Lenin was not a German agent, despite the help that Chancellor Bethmann-Hollweg awarded him, because his objectives were then compatible with certain people in the Foreign Ministry. Additionally, each entity had alternative motives—Germany sought access to postwar markets in Russia, and Lenin sought to establish a Marxist dictatorship. 1394 Lenin and Parvus, who worked with German intelligence, privately collaborated but carefully avoided meeting in public. German intelligence established Parvus’ financial network via offshore operations in Copenhagen, to shift money to Russia between front organizations. The majority of the transactions were genuine, yet still helped to conceal Bolshevik funds. Scandinavian fiscal and customs offices were overburdened, and inadequate for the booming black market during the war. There is no conclusive evidence showing that the Germans supplied the money for this financial network. Historians recently examined the records from Alexander Kerensky’s Government and found them to be inconclusive or utter forgeries.

On October 27, 1917, Edgar Sisson, a former Chicago Tribune reporter, former manag-

ing editor of *Collier's Weekly* and past editor of *Cosmopolitan*, left the United States to become the Petrograd-based representative of the government's propaganda apparatus, the Committee on Public Information (CPI) or the Creel Committee, and a special envoy of President Woodrow Wilson. In early 1918, after the Bolsheviks had seized power, he acquired a set of 68 Russian-language documents. These papers appeared to provide evidence of a German-Bolshevik conspiracy during World War I, claiming that Trotsky, Lenin, and other Bolshevik leaders were agents of the German government. Sisson recruited Russians to disseminate US propaganda in Germany, in addition to distributing a million Russian-language prints of President Wilson's war message to the US Congress. Sisson returned to the United States in May, to head the CPI's Foreign Section. On May 9, 1918, President Wilson had Sisson's report on the Russian documents, which the CPI released to the media on September 15. The press dutifully and unquestioning reported that the German General Staff had hired Lenin and Trotsky. On September 21, 1918, *The New York Evening Post* questioned the validity of the Sisson Documents, and claimed that Santeri Nuorteva, member of the Finnish Socialist Federation, and a former Soviet propagandist, actually wrote them. *The New York Times*, certainly a biased opinion-making newspaper, reported that the Sisson Documents, in possession of the CPI, verified that Lenin and Trotsky, heads of the Bolshevik government, were German agents. Further, that the German Great General Staff arranged for the German Imperial Bank, and other financial institutions, to fund the revolution. Moreover, German agents Lenin and Trotsky betrayed the Russian people by signing the Treaty of Brest-Litovsk.

Germany allegedly selected a commander to defend Petrograd against the German Army, and provided German officers to advise the Bolshevik government, command its armies, spy on the embassies of Russia, and to direct Bolshevik foreign and domestic policy. *The New York Times* claimed that the Bolshevik government was in fact German, representing the best interests of Germany. The CPI published a pamphlet, based on the Sisson Documents, *The German-Bolshevik Conspiracy*, of which it distributed 137,000 copies. John F. Jameson, a gatekeeper historian, associated with the Carnegie Institution, and the American Historical Association, founded by Andrew D. White (S&B), and Professor Samuel N. Harper, validated the authenticity of most of the documents. 1398 Not surprisingly, after World War II, the Allies discovered documents in the German Foreign Office that purportedly confirmed that Imperial Germany had financed the Bolsheviks.

In 1956, George F. Kennan examined and scientifically evaluated the Sisson Documents, and categorically stated that they were forgeries. He wrote a very persuasive technical article but, by then, the public paid very little attention to a decades-old controversy. Some academics appreciated his scholarship but, for the most part, the entertainment and news media, the schools, and typical government officials raised on propaganda pabulum, continue to compare every totalitarian institution, or government, to Nazism or Communism, as if each shared the same characteristics, but with different names.

8.7 The Armenian Genocide, Relocation and Extermination

The Jews took power during their Young Turk Revolution, a movement entirely overshadowed by the Chinese Revolution (1911), and the Russian Revolutions (1905, 1917). Young Turk leaders then organized and executed the Armenian Genocide wherein between 600,000 and 1,500,000 perished. Henry Morgenthau Sr., a member of both the Pilgrims Society, and B'nai B'rith, was a Harlem real estate mogul and a leader in New York City's Reform Jewish community. His money helped to install Woodrow Wilson into the White House, and the new president asked him to accept the ambassadorship to Turkey. Though lacking experience, Morgenthau reluctantly accepted the position (1913-1916), with the encouragement of his good friend, Rabbi Stephen S. Wise, a founder, and leading member of the Zionist Organization of America, founded in 1897, to do everything necessary to secure a Jewish homeland in Palestine.

Not only do the United States and other industrialized countries send ambassadors, they also send intelligence agents, such as the CIA, to engage in terrorist activities. In March 1915, Eitan Belkind, Aharon and Sarah Aharonson, his sister, and Avshalom Feinberg founded Nili, a Jewish espionage network that provided information to the allied forces during World War I. Sir Mark Sykes assisted Belkind infiltrated the Ottoman army, and became an officer assigned to the headquarters of Ahmed Djemal, Minister of the Navy. Belkind, the British agent, relates that, in early 1915, a few Circassian soldiers ordered some Armenians to gather sufficient thorns and thistles to create a tall pyramid. Thereafter, the soldiers tied almost 5,000 Armenians together around the pyramid and then torched it. He fled in order to escape the tortuous screams but returned two days later to find the charred bodies. Belkind was a cousin to the Chief Rabbi of Turkey, Chaim Nahum, who "rejected any involvement or contact" in the Armenian issue.

Belkind also wrote, "On Friday in late March 1915, about 10,000 Jewish were exiled from Israel. They were taken to Jaffa and forced to board ships belonging to neutral states such as Italy, USA, etc. The deportation was carried out with great cruelty. The deportees left all their property behind, women and children were hurled into the ships. It was a tragic and oppressing sight. Feinberg, a witness to the deportations, went to Jerusalem to the Anti-Locust Department, and urged Aharonson to start an uprising; because the Jewish settlements were on the brink of annihilation. Avshalom insisted that, in his opinion, that it had been the Germans that advised Turkey to deport the Jews."

On April 24, 1915, Mehmed Talaat Pasha, a freemason, while posing as an orthodox Moslem, was actually descended from a Spanish- Jewish family. He had collaborated with the Young Turks, also Jews. He ordered the closure of all Armenian political organizations within the Ottoman Empire, and the arrest of all Armenians associated with those organizations. On the night of April 24/25, 1915, Young Turk authorities arrested between 235 and 270 Armenian leaders in Constantinople, including politicians, clergymen, physicians, authors, journalists, lawyers, and teachers. Several weeks earlier, the government allegedly organized the mass killings of Armenian civilians in the Van vilayet.

On May 27, 1915, Talaat Pasha, CUP Minister of the Interior issued the Tehcir Law or Temporary Law of Deportation authorizing the government to deport anyone that it “sensed” was a threat to national security. The order covered the period from June 1, 1915 to February 8, 1916. It legalized the mass deportation of Armenians from the empire’s eastern provinces to Syria. Many historians maintain that Ismail Enver Pasha should share equal responsibility for the “extermination” of the Armenians. Reportedly, Ismail Enver Pasha told Ambassador Morgenthau, “I have accomplished more toward solving the Armenian problem in three months than Abdülhamid accomplished in thirty years!” Ismail Enver Pasha, because the Armenians were plotting against the government, introduced repressive measures against them, and implemented the deportation of about 2,000,000 Armenians, which culminated in a massacre. Ethnic Turks and Kurds attacked their villages and murdered vulnerable refugees. Many Armenians relocated in Iran, now the residence of about 100,000 of them.

The German Ambassador to the Ottoman Empire, Baron Hans von Wangenheim stated that a systematic genocide of the Armenians would have obstructed the war effort. It would have withdrawn troops and military supplies, needed by the Central powers, and weakened the army. He did not want to insult the Young Turk rulers and their efforts to win the war. On May 31, 1915, he notified officials in Berlin to block Armenian espionage and their extensive risings. Ismail Enver Pasha intended to close many Armenian schools, suppress their correspondence and newspapers as well as relocate uninvolved Armenian families to Mesopotamia. He requested that Germany not interfere. Governments hostile to Germany, would exploit anything that Turkish officials did. He said that he thought that Germany should try to modify its methods, but not hinder the Turkish government on its principles.

On June 17, 1915, Wangenheim changed his opinions. He wrote, “It is obvious that the banishment of the Armenians is not due solely to military considerations.” Talaat Bey (born Mehmed Talaat), the minister of the interior, told Dr. Johannes Mordtmann of the embassy that “the Porte intended to make use of the world war to deal thoroughly with its internal enemies, the Christians in Turkey, and that it meant not to be disturbed in this by diplomatic intervention from abroad.” Wangenheim sent a memo to the grand vizier telling him that Germany would not hide the consequences “created by these harsh measures and mass deportations, which include guilty and innocent without distinction, especially when they accompany these measures by acts of violence, such as massacres and pillages.” Young Turk officials subjected the Armenian Christians, as part of the deportation, to forced marches, massacres, starvation and rape.

Wangenheim said that it was imperative that the provincial authorities take measures to protect the life and property of evacuated Armenians, during their deportation and in their new location. He reminded the Turkish authorities that their activities could damage German interests, and asked that the deportees be given a grace period before they were actually deported. The Turkish government rejected the Austrian or German appeals. On July 12, 1915, Wangenheim again wrote to Talaat Pasha demanding that he take

measures against Reshid Bey, who was organizing large-scale massacres. Wangenheim also wrote to Chancellor Bethmann-Hollweg telling him that diplomatic pressure failed to influence the government and therefore, "Turkey must accept full responsibility for her actions." Wangenheim soon left for Berlin and his successor, Paul Wolff Metternich, reiterated Germany's opposition to the Ottoman's treatment of the Armenians. The Young Turk government allegedly did not provide the deportees with shelter, food, water or supplies during the march. The Turkish guards accompanying them reportedly robbed, raped, and killed many of them and allowed bystanders to participate. On August 18, 1915, The New York Times, published by Adolph S. Ochs, reported, "The refugees will have to traverse on foot a distance, requiring marches of from one to two months . . . the roads and the Euphrates are strewn with corpses of exiles, and those who survive are doomed to certain death. It is a plan to exterminate the whole Armenian people." The Times reported, "Hundreds of women and young girls . . . have been pillaged, defiled and destroyed. At the beginning of this month all the inhabitants of Karahissar were pitilessly massacred, with the exception of a few children." Bahaeddin Şakir said, "We are in war, there is no threat of intervention by Europe and the Great Powers, and the world press either will not be able to voice a protest. Even if we do not succeed, the problem will become an accomplished fact, the voices will calm down, and no one will dare to express a protest. We should make use of this exceptional situation as much as possible. This kind of opportunity is not always available . . ."

Samuel S. McClure wrote, "The shortest method for disposing of the women and children concentrated in the various camps was to burn them. Fire was set to large wooden sheds in Alidjan, Megrakon, Khaskegh, and other Armenian villages, and these absolutely helpless women and children were roasted to death . . . And the executioners, who seem to have been unmoved by this unparalleled savagery, grasped infants by one leg and hurled them into the fire . . . the stench of the burning human flesh permeated the air for many days after." In the Baibourt area, "The worst and most unimaginable horrors were reserved for us at the banks of the Euphrates and in the Erzindjan plain. The mutilated bodies of women, girls, and little children made everybody shudder." The Young Turks also allegedly used cattle cars to transport the Armenians, at least 20,000 by August 1, 1915. Peter Balakian, an author on The New York Times Best Seller's List, relates that there was a twenty-five mile stretch between Urfa and Arab Pournar, where "the beaten paths are lined with corpses of the victims."

After deportation, the government could legally confiscate the abandoned properties, livestock, and land and assets, as sanctioned by the new Temporary Law of Expropriation and Confiscation, enacted on September 13, 1915. 1414 On September 29, 1915, Jesse B. Jackson, American Consul in Aleppo, sent Morgenthau many charts and tables enumerating the railway deportations by city, town, and Armenian religious sect . . . giving the numbers of children and adults." Jackson wrote, "The deportation of Armenians from their homes by the Turkish government has continued with a persistence and perfection of plan." Almost all of the Armenians, Catholics, Caldeans and Protestants, from the

provinces of "Van, Erzaerum, Bitlis, Diarbekir, Mamouret ul-Aziz, Angora and Sivas . . . have already been practically exterminated." The death toll was reportedly already over 500,000 by August 15, 1915. The survival rate of the forced marches was about fifteen percent; about one million Armenians were missing. 1418 Military personnel who refused to kill defenseless Armenians were relieved of duty and court-martialed or murdered.

On October 6, 1915, Lord James Bryce, former Member of Parliament, a former Ambassador to the United States (1907-1913), a friend of President Woodrow Wilson, and a popular figure in America, told Parliament about the premeditated murder of "around 800,000" Armenians. He said that officials in Constantinople ordered the massacres, which carried a penalty for non-compliance. Aneurin Williams, of the British Parliament, presented a similar account on November 16. Denys Cochin, a French writer, wrote about the massacres. He was the Minister of State (1915-1916) under Aristide Briand, a leader of the French Socialist Party. Cochin was then undersecretary for foreign policy matters responsible for dealing with the blockade of Germany. Other writers disseminated Cochin's material. One such individual wrote, "Germany's ally was committing the vilest atrocities," and compared the fate of the Armenians to that of the Belgians.

Ambassador Morgenthau gave a speech at the Wise Center Forum in Cincinnati on May 21, 1916, regarding the sale of Palestine, after the war. As ambassador, he said he broached the subject of the Armenians with Turkish officials who were very receptive, even eager. He said, "Turkish officials will do anything if they have no fear of punishment or censure. The Turks gladly would have made a bargain with me that they would protect the Jews and do what they desired with the Christians." He went on to say, "It is utterly impossible to place several millions of people in Palestine. There would be grave danger from the Arabs. It is a good idea to have a model colony here. If Jews continue there as at present, at the end of the war there will be no friction. I believe the Zionists will not provoke the Government. Turkey needs the Jews. They have lost the Armenians and must fill the gap."

While Morgenthau was US Ambassador, though he claimed otherwise, he remained relatively silent during what people refer to as the systematic Armenian Genocide. In June 1917, he and Felix Frankfurter, representing the War Department, traveled to Turkey on a secret mission to convince its leaders to abandon the Central Powers. After the war, Morgenthau attended the Paris Peace Conference as an advisor regarding Eastern Europe and the Middle East issues. Perhaps Morgenthau's statements in Cincinnati were an attempt to push the British to accept the Zionist goals.

In 1919, Morgenthau wrote an incredibly anti-Muslim book detailing the genocidal horrors of the Armenian genocide, actually carried out by the Dönmes, which, at the time, the United States and Britain apparently ignored. He described Sheik-ul-Islam's alleged appeal for a total Jihad or Holy War against all infidels. The Sheik's proclamation purportedly summoned the complete Muslim world to arise and annihilate their Christian oppressors, except for the Germans and Austrians. Interestingly, certain parties, attempting to ignite hatred, republished his book in 2003, perhaps to provoke US sensibilities

against the Muslims.

8.8 Making Money the Old Fashioned Way, War Profiteering

Evidently, the financial cost of World War I amounted to almost \$38 billion for Germany alone; Britain spent \$35 billion, France \$24 billion, Russia \$22 billion, USA \$22 billion and Austria-Hungary \$20 billion. In total, the war cost the Allies around \$125 billion and it cost the Central Powers about \$60 billion.

On November 23, 1913, John D. Rockefeller, Andrew Mellon, Andrew Carnegie, and J. Pierpont Morgan, Frank A. Vanderlip and other bankers, financiers, and industrialists created the American International Corporation (AIC), capitalized with \$50 million specifically to assist the Bolsheviks in their revolution. AIC's objectives were to develop and promote US foreign trade. AIC soon acquired interests in the Panic Mail Steamship Company, the International Mercantile Marine Company, United Fruit Company, and the New York Shipbuilding Company. It owned all of the stock in the Allied Machinery Company of America, invested in other companies and had controlling interest in many others. AIC created, controlled, owned, or purchased the following companies to fulfill their objectives,

Allied Machinery Company of America; American International Shipbuilding Corporation; American International Steel Corporation; American Balsa Company; Allied Construction Machinery Corporation; Allied Sugar Machinery Corporation; American International Terminals Company; Carter Macey & Company; F. W. Horne & Company; The China Corporation; The Latin American Corporation; Ulen Contracting Company; Grace Russian Company; Holbrook, Cabot & Rollins Corporation; International Merchant Marine; International Products Company; New York Shipbuilding Corporation; Pacific Mail Steamship Company; Rosin & Turpentine Export Company; Siems Carry Railroad and Canal Company; United Fruit Company; United States Rubber Company; United States Industrial Alcohol Company; Jones Laughlin Steel Corporation; Midvale Steel Corporation; G. Amsinck & Company; Symington Forge Corporation; Remington Arms; and the Robert Dollar Company. Many companies that focused on military efforts and food.

Individuals associated with the Federal Reserve and Wall Street assumed control of AIC, all attempting to profit from imminent war. The AIC Directors, all powerful bankers, politicians or industrialists. By 1915, AIC was doing business in Australia, Argentina, Uruguay, Paraguay, Colombia, Brazil, Chile, China, Japan, India, Ceylon, Italy, Switzerland, France, Spain, Cuba, Mexico, and other Central American countries. By 1917, AIC's foreign investments totaled over \$27 million and it had agents in London, Paris, Buenos Aires, Peking, and Petrograd, Russia. AIC's United Fruit Company played a role in various Central American Marxist revolutions in the 1920s. By November 1917, AIC owned Amsinck and Company, also located at 120 Broadway. Amsinck funded German wartime espionage in the United States and supported the Bolshevik Revolution.

Churchill's US counterpart, Navy Secretary Franklin D. Roosevelt claimed that US industry had been preparing for war for about a year. The Army and Navy Departments started purchasing supplies by early 1916. In 1916, AIC purchased New York Shipbuilding, a navy contractor that, by 1918, owned the world's biggest shipyard. President Woodrow Wilson placed the nation's monetary system into the hands of the international bankers through the Federal Reserve System. When the United States entered into World War I against Germany, on April 6, 1917, Wilson relinquished further economic control of the government to three of his financial backers, all Jews, Eugene I. Meyer, Paul Warburg, and Bernard Baruch. In 1890, Bernard Baruch had worked on Wall Street for A.A. Housman & Co. In 1896, he merged the six top US tobacco companies into the Consolidated Tobacco Company, which forced James Duke and the American Tobacco Trust into another trust. He delivered the copper industry to the Guggenheim family, and collaborated with Edward H. Harriman, Jacob H. Schiff's agent in managing America's railway system for the Rothschild family. Baruch and Harriman seized control of the New York City transit system. Baruch Brothers of New York changed their name to Hentz Brothers in 1917 when Bernard became Chairman of the US War Industries Board, established on July 28, 1917. Baruch wrote, "... in the view of many, I became a virtual dictator."

On February 8, 1918, some senators convened a committee to hear the views of Treasury Secretary William G. McAdoo regarding Senate bill No. 3714, providing for the establishment of a War Finance Corporation. Other attendees who favored the bill's passage were banker, William Proctor Gould Harding, Chairman of the Federal Reserve (1916-1922) and Paul M. Warburg, Vice Governor Federal Reserve Board. Warburg relinquished his \$500,000 a year job at Kuhn, Loeb to accept the paltry \$12,000 a year job as governor of the Federal Reserve. On March 7, 1918, the Senate passed the bill, which authorized the extension of \$4 billion in credit to firms and corporations engaged in war-related industries. Eugene I. Meyer directed the War Finance Corporation. The President would later propose his name as the Governor of the Federal Reserve Board. Congress created the US Government agency on April 5, 1918 in order to give financial support to industries deemed essential for World War I, and to the banks that financed them. It functioned in that capacity, between the wars, until Congress abolished it on July 1, 1939.

Regarding his personal interests, Baruch admitted, "I carried through the war three major investments, Alaska Juneau Gold Mining Company, Texas Gulf Sulphur, and Atolia Mining Company (tungsten)." On February 21, 1921, Representative Mason told the House of Representatives that Baruch made over \$50 million just in copper during the war. Baruch, as chairman of the War Industries Board, directed the affairs of all US factories. He chose Clarence Dillon, a Wall Street lawyer as his assistant. William P. G. Harding, Chairman of the Federal Reserve, was the Managing Director of the War Finance Corporation under Meyer. George R. James, member of the Federal Reserve Board (1923-1924) had been Chief of the Cotton Section of the War Industries Board.

On September 13, 1937, in a congressional investigation, Baruch testified before Congress and admitted that all wars are economic in nature, despite the political or religious reasons

repeatedly used to justify war. He made \$750,000 in just one day during World War I when he headed the purchasing agency for the Allies. In that capacity, he spent \$10 billion per year and was the primary member of the Munitions Price-Fixing Committee, and as such, he determined how much money the US government spent and the companies from which they would purchase. President Wilson also gave him a letter authorizing him to seize any US industry or plant. During Congress' investigation, officials asked him about the specific skills that qualified him for the job. He responded that he was a speculator.

There were at least two Congressional investigations, in 1925 and 1930-The Select Committee to Investigate the Destruction of Government Bonds. On March 2, 1925, it was reported, "Duplicate bonds amounting to 2,314 pairs and duplicate coupons amounting to 4,698 pairs ranging in denominations from \$50 to \$10,000 had been redeemed to July 1, 1924. Some of these duplications have resulted from error and some from fraud." This chicanery enabled Meyer to purchase control of Allied Chemical and Dye Corporation and The Washington Post. The duplication of bonds, "one for the government, one for me" in denominations as high as \$10,000 each, amounted to a fortune. Meyer's daughter Katharine Graham later became publisher of the Washington Post. President Herbert Hoover appointed Meyer as Chairman of the Federal Reserve (1930-1933). In 1920 Meyer and William H. Nichols, owner of General Chemical, merged five smaller chemical companies to create the Allied Chemical and Dye Corporation later known as the Allied Chemical Corp. After World War II, President Harry S. Truman, a freemason, appointed Meyer as the first head of the World Bank in June 1946.

Samuel P. Bush, father of Prescott Buch (father of George H. W. Bush, Grandfather of George W. Bush) was president of Buckeye Steel Castings (1908-1927), a railroad equipment-manufacturing firm that had supplied the Morgans, Harrimans, and Rockefellers and the railroads they controlled. Frank Rockefeller, brother of John D. and William, was Buckeye's former president. Bush, who helped co-found Columbus Academy, a private prep school, made certain that his own children had superior educations at private schools. He was a director of the Pennsylvania Railroad's Ohio subsidiaries, of the Hocking Valley Railway, the Norfolk & Western Railway, and the Huntington National Bank. He was also a director of the Federal Reserve Bank of Cleveland. Bush was associated with the US Chamber of Commerce and was the first president of the National Association of Manufacturers. He worked with Baruch on the War Industries Board where he was the national chief of the Ordnance, Small Arms, and Ammunition Section. He negotiated with the nation's munitions companies, including Remington Arms, in securing weaponry. The War Industries Board directed the militarization of the country's civilian industry. The National Archives destroyed most of the War Industries Board records relating to his activities. Bush knew top executives at Du Pont, Remington, Winchester and Colt Arms. Between the wars, he was an advisor to President Herbert Hoover. Unlike the Spanish American War, World War I brought together the nation's industrial, military and business components. These connections grew even stronger with the next war and helped to further militarize America.

It was AIC then; now it is Carlyle and other such groups. On May 16, 2008, Booz, Allen & Hamilton, a privately held corporation owned by about 300 senior executives announced the sale of the majority of its US government business division to the Carlyle Group (established 1987), a multibillion dollar private equity firm for \$2.54 billion. Carlyle Group invested in the Bin Laden family's extensive construction projects in Saudi Arabia and other areas in the Middle East. In September 2007, the Mubadala Development Company, a sovereign wealth fund of the Abu Dhabi government specializing in acquisitions, paid 1.35 billion for a 7.5 percent ownership stake in Carlyle. The politically connected, bi-partisan, buyout firm, Carlyle Group, is stacked with war profiteers, numerous former politicians, and has massive assets. George H. W. Bush, a profiteer like his progenitor, joined Carlyle in 1993, and was the Senior Advisor to their Asia Advisory Board (April 1998-October 2003). He reluctantly resigned, under pressure due to the company's massive Iraqi war profits. He retained his Carlyle stock, and gave speeches in Carlyle's behalf, for a \$500,000 fee. Carlyle is notorious for buying defense companies and "doubling or tripling their value" due to abundant, frequently no-bid, defense contracts. In 2002, Carlyle got at least \$677 million in government contracts, and by Bush's 2003 Iraqi invasion, Carlyle contracts were worth \$2.1 billion, netting sizeable profits for the investors—friends and family.

Notable people associated with Carlyle include James Baker III, former US Secretary of State under George H. W. Bush. Baker was also a staff member under George W. Bush. Others associated with Carlyle include Frank C. Carlucci, Deputy Director of the CIA under Carter; Richard Darman, former Director of the US Office of Management and Budget under George H. W. Bush; Randal K. Quarles, former Under Secretary of the US Treasury under George W. Bush; Allan Gotlieb, Canadian ambassador to the United States; William Kennard, Chairman of the Federal Communications Commission (FCC) under Clinton; Arthur Levitt, Chairman of the Securities and Exchange Commission (SEC) under Clinton; Mack McLarty, White House Chief of Staff under Clinton, President of Kissinger McLarty Associates and many others. After 9/11, no-bid contracts and privatization, accelerated. The war on terror, the creation of numerous new agencies and bureaucracies was never about freedom or security. All of it, the programs, and the Iraq reconstruction are all a colossal assault on the federal budget, facilitated by the politically connected, selectively efficient contractors who collect up-front then frequently, sub-contract projects to unskilled workers who often never complete the work.

8.9 The Sinking of the Lusitania

The sinking of the Cunard ocean liner RMS Lusitania occurred on Friday, 7 May 1915 during the First World War, as Germany waged submarine warfare against the United Kingdom of Great Britain and Ireland. The ship was identified and torpedoed by the German U-boat U-20 and sank in 18 minutes. The vessel went down 11 miles (18 km) off the Old Head of Kinsale, Ireland, killing 1,198 and leaving 761 survivors. The sinking

turned public opinion in many countries against Germany, contributed to the American entry into World War I and became an iconic symbol in military recruiting campaigns of why the war was being fought.

The next step in the maneuvering of the United States into the war came when the Cunard Lines, owner of the ocean liner, the Lusitania, turned the ship over to the First Lord of the Admiralty, Winston Churchill. It now became a ship of the English Navy and was under the control of the English government. The ship was sent to New York City where it was loaded with six million rounds of ammunition, owned by J.P. Morgan & Co., to be sold to England and France to aid in their war against Germany. It was known that the very wealthy were interested in involving the American government in that war, and Secretary of State William Jennings Bryan was one who made note of this. "As Secretary [Bryan] had anticipated, the large banking interests were deeply interested in the World War because of wide opportunities for large profits. On August 3, 1914, even before the actual clash of arms, the French firm of Rothschild Freres cabled to Morgan and Company in New York suggesting the flotation of a loan of \$100,000,000, a substantial part of which was to be left in the United States, to pay for French purchases of American goods."

England broke the German war code on December 14, 1914, so that "By the end of January, 1915, [British Intelligence was] able to advise the Admiralty of the departure of each U-boat as it left for patrol..." This meant that the First Lord of the Admiralty, Winston Churchill, knew where every U-boat was in the vicinity of the English Channel that separated England and France. The fact that the Lusitania was a passenger ship is misleading. Although she was built as a luxury liner, her construction specifications were drawn up by the British Admiralty so that she could be converted, if necessary, into a ship of war. Everything from the horsepower of her engines and the shape of her hull to the placement of ammunition storage areas were, in fact, military designs. She was build specifically to carry twelve six-inch guns. The construction costs of these features were paid for by the British government. Even in times of peace, it was required that her crew include officers and seamen from the royal Navy Reserve. In May of 1913, she was brought back into dry dock and outfitted with extra armor, revolving gun rings on her decks, and shell racks in the hold for ammunition. Handling elevators to lift the shells to the guns were also installed. Twelve high-explosive cannons were delivered to the dry dock. All this is a matter of public record at the National Maritime Museum in Greenwich, England, but whether the guns were actually installed at that time is still hotly debated. There is no evidence that they were. In any event, on September 17, the Lusitania returned to sea ready for the rigors of war, and she was entered into the Admiralty fleet register, not as a passenger liner, but an armed auxiliary cruiser] From then on, she was listed in Jane's Fighting Ships as an auxiliary cruiser and in the British publication, The Naval Annual, as an armed merchant man.

Part of the dry dock modification was to remove all the passenger accommodations in the lower deck to make room for more military cargo. Thus, the Lusitania became

one of the most important carriers of war materials — including munitions — from the United States to England. On March 8, 1915, after several close calls with German submarines, the captain of the Lusitania turned in his resignation. He was willing to face the U-boats, he said, but he was no longer willing “to carry the responsibility of mixing passengers with munitions or contraband.”

Churchill set a Trap

From England’s point of view, the handwriting on the wall was clear. Unless the United States could be brought into the war as her ally, she soon would have to sue for peace. The challenge was how to push Americans off their position of stubborn neutrality. How that was accomplished is one of the more controversial aspects of the war. It is inconceivable to many that English leaders might have deliberately plotted the destruction of one of their own vessels with American citizens aboard as a means of drawing the United States into the war as an ally. Surely, any such idea is merely German propaganda. Robert Ballard, writing in *National Geographic*, says: “Within days of the sinking, German sympathizers in New York came up with a conspiracy theory. The British Admiralty, they said, had deliberately exposed Lusitania to harm, hoping she would be attacked and thus draw the U.S. into the war.” Let’s take a closer look at this conspiracy theory. Winston Churchill, who was First Lord of the Admiralty at that time, said:

“There are many kinds of maneuvers in war. There are maneuvers in time, in diplomacy, in mechanics, in psychology; all of which are removed from the battlefield, but react often decisively upon it.... The maneuver which brings an ally into the field is as serviceable as that which wins a great battle. The maneuver which gains an important strategic point may be less valuable than that which placates or overawes a dangerous neutral. “

The maneuver chosen by Churchill was particularly ruthless. Under what was called the Cruiser Rules, warships of both England and Germany gave the crews of unarmed enemy merchant ships a chance to take to the lifeboats before sinking them. But, in October of 1914, Churchill issued orders that British merchant ships must no longer obey a U-boat order to halt and be searched. If they had armament, they were to engage the enemy. If they did not, they were to attempt to ram the sub. The immediate result of this change was to force German U-boats to remain submerged for protection and to simply sink the ships without warning. Why would the British want to do such a stupid thing that would cost the lives of thousands of their own seamen? The answer is that it was not an act of stupidity. It was cold blooded strategy. Churchill boasted:

“The first British countermove, made on my responsibility... was to deter the Germans from surface attack. The submerged U-boat had to rely increasingly on underwater attack and thus ran the greater risk of mistaking neutral for British ships and of drowning neutral crews and thus embroiling Germany with other Great Powers.”

To increase the likelihood of accidentally sinking a ship from a neutral 'Great Power,' Churchill ordered British ships to remove their names from their hulls and, when in port, to fly the flag of a neutral power, preferably that of the United States. As further provocation, the British navy was ordered to treat captured U-boat crew members not as prisoners of war but as felons. "Survivors," wrote Churchill, "should be taken prisoner or shot— whichever is the most convenient." ² Other orders, which now are an embarrassing part of official navy archives, were even more ruthless: "In all actions, white flags should be fired upon with promptitude." The trap was carefully laid. The German navy was goaded into a position of shoot-first and ask questions later and, under those conditions, it was inevitable that American lives would be lost.

After many years of investigation, it is now possible to identify the cargo that was loaded aboard the Lusitania on her last voyage. It included 600 tons of pyroxyline (commonly called gun cotton), six-million rounds of ammunition, 1,248 cases of shrapnel shells (which may not have included explosive charges), plus an unknown quantity of munitions that completely filled the holds on the lowest deck and the trunkways and passageways of F deck. In addition, there were many tons of "cheese," "lard," "furs" and other items which were shown later to be falsely labelled. What they were is not now known, but it is certain they were at least contraband if not outright weapons of war. They were all consigned through the J.P. Morgan Company. But none of this was suspected by the public, least of all those hapless Americans who unknowingly booked a passage to death for themselves and their families as human decoys in a global game of high finance and low politics.

The German embassy in Washington was well aware of the nature of the cargo being loaded aboard the Lusitania and filed a formal complaint to the United States government, because almost all of it was in direct violation of international neutrality treaties. The response was a flat denial of any knowledge of such cargo. Seeing that the Wilson Administration was tacitly approving the shipment, the German embassy made one final effort to avert disaster. It placed an ad in fifty East Coast newspapers, including those in New York City, warning Americans not to take passage on the Lusitania. The ad was prepaid and requested to be placed on the paper's travel page a full week before the sailing date. It read as follows:

"NOTICE!

TRAVELERS intending to embark on the Atlantic voyage are reminded that a state of war exists between Germany and her allies and Great Britain and her allies; that the zone of war includes the waters adjacent to the British Isles; that, in accordance with formal notice given by the Imperial German Government, vessels flying the flag of Great Britain, or of any of her allies, are liable to destruction in those waters and that travelers sailing in the war zone on ships of Great Britain or her allies do so at their own risk.

IMPERIAL GERMAN EMBASSY

Washington, D.C., April 22, 1915. "

Although the ad was in the hands of newspapers in time for the requested deadline, the

State Department intervened and, raising the specter of possible libel suits, frightened the publishers into not printing it without prior clearance from State Department attorneys. Of the fifty newspapers, only the Des Moines Register carried the ad on the requested date. What happened next is described by Simpson:

George Viereck [who was the editor of a German-owned newspaper at that time and who had placed the ads on behalf of the embassy] spent April 26 asking the State Department why his advertisement had not been published. Eventually he managed to obtain an interview with [Secretary of State, William Jennings] Bryan and pointed out to him that on all but one of her wartime voyages the *Lusitania* had carried munitions. He produced copies of her supplementary manifests, which were open to public inspection at the collector's office. More important, he informed Bryan, no fewer than six million rounds of ammunition were due to be shipped on the *Lusitania* the following Friday and could be seen at that moment being loaded on pier 54. Bryan picked up the telephone and cleared the publication of the advertisement. He promised Viereck that he would endeavor to persuade the President publicly to warn Americans not to travel. No such warning was issued by the President, but there can be no doubt that President Wilson was told of the character of the cargo destined for the *Lusitania*. He did nothing, but was to concede on the day he was told of her sinking that his foreknowledge had given him many sleepless hours.

The Final Voyage

While Morgan and Wilson were setting the deadly stage on the American side of the Atlantic, Churchill was playing his part on the European side. When the *Lusitania* left New York Harbor on May 1, her orders were to rendezvous with a British destroyer, the *Juno*, just off the coast of Ireland so she would have naval protection as she entered hostile waters. When the *Lusitania* reached the rendezvous point, however, she was alone, and the captain assumed they had missed each other in the fog. In truth, the *Juno* had been called out of the area at the last minute and ordered to return to Queenstown. And this was done with the full knowledge that the *Lusitania* was on a direct course into an area where a German submarine was known to be operating. To make matters worse, the *Lusitania* had been ordered to cut back on the use of coal, not because of shortages, but because it would be less expensive. Slow targets, of course, are much easier to hit. Yet, she was required to shut down one of her four boilers and, consequently, was now entering submarine-infested waters at only 75% of her potential speed.

As the *Lusitania* drew closer to hostile waters, almost everyone knew she was in grave danger. Newspapers in London were alive with the story of German warnings and recent sinkings. In the map room of the British Admiralty, Churchill watched the play unfold and coldly called the shots. Small disks marked the places where two ships had been torpedoed the day before. A circle indicated the area within which the U-boat must still be operating. A larger disk represented the *Lusitania* travelling at nineteen knots directly

into the circle. Yet, nothing was done to help her. Admiral Coke at Queenstown was given perfunctory instructions to protect her as best he could, but he had no means to do so and, in fact, no one even bothered to notify the captain of the Lusitania that the rendezvous with the Juno had been canceled.

One of the officers present in the high-command map room on that fateful day was Commander Joseph Kenworthy, who previously had been called upon by Churchill to submit a paper on what would be the political results of an ocean liner being sunk with American passengers aboard. He left the room in disgust at the cynicism of his superiors. In 1927, in his book, *The Freedom of the Seas*, he wrote without further comment: "The Lusitania was sent at considerably reduced speed into an area where a U-boat was known to be waiting and with her escorts withdrawn." Further comment is not needed. Colonel House was in England at that time and, on the day of the sinking, was scheduled to have an audience with King George V. He was accompanied by Sir Edward Grey and, on the way, Sir Grey asked him: "What will America do if the Germans sink an ocean liner with American passengers on board?" As recorded in House's diaries, he replied: "I told him if this were done, a flame of indignation would sweep America, which would in itself probably carry us into the war." 2 Once at Buckingham Palace, King George also brought up the subject and was even more specific about the possible target. He asked, "Suppose they should sink the Lusitania with American passengers on board..."

Even though Wilson proclaimed America's neutrality in the European War, in accordance with the prior admonitions of George Washington, his government was secretly plotting to involve the American people by having the Lusitania sunk. This was made public in the book *The Intimate Papers of Colonel House*, written by a supporter of the Colonel, who recorded a conversation between Colonel House and Sir Edward Grey of England, the Foreign Secretary of England:

Grey: What will America do if the Germans sink an ocean liner with American passengers on board?

House: I believe that a flame of indignation would sweep the United States and that by itself would be sufficient to carry us into the war.

On May 7, 1915, the Lusitania was sunk off the coast of County Cork, Ireland by a U-boat after it had slowed to await the arrival of the English escort vessel, the Juno, which was intended to escort it into the English port. The First Lord of the Admiralty, Winston Churchill, issued orders that the Juno was to return to port, and the Lusitania sat alone in the channel. Because Churchill knew of the presence of three U-boats in the vicinity, it is reasonable to presume that he had planned for the Lusitania to be sunk, and it was. 1201 people lost their lives in the sinking. This sinking has been described by Colin Simpson, the author of a book entitled *The Lusitania*, as "the foulest act of wilful murder ever committed on the seas."

But the event was not enough to enable President Wilson to declare war against the German government, and the conspirators changed tactics. They would use other means

to get the American people involved in the war, as the “flame of indignation” did not sweep the United States as had been planned. Robert Lansing, the Assistant Secretary of State, is on record as stating: “We must educate the public gradually — draw it along to the point where it will be willing to go into the war.” After the sinking of the Lusitania, two inquiries were held, one by the English government, in June, 1915, and one by the American government in 1918. Mr. Simpson has written that “Both sets of archives... contain meager information. There are substantial differences of fact in the two sets of papers and in many cases it is difficult to accept that the files relate to the same vessel.” But in both inquiries, the conclusions were the same: torpedoes and not exploding ammunition sank the Lusitania, because there was no ammunition aboard. The cover-up was now official. But there have been critics of these inquiries. One was, of course, the book written by Colin Simpson, who did the research necessary to write his book in the original minutes of the two inquiries. The Los Angeles Times reviewed Mr. Simpson’s book and concluded: “The Lusitania proves beyond a reasonable doubt that the British government connived at the sinking of the passenger ship in order to lure America into World War I. The Germans, whose torpedo struck the liner, were the unwitting accomplices or victims of a plot probably concocted by Winston Churchill.” President Wilson was seeking re-election in 1916. He campaigned on his record of “keeping us out of the War” during his first term of office from 1912 to 1916.

8.10 The Bankers of World War I

The City of London, the financial core within London, financed America’s trade before World War I, which made the United States a debtor nation, a country that had invested fewer resources in other countries than they had invested in America. With the advent of World War I, and the creation of the Federal Reserve, the bankers transformed the United States into a net creditor nation of \$3.7 billion. American banks established foreign branches and made foreign loans. Europe shifted their investments from the United States while the US government and banks extended loans to the Allies, France and Britain. With the war, J. P. Morgan, National City Bank and others exploited the new federal legislation to enlarge their foreign operations.

Cordell Hull, House of Representatives (1907-1921; 1923-1931), who authored the federal income tax laws of 1913 and 1916, remarked in his memoirs, that the enactment of the income tax law and the Federal Reserve System had to be rushed through, “just in the nick of time,” to meet the economic demands of the war. Further, administrators had to train bank staffs to meet the demand of their services. The drafters of the Federal Reserve Act decided that Federal Reserve Banks would function as fiscal agents of the government.

Beginning in July 1913, a steady exportation of gold concerned US bankers, some of which had fallen below their required gold reserves. This was serious because drafts,

payable in gold, were due on railway and industrial securities sold abroad starting on July 31, 1914. The bankers and the US Treasury created a gold fund of \$100 million to protect the country's foreign credit. The warring nations were purchasing huge amounts of American products, which normalized the inequitable exchange rate. Then gold started flowing into the United States. In 1915, President Woodrow Wilson informed the banks, "The government sees no objection in opening banking credits to all belligerents." While that might have sounded neutral, the international bankers made 95 percent of their loans to the Allies and only 5 percent to Germany. Professor Pierre Renouvin admitted, "American economic and financial relations were almost exclusively tied to Great Britain and France. How could such a situation not have political consequences? The neutrality of the United States is no longer impartial." Colonel Edward M. House said, "We will act not only to save civilization but also for our own benefit." In September 1915, New York bankers loaned England and France a combined amount of \$500 million, payable on April 15, 1917. Then, between September 1, 1915 and April 17, 1917, they loaned England and France over \$1,650 billion dollars. The net balance of gold imports into the United States in that same period was \$1,075 billion. Our entry into the war required funding the US military, either through taxation or the sale of a series of four "liberty" bonds, a voluntary contribution which functioned as a loan to the government. The Treasury Secretary, William G. McAdoo, a former New York lawyer, the first Chairman of the Federal Reserve Board, issued Liberty Loan bonds. They had varying maturation dates, some as long as thirty years.

German loans generated within the United States included \$400,000, from Kuhn, Loeb & Company in September 1914, backed by the collateral of twenty-five million marks deposited with Max M. Warburg, Kuhn, Loeb's German affiliate. Chase National Bank, part of the Morgan group, loaned Germany \$3 million. Mechanics and Metals National Bank loaned \$1 million dollars. These loans funded Germany's espionage activities in Mexico and the United States Felix A. Sommerfeld, a German agent, had an account with the Guaranty Trust Company, which made direct payments to Western Cartridge Co. of Alton, Illinois, for ammunition used in Mexico by Pancho Villa's bandits.

The Central Liberty Loan, within each of the twelve Federal Reserve Districts Committees, aggressively marketed the bonds to the American public. Benjamin Strong, head of J.P Morgan's Bankers Trust Company and governor of the Second Reserve Bank (1914-1928) headed the Committee in his district, assisted by J. P. Morgan, Jacob H. Schiff, and Frank A. Vanderlip and others. Trusted men directed the bond sales in each Federal Reserve District. The nationwide National Woman's Liberty Loan Committee enrolled about 800,000 women.

People competed against each other and got on the patriotic bandwagon to support the war by selling and buying bonds. Loyalty typically follows one's money. Every man, woman and child was encouraged to do their part for the war effort. There were bands, parades, processions, and airplanes dropping leaflets. They used every imaginable selling device, including the use of endorsements from movie stars, Douglas Fairbanks and Mary

Pickford, with phrases like “Your money must win the war.” They filled newspapers and magazines with full-page ads to “Buy a Bond.” It was the cultural slogan of the day, in every public place—restaurants, theaters, clubs and schools. Purchasing a bond was not about earning the promised interest but about “helping” the country in its patriotic fight for freedom. Purchasers without available funds could borrow money—“Borrow, buy and save.” One could even buy bonds on the installment plan using coupon books. After the Armistice, prices for all commodities increased and merchants required more cash to increase their inventories. People redeemed their bonds below par.

On October 1, 1895, Paul Warburg had married Nina Loeb, the daughter of Solomon Loeb of Kuhn, Loeb and Company, an international banking firm. Felix M. Warburg, a senior partner at Kuhn, Loeb, married Frieda Schiff, the daughter of Jacob H. Schiff, also of Kuhn, Loeb. The Schiffs and the Rothschilds were neighbors in Frankfurt. Schiff used Rothschild money to secure a partnership with Kuhn, Loeb and Company. After frequent trips to the United States, Paul Warburg, along with his brother Felix, immigrated to the United States from Germany in 1902.

American citizens, in 1915 and 1916, were anti-British and pro-German. Paul Warburg, a naturalized citizen (1911), and Kuhn, Loeb Company were prominent United States fixtures. Max, Paul’s brother stayed at home in Frankfurt to manage the family business, M.M. Warburg & Company, which their great-grandfather founded in 1798. Paul was a partner in the family firm in 1895. Max supervised the German Secret Service during the war. He was working in Switzerland for German Intelligence. 1531 From the proceeds of the First Liberty Loan, J. P. Morgan advanced Britain \$400 million at the beginning of the war. By 1917, the Morgans and Kuhn, Loeb Company had loaned the Allies \$1.5 billion in addition to financing numerous front organizations designed to embroil America into warfare. Morgan also offered to give the Allies credit. On October 13, 1917 Woodrow Wilson gave an address, “It is manifestly imperative that there should be a complete mobilization of the banking reserves of the United States. The burden and the privilege (of the Allied loans) must be shared by every banking institution in the country. I believe that cooperation on the part of the banks is a patriotic duty at this time, and that membership in the Federal Reserve System is a distinct and significant evidence of patriotism.”

On December 12, 1918, after they signed the armistice, the US Naval Secret Service presented a report detailing Paul Warburg’s questionable connections while we were at war with Germany. The report noted that he had resigned from the Federal Reserve in May 1918. In June 1918, he wrote to Wilson, “I have two brothers in Germany who are bankers. They naturally now serve their country to their utmost ability, as I serve mine.” According to the New York Times, dated August 10, 1918, he resigned because his term expired, not because of his brother’s position. He assumed Morgan’s position on the Federal Advisory Council and continued to administer the Federal Reserve for the next ten years. Paul Warburg was a Council on Foreign Relations (CFR) Director since its founding in 1921, until his death and was trustee of the Institute of Economics (1922),

which merged with the Brookings Institution (1927), for which he was a trustee until his death. He promoted German-American relations and helped found the Carl Schurz Memorial Foundation in 1930. James Warburg, Paul Warburg's son, was one of Franklin D. Roosevelt's financial advisers. Kuhn, Loeb Company was the country's biggest owner of railroad properties in the United States and Mexico and had controlling interest in The New York Times. They instructed President Wilson to establish the US Railroad Administration, under the jurisdiction of McAdoo, Comptroller of the Currency in order to protect their interests during the war. In 1918, the Federal Transportation Council replaced this agency. These agencies prevented railroad workers from earning suitable wages, a travesty, given the increased profits that Kuhn, Loeb was making from the US government as a result of the war.

On May 1, 1918, Sir William Wiseman sent a cable to Colonel House from London suggesting Allied assistance to help organize the Bolshevik forces. During the years 1917-1920, Lt. Col. Norman Thwaites often consulted with Otto H. Kahn on political and economic issues. He also sought advice from Wiseman, the advisor on United States issues to the British delegation at the Peace Conference. He functioned in Britain in the same capacity as House did in this country. Wilson appointed House to head the American War Mission to the Inter-Allied War Conference in the summer of 1917. Gordon Auchincloss, House's son-in-law, was his assistant. Paul Cravath, a Kuhn, Loeb Co. lawyer accompanied House and Auchincloss on a European tour, guided by Wiseman. He was a protégé of Canadian Round Table founder Lord Beaverbrook, and was prominent in the Zionist movement."

Representative Charles A. Lindbergh, of the House Banking and Currency Committee, impeached five members of the Federal Reserve Board. Lindbergh said that Paul M. Warburg, of the Federal Reserve Board, the National City Bank and other banking firms conspired to enact currency legislation in the interest of big business in order to make industrial slaves of the population. However, the House did not act on the impeachment resolution.

G.B. Shaw has reduced the First World War to this nullity: "The present destruction of the German military power is [...] a completely regular operation of British foreign policy, which was executed according to plan with all the resolve, patience, cunning and power which we in England are accustomed to use, and with overwhelming success. But likewise also, however, with the amazing English talent of veiling from oneself what one is doing. The Englishman never knows what the 'Foreign Office' is up to; [...] An instinct tells him that it is better for him [...] not to know." According to all that is known today, the First World War of 1914 would not have happened. Germany would have been able to calmly put up with the parade from Russia toward its borders!

After the First World War, a foreign diplomat expressed to Churchill: "In the twenty years of my residency there, I was witness to a profound and total revolution in England, even as the French Revolution was. The ruling classes in your country have been almost completely robbed of their political power and, to a large extent, their prosperity and

property as well; and all this [...] without the loss of a single human life.”

8.11 The Balfour Declaration

Decades before World War I, the Zionist movement was predisposed to be pro-German. Theodor Herzl, formerly an assimilated Jewish journalist in Vienna, was part of the German-speaking world, whose first supporters resided in Germany and Austria. There were, in Germany, approximately 600,000 Jewish citizens who were better educated, a bit more assimilated, and enjoyed superior social standing compared to Jews living in Eastern Europe. Germany was the prominent power in Europe and Jews in Germany viewed themselves as the natural leaders of Jewry. Additionally, the Jewish aristocrats in America originally came from Germany and maintained cultural loyalties to that country and when war erupted, they naturally allied with Germany.

Prior to 1914, Berlin had been the foundation of Zionist activity. The Israel Institute of Technology, located in Haifa, looked to Germany for support and protection. Arthur Zimmermann, who became Under Secretary of State in 1911 in the German Empire, was in China during the Boxer Rebellion, and as acting secretary, he participated in the deliberations in 1914, with Kaiser Wilhelm and Chancellor Theobald von Bethmann-Hollweg (1909-1917), to support Austria-Hungary after the assassination of Franz Ferdinand. Hollweg, Max Warburg, and Albert Ballin advised Wilhelm to declare war. Zimmermann, famous for the Zimmermann telegram, later helped the communists to undermine czarist Russia and appreciated his close connections to the German Zionists.

Jews living in America and Britain, including Baron Walter Rothschild, favored Germany in 1914 and 1915, even to the point that Rothschild sent the Kaiser an encouraging cable when the war broke out. At the beginning of the war, most Jews favored Germany because it had attacked Russia, their mortal enemy. They viewed Kaiser Wilhelm, who treated them with deference, as the man who might potentially deliver Palestine to them. Despite minor altercations against them in Germany, they still felt more at ease there than anywhere else in Europe. They had acquired substantial influence in finance, business, and the news media and in the universities. Their language, Yiddish, was similar to German and they were culturally comfortable. The most influential members of the Reichstag were Jews.

Dr. Chaim Weizmann understood that the British government would relinquish the organization of the Jewish commonwealth in Palestine to the management of the Jews, but first a powerful government must militarily conquer Palestine. Thereafter, the Zionists would require the protection of the armies of that same powerful government to protect them from the indigenous population. In 1915, Dr. Weizmann already knew what would occur in the next twenty years following the war. The British would establish a protectorate and the Jews would take over the country.

On June 1, 1916, Louis D. Brandeis joined the US Supreme Court as an Associate

Judge. By October 1916, the war-torn British were exhausted and unable to expel the German Army from France. Prime Minister Herbert H. Asquith (1908-1916), was ready to negotiate to end the war. However, the Zionists, via Weizmann and Arthur J. Balfour, offered British officials another possibility. If Britain would establish a secret alliance with the Zionists, in order to transfer Palestine to them for the establishment of a Jewish state, the Zionists would maneuver America into the European war in behalf of the Allies, which would guarantee an Allied victory, an arrangement that probably occurred in October 1916. This agreement would necessitate changes in the political and military personnel in Britain and Germany, so that specific people would be in place to facilitate the necessary circumstances. 1652 In November 1916, the American citizens reelected Woodrow Wilson who campaigned on the deceptive slogan—He kept us out of war.

In early December 1916, Prime Minister Herbert H. Asquith resigned under pressure. On December 6, 1916, King George V gathered numerous politicians, including Balfour and David Lloyd George, to a special meeting at Buckingham Palace. That night, a delegation approached Balfour to see if he would accept the office of Foreign Minister under a new Prime Minister, Lloyd George. Dr. Weizmann wrote a memorandum to the British Government in which he demanded that it officially recognize “The Jewish population of Palestine” as the Jewish Nation.” A committee composed of nine Zionist leaders, and Sykes, the government’s representative, convened privately to draft an official document, later known as the Balfour Declaration. Balfour immediately scheduled a trip to America to promote an Anglo-American protectorate but he never spoke directly to President Wilson.

The new Prime Minister David Lloyd George, under the strong influence of the Zionists, wanted war, not negotiations. On December 10, 1916, Lord Balfour replaced Sir Edward Grey as the British Foreign Minister. Baron Sidney C. Sonnino became the Foreign Minister in Italy. Bernard Baruch enlarged his influence within President Woodrow Wilson’s Administration. Georges Mandel’s real name was Jeroboam Rothschild. Though reportedly unrelated to the infamous banking family, he was prosperous and Jewish. 1660 He was Georges Clemenceau’s handler, just as Edward M. House managed Woodrow Wilson. Louis-Lucien Klotz, a radical Jewish socialist, became French Minister of Finance, and was later responsible for negotiating reparations from Germany. House was elated with all of these changes. Balfour visited the United States in 1916, to establish the foundation among financial and media connections. 1661 Balfour was very impressed with the strength of the US Jewish lobby and their powerful influence in financial circles.

Financial networks were already set up as well as the media that used every propaganda slogan imaginable. Colonel House, supported by American Jews, informed the British government of President Wilson’s every move. House literally controlled the United States; Wilson was just a figurehead and everyone but the public knew it. On December 12, 1916, German officials stated that they were anxious for peace and wished to talk with their adversaries and hoped Wilson would persuade the Allies to meet together. House ruled out the possibility of peace negotiations. On December 18, 1916, US Ambassador

to Britain, Walter H. Page, relayed a peace offer to the Allies from Germany, the Austro-Hungarian Empire, the Ottoman Empire, and Bulgaria. On January 9, 1917, Prime Minister Lloyd George quickly repudiated the offering, and declared that Britain would fight to the victory, which possibly prompted the Germans to re-initiate submarine warfare. Ambassador Page, in touch with President Wilson and Secretary of State Robert Lansing, defended British policies. This was after William Jennings Bryan's resignation, after he described Britain's collapsing financial situation, and the need for American neutrality. America's entry into the war would allow Britain to avoid financial disaster.

Arthur Zimmermann, the German foreign minister, informed the German ambassador in Washington, Count Johann Heinrich von Bernstorff that Germany was going to engage in submarine warfare so that the ambassador could alert US officials. On January 19, 1917, Zimmermann sent a second telegram to the German Embassy in Mexico City. The British intercepted and de-coded it. The Kaiser and Chancellor Hollweg were unaware of Zimmermann's telegram, as he had acted on his own authority. Later, officials called him to testify about his behavior before the Reichstag. Bernstorff advised the German government to reconsider their decision to start unrestricted submarine warfare, which it refused to do. On February 1, 1917, Bernstorff told the US government that Germany was beginning submarine warfare the next day. On February 14, 1917, the US government suspended all diplomatic relations with Germany and demanded that Bernstorff leave the country, which he did.

In early 1917, three obstacles prohibited Zionist efforts from acquiring a promise from the British government to support their objectives in Palestine—1) the 1915 agreement made with Sharif Husain of Arabia regarding an independent Arab state, including Palestine; 2) the Sykes-Picot agreement; 3) an influential faction of British Jews opposed political Zionism. However, Prime Minister Lloyd George directed Sykes to negotiate with the Zionists which resulted in the British Government issuing the Balfour Declaration. Additionally, the Jews allegedly used their substantial influence to maneuver the United States into the war. The secretive details of the Balfour-Weizmann agreement of October 1916 remain a mystery. On April 8, 1917, Dr. Weizmann wrote and requested Judge Brandeis to counsel Wilson to oppose a joint protectorate but to confirm America's support of Balfour. Brandeis, author of *The Jewish Problem* (1915), no longer directed the American Zionist movement but functioned as Wilson's advisor on all Jewish issues. Weizmann requested Brandeis to counsel Wilson to favor a British protectorate. Although Balfour did not meet with Wilson, the president talked with Rabbi Stephen S. Wise who had also informed Edward M. House of their wishes. The Zionists had already recruited House to their cause.

Balfour, Brandeis, House, and Weizmann were all dedicated to establishing a British administration in Palestine. Balfour, now the British Foreign Secretary, despite a conflict of interests, personally supported Zionism. Brandeis, also in an official position, had self-interests that countered his official obligations. Brandeis and House, on behalf of Wilson, and in accordance with Weizmann's request, issued a statement denouncing secret

treaties. Americans, upon hearing their announcement, assumed that their government was transparent and trustworthy, exactly the illusion that the Zionists sought. The British and the French had to defeat Turkey and win the Arabs to their side, using the deceptive Sykes-Picot agreement, a contract that would create an independent confederation of Arab States. Unfortunately, for the Zionists, that agreement would also facilitate the establishment of an international administration for Palestine rather than an exclusive British protectorate. However, Weizmann made certain that President Wilson, despite his denunciation of secret treaties, would insist that England assume the protectorate of Palestine, which targeted the Arab inhabitants.

The British government sent Sir William Wiseman to Washington to advise Edward M. House about Britain's desires. He informed House, "It is impossible to negotiate with the Germans since they did not specify any conditions," the very purpose of negotiations, to define the conditions. US Ambassador Walter H. Page told British officials that President Wilson was not interested in negotiating, which was a blatant lie. Wilson had written letters to British and German officials, behind House's back saying, "The belligerents each insist on certain conditions. They are not incompatible, contrary to the fear of certain persons. An exchange of views would clear the air." This was just the circumstances that the German officials wanted, but the Allies rejected this suggestion. House was not pleased when he read Wilson's note and disassociated himself from Wilson's correspondence because "the Allies were obviously not in a mood to welcome it."

After the Bolshevik Revolution of October 1917, Russia capitulated. The Kaiser's Turkish allies probably would have delivered Palestine to the Zionists. Then, the Zionists no longer needed Germany, especially since they had an alliance with Britain. Thus, Balfour viewed Germany as expendable. The Zionists were now looking at Britain as their total benefactor, to get Palestine as a Jewish homeland, especially after House and Balfour brought America into the war to guarantee an Allied victory. Balfour's only challenge was to sway the US Jews to support Britain and relinquish their longtime loyalties to Germany.

They were going to take Palestine, no matter who won the war, Britain or Germany. However, the Zionists played both sides of the war to guarantee their own objectives, despite the costs to anyone else. On November 12, 1917, The New York Times reported that the Germans recognized that Morgenthau, Walter Rothschild, Frankfurter and President Wilson had conspired to get the United States to enter the war in exchange for the Balfour Declaration. In August 1919, Woodrow Wilson sent General James Harbord on a fact-finding mission to the Middle East to investigate the feasibility of the Balfour Declaration, in support of a Jewish state.

Morgenthau explained how the Turkish government instigated the massacre, and reiterated how officials "enthusiastically approved this treatment of the detested race." They had "even delved into the records of the Spanish Inquisition and other historic institutions of torture and adopted all the suggestions found there." He claimed that the atrocities "were merely the preparatory steps in the destruction of the race." The Turks preferred

to use death through deportation instead of wholesale slaughter by announcing their intentions “of gathering the two million or more Armenians living in the several sections of the empire and transporting them to this desolate and inhospitable region,” to the desert of what is now Syria. They understood that “the great majority would never reach their destination and that those who did would either die of thirst and starvation.” He wrote, “When the Turkish authorities gave the orders for these deportations, they were merely giving the death warrant to a whole race; they understood this well.”

The Balfour Deportation Declaration

Negotiations between the British politicians and the Zionists began as early as 1903, when Arthur J. Balfour was British Prime Minister (1902-1905). The Zionists retained the London law firm of Lloyd George, Roberts and Company, as David Lloyd George, a partner at the firm, was a Member of Parliament (1890-1945), allowing them influence in the Foreign Office. Politicians and moneyed individuals frequently form symbiotic relationships.

Theodor Herzl's successor, Dr. Chaim Weizmann, a freemason, recognized that Zionism could only succeed with the support of a world power. Weizmann, born in Belarus (then part of the Russian Empire), moved to England in 1905, developed an interest in Palestine and was the professed leader of a pro-Zionist faction. He was a member of the General Zionist Council. Weizmann, Chairman of the Zionist Administrative Commission in Palestine, and a chemist, offered his services to the Ministry of Munitions when war erupted. According to Lloyd George's memoirs, the Balfour Declaration was Weizmann's reward for his expertise in producing acetone. British officials told the citizens that they supported Zionism to show gratitude to Weizmann (Israel's first president). As the war became imminent, numerous politicians espoused Zionism and became co-conspirators while failing to inform the public about their intentions regarding Palestine. Weizmann advocated a British-Zionist alliance in October 1914. He lobbied every influential figure in the Anglo-Jewish hierarchy of the Rothschild-dominated British government, primarily Balfour, Baron James de Rothschild, Sir Herbert Samuel, and Sir David Lloyd George. Weizmann and Samuel persuaded a majority of sympathetic British citizens to create a British protectorate.

The plot that the Jews developed in Russia, could not get support there, or in Germany, but it took root in Britain. Weizmann and Balfour met again on December 14, 1914, right after war erupted. During the first few months of the war, many British and French soldiers lost their lives and by the end of the war, 3,000,000 of the youth of France and Britain would die thinking they were overthrowing Prussian militarism, or liberating small nations, and restoring freedom and democracy. Balfour told Weizmann, regarding Zionism and Palestine, “I was thinking about that conversation of ours (in 1906) and I believe that when the guns stop firing you may get your Jerusalem.” In referring to the protectorate, Dr. Weizmann repeatedly resorted to the phrase, “the Bible is our

Mandate” which of course meant the utter destruction, of the indigenous population, a fact that western politicians acknowledged, yet they continued to support the Zionists. 1738 Weizmann wanted to “make Palestine as Jewish as England is English.”

The Zionists assumed that Britain, France, Russia, Serbia, and Belgium would prevail in World War I and that they would dismantle the Ottoman Empire. In May 1917, Nahum Sokolow helped negotiate for the Balfour Declaration when he met with French officials who formally agreed to support the Zionists. They secured a promise from Britain that Palestine would be a national home for the Jews. In return, the World Zionist Organization would network and pressure Jews in Austria, Germany, France, and the United States to support the Allied war effort. America entered the war on April 6, 1917, a year before the war ended. That year, Lord Balfour, a crucially important Zionist patron and the British Foreign Minister, sent a letter, drafted by Leopold M. Amery, to Lord Rothschild, which ultimately grew into the Balfour Declaration, “the key which unlocks the doors of Palestine.” Lord Balfour wrote, “Zionism . . . is of far profounder import than the desires and prejudices of the 700,000 Arabs who now inhabit that ancient land.”

On June 27, 1917, Lord Edmund Allenby, took over as commander-in-chief of the Egyptian Expeditionary Force to conquer Palestine and Syria. He decided that it was inappropriate to publish the Balfour Declaration in Palestine, as his military forces had not yet subdued the area. He reorganized his troops, won the Third Battle of Gaza, October 31 to November 7, 1917, and captured Jerusalem on December 9, 1917 where he established martial law. Although the Zionists presumptuously drafted the Balfour Declaration before the end of the war, it did not become official until the San Remo Resolution on April 24, 1920, after the British Mandate established the Civil Administration.

People might be more accurate if they called the Balfour Declaration, the Lord Alfred Milner Declaration because he also helped draft the document, a fact that they concealed until July 21, 1936. Nathan M. Rothschild appointed him to chair the Round Table group to implement world government, and to promote the draft in the War Cabinet. The initial Zionist draft, of July 1917, was simple. It mandated that Britain would reconstitute Palestine as the National Home of the Jewish People. Further, Britain would use its power to reach that objective, in consultation with the Zionist Organization. Balfour wrote the contract between Britain and World Jewry as a letter to Baron Walter Rothschild who was a key figure in England’s Jewish community, and he would then transmit it to the Zionist Federation of Britain and Ireland, established in 1899, as a Zionist lobby. The actual final draft of the declaration had to be issued in the name of the Foreign Secretary, but the actual draftsman was Lord Milner.”

On December 23, 1917, at least 15,000 American Jews gathered at Carnegie Hall to celebrate the signing of the momentous Balfour Declaration on November 2, 1917. Another 25,000 American Jews paraded down the main streets of Newark, New Jersey. Anti-Zionist Jews did not celebrate but the majority of American Jews did and they, most especially Colonel Edward M. House, had been influential in persuading President

Woodrow Wilson to champion the Declaration. It was pompous, pretentious, generosity to promise a well-represented, well-connected ethnic group, land that another closely related ethnic group already inhabited, and had for decades. It was sure to cause chaos, death, and destruction that would certainly require a longterm military presence in the area.

8.12 The Brest-Litovsk Treaty

On April 6, 1917, Congress declared war on Germany obligating that country to fight a two-front war, which was even more formidable after America joined the battle. There was no way that Germany could possibly win. However, her defeat would end the war, the profit stream, the ongoing Marxist infiltration, and the subsequent destabilization of Europe. Vladimir Lenin, in order to prolong the war, had to somehow remove Russia from the equation. Thereafter, Germany and Austria-Hungary and its allies would exhaust themselves fighting France, Britain and the United States, the remaining allies. Meanwhile, Russia, on the sidelines, would add fuel to the fiery battle.

By 1917, provocateurs were busily engaged in Berlin where they infiltrated various organizations, including the government. On July 6, 1917, in the Reichstag, Matthias Erzberger passionately called for peace. In the fall of 1917, using seventy-five newspapers, the militaristic Bolsheviks began an "unprecedented campaign" for peace. On October 26, 1917, after they had seized St. Petersburg and gained control of the government, Lenin presented their first official document to the Second Congress of the Soviet, the Decree on Peace. The next day, he had it published in the *Izvestia*, which called for an abrupt end of Russia's war with Germany and Austria-Hungary.

A continued war with Germany might cost Lenin the more important revolution in Russia. On November 23, 1917, in as much as their political survival was at stake, Lenin and Trotsky decided to negotiate with Germany at Brest-Litovsk, a city in Belarus. Germany finally persuaded Lenin to negotiate. Yet, for political expediency, he procrastinated for over four months. Lenin and Trotsky, implementing the total capitulation of Russia to Germany, directed the Russian army to abandon their trenches, leaving their guns, mortars, machine guns, millions of small arms, ammunition, uniforms, and other essential war supplies and return home. Lenin and Trotsky, two internationalists devoid of national loyalties to any country, with their Peace Decree betrayed Russia's allies, allowed Germany to focus its attention on the western front while at the same time wreaking havoc within Germany and Austria-Hungary beginning in earnest in early 1918, through well-positioned agitators. Lenin and Trotsky then came to Germany's assistance with the Brest-Litovsk Treaty.

The Bolsheviks stalled, from December 28, 1917 to January 7, 1918. Lenin faced massive opposition at home. The propagandized working classes had elected only 175 Bolsheviks out of 717 total seats in the Constituent Assembly. On January 18, 1918, Bolsheviks

placed police armed with machine guns at the Taurid Palace to displace new assembly members as they arrived. They dissolved the Assembly the next morning. A few hours later, some workers organized a march to show their support for the people they had elected. The Bolsheviks machine-gunned twenty-one of them, the consequences of opposing Lenin. The Germans recognized that less than ten percent of the population had forced a dictatorship on Russia. Trotsky wanted to use those same tactics at Brest-Litovsk but that would not achieve their goals. On January 22, 1918, Trotsky, of the central committee, proposed that the Soviets should refuse to sign a peace treaty but have both sides demobilize.

On February 9, 1918, Ukrainians declared independence and soon negotiated the German-Austrian-Ukrainian treaty and then shipped a million tons of wheat to Austria. When Trotsky heard about it, he flew into a rage. He had hoped to leverage the Germans into a treaty more beneficial to the Soviets, using food, a desperate need of Germany and Austria. Germany then ordered troops to St. Petersburg, about a two-week march and they met no resistance along the way.

The Bolshevik arbitrators were Adolph A. Joffe, Lev Rozenfeld (Lev B. Kamenev) and Lev D. Bronstein (Leon Trotsky). 1724 When General Erich Ludendorff met them, he asked, "How can we negotiate with such people?" He would rather have taken his troops to St. Petersburg and Moscow and eradicated their stronghold. Yet, that would mean retaining a large German force in Russia and he could not spare the forces when he needed his greatest strength on the Western front. Erich Ludendorff wanted better territorial guarantees on the eastern border and the creation of a German protectorate in the Baltic States to halt the spread of Bolshevism. On March 3, 1918, they signed the Brest-Litovsk Treaty.

Lenin agreed to recognize the anti-communist areas that were once part of the Russian Empire, mentioned above, and Rumania (including Bessarabia), the Crimea, the Caucasus, Georgia, Armenia, Azerbaijan, the Urals, and all of Siberia. He agreed to limit his rule to Moscow and the adjacent area, in addition to the city of Leningrad. However, despite his promises, he intended to expand Communism as quickly as possible. Surrounded by anti-communist countries, if the west had really wanted to crush communism, they could have at this point.

Lenin's plans fell apart and he was about to have the anti-communist Germans too close to home. They would stop his revolution so he was ready to sign anything as long as he could retain part of Russia as a base. France, his ally, through their embassy, wanted Russia to stay in the war and even offered men and millions in gold which they accepted. However, the German Army was about 100 miles from his headquarters in St. Petersburg. Trotsky wanted to fight but finally agreed with Lenin that they should sign the treaties. Lenin viewed this as a defeat but had no choice. It was either peace with Germany or extinction.

With the treaty, Lenin betrayed his allies, members of the Triple Entente, Britain, France,

Belgium, Serbia, Italy, Japan, Greece, and Romania by signing the Brest-Litovsk Treaty with the Central Powers, the German Empire, the Austro-Hungarian Empire, the Ottoman Empire, and the Kingdom of Bulgaria (the Triple Alliance). Lenin relinquished Poland, Finland, Estonia, Latvia, Lithuania, Belarus, and over half of Ukraine. The treaty put Russia at a disadvantage but he focused on initiating a world revolution even if it meant sacrificing Russia's national interests. Lenin was quick to admit that establishing Communism in Russia and other countries was foremost and that it was above all national sacrifices. They also signed the Treaty of Bucharest with Austria-Hungary on May 7, 1918. In the treaty, the Soviets relinquished the Baltic countries, Poland, Byelorussia, Ukraine, Crimea and Tiflis to Germany, who now had access to food and other raw materials. According to author, Leon Degrelle, Germany might have won the war if the United States had not intervened. General Ludendorff, Marshal Paul von Hindenburg's best general, brought back 600,000 soldiers from the Eastern front to reinforce Germany's war efforts on the Western front.

Germany immediately acquired massive amounts of food to feed its starving population. In as much as they now occupied Russian land, Germans displaced Russians. Lenin and Trotsky had not consulted anyone about the forfeiture of their land and homes. Without the industrial and agricultural regions, millions of people in the remaining territory experienced severe famine. Lenin, to prolong the war, willingly sacrificed them. The stipulations of the treaty provided food and resources to Germans while it deprived Russians who adamantly opposed communism. Moreover, in as much as Germans were taking lands and homes, the fleeing Russians would develop resentment and be anxious and willing to fight Germans in another war, already planned by the communist cabal.

The French and British had blockaded Germany and her allies, cutting off all food and weapon supplies. Russia, with the Brest-Litovsk Treaty, like manna from heaven, relinquished about 387,000 square miles, about 25 percent of Russia's cultivated land to Germany. At least fifty-six million people inhabited the area, which also contained 26 percent of the nation's railways, 73 percent of their iron and steel industry and 89 percent of their coal. On August 27, 1918, Lenin and Trotsky also agreed to pay Germany war reparations in the amount of six billion marks, without which, Germany might not have lasted until November 1918.

On November 5, 1918, because of Soviet revolutionary propaganda, Germany renounced the Treaty of Brest-Litovsk and terminated diplomatic relations with the Russian Soviet Federative Socialist Republic (RSFSR) which came to power on November 7, 1917. The Bolsheviks then voided the treaty on November 13, 1918, as reported in Pravda the next day. Following the armistice, the German Army totally withdrew from the territories obtained through the treaty. On April 16, 1922, via the Treaty of Rapallo, the two countries, with Georgi Chicherin, Soviet Foreign Minister and Walther Rathenau of Germany agreed to invalidate all territorial and financial claims against each other. On June 29, 1926, officials reaffirmed that agreement with the Treaty of Berlin.

8.13 Treaty of Versailles

Governments that are almost certain to be victorious during a war must justify their warfare intentions to the citizens. Governments do everything possible to subvert anti-war sentiments including formulating a sub-culture of problematic pacifists, like the anti-war drug culture of the 1960s, so that the majority of the population would predictably marginalize authentic pacifists who resist war for moral reasons. Victorious nations must prove that the conquered nation was the aggressor in order to impose a punitive, even revengeful peace on the vanquished. Raymond Poincaré, later the Prime Minister of France, said regarding reparations, "If the Germans are proved innocent, why should they want to pay war damages?"

Following World War I, numerous scholars in the triumphant countries, as well as the conquered nations, otherwise accurate and credible in many of their historical interpretations, falsely claimed that Germany bore the sole responsibility for the war. Fabre Luce, the French historian, apparently more honest than his colleagues, admitted, "France isolated herself in a lie."

Delegates were gearing up for the Paris Peace Conference, January 18, 1919-January 21, 1920, with the inauguration of the League of Nations. On January 4, 1919, Dr. Chaim Weizmann arrived in Paris as part of the Zionist Delegation. Nahum Sokolow would join him. The Zionists, who after years of negotiations with Middle East officials and the capitals of Western Europe, appeared to be gaining cooperation between the Arabs and Jews of Palestine. On behalf of the Zionist Organization of America, Julian W. Mack, Stephen S. Wise, Harry Friedenwald, Jacob De Haas, Mary Fels, Louis Robison and Bernard Flexner attended. Israel Rosoff attended in behalf of the Russian Zionist Organization.

The Zionist Organization submitted their draft resolutions for consideration by the Peace Conference on February 3, 1919. Their demands, officially submitted by Lord Walter Rothschild, included:

- (1) Officials would formally recognize the Jewish people's historic title to Palestine and their right to reconstitute their National Home there.
- (2) The boundaries of Palestine were to be declared as set out in the attached Schedule.
- (3) Officials would place the sovereign possession of Palestine in the League of Nations and entrust the Government to Britain as Mandatory of the League.
- (4) The High Contracting Parties would insert other provisions relating to the application of any general conditions attached to mandates, which are suitable to the case in Palestine.
- (5) The mandate shall be subject to several noted special conditions, including a provision to be inserted relating to the control of the Holy Places.

A few powerful individuals, including the Rothschilds and their allied bankers, instructed their agents on the terms they sought to impose upon Germany. One important aspect of the Versailles Treaty was the allocation of Germany's railway rights within Palestine to the Rothschilds which would then allow them to dictate policy for Palestine because they had loaned Turkey almost £100 million. Since Turkey lost the war and its government had collapsed, they were unable to pay the debt, allowing the Rothschilds to claim Palestine with its strategic location and Christian and Islam significance. The British government, habitually subservient Rothschild puppets, maneuvered the circumstances to ultimately gain political control of Palestine. As a result, the Rothschilds began to direct the formation of the Israelization via their power over the British politicians.

The US Delegation, headed by Herbert Hoover, Wilson's Advisor on Relief, included Bernard Baruch and Paul Warburg, as economic advisors, Colonel House, Walter Lippmann, and brothers Allen W. and John Foster Dulles. Just before the conference, Baruch accompanied Hoover to Belgium, the location of his profitable food swindle. Hoover was in Paris for another reason—to meet with several other individuals to discuss the need for a continuing council of "private bodies" to resolve international problems. On May 30, 1919, he met with Colonel House, Whitney H. Shepardson, General Tasker H. Bliss, George L. Beer, Professor Archibald C. Coolidge and Dr. James T. Shotwell and their British counterparts Lord Robert Cecil (a Jewish family), Sir Valentine Chirol, Lionel G. Curtis, Lord Eustace Percy and Professor Harold Temperley.

Hoover and Thomas W. Lamont were among twenty-one other Americans, including twelve scholars, members of The Inquiry, from Harvard, Yale and Columbia who attended the organizational meeting, at Hotel Majestic, of the Anglo-American Royal Institute of International Affairs of London which is allegedly Illuminati-based. 1794 Charles Seymour (S&B), historian and later President of Yale University (1937-1951), was a CFR (Council of Foreign Relations) founding member. The CFR initially functioned as a J. P. Morgan front in association with the American Round Table Group. 1795 The institute devises domestic and foreign policies. Scholarly members promote open borders and internationalism and curtail nationalism. J.P. Morgan, Baruch, John D. Rockefeller, Otto H. Kahn, Jacob H. Schiff and Paul Warburg provided financing for its creation. Others in the US Peace Treaty Delegation included President Wilson, a few others including J. P. Morgan lawyers. Albert Strauss (Federal Reserve Board) and Thomas W. Lamont, a Morgan partner and owner of the New York Evening Post were also part of the US Delegation.

The Peace Conference served as a social, familial gathering. Felix Frankfurter and Justice Louis D. Brandeis met with friends in Paris, Arthur J. Balfour, Louis Marshall, and Edmond de Rothschild who hosted the most prominent delegates at his Paris mansion. Minor delegates stayed at the Hotel Crillon. Paul Warburg socialized with his brother Max, who represented Germany. Dr. Carl Melchior, also of M.M. Warburg Company, and William G. von Strauss, Franz Urbig, and Mathias Erzberger, accompanied him. 1797 Baruch, head of the Reparations Commission negotiated with Max Warburg on behalf of Germany, who accepted the reparations terms. Paul Warburg, Thomas W. Lamont,

John Foster and Allen W. Dulles, of Sullivan & Cromwell, and other Wall Street bankers counseled Wilson on US diplomatic policies in conjunction with this conference. The Allies accomplished three major objectives, all in conjunction with devising the retributive treaties that had little to do with justice but led to further destabilization. Those goals were 1) implement the League of Nations, the entity favoring global governance over nationalism, located in Geneva; 2) officially recognize the Soviet regime; 3) reconfigure European countries to maximize ethnic and political discontent, a foundation for further warfare. The Versailles Treaty terms, imposed on Germany without any negotiation, included debilitating territorial changes and excessive reparations, which created the perfect environment for an anti-Soviet regime, an inevitable situation. The treaty formalized the circumstances that would ignite the next world war.

President Wilson's famous words had the vision of a great plan to solve the post-war problems. This plan delighted liberal circles and gave the war against Germany a moral justification. Wilson's speeches were based on the thought that peace can only be achieved through equity. International equity meant self-determination of the peoples and meant that borders need to be drawn by the will of the respective population. When this happens, when the people no longer want to change their borders then the main cause for war is nullified. One begins to wonder why they gave huge German populations to foreign nations, creating the exact opposite situation of what they said they wanted to achieve. The new eastern borders of Germany created the most problems in the end. No other part of the Treaty of Versailles created more resentment than losing millions of Germans to Poland and Czechoslovakia.

British Prime Minister Lloyd George invested effort in the German cause. On March 27th 1919 he said: "I believe that the Germans will accept everything else, including the heavy financial burden; but the thought of delivering millions of Germans to Polish rule will hit them hard." Wilson wanted equity and for him this meant the creating of a Polish sovereign state economically strong enough that it can be properly defended. To achieve this one has to go beyond the ethnic boundaries of Poland: "It is therefore necessary to not only look at the economic requirements but also at the strategic requirements, because the eastern part of Germany is highly aggressive.... Since I am against the Germans, I am on the side of Poland." When Lloyd George said that British troops would not fight to give this land to Poland without a national referendum, Wilson answered that American troops would support any nation against the Germans.

The Versailles Treaty, Economic Warfare against Germany

In 1918, Sir Alfred E. Zimmern, of Alfred Milner's Round Table, wrote a plan for Germany, *The Economic Weapon against Germany*, in which he said, "The Central Powers are being besieged by practically the entire world and they have no means at their disposal for bringing the siege to an end." 1800 He indicated that systematic, large-scale economic warfare was yet untried and that Germany would not anticipate its effectiveness. He

and his cohorts had post-war plans, devised at the peace conference. While the physical blockade would ultimately end, they would make certain that Germany would lack access to raw materials, making industrial employment impossible. Without manufacturing, the returning soldiers would not find employment. The Allies, by confiscating and managing essential supplies, they would incapacitate Germany and make it impossible for her to recover from warfare. This would cause food shortages and famine, which would affect all of civilized Europe, if not the whole world for as long as three years. He wrote, "Who more naturally than Germany? It is not as if the boycott had to be organized. It will come about almost of itself unless special provision is made in the peace."

The Allies included Britain, France, and the United States, and also Bolivia, Guatemala, Haiti, Cuba, Ecuador, Honduras, Liberia, Nicaragua, Panama, Peru, Uruguay and many others. Regardless, the countries that benefitted from the stipulations of the Versailles Treaty were Britain and France, both of which the United States supported. On January 8, 1918, President Woodrow Wilson delivered his Fourteen Points to Congress, authored by Walter Lippmann. They functioned as a platform for a new world order, calling for transparent democracy, unilateral disarmament, free trade and self-determination. He implied the restoration of invaded territories, no annexations, no contributions, and no punitive damages. Germany would sign the Armistice based on Wilson's ideals. On November 5, 1918, six days before the signing of the Armistice, Secretary of State Robert Lansing notified the German government that they would have to compensate the Allies for all damages, including civilian property which obviously contradicted Wilson's words.

On February 6, 1919, Germany's National Assembly had selected Friedrich Ebert as its first president during the Weimar period and soon the reparations rhetoric began. The armistice disarmed Germany and they allegedly devised the document to keep a Bolshevik onslaught at bay. However, Germany sent a few units to fend off the invaders at Frankfurt on the Oder and at Breslau. On February 16, 1919, Georges Clemenceau sent in the military and forced the German units to retreat behind a provisional line, which would later function as the border between Poland and Germany, awaiting the Allied Supreme Council's final decision. They obviously favored Warsaw. If Poland wanted to annex Silesia, all they had to do was issue a statement making the provisional border permanent.

Despite the humanitarian slogans like save the children and the massive funds that charities raised to allegedly alleviate starvation in Germany, the ships could not penetrate the blockade. In February 1919, George E. R. Gedye traveled to inspect the situation in Germany. He reported, "Hospital conditions were appalling. A steady average of ten percent of the patients had died during the war years from lack of fats, milk and good flour . . . We saw some terrible sights in the children's hospital, such as the 'starvation babies' with ugly swollen heads . . . Our report naturally urged the immediate opening of the frontiers for fats, milk and flour . . . but the terrible blockade was maintained as a result of French insistence." Norman H. Davis, President Wilson's Assistant Secretary of Treasury, and later Undersecretary of State, and John Foster Dulles, a wellconnected New

York lawyer, part of the US team, wrote the War Guilt Clause (Kriegsschuld Klausel), article 231, created on April 7, 1919. It compelled Germany to accept the responsibility, essentially a blank check, for causing all of the loss and destruction suffered by the allies. Article 231 reads, "The Allied and Associated Governments affirm and Germany accepts the responsibility of Germany and her allies for causing all the loss and damage to which the Allied and Associated Governments and their nationals have been subjected as a consequence of the war imposed upon them by the aggression of Germany and her allies."

Germany's political and economic structure, though incredibly bruised, remained a factor despite their defeat in the war. Warfare caused by external forces had not totally destroyed those responsible for Germany's strong industrial foundation or the country's resilient internal framework. The Allies' maneuvering at Versailles initiated Britain's second onslaught against Germany with the intention of bringing about the country's total obliteration. The Allies excluded the officials of the defeated nations of Germany and her ally, Austria-Hungary from the negotiations. Russia did not participate because it had already signed the Brest-Litovsk Treaty with Germany. The Allies arranged Germany's economic future. They apportioned German spoils as follows, 50 percent to France, 30 percent to Britain and they divided 20 percent between the smaller allies. The Allies abandoned Wilson's Fourteen Points, a deceptive decoy; it had served its misleading purpose of getting the Germans to surrender. They arrived in Paris at the end of April 1919. Prime Minister David Lloyd George read the text of the Versailles Treaty on May 7, 1919. They completed it in secret, the day before.

Prime Minister Georges Clemenceau submitted the potential treaty to the German delegation, which ordered the transfer of Silesia to Poland. An unauthorized group of Polish soldiers had invaded Silesia; therefore Germany had to relinquish nearly two million ethnic Germans, and its resource-rich province to the invaders. Clemenceau legalized the invasion, barred the Germans from protecting themselves and forced them back behind the Oder River. Wilson supported his conclusions because, Winston Churchill explained, "Polish voters constituted a real factor in American politics." According to *The New York Times*, May 14, 1919, Hugo Haase and those who controlled the Weimar government fought to gain approval of the Versailles Treaty. Although officials signed the armistice, it did not end the British blockade of Germany (August 1914-1919). For months following the war's end, unknown to American and British citizens, the British government prohibited food shipments to the starving Germans in several cities and towns until they acquiesced to the stipulations of the Versailles Treaty. According to official documents in the National Archives, 763,000 German civilians died from starvation caused by the blockade with another 150,000 deaths due to the 1918 flu pandemic. While the British and US public knew about the desperate situation, no one informed them about the atrocious policies that generated it.

The Germans were flabbergasted. Their spokesperson, Foreign Minister Count Ulrich von Brockdorff-Rantzau, who remained seated as an insult to the others, pointed out

the violations of the 'pre-armistice commitments. German officials prepared a 443-page counter proposal and the German government offered \$25 billion dollars and rejected the proposed territorial changes. Philip Kerr (Lord Lothian) wrote the rejection to Germany's counter proposals. Kerr, of Milner's Kindergarten, also helped co-author the treaty. The Allies refused to budge and gave Germany an ultimatum. On June 20, 1919, Georges Clemenceau, David Lloyd George and Woodrow Wilson told the Germans that unless they signed the treaty by the evening of June 23, they would direct Ferdinand Foch, who commanded the Allied forces as of March 1918, to advance on Germany. German advisors included Max M. Warburg, Oscar Oppenheimer, and Albrecht Mendelssohn Bartholdy, a great-great-grandson of philosopher Moses Mendelssohn, and grandson of the composer Felix Mendelssohn Bartholdy. 1815 Bartholdy, of the Politics Law Consortium, was part of the German delegation to the League of Nations in Geneva, beginning in 1931. He left Germany in 1933.

Philipp Scheidemann, Germany's Chancellor (February 13-June 20, 1919), rather than sign the document resigned. After Scheidemann's resignation, President Friedrich Ebert formed a new coalition government under Chancellor Gustav Bauer, former chairman of the General Commission of Trade Unions for all of Germany (1908-1918). On June 22, the Reichstag ratified the treaty. On June 28, 1919, in the Hall of Mirrors at Versailles, exactly five years after assassins killed Franz Ferdinand, the delegates, except for the Chinese, signed the Treaty of Versailles.

Georges Clemenceau and his assistant, André Tardieu encouraged Polish officials to demand chunks of East Prussia, in addition to Danzig and the corridor. British officials wanted to put this issue to a vote, which irked the Poles and Tardieu, their advocate. The vote would be in the districts of Allenstein and Marienwerder, accompanied by a massive propaganda campaign and overt intimidation. However, the Prussians voted almost unanimously, 98.73 percent, to remain German, a figure rarely mentioned in Allied history books. Next, they considered the annexation of Upper Silesia, a rich and highly industrialized province. Its loss would dramatically reduce Germany's power. Greedy Polish politicians had sent in armed groups by February 1919 to grab their legally sanctioned war booty.

The Allies forced Germany to relinquish a sizeable amount of territory, including vital mineral areas and the Polish Corridor, which would isolate Prussia from the rest of the county. The Allies deprived Germany of its merchant fleet. 1822 She had to terminate all military drafts and reduce her troops to 100,000 for internal peace keeping only. She had to drastically decrease her naval fleet and disband the submarine fleet. She had to destroy all military fortifications and give up the right to have heavy artillery, tanks, submarines, and all aviation. The Allies prohibited Germany's military industry from designing or owning chemical weapons and they had to destroy their stock of poisonous biological warfare weapons. International officials would have to supervise any German arms production. The Allies forced Hungary, a quickly developing country who supported Germany, according to the Treaty of Trianon, to relinquish over two-thirds of its territory.

This shifted 3.3 million ethnic Hungarians into Romania and Czechoslovakia. The newly configured Hungary also had to pay war reparations to its neighbors. Ethnic Hungarians would be living in a foreign land where local residents subjected them to discrimination and difficulty in assimilating. Hungarians and non-Hungarian historians justifiably claim that the real objective of the treaty stipulations was an attempt to dismantle a major power in Central Europe. The Ally's priority was to prevent Germany's resurgence. Therefore, they surrounded Germany's allies, Austria and Hungary, with more powerful, bigger states friendly to the Allies.

The Treaty of St. Germain amputated Austria from all of its industrial areas and natural resources, which were located in the German populated areas of Austrian Silesia and the Sudetenland. Austria was nothing but a skeleton of a state with a decreased population of just seven million. The Allies reduced the multinational Austria-Hungary into numerous pieces lacking the cohesiveness they once enjoyed. This partition spawned the state of Czechoslovakia whose population consisted of Czechs (46%), Slovaks (13%), Poles (2%), Ukrainians (3%), Hungarians (8%), and 3.5 million Germans (28%). This unproductive dissection, administered by Archibald C. Coolidge, part of Edward M. House's Inquiry but under the auspices of the American Expert Commission, placed several thousand Germans under Czech domination, and placed German industrial areas from northern Bohemia into Saxony. The Austrians, who had no voice in the matter, contested this arbitrary fracturing. Nearly 1.5 million Germans, now considered minorities, remained in Romania, Yugoslavia, Banar, Syrmia, Czechoslovakia, Batschka, and Slovenia. The provisions of the Treaty of Trianon placed 550,000 Germans into what remained of Hungary.

Commercially, Germany lost all of her African colonies; the Allies placed them under the League of Nations' jurisdiction. France received Alsace-Lorraine and all the coal resources in the Saar district, 991.8 square miles, on the border between France and Germany, with the League of Nations administering the area. Poland got the key industrialized area of Upper Silesia, most of Posen Province and West Prussia, which created what people referred to as the Polish Corridor, with access to the sea. This separated East Prussia from the rest of the country. This would cut Prussia in half and the so-called Polish Corridor and amputate the city of Danzig from Germany. Poland would receive Upper Silesia, one of Germany's richest regions (producing 20% of its coal, 57% of its lead, and 72% of its zinc). They forced Germany to relinquish Posen, another rich German province. Yet, Danzig was almost completely German in composition. Churchill wrote, "German science and capital had created a vigorous industry in this territory. German culture, imposed by the power of an energetic empire, had left its mark everywhere." He later admitted, "The commission first proposed to place Danzig entirely under Polish sovereignty, which would subject Danzigers to Polish laws and mandatory conscription in the Polish army." For centuries, there were few Poles in Danzig. Yet they gifted Poland control of the city's customs, taxes, port facilities and the city's diplomatic representation. This required that any German Danziger traveling from the area had to get a passport or visa from the Polish embassies and consulates, a group of "hateful and arrogant alien

bureaucrats.”

When the Danzigers finally voted, just before the Second World War, they chose Germany by a margin of 99%. Wilson had guaranteed Poland “free and secure access to the sea,” not “access to the sea,” as dozens of biased historians and journalists have reported thus accrediting the creation of the corridor, a piece of land 20 to 70 miles wide, right across Germany. No one would have proposed such an incursion on France but thought nothing of imposing it on Germany. For 20 years, Germans were compelled to travel from one part of Germany to the other part locked in sealed trains where they were humiliated at the two Polish borders while entering and leaving the corridor.

The Allies seized Germany’s merchant navy and unethically confiscated private property from many countries throughout the world that belonged to German citizens. The amoral Allied powers usurped the right, by virtue of the treaty, to retain or dispose of privately held companies or other assets. This occurred without any compensation to the victims of this wholesale plunder. Furthermore, the Allies held German citizens responsible for the liabilities or indebtedness on those confiscated items. Additionally, the Allies and their lawyers stipulated that Germany could not make capital investments in other countries and had to relinquish the title of any possessions in neighboring countries. The lawyers designed the agreement to force Germany to allow the Allies full access to all of their markets without paying a tariff. Conversely, Germany had to pay an outrageously high tariff for foreign goods. Germans, already starving, were required to surrender their remaining livestock—they had to deliver their cattle, sheep, goats, pigs and even their dairy cows to France and Belgium. They left the starving children, the most vulnerable victims in any war, without milk to drink. The confiscation of Germany’s coal resources caused the deaths of German children who were not only starving but would now freeze to death without a source of heat.

The Allies forced Germany to surrender 67,273 square kilometers, comprising one-eighth of its territory, which had a population of 5,138,000 people. The Allies appropriated all merchant ships over a certain size, a quarter of the fishing fleet and a fifth of the river fleet and half of all German paints and non-military chemicals as well as their production of those items for the next five years. Over the next five years, Germany had to construct merchant ships for the allies. Further, she was to supply 140 million tons of coal to France, eighty million tons to Belgium and seventy-seven million to Italy. The allies gained the right to use all German railways, ports, waterways for a very small remuneration, all in addition to huge reparations. They designed these unrealistic and inequitable provisions, not to promote peace but to instill resentment, to set the stage for more warfare.

Political leaders, banker’s agents, advisors and lawyers from the victorious nations had arrived and were ensconced in luxurious Paris hotels and enjoying sumptuous meals. They were prepared to spend almost a year to resolve, negotiate, and make decisions. Meanwhile, an entire population, because of a hellish war, was starving in Central Europe. The British maintained the blockade against the Germans until July 12, 1919, eight long months after the armistice. 1816 Count von Brockdorff-Rantzau addressed the

Versailles assembly. “The hundreds of thousands of noncombatants who have perished since November 11, 1918, as a result of the blockade, were killed with cold deliberation, after our enemies had been assured of their complete victory.” Jan Smuts, one of Milner’s associates, discovered a loophole in Robert Lansing’s letter regarding the damages against the civilians. Smuts skewed the issues in Britain’s favor and persuaded Wilson to include a pension for the soldiers’ widows and orphans in the reparations package. John Maynard Keynes, representing the British Treasury, argued that those additions violated Wilson’s Fourteen Points and would increase the reparations by at least two and half times. Still, the Allies expected Germany to remit a preliminary payment by May 1921. These additions totaled almost \$40 billion dollars, far beyond their capacity to pay.

The war planners, those who won the war, made financial demands in the billions of dollars. Prime Minister Lloyd George (He added his uncle’s surname to become Lloyd George) suggested \$120 billion; Prime Minister Georges Clemenceau wanted \$220 billion. Lloyd George delegated the task of calculating the final reparation figures to a panel of experts with a target date of May 1921. To lighten the suffering of war-weary Europeans, they finally made the reparations demands—the British got the equivalent of \$90 billion in addition to a portion of Germany’s foreign colonies and their European industries; the French got \$200 billion; the United States wanted \$25 to \$30 billion. The treaties signed during the conference in Paris were 1) the Treaty of Versailles, June 28, 1919 for the disposition of the German Empire; 2) the Treaty of Saint-Germain, September 10, 1919 for the disposition of Austria; 3) the Treaty of Neuilly, November 27, 1919 for the disposition of Bulgaria; 4) the Treaty of Trianon, June 4, 1920 for the disposition of Hungary; 5) the Treaty of Sèvres, August 10, 1920, later revised by the Treaty of Lausanne, July 24, 1923 for the disposition and partition of the Ottoman Empire.

On October 15, 1920, Vladimir Lenin declared, “The order held by the Versailles Peace Treaty lies over a volcano, since the seventy percent of the world’s people who are enslaved are anxiously awaiting someone to come and start a struggle for their liberation, and to rock the foundation of their countries.”¹⁸³³ He said, “The war is waged by slave traders haggling over cattle.” In fact, the Allies were wrangling over the Rhineland, Tyrol, Sudetenland, Prussia, Carpathia, Dalmatia, Smyrna, Armenia, Mosul, Baghdad and Jerusalem.¹⁸³⁴ He surmised that the turmoil caused by the Allied remapping of the world would open the door to Communism.

German Reparations and Recovery

The Allies, according to the Versailles Treaty, specifically the “warguilt clause” (Article 231 of the treaty), set up a schedule of reparations for Germany covering the years, 1919-1932 which one may subdivide into six periods.

1. The preliminary payments, 1919-1921

2. The London Schedule, May 1921-September 1924
3. The Dawes Plan, September 1924-January 1930
4. The Young Plan, January 1930-June 1931
5. The Hoover Moratorium, June 1931-July 1932
6. The Lausanne Convention, July 1932

By May 1921, Germany was to pay 20,000 million marks. The Allies, Britain, France, America and Italy contended that Germany had only paid 8,000 million marks of the required preliminary payments. They threatened to occupy the Ruhr in order to enforce payment. In May, dismissing the previous threat, the Allies presented Germany with a 132,000 million marks bill. To avoid another ultimatum, Germany capitulated and gave them bonds for the new amount. The Allies forgave 82 million but required Germany to pay the other 50 million in yearly installments plus interest.

Given its economic circumstances, Germany was hard-pressed to pay reparations. The international bankers refused payment in the form of German goods and services. Therefore, Germany was unable to fulfill the reparation schedule. British bankers viewed this as evidence of Germany's inability while French bankers regarded this as Germany's unwillingness to pay. The Anglo-Americans rejected Germany's offer to pay in goods to compensate for money Germany could not pay. In 1921, Britain imposed a 26% tariff on imports. They could have paid the required reparations if the bankers had agreed to accept goods and services. On May 26, 1922, per the Allies suggestion, German officials released the Reichsbank from government regulation, meaning it becomes a private organization, just like the Federal Reserve. The absence of regulation led to horrific hyperinflation (1922-1923). Bankers deceptively used this example of hyperinflation to persuade people not to trust governments to print money; rather private bankers should manage the task. The League of Nations then delegated "experts" to monitor Germany's economic recovery.

These experts wanted Germany's central bank to adopt free market policies. Germany's currency predictably lost its value, causing immense suffering especially in urban and industrial areas. Berlin was especially hard hit—people were scavenging the trashcans behind the hotels looking for something to eat. A cup of coffee cost one million marks one day only to rise to a million and a half the next day. On January 9, 1923, the Reparations Commission declared that Germany had defaulted on her payments. Consequently, France, Belgium, and Italy immediately occupied the Ruhr with 70,000 soldiers, supposedly to protect engineers seizing telegraph poles and timber, but really to secure "the economic edge that France and Belgium had failed to secure under the Versailles Treaty." Germany stopped all reparations payments and supported those who had gone on strike in the Ruhr. The government also printed more currency. The Ruhr, 60 miles long and 30 miles wide, had 10 percent of Germany's population and generated 80 percent of Germany's coal, iron, and steel. The occupation forces seized the Ruhr's complex railway system. Armed conflict erupted and soldiers killed at least 400 people and wounded over

2,100 people.

Because of their “passive resistance,” French authorities expelled or detained 46,200 uncooperative civil servants, railroad workers, and police, along with 100,000 members of their families. The residents responded by committing acts of sabotage and “low-level acts of terrorism.” The occupying forces countered these actions by taking hostages, massive fines, hostile house searches, identity examinations and executions. 1847 Walther Kadow, a communist, betrayed Albert L. Schlageter, who blew up a rail line near Düsseldorf. 1848 On May 26, 1923, after a quick trial, French authorities executed Schlageter. Rudolf Höss and Martin Bormann then assassinated Kadow for which the authorities imprisoned them. Karl Radek attempted to exploit the situation in the Ruhr, especially to the German communists, and claimed that the strike was part of the revolt against German capitalism. Radek and other communists, like Clara Zetkin, feared that the general destruction in Europe would cause a “regrouping of forces into a united front against Russia.” He felt it was necessary to cooperate with the German nationalists to protect Soviet Russia. Zetkin and Radek feared fascism. Radek decided to make Schlageter a nationalist hero and depicted him as “a courageous soldier of the counter revolution.” 1849 It is possible that the Bolsheviks were hoping for a fascist overthrow of the Weimar Republic, and then they would take over. Radek, in a speech on June 20, 1923, in Moscow, adopted the national hero and lavished praise on Schlageter. The communist press accorded wide publicity to Radek’s speech, designed to “appeal to disgruntled Germans who had been flocking to Hitler’s NSDAP. The communists even used some of the same phrases, like “Down with the government of national shame and betrayal of the people.” Ruth Fischer, a half Jewish leftist, exhorted communists to “trample the Jewish capitalists down, hang them from the lampposts.”

The German government continued, year after year, to maintain an unbalanced budget. To pay their deficit, they borrowed from the Reichsbank, which continued to cause severe inflation, ruinous to the middle class but it barely touched the wealthy living in Germany. This situation predictably encouraged middle class dissent while it benefited people who owned actual wealth in the form of property. Inflation hiked up property and land values, which allowed certain people to eliminate their debts. The German mark collapsed in value from 305 to the pound in August 1921 to 1,020 in November 1921. It dropped to 80,000 by January 1923, to 20 million by August 1923, and to 20 billion by December 1923. 1851 The hyperinflation peaked during the summer of 1923. A wave of strikes began in August 1923 and Cuno and his cabinet resigned on August 12, 1923.

In 1923, the League of Nations asked Charles G. Dawes, owner of Chicago’s Central Republic Bank and Trust to lead a committee to address Germany’s financial condition. He, along with Austen Chamberlain, received the 1925 Nobel Peace Prize. In 1932, his bank would fail, costing the US taxpayers \$90 million. 1852 In April 1924, his committee followed some of John Foster Dulles’ suggestions. Dulles, a lawyer with Sullivan and Cromwell, was a member of the Reparations Commission. The Inter-Allied Reparations Committee sent Dawes and Young to Europe with Dulles as their special counsel. J. P.

Morgan bank initiated the entire process with a \$200 million private loan. The Dawes Plan relied on private loans, not government aid. While it was ostensibly a government program, it allowed private bankers to make a financial killing in Europe. Sullivan and Cromwell, who later represented Hamburg-Amerika Line, also handled a bond for the Krupp steel company, issued through J. & W. Seligman & Company. Dulles, knowing the State Department would not interfere with his transactions, made considerable money for himself and his firm which dominated a major portion of the private loans and investments in Germany.

The Dawes Plan called for long-term, high interest loans, and a restructuring of the Reichsbank including revenue sharing, followed up, in 1924, by loans from foreign banks, based on their confidence in Hjalmar Schacht. In December 1923, he had become the bank president after a meeting with Montagu Norman, president of the Rothschild's Bank of England. Schacht initially opposed the loans but acquiesced only if they used the money to fund production, not luxury or consumption. The foreign troops in the Ruhr forced Germany to accept the Dawes Plan for reparations; then the troops left the Ruhr. Dawes, Vice President under President Calvin Coolidge (1925-1929), directed a committee of financial experts under the jurisdiction of the international bankers, to devise the plan under which Germany owed more in 1929 than before. It artificially protected the German mark in the international market. It encouraged Germany to over borrow and spend without experiencing immediate consequences, which would have occurred with a system of accurate international exchange. Germany was unable to repay the loans. US bankers loaned money to German industrialists for their recovery. The bankers also insisted that Germans build unnecessary and nonproductive equipment.

Adolf Hitler and others were certain that Germany was rushing headlong into severe inflation because of the collaboration of the black-red coalition. Hitler opposed the Dawes Pact, a devious method for the bankers to plunder all of Germany's resources. The Young Plan, with the objective of enslaving Germany, facilitated it. Hitler, while incarcerated in 1924, attempted to have his associates oppose the Dawes Pact and the Centre Party who claimed that the foreign loans associated with the plan would increase Germany's prosperity, create jobs, raise wages and benefit agriculture. He claimed that the Dawes Pact would do nothing but increase poverty. 1858 International bankers have always worked with local complicit politicians to enslave nations with excessive, usury-heavy loans. When this occurs, the bankers control the national resources and soon, a once resource-rich country is a dependent third world nation, relying on other countries for manufactured goods, food, and fuel.

Former UK Prime Minister David Lloyd George reveals:

"The international bankers dictated the Dawes reparations settlement. The protocol, which was signed between the allies and Germany, is the triumph of the international financier. Agreement would never have been reached without the brutal intervention of the international bankers. They swept statesman, politicians, and journalists aside, and issued their orders with the imperiousness of absolute Monarchs, who knew there was

no appeal from their ruthless decrees. The Dawes report was fashioned by the Money Kings.”

John Perkins, in *Confessions of an Economic Hit Man*, explains that highly paid professionals, lawyers like Dulles, cheat countries out of trillions of dollars by loaning them money through government programs but it actually goes into the “coffers of huge corporations and the pockets of a few wealthy families who control the planet’s natural resources.” These agents use “fraudulent financial reports, rigged elections, payoffs, extortion, sex, and murder.” It is a “game as old as empire, but one that has taken on new and terrifying dimensions during this time of globalization.”

Owen D. Young chaired the committee that conceived, between February and June 1929, the Young Plan that mandated German reparations over a period of fifty-nine years, until 1988. Hjalmar Schacht, Emile Francqui, John Foster Dulles, later referred to as the “most dangerous man in America” established the Bank for International Settlements (BIS), chartered on January 20, 1930. The officials who designed the Hague Treaty created it to receive German reparations payments. Germany would pay these funds to the BIS in Basel, owned by the world’s central banks. It functioned as a “Central Bankers’ Bank” which shifted payments among national accounts. The 1929 crash ended the Dawes Plan and created an environment for another world war. By 1931, US banks terminated their loans to Germany whose gold reserve they had greatly reduced. 1860 The BIS gradually assumed control of coordinating banking and economic policy across the world.

Germany paid their war debts but did not balance their budget or pursue a trade balance. Two things would be sure to occur with this easy money, 1) when the US bankers stopped lending, Germany would collapse and, 2) they transferred debts from account to account without building real solvency. Germany borrowed 18.6 billion marks while paying 10.5 billion marks in reparations (1924-1931). The international bankers were the only benefactors, with their numerous commissions and fees. In January 1930, the equally nefarious Young Plan replaced the Dawes Plan because Germany’s payments under that plan did not satisfy the London Schedule. This change also voided the German foreign-exchange rate, which forced Germany to experience the results of her extravagant borrowing. In addition, France demanded payment for their war reconstruction. In April 1931, Germany and Austria united their customs while remaining separate countries, a move opposed by the French. On May 11, 1931, Rothschild’s Austrian bank, the Creditanstalt that controlled 70 percent of Austria’s industry, declared its insolvency. The Rothschilds and the Austrian government bailed out the bank. However, there was still a run on the bank. To accommodate this run, Austrian banks pulled all their funds from the German banks, which then began to fail. The German banks called for their funds in London, which began to fail. Europe’s gold disappeared. On September 21, 1931, Churchill removed England from the gold standard. The Reichsbank lost a huge percentage of their gold reserve, which almost destroyed German industry.

F. William Engdahl refers to Attorney George L. Harrison (S&B, CFR) as a “Germanophile.” As president of the Federal Reserve Bank, he worked with the Bank of England’s

Montagu Norman and Reichsbank President Hjalmar Schacht to collapse and bankrupt the Vienna-based Creditanstalt, a Rothschild bank. It had connections to the French bankers, which in turn led to “the flight of capital out of Germany” and the ultimate failure of the Danat-Bank of Germany, the second largest bank of Germany, chaired by Jakob Goldschmidt. 1864 That was obviously the objective; the Rothschilds ultimately benefitted.

On July 7, 1931, German citizens tried to pull their funds from the Reichsbank. German industry and the four largest banks suffered losses. By November 1931, the European Powers, except France, were willing to end reparations via the Lausanne Conference of June 1932. Germany was then responsible to pay three billion marks. The US Congress refused to cut the debt so the Germans never ratified the Lausanne agreement so the Young Plan was still legally in force.

However, in 1933, Hitler renounced all reparations. The Germans had already paid about 10.5 billion marks under the Dawes Plan (1924-1931). Before 1924, they had paid 56,577 billion marks. The Allies claimed that Germany had only paid 10,426 billion. In truth, Germany probably paid, before 1924, about 40 billion marks. 1866 Though reparation ended in 1933, the Allies reinstated them after World War II.

8.14 Versailles 1919 and the Question of War Guilt

In contradiction of the 14-point programme drafted in the course of the negotiations leading to the armistice in 1918, France and Great Britain imposed conditions upon the German people that violated the fundamental principles of international law. In the terms of the Versailles victor's diktat, Germany bore full and exclusive responsibility for the war; subsequently, was liable for reparation of all damage done. The Versailles diktat became the “foundation of law”, the “law of nations” providing the rule of order amongst the states of Europe. Lies, economic exploitation for an indefinite period, annexation, forced assimilation and the oppression of ethnic minorities, the expropriation of other nations' colonies, compulsory demilitarization, submission to foreign governments, military occupation and numerous other instances of wrongful and arbitrary treatment were thus legitimated by the victors. Thus also the very ideas of “law”, “democracy”, “agreement”, “truth”, “self-determination”, “freedom” etc. were subverted. Anyone who called into question these acts of the “civilized nations” was accused of “violation of law”, “revisionism”, “revanchism” and considered a war-monger. The authority of this “ruling” is derived from the “war guilt paragraph” (§231) of the Versailles “treaty” and, furthermore, from the Allies' explanatory letter of 16 June 1919 to the German representatives (Reply of the Allied and Associated Powers to the observations of the German delegations on the conditions of peace), published as a preface to the treaty. It reads, in part:

“...In the view of the Allied and Associate Powers the war which began on August 1 1914, was the greatest crime against humanity and the freedom of peoples that any

nation, calling itself civilized, has ever consciously committed. For many years the rulers of Germany, true to the Prussian tradition, strove for a position of dominance in Europe. They were not satisfied with that growing prosperity and influence to which Germany was entitled, and which all other nations were willing to accord her, in the society of free and equal peoples. They required that they should be able to dictate to and tyrannize a subservient Europe, as they dictated and tyrannized over a subservient Germany. In order to attain their ends they used every channel in their power through which to educate their own subjects in the doctrine that might was right in international affairs... As soon as their preparations were complete, they encouraged a subservient ally to declare war against Serbia... In order to make doubly sure, they refused every attempt at conciliation and conference until it was too late, and the world war was inevitable for which they had plotted, and for which alone among the nations they were fully equipped and prepared. Germany's responsibility, however, is not confined to having planned and started the war. She is no less responsible for the savage and inhuman manner in which it was conducted. They were the first to use poisonous gas... They commenced the submarine campaign ... They drove thousands of men and women and children with brutal savagery into slavery in foreign lands. They allowed barbarities to be practised against their prisoners of war from which the most uncivilized peoples would have recoiled. The conduct of Germany is almost unexampled in human history. The terrible responsibility which lies at her doors can be seen in the fact that not less than seven million dead lie buried in Europe, while more than twenty million others carry upon them the evidence of wounds and sufferings, because Germany saw fit to gratify her lust for tyranny by resort to war. That is why the Allied and Associated Powers have insisted as a cardinal feature of the treaty that Germany must undertake to make reparation to the very uttermost of her power; for reparations for wrongs inflicted is of the essence of justice... The Allied and Associated Powers therefore believe that the peace they have proposed is fundamentally a peace of justice. They are no less certain that it is a peace of right fulfilling the terms agreed upon at the time of the armistice."

The victorious powers have been frustrating all serious attempts of clarifying the causes and the motives, along with their practical application to politics, of the First World War. Since the 1920s no serious historian has defended the argument of Germany's exclusive responsibility for the war. Yet the repeated protests and requests by successive Weimar governments seeking rehabilitation of their country through a revision of the "official" version invariably met with outright rejection, effectively justified by nothing but "Power". None of the victors of Versailles based any of their charges against Germany on specialists' reports, let alone did they reduce or retract the charges with the emergence of later historical research findings. In this regard, British Prime Minister David Lloyd George declared at a meeting of the Reparations Commission in London on 3 March 1921:

"German responsibility for the war is fundamental to the Allies. It is the basis on which the Treaty has been established and if this basis breaks down, or should be abandoned,

the Treaty would be destroyed ... Therefore, we wish to make clear, once and for all, that German responsibility for the war has definitely been established and must accordingly be dealt with by the Allies.”

This label of culpability was necessary so as not to be indicted of one's own immoral actions. Only in this way was it possible to continue to consider as valid, “legitimate” and irrevocable all of the “punishment” put upon Germany in the form of territorial cessions, discriminations, reparations, confiscations, control rights etc.

“The future is in your hands!” With those words Raymond Poincaré, President of the French Republic, greeted the representatives of 27 nations at the opening of the Versailles Peace conference on 18 January 1919. These words were to take on historical significance. The reason for the disastrous outcome of this Peace conference was not due to the “harsh” conditions laid upon the German nation, but rather because an unjust ruling in international law was created in the shape of the Versailles “treaty” – signed by a German government under threat of military occupation. There were politicians both in Germany and abroad who could already foresee the inevitable consequences of the “Peace Treaty”. Phillip Scheidemann (SPD), Chancellor of the Reich, in May 1919:

“ I come straight to the point: This thick volume in which hundreds of paragraphs begin with: ‘Germany renounces’, ‘renounces’, ‘renounces’ ! – this terrible, deadly weapon is being used to extort from a great nation an admission of its own unworthiness, an agreement to a pitiless dismemberment, the acceptance of enslavement, this text must not be allowed to become a statute book for the future ... What hand should not wither, binding us with these chains, yet still they want us to work like slaves for international finance, to do socage (labour for the feudal lord) for the whole world. The government of the Reich considers this treaty unacceptable. Unacceptable to such a degree that, still today, I cannot believe that the world could tolerate a text such as this without the sound of millions upon millions of voices echoing throughout every land and every party: Away with this murderous plot!”

Many notable politicians from France, Britain, Italy and other countries, in 1919 and in the years soon afterwards, were already stating with urgent insistence that the “Versailles arrangement”, particularly as concerned the borders between Germany and Poland, could only lead to a new war. The former American Secretary of State (Foreign Minister), Robert Lansing, as quoted by Francesco Nitti, head of the Italian government: “The victors intend to impose their combined objectives on the vanquished, and to subordinate all other interests to their own. European politics, as established today, are prey to every sort of greed and intrigue, only called upon to declare just what is unjust. We have a peace treaty, but it will not bring lasting peace, because it is founded on the shifting sands of individual interests. ‘In this judgment’, Lansing added, ‘I was not alone. A few days after, I found myself in London, where I was discussing the treaty with some of the leading men in Britain. They all agreed that the treaty was absurd and unworkable, that it was born of intrigue and shaped by greed and, therefore, was more apt to cause wars than to prevent them.’”

Nitti himself, at the same period, said:

“A serious and durable peace has never been built on the plunder, the torture and the ruin of a defeated nation, let alone a defeated great nation. And it is precisely this what the Treaty of Versailles represents.”

The British Labour Member of Parliament, J.W. Kneeshaw, at the Party's conference of 1920 in Scarborough, commented:

“Should we have been the defeated nation and should such conditions have been imposed upon us, we would, instead of a calm engagement, begin in the schools and homes to prepare our children for a retaliatory war to shake off the intolerable, unbearable victors' yoke. These conditions have amounted to a plot not only against Germany, against Austria and the other defeated nations, but also against the whole of civilization.”

The Dutch Ambassador to London, René van Swinderen, stated to the British diplomat, E. Howard:

“The Versailles peace conditions contain all the germs for a just and lasting war.”

President Wilson in 1919 stated:

“How can, for instance, a power like the United States of America – since I cannot speak for any other – 3,000 miles across the ocean, sign this Treaty, withdraw from Europe, and tell the people in America that a peace treaty has been created for the world, while its content cannot be viewed as lasting. I have felt it incumbent upon me to withhold my signature.”

All governments during the Weimar Republic, irrespective of political orientation, denied the legitimacy of the Versailles diktat's grave accusations and of its consequences for their country, calling time and time again for a fair judgment to be made by an impartial Court of Justice. Always in vain! The great powers simply made no response. Trust amongst nations thus remained impaired. Versailles was the irresponsible provocation that summoned a nation to gather all of its defensive forces available and mould them into a united front, the better to fight this injustice not only with words but also with deeds. An Englishman, Lord Buckmaster, admitted that

“to induce any nation, however evil and abominable they might be, to lay down their arms on one set of terms and then, when they were defenceless, to impose another set, is an act of dishonour which can never be effaced.”

But, this was not the only thing that took place. Lloyd George conceded, on 7 October 1928, in a speech at the Guild Hall in London:

“The entire documentation which certain people among our Allies have placed before us, was made up of lies and is a swindle. We have ruled [in Versailles*] on the basis of forgeries.”

The Allied delegates confessed, at the session of 8 May 1919 at the Peace conference

at Trianon palace, that they had not the slightest notion of the problems of central Europe.¹⁰) Yet none of these shocking facts led to any change in the situation. The governments of those countries had given their word to the world and to Germany, and they broke it time and time again. Germany had laid down her arms in November 1918, trusting that the conditions of the Fourteen Points would be honoured, since Lloyd George for Britain and Clemenceau for France (as well as the United States of America) had committed themselves in a pre-armistice agreement. The Allies completely ignored their obligation. The armistice agreement was violated at the very outset with the continuation of the blockade against Germany. The Allies repeatedly breached their "Peace Treaty" thereafter, in the absence of any provocation by the German government, and at a time when Adolf Hitler was just entering the political arena.

The violations of the Versailles "Treaty" were:

1. Failure to respect the Reich's sovereignty and right to self-determination.
2. Annexation of parts of Upper Silesia by Poland in spite of a plebiscite in favour of remaining German.
3. Poland's violations of the borders drawn up at Versailles.
4. Annexation of the Memel territory by Lithuania, without plebiscite.
5. Misappropriation of Germany's colonies contrary to article 5 of Wilson's Fourteen Points as the one confirming "impartial regulations".
6. Non-observance of the minority rights of the separated ethnic Germans, despite contractual assurances.
7. Military occupation of the Ruhrort, Duisburg, of Düsseldorf, Mühlheim, Oberhausen and other West German cities in March 1921, and the relocation of the customs border; military occupation of the Ruhr area in January 1923 by France.
8. Prohibition of a Customs Union between Germany and Austria (to say nothing of the prohibition of unification of the two countries).
9. Non-compliance with the disarmament – guarantee.
10. Additional resolutions of the Council of the League of Nations for further restricting the "freedom" of Danzig.¹¹)
11. Expulsion of ethnic Germans, who were compulsory separated from the territories detached from the German Reich; by 1922 their numbers had already reached one million, not counting those interned by the Allies:
200,000 Expatriate – and colonial Germans;
120,000 Germans of Alsace-Lorraine;
500,000 Germans, refugees and exiles from West Prussia,
Posen and Eastern Upper Silesia;
100,000 Germans from Russia and the Baltics.

The countries in question never took stock of the grave consequences of these facts. Brave voices raised here and there were stifled by the wave of blinding hatred of anything German. In those lands the showing of hatred for Germany seemed to have become a way to demonstrate character and good citizenship, in keeping with the international or

rather “European” political standard. Not troubled in the least by the various critics, the victorious powers continued to regard their “treaty” as a means by which to conduct their general anti-German policy. Germany remained weak, dismembered, strife-torn, isolated from foreign affairs, economically ruined and under constant military threat from her neighbours. Danzig, Posen-West Prussia, Upper Silesia and Eastern Silesia, Memel, the Saarland, Sudetenland, Hultschin, Eupen-Malmedy, North-Schleswig, South Tyrol and Alsace-Lorraine*) – the “treaty” had stripped Germany of all these territories, turning them into detonators of conflict along her borders that made a reconciliation between the German nation and her neighbours still more difficult, if not impossible.

Indeed, a coalition of hostile European states could be mustered against Germany at any given moment. Adolf Hitler declared in a speech to the Reichstag on 17 May 1933:

“The hopes of restoring an international conception of justice have been dashed by the [Versailles] Treaty for, in order to justify all the measures of this diktat, the Allies had to brand Germany with the mark of guilt [for the war]. This procedure is both simplistic and impracticable. In future, the guilt for a conflict will always be borne by the defeated since the winners are always able to impose their own diagnosis. This practice leads thus to a dreadful result, because it gave them a reason for changing a balance of power as existing at the end of that war into a permanent legal fixture. Thus the concept of victor and vanquished became officially the foundation of a new international legal and social order.”

It took until the year 1958 before Europeans learned of the, hitherto solitary, appearance of some form of self-criticism emanating from official Paris:

“The full burden of the [Versailles] Treaty fell on Britain and France and the newly created states in Eastern Europe that could scarcely manage their own problems. The victors were neither strong enough to impose their will upon the vanquished, nor magnanimous enough to seek reconciliation with them. In spite of the idealistic internationalism of Geneva, no constructive European policy came about and so constant use was made of stopgap measures in order to maintain a dubious balance of power. The entire tragic nature of the period between the two World Wars is expressed in the failure of the League of Nations. Germany above all had cause to assume a suspicious attitude towards an organization that was based on the coalition of the victors. France had attempted to impose coercive measures on a vanquished Germany. By such means, Germany was driven to despair but France gained nothing... .. the creation of ‘successor-states’ that relied upon the ‘right to selfdetermination’, provided no satisfactory solution, for in practice that right was accorded only to certain majority nations...The creation of thousands of kilometres of new borderlines in Central and Eastern Europe solved none of the region’s economic problems. On the contrary...”

Let us repeat these thoughts with all urgency:

1. The States in Eastern Europe, newly created by Versailles, could scarcely manage their own problems.

2. The winners of Versailles were not magnanimous enough to attempt reconciliation with the defeated nations.
3. The League of Nations was unable to establish a constructive European policy.
4. Versailles created a new and precarious balance of power.
5. This doubtful balance of power was to be preserved according to the will of the League of Nations.
6. Germany was driven to despair by France's forcible measures.
7. The right to self-determination was reserved for only certain nations.

However, such an admission was too late and in any case, had no effect. Those statesmen, who had led the big battle against Imperial Germany in order to stamp out "the tyranny and the international anarchy", would not lift a finger to give a worthy democratic government in Germany an honest chance, once they had defeated Germany. Violence and international anarchy were thus the prospects for the future – at a time when nobody spoke of Hitler. And so Versailles has become the birthplace of National-Socialism. An American historian, who admits to "heartily disliking this Hitler", wrote:

"It is obvious that the revelations in the Nuremberg documents concerning Hitler's design for aggression are merely the last chapter in a long and a depressing book that began at Versailles."

8.15 Concealing the History of World War I

Long before World War I, revolutionaries led an assault against the Russian Empire. The czar responded but instead of exile to Siberia, Russian authorities deported at least 5,000 revolutionaries and terrorists, many of which fled to Paris. These dissidents, who may have included people like Avetis Nazarbekian and Mariam Vardanian, had more freedom in the West to carry out their subversive revolutionary actions against Imperial Russia. In 1883, to counter this activity, the Russian Imperial Police opened an office in Paris known as the Okhranka or Agentura. Okhranka's foreign bureau was composed of agents, double agents, and agent provocateurs who gathered information on the revolutionaries.

In March 1917, after the Bolsheviks overthrew the regime, they concentrated on their enemies within the Okhranka, and organized a committee to investigate czarist officials in St. Petersburg, Moscow, Warsaw, and Paris in order to prosecute them. Basil Maklakov, the last Russian Ambassador to France, closed his Paris office and boxed up its contents and placed the Okhranka files in sixteen 500-pound packing crates. The Bolsheviks seized power from the Provisional Government in November. France repudiated Moscow's new government until 1924. In 1925, the Bolsheviks sought these vital, very revealing records. Maklakov claimed to have burnt them. Christian A. Herter, an associate of Hoover's American Relief Administration (1919-1923) had a house in Paris. Maklakov coaxed Herter to stash the records there until they could get them to America. Once in the US

officials transferred them to the Hoover Institution at Stanford University.

Maklakov, justifiably fearful of retaliation from the Cheka, asked that the officials conceal the records until after his death which occurred in 1957, in Switzerland. He maintained contact with the Hoover Institution which would finally open the packing crates on October 28, 1957. A team would spend five years organizing and cataloguing a vast collection containing 206 boxes, 26 scrapbooks, 164,000 cards, and thousands of photographs, all available on 509 reels of microfilm. This collection includes files and photos of Stalin, Molotov, and Trotsky.

The winners write the history according to the unspoken but understood policies of the American Historical Association. Many influential tax-exempt foundations fund that association. Court historians regularly overlook historical facts in favor of the official version. These official guidelines for reporting history have been in place for over a century. The Eastern Establishment governs what is acceptable—in textbooks, magazines, or any other major publications targeted for libraries. The same provisions apply to the American Economic Association, the American Chemical Society, the American Psychological Association, and other prominent institutions which successfully control and manipulate society. In mid-1918, Hoover acquired the assistance of General John J. Pershing, the commanding general of the American Expeditionary Forces (AEF) in his food distribution organization. Beginning in 1919, Hoover, with General Pershing's help, recruited at least 1,500 trusted officers from the US Army and the Supreme Economic Council and sent them throughout Europe to gather documents, in addition to the Okhranka records mentioned above. All of these records would comprise, by 1922, the Hoover War Collection. On February 5, 1921, *The New York Times* reported that Hoover, from Stanford University's first graduating class and one of its Trustees, presented the school with a collection of secret Bolshevik documents with descriptions of their initial organizational plans, along with records from other European countries. One agent acquired many Bolshevik records for \$200. These items joined a collection of 375,000 volumes and data already deposited in the university's library. The library already had more than 6,000 volumes "of court documents covering the complete official and secret proceedings of the Kaiser's war preparations and his wartime conduct of the German Empire, every record, in fact, except those of the Grand Military Headquarters itself." When Hoover began his "relief" efforts in Europe, he recognized the value of "original documents" to future historians and had agents scouring Europe for them. They evidently knew exactly what they were seeking and had been given ample funds to purchase documents.

The CFR formalized a historical blackout to circumvent any conscientious journalists who challenged the government's cover story, the official version, after World War II, and actually write about the realities of the war as many had done after World War I. The tax-exempt Rockefeller Foundation would later allot \$139,000 for a three-volume set of the history of World War II. Harry Elmer Barnes wrote, "The readjustment of historical writing to historical facts relative to the background and causes of the First World War, what is popularly known in the historical craft as 'Revisionism' was the most important

development in historiography during the decade of the 1920s." The cowardly writers who wished to remain in "the profession remained true to the mythology of the war decade."

In 1924, Bernard Baruch reportedly financed Maxwell L. Schuster and Dick Simon to form Simon and Schuster. Following World War II, just before the huge media and Hollywood emphasis on the Holocaust, William L. Shirer, worked for Edward R. Murrow, the European manager of Columbia Broadcasting System (CBS). Shirer, a corporate journalist and a Jew, provided the news coverage, or the official version, during and immediately after the war. Similarly, Hoover, with the help of leading military leaders had subsequently collected and camouflaged the real history of World War I. Simon and Schuster published Shirer's 1,200-page tome, *The Rise and Fall of the Third Reich, a History of Nazi Germany*, the source of much of the later rhetoric regarding Hitler and Germany. The concealment of historical events, in addition to the printed word, also applies to other media. When broadcast radio began in November 1920, the airwave spectrum, according to official theories, was in short supply. Consequently, they licensed and regulated this public commodity. People who had a political or religious message, or those with a product or service to sell, wanted airtime. By 1922, there were 576 stations licensed by the Secretary of Commerce, Herbert Hoover (1921-1928). By 1925, churches or religious groups owned sixty-three stations. The Commerce Department sponsored a series of conferences for major broadcasters. At the first meeting, a Westinghouse representative complained to Hoover that certain inferior stations, according to him, lacked substance and recommended that only preferred people be allowed to broadcast with a limit of 12-15 stations.

Hoover, as Commerce Secretary, was responsible for The Radio Act of 1927, which placed the responsibility of licensing and regulating (censoring) all the nation's radio stations in the hands of the federal government. That 1927 act established the Federal Radio Commission (FRC), which, in 1929, issued a set of guidelines. Accordingly, a station was to accommodate the "tastes, needs and desires of all substantial groups among the listening public . . . in some fair proportion, by a well-rounded program, in which entertainment, consisting of music of both classical and lighter grades, religion, education and instruction, important public events, discussions of public questions, weather, market reports, and news, and matters of interest to all members of the family." Broadcasters began acting as public trustees and evidently people naïvely assumed that broadcasters would never violate that trust. The Communications Act of 1934 established the Federal Communications Commission (FCC) that began operating on July 11, 1934 with seven commissioners appointed by the President and confirmed by the Senate. Officials changed this to five in 1983.

British and American publishers and broadcasters who receive the most press coverage, airtime, and accolades consistently suppress the truth. Skeptical authors, in both countries, rarely, if ever, get a manuscript published if it is contrary to official opinions. Despite the number of schools, libraries and books, there is a huge decline in the population's knowledge and understanding. The literacy statistics in America and Britain substan-

tiate the fact that, with the increase of technology and laborsaving gadgets, allowing more discretionary time, people are more prone to believe trendy popularized, personable talking heads sponsored by multinational media corporations than their own perceptions, derived from personal examination of authentic alternative sources.

According to the official version of any event, a political assassination, a terrorist act, an airplane crash, or any other extraordinary occurrence, it can never be the result of a premeditated conspiracy. To avoid speculative questions and popular dissent, the talking heads at the government-licensed network news shows immediately and authoritatively report, within minutes of any tragedy, that the event was not the result of a conspiracy. Typically, the government sanctions an investigative commission stacked with individuals who always support the government's version of any event. Writers, who perpetuate the government's official story, are in essence, participants in a vile conspiracy, which is by definition an agreement between persons to deceive, mislead, or defraud others. Fabricating fraudulent reasons to send individuals into wars where they kill total strangers at the government's behest, while risking their lives and emotional well-being is the epitome of deception. The government creates and maintains more conspiracies than any other entity while deceiving and plundering millions of taxpayers. The government and their media cohorts have the power to consistently control and sustain the cover story of every event and all circumstances. The rewriting of history and the dissemination of disinformation is rampant.

In 1946, the Rockefeller Foundation, a huge sponsor of the CFR, functioning like a government agency, issued a report. It included the following statement, "The Committee on Studies of the Council on Foreign Relations is concerned that the debunking journalistic campaign following World War I should not be repeated and believes that the American public deserves a clear and competent statement of our basic aims and activities during the second World War."

Just exactly who creates some of these false histories? One such group might be the Carnegie Endowment. According to their Annual Report of the Secretary, the Trustees at the Carnegie Endowment, on the day after the attack on Pearl Harbor, following their precedent from 1917, offered its services, equipment and personnel to the US Government. Since then, it devotes its efforts and assistance, in large part, to various government agencies in dealing with international business incident to warfare and in preparing useful materials for the post-war reconstruction of peace. It also offers such services to agents of other UN-associated governments with offices located in Washington. The Endowment's Washington offices are located close to the White House and the State Department and are a busy center of information, guidance, and advice by personal visits and interviews, by telephone, and by mail. It also assisted organizations such as the Institute of Pacific Relations, the Commission to Study the Organization of Peace, the American Society of International Law, the Inter-American Bar Association and the Section of International Law of the American Bar Association.

CBS Corporation owns Showtime, formerly known as Viacom, which it reorganized on

December 31, 2005 to create a mega media trust. Sumner Murray Redstone (born Sumner Murray Rothstein) owns seventy percent of its voting stock. He obtained an exclusive contract with the Smithsonian Institute, an educational and research institute. Taxpayers fund the institution with about \$800 million a year. Effective January 1, 2006, the Smithsonian restricted access to its archives and its scientists to Redstone's Showtime Network. Prior to this exclusive contract, all filmmakers relied on the vast holdings of the archives to produce accurate historical pieces. Millions of viewers now view history according to Showtime's version of history. Showtime has full access to millions of historical documents, films, photographs and thousands of hours of recordings unavailable anywhere else in the world. One has to obtain permission from Showtime, the Smithsonian's new collaborator, to access these resources.

9. Post War Era

9.1 The International Socialist Movement

The international Socialist movement was both a product of the nineteenth century and a revulsion against it. It was rooted in some of the characteristics of the century, such as its industrialism, its optimism, its belief in progress, its humanitarianism, its scientific materialism, and its democracy, but it was in revolt against its *laissez faire*, its middleclass domination, its nationalism, its urban slums, and its emphasis on the price-profit system as the dominant factor in all human values. This does not mean that all Socialists had the same beliefs or that these beliefs did not change with the passing years. On the contrary, there were almost as many different kinds of Socialism as there were Socialists, and the beliefs categorized under this term changed from year to year and from country to country. Industrialism, especially in its early years, brought with it social and economic conditions which were admittedly horrible. Human beings were brought together around factories to form great new cities which were sordid and unsanitary. In many cases, these persons were reduced to conditions of animality which shock the imagination. Crowded together in want and disease, with no leisure and no security, completely dependent on a weekly wage which was less than a pittance, they worked twelve to fifteen hours a day for six days in the week among dusty and dangerous machines with no protection against inevitable accidents, disease, or old age, and returned at night to crowded rooms without adequate food and lacking light, fresh air, heat, pure water, or sanitation.

These conditions have been described for us in the writings of novelists such as Dickens in England, Hugo or Zola in France, in the reports of parliamentary committees such as the Sadler Committee of 1832 or Lord Ashley's Committee in 1842, and in numerous private studies like *In Darkest England* by General William Booth of the Salvation Army. Just at the end of the century, private scientific studies of these conditions began to appear in England, led by Charles Booth's *Life and Labour of the People in London* or B. Seebohm Rowntree's *Poverty, a Study of I own Life*. The Socialist movement was a reaction against these deplorable conditions of the working masses. It has been customary to divide this movement into two parts at the year 1848, the earlier part being called "the period of the Utopian Socialists" while the later part has been called "the period of scientific Socialism." The dividing line between the two parts is marked by the publication in 1848 of *The Communist Manifesto* of Karl Marx and Friedrich Engels. This work, which began with the ominous sentence, "A spectre is haunting Europe—the spectre of Communism," and ended with the trumpet blast, "Workers of the world, unite!" is generally regarded as the seed from which developed, in the twentieth century, Russian Bolshevism and Stalinism. Such a view is undoubtedly an oversimplification, for the development of Socialist ideology is full of twists and turns and might well have grown

along quite different paths if the history of the movement itself had been different.

The history of the Socialist movement may be divided into three periods associated with the three Socialist Internationals. The First International lasted from 1864 to 1876 and was as much anarchistic as Socialistic. It was finally disrupted by the controversies of these two groups. The Second International was the Socialist International, founded in 1889. This became increasingly conservative and was disrupted by the Communists during World War I. The Third, or Communist, International was organized in 1919 by dissident elements from the Second International. As a result of the controversies of these three movements, the whole anticapitalist ideology, which began as a confused revolt against the economic and social conditions of industrialism in 1848, became sorted out into four chief schools. These schools became increasingly doctrinaire and increasingly bitter in their relationships. The basic division within the Socialist movement after 1848 was between those who wished to abolish or reduce the functions of the state and those who wished to increase these functions by giving economic activities to the state. The former division came in time to include the anarchists and the syndicalists, while the latter division came to include the Socialists and the Communists. In general the former division believed that man was innately good and that all coercive power was bad, with public authority the worst form of such coercive power. All of the world's evil, according to the anarchists, arose because man's innate goodness was corrupted and distorted by coercive power. The remedy, they felt, was to destroy the state. This would lead to the disappearance of all other forms of coercive power and to the liberation of the innate goodness of man. The simplest way to destroy the state, they felt, would be to assassinate the chief of the state; this would act as a spark to ignite a wholesale uprising of oppressed humanity against all forms of coercive power. These views led to numerous assassinations of various political leaders, including a king of Italy and a president of the United States, in the period 1895- 1905.

Syndicalism was a somewhat more realistic and later version of anarchism. It was equally determined to abolish all public authority, but did not rely on the innate goodness of individuals for the continuance of social life. Rather it aimed to replace public authority by voluntary associations of individuals to supply the companionship and management of social life which, according to these thinkers, the state had so signally failed to provide. The chief of such voluntary associations replacing the state would be labor unions. According to the syndicalists, the state was to be destroyed, not by the assassination of individual heads of states, but by a general strike of the workers organized in labor unions. Such a strike would give the workers a powerful esprit de corps based on a sense of their power and solidarity. By making all forms of coercion impossible, the general strike would destroy the state and replace it by a flexible federation of free associations of workers (syndicates). Anarchism's most vigorous proponent was the Russian exile Michael Bakunin (1814-1876). His doctrines had considerable appeal in Russia itself, but in western Europe they were widely accepted only in Spain, especially Barcelona, and in parts of Italy where economic and psychological conditions were somewhat similar to

those in Russia. Syndicalism flourished in the same areas at a later date, although its chief theorists were French, led by Georges Sorel (1847-1922).

The second group of radical social theorists was fundamentally opposed to the anarcho-syndicalists, although this fact was recognized only gradually. This second group wished to widen the power and scope of governments by giving them a dominant role in economic life. In the course of time, the confusions within this second group began to sort themselves out, and the group divided into two chief schools: the Socialists and the Communists. These two schools were further apart in organization and in their activities than they were in their theories, because the Socialists became increasingly moderate and even conservative in their activities, while remaining relatively revolutionary in their theories. However, as their theories gradually followed their activities in the direction of moderation, in the period of the Second International (1889-1919), violent controversies arose between those who pretended to remain loyal to the revolutionary ideas of Karl Marx and those who wished to revise these ideas in a more moderate direction to adapt them to what they considered to be changing social and economic conditions. The strict interpreters of Karl Marx came to be known as Communists, while the more moderate revisionist group came to be known as Socialists. The rivalries of the two groups ultimately disrupted the Second International as well as the labor movement as a whole, so that anti-labor regimes were able to come to power in much of Europe in the period 1918-1939. This disruption and failure of the working-class movement is one of the chief factors in European history in the twentieth century and, accordingly, requires at least a brief survey of its nature and background.

The ideas of Karl Marx (1818-1883) and of his associate Friedrich Engels (1820- 1895) were published in the Communist Manifesto of 1848 and in their three-volume opus, *Das Kapital* (1867-1894). Although they were aroused by the deplorable conditions of the European working classes under industrialism, the chief sources of the ideas themselves were to be found in the idealism of Hegel, the materialism of the ancient Greek atomists (especially Democritus), and the theories of the English classical economists (especially Ricardo). Marx derived from Hegel what has come to be known as the "historical dialectic." This theory maintained that all historical events were the result of a struggle between opposing forces which ultimately merged to create a situation which was different from either. Any existing organization of society or of ideas (thesis) calls forth, in time, an opposition (anti-thesis). These two struggle with each other and give rise to the events of history, until finally the two fuse into a new organization (synthesis). This synthesis in turn becomes established as a new thesis to a new opposition or antithesis, and the struggle continues, as history continues. A chief element in Marxist theory was the economic interpretation of history. According to this view, the economic organization of any society was the basic aspect of that society, since all other aspects, such as political, social, intellectual, or religious, reflected the organization and powers of the economic level.

From Ricardo, Marx derived the theory that the value of economic goods was based on

the amount of labor put into them. Applying this idea to industrial society where labor obtains wages which reflect only part of the value of the product they are making, Marx decided that labor was being exploited. Such exploitation was possible, he believed, because the working classes did not own the "instruments of production" (that is, factories, land, and tools) but had allowed these, by legal chicanery, to fall into the hands of the possessing classes. In this way, the capitalistic system of production had divided society into two antithetical classes: the bourgeoisie who owned the instruments of production and the proletariat who lived from selling their labor. The proletariat, however, were robbed of part of their product by the fact that their wages represented only a portion of the value of their labor, the "surplus value" of which they were deprived going to the bourgeoisie as profits. The bourgeoisie were able to maintain this exploitative system because the economic, social, intellectual, and religious portions of society reflected the exploitative nature of the economic system. The money which the bourgeoisie took from the proletariat in the economic system made it possible for them to dominate the political system (including the police and the army), the social system (including family life and education), as well as the religious system and the intellectual aspects of society (including the arts, literature, philosophy, and all the avenues of publicity for these). From these three concepts of the historical dialectic, economic determinism, and the labor theory of value, Marx built up a complicated theory of past and future history. He believed that "all history is the history of class struggles." Just as in antiquity, history was concerned with the struggles of free men and slaves or of plebians and patricians, so, in the Middle Ages, it was concerned with the struggles of serfs and lords, and, in modern times, with the struggles of proletariat and bourgeoisie. Each privileged group arises from opposition to an earlier privileged group, plays its necessary role in historical progress, and is, in time, successfully challenged by those it has been exploiting. Thus the bourgeoisie rose from exploited serfs to challenge successfully the older privileged group of feudal lords and moved into a period of bourgeois supremacy in which it contributed to history a fully capitalized industrial society but will be challenged, in its turn, by the rising power of the laboring masses.

To Marx, the revolution of the proletariat was not only inevitable but would inevitably be successful, and would give rise to an entirely new society with a proletariat system of government, social life, intellectual patterns, and religious organization. The "inevitable revolution" must lead to an "inevitable victory of the proletariat" because the privileged position of the bourgeoisie allowed them to practice a merciless exploitation of the proletariat, pressing these laboring masses downward to a level of bare subsistence, because labor, having become nothing but a commodity for sale for wages in the competitive market, would naturally fall to the level which would just allow the necessary supply of labor to survive. From such exploitation, the bourgeoisie would become richer and richer and fewer and fewer in numbers, and acquire ownership of all property in the society while the proletariat would become poorer and poorer and more and more numerous and be driven closer and closer to desperation. Eventually, the bourgeoisie would become so few and the proletariat would become so numerous that the latter could rise up in their

wrath and take over the instruments of production and thus control of the whole society. According to this theory, the “inevitable revolution” would occur in the most advanced industrial country because only after a long period of industrialism would the revolutionary situation become acute and would the society itself be equipped with factories able to support a Socialist system. Once the revolution has taken place, there will be established a “dictatorship of the proletariat” during which the political, social, military, intellectual, and religious aspects of society will be transformed in a Socialist fashion. At the end of this period, full Socialism will be established, the state will disappear, and a “classless society” will come into existence. At this point history will end. This rather surprising conclusion to the historical process would occur because Marx had defined history as the process of class struggle and had defined the state as the instrument of class exploitation. Since, in the Socialist state, there will be no exploitation and thus no classes, there will be no class struggles and no need for a state.

In 1889, after the First International had been disrupted by the controversies between anarchists and Socialists, a Second International had been formed by the Socialists. This group retained its allegiance to Marxist theory for a considerable period, but even from the beginning Socialist actions did not follow Marxist theory. This divergence arose from the fact that Marxist theory did not provide a realistic or workable picture of social and economic developments. It had no real provision for labor unions, for workers' political parties, for bourgeois reformers, for rising standards of living, or for nationalism, yet these became, after Marx's death, the dominant concerns of the working class. Accordingly, the labor unions and the Social-Democratic political parties which they dominated became reformist rather than revolutionary groups. They were supported by upper-class groups with humanitarian or religious motivations, with the result that the conditions of life and of work among the laboring classes were raised to a higher level, at first slowly and reluctantly, but, in time, with increasing rapidity. So long as industry itself remained competitive, the struggle between industrialists and labor remained intense, because any success which the workers in one factory might achieve in improving their wage levels or their working conditions would raise the costs of their employer and injure his competitive position with respect to other employers. But as industrialists combined together after 1890 to reduce competition among themselves by regulating their prices and production, and as labor unions combined together into associations covering many factories and even whole industries, the struggle between capital and labor became less intense because any concessions made to labor would affect all capitalists in the same activity equally and could be covered simply by raising the price of the product of all factories to the final consumers.

In fact, the picture which Marx had drawn of more and more numerous workers reduced to lower and lower standards of living by fewer and fewer exploitative capitalists proved to be completely erroneous in the more advanced industrial countries in the twentieth century. Instead, what occurred could be pictured as a cooperative effort by unionized workers and monopolized industry to exploit unorganized consumers by raising prices

higher and higher to provide both higher wages and higher profits. This whole process was advanced by the actions of governments which imposed such reforms as eight-hour days, minimum-wage laws, or compulsory accident, old age, and retirement insurance on whole industries at once. As a consequence, the workers did not become worse off but became much better off with the advance of industrialism in the twentieth century. This tendency toward rising standards of living also revealed another Marxist error. Marx had missed the real essence of the Industrial Revolution. He tended to find this in the complete separation of labor from ownership of tools and the reduction of labor to nothing but a commodity in the market. The real essence of industrialism was to be found in the application of nonhuman energy, such as that from coal, oil, or waterpower, to production. This process increased man's ability to make goods, and did so to an amazing degree. But mass production could exist only if it were followed by mass consumption and rising standards of living. Moreover, it must lead, in the long run, to a decreasing demand for hand labor and an increasing demand for highly trained technicians who are managers rather than laborers. And, in the longer run, this process would give rise to a productive system of such a high level of technical complexity that it could no longer be run by the owners but would have to be run by technically trained managers. Moreover, the use of the corporate form of industrial organization as a means for bringing the savings of the many into the control of a few by sales of securities to wider and wider groups of investors (including both managerial and laboring groups) would lead to a separation of management from ownership and to a great increase in the number of owners.

All these developments were quite contrary to the expectations of Karl Marx. Where he had expected impoverishment of the masses and concentration of ownership, with a great increase in the number of workers and a great decrease in the number of owners, with a gradual elimination of the middle class, there occurred instead (in highly industrialized countries) rising standards of living, dispersal of ownership, a relative decrease in the numbers of laborers, and a great increase in the middle classes. In the long run, under the impact of graduated income taxes and inheritance taxes, ... the great problem of advanced industrial societies became ... the exploitation of unorganized consumers (of the professional and lower-middle-class levels) by unionized labor and monopolized managers acting in concert. The influence of these last two groups on the state in an advanced industrial country also served to increase their ability to obtain what they wished from society as a whole. As a consequence of all these influences, the revolutionary spirit did not continue to advance with the advance of industrialism, as Marx had expected, but began to decrease, with the result that the more advanced industrial countries became less and less revolutionary. Moreover, what revolutionary spirit did exist in advanced industrial countries was not to be found, as Marx had expected, among the laboring population but among the lower middle class (so-called "petty bourgeoisie"). The average bank clerk, architect's draftsman, or schoolteacher was unorganized, found himself oppressed by organized labor, monopolized industry, and the growing power of the state, and found himself caught in the spiral of rising costs resulting from the efforts of his three oppressors to push the costs of social welfare and steady profits on to the unorganized

consumer. The petty bourgeois found that he wore a white collar, had a better education, was expected to maintain more expensive standards of personal appearance and living conditions, but received a lower income than unionized labor. As a consequence of all this, the revolutionary feeling existing in advanced industrial countries appeared among the petty bourgeoisie rather than among the proletariat, and was accompanied by psychopathic overtones arising from the suppressed resentments and social insecurities of this group. But these dangerous and even explosive feelings among the petty bourgeoisie took an anti-revolutionary rather than a revolutionary form and appeared as nationalistic, anti-Semitic, anti-democratic, and anti-labor-union movements rather than as antibourgeois or anticapitalist movements such as Marx had expected.

Unfortunately, as economic and social developments in advanced industrial countries moved in the un-Marxian directions we have mentioned, the unionized laborers and their Social Democratic political parties continued to accept the Marxist ideology or at least to utter the old Marxist war cries of "Down with the capitalists!" or "Long live the revolution!" or "Workers of the world, unite!" Since the Marxist ideology and the Marxist war cries were more easily observed than the social realities they served to conceal, especially when labor leaders sought all publicity for what they said and profound secrecy for what they did, many capitalists, some workers, and almost all outsiders missed the new developments completely and continued to believe that a workers' revolution was just around the corner. All this served to distort and to confuse people's minds and people's actions in much of the twentieth century. The areas in which such confusions became of great significance were in regard to the class struggle and to nationalism. We have pointed out that the class struggles between capitalists and the laboring masses were of great importance in the early stages of industrialism. In these early stages the productive process was more dependent on hand labor and less dependent on elaborate equipment than it became later. Moreover, in these early stages, labor was unorganized (and thus competitive), while capitalists were un-monopolized (and thus competitive). As the process of industrialization advanced, however, wages became a decreasing portion of productive costs, and other costs, especially the costs of equipment for mass production, for the technical management required by such equipment, and for the advertising and merchandising costs required for mass consumption, became more and more important. All of these things made planning of increasing significance in the productive process. Such planning made it necessary to reduce the number of uncontrolled factors in the productive process to a minimum while seeking to control as many of these factors as possible. An industry which had hundreds of millions of dollars (or even billions) in equipment and plant, as did the steel industry, automobiles, chemicals, or electrical utilities, had to be able to plan, in advance, the rate and the amount of usage that equipment would receive. This need led to monopoly, which was, essentially, an effort to control both prices and sales by removing competition from the market. Once such competition had been removed from the market, or substantially reduced, it became both possible and helpful for labor to be unionized.

Unionized labor helped planning by providing fixed wages for a fixed period into the future and by providing a better trained as well as a more highly disciplined labor force. Moreover, unionized labor helped planning by establishing the same wages, conditions, hours (and thus costs) on an industry-wide basis. In this way unionized labor and monopolized industry ceased to be enemies, and became partners in a planning project centered on a very expensive and complex technological plant. The class struggle in Marxian terms largely disappeared. The one exception was that, in a planned industry, the managerial staff could compare wage costs with fixed capital costs and might decide, to the resentment of labor, to replace a certain amount of labor by a certain amount of new machinery. Labor tended to resent this and to oppose it unless consulted on the problem. The net result was that rationalization of production continued, and advanced industrialized countries continued to advance in spite of the contrary influence of the monopolization of industry which made it possible, to some extent, for obsolete factories to survive because of decreased market competition. The effects of nationalism on the Socialist movement was of even greater significance. Indeed, it was so important that it disrupted the Second International in 1914-1919. Marx had insisted that all the proletariat had common interests and should form a common front and not fall victim to nationalism, which he tended to regard as capitalistic propaganda, seeking, like religion, to divert the workers from their legitimate aims of opposition to capitalism. The Socialist movement generally accepted Marx's analysis of this situation for a long time, arguing that workers of all countries were brothers and should join together in opposition to the capitalist class and the capitalist state. The Marxian slogans calling on the workers of the world to form a common front continued to be shouted even when modern nationalism had made deep inroads on the outlook of all workers. The spread of universal education in advanced industrial countries tended to spread the nationalist point of view among the working classes. The international Socialist movements could do little to reverse or hamper this development. These movements continued to propagate the internationalist ideology of international Socialism, but it became more and more remote from the lives of the average worker. The Social Democratic parties in most countries continued to embrace the international point of view and to insist that the workers would oppose any war between capitalist states by refusing to pay taxes to support such wars or to bear arms themselves against their "brother workers" in foreign countries.

How unrealistic all this talk was became quite clear in 1914 when the workers of all countries, with a few exceptions, supported their own governments in the First World War. In most countries only a small minority of the Socialists continued to resist the war, to refuse to pay taxes, or to serve in the armed forces, or continued to agitate for social revolution rather than for victory. This minority, chiefly among the Germans and Russians, became the nucleus of the Third, or Communist, International which was formed under Russian leadership in 1919. The Left-wing minority who became the Communists refused to support the war efforts of their various countries, not because they were pacifists as the Socialists were but because they were anti-nationalist. They were not eager to stop the war as the Socialists were, but wished it to continue in the hope that it would destroy

existing economic, social, and political life and provide an opportunity for the rise of revolutionary regimes. Moreover, they did not care who won the war, as the Socialists did, but were willing to see their own countries defeated if such a defeat would serve to bring a Communist regime to power. The leader of this radical group of violent dissident Socialists was a Russian conspirator, Vladimir Ilich Ulyanov, better known as Lenin (1870-1924). Although he expressed his point of view frequently and loudly during the war, it must be confessed that his support, even among extremely violent Socialists, was microscopic. Nevertheless, the fortunes of war served to bring this man to power in Russia in November 1917, as the leader of a Communist regime.

9.2 The Bolshevik Revolution, 1917

Friedrich Adler, who assassinated Austrian Prime Minister Karl von Sturgkh, on October 21, 1916, maintained contact "with the masonic leader Rothschild." Austrian Viktor Adler, father of Friedrich, warned Leon Trotsky, who was then exiled in Vienna that the authorities were going to capture him the next day, so he fled to Switzerland. Lenin stayed in Switzerland until March 1917. Ultimately, Trotsky arrived in New York City in January 1917, where he collaborated with Jacob H. Schiff, who ensconced him in an apartment and provided him with a chauffeur-driven limousine. After Trotsky had gathered a group of 300 Marxist revolutionaries from Manhattan's Lower East Side, Rockefeller allowed them to train in the Standard Oil compound in New Jersey. Then, they sailed from New York on the S.S. Kristianiafjord, chartered by Schiff, who also supplied Trotsky with \$20 million in gold. It was a paltry sum to acquire control of Russia and her vast natural resources. Rockefeller gave Trotsky \$10,000 for traveling expenses and arranged a special passport for him with President Woodrow Wilson.

Trotsky joined Vladimir Lenin, Joseph Stalin, Lazar Kaganovich, and Maxim Litvinov (Meyer H. Wallakh) for a strategy meeting in Switzerland before going to Russia. At the Congress of Vienna, officials guaranteed perpetual neutrality, to Switzerland, in the heart of Europe, due to the Rothschild's meticulous long-range planning. Industrialists, bankers, and politicians supported the Bolsheviks. On April 2, 1917, President Wilson said ". . . Assurance has been added to our hope for the future peace of the world by the wonderful and heartening things that have been happening in the last few weeks in Russia . . . Here is a fit partner for a League of Honor." US State Department records document that National City Bank, controlled by Stillman and Rockefeller interests, and the Guaranty Trust, controlled by Morgan interests, both provided substantial loans to belligerent Russia before America entered World War I on April 6, 1917. The State Department told the banks that the loans were contrary to international law. However, they conducted the loan negotiations through official US government communications facilities, and the State Department allowed the message transference.

On April 13, 1917, officials waylaid the ship in Halifax and they arrested Trotsky. People

had warned Canadian officials that Trotsky would halt Russia's participation in the war, which would free up the German armies who would then attack Canadian troops on the Western Front. Prime Minister David Lloyd George (1916-1922) cabled them and ordered the immediate release of Trotsky. They ignored him. John D. Rockefeller then directed Canadian Minister Mackenzie King to intervene, and he maneuvered Trotsky's release. In April 1917, after nine years, Lenin was returning to Russia to join Trotsky, the person with the connections to the bankers. Germany did not anticipate that Lenin, with perhaps 200 followers, could challenge their enemy, Russia. Lenin arrived at the Russian frontier in a sealed train from Switzerland. Trotsky arrived from the United States a while later. Kurt Riezler was the conduit for German subsidies to the Bolsheviks and negotiated with Lenin's agents, Karl Radek, and Alexander Parvus. Riezler later claimed that it was his idea to transport Lenin in the sealed train from Zurich, through Germany to Russia. A few Germans considered supporting Stalin, as they believed they could influence him more than Lenin could. They wanted to destroy both Lenin and Stalin without destroying Russia. The Germans had two objectives, 1) get Lenin to end Russia's participation in the war, and 2) eliminate Lenin and his revolutionary goals. However, Lenin was incredibly deceptive. While he played along with them, he implemented his revolution, and he intended to manipulate them and then turn against them.

To allay the fears of his colleagues, Alexander Kerensky claimed that Lenin was a German agent to discredit him. The patriots in the Duma said, "The very fact that Lenin came back via Germany will harm his prestige to such an extent that there will be nothing more to fear from him." Lenin expected such an indictment and so, before boarding the German train, he asked others to attest to his credentials. Paul Levi, a Jewish political leader, a member of the Social Democratic Party (SPD), along with Rosa Luxemburg, who kept kosher, and Karl Liebknecht verified Lenin's legitimacy as a Marxist. One person wrote, "The Russian internationalists who are now leaving for Russia to serve the revolution will be helping us by fostering uprisings among the proletarians of other countries, particularly those of Germany and Austria, against their own governments." Lenin requested the writer of that endorsement to add the reference to Germany and Austria to refute the claim that he was a German agent.

German bankers, through their agents, gave Lenin money before he boarded the train. Lenin exploited everyone for his own objectives, one of which was to destroy imperial Germany, after he had seized power in Russia. In September 1917, Schiff gave Trotsky funds through the Warburg Bank, his correspondent in Stockholm, which managed Trotsky's account. While the bankers invested in Lenin and Trotsky's revolutionary activities, they did not anticipate getting revolutions in their own countries. If certain German and Jewish bankers had not given Lenin millions of dollars, his revolution and plans for world subversion would have failed. With Lenin, it was always the ends justify the means. Max Warburg, the head of the German Secret Service, allowed Lenin's train with \$20 million in gold to cross the border on its way to Russia. The bankers and industrialists did not espouse the Marxist ideology but recognized that it is the ultimate monopoly

for controlling the government, the monetary system and all property. Less than ten percent of the population had imposed a dictatorship on the rest of the country. The occupants of Lenin's train, of the 165 names published, twenty-three were Russian, three were Georgian, four were Armenian, one was a German, and 128 were Jewish.

Henry P. Davison, as Chairman of the War Council of the American Red Cross, assisted the Bolsheviks by sending food. Davison, who helped found the Bankers Trust Company, was a senior partner at J.P. Morgan & Company, and participated in the meeting on Jekyll Island in 1910, where plotters devised the creation of the Federal Reserve. The contrived reason for the revolution was that starving Russian workers revolted against the oppressive czarist regime. However, the Bolsheviks manipulated the workers just as revolutionaries in France, exploited the destitute workers during the French Revolution. Prior to the Bolshevik revolt, Russia had become a producer in the world's oil market. Thomas D. Thacher (S&B), whose brother worked for Henry L. Stimson (S&B), was a partner in the Wall Street law firm of Simpson, Thacher & Bartlett. He represented the Soviet State Bank and assisted the Soviets to circumvent the law with the government's full cooperation. People at the Equitable Trust Building, 120 Broadway, in New York City, home of numerous firms, including the American International Corporation, developed the plan to participate in the brewing revolution. Thacher's 1917 memorandum, in consultation with Alfred Harmsworth, Lord Northcliffe, in London, called for assistance to the Bolsheviks. Thacher, who had visited Russia with William B. Thompson's Red Cross Mission, called for official recognition of the Soviet government. Because the Bolsheviks only controlled a small portion of the huge country, they required military and financial assistance to conquer the rest of the country.

Thacher thought that the United States should keep Japan out of Siberia, while giving assistance to the Soviets to build an army. He suggested that the Allied forces supply moral support to the Russian people in their political choices. Further, they should make every effort to maintain peace between Germany and the Soviet Union, until the inevitable conflict, in order to allow the Soviets to expand technologically and commercially. The Soviets would be unable to develop their natural resources without western assistance. The czar had rejected Rockefeller's help in developing the country's vast oil resources after Alphonse Rothschild died. President Woodrow Wilson sent US troops, under General William S. Graves to secure the Tran-Siberian Railroad for which the Soviets were grateful. Guaranty Trust and Brown Brothers saw a profitable opportunity with the Bolshevik Revolution, for which they supplied cash, guns, ammunition, and discreet political support from London, Washington, DC, and Paris, which gave minimal support. International bankers often finance both sides to incur major indebtedness. By their lending policies, the bankers decide which nation will be victorious. They loan the predetermined loser nation(s) enough money to participate but insufficient funds for a victory. Meanwhile, the banks lend the inevitable victor plenty of money with the understanding that the winner will honor the debts of the defeated countries, via the victor's seizure of the vanquished nation's natural and manufactured assets. The bankers invariably win while nations, even

victorious nations, mount up unpayable debt and squander their people in warfare.

Catherine Breshkovsky, the so-called Grandmother of the Russian Revolution, wrote to President Wilson, "A widespread education is necessary to make Russia an orderly democracy. We plan to bring this education to the soldier in the camp, to the workman in the factory, to the peasant in the village." Further, they could only maintain a democracy in Russia by militarily defeating and overthrowing Germany. She maintained that a free Russia could not survive if the people were untrained, unprepared and uneducated for governmental responsibilities, especially with Germany as "her next door neighbor." Thompson reiterated, "Russia would become speedily the greatest war prize the world has even known." In March 1918, President Wilson sent a telegram addressed to the Soviet Congress which read, "Let me take the opportunity on the occasion of this Soviet gathering to express the sincere sympathy felt by the American people for the Russian People. The American people are heartily with the Russian people in its determination to be forever free of autocratic government and to be master of its own destiny." Wilson sent Elihu Root to Russia with \$100 million from his Special Emergency War Fund to prop up the faltering Bolshevik regime. The evidence of Kuhn, Loeb and Company's support in the establishment of Communism is extensive. After their victory, the Bolsheviks transferred 600 million rubles in gold between the years 1918 and 1922, to Kuhn, Loeb.

American Jews such as the Warburg family funded Lenin and Trotsky. Armand Hammer, son of Russian-born Jewish immigrants, Julius and Rose (Lipshitz) Hammer, whose parents named him after the arm and hammer symbol of the Socialist Labor Party of America (SLP), was a Bolshevik agent. He later assisted in the formation of the American Communist Party, and advocated support for the Bolsheviks. In 1921, Armand Hammer went to the Soviet Union and stayed until late 1930. Jews were deeply involved in the revolution to destroy the czar and Christian Russia. Some individuals claim that British freemasons directed the B'nai B'rith in their installation of the Bolsheviks to destroy the possibility of a Eurasian alliance among France, Germany, Russia, Japan, and China, which would jeopardize British economic and geopolitical objectives. Germany, in the late 1800s, won a concession to build the Baghdad to Berlin railway, which would decrease Britain's importance as the dominate power.

On November 30, 1918, Trotsky addressed the Petrograd Soviet during which he spoke of two Americans with close connections to Wall Street, probably Thompson and Raymond Robins, a mining promoter. New York Federal Reserve Bank director (1914-1919), Thompson, left Petrograd on December 4, 1918, two days after he cabled a request for \$1 million to Morgan. The three key Soviet financiers were Thompson, Thomas W. Lamont, and Charles R. Crane (King Crane Commission). Without the help of J. Pierpont Morgan, and the Guaranty Trust Company, the Bolshevik Revolution would have failed as it did in 1905. Jacques Attali, the Jewish historian, academician and freemason, author of *The Jews, the World, and the Money*, confirmed in the magazine *L'Express* that the Jews invented capitalism. The Jews also developed state capitalism, which is communism, two diabolical systems that have caused the death of millions. Elizabeth Dilling

wrote, "Marxism, Socialism, or Communism in practice are nothing but state-capitalism and rule by a privileged minority, exercising despotic and total control over a majority having virtually no property or legal rights."

As long as currency creation, with its inherent debt structure, remains in the hands of the families that funded communism, the United States will never escape from the tyranny of the international money cabal. Experts say this about every country in which a central bank controls the currency and credit. The control of a nation's currency must be in the hands of the people who labor, not by those who seize the products of their labors. Communism, under other names, exists in every country, particularly the United States, and has been since the secretive, private Federal Reserve was established.

From the Book "The Creature of Jekyll Island" we learn:

The top Communist leaders have never been as hostile to their counterparts in the West, as the rhetoric suggests. They are quite friendly to the world's leading financiers and have worked closely with them, when it suits their purposes. As we shall see in the following section, the Bolshevik revolution actually was financed by wealthy financiers in London and New York. Lenin and Trotsky were on the closest of terms with these moneyed interests both before and after the Revolution. Those hidden liaisons have continued to this day and occasionally pop to the surface, when we discover a David Rockefeller holding confidential meetings with a Mikhail Gorbachev in the absence of government sponsorship or diplomatic purpose.

Masquerade in Moscow

One of the greatest myths of contemporary history is that the Bolshevik Revolution in Russia was a popular uprising of the downtrodden masses against the hated ruling class of the Tsars. As we shall see, however, the planning, the leadership and especially the financing came entirely from outside Russia, mostly from financiers in Germany, Britain and the United States. Furthermore we shall see, that the Rothschild Formula played a major role in shaping these events. This amazing story begins with the war between Russia and Japan in 1904. Jacob Schiff, who was head of the New York investment firm Kuhn, Loeb and Company, had raised the capital for large war loans to Japan. It was due to this funding that the Japanese were able to launch a stunning attack against the Russians at Port Arthur and the following year to virtually decimate the Russian fleet. In 1905 the Mikado awarded Jacob Schiff a medal, the Second Order of the Treasure of Japan, in recognition of his important role in that campaign.

During the two years of hostilities thousands of Russian soldiers and sailors were taken as prisoners. Sources outside of Russia, which were hostile to the Tsarist regime, paid for the printing of Marxist propaganda and had it delivered to the prison camps. Russian-speaking revolutionaries were trained in New York and sent to distribute the pamphlets among the prisoners and to indoctrinate them into rebellion against their own government. When

the war was ended, these officers and enlisted men returned home to become virtual seeds of treason against the Tsar. They were to play a major role a few years later in creating mutiny among the military during the Communist takeover of Russia.

Trotsky was a multiple Agent

One of the best known Russian revolutionaries at that time was Leon Trotsky. In January of 1916 Trotsky was expelled from France and came to the United States. It has been claimed that his expenses were paid by Jacob Schiff. There is no documentation to substantiate that claim, but the circumstantial evidence does point to a wealthy donor in New York. He remained for several months, while writing for a Russian socialist paper, the *Novy Mir* (New World) and giving revolutionary speeches at mass meetings in New York City. According to Trotsky himself, on many occasions a chauffeured limousine was placed at his service by a wealthy friend, identified as Dr. M. In his book, *My Life*, Trotsky wrote:

The doctor's wife took my wife and the boys out driving and was very kind to them. But she was a mere mortal, whereas the chauffeur was a magician, a titan, a superman! With the wave of his hand he made the machine obey his slightest command. To sit beside him was the supreme delight. When they went into a tea room, the boys would anxiously demand of their mother, 'Why doesn't the chauffeur come in?' (Leon Trotsky: *My Life*, New York publisher: Scribner's, 1930, p. 277)

It must have been a curious sight to see the family of the great socialist radical, defender of the working class, enemy of capitalism, enjoying the pleasures of tea rooms and chauffeurs, the very symbols of capitalist luxury. On March 23, 1917 a mass meeting was held at Carnegie Hall to celebrate the abdication of Nicolas II, which meant the overthrow of Tsarist rule in Russia. Thousands of socialists, Marxists, nihilists and anarchists attended to cheer the event. The following day there was published on page two of the *New York Times* a telegram from Jacob Schiff, which had been read to this audience. He expressed regrets, that he could not attend and then described the successful Russian revolution as "...what we had hoped and striven for these long years". (Mayor Calls Pacifists Traitors, *The New York Times*, March 24, 1917, p. 2)

In the February 3, 1949 issue of the *New York Journal America* Schiff's grandson, John, was quoted by columnist Cholly Knickerbocker as saying that his grandfather had given about \$20 million for the triumph of Communism in Russia. (To appraise Schiff's motives for supporting the Bolsheviks, we must remember, that he was a Jew and that Russian Jews had been persecuted under the Tsarist regime. Consequently the Jewish community in America was inclined to support any movement, which sought to topple the Russian government and the Bolsheviks were excellent candidates for the task. As we shall see further along, however, there were also strong financial incentives for Wall Street firms, such as Kuhn, Loeb and Company, of which Schiff was a senior partner, to see the old regime fall into the hands of revolutionaries, who would agree to grant lucrative business

concessions in the future in return for financial support today.)

When Trotsky returned to Petrograd in May of 1917 to organize the Bolshevik phase of the Russian Revolution, he carried \$10,000 for travel expenses, a generously ample fund considering the value of the dollar at that time. Trotsky was arrested by Canadian and British naval personnel, when the ship, on which he was traveling, the S.S. Kristianiafjord, put in at Halifax. The money in his possession is now a matter of official record. The source of that money has been the focus of much speculation, but the evidence strongly suggests, that its origin was the German government. It was a sound investment.

Trotsky was not arrested on a whim. He was recognized as a threat to the best interests of England, Canada's mother country in the British Commonwealth. Russia was an ally of England in the First World War, which then was raging in Europe. Anything, that would weaken Russia - and that certainly included internal revolution - would be, in effect, to strengthen Germany and weaken England. In New York on the night before his departure Trotsky had given a speech, in which he said: "I am going back to Russia to overthrow the provisional government and stop the war with Germany." (A full report on this meeting had been submitted to the U.S. Military Intelligence. See Senate Document No. 62, 66th Congress, Report and Hearings of the Subcommittee on the Judiciary, United States Senate, 1919, Vol. II, p. 2680.) Trotsky therefore represented a real threat to England's war effort. He was arrested as a German agent and taken as a prisoner of war.

With this in mind we can appreciate the great strength of those mysterious forces both in England and the United States, that intervened on Trotsky's behalf. Immediately telegrams began to come into Halifax from such divergent sources, as an obscure attorney in New York City, from the Canadian Deputy Postmaster-General and even from a high-ranking British military officer, all inquiring into Trotsky's situation and urging his immediate release. The head of the British Secret Service in America at the time was Sir William Wiseman, who, as fate would have it, occupied the apartment directly above the apartment of Edward Mandell House and who had become fast friends with him. House advised Wiseman, that President Wilson wished to have Trotsky released. Wiseman advised his government and the British Admiralty issued orders on April 21st, that Trotsky was to be sent on his way. ("Why Did We Let Trotsky Go? How Canada Lost an Opportunity to Shorten the War", MacLeans magazine, Canada, June 1919. Also see Martin, pp. 163-164.) It was a fateful decision, that would affect not only the outcome of the war, but the future of the entire world.

It would be a mistake to conclude, that Jacob Schiff and Germany were the only players in this drama. Trotsky could not have gone even as far as Halifax without having been granted an American passport and this was accomplished by the personal intervention of President Wilson. Professor Antony Sutton says:

President Woodrow Wilson was the fairy godmother, who provided Trotsky with a passport to return to Russia to "carry forward" the revolution... At the same time careful

State Department bureaucrats, concerned about such revolutionaries entering Russia, were unilaterally attempting to tighten up passport procedures. (Antony C. Sutton, Ph. D.: *Wall Street and the Bolshevik Revolution*, published by Arlington House in New Rochelle, NY, 1974, p. 25)

And there were others, as well. In 1911 the St. Louis Dispatch published a cartoon by a Bolshevik named Robert Minor. Minor was later to be arrested in Tsarist Russia for revolutionary activities and in fact was himself bankrolled by famous Wall Street financiers. Since we may safely assume, that he knew his topic well, his cartoon is of great historical importance. It portrays Karl Marx with a book entitled *Socialism* under his arm, standing amid a cheering crowd on Wall Street. Gathered around and greeting him with enthusiastic handshakes are characters in silk hats identified as John D. Rockefeller, J.P. Morgan, John D. Ryan of National City Bank, Morgan partner George W. Perkins and Teddy Roosevelt, leader of the Progressive Party.

What emerges from this sampling of events is a clear pattern of strong support for Bolshevism coming from the highest financial and political power centers in the United States; from men, who supposedly were "capitalists" and who according to conventional wisdom should have been the mortal enemies of socialism and communism. Nor was this phenomenon confined to the United States. Trotsky in his book *My Life* tells of a British financier, who in 1907 gave him a "large loan" to be repaid after the overthrow of the Tsar. Arsene de Goulevitch, who witnessed the Bolshevik Revolution firsthand, has identified both the name of the financier and the amount of the loan. "In private interviews", he said, "I have been told that over 21 million rubles were spent by Lord [Alfred] Milner in financing the Russian Revolution... The financier just mentioned was by no means alone among the British to support the Russian revolution with large financial donations." Another name specifically mentioned by de Goulevitch was that of Sir George Buchanan, the British Ambassador to Russia at the time. (See *Arsene de Goulevitch: Czarism and Revolution*, published by Omni Publications in Hawthorne, California, no date; rpt. from 1962 French edition, pp. 224, 230) It was one thing for Americans to undermine Tsarist Russia and thus indirectly help Germany in the war, because American were not then into it, but for British citizens to do so was tantamount to treason. To understand, what higher loyalty compelled these men to betray their battlefield ally and to sacrifice the blood of their own countrymen, we must take a look at the unique organization, to which they belonged.

Round Table Agents in Russia

In Russia prior to and during the revolution there were many local observers, tourists and newsmen, who reported, that British and American agents were everywhere, particularly in Petrograd, providing money for insurrection. On report said, for example, that British agents were seen handing out 25-rouble notes to the men at the Pavlovski regiment just a few hours, before it mutinied against its officers and sided with the revolution.

The subsequent publication of various memoirs and documents made it clear, that this funding was provided by Milner and channeled through Sir George Buchanan, who was the British Ambassador to Russia at the time. (See de Goulevitch, p. 230) It was a repeat of the ploy, that had worked so well for the cabal many times in the past. Round Table members were once again working both sides of the conflict to weaken and topple a target government. Tsar Nicholas had every reason to believe, that since the British were Russia's allies in the war against Germany, British officials would be the last persons on Earth to conspire against him. Yet the British Ambassador himself represented the hidden group, which was financing the regime's downfall.

The Round Table Agents from America did not have the advantage of using the diplomatic service as cover and therefore had to be considerably more ingenious. They came not as diplomats or even as interested businessmen, but disguised as Red Cross officials on a humanitarian mission. The group consisted almost entirely of financiers, lawyers and accountants from New York banks and investment houses. They simply had overpowered the American Red Cross organization with large contributions and in effect purchased a franchise to operate in its name. Professor Sutton tells us:

The 1910 [Red Cross] fund-raising campaign for \$2 million, for example, was successful only, because it was supported by these wealthy residents of New York City. J.P. Morgan himself contributed \$100,000... Henry P. Davison [a Morgan partner] was chairman of the 1910 New York Fund-Raising Committee and later became chairman of the War Council of the American Red Cross... The Red Cross was unable to cope with the demands of World War I. and in effect was taken over by these New York bankers. (Sutton: Revolution, p. 72)

For the duration of the war the Red Cross had been made nominally a part of the armed forces and subject to orders from the proper military authorities. It was not clear, who these authorities were and in fact there were never any orders, but the arrangement made it possible for the participants to receive military commissions and wear the uniform of American army officers. The entire expense of the Red Cross Mission in Russia, including the purchase of uniforms, was paid for by the man, who was appointed by President Wilson to become its head, "Colonel" William Boyce Thompson. Thompson was a classical specimen of the Round Table network. Having begun his career as a speculator in copper mines, he soon moved into the world of high finance. He

- refinanced the American Woolen Company and the Tobacco Products Company;
- launched the Cuban Cane Sugar Company;
- purchased controlling interest in the Pierce Arrow Motor Car Company;
- organized the Submarine Boat Corporation and the Wright-Martin Aeroplane Company;
- became a director of the Chicago Rock Island & Pacific Railway, the Magma Arizona Railroad and the Metropolitan Life Insurance Company;
- was one of the heaviest stockholders in the Chase National Bank;
- was the agent for J.P. Morgan's British securities operation;
- became the first full-time director of the Federal Reserve Bank of New York, the most

important bank in the Federal Reserve System;
-and of course contributed a quarter-million dollars to the Red Cross.

When Thompson arrived in Russia, he made it clear, that he was not your typical Red Cross representative. According to Hermann Hagedorn, Thompson's biographer:

He deliberately created the kind of setting, which would be expected of an American magnate: established himself in a suite in the Hotel de l'Europe, bought a French limousine, went dutifully to receptions and teas and evinced an interest in objects of art. Society and the diplomats, noting that here was a man of parts and power, began to flock about him. He was entertained at the embassies, at the houses of Kerensky's ministers. It was discovered, that he was a collector and those with antiques to sell fluttered around him offering him miniatures, Dresden china, tapestries, even a palace or two. (Hermann Hagedorn: *The Magnate: William Boyce Thompson and His Time*, published by Reynal & Hitchcock, New York, 1935, pp. 192-93)

When Thompson attended the opera, he was given the imperial box. People on the street called him the American Tsar. And it is not surprising, that according to George Kennan, "He was viewed by the Kerensky authorities as the 'real' ambassador of the United States." (George F. Kennan: *Russia Leaves the War: Soviet-American Relations, 1917-1920* published by Princeton University Press in Princeton, NJ, 1956, p. 60) It is now a matter of record, that Thompson syndicated the purchase on Wall Street of Russian bonds in the amount of ten million roubles. (Hagedorn, p. 192) In addition, he gave over two million roubles to Aleksandr Kerensky for propaganda purposes inside Russia and with J.P. Morgan gave the rouble equivalent of one million dollars to the Bolsheviks for the spreading of revolutionary propaganda outside of Russia, particularly in Germany and Austria. (Sutton: *Revolution*, pp. 83, 91.) It was the agitation made possible by this funding, that led to the abortive German Spartacus Revolt of 1918. (See article "W.B. Thompson, Red Cross Donor, Believes Party Misrepresented" in the *Washington Post* of Feb. 2, 1918) A photograph of the cablegram from Morgan to Thompson advising, that the money had been transferred to the National City Bank branch in Petrograd, is included in this book.

An Object Lesson in South Africa

At first it may seem incongruous, that the Morgan group would provide funding for both Kerensky and Lenin. These men may have both been socialist revolutionaries, but they were miles apart in their plans for the future and in fact were bitter competitors for control of the new government. But the tactic of funding both sides in a political contest by then had been refined by members of the Round Table into a fine art. A stunning example of this occurred in South Africa during the outset of the Boer War in 1899.

9.3 Marxist Subversion throughout Europe

By November 1918, every country in Europe was experiencing economic chaos, and the destabilization associated with warfare, just as the Bolshevik criminals intended. On November 24, 1918, Béla Kuhn, a former journalist, a communist politician, and a Bolshevik revolutionary founded the Communist Party of Hungary (KMP) in Budapest. There was rampant inflation, mass unemployment, housing shortages, food and energy shortages, and widespread protests, a highly suitable environment in which to establish socialism. In his early travels, including to Petrograd and Moscow, Kuhn met Vladimir Lenin, who was more to the right than Kuhn. He created an ultraradical left-wing faction in opposition to Lenin, and the conventional Bolsheviks. They endorsed revolutionary offensive by any means possible.

The Bolsheviks declared Bremen, Germany, as a Soviet Republic, which existed from November 1918 to February 1919. On April 6, 1919, they declared a Bavarian Soviet Republic, which lasted until May 3, 1919. They created a Red Army, and established secret police squads to commit terrorist activities against every citizen and to liberate neighboring countries. The Soviet Ukraine waged war on Romania and prepared to march west to meet Soviet Hungary.

Anarchy, hunger, and hardships made every European country vulnerable to communist infiltration as numerous governments collapsed, including the German Empire. As quickly as the Soviets had declared peace, they now declared war, and sent the Red Army to take over the governments of Estonia (November 29, 1918), Latvia (December 4), Lithuania (December 8). The revolution in Germany would begin at the end of World War I. On December 17, 1918, the Marxists published a manifesto in Riga describing the war-weary vulnerable German Empire as the main target of their immediate assault. Lenin said, "We are at the doorstep of world revolution." Lenin and Trotsky began to construct a World Soviet Socialist Republic, their ultimate goal, by creating communist factions on each continent. They funded this from Russia's gold reserves. The communist ideology stated—the old world must be destroyed and replaced by a new one; this destruction requires gaining political control through any means possible—peaceful, violent, open or secret; the struggle for this new world must unfold on a world scale rather than a national one. Their stated philosophy is, "The interests of the World Revolution are more important than the interests of individual countries."

After World War I, Jewish-led revolutionary movements peopled by the propagandized poverty-stricken working classes swept across war-torn Europe. On March 4, 1919, at a Congress in Moscow, Lenin and Trotsky devised the Communist International, or Comintern, with the objective of creating a World Soviet Socialist Republic. According to official Hungarian documents, Bolshevism in Hungary was a Judaea-Masonic movement. On March 21, 1919, communists established the Hungarian Soviet Republic. The new government had numerous freemasons headed by Hungarian Béla Kuhn. The Hungarian Commissariat consisted of twenty-six, eighteen of who were Jewish. Kuhn's new Hun-

garian Soviet Republic promised equality and social justice. It only lasted until August 6, 1919, collapsing when Romanian forces occupied Budapest during the Hungarian-Romanian War. Officials created the Kingdom of Hungary after the Romanian Army withdrew.

On March 24, 1919, the communist infiltrators seized control of the government buildings in Hamburg. In other industrialized cities in central Germany, they sequestered court buildings, municipal buildings, banks, and police headquarters. Their official newspaper, *Die Rote Fahne* advocated a general revolution. Despite their success and their propaganda efforts, their revolution failed to achieve their objectives. On June 20, 1919, members of the Hungarian Red Army entered Slovakia and declared the Slovak Soviet Republic. The Communist Party of Russia, with all of the confiscated gold reserves of Russia, financed the activities of the Marxist regimes in other countries. Comintern officials at the Kremlin made the decisions, and the Soviet secret police enforced them. They eliminated those who opposed the tyrannical central control. On August 5, 1919, Trotsky issued a memo stating, "The road to Paris and London lies through the cities of Afghanistan, Punjab, and Bengal." On March 6, 1920, Lenin said, "Victory will be ensured in the not-too distant future." Lenin prepared to invade India. Trotsky thought it essential to have an Asian command center from which to conduct a revolution in India, in conjunction with, and support of local revolutionaries. While the Bolsheviks wanted to immediately initiate another world war, the Russians were engaged in a civil war (1918-1919). Because they were expending the nation's resources on fighting against dissident Russians, they were unable to initiate another world war. Moreover, Trotsky and Lenin could not send financing to the communist leaders they had installed in Central European countries nor could they send the Red Army to Germany.

On July 23, 1920, Lenin cabled Stalin, who was at the Polish front, "Situation in Comintern is outstanding. Zinoviev (Grigory), Bukharin (Nikolai), and I think that it would be proper to encourage a revolution in Italy. My personal opinion is that to do so, Hungary has to be sovietized, possibly along with Czechoslovakia and Rumania." Lenin told some French delegates in the Comintern congress, "Yes, the Soviet troops are in Warsaw. Soon, Germany will be ours. We will conquer Hungary again; the Balkans will rise against capitalism. Italy will tremble. Bourgeois Europe is crackling at the seams in the storm." While the Bolshevik slaughter in Russia horrified the Christian world, others, especially in Europe, viewed it as heroic.

In 1920, hundreds of communist agitators entered a disheartened, economically ruined Germany, the perfect crisis environment to emphasize class struggle, and provoke a revolution against the status quo. In March 1920, about twelve million workers participated in a strike. On December 6, 1920, Lenin said that in order to have soviet communist world dominion or "victory of socialism all over the world," that they would have to incite the conflicts and contradictions between the capitalist states, to let them exhaust themselves fighting each other. On December 30, 1922, in Moscow, the Bolsheviks created the Union of Soviet Socialist Republics with the implications that there were

no geographic limitations but rather worldwide with global image on its coat of arms. Their first target was Germany. They had a regular commission just to concentrate on Germany composed of the top leadership—Trotsky, Stalin, Zinoviev, Nikolai Bukharin (Moshe Pinkhus-Dolgolevsky), and Karl Radek. Stalin, who had taken over the party from Lenin, felt that it was imperative that they conceal the fact that the Bolsheviks in the USSR had instigated and dictated the circumstances of the revolution in Germany which they planned for November 9, 1923.

In almost every nation, the Comintern helped to establish communist parties, all dictated by policies from Moscow. For the most part, delegates from the various nations representing communist parties were trade union members, members of legislative bodies, and other government officials. communists engaged in open terrorism, and assassinations, followed by coup d'état and infiltration of existing governments. Their ideology advocates the following:

- 1) They must destroy the old world and build a new one in its place.
- 2) To do that, it is necessary to gain political power which requires using all measures, ranging from the most peaceful to the most violent, from the most open to the most secretive.
- 3) They must impose a new world on a world scale. "The interests of the World Revolution are more important than the interests of individual countries."

Marxist Infiltration in Germany

The Social Democratic Party of Germany (SPD), the strongest party in Germany, steadily increased in membership, from 384,327 in 1906 to 1,085,905 by 1914. In 1912, it had 110 seats in the Reichstag, the German parliament. Trade unions were also very strong. In 1892, at least 237,000 workers belonged to a union. The number grew to 2,600,000 by 1912. When Russia declared war on Germany, needing funds for defense, Germany attempted to borrow money from Wall Street, but found that the international financial markets excluded her. However, they funded France and Britain's warfare. Germany resorted to domestic borrowing, mainly from institutions and large corporations. Thus the Reichstag passed a series of war credits (bonds). On August 4, 1914, Friedrich Ebert, August Bebel's successor as SPD co-chairman, and other party members, like Karl Liebknecht, supported these bonds to finance Germany in World War I, despite the party's supposed anti-war position. These bonds only covered two-thirds of the costs and carried interest, a growing expense which required further resources to pay.

In 1915, the SPD advocated German participation in World War I. The avid Marxists who dominated the SPD tried to legitimize their support of the war in the Reichstag. Heinrich Cunow, Paul Lensch, and Konrad Haenisch led this group, individuals who were close to Alexander Parvus, a wealthy Jewish revolutionary, who had joined the SPD by 1886. In early 1915, Franz Mehring, sympathetic to the Bolsheviks, and their October

Revolution, and Rosa Luxemburg, a Polish Jew, edited and published the magazine *Die Internationale*. She, Liebknecht, Clara Zetkin, and others, officially founded the anti-war Spartacus League on January 1, 1915. They quietly funded a conference in Berlin to attract a growing number of like-minded people. Meanwhile, they worked to instigate strikes. There had been none between August and December 1914. However, in 1915, about 13,000 workers participated in 140 strikes. On May 1, 1916 (a communist holiday), Luxemburg and Liebknecht organized an anti-war demonstration, with 10,000 workers in Berlin. In June, in Berlin, 55,000 munitions workers went on strike. Concurrently, strikes erupted in Bremen and Braunschweig. In 1916, there were 125,000 workers who participated in 240 strikes.

In January 1917, given their success instigating strikes and demonstrations, Luxemburg, Liebknecht and Haase left the SPD and founded the anti-war Independent Social Democratic Party of Germany (USPD). Kautsky, whose wife was close to Luxemburg, soon left the SPD and joined them. After the November revolution in Germany, Kautsky would become the under-secretary of State in the Foreign Office where he would attempt to find documents proving Germany's war guilt. Author Fritz Fischer purportedly discovered secret archival documents long after the war. He described the September Plan in two books, claiming that Germany had expansionary goals, its alleged goals for going to war, the claim that Kautsky had made in 1915. Over the winter, the food situation worsened and by March 1917, the government had to decrease bread rations. From January through April of 1917, more than 400,000 workers were involved in more strikes than had taken place in the previous year. In April 1917, decreased bread rations ignited another wave of strikes. In Berlin, over 300,000 workers refused to work, demanded peace, the release of all political prisoners, and more food. As a result of the strikes of April 1917, and January 1918, the USPD instituted the office of Revolutionary Shop Stewards whose stewards would maintain regular connections to the USPD and play a big part in the strikes. By mid-1917, Matthias Erzberger, of the Centre Party, began opposing the war which, with the concurrent strikes, seriously undermined military morale. He authored the Peace Resolutions that the Reichstag adopted on July 17, 1917, seeking a negotiated peace. In October 1918, he would become Secretary of State after he helped oust Chancellor Bethmann-Hollweg.

The German army was slowly losing ground, not because of Allied strength but to the undermining actions of officials. General Erich Ludendorff blamed the government and certain civilians for the military surrender and the subsequent armistice, claiming they withheld support. Additionally, Vladimir Lenin's Marxist agitators had infiltrated the unions and had waged a relentless drive of subversion and sabotage. Officials arrested some of them and found incriminating documents. Jewish managers provided considerable funds to Liebknecht and Luxemburg to conduct espionage activities in order to instigate an insurrection. Over 70,010 Jews were among Russia's communist leadership and they made certain to disseminate a majority of Jewish agents throughout Europe.

While they were negotiating for peace in Brest-Litovsk, February- March 1918, the Bol-

sheviks in St. Petersburg published 500,000 inflammatory copies of *Die Fackel* (The Torch) for distribution in German. This subversion facilitated instability while German soldiers were fighting a bloody battle in the West. 1629 The Bolsheviks may have procrastinated signing the Brest-Litovsk Treaty to allow their agents more organizational time. Liebknecht, along with Luxemburg, a dedicated Marxist, and a naturalized German citizen, influenced some of the German negotiators to agree with Trotsky. The Marxists sent agitators among the steel workers unions; they were able to organize at least 500,000 workers to go on strike. General Erich Ludendorff, exasperated with this obvious foreign subversion, persuaded the workers to return to work within a week. 1630 Despite the peace treaty, the unethical Marxists still published German-language propaganda, and set up additional groups in Germany to exploit war-related political and economic instabilities.

On September 29, 1918, the Supreme Army Command informed Kaiser Wilhelm, at the Imperial Army headquarters in Spa, Belgium, about the military situation with decreased armaments and the numerous uprisings in Berlin and other places. Ludendorff asked for an immediate cease fire and suggested that Germany accept President Wilson's peace terms, which would place the nation on an equal basis with the Allies. On that same day, the Prussian Kingdom assumed its pre-war authority, which lasted until Kaiser Wilhelm's abdication. Henry Cabot Lodge had attacked Wilson's Fourteen Points as unrealistic and too weak, maintaining that they should militarily and economically demolish Germany, and then burden it with severe penalties to remove all possible future threats to Europe's stability. This sounds strangely similar to the vindictive Morgenthau Plan after World War II. The German Revolution soon erupted, lasting from November 4, 1918 to August 11, 1919.

On November 7, 1918, Kurt Eisner, a Jew living in Munich, attended a peace rally in Munich. In front of approximately 60,000 people he demanded the end of the war, the institution of an eight-hour work day, and assistance for the poor and unemployed. He demanded that King Ludwig III, of the Wittelsbach monarchy in Bavaria, and Emperor Wilhelm II relinquish their positions. Eisner wanted to replace them with councils, composed of workers and soldiers. The crowd, swayed by his fervency, marched to the army barracks where they persuaded many of the soldiers to join the revolution. That evening, Ludwig went into exile. On November 8, Eisner proclaimed Bavaria a free state and he became Minister-President of Bavaria. He quickly dissociated himself from the Bolsheviks and other communists. One can only imagine how the German soldiers must have felt, just returning home from war and seeing their country in a Jewish-led communist revolution trying to repeat the Bolshevik-Revolution.

On November 7, 1918, Kurt Eisner, a Jew living in Munich, attended a peace rally in Munich. In front of approximately 60,000 people he demanded the end of the war, the institution of an eight-hour work day, and assistance for the poor and unemployed. He demanded that King Ludwig III, of the Wittelsbach monarchy in Bavaria, and Emperor Wilhelm II relinquish their positions. Eisner wanted to replace them with councils, com-

posed of workers and soldiers. The crowd, swayed by his fervency, marched to the army barracks where they persuaded many of the soldiers to join the revolution. That evening, Ludwig went into exile. On November 8, Eisner proclaimed Bavaria a free state and he became Minister-President of Bavaria. He quickly dissociated himself from the Bolsheviks and other communists. On November 9, 1918, Luxemburg founded the *Die Rote Fahne* (The Red Flag), the central organ of the Spartacist League, which would evolve into the Communist Party of Germany (KPD), during a founding congress, December 30, 1918 to January 1, 1919, part of the Comintern. The expertly-trained agents, such as Luxemburg, fomented strikes in vital industries, particularly those related to the war effort. They emboldened civil disorder with rhetoric that challenged people's faith. They promoted contempt and ridicule for political and military leaders. They used rational arguments and emotional slogans that encouraged people to question traditional moral values such as honesty, sobriety, integrity and commitment.

The Kaiser appointed Prince Maximilian of Baden as the new Imperial Chancellor who then announced the abdication of the Kaiser. On November 7, 1918, the prince formed a new government, which included Friedrich Ebert, Philipp Scheidemann, and other top SPD members. The French masonic lodge "Art et Travail in Paris", was a study center for Scheidemann, Lenin, Trotsky, and Béla Kuhn. Recall, that in August 1914, Ebert had led the SPD to unanimously vote for war loans to fight a necessary patriotic war. On November 9, 1918, after the German Revolution erupted, Maximilian relinquished his office to Ebert, the head of the provisional government for the next several months. Maximilian appointed Secretary of State, Matthias Erzberger to represent Germany in the negotiations in the Forest of Compiègne. Scheidemann, who had also been pro-war, proclaimed the Weimar Republic (1919-1933) to replace the imperial form of government, following the Kaiser's abdication. He did this to ostensibly counter Liebknecht's declaration of a Free Socialist Republic. German nationalists referred to Ebert, Erzberger, and Walter Rathenau as November Criminals. Many Germans blamed the civilian government who they say failed to support the army who were undefeated in the field and that Marxists sabotaged and now ruled the country.

Britain and France were war-weary, and had not penetrated Germany's western frontier and had no will to do so. Those nations were ready to capitulate even though the United States had re-supplied them. In the east, Germany had prevailed against Russia and they had signed the Treaty of Brest-Litovsk. Germany was close to winning the war in the West, with the Spring Offensive, which began on March 21, 1918, when they advanced further into enemy territory, before fresh US troops entered the war. The German armies were in France and Belgium in November 1918, when German officials surrendered. Thereafter, the armies withdrew. One of the biggest contributing factors for the surrender was the strikes occurring in the arms industry, which left the military with an insufficient supply of armaments. Further, the West's industrialization of warfare, in addition to the blockades, initiated a radical dehumanizing war that helped to defeat Germany.

German soldiers relinquished their weapons with the understanding that the government arbitrators would devise the peace treaty according to Wilson's Fourteen Points. They felt that the politicians had pressured them into putting down their arms without a legitimate military defeat. The relative ease of a deceptive unconditional surrender strengthened the conspiratorial relationship of the three major Allies. In addition to a military loss, the Treaty of Versailles would impose further territorial and financial losses. When the new government forced Kaiser Wilhelm to abdicate, the military, under General Paul von Hindenburg, commander-in-chief, relinquished its executive power to the temporary civilian government. Ebert, telegraphed Erzberger, a civilian, authorizing him to sign the Armistice which he did on November 11, 1918, which officially ended the war and led to the Treaty of Versailles. Then, starting in August 1919, as Finance Minister, Erzberger encouraged the parliament to honor the ratification of the Versailles Treaty. He then began making plans toward accruing funds to start reparations payments by forcing through the new measures of taxation. 1635 People would force Erzberger from office in March 1920, and members of the nationalistic Organization Consul murdered him on August 26, 1921, in Bad Griesbach, a spa in the Black Forest. That group also assassinated Rathenau, the Foreign Minister, from February to June 24, 1922.

When the German monarchy fell, influential Jews seized control of the Bavarian government. Hugo Haase was in charge of Foreign affairs. Otto Landsberg, a member of the Weimar National Assembly, was the German Ambassador in Belgium (1920-1923), and was deputy to the Reichstag (1924-1933). Karl Kautsky was the state under-secretary in the Foreign Office under Haase. Oskar Cohn and Joseph Herzfeld were both Haase assistants. The Finance Minister, Eugen Schiffer, was also Jewish, as was Eduard Bernstein, his assistant. Dr. Ludwig Freund, an associate of Sigmund Freud assisted the Minister of the Interior, Hugo Preuß, the main author of the Weimar constitution. 1636 Fritz M. Cohen was the government's publicity agent.

The desperate middle class Germans blamed their economic troubles on the Jews, easily identified with communism because so many of them embraced Marxism. After all, Eisner helped instigate the Bolshevik revolution in Munich. Other Jews collaborated with him—Liebknecht, Luxemburg, who the Bolsheviks had sent to Germany, and Max Lowenberg, Dr. Kurt Rosenfeld, Caspar Wollheim, Max Rothschild, Carl Arnold, Hermann Kranold, Rosenhek, Birnbaum, Reis and Kaiser. Eleven of the most active revolutionaries were freemasons who belonged to a secret lodge located in Munich at No. 51 Briennerstrasse. 1637 De Poncins wrote, "The Jewish preponderance in the German revolutions of 1918 is not less irrefutable; there as elsewhere, they are directors and strategists of the movement. The Soviet Republic of Munich was Jewish; it is sufficient to mention some of the names of leaders: Liebknecht, Rosa Luxembourg, Kurt Eisner and many others." Hugh R. Wilson wrote, "In these conditions anti-Semitism reared its ugly head. Millions of returning soldiers out of a job and desperately searching for one, found the stage, the press, medicine and law crowded with Jews. They saw among the few who had money to splurge, a high proportion of Jews. A number of the leaders of the Demokratische

Partei, that fraction of the Reichstag most closely identified with the type of government in power, were Jews. The leaders of the Bolshevik movement in Russia, a movement desperately feared in Germany, were Jews. One could sense the spreading resentment and hatred." 1639 He further wrote, "I remember writing home at the time that if there ever came a reactionary movement, whether military or monarchist, I didn't dream of a Nazi Party, that movement would be anti-Semitic in character. It has been widely assumed that Adolf Hitler and his followers invented anti-Semitism in Germany. The facts of the case do not bear this out. When Hitler inserted an anti-Semitic plank in his platform, he doubtless was acting in accordance with his own hatred and prejudice. Nevertheless, adroit politician that he is, he was inserting a plank to catch the votes."

The government and the Freikorps, captured Luxemburg and Liebknecht and some of their supporters. On January 15, 1919, they drowned Luxemburg in the Landwehr Canal in Berlin, thereby making them Marxist martyrs. Violence was pandemic in Munich in the first six months of 1919. On March 7, 1919, Johannes Hoffmann, the leader of the SPD, unsuccessfully attempted to form a coalition government in Bavaria. Then he set up and headed a Social Democratic government, which would only last until April 6, 1919. On that day, Marxists officially proclaimed a Soviet Republic, ruled by USPD members such as Ernst Toller, from a Prussian Jewish family, Gustav Landauer, a Jewish anarchist (grandfather of the television and film director, Mike Nichols), Silvio Gesell, and Erich Mühsam, influenced by Bela Kuhn's communist regime in Hungary.

On April 12, 1919, the communists seized power and Eugen Leviné, a Russian-born Jew, was the leader of the Bavarian Soviet Republic. He began imposing reforms, organizing a Red Army and confiscating money, food, and expensive apartments. They requisitioned factories and assigned workers to control them. Leviné intended to reform the education system. Lenin directed Leviné to capture and execute certain individuals, but his men refused to kill the hostages. On April 30, Russian soldiers, sent by Lenin, murdered eight men, including Prince Gustav of Thurn and Taxis, and Countess Hella von Westarp. German soldiers returned home following their inexplicable defeat and many joined one of several paramilitary organizations that had sprung up to in an attempt to suppress the communist uprisings. Minister of Defense Gustav Noske, of the SPD, gave considerable support to these military groups. He used them to crush the German Revolution and the Marxist Spartacist League. Leviné's communist government lasted less than a month. On May 3, 1919, a combined 39,000-member force of loyal members of the German army and the Freikorps arrived in Munich where they engaged in brutal street fighting and finally defeated the communists. During the battle, they killed over 1,000 people who supported the communist government. They arrested and summarily executed approximately 700 men and women. The court also condemned Leviné for treason. The civil conflict resulted in the replacement of Germany's imperial government with the Weimar Republic on August 11, 1919, when they officially adopted the Weimar Constitution. Following the war and the abolition of the monarchy, Ebert was the first president of Germany (1919-1925). After he assumed office, the government, the army, and the Freikorps

together battled the leftist uprisings, where they killed several leftwing politicians which culminated in the affiliation of the SPD and the Independent Social Democratic Party of Germany (USPD).

Nationalists and former military leaders criticized the unconditional peace stipulations and the Weimar politicians, socialists, communists, and Jews, who they accused of betraying Germany by withdrawing support for the military, criticizing nationalism, instigating unrest and strikes, and finally relinquishing Germany to its enemies. People refer to those responsible as the treasonous November Criminals, many of whom were now functioning in the newly formed Weimar Republic. The newly-established government attempted to address the death and destruction and other chaotic consequences of the war, the lack of infrastructure, the loss of thousands of homes, the absence of food and the starvation afflicting the entire population. It tried to provide unemployment benefits and other assistance to the soldiers who returned home to high unemployment and very little opportunity. The SPD, now part of the struggling republic, and the new Communist Party of Germany (KPD), consisting of former SPD members, became bitter enemies.

In November 1919, the Weimar National Assembly appointed a committee to investigate the causes of the war and Germany's defeat. On November 18, 1919, Paul von Hindenburg testified and referred to an article that appeared in the *Neue Zürcher Zeitung* on December 17, 1918, which cited two other articles, wherein British General Frederick B. Maurice said the civilians betrayed the German army. Communists entered a disheartened, economically ruined Germany, the perfect environment to emphasize class struggle and provoke a further revolution against the status quo. In March 1920, at least 12,000,000 workers initiated a general strike in Germany, a nation about to explode in revolution. The Red Army, now on the move through Poland, in the Polish-Soviet War, February 1919-March 1921, was to expedite that explosive event. General Mikhail Tukhachevsky began an aggressive campaign westward with his forces toward the goal of brutalizing Europe. Later, he became the commander in chief of the Red Army (1925-1928). According to excerpts from order #1423, dated July 2, 1920, regarding the western front, it said, "Fighters of the Workers' Revolution! The fate of the World Revolution will be decided in the West. The path to the world fire lies over the dead body of White (anti-communist) Poland. We will carry happiness and peace on our bayonets to the working people of the world. To the West! To decisive battles and thundering victories."

Tukhachevsky, leading the Soviet invasion of Poland in 1920, failed to understand military strategy, and his opponents, led by Józef Piłsudski, defeated his army outside Warsaw. Tukhachevsky and Stalin blamed each other for their inability to capture Warsaw. Because of this, they had to postpone their revolution in Europe. Tukhachevsky later said, "There can be no doubt that if we had been victorious on the Vistula, the revolutionary fires would have reached the entire continent." On April 16, 1922, Walther Rathenau, Foreign Minister of the Weimar Republic, negotiated and signed the Treaty of Rapallo, with Georgi Chicherin, the Soviet Foreign Minister, which officials reaffirmed with the Treaty of Berlin, April 24, 1926. The Weimar Republic and Soviet Russia each renounced all

territorial and financial claims against each other following the Treaty of Brest-Litovsk and World War I. This new treaty recognized the secret German-Soviet collaboration, starting in 1921, which allowed for Germany's rearmament. Hitler and his associates saw Rathenau as part of the communist conspiracy for his actions.

In 1923, Jews living in Germany acquired financial power through the receipt of funds for investment from rich friends in other countries, including the United States. There was also a huge migration of Jews from the former Austro-Hungarian Empire. Germans viewed all of the Jews coming from the East as invaders, all looking for food and shelter that were unavailable. Some Eastern European Jews participated in the rampant speculation, always a factor with an unstable currency, and a decreased supply of commodities. The Germans resented the Jews, who with their increased power, now benefited from Germany's misfortunes. This Jewish influx resurrected the earlier feelings of Germans who viewed them as trespassers who were not interested in assimilating but remained exclusively separate.

9.4 Communist Infiltration in China

In addition to infiltrating America, the Bolsheviks quickly established a presence in almost every country — England, France, Germany, Belgium, Sweden, Denmark, Switzerland, Austria, Romania, Czechoslovakia, Bulgaria, Greece, and in Asia.

By 1920, Shanghai, the focus of western economic interest, contained the majority of the country's industrial workers and the biggest base of communist support in China. The Chinese Communist Party (CCP), founded in July 1921, dominated Shanghai's municipal government. In 1921, in an attempt to unify China, Dr. Sun, president and generalissimo, met with Henk Sneevliet, of the Comintern, with the objective of establishing a military government in the Guangzhou, Guangdong Province in southern China. To hasten the conquest of the warlords in northern China, he accepted Soviet help and cooperated with local communists after the western powers rejected his requests. The Soviets and the Comintern supervised and, to an extent, financed the Chinese revolutionary movement. In March 1923, the Soviet leaders concluded that they would assist Sun Yat-sen with at least three million rubles channeled through Mikhail Borodin (born Mikhail Gruzenberg), a freemason, another Bolshevik agent in China (1923-1927), to provide the initial funding and operating expenses of the Whampoa Military Academy, according to Louis Fischer, a Borodin confidante. Bliukher's diary indicates that the monthly subsidy totaled 100,000 rubles in November 1924. Additionally, the Soviets sent a valuable shipment of arms, aboard the Vorovsky, in October 1924 for which they charged the Canton government.

In January 1924, the NP (Nationalist Party) devised an anti-imperialist policy with an emphasis on workers and peasants. At the same time, technical and financial assistance arrived from the Soviet Union. This linked the Chinese NP to the Communist Party. 1935 The NP and the Communist Parties, encouraged and financed by Moscow, worked

together in the Kwangtung province, until mid-1926, to create a national revolution. The Soviet Union also assisted Feng Yu-hsiang in building a large military organization in North China beginning in the spring of 1925. The Kuomintang and the Communist Party also collaborated and participated in labor movements among the students in numerous cities such as Shanghai, Hankow, Peking and others. All of these factions joined in the Northern Expedition, which they initiated in July 1926. Investigators, during a raid of the Hoover Institute at Stanford University, found a document in the papers of Jay C. Huston, a US Foreign Service Officer in Peking and Canton in the 1920s. In September 1925, General Vasily K. Bliukher, using the pseudonym "Galen" wrote a report and military plan later discovered in the Central Archives of the Party, Institute of Marxism and Leninism of the Central Committee of the Communist Party of the Soviet Union.

Bliukher was a Soviet military adviser in China (1924-1927), using the name Galen, while he worked at Chiang Kai-Shek's military headquarters where he facilitated the military planning of the Northern Expedition. This inaugurated the Kuomintang unification of China. Chiang permitted Bliukher to "escape" following his anticommunist purge beginning on April 12, 1927. Bliukher taught Lin Biao, pivotal in the communist victory in the Chinese Civil War and later a key figure in the Chinese People's Liberation Army. The intermittent Chinese Civil War, 1927-1936, 1941-1945, 1946-1950, was between the Kuomintang (KMT) or Chinese Nationalist Party, the governing party of the Republic of China, and the Communist Party of China (CPC) over the control of China. This war culminated with the division of the nation into the Republic of China (ROC) and People's Republic of China (PRC). The war began in April 1927, with the Northern Expedition, ending in 1949-1950.

In 1925, Rockefeller founded the Institute of Pacific Relations (IPR) in ten Asian countries. The Rockefeller and Carnegie Foundations financed it while an alliance of Morgan and Rockefeller interests on Wall Street controlled it. Other financing came from Standard Oil, IT&T, Vacuum Oil, Shell Oil, International Business Machines, International General Electric, Time Magazine, J. P. Morgan, National City Bank and Chase National Bank, as well as individuals with Wall Street connections.

The Soviets working in China, despite the growth of the Chinese Communist Party and the Socialist Youth Corps, grew frustrated with the progress of the overall movement. The Party did organize some successful strikes in late 1925 among workers in Hong Kong and Kwangtung farmers. On April 12, 1927, William J. Keswick, a Director of Jardine Matheson and Company (drug smugglers during the Opium Wars), and a principle of the Extraterritorial International Settlements ordered the Green Gang and Chiang, head of the Nationalist Army, to begin a reign of terror. They purged the leftists and labor activists from Shanghai in what people call the Shanghai Massacre. 1945 They quickly executed 5,000 to 6,000 captives and drove the CCP underground. 1946 Within six months they halted the Chinese communist movement. As many as 25,000 people perished in Shanghai, Nanking, Wusih, Soochow, Changchow, Hangchow, and Canton. 1947 In the 1920s, Chiang, a professional soldier, used the Kuomintang, or NP, a paramilitary

organization to implement the Northern Expedition which forcefully integrated southern and central China and created an alliance with the bankers of Shanghai.

On December 1, 1927, Chiang Kai-shek married Soong Mei-Ling although her mother vehemently objected because he was a Buddhist and her American-educated daughter was Christian. Therefore, Chiang converted. Mei-Ling was the daughter of China's wealthiest family and the sister of a Rothschild agent, Soong Tse-ven. On October 10, 1928, the bankers installed Chiang as president of China. After the marriage, Soong presented his sister with his personal mansion. 1950 Chiang would very subtly reveal his new alliances when he inexplicably abandoned Nanking, then the capital of the Republic of China, leaving its vulnerable citizens to endure six weeks of savagery by the invading Japanese in December 1937. Soong Tse-ven had resigned as Finance Minister (1928-1931, 1932-1933) after failing to raise sufficient money to fight Communism. However, in early June 1932, he agreed to return only if China's government, now desperate, would resort to putting even more effort to growing opium, a profitable cash crop that became the backbone of the Chinese economy, which might resolve China's financial crisis. Consequently, they removed millions of acres from food production. China, short of food, was already struggling to feed its people. Choosing opium over food production caused a genocidal famine that led to the deaths of at least 6,000,000 peasants in four provinces, killing a third of the population in the Shaanxi Province between 1928 and 1933.

9.5 Europe and the World Economy

The structure of world trade prior to 1914 was done by the export of finished goods from Europe in exchange for basic resources from non-European countries (including food). Investments of European Nations in countries which produced basic resources further led to economic growth in Europe, i.e. industrialization. The First World War had also major impact on non-European countries. Europe could no longer export finished goods as well and they also focused on agriculture more to satisfy their needs. The level of export of finished goods did not reach pre-war levels after the war, further damaging the economy of other countries. This also meant that the level of import of basic resources declined. As a result, other countries started to rely on their own finished goods which further reduced European exports. The following table shows the import of finished products of Argentina, Brazil and India in millions of Dollars (value from 1955):

Year	1899	1913	1929	1937
Argentina	218	744	1064	725
Brazil	174	429	489	372
India	704	1219	1159	796

Another reason for the weakening of Europe's position in world trade was the growing

competition of other countries, mostly the United States and Japan. The next table shows the share (in %) of world trade of five countries:

Year	1913	1929	1937
USA	12	21	21
Great Britain	32	22	21
Germany	26	20	16
France	12	12	6
Japan	2	3	10

The growing competition by the US and Japan happened during the war when Europe could not longer deliver finished goods to other countries. After the war Japan continued to export cheap textiles while the US could dominate with fast production of goods, especially automobiles (the US exported three times the amount of England, Germany, France and Italy combined in 1929). All this was crippled by the great depression of 1929 which will be mentioned in another chapter. The following table shows the amount of finished goods (in % of total world production) for the world economy. The great powers produced around 80% of all finished goods on the planet at that time.

Year	USA	USSR	Germany	Great Britain	France	Japan	Italy
1929	43.3	5.0	11.1	9.4	6.6	2.5	3.3
1932	31.8	11.5	10.6	10.9	6.9	3.5	3.1
1937	35.1	14.1	11.4	9.2	4.5	3.8	2.9
1938	28.7	17.6	13.2	9.2	4.5	3.8	2.9

One can already see how the US and the USSR became the biggest producers of goods. Had the allies known about the capabilities of the USSR in detail, they might have picked them as a target for war instead of Germany.

9.6 England

The time between the wars was a time of mass unemployment for Britain and the government had to deal with this to great extent. The following table shows the amount of unemployed people in %.

Year	%	Year	%	Year	%
1921	16.6	1927	9.6	1933	19.8
1922	14.1	1928	10.7	1934	16.6
1923	11.6	1929	10.3	1935	15.3
1924	10.2	1930	15.8	1936	12.2
1925	11.0	1931	21.1	1937	10.6
1926	12.3	1932	21.9	1938	12.6

The reason for this scenario was to continued decline in exports after 1920. The mining of coal reduced from 270 million tons in 1914 to 230 million tons in 1939 and the amount of workers in that sector was reduced from over 1 million to around 700.000. The export of steel was at 2.750.000 tons before the war and just 750.000 tons in 1929, having 38% of all steel-product exports before the war down to 25% in 1936. The areas of economy suffered too due to several reasons. Especially the textile industry shrunk drastically, exporting 576 tons in 1913 and just 135 tons in 1938, while Japan exported 3 tons in 1913 and 234 tons in 1938. At the same time, textile exports from India shrung by a factor of 4, and China exported 181 tons in 1913 and just 2 tons in 1938.

Britain thought that in order to get the economic problems under control they had to increase their world trade again. The biggest obstacle for that were, in their view, instabilities of the currencies and the resulting distrust between trader and producer. Because of this, Britain pressured France into easing the French demands for reparations from Germany. Britain needed to make sure to keep Germany as a potential export markets, otherwise their economy would decline further. In 1937, British exports only were 60% of what they were in 1929 and the huge unemployment was only handled with the beginning of the war. Similar economic problems could be found in the US, which were also solved with the start of World War 2.

Since Britain won World War 1, they situation was not as bad as in Germany. Still extremist movements were to be found. The Communists had over 40.000 members and a fascist movement started to form under the leadership of Sir Oswald Mosley(a bit more about this later). Several workers unions were created which satisfied the needs of the lower classes and stopped the extremist movements to from becoming a relevant threat. The British union movement was the biggest in the world in the beginning of the 20th Century. Unemployment was easier to handle in Britain compared to the US or Germany.

British Naval Policy

At the end of the First World War Britain had the largest navy in the world. In 1919, Lloyd George's cabinet placed stringent limits on defence expenditure on the planning assumptions that a major war involving UK forces would not occur within ten years. As it required the greatest industrial infrastructure, the ten-year rule hit the Royal Navy

particularly hard. With orders for warships at a low level it had an impact on a wide variety of industries - shipbuilding, steel and engineering, as well as specialised manufacturers of guns, ammunition and naval equipment. The political decision to pursue a policy of disarmament by international agreement only made the problems faced by the armed forces, and especially the Navy, even worse.

During the 1920s the limited funds for defence, coupled with the resentment felt by the Army and the Royal Navy in thinking the Royal Air Force had more than its fair share of funds, caused inter-service bureaucratic infighting. The Navy in particular took the loss of its own air service very badly and continually attempted to regain control of naval aviation. The deep cuts in defence spending and the resulting contraction of defence industries had a long-term effect on rearmament. The legacy of limited finance and concentration on the barest of essentials in material and defence thinking would reverberate through the 1930s and into the Second World War.

The goal of international disarmament was preserved in Woodrow Wilson's 14 points and implicit within the League of Nations framework. The first act of international disarmament was the Washington Naval Conference of 1921-1922. The Washington Conference of 1921-1922 set ratios for the number of capital ships of the major powers. For the first time it was agreed that the British Royal Navy and the US Navy have the same number of battleships and battle cruisers. The conference agreed parity between the British and American navies, setting a lower quota of battleships for the Japanese, French and Italian navies. The conference also agreed a ten-year building holiday for major warships and set down the maximum size of battleships, aircraft carriers and cruisers as well as the size of the gun armament. The conference was supposed to be the first of a series of treaties limiting not just navies, but land and air forces too. However, the subsequent conferences never took place so Britain, as the world's predominant naval power, suffered more than a land power such as France. (It should be noted that Germany was the only country which fulfilled their part of the Treaty of Versailles regarding disarmament to the fullest)

With no need to plan for a major global or European conflict for ten years, the armed forces concentrated on imperial policing roles. For the Royal Navy, cruisers were vital for this role, as well as for the defence of trade. In 1927 a further conference in Geneva failed, the difficulty being agreement on the number and size of cruisers needed by Britain for trade defence. Until the early 1930s Anglo-American naval tension continued to simmer. In 1930 the London Naval Conference extended the terms of the Washington conference to 1936 and Britain agreed to reduce the number of cruisers to 50 - against the wishes of the Admiralty, which had a long-established requirement for 70. Finally, the British took the lead in the wide-ranging Geneva Disarmament Conference (1932-1934) that sought land, sea and air reductions. It too was a failure, and its collapse was a spur to Britain's rearmament. The Labour Government in 1930 came to an agreement with other Powers on limitation of cruisers, under which Britain was able to map out and to lay down since 1929 a regular replacement program so that, in comparison with the other cruiser fleets in

the world, the British Fleet was not only the largest but the most efficient. Some of those ships were rapidly approaching the over-age position by the mid-1930s, but there was nothing that could not have been met by the ordinary, annual replacement program [but there had not been one]. His Majesty's Fleet, with one brief exception of Invergordon, had been manned by perfectly loyal seamen, marines and stokers for a century. There had been one or two isolated cases of insubordination, but in the 20th Century there had been no concerted attempt to mutiny in the Fleet. Attempts were made by agitators to seduce the seamen of the Royal Navy during the Great War, and without success. It was not in the British Fleet that there was any trouble. The trouble came in the German Navy, and there was a very serious outbreak in the Austrian Navy as well. The British Navy, its members drawn from a nation that was used to liberty, came through without one concerted case of serious insubordination, much less of mutiny, during the whole of the four years of war.

From 1918 to 1931, nine battleships of the "Queen Elizabeth" and "Royal Sovereign" classes, and the battle cruisers "Renown" and "Repulse," had been modernised and the "Barham" was in hand in 1931. The main alterations comprised addition of bulges, increase in anti-aircraft armament in some cases, improvements to bridges and tops, and improvements to ventilation and accommodation. Additional armor protection had been fitted in "Renown" and "Repulse." As late as 1936 the British Fleet was said to be the largest, the most powerful, the most efficient Fleet in the whole world. That remark applied not to this or that category of vessels but to all the categories of vessels in the British Fleet. It applied to the category of capital ships. There were no other two capital ships afloat in the whole world which could match the "Nelson" and the "Rodney." Taking the actual age and the equipment of the rest of the capital ships, there was nothing in the whole world really comparable with them, outside the United States of America, and the United States had of late years always been ruled out of account as a possible enemy. It is the same with regard to aircraft carriers and their equipment.

In 1936 the British rearmament program began in earnest with increases in budgets. The weapons and equipment developed were to form the backbone of British military capability during the first three years of the Second World War. Naval rearmament was limited from the outset by the disarmament process. Expansion only got underway after 1936. Winston Churchill, the member from Epping, told the Commons on 16 March 1936 "The foundation of British naval policy is the acceptance of the principle of parity with the United States of America, not only in battleships but over the whole range of the Fleet. We are all agreed upon that, and that decision once taken ought to exclude the idea of naval rivalry between the two countries. It certainly ought not to be followed by a meticulous measuring of swords, as it were, at recurring conference tables. The British view is, and has long been, that the, United States Navy, whatever it rely become, is no cause of anxiety to us. On the contrary, many people will feel, and it is no exaggeration to say so, that the stronger the United States Navy becomes, the surer are the foundations of peace throughout the world. I trust, therefore, that the principle of parity which is

really the principle of non-competition, will be interpreted in the most liberal and flexible manner on both sides of the Atlantic, and that the two great branches of the English-speaking peoples will not seek to hamper one another in making whatever may be the best possible arrangements for their respective naval defence."

By 1937 shipbuilding was at full capacity following the acceleration of the Navy's programs. Any new standard of naval strength was of academic interest only, as it would not be achieved for some years. Even the gain of the Fleet Air arm from RAF control to the Navy was too late to ensure wholesale re-equipment with modern aircraft before the outbreak of war. Adding the new 1939 program to the previous programs, British dockyards and shipyards in the course of the year were engaged in constructing some 200 vessels, or a total of 870,000 tons. An achievement like this had never been approached before in peace-time. The British were building, in the course of the year 1939, nine battleships, six aircraft carriers, 25 cruisers, 43 destroyers, 19 submarines, and a large number of small vessels.

Fascist Movement in Britain

The British Union of Fascists, or BUF, was a Fascist political party in the United Kingdom formed in 1932 by Oswald Mosley. It changed its name to the "British Union of Fascists and National Socialists" in 1936 and, in 1937, to "British Union." It was finally disbanded in 1940 after it was proscribed by the British government, following the start of the Second World War. The BUF emerged in 1932 from the British far-right, following the electoral defeat of its antecedent, the New Party, in the 1931 general election. The BUF's foundation was initially met with popular support and developed a sizeable following. The press baron Lord Rothermere was a notable early supporter. As the party became increasingly radical, however, support declined. The Olympia Rally of 1934, in which a number of anti-Fascist protestors were attacked, isolated the party from much of its following. The party's embrace of Nazi-style anti-semitism in 1936 led to increasingly violent clashes with opponents, notably the 1936 Battle of Cable Street in London's East End. The Public Order Act 1936, which banned political uniforms and responded to increasing political violence, had a particularly strong effect on the BUF whose supporters were known as "Blackshirts" after the uniforms they wore. Growing British hostility towards Nazi Germany, with which the British press persistently associated the BUF, further contributed to the decline of the movement's membership. It was finally banned by the British government in 1940 after the start of the Second World War, amid suspicion that its remaining supporters might form a pro-Nazi "fifth column". A number of prominent BUF members were arrested and interned under Defence Regulation 18B.

The BUF claimed 50,000 members at one point, and the Daily Mail, running the headline "Hurrah for the Blackshirts!," was an early supporter. Towards the middle of the 1930s, the BUF's violent clashes with opponents began to alienate some middle-class supporters, and membership decreased. At the Olympia rally in London, in 1934, BUF stewards

violently ejected anti-fascist disrupters, with one protester claiming to have lost an eye, and this led the Daily Mail to withdraw its support for the movement. Mosley, known to his followers as The Leader, modelled his leadership style on Benito Mussolini and the BUF on Mussolini's National Fascist Party in Italy, including an imitation of the Italian Fascists' black uniforms for members, earning them the nickname "Blackshirts". The BUF was anti-communist and protectionist, and proposed replacing parliamentary democracy with executives elected to represent specific industries, trades or other professional interest groups—a system similar to the corporatism of the Italian fascists. Unlike the Italian system, British fascist corporatism planned to replace the House of Lords with elected executives drawn from major industries, the clergy, and colonies. The House of Commons was to be reduced to allow for a faster, "less factionist" democracy. His movement advocated to end the war with the 3rd Reich by accepting their peace offers.

Just like the National Socialist Movement, they addressed the Jewish-Question within their own borders. Mosley said: "The Jews have been treated in Britain with a fairness and generosity unparalleled elsewhere, and have banded together against us, despite the conventional opinion that it was very wrong to combine against them. And now this organised alien minority, who have enriched themselves at our expense, repay our generosity by political terrorism carried out at the point of the economic gun. It is a strange thing that a great country should allow both the economic and the political freedom of an organised minority who owe allegiance, and who admit they owe it, not primarily to Britain, but to their kinsmen beyond our borders, and whose capacity for mischief is exceeded only by their desire to do it."

9.7 France

During the 1920s, France was relatively well off economically. This was achieved by the very thing everybody tried to prevent, the devaluation of the Franc. The economic history of France stays in contrast to that of Britain until 1929. People with a steady income were well off in Britain, while workers and producers suffered after the pre-war value of the British Pound was reinstated. In France, pensioners and people with a steady income were ruined when inflation devalued the currency until its value was reduced by a factor of five. During the war, the Franc was artificially stabilized at a value of 25:1 compared to the British Pound, when in 1926, this changed to 200:1. By 1928, retail prices increased by a factor of 5.5. Industry production increased by 48% in 1929 compared to 1913. Unemployment was not a critical factor. What saved the economy was the devaluation of the Franc because thanks to this, French products were able to compete on the world market, unlike those of Britain, which tried to keep the value of their currency.

The economic situation declined after 1930, mostly due to the great economic crisis. French exports were reduced by 25%. Britain devalued their currency in 1931 and the US did the same in 1933, which further reduced French exports of finished goods by 42%.

In the end, France was hit by the economic crisis later than Britain, the US or Germany but when it finally happened, it led to a long period of stagnation. France's economic strength from 1932 till 1936 was around 75% of the value from 1929 and unemployment never reached critical stages like in England or Germany, only going up to 5%. Britain and France lost some market shares to Germany. The following chart shows the production of raw steel in 1000 tonnes:

	France	Great Britain	Germany (without Saar area)
1929	9711	9790	16210
1938	6221	10564	20099

At the end of the 1920s, the French Republic was politically strong and it was rather quiet within the country, while they seemed to be on the brink of a civil war during the 1930s. Two events are prominent: The unrests from Februar 6. 1034 in Paris and the electoral-win of the People's Front in 1936, which lead to fear of a communist revolution, where the Socialists and Communists started to work together. They did this of fear of the NSDAP in Germany, which gained power when the Communists worked together with the NSDAP (ordered by Stalin). Everyone started seeing a threat to the socialist state, even a threat to the USSR, already in 1934, and they proclaimed that all of Hitler's plans need to be destroyed. Big demonstrations were started in July 1934 also supported by the Soviet government. The French-Soviet pact was proclaimed on Mai 15th 1935. The Socialists under Leon Blum became the strongest party in the elections of 1936 and for the first time, France had a party which campaigned for the needs of the worker. But similar to all other countries in Europe, the Jewish roots of Leon Blum created a big wave of anti-semitism. The people back then associated Socialism and Communism with the Jews and they were not wrong (as can be seen in the course of this book). In 1938, Blum had to step down and the government was ruled by the party of Daladier, conservatism was back in France.

During the Civil War in Spain, the French right-wingers supported the the revolt of the Spanish military against the People's Front, while the Left used demonstrations and stikes to force the French government to intervene on the side of the Spanish republic government. The French Right concluded that the Communists in France worked under the order of Stalin (they were correct) and were hell-bent to start another European War and they were right. Some of the French right-wingers thought that they should ally with Germany to keep the Communist manace in check and let the National Socialists deal with the USSR, while the other part still held pre-WW1 views that a strong Germany just has to attack France at some point and that any ally against Hitler is welcome, even the Soviet Union. Politics in France was devided on the question regarding Hitler. They were inclined to ally with him as long as he keeps his anti-Communist stance. But this idea was crushed when he allied with the USSR and they split Poland.

The preparations for war in France began already in 1934 when General Denain made the plan to build 1200 aircrafts, which was later increased to 2400.

9.8 Italy

For many Italians it seemed that the gains won on the battlefield in WW1 at such great cost had been thrown away at the peace table, and a sense of frustration and disillusionment—and of betrayal—permeated the country in the years immediately after the war. Italy was saddled with an enormous war debt. Inflation and shortages of basic goods triggered strikes that paralyzed large segments of the economy. Demobilized troops swelled the ranks of the unemployed. Profiteering, often involving public officials, took its toll on public confidence in the government. Socialist gains in local elections inspired fears of expropriation—especially among small landholders—and outbreaks of violence and counterviolence. The government admitted its inability to maintain public order, and amnesties granted to striking workers confirmed the middle class in its belief that the parliamentary government was not only corrupt but weak.

This was the atmosphere that spawned Benito Mussolini's fascist movement, which for nearly one-quarter of a century demeaned and demoralized Italy's national life. Mussolini had always been a political maverick. Imprisoned and exiled for his political activities, the schoolteacher-turned-journalist from Romagna had begun his activist career as a pacifist and anarchist, later joining the militant wing of the PSI—at one time being the editor of the party's official newspaper. Mussolini broke with the party on the issue of entry into World War I and abandoned Marxism for nationalism. Mussolini was a manipulative orator; his showmanship was not mere buffoonery but struck a responsive chord in his listeners. He had attracted a personal following as early as 1917. In 1919 he assembled the paramilitary Combat Groups (Fasci di Combattimento), called the Blackshirts, from among army veterans and youths, modeled after the *arditi* (commandos), the shock troops of the Italian army. Organized in more than 2,000 squads, the Blackshirts were used as strikebreakers (subsidized by industrialists for the purpose), attacked Socialists and Communists, whom they claimed the government was too timid to deal with, terrorized left-wing town governments, and set up local dictatorships while the police and the army looked on—often in sympathy. Mussolini profited from the anxieties of the middle class—their businesses threatened and their savings wiped out by inflation—and from the smallholders' fears of expropriation by the Socialists.

In 1921 Mussolini, seeking a broader following than among the fascist squads, formed a parliamentary party, the National Fascist Party (Partito Nazionale Fascista), which captured thirty-five seats in the Chamber of Deputies. The party, running on a bloc list with Giolitti's Liberals, was admitted to the coalition government. The party program called in vague terms for social reform, financial stability, assertion of Italy's prestige abroad, and order at home. The Fascists considered themselves a revolutionary party in opposition to nineteenth-century liberalism, middle-class humanistic values, and capitalism, but Mussolini advanced no guiding ideology. Fascism, Mussolini insisted, represented a mood in the country, not ideas, and he wrote, "Fascism . . . was a form of a need for action, and in itself was action."

Despite their relatively minor representation in Parliament, no government could survive without the support of the National Fascist Party, and in October 1922 Mussolini was summoned by Victor Emmanuel III to form a government as prime minister. The much-heralded March on Rome by 300,000 armed Fascists, usually credited with bringing Mussolini to power by a coup, was in fact the result rather than the cause of his appointment to office, a brilliant bluff intended to impress the nation and Europe with the strength and determination of his following. Mussolini governed constitutionally, heading a national government comprising the Fascists, some Social Democrats, Liberals, and members of the Italian Popular Party (Partito Popolare Italiano, known as Popolari). The Popolari were a center-left reformist group founded in 1919 by a Sicilian priest, Don Luigi Sturzo. Formation of the party marked the entry of an organized, mass-based Catholic party into parliamentary politics, although without the approval of the Italian hierarchy or the Vatican. In 1919 Sturzo's party won 101 seats in Parliament, second in strength only to the PSI. Mussolini considered the Popolari, parent party to the postwar Christian Democratic Party (Partito Democrazia Cristiana—DC), the toughest obstacle in his rise to power. The Popolari withdrew their support from the Mussolini government in 1923.

The Fascists, under a revised electoral law, polled two-thirds of the votes cast in the 1924 elections. Seemingly secure in his parliamentary majority, Mussolini's confidence was shaken and his regime endangered by the public reaction to the murder of a socialist politician, Giacomo Matteotti, by fascist toughs. The opposition withdrew from the Chamber of Deputies in protest. Without resistance Mussolini assumed dictatorial powers in January 1925, ruling thereafter by decree, and replacing elected local government officials with fascist operatives. Although a rump chamber of deputies continued to sit, advisory functions passed to a party organ, the Fascist Grand Council, which Mussolini integrated into the state apparatus.

Controlling all the organs of government, Mussolini set about constructing a totalitarian state in Italy that would dominate every aspect of national life. Il Duce, as Mussolini was styled, proclaimed the doctrine of "everything within the state, nothing against the state, nothing outside the state," including professional and labor associations, youth groups, and sports organizations. Political parties other than the Fascists were suppressed. The press and court system were cowed. Strikes were made illegal and, although the free trade unions were not abolished, they were gradually throttled. Mussolini was less successful in imposing economic control, and the corporate state, which remained part of the myth of the fascist regime, was never more than its facade. In some respects the Italian character, especially its spirit of individualism, mitigated the worst effects of Mussolini's totalitarianism, which was, as a critic noted, "a tyranny tempered by the complete disobedience of all laws." In addition totalitarianism in the strictest sense was not possible where an independent church, claiming the spiritual allegiance of a large part of the population, existed. Mussolini's political background was anticlerical, but he understood the importance of the church to Italian life and realized that he could not expect to consolidate political support behind the regime until an accommodation was

made with the Vatican—which had not recognized the legality of the Italian state.

The Lateran Pacts of 1929 consisted of a treaty between Italy and the Holy See and concordat regulating relations between the Italian state and the Catholic church. The treaty created the independent state of Vatican City and recognized the sovereignty of the pope there. In the concordat the church was assured of jurisdiction in ecclesiastical matters, and canon law was recognized as superseding the civil code in such areas as marriage. The church was restored to its role in education and allowed unencumbered operation of its press and communication facilities. The clergy were prohibited from membership in political organizations. The solution of the Roman Question, which had vexed Italian politicians since 1860, marked the peak of Mussolini's political leadership and has been considered by some observers the singular positive achievement of an otherwise execrable regime. The provisions of the Lateran Pacts were included in the 1948 Constitution.

Imperialism was always a facet of fascism but was not explicit until 1935. The need to provide space for Italian emigration was emphasized by the occupation of Ethiopia in the 1935-36 period. The action might well have been passed over except for Ethiopia's protest in the League of Nations, but to the league's condemnation Italy responded that it had done no more in Africa than other powers had done earlier. France and Great Britain were unwilling to risk war for the sake of Ethiopia, but league members agreed to impose economic sanctions on Italy. The sanctions were halfheartedly enforced and subsequently withdrawn. They provoked bitterness in Italy, especially against Great Britain, and rallied theretofore lukewarm Italians to Mussolini. The sanctions also spurred the drive for economic self-sufficiency, an uneconomic project better suited to propaganda than to feeding the Italian people. Cut off from other sources, Italy relied on Germany as a supplier of raw materials and was drawn within its political orbit. Mussolini was frankly impressed by German efficiency, overlooking outstanding conflicts of interests in Austria and the Balkans that might otherwise have kept the two dictators at odds. In 1936 Mussolini agreed to the Rome-Berlin Axis, pledging cooperation in central Europe. The next year Italy joined with Germany and Japan in the Anticomintern Pact, directed against the Soviet Union. By the time that Italy had formalized its military ties with Germany in the so-called Pact of Steel in 1939, Mussolini had so identified his country's interests with those of Hitler that Italy had become a virtual German satellite.

Italy aided Franco's forces during the 1936-39 Spanish civil war, contributing supplies, naval and air support, and more than 50,000 men. Mussolini participated at Munich in the dismemberment of Czechoslovakia in 1938, but his foreign minister, Galeazzo Ciano, had tried to dissuade Germany from attacking Poland. Cut off from advanced notice of its ally's plans, Mussolini's government was acutely embarrassed by the Soviet Pact in 1939 that opened the door for invasion of Poland. Mussolini had pompously bragged about the "8 million bayonets" at his disposal but, as was the case so often during his regime, propaganda had taken the place of actual preparation, and Italy was no more ready for a major war than it had been in 1915. Confident of German strength, Mussolini

believed that the war would be short and remarked that it would be humiliating “to sit with our hands folded while others write history.”

9.9 The Weimar Republic

From “Tragedy and Hope“ we learn:

The essence of German history from 1918 to 1933 can be found in the statement There was no revolution in 1918. For there to have been a revolution it would have been necessary to liquidate the Quartet or, at least, subject them to democratic control. The Quartet represented the real power in Germany society because they represented the forces of public order (army and bureaucracy) and of economic production (landlords and industrialists). Even without a liquidation of this Quartet, it might have been possible for democracy to function in the interstices between them if they had quarreled among themselves. They did not quarrel, because they had an esprit de corps bred by years of service to a common system (the monarchy) and because, in many cases, the same individuals were to be found in two or even more of the four groups. Franz von Papen, for example, was a Westphalian noble, a colonel in the army, an ambassador, and a man with extensive industrial holdings, derived from his wife, in the Saarland.

Although there was no revolution—that is, no real shift in the control of power in Germany in 1919—there was a legal change. In law, a democratic system was set up. As a result, by the late 1920’s there had appeared an obvious discrepancy between law and fact—the regime, according to the law, being controlled by the people, while in fact it was controlled by the Quartet. The reasons for this situation are important. The Quartet, with the monarchy, made the war of 1914-1918, and were incapable of winning it. As a result, they were completely discredited and deserted by the soldiers and workers. Thus, the masses of the people completely renounced the old system in November 1918. The Quartet, however, was not liquidated, for several reasons:

1. They were able to place the blame for the disaster on the monarchy, and jettisoned this to save themselves;
2. most Germans accepted this as an adequate revolution;
3. the Germans hesitated to make a real revolution for fear it would lead to an invasion of Germany by the French, the Poles, or others;
4. many Germans were satisfied with the creation of a government which was democratic in form and made little effort to examine the underlying reality;
5. the only political party capable of directing a real revolution was the Social Democrats, who had opposed the Quartet system and the war itself, at least in theory; but this party was incapable of doing anything in the crisis of 1918 because it was hopelessly divided into doctrinaire cliques, was horrified at the danger of Soviet Bolshevism, and was satisfied that order, trade-unionism, and a “democratic“ regime were more important than Socialism, humanitarian welfare, or consistency between theory and action.

Before 1914 there were two parties which stood outside the Quartet system: the Social Democrats and the Center (Catholic) Party. The former was doctrinaire in its attitude, being anticapitalist, pledged to the international brotherhood of labor, pacifist, democratic, and Marxist in an evolutionary, but not revolutionary, sense. The Center Party, like the Catholics who made it up' came from all levels of society and all the Catholics who made it up, came from all levels of society and all shades of ideology, but in practice were frequently opposed to the Quartet on specific issues.

These two opposition parties underwent considerable change during the war. The Social Democrats always opposed the war in theory, but supported it on patriotic grounds by voting for credits to finance the war. Its minute Left wing refused to support the war even in this fashion as early as 1914. This extremist group, under Karl Liebknecht and Rosa Luxemburg, became known as the Spartacist Union and (after 1919) as the Communists. These extremists wanted an immediate and complete Socialist revolution with a soviet form of government. More moderate than the Spartacists was another group calling itself Independent Socialists. These voted war credits until 1917 when they refused to continue to do so and broke from the Social Democratic Party. The rest of the Social Democrats supported the war and the old monarchical system until November 1918 in fact, but in theory embraced an extreme type of evolutionary Socialism. The Center Party was aggressive and nationalist until 1917 when it became pacifist. Under Matthias Erzberger it allied with the Social Democrats to push through the Reichstag Peace Resolution of July 1917. The position of these various groups on the issue of aggressive nationalism was sharply revealed in the voting to ratify the Treaty of Brest-Litovsk imposed by the militarists, Junkers, and industrialists on a prostrate Russia. The Center Party voted to ratify; the Social Democrats abstained from voting; the Independents voted No.

The "revolution" of November 1918 would have been a real revolution except for the opposition of the Social Democrats and the Center Party, for the Quartet in the crucial days of November and December 1918 were discouraged, discredited, and helpless. Outside the Quartet itself there was, at that time and even later, only two small groups which could possibly have been used by the Quartet as rallying points about which could have been formed some mass support for the Quartet. These two small groups were the "indiscriminate nationalists" and the "mercenaries." The indiscriminate nationalists were those men, like Hitler, who were not able to distinguish between the German nation and the old monarchical system. These persons, because of their loyalty to the nation, were eager to rally to the support of the Quartet, which they regarded as identical with the nation. The mercenaries were a larger group who had no particular loyalty to anyone or to any idea but were willing to serve any group which could pay for such service. The only groups able to pay were two of the Quartet—the Officers' Corps and the industrialists—who organized many mercenaries into reactionary armed bands or "Free Corps" in 1918-1923.

Instead of working for a revolution in 1918-1919, the two parties which dominated the

situation—the Social Democrats and the Centrists— did all they could to prevent a revolution. They not only left the Quartet in their positions of responsibility and power—the landlords on their estates, the officers in their commands, the industrialists in control of their factories, and the bureaucracy in control of the police, the courts, and the administration—but they increased the influence of these groups because the actions of the Quartet were not restrained under the republic by that sense of honor or loyalty to the system which had restrained the use of their power under the monarchy. As early as November 10, 1918, Friedrich Ebert, chief figure of the Social Democratic Party, made an agreement with the Officers' Corps in which he promised not to use the power of the new government to democratize the army if the officers would support the new government against the threat of the Independents and the Spartacists to establish a soviet system. As a consequence of this agreement Ebert kept a private telephone line from his office in the Chancellery to General Wilhelm Groener's office at the army's headquarters and consulted with the army on many critical political issues. As another consequence, Ebert and his Minister of War Gustav Noske, also a Social Democrat, used the army under its old monarchist officers to destroy the workers and radicals who sought to challenge the existing situation. This was done in Berlin in December 1918, in January 1919, and again in March 1919, and in other cities at other times. In these assaults the army had the pleasure of killing several thousand of the detested radicals..

A somewhat similar anti-revolutionary agreement was made between heavy industry and the Socialist trade unions on November 11, 1918. On that day Hugo Stinnes, Albert Vögler, and Alfred Hugenberg, representing industry, and Carl Legien, Otto Hue, and Hermann Müller representing the unions, signed an agreement to support each other in order to keep the factories functioning. Although this agreement was justified on opportunist grounds, it clearly showed that the so-called Socialists were not interested in economic or social reform but were merely interested in the narrow trade-union objectives of wages, hours, and working conditions. It was this narrow range of interests which ultimately destroyed the average German's faith in the Socialists or their unions.

Germany had twenty major Cabinet changes from 1919 to 1933. Generally these Cabinets were constructed about the Center and Democratic parties with the addition of representatives from either the Social Democrats or the People's Party. On only two occasions (Gustav Stresemann in 1923 and Hermann Müller in 1928-1930) was it possible to obtain a Cabinet broad enough to include all four of these parties. Moreover, the second of these broad-front Cabinets was the only Cabinet after 1923 to include the Socialists and the only Cabinet after 1925 which did not include the Nationalists. This indicates clearly the drift to the Right in the German government after the resignation of Joseph Wirth in November 1922. This drift, as we shall see, was delayed by only two influences: the need for foreign loans and political concessions from the Western Powers and the recognition that both of these could be obtained better by a government which seemed to be republican and democratic in inclination than by a government which was obviously hand in glove with the Quartet. At the end of the war in 1918 the Socialists

were in control, not because the Germans were Socialistic (for the party was not really Socialist) but because this was the only party which had been traditionally in opposition to the imperial system. A committee of six men was set up: three from the Social Democrats (Ebert, Philip Scheidemann, and Otto Landsberg) and three from the Independent Socialists (Hugo Haase, Wilhelm Dittman, and Emil Barth). This group ruled as a sort of combined emperor and chancellor and had the regular secretaries of state as their subordinates. These men did nothing to consolidate the republic or democracy and were opposed to any effort to take any steps toward Socialism. They even refused to nationalize the coal industry, something which was generally expected. Instead they wasted the opportunity by busying themselves with typical trade-union problems such as the eight-hour day (November 12, 1918) and collective bargaining methods (December 23, 1918).

The critical problem was the form of government, with the choice resting between workers' and peasants' councils (soviets), already widely established, and a national assembly to set up an ordinary parliamentary system. The Socialist group preferred the latter, and were willing to use the regular army to enforce this choice. On this basis a counterrevolutionary agreement was made between Ebert and the General Staff. As a consequence of this agreement, the army attacked a Spartacist parade in Berlin on December 6, 1918, and liquidated the rebellious People's Naval Division on December 24, 1918. In protest at this violence the three Independent members of the government resigned. Their example was followed by other Independents throughout Germany, with the exception of Kurt Eisner in Munich. The next day the Spartacists formed the German Communist Party with a non-revolutionary program. Their declaration read, in part: "The Spartacist Union will never assume governmental power except in response to the plain and unmistakable wish of the great majority of the proletarian masses in Germany; and only as a result of a definite agreement of these masses with the aims and methods of the Spartacist Union."

This pious expression, however, was the program of the leaders; the masses of the new party, and possibly the members of the Independent Socialist group as well, were enraged at the conservatism of the Social Democrats and began to get out of hand. The issue was joined on the question of councils versus National Assembly. The government, under Noske's direction, used regular troops in a bloody suppression of the Left (January 5-15), ending up with the murder of Rosa Luxemburg and Karl Liebknecht, the Communist leaders. The result was exactly as the Quartet wanted: the Communists and many non-Communist workers were permanently alienated from the Socialists and from the parliamentary republic. The Communist Party, deprived of leaders of its own, became a tool of Russian Communism. As a result of this repression, the army was able to disarm the workers at the very moment when it was beginning to arm reactionary private bands (Free Corps) of the Right. Both of these developments were encouraged by Ebert and Noske. Only in Bavaria was the alienation of Communist and Socialist and the disarmament of the former not carried out; Kurt Eisner, the Independent Socialist minister-president in Munich, prevented it. Accordingly, Eisner was murdered by Count

Anton von Arco-Valley on February 21, 1919. When the workers of Munich revolted, they were crushed by a combination of regular army and Free Corps amid scenes of horrible violence from both sides. Eisner was replaced as premier by a Social Democrat, Adolph Hoffman. Hoffman, on the night of March 13, 1920, was thrown out by a military coup which replaced him by a government of the Right under Gustav von Kahr.

The German Cabinets from 1923 to 1930, under Wilhelm Marx, Hans Luther, Marx again, and finally Hermann Müller, were chiefly concerned with questions of foreign policy, with reparations, evacuation of the occupied areas, disarmament agitation, Locarno, and the League of Nations. On the domestic front, just as significant events were going on but with much less fanfare. Much of the industrial system, as well as many public buildings, was reconstructed by foreign loans. The Quartet were secretly strengthened and consolidated by reorganization of the tax structure, by utilization of governmental subsidies, and by the training and rearrangement of personnel. Alfred Hugenberg, the most violent and irreconcilable member of the Nationalist Party, built up a propaganda system through his ownership of scores of newspapers and a controlling interest in Ufa, the great motion-picture corporation. By such avenues as this, a pervasive propaganda campaign, based on existing German prejudices and intolerances, was put on to prepare the way for a counterrevolution by the Quartet. This campaign sought to show that all Germany's problems and misfortunes were caused by the democratic and laboring groups, by the internationalists, and by the Jews.

The Center and Left shared this nationalist poison sufficiently to abstain from any effort to give the German people the true story of Germany's responsibility for the war and for her own hardships. Thus the Right was able to spread its own story of the war, that Germany had been overcome by "a stab in the back" from "the three Internationals": the "Gold" International of the Jews, the "Red" International of the Socialists, and the "Black" International of the Catholics, an unholy triple alliance which was symbolized in the gold, red, and black flag of the Weimar Republic. In this fashion every effort was made, and with considerable success, to divert popular animosity at the defeat of 1918 and the Versailles settlement from those who were really responsible to the democratic and republican groups. At the same time, German animosity against economic exploitation was directed away from the landlords and industrialists by racist doctrines which blamed all such problems on bad Jewish international bankers and department store owners.

When the economic crisis began in 1929, Germany had a democratic government of the Center and Social Democratic parties. The crisis resulted in a decrease in tax receipts and a parallel increase in demands for government welfare services. This brought to a head the latent dispute over orthodox and unorthodox financing of a depression. Big business and big finance were determined to place the burden of the depression on the working classes by forcing the government to adopt a policy of deflation—that is, by wage reductions and curtailment of government expenditures. The Social Democrats wavered in their attitude, but in general were opposed to this policy. Schacht, as president of the Reichsbank, was able to force the Socialist Rudolf Hilferding out of the position of

minister of finance by refusing bank credit to the government until this was done. In March 1930, the Center broke the coalition on the issue of reduction of unemployment benefits, the Socialists were thrown out of the government, and Heinrich Brüning, leader of the Center Party, came in as chancellor. Because he did not have a majority in the Reichstag, he had to put the deflationary policy into effect by the use of presidential decree under Article 48. This marked the end of the Weimar Republic, for it had never been intended that this "emergency clause" should be used in the ordinary process of government, although it had been used by Ebert in 1923 to abolish the eight-hour day. When the Reichstag condemned Brüning's method by a vote of 236 to 221 on July 18, 1930, the chancellor dissolved it and called for new elections. The results of these were contrary to his hopes, since he lost seats both to the Right and to the Left. On his Right were 148 seats (107 Nazis and 41 Nationalists); on his Left were 220 seats (77 Communists and 143 Socialists). The Socialists permitted Brüning to remain in office by refusing to vote on a motion of no confidence. Left in office, Brüning continued the deflationary policy by decrees which Hindenburg signed. Thus, in effect, Hindenburg was the ruler of Germany, since he could dismiss or name any chancellor, or could permit one to govern by his own power of decree.

In the crisis of 1929-1933, the bourgeois parties tended to dissolve to the profit of the extreme Left and the extreme Right. In this the Nazi Party profited more than the Communists for several reasons: (1) it had the financial support of the industrialists and landlords; (2) it was not internationalist, but nationalist, as any German party had to be; (3) it had never compromised itself by accepting the republic even temporarily, an advantage when most Germans tended to blame the republic for their troubles; (4) it was prepared to use violence, while the parties of the Left, even the Communists, were legalistic and relatively peaceful, because the police and judges were of the Right. The reasons why the Nazis, rather than the Nationalists, profited by the turn from moderation could be explained by the fact that (1) the Nationalists had compromised themselves and vacillated on every issue from 1924 to 1929, and (2) the Nazis had an advantage in that they were not clearly a party of the Right but were ambiguous; in fact, a large group of Germans considered the Nazis a revolutionary Left party differing from the Communists only in being patriotic.

The whole of 1932 was filled with a series of intrigues and distrustful, shifting alliances among the various groups which sought to get into a position to use the presidential power of decree. On October 11, 1931, a great reactionary alliance was made of the Nazis, the Nationalists, the Stahlhelm (a militaristic veterans' organization), and the Junker Landbund. This so-called "Harzburg Front" pretended to be a unified opposition to Communism, but really represented part of the intrigue of these various groups to come to power. Of the real rulers of Germany, only the Westphalian industrialists and the army were absent. The industrialists were taken into camp by Hitler during a three-hour speech which he made at the Industrial Club of Dusseldorf at the invitation of Fritz Thyssen (January 27, 1932). The army could not be brought into line, since it

was controlled by the presidential coterie, especially Schleicher and Hindenburg himself. Schleicher had political ambitions of his own, and the army traditionally would not commit itself in any open or formal fashion.

Germany suffered two major crisis between 1920 and 1933, the first would be the hyper-inflation of 1923 and the great depression from 1930 till 1933. The reason for the hyper-inflation will be discussed later. Germany was "flourishing" directly after the war. Until 1923, Industry grew and had only 77.000 recorded unemployed. The occupation of the Ruhr area happend by France and Belgium in 1923 happened partly because of the hyper-inflation. At that point, production declined and unemployment skyrocketed. This lead to a shift of wealth. People who had their wealth in cash were ruined and the entire middle class became impoverished while people owning the means of production were rather well off. This lead to huge amount of stikes, further destroying the economy. The inflation was stopped by the creation of a new currency, the "Mark", and the currency was stabilized in a difficult transition period until 1926. Unemployment rose to 25% at the end of 1923.

The French occupation of the Ruhr

In 1921 the Allied Reparations Commission presented the government with a bill for reparations of £6.6 Billion. The Germans could not pay the amount owed and over the Christmas and New Year, 1922-3, they defaulted on their payments. Seventy thousand French and Belgian troops occupied the Ruhr. They intended to use the produce of Germany's industrial heartland as payment in kind for reparations. The German government began a policy of passive resistance and called a general strike. Some began a low level terrorist campaign. The French reacted brutally with aggressive house searches, hostage taking and shooting over a hundred Germans. The economic effects of the occupation were catastrophic. The loss of production in the Ruhr caused a fall in production elsewhere and unemployment rose from 2% to 23%. Prices rose out of control as tax revenues collapsed and the government financed its activities through the printing of money. By November prices were a billion times their pre-war levels.

The Locarno Pact

In 1925 he took the initiative that led to the Locarno Pact. Under this agreement Germany recognised her Western frontiers as final and agreed to use peaceful means to ensure revision of her frontiers in the east. Stresemann was a German nationalist and was not prepared to give up what he saw as legitimate demands for the return of Danzig and the northern half of the Polish Corridor. In September 1926 Germany joined the League of Nations with a permanent seat on the Council in recognition of her status as a great power. As part of this policy of co-operation, the first of the three Rhineland zones which had been placed under Allied military occupation by the Treaty of Versailles were

evacuated in 1926. In 1927 the Inter-Allied Control Commission to supervise German disarmament was withdrawn. The Young Plan agreed in 1929 greatly reduced German reparations to a figure of £2 billion and Repayments were to be made over a period of 59 years. Stresemann also won complete allied evacuation of the Rhineland by June 1930 (five years ahead of schedule). It is hardly surprising that when he died of a stroke in October 1929 at the early age of fifty-one Stresemann's reputation stood very high. He had also become a focus for hopes of European peace. Hitler is reported to have remarked that in Stresemann's position "he could not have achieved more".

The Collapse of Weimar

Stresemann's death could not have come at a worse time for the young republic. The onset of the Great Depression was to have dramatic effects on Germany. The German economy's recovery after the inflation of 1923 had been financed by loans from the United States. Many of these short term loans had been used to finance capital projects such as road building. State governments financed their activities with the help of these loans. German interest rates were high, and capital flowed in. Large firms borrowed money and depended heavily on American loans. German banks took out American loans to invest in German businesses. The German economic recovery was based on shaky foundations. The German economy was in decline prior to the Wall Street Crash. There was no growth in German industrial production in 1928-9 and unemployment rose to two and a half million.

On the 24th October, "Black Thursday", there was panic selling on the New York Stock Exchange reacting to a business crisis in America. Early the following week, "Black Tuesday", 29th of October, panic selling set in again. 16.4 million shares were sold, a record not surpassed for forty years. Share prices went into freefall. Ten billion dollars was wiped off the value of share prices in one day. Effects on Germany As a result American demand for imports collapsed. American banks saw their losses mount and they started calling in their short term loans with which so much of German economy had been financing itself for the past five years. Firms began to cut back drastically. Industrial production fell quickly and by 1932 it was 40% of its 1929 level. To make matters worse in 1931 a number of Austrian and German banks went out of business. Unemployment rose from 1.6 million in October 1929 to 6.12 million in February 1932. 33% percent of the workforce were now unemployed. By 1932 roughly one worker in three was registered as unemployed with rates even higher in industrial areas of Germany. Matters were made worse by the fact that the drastic fall in people's income caused a collapse in tax revenues. Many soon were not in receipt of unemployment benefits as state governments could not afford to pay it. Industry production was reduced to 58%, Agriculture was down to 65%.

Political Turmoil

The Republic was soon under attack from both left- and right-wing sources. The radical left accused the ruling Social Democrats of having betrayed the ideals of the workers' movement by preventing a communist revolution and sought to overthrow the Republic and do so themselves. Various right-wing sources opposed any democratic system, preferring an authoritarian, autocratic state like the 1871 Empire. To further undermine the Republic's credibility, some right-wingers (especially certain members of the former officer corps) also blamed an alleged conspiracy of Socialists and Jews for Germany's defeat in World War I. In the next five years, the central government, assured of the support of the Reichswehr, dealt severely with the occasional outbreaks of violence in Germany's large cities. The left claimed that the Social Democrats had betrayed the ideals of the revolution, while the army and the government-financed Freikorps committed hundreds of acts of gratuitous violence against striking workers. The first challenge to the Weimar Republic came when a group of communists and anarchists took over the Bavarian government in Munich and declared the creation of the Bavarian Soviet Republic. The uprising was brutally attacked by Freikorps, which consisted mainly of ex-soldiers dismissed from the army and who were well-paid to put down forces of the Far Left. The Freikorps was an army outside the control of the government, but they were in close contact with their allies in the Reichswehr.

On 13 March 1920, 12,000 Freikorps soldiers occupied Berlin and installed Wolfgang Kapp (a right-wing journalist) as chancellor (Kapp Putsch). The national government fled to Stuttgart and called for a general strike against the putsch. The strike meant that no "official" pronouncements could be published, and with the civil service out on strike, the Kapp government collapsed after only four days on 17 March. Inspired by the general strikes, a workers' uprising began in the Ruhr region when 50,000 people formed a "Red Army" and took control of the province. The regular army and the Freikorps ended the uprising on their own authority. The rebels were campaigning for an extension of the plans to nationalise major industries and supported the national government, but the SPD leaders did not want to lend support to the growing USPD, who favoured the establishment of a socialist regime. The repression of an uprising of SPD supporters by the reactionary forces in the Freikorps on the instructions of the SPD ministers was to become a major source of conflict within the socialist movement and thus contributed to the weakening of the only group that could have withstood the National Socialist movement. Other rebellions were put down in March 1921 in Saxony and Hamburg.

In 1922, Germany signed the Treaty of Rapallo with the Soviet Union, which allowed Germany to train military personnel in exchange for giving Russia military technology. This was against the Treaty of Versailles, which limited Germany to 100,000 soldiers and no conscription, naval forces of 15,000 men, twelve destroyers, six battleships, and six cruisers, no submarines or aircraft. However, Russia had pulled out of World War I against the Germans as a result of the 1917 Russian Revolution, and was excluded from the

League of Nations. Thus, Germany seized the chance to make an ally. Walther Rathenau, the Jewish Foreign Minister who signed the treaty, was assassinated two months later by two ultra-nationalist army officers. Further pressure from the political right came in 1923 with the Beer Hall Putsch, also called the Munich Putsch, staged by the Nazi Party under Adolf Hitler in Munich. In 1920, the German Workers' Party had become the National Socialist German Workers' Party (NSDAP), or Nazi party, and would become a driving force in the collapse of Weimar. Hitler named himself as chairman of the party in July 1921. On 8 November 1923, the Kampfbund, in a pact with Erich Ludendorff, took over a meeting by Bavarian prime minister Gustav von Kahr at a beer hall in Munich.

Ludendorff and Hitler declared that the Weimar government was deposed and that they were planning to take control of Munich the following day. The 3,000 rebels were thwarted by the Bavarian authorities. Hitler was arrested and sentenced to five years in prison for high treason, a minimum sentence for the charge. Hitler served less than eight months in a comfortable cell, receiving a daily stream of visitors before his release on 20 December 1924. While in jail, Hitler dictated *Mein Kampf*, which laid out his ideas and future policies. Hitler now decided to focus on legal methods of gaining power.

Suffering, Degeneracy and the Jews

At the end of the First World War, Germany was essentially tricked into paying massive reparations to France and other economic competitors and former belligerent countries in terms of the so-called Treaty of Versailles, thanks to the liberal American President Woodrow Wilson. Germany was declared to be solely responsible for the war, in spite of the fact that "Germany did not plot a European war, did not want one, and made genuine efforts, though too belated, to avert one." As a result of these massive forced financial reparations, by 1923 the situation in Germany became desperate and inflation on an astronomical scale became the only way out for the government. Printing presses were engaged to print money around the clock. In 1921 the exchange rate was 75 marks to the dollar. By 1924 this had become about 5 trillion marks to the dollar. This At the end of the First World War, Germany was essentially tricked. As a result of these massive enforced financial reparations, by 1923 the situation in Germany became desperate and inflation on an astronomical scale became the only way out for the government. Printing presses were engaged to print money around the clock. In 1921 the exchange rate was 75 marks to the dollar. By 1924 this had become about 5 trillion marks to the dollar. This virtually destroyed the German middle class (reducing any bank savings to a virtual zero.

According to Sir Arthur Bryant the British historian: "It was the Jews with their international affiliations and their hereditary flair for finance who were best able to seize such opportunities... They did so with such effect that, even in November 1938, after five years of anti-Semitic legislation and persecution, they still owned, according to the Times correspondent in Berlin, something like a third of the real property in the Reich. Most

of it came into their hands during the inflation... But to those who had lost their all this bewildering transfer seemed a monstrous injustice. After prolonged sufferings they had now been deprived of their last possessions. They saw them pass into the hands of strangers, many of whom had not shared their sacrifices and who cared little or nothing for their national standards and traditions... The Jews obtained a wonderful ascendancy in politics, business and the learned professions (in spite of constituting) less than one percent of the population... The banks, including the Reichsbank and the big private banks, were practically controlled by them. So were the publishing trade, the cinema, the theatres and a large part of the press – all the normal means, in fact, by which public opinion in a civilized country is formed... The largest newspaper combine in the country with a daily circulation of four millions was a Jewish monopoly... Every year it became harder and harder for a gentile to gain or keep a foothold in any privileged occupation... At this time it was not the 'Aryans' who exercised racial discrimination. It was a discrimination that operated without violence. It was exercised by a minority against a majority. There was no persecution, only elimination... It was the contrast between the wealth enjoyed – and lavishly displayed – by aliens of cosmopolitan tastes, and the poverty and misery of native Germans, that has made anti-Semitism so dangerous and ugly a force in the new Europe.

Strangely enough, a book unexpectedly published by Princeton University Press in 1984, Sarah Gordon (*Hitler, Germans and the "Jewish Question"*) essentially confirms what Bryant says. According to her, "Jews were never a large percentage of the total German population; at no time did they exceed 1% of the population during the years 1871-1933." But she adds "Jews were over-represented in business, commerce, and public and private service... They were especially visible in private banking in Berlin, which in 1923 had 150 private Jewish banks, as opposed to only 11 private non-Jewish banks... They owned 41% of iron and scrap iron firms and 57% of other metal businesses... Jews were very active in the stock market, particularly in Berlin, where in 1928 they comprised 80% of the leading members of the stock exchange. By 1933, when the Nazis began eliminating Jews from prominent positions, 85% of the brokers on the Berlin Stock exchange were dismissed because of their "race"... At least a quarter of full professors and instructors (at German universities) had Jewish origins... In 1905-6 Jewish students comprised 25% of the law and medical students... In 1931, 50% of the 234 theatre directors in Germany were Jewish, and in Berlin the number was 80%... In 1929 it was estimated that the per capita income of Jews in Berlin was twice that of other Berlin residents..."

Arthur Koestler confirms the Jewish over-involvement in German publishing. "Ullstein's was a kind of super-trust; the largest organization of its kind in Europe, and probably in the world. They published four daily papers in Berlin alone, among these the venerable *Vossische Zeitung*, founded in the eighteenth century, and the *B.Z. am Mittag*, an evening paper... Apart from these, Ullstein's published more than a dozen weekly and monthly periodicals, ran their own news service, their own travel agency, etc., and were one of the leading book publishers. The firm was owned by the brothers Ullstein - they were five,

like the original Rothschild brothers, and like them also, they were Jews.” Edgar Mowrer, Berlin correspondent for the Chicago Daily News, wrote an anti-German tract called *Germany Puts the Clock Back* (published as a Penguin Special and reprinted five times between December 1937 and April 1938). He nevertheless notes, “In the all-important administration of Prussia, any number of strategic positions came into the hands of Hebrews... A telephone conversation between three Jews in Ministerial offices could result in the suspension of any periodical or newspaper in the state... The Jews came in Germany to play in politics and administration that same considerable part that they had previously won by open competition in business, trade, banking, the Press, the arts, the sciences and the intellectual and cultural life of the country. And thereby the impression was strengthened that Germany, a country with a mission of its own, had fallen into the hands of foreigners.”

Mowrer says, “No one who lived through the period from 1919 to 1926 is likely to forget the sexual promiscuity that prevailed... Throughout a town like Berlin, hotels and pensions made vast fortunes by letting rooms by the hour or day to baggageless, unregistered guests. Hundreds of cabarets, pleasure resorts and the like served for purposes of getting acquainted and acquiring the proper mood...” . Bryant describes throngs of child prostitutes outside the doors of the great Berlin hotels and restaurants. He adds “Most of them (the night clubs and vice-resorts) were owned and managed by Jews. And it was the Jews... among the promoters of this trade who were remembered in after years.”

Douglas Reed, Chief Central European correspondent before WWII for the London Times, was profoundly anti-German and anti-Hitler. But nevertheless he reported: “I watched the Brown Shirts going from shop to shop with paint pots and daubing on the window panes the word “Jew“, in dripping red letters. The Kurfürstendamm was to me a revelation. I knew that Jews were prominent in business life, but I did not know that they almost monopolized important branches of it. Germany had one Jew to one hundred gentiles, said the statistics; but the fashionable Kurfürstendamm, according to the dripping red legends, had about one gentile shop to ninety-nine Jewish ones.”. In Reed’s book *Disgrace Abounding* of the following year he notes, “In the Berlin (of pre-Hitler years) most of the theatres were Jewish-owned or Jewish-leased, most of the leading film and stage actors were Jews, the plays performed were often by German, Austrian or Hungarian Jews and were staged by Jewish film producers, applauded by Jewish dramatic critics in Jewish newspapers... The Jews are not cleverer than the Gentiles, if by clever you mean good at their jobs. They ruthlessly exploit the common feeling of Jews, first to get a foothold in a particular trade or calling, then to squeeze the non-Jews out of it... It is not true that Jews are better journalists than Gentiles. They held all the posts on those Berlin papers because the proprietors and editors were Jewish.” The Jewish writer Edwin Black notes, “For example, in Berlin alone, about 75% of the attorneys and nearly as many of the doctors were Jewish.”

Another Look at the Weimar Hyperinflation

The Weimar financial crisis began with the crushing reparations payments imposed at the Treaty of Versailles. Hjalmar Schacht, who was currency commissioner for the Republic, complained:

“The Treaty of Versailles is a model of ingenious measures for the economic destruction of Germany. . . . [T]he Reich could not find any way of holding its head above the water other than by the inflationary expedient of printing bank notes.”

That is what he said at first; but Zarlenga writes that Schacht proceeded in his 1967 book *The Magic of Money* “to let the cat out of the bag, writing in German, with some truly remarkable admissions that shatter the ‘accepted wisdom’ the financial community has promulgated on the German hyperinflation.”⁸ Schacht revealed that it was the privately-owned Reichsbank, not the German government, that was pumping new currency into the economy. Like the U.S. Federal Reserve, the Reichsbank was overseen by appointed government officials but was operated for private gain. The mark’s dramatic devaluation began soon after the Reichsbank was “privatized,” or delivered to private investors. What drove the wartime inflation into hyperinflation, said Schacht, was speculation by foreign investors, who would sell the mark short, betting on its decreasing value. Recall that in the short sale, speculators borrow something they don’t own, sell it, then “cover” by buying it back at the lower price. Speculation in the German mark was made possible because the Reichsbank made massive amounts of currency available for borrowing, marks that were created on demand and lent at a profitable interest to the bank. When the Reichsbank could not keep up with the voracious demand for marks, other private banks were allowed to create them out of nothing and lend them at interest as well.

According to Schacht, not only was the government not the cause of the Weimar hyperinflation, but it was the government that got the disaster under control. The Reichsbank was put under strict regulation, and prompt corrective measures were taken to eliminate foreign speculation by eliminating easy access to loans of bank-created money. Hitler then got the country back on its feet with his MEFO bills issued by the government.

Schacht actually disapproved of the new government-issued money and wound up getting fired as head of the Reichsbank when he refused to issue it, something that may have saved him at the Nuremberg trials. But he acknowledged in his later memoirs that Feder’s theories had worked. Allowing the government to issue the money it needed had not produced the price inflation predicted by classical economic theory. Schacht surmised that this was because factories were sitting idle and people were unemployed. In this he agreed with Keynes: when the resources were available to increase productivity, adding money to the economy did not increase prices; it increased goods and services. Supply and demand increased together, leaving prices unaffected. These revelations put the notorious hyperinflations of modern history in a different light.

9.10 Soviet Union

World War I ended on November 11, 1918. Within forty-eight hours, on the morning of November 13, an attempt was made to bring about a second world war. At that time the concepts and names “World War I” and “World War II” did not yet exist. The war of 1914–18, because it was a collision of gigantic empires, was called the Imperialist War. It was also called the Great War, because it surpassed all previously known wars in magnitude, expenditure, and number of participants. No previous wars had known such extended fronts, such intense battles, such massive losses, or such great social and economic consequences. The barbarity of a global slaughterhouse was so obvious that an overwhelming majority of people considered a repeated occurrence of such madness impossible. For this reason, the war of 1914–18 had another name, which is now forever forgotten, the Last War. Many thought that the gory absurdity of the Great War would sober all its participants, and eternally eradicate the desire to fight. Nevertheless, a small group of people existed in Russia, who dreamed that a second world war would be crueler, that the bloodshed would encompass not only Europe and part of Asia but all the other continents as well. These people called themselves Bolsheviks, or Communists. Vladimir Lenin headed the group, and called their organization a political party. However, the infrastructure, tactics, and strategies of Lenin’s group did not resemble those of a political party, but of a small, well-organized, conspiratorial cult. Lenin’s party had a perceptible structure, parallel to which ran a secret, invisible organization. Just like a mafia organization, Lenin’s party had open and entirely legal associations and undertakings, along with a secret unifying force that always remained in the shadows.

The leaders of this cult concealed their real names. Lenin, Trotsky, Stalin, Zinoviev, Kamenev, Molotov, and Kirov: these are all aliases. They all had serious reasons for not revealing their true names. For example, under the alias of “Stalin” hid a bank robber whose real name was Dzhugashvili. He was in charge of filling the party’s cashbox. Lenin and his gang worked hard to draw out World War I as much as possible. As early as September 1916, during the peak of the war, Lenin declared that one world war might be insufficient, and humanity might need another one of the same or even greater destructive scale. He reasoned that war is the mother of revolution, and world war is the mother of world revolution. The longer the war lasts, the more bloodshed and destruction it brings, the sooner revolution takes place. If a world revolution did not arise as a result of the first world war, a second world war becomes necessary.

Lenin’s party was not only the most militaristic in the world, but also the most peaceloving. In 1914, almost all political parties of the nations at war voted in unison in the parliaments of their countries to create war credits. Lenin’s party counted among the very few exceptions. Together with another branch of Russian Social Democrats, the Mensheviks, Lenin’s party voted against increasing military expenditures, despite the obvious understanding that during wartime military expenditures cannot be the same as during peacetime. On July 26, 1914, during an emergency session of the Duma, the Bolsheviks

and Mensheviks left the meeting hall “as a protest against the current military insanity.” Lenin’s party began an unprecedented campaign for peace. By September–October of 1917, the Bolshevik party had seventy-five newspapers and magazines, with a total daily run estimated as high as 600,000 copies. All these publications advocated for immediate peace. The Communists distributed their publications free of charge in city streets, in factories, in military barracks, and in the trenches at the front. On top of the newspapers and magazines, Lenin’s party printed millions of books, brochures, pamphlets, and proclamations. Soldiers were told to try to establish friendly relations with the enemy, instead of shooting at them. Communist slogans urged the troops: “Put down your rifles!” “Go home!” “Let’s transform the Imperialist War into a Civil War!”

In the fall of 1917, under the leadership of Leon Trotsky and Vladimir Lenin, the Communists carried out a coup and seized control of the capital of the Russian empire, Petrograd (formerly St. Petersburg). For the first time in world history, a group of people living and working under fake names gained control of the capital of such a vast country. Most nations of the world did not recognize the new authorities as legitimate. The only exceptions were countries with which Russia was at war, Germany and Austria-Hungary. Only the enemy recognized Lenin’s command. Moments after the new power came into being, the first official document—the Peace Decree - was created and signed. The army and navy immediately ceased all military activity. Every regiment elected committees of soldiers. Delegates from each regiment began conducting their own peace talks with the enemy. They paid no attention to their regimental or division commanders, or higher authorities. At first every regiment, and later on every battalion, independently designed the conditions for peace, without taking into consideration the demands of the other battalions. The Russian army crumbled into hundreds of uncontrollable regiments and thousands of battalions, ceasing to exist as a single unified organism. The front collapsed. Nobody was left to defend Russia. Following the decree to stop fighting, Lenin and his cohorts immediately instituted committees to demobilize and take apart the Russian army. No major power had ever voluntarily dismantled its army during peacetime. Yet Lenin and Trotsky demolished the Russian army during the peak of World War I.

The Russian army, acting under Lenin and Trotsky’s orders, abandoned its trenches and went home. Thousands of guns, mortars, machine guns, millions of small arms, and huge stores of ammunition, uniforms, and supplies were left behind on the frontlines. Lenin’s “Peace Decree” was an act of Russia’s utter capitulation before Germany. From this moment the Eastern Front ceased to exist. Germany received the chance to concentrate its efforts on the Western Front against Russia’s former allies. In adopting the “Peace Decree” Russia betrayed her allies. Lenin and Trotsky singlehandedly brought Russia out of the war and made their country subject to Germany’s mercy. Despite Russia’s withdrawal, the situation in Germany and Austria-Hungary continued to worsen. A general strike broke out in Austria-Hungary in January 1918. During the same month, a general strike was called in Germany. Both countries stood on the verge of chaos. Russian Communists saved their day. To be capable of fighting in the war as long as possible,

Germany needed strategic resources in large quantities. Lenin and Trotsky again came to Kaiser Wilhelm's aid. They signed the Brest-Litovsk Treaty in March 1918. The Russian Communists, without battle, handed over approximately a million square kilometers of their territory to the Germans. Fifty-six million people, about a third of the Russian empire's population, inhabited this territory. The occupied area encompassed more than a quarter of the nation's cultivated lands; it housed 26 percent of the railways, and major industrial capabilities. Seventy-three percent of Russia's iron and steel was cast in these territories, and 89 percent of Russia's coal was mined there.

Communists are proud of their love of peace. However, the stubbornness with which they fought for peace far surpasses common sense, to the point of suspicion. For the sake of peace, Lenin and Trotsky sacrificed 56 million of their subjects, without considering their wishes and needs. What good was peace for these people, if their homes were taken over by foreign occupants? For the sake of peace, Lenin and Trotsky handed Russia's most fertile lands over to Germany, causing widespread famine in the remaining territories. Without bread, meat, gold, steel, iron, and coal, Russia could not exist. What good is peace if it brings the death of the nation? It was clear that Germany could not successfully continue to fight on two fronts, but the defeat of Germany would mean the end of the war. Consequently, Lenin's task, to prolong the war, was to create a situation in which Germany fought on only one front. For this purpose, he took Russia out of the war. Lenin's plot was simple: let Germany and Austria-Hungary fight against Great Britain, France, and the United States. Let them wear out each other's strengths. Most importantly, do not allow the flames of war to be extinguished. Russia would remain on the side and add fuel to the fire. While "peace" was being made on Lenin's orders in Brest-Litovsk, intensive preparations for a revolt against the German government were underway in Petrograd. The revolutionaries published half a million copies of a Communist newspaper in German, *Die Fackel* (the Torch). Even before the Brest-Litovsk Treaty was signed, in January 1918 a German Communist organization, Spartakus, was formed in Petrograd. The newspapers *Die Weltrevolution* (the World Revolution) and *Die Rote Fahne* (the Red Banner) were also born, not in Germany but in Russia under Lenin's orders, while he made peace with Germany's government. Communism would become deeply rooted in Germany in the 1920s. Part of the credit for this goes to Lenin, who fueled the instability of German politics precisely at the time when he had a peace treaty with the German government. While Germany was conducting a hopeless and devastating military campaign in the West, Lenin was subverting its political system.

Finally, World War I ended. In November 1918 Europe's condition was exactly what the Kremlin leaders had hoped it would be. The economic hardships caused by war had reached their limits in all the nations. Europe was facing an unprecedented crisis that encompassed all spheres of life, including the economy, politics, and ideology. Germany admitted her defeat. The monarchy crumbled. Anarchy and famine ruled the land. Just then, Lenin and Trotsky's love for peace vanished. The government of Soviet Russia issued, on November 13, 1918, an order for the Red Army to begin offensive

operations against Europe. A review of the protocols of any of the countless meetings and congresses of that period reveals that the only question on the agenda was the World Revolution. The aim of the Soviet advance narrowed down to installing Communism on the European continent. In a few days, the Red Army crossed into the Baltic countries. The Communist government of Estonia was formed on November 29, that of Latvia on December 4. Lithuania followed on December 8, 1918. On December 17, a manifesto published in Riga named Germany as the imminent objective of the offensive. The most important goal of the operation: fuel a new world war.

Lenin's calculations were precise: Worn out by World War I, the German empire is unable to bear the pressures of another war. The war ends with the crushing of the empire and is followed by a revolution. In war-torn Europe, on the remaining fragments of the old empires, Communist countries arise, remarkably similar to Lenin's Bolshevik regime. Lenin was ecstatic: "We are at the doorstep of world revolution!"

First Attempts to Unleash a Second World War

As a result of World War I, Europe found itself in a situation which the Communists called revolutionary. In 1918 Communist parties formed in many European countries. In Kiel, German navy seamen called a strike on November 3, 1918. Two days later, the strike spread to all of northern Germany, and on November 7–8 it reached the main industrial regions and the capital city, Berlin. The strikes were suppressed, or subsided on their own. But in January 1919, a Soviet republic was declared in Bremen. The Hungarian Soviet Republic formed in March. In April, the Bavarian Soviet Republic followed. Following the Soviet example, these Communist nations formed Red Armies and secret police squads, which called themselves "extraordinary commissions in the struggle against counterrevolution." These extraordinary commissions immediately instigated a reign of terror against all layers of society, and the Red Armies threw themselves into revolutionary wars to "liberate" the neighboring nations. A part of the Hungarian Red Army marched into Slovakia and, on June 20, 1919, proclaimed the Slovak Soviet Republic. A Communist government formed immediately and declared a policy of nationalization of all private lands and annulment of private property. It nationalized all commercial enterprises, banks, and transportation systems. For silencing the voices of discontent, they formed the Slovak Red Army and Extraordinary Commission. At the same time Soviet Ukraine declared war on Romania, and began preparations to advance west, to connect with Soviet Hungary.

Lenin and Trotsky prepared to establish Communism in Asia as well as in Europe. On August 5, 1919, Trotsky wrote a secret memorandum arguing that "the road to Paris and London lies through the cities of Afghanistan, Punjab, and Bengal." He proposed "preparations for a march on India, to help the Indian revolution." To achieve this goal Trotsky said it was necessary to form "a political and military command center of Asian revolution, and a revolution academy" in the Urals or in Turkestan, to form a special

corps of 30,000 to 40,000 horsemen and “unleash them on India” to help the “native revolutionaries.” Civil war raged in Russia and distracted the efforts to ignite a second world war in 1918 and 1919. The main resources of the Red Army were tied up on internal fronts fighting against those who opposed Communism. Lenin and Trotsky were not able to send aid to the Communist nations that sprouted in Central Europe, nor could the Red Army reach Germany.

In 1919 in Moscow, Lenin and Trotsky created the Communist International, abbreviated as Comintern. This organization defined itself as “the Headquarters of World Revolution.” The goal of the Comintern was the creation of a “World Soviet Socialist Republic.” It began the process of creating and strengthening Communist parties on all continents. These parties constituted sections of the Comintern and were subordinate to its leadership. Allegedly, all Communist parties in the world, including the Russian party, had an equal status. They all contributed to the communal bank of the Comintern. Delegates from all Communist parties of the world held congresses, developed strategies and tactics, and elected a common leadership—the Executive Committee of the Comintern. This organ oversaw all the Communists of the world. The Communist Party of Russia officially was a section of the Comintern, on equal footing with all the other parties, and bound to abide by commonly developed decisions. In practice, however, the reality was an entirely different story. All the funds in the Comintern budget came from the gold reserves of Soviet Russia. All the Communist parties of the world were paid for by Moscow and existed only through financing from the Kremlin. The Comintern itself was also created with Kremlin funds. The leaders of the Comintern lived and worked in Moscow, under tight control of the Soviet secret police. All their directives came from the Kremlin. Only those who were agreeable to the Kremlin leaders, and who carried out all their orders without dissent, were chosen.

Communists conducted not only an open struggle, but also a secret one. Stated briefly, their ideology narrowed down to advocating: “The old world must be destroyed, and a new one built in its place.” To destroy the old world and build a new one, it is necessary to gain political power. Gaining political power requires using all measures, ranging from the most peaceful to the most violent, from the most open to the most secretive. “The struggle for a new world must unfold not on a national scale, but on a world scale. The interests of the World Revolution are more important than the interests of individual countries.”

Every person joining the Communist Party accepted this ideology, meaning he or she agreed to fight against the interests of their own nation, if it became necessary, and to use all methods, including covert and violent action. Suddenly the intelligence services of the Soviet Union received legions of volunteers from practically every nation in the world. All that remained was to select the most competent ones, train them, finance them, and assign them to missions in the fight against their own countries and governments. In the 1920s Soviet intelligence suddenly became the most powerful intelligence organization in the world. Thousands of Germans, Czechs, Hungarians, Americans, English, Japanese,

and French selflessly worked in the name of a bright future for all humanity. In actuality, they worked for the interests of the Kremlin.

Lenin was the first to understand that World War I left a rocky legacy. The victorious allied nations, especially France, were carried away in demanding reparations from Germany. Forced into making huge payments to the victors, Germany faced a sharp economic crisis, and the German people experienced hunger, poverty, and constant misfortune. Lenin was the first to understand that the Versailles Treaty was a bomb waiting to explode under Europe. Germany would never make peace due to the unfairness of the pact; there would always be those who opposed the treaty, who would call out for revenge and act to get it. On October 15, 1920, Lenin declared: "The order held by the Versailles peace treaty lies over a volcano, since the seventy percent of the world's people who are enslaved are anxiously awaiting someone to come and start a struggle for their liberation, and to rock the foundation of their countries." Just who could that man be?

In 1920 Russian Communists undertook a new attempt to spark a second world war by ripping through Poland into Germany. Although the most favorable conditions for revolution had already lessened, Germany in 1920 was still an acceptable place for class struggles. Germany was ruined and dishonored. All her ideals were besmirched and mocked. The country was enveloped in a harsh economic crisis; in March 1920 Germany experienced a general strike, estimated to have had more than 12 million participants. Germany resembled a powder keg, waiting for just one spark. The Red Army was supposed to bring this spark to Germany. In the summer of 1920, the western front of the Red Army, under the leadership of the ruthless General Mikhail Tukhachevski, began to advance with the objective of crushing Europe. Excerpts from order #1423 given to the western front on July 2, 1920, announced: "Fighters of the Workers' Revolution! The fate of the World Revolution will be decided in the West. The path to the world fire lies over the dead body of White (anti-Communist) Poland. We will carry happiness and peace on our bayonets to the working people of the world. To the West! To decisive battles and thundering victories!"

In the days when the Red Army was advancing toward the Polish cities of Warsaw and Lvov, a second congress of the Comintern was taking place in Russia. The Headquarters of the World Revolution then issued a call:

"Brothers—Red Army Fighters, you should know your fight against the Polish slave drivers is the most just war in history. You are fighting not only for the interests of Soviet Russia, but for the interests of the whole of working mankind, for the interest of the Communist International. . . . Soviet Germany, united with Soviet Russia, will immediately become more powerful than all the capitalist powers combined! The Communist International declared that Soviet Russia's goal is its own goal too. The international proletariat will not sheath its sword until Soviet Russia joins the Federation of the Soviet Republics of the World as an integral link."

On July 23, 1920, directly from the Comintern congress, Lenin telegraphed Stalin at the

Polish front: "Situation in Comintern is outstanding. Zinoviev, Bukharin, and I think that it would be proper to encourage a revolution in Italy. My personal opinion is that, to do so, Hungary has to be sovietized, possibly along with Czechoslovakia and Rumania."⁵ In a conversation with the French delegates to the congress, Lenin was even blunter: "Yes, the Soviet troops are in Warsaw. Soon, Germany will be ours. We will conquer Hungary again; the Balkans will rise against capitalism. Italy will tremble. Bourgeois Europe is cracking at the seams in the storm."

The Red Army stepped onto Polish territory and immediately in the first occupied city declared the creation of the PSSR—the Polish Soviet Socialist Republic.⁷ Felix Dzerzhinski, the head of the Soviet secret police and an ethnic Pole, led the PSSR. By the end of the second congress of the Comintern, Warsaw was half surrounded by the units of the Red Army. Prior to the Polish counterattack, the Red Army crossed the Vistula River in the vicinity of the town of Wloclawek—360 kilometers, or ten marching days, from Berlin.⁸ There was no common border between Soviet Russia and Germany. In order to spark the fires of revolution, it was necessary to tear down the dividing barrier—Poland. On September 22, 1920, Lenin spoke to the Ninth Conference of the Russian Communist Party and bluntly described the logic guiding the Bolsheviks in their drive: "e defensive war against capitalism is over, we have won. . . . We are now going to try to attack them, to help the sovietization of Poland. . . . We have set ourselves a task: to seize Warsaw. . . . It turned out that not just the fate of Warsaw is being decided, but the fate of the whole Versailles Treaty."

To the Communists' misfortune, Tukhachevski, who did not understand strategy, was in command of Soviet troops. Tukhachevski's armies were crushed near Warsaw and fled in disgrace. In the critical moment, Tukhachevski lacked strategic reserves, and this decided the outcome of the grandiose battle. This time, Europe was fortunate. The Soviet Communists had to postpone the revolution in Europe until 1923.

The First Contact

After the failed first try of further revolution the Russian people demanded peace, not world domination. St. Petersburg, the "cradle of the revolution," experienced one workers' strike after another. The workers demanded bread and freedom. The Bolsheviks crushed the workers' demonstrations, but in March 1921 all of a sudden the Baltic fleet intervened on the workers' behalf. The sailors of the seaport city of Kronstadt (a naval base), the same ones who gave power to Lenin and Trotsky, now sought their freedom from Communist rule. They demanded that the Soviets (the workers' and peasants' councils, the basic organizing units of society created by the Communists) be purged of Communists. In addition, the nation experienced a wave of peasant uprisings.

The peasants' and sailors' uprisings and the workers' demonstrations were crushed by the same man who lost the Polish war, Mikhail Tukhachevski. He showed inhuman cruelty, and disregarded all international rules of law and human rights. Under his leadership

thousands of hostages were executed by firing squad, peasants were shelled with poison gas, and villages were burned. Villagers were drowned in swamps; sailors were drowned, pushed into holes cut in the ice. Communist leaders were desperately looking for a way out of the crisis. The Comintern, finding itself in this desperate situation, made a decision that the only thing that could save Bolshevism was a revolution in Germany. The head of the Comintern, Grigorii Zinoviev, sent his loyal follower, the Hungarian revolutionary Bela Kun, to Berlin. Kun, who in 1919 had been the actual head of the short-lived Hungarian Soviet Republic, arrived in Berlin in March 1921 with an order from Zinoviev and the Executive Committee of the Comintern to the Central Committee of the German Communist Party to seize power. For this the German Communists had to organize an immediate uprising and abolish the Weimar Republic.

On March 22 a general strike was declared in the industrial regions of central Germany. On March 24 the Communists took control of government buildings in Hamburg. In Leipzig, Dresden, Chemnitz, and other cities of central Germany, the Communists organized a takeover of courts, municipal buildings, banks, and police headquarters. The official organ of German Communists, *Die Rote Fahne*, openly called for revolution." Although the attempt to take control of Germany in 1921 suffered defeat, in Moscow preparations immediately began for a new seizure of power in Germany and the world. On December 30, 1922, the Union of Soviet Socialist Republics (USSR) was born. In this name there are no national or geographical limits. According to the plans of the founders of the USSR, the Union was meant to spread throughout the world. The "Declaration of the Founding of the Union of the Soviet Socialist Republics" proclaimed that the USSR is only the first decisive step in a creation of the World Soviet Socialist Republic. The number of republics was planned to expand until the entire world formed one giant Communist state. The Founding Declaration of the USSR was an open and direct declaration of war to the rest of the world. It was an official document that stated the main purpose of the existence of the giant state: to destroy and subordinate all remaining states of the world.

Attempts to unleash a war and revolution were repeated by the Soviet Communists many times over. There was an attempt to start a "Balkan revolution," and obtain, in Trotsky's words, a direct route from the Balkan region to the ports of France and Britain.⁶ An assassination attempt was made against the Bulgarian Tsar Boris, but miraculously he survived. In September 1923 armed uprisings began in Bulgaria, started on the Comintern's orders. On September 27, 1923, the Soviet Politburo ordered ten Bulgarian Communists (officers and pilots) to the navy base in Sevastopol. If a nearby Bulgarian city close to the shore was in rebel hands, the pilots would establish a connection by airplane between the south of Russia and Bulgaria. Then, "upon the establishment of the connection, to send out arms that have been in Sevastopol since last year, prepared for the Bulgarian revolution . . . and . . . send Bulgarian Communists currently in Moscow and other Russian cities to Bulgaria with arms." The leader of the uprisings was Georgy Dimitrov—future head of the Comintern. Attempts were also made to spark revolutions in South America, Estonia, Latvia, Lithuania, China, India, and many other countries.

However, Germany remained the ultimate objective. One of the several attempts to take power in Germany is especially interesting. This attempt was undertaken in the fall of 1923 when Lenin no longer participated in the leadership. The reins of power were almost completely in Stalin's hands, although neither the country, nor the world, not even his rivals within the party, had come to understand this. Stalin's personal secretary, Boris Bazhanov, described the preparations for seizure of power in Germany: "At the end of September an emergency meeting of the Political Bureau of the Central Committee of the Russian Communist Party of Bolsheviks (the former name of the Communist Party of the Soviet Union—the CPSU, as it was renamed in October 1952) was held, so secret that it was attended only by the members of the Politburo and myself. No regular member of the Central Committee was permitted to be present. This meeting was called in order to fix a date for a coup in Germany. It was decided on November 9, 1923."

Bazhanov wrote that the funds earmarked to support the German revolution were tremendous, and a decision was made to support the effort without limits. Inside the Soviet Union, all Communists of German origin and all Communists who knew the German language were mobilized. They were trained and sent to Germany for underground work. Not only regular Soviet Communists were sent to Germany, but leaders of higher rank as well, among them the People's Commissar (member of the cabinet of ministers of the Soviet government) Vasily Schmidt, the members of the Central Committee of the Soviet Communist Party Karl Radek and Grigory Piatakov, the candidate for membership to the Politburo of the Communist party of the USSR Nikolai Bukharin, and many others. In 1923 many others, also under aliases, arrived in Germany: Tukhachevski, Unshlikht, Vatsetis, Menzhinskii, Trillisser, Yagoda, and many others. The Soviet ambassador to Germany, Nikolai Krestinski, formed a powerful web of secret intelligence. The Soviet embassy transformed itself into the headquarters of the revolution. Through its orders were passed from Moscow, along with a flow of funds, which were immediately transformed into a storm of subversive propaganda, arms, and war supplies.

The Comintern commission dealing with German affairs consisted of the entire Soviet leadership: Stalin, Trotsky, Zinoviev, Bukharin, and Radek. Stalin thought that it was necessary to avoid at all cost anything that might reveal that the revolution was "dictated" or "instigated" by the USSR. The plan was simple: November 7—the anniversary of the Communist takeover in Russia—would be the day for workers' demonstrations of solidarity in Germany. Special units, trained in Moscow by Communist secret police and military intelligence under the supervision of Joseph Unshlikht, would act as provocateurs and incite conflicts with police. Their goal was to cause violent clashes and arrests thus inflaming the anger of the workers. On November 8, the clashes were to grow from street fights into more serious threats. On the night of November 9, Unshlikht's units were to seize the most important government establishments, making it appear to be a spontaneous reaction of the masses against police brutality. The script was simple, yet reliable. The so-called "Great October Socialist Revolution" followed the same script; so did the "proletarian revolutions" in Estonia, Lithuania, and Latvia in 1918 and in 1940.

Following this blueprint, Communists took control of many states after World War II: a “spontaneous demonstration” of workers, the wrath of the people—and small units of cunning professionals.

Let’s examine the dates. In August of 1923, Stalin decided that “German Communists, by themselves, will have to seize power in Germany.” After this, in October, high-ranking Soviet officials were sent to Germany, and one of Stalin’s agents conducted talks with the Nazis and discussed cooperative actions. In other words, the Soviets were saying on the one hand, “Dear Nazis, please help the Communists take power in Germany.” On the other hand, they were saying “Let the Communists rule Germany by themselves.” This is a familiar Communist maneuver, and it was Stalin’s personal trademark. Communists took power in Russia in alliance with other parties. Then they destroyed their allies after they became useless. Stalin personally acted in the same fashion. He eliminated his political adversaries by using his allies, and then eliminated the allies.

Stalin’s Role in the Rebirth of German War Power

The Kremlin leaders should have used all the powers of the Soviet diplomacy and intelligence services to uncover and root out all attempts to revive the German military machine. Let Germany stay weak! If Germany does not have tanks, aviation, heavy artillery, poison gases, submarines, if Germany has no trained panzer corps, pilots, navigators, if the German generals are banned from developing new tactics and methods of conducting operations, if German engineers do not have the ability to create new models of weapons, and factories do not produce these weapons—then Germany would never start a new war. But the Kremlin leaders did not order their intelligence services to undertake a mission for the strict execution of and adherence to the Versailles Treaty. They did the opposite. A secret reorganization of the German army began with the help of the Soviet government. Moscow gave the German commanders all that they were forbidden to possess: tanks, heavy artillery, war planes, training classes, and weapons testing and shooting ranges. Germany was also provided with access to the Soviet factories that produced tanks and airplanes that were the most advanced in the world so the Germans would be able to look, to memorize, to copy. Stalin allowed the German government to create secret design bureaus and training centers on Soviet territory.

On November 26, 1922, an agreement about the production of metal airplanes and plane engines was signed with the German aviation firm Junkers Flugzeugwerke. It was this agreement with Junkers that paved the way for large-scale Soviet-German military cooperation. In July 1923 two new agreements were set out: one was about the production of munitions and military equipment and the other about the construction of a chemical plant. On April 15, 1925, an agreement was signed about the creation of a secret air force center in the Russian city of Lipetsk for training German military pilots. By the end of 1933, the school had prepared 450 fighter pilots, air reconnaissance observers, and members of bomber squads. Many of them later entered the core of Reichsmarschall

Hermann Goering's command staff. It is safe to say that the Luftwaffe (the German air force) was born in the Soviet town of Lipetsk. Nobody was supposed to know that Stalin was preparing Germany for a new world war. Planes, designed for training and testing, arrived by non-stop flights at high altitude. All those Germans who headed to the German aviation school in Lipetsk were formally discharged from the Reichswehr. Their names were changed. The return of bodies of those who perished during the frequent training accidents was quite a challenge. They were sent by sea through Leningrad, in containers labeled "Mechanical Parts." Their relatives were not told of the true causes of death.

Stalin understood that the new war would not only be an air war, but a tank war as well. Therefore, he gave particular attention to preparing German Panzer corps. In 1926, near the Soviet city of Kazan, a tank school for the Reichswehr was created. German tankers wore Soviet uniforms there. Stalin fully equipped future German Panzer generals: he gave them tanks, fuel, ammunition, transport, housing, repair facilities, and a gigantic well-guarded weapons range—to create, to invent, to test. Kazan became the birthplace and alma mater of German armored divisions. Fifteen years separate the end of World War I and Hitler's coming to power. Stalin's merit before Hitler's Germany lies in that he did not allow Germany to fall behind its enemies in technological and scientific advancement. Stalin bridged the gap between the retiring generation of engineers from the Kaiser era and the newly ascending generation of the Third Reich. Stalin's efforts secured the transfer of all amassed scientific and technological potential, knowledge, and experience from the retiring designers to the newly starting creators of military equipment and weapons. It was not enough to train personnel and perfect models of weapons. One also needs military factories that will produce these weapons. Here as well the Kremlin leaders already, at the end of the 1920s, showed full understanding, and came to the aid of the German war industry. An agreement was worked out about the creation in Russia of production facilities for the German war industry, masked as Soviet-German enterprises. The Junkers deal was the first such enterprise. In 1922 the firm began constructing metal planes and plane motors. Beginning in 1924, the factory already had begun to produce several hundred planes per year. Following Junkers were Friedrich Krupp (cannons, shells, and tanks), BMW (tank motors and plane motors), Bersol (poisonous gases), Karl Walther (rifles), and others. Stalin prepared Germany for a second world war. Without Stalin's help, Germany could not arm itself and destroy Europe. Obviously, when arming Germany, Stalin was not planning that all this would be used against him. The idea was that Germany could still get under communist control and become part of the USSR.

Why Did Stalin Like Hitler's Book So Much?

A study of the war between Germany and the Soviet Union should start with the question: Why did Hitler invade? In 1924 Hitler wrote in his book *Mein Kampf*: "We want to return to that point, where our previous development halted six hundred years ago. We want

to halt Germany's constant efforts to expand to the south and west, and have our sights set towards the territories situated to the east." is phrase became famous and has been quoted time after time. Politicians, diplomats, generals, historians, and journalists have tirelessly repeated these words. Even in the 1920s this quote was cited in the essays and public speeches of Soviet leaders. Trotsky, Bukharin, Zinoviev, and Kamenev repeated it. In the 1930s, especially after the Nazis came to power, Hitler's frankness resounded with new authority. Any public speaker on the impending war began with this proclamation by Hitler. After Stalin's death in 1953, hordes of historians quoted Hitler and accused Stalin of short-sightedness. The Fuehrer openly declared his intentions. Stalin should have read *Mein Kampf* and taken appropriate measures. From the moment that *Mein Kampf* first appeared in 1925 until the moment Hitler invaded in 1941, this quote was repeated from every loudspeaker. It was shouted at factory meetings, it was used to scare the people. It was repeated by the Comintern and printed in schoolbooks. After all this, how could the German invasion have been a surprise for Stalin? Did Stalin himself read *Mein Kampf*?

Yes, he read it. Moreover, Stalin was the first foreign reader. He was its greatest scholar and fan. The first translation of *Mein Kampf* was into Russian, under Stalin's personal orders. The book was published for the leadership of the party and the army. Marshal of the Soviet Union Konstantin Konstantinovich Rokossovsky wrote: "In our time we all read Hitler's book *Mein Kampf*."¹ The translation was completed without obtaining the author's permission. But his royalties were paid, though not right away. At the moment *Mein Kampf* was published, Stalin was not the only leader—there was a whole crowd of leaders in the Kremlin. Not all of them understood the meaning of Hitler's creation. Comrade Stalin, however, immediately grasped, weighed, and evaluated everything. After having strangled his competition, Stalin paid his due to the author of *Mein Kampf*. The number of copies printed in Russian at that time is unknown to me. One thing is clear: the circulation was minimal. For those few copies of the precious book, Stalin paid generously. How much did he pay? Stalin gave Hitler power over Germany. "Without Stalin, there would have been no Hitler, there would have been no Gestapo"—so said Trotsky in October 1936 as he evaluated Stalin's aid to Hitler.

On November 8, 1923, a socialist revolution hit Germany. The revolution was organized by the Comintern, and carefully directed behind the scenes by Soviet intelligence officers and envoys from Moscow. Although the revolution failed, Hitler's socialist workers' party showed itself as a unified, though small, formation of German workers. Hitler personally led his comrades into police fire. Some of his followers perished; Hitler himself was wounded and landed in jail. It is where he fell into heresy. Hitler wrote a book, in which he uttered those famous words about lands in the east. Lenin and Trotsky decided that for the sake of the happiness of people everywhere they needed to sacrifice the people of their own country, whereas Hitler decided that the opposite had to be done: for the sake of the happiness of his people, he was willing to sacrifice people of other nations. For example, conquer lands to the east for Germany, regardless of the consequences for the

people inhabiting those lands. Hitlerism could have been eliminated from the moment of its conception. Sending an idealistic murderer to Munich would not have been a difficult feat for Stalin. Nobody would have paid any attention to one socialist breaking the skull of another, a very common occurrence. How many people did Stalin eradicate? Why did he not touch Hitler?

Stalin read *Mein Kampf* from cover to cover and figured out that the main goal Hitler set for Germany's future was not lands in the east, mentioned in only one phrase in the book, but in liberating Germany from the chains of the Versailles Treaty. Hitler made enemies within and outside Germany. Internal enemies were the Jews. Outside enemies were the French, and the Jews. Stalin's tactic relied on doing everything with someone else's hands, eliminating one enemy with the hands of the other. "Stalin always found monkeys, who brought him nuts from the hottest fire." is was said by Robert Conquest.³ "Nobody could make his competitors knock heads like Stalin, always staying on the side and coming out superior to all." is was noted by A. Antonov-Ovseenko.⁴ To this, one must add that Stalin was the most ardent perpetrator of Lenin's mission: to "create a Communist society with the hands of our enemies." Stalin understood that if Hitler tried to free Germany from France's economic slavery and from the Versailles Treaty, Britain would immediately interfere, because France imposed the treaty in alliance with Britain. If Germany entered into war with Britain and France, other countries would be pulled into the conflict as well. is was just what Stalin needed. It did not at all follow from *Mein Kampf* that Hitler would advance to the east. In *Mein Kampf* there is a mention of lands in the east, but no indication of when Germany needs to conquer those lands. Hitler simply "pointed his finger" in the direction. He even said (in Part 1, Chapter III): "e effort would have to be envisaged in terms of centuries; just as in all problems of colonization, steady perseverance is a far more important element than the output of energetic effort at the moment." Hitler was planning to build a thousand-year Reich. Even in the famous, repeatedly quoted passage, he speaks of centuries: "We want to return to that point, at which our previous development stopped six hundred years ago."

The book *Mein Kampf* clearly demonstrated the arrival of a man who was going to fight against the world, the man whom the world was going to hate, the man against whom all people would rise up, the man the whole world would declare war upon. The entire world's hatred would concentrate against Hitler and his followers. If Hitler unleashed a war, first and foremost this war would be against anyone but the Soviet Union. If Hitler unleashed a war, logic would demand the dissipation of German strength along the entire European continent, and beyond. ose who fought against Hitler would be considered saviors and liberators. is is exactly what Stalin needed. Stalin knew: if Hitler went to war against France and Britain, the question of lands in the east would fade on its own.

Industrialization and Collectivization

In 1927, a Five Year Plan for developing industry was adopted in the Soviet Union. It began the industrialization, over-industrialization, super-industrialization. After the first, the second Five Year Plan followed, and then a third one. We can judge the purpose of the Five Year Plans from the following fact. At the beginning of the first Plan, the Red Army had seventy-nine tanks; at the end it had over 4,538.¹ Nevertheless, the military accent was not so noticeable in the first five years. The main focus then was not on the production of arms, but on the creation of an industrial base, which later was to produce armaments. The second Five Year Plan was a continuation of the development of the industrial base. It meant the creation of furnaces, giant electricity plants and oxygen plants, and coal ore mines. The production of arms was not yet the main objective although Stalin does not forget about it either; in the first two five-year intervals, 21,573 warplanes were produced.² But it was the third Five Year Plan, which was scheduled to end in 1942, that had as its goal the output of hoped-for military production, in enormous quantities and of very high quality. Under Stalin, the Soviet Union truly attained grandiose achievements.

The first secret of the success: terror. Communists shut down the borders of the country; it was impossible to run away. Secret police unleashed a fight against "saboteurs." Any accident in a production line, any breakage, any lack of success was declared a result of an evil plot. The guilty (and the innocent) were imprisoned; the terms were quite lavish. Those who were named "malevolent saboteurs" were shot. The terror had a dual effect. On the one hand, discipline improved, and any opposition was crushed. Millions of people ended up in the concentration camps. It was a slave workforce. Inmates do not have to be paid at all. They can be sent anywhere. They do not need housing—a torn tent, wooden barrack that they build for themselves, or a hole in the ground that they will dig will suffice. Inmates can be almost never fed or clothed. Their lives cost nothing. They can be forced to work any number of hours in a day, without holidays. They can be executed for unfulfilled production quotas. The development of the remote regions of Siberia and the Far East would have been impossible without the multi-million-strong armies of the inmates (and the "special settlers," in other words, those deported by force and exiled to those remote regions). The government planned in advance the number of prisoners that would be needed for the next year, and would place an advance order for the arrests with the People's Commissariat of Internal Affairs (NKVD).

The second secret of Stalin's industrialization success: vast resources available in the USSR. Over a thousand years of its history, Russia had amassed an enormous treasure. The country had huge gold reserves. In churches, monasteries, museums, tsarist palaces, and the homes of rich people, mind-boggling valuables were collected: icons, paintings, statues, medals, books, antique furniture, furs, and jewelry. All this was mercilessly confiscated and sold abroad. Stalin sold enormous reserves of gold, platinum, and diamonds to the outside world. In just a few years, Stalin sold all that the nation had been gath-

ering for centuries. Stalin robbed churches and monasteries, the imperial vaults, and museums. Icons and precious books, paintings by great Renaissance masters, collections of diamonds, and the treasures of museums and libraries were all exported. On top of all this, Russia has every sort of natural resource and in almost inexhaustible quantities. Millions of people were cutting down forests and transporting the timber to the northern ports. The timber was the base of exports. Stalin also organized gold mining on a never-before-seen scale. Among others, a group of concentration camps was formed under the name "Dal'stroy" (the Russian abbreviation for "Far Eastern Construction Trust"). Jacques Rossi, a Frenchman, spent almost half of his life in Soviet concentration camps.

Starting in the late 1930s and all the way into the beginning of the 1950s, several hundred thousand inmates were mining up to 100 tons of gold a year for Stalin.⁴ In 1939, just Dal'stroy by itself mined 66.7 tons of gold on Kolyma. The plan for 1940 was for 80 tons of gold. And the production of gold kept on growing. For comparison's sake: In tsarist Russia, the maximum production of gold was 64 tons, in 1913; average annual gold production in the world in 1930–39 was 803 tons. Therefore, just the Kolyma camps were providing Stalin with 12 percent of the world's gold production. Siberian and Far East gold was the golden key to the success of industrialization. But Dal'stroy was not the only place where gold was mined. Stalin also paid for foreign technology with coal, nickel, manganese, petroleum, cotton, and also with lumber, caviar, and furs. In 1930, the main Soviet export became grain. They managed to get 883 million gold rubles for the exported grain. The sales of oil and oil products and also timber and timber products produced another 430 million gold rubles. Capitalists paid almost 500 million gold rubles for flax and furs. Later on, because of grain overproduction in the United States, world grain prices dropped. In 1932–33, the overall revenue from grain sales, at very low "dumping" prices, was only 369 million gold rubles. In 1933, the revenue from grain sales was only 8 percent of overall export revenues. Even half of the grain sold during 1932–33 would have been enough to save all of the country's regions from starvation.

Millions of slaves of communism fulfilled the first Five Year Plan, while at the same time the United States experienced an unprecedented economic crisis, which spread to Europe. The crisis gave additional impulse to Stalin's buildup. Finding themselves in the midst of the Great Depression, inventors and businessmen in America, Germany, Great Britain, and France sold technology at low prices. Fortunately, Stalin had plenty of gold in reserve. Western technology was the main key to success. In the beginning of the 1930s, the USSR became the world's biggest importer of machinery and equipment. The People's Commissar of Heavy Industry, Sergo Ordzhonikidze, declared with satisfaction: "Our plants, our mines, our factories are now equipped with such outstanding technology that no other country has. . . . Where did we get it from? We bought from the Americans, from the Germans, from the French, from the British the most advanced technological achievement and then outfitted our enterprises."

American engineers traveled to the Soviet Union and designed factories, while Stalin's slaves dug pits, poured concrete roads, and erected walls. Right away, cranes, tools,

and equipment came from abroad, and the foreign engineers mounted, set, and tested all this. In the early 1930s, to the amazement of the entire world, in the city of Nizhny Tagil sprang up the most powerful industrial enterprise in the world—Uralvagonzavod (the Ural Railroad Car Factory). Americans talk with deserved pride of the giant factory which they designed and built not in America, but in the Soviet Union. During the course of six decades, until the very crumbling of the Soviet Union, Uralvagonzavod remained the largest enterprise in the world (the Guinness book of world records confirms this). Uralvagonzavod was built in such a manner that it could at any moment switch from producing railroad cars to producing tanks. In 1941, an order was issued to produce tanks, and Uralvagonzavod without any delays began mass production. During four years of war, Uralvagonzavod produced 35,000 T-34 tanks. It also produced other weapons. The Chelyabinsk tractor factory was also built in the Urals at the same time. It also was built according to American designs and fully outfitted with American equipment, and it also was built in such a way that at any moment it could stop producing tractors and instead begin producing tanks. During the course of the war, this factory was called Tankograd. They build up the biggest industry in the world at that time.

Modern factories were built in the Soviet Union, but the lives of the people were not at all improving as a result. The most ordinary pots and pans, rubber boots, plates, the simplest furniture, cheapest clothing, nails, and matches—all these became scarce. Huge lines formed outside the stores. Stalin was paying for industrialization with his people's standard of living, letting it drop very low. Stalin had one more ace: spies. The West supplied Stalin with the most contemporary industrial equipment, and sold licenses for production of the newest models of weapons and military technology. But all that could not be obtained by legal means was stolen by Stalin's spies. Stalin was generous with his gold when it came to spying. In order to raise the productivity of his scientists and engineers, Stalin imprisoned entire collectives of engineers, accusing them of being spies. Prominent aviation, tank, and artillery engineers found themselves behind bars. The task set before them was simple: create the best bomber (tank, cannon, engine, and submarine) in the world and you will receive freedom; fail and you will go to Dal'stroy to extract gold; the inmates there do not live too long. Imprisoned engineers did not have to be paid millions for their work, they did not need good houses or apartments, and there was no need to send them to resorts by the warm sea: without all this, they were still very interested in creating the best weapons in the world on very short deadlines. These were talented people; on top of talent, Stalin's spies supplied everything that was created by the best minds in the world. Every imprisoned engineer had before him the best American, German, British, and other designs in the given field. He could choose the best, and based on it create something even more remarkable.

Immediately after the Communists seized power, the land was divided among the peasants. Land was divided rather fairly—according to the number of mouths to feed, meaning the size of area a family received depended on the number of its members. Millions of Russian peasants dreamed for centuries of receiving land. Now their dreams had finally

come true, but resulted in a widespread famine across the land. The cause for this was that the Communists gave people the land, but demanded everything the peasants could grow to be given back to the government. The land is yours, but all that you can grow on it is not yours. It is understandable that nobody wanted to voluntarily give up the fruits of his labor. In answer to this, Communists created “food regulation” brigades and entire armies—units of armed men who took away from the peasants all their reserves. The peasants answered with armed resistance, but they failed.

In the struggle for bread the Communists won, but they celebrated their victory too soon. It is possible to take away from the peasant all his bread, his potatoes, to lead away his cows and to slaughter his pigs; however, it is impossible to force a man to continue working hard. The Russian peasants stopped growing agricultural products since the Communists were taking away what they produced. This resulted in the horrible famine of 1920–21. Lenin was forced to retreat from his rigid politics. Free trade of foodstuffs was allowed; the gold ruble was introduced. All this was called by the term NEP—New Economic Policy. There was nothing new in it. It was good old capitalism. The country was revived almost immediately. By 1923, there was so much produce that Russia was once again able to export grain. Then, in 1927, Stalin began his industrialization. This process brought on consequences that were not foreseen by the Communists. The country had huge reserves of produce, but peasants were in no rush to sell them. The reason was simple: over several years, hardworking peasants had hoarded significant reserves of gold rubles. They went to the shops in search of manufactured products, but there was nothing to buy. Practically all industrial production in the Soviet Union focused on the military. There were tanks, airplanes, parachutes, cannons, shells, cartridges, and machine guns, but no home appliances. What does a man need cash for, if there is nothing to buy? The peasants once again either stopped selling products or stopped producing them.

The Communists now faced a dilemma: either direct a part of production to producing goods for the wealthy peasants to consume or get rid of the wealthiest, meaning the most hardworking, the smartest. Rather than return to normal human existence and end communism, Stalin chose to enslave the peasants on collective farms and eliminate private ownership. In 1928, Stalin began the bloody war against peasants, which was called collectivization. Units of the Red Army encircled entire regions. Those peasants who produced more than others were, in the middle of winter, herded together with their families into railroad cattle cars and transported across thousands of kilometers to Siberia, the Urals, or Kazakhstan, where they were thrown out into the cold on the bare steppes. This grandiose operation was initiated on Stalin's orders and executed by his rising deputy Molotov. Many years later, Molotov was asked how many people were transported to the wild, uninhabited regions during collectivization. He answered: “Stalin said that we relocated ten million. In reality, we relocated twenty million.” Historical literature and documentary sources offer different numbers of the demographic losses resulting from the collectivization and starvation of 1932–33. Presently, the following figures look most justified: 3.5 to 5 million people perished from famine, and about 3 to 4 million people

died at the places of exile as a result of intolerable conditions of repression and unbearable life. Cannibalism flourished in the country. Stalin, meanwhile, during these horrible times was selling millions of tons of grain each year to accumulate currency in order to produce weapons in mass quantities.

Stalin's Role in Elevating Hitler

The year 1927 was when Stalin finally secured and firmly established his place atop the power structure. From this moment, Stalin's attention was concentrated not only on fortifying his dictatorship, but on issues of the Communist movement and the World Revolution. Stalin needed victory in Europe, especially in Germany. For this, he needed to eliminate three obstacles that were preventing the German revolution. Stalin had to bring order to the German Communist Party and force it to execute orders coming from Moscow, establish common borders with Germany, and destroy the German Social Democrats. Stalin understood better than anyone else that revolution comes as a result of war. War heightens tensions, ruins economies, and brings nations closer to the fateful limits, beyond which their ordinary existence ceases to be. In matters of war and peace, he adhered to this principle: if the Social Democrats, with their pacifism, divert the proletariat's attention from revolution and from war that gives birth to revolution, then merciless war must be waged against the Social Democrats. On November 6, 1927, Stalin sounded the slogan: "It is impossible to finish off capitalism without finishing off the Social Democrats."

In 1927 Stalin foresaw the Nazi takeover in Germany, and considered this development desirable: "Precisely the fact that the capitalist government is turning fascist is leading to a heightening of tensions within the capitalist countries, and to revolutionary actions by workers," Stalin told the Central Committee in 1927.³ Stalin gave Hitler's regime the name "terrorist dictatorship" and stressed that "the revolutionary crisis will increase faster [since] the more the bourgeoisie gets confused in its combinations and tactics, the more it employs terrorist methods." In his report to the Seventeenth Party Congress, he stressed: "I speak not about fascism in general, but about fascism of the German type."

In 1925, Stalin declared that World War II was inevitable, as was the Soviet Union's entrance into that war. "There can be no doubt that a war in Europe will start and they will all fight in it."⁴ But Stalin did not want to start the war himself, or to be its participant from the first day: "We will have to enter, but we will enter last, we will enter in order to throw in our weight and tip the scale."⁵ The more crimes Hitler committed in Europe, the better for Stalin, the more reasons Stalin had to send the Red Army to liberate Europe. Stalin saw that Hitler's party was not strong enough in Germany and in the elections in 1932, the NSDAP lost to the combined force of the Social Democrats and the Communists.

Hitler's party (NSDAP)—11,705,000

Social Democrats—7,231,000

Communist Party—5,971,000

Hitler's National Socialist Workers' Party faced a crisis. At first glance, Hitler seemed to be the winner and the most popular politician in Germany, and therefore should have taken power. However, he did not have an absolute majority, and could not take power. But combined, the Social Democrats and the Communists had more votes. Hitler's National Socialist Workers' Party was in a deep financial crisis as well, its funds diminishing fast. Goebbels wrote in his diary: "All hope has disappeared.... There is not a pfennig in our cash boxes...."

Nobody gives us any credit. . . . We are on our last breath." Goebbels's entry on December 23, 1932, said: "I am overwhelmed by a terrible feeling of loneliness, which borders on a sense of total loss! The year 1932 was a sequence of one misfortune after another. It should be erased completely. . . . We have no prospects, no hopes left." The terrible position the Nazis found themselves in was no secret to outside observers. By New Year's Eve, the powerful newspaper *Frankfurter Zeitung* was already rejoicing at the "disintegration of the NSDAP myth." Harold Laski, one of the leading intellectuals of the English left, was assured that: "e day when the National Socialists presented a lethal danger has passed. . . . If we discount chance, it is not so improbable that Hitler will finish his career as an old man in some Bavarian village, telling tales to his friends in the evenings in some beer hall, about how he once almost orchestrated a takeover in the German Reich." Facing bankruptcy, Hitler, as recorded in Goebbels's diary, considered two options: the first was flight, the other was suicide. Ten years after the crisis, Hitler himself told his inner circle: "e situation was at its worst in 1932, when we were forced to sign many debt obligations in order to fund our press and election campaigns, and keep the party running. . . . In the name of the NSDAP, I signed for these obligations, knowing that if the NSDAP stopped functioning, everything was lost."

German National Socialism faced doom until Hitler was saved by Stalin. Comrade Stalin did not just save Hitler; he handed him the keys to power. Democracy is structured in such a way that, during the turning points of history, minority groups play the key roles. is occurs because history has innumerable possible courses and outcomes. When everything goes well, people agree with the leaders' course of action, but during times of crisis alternative ideas and plans arise. Policy alternatives split the nation almost evenly between two diametrically opposed views. In such a situation, a third party—a minority—becomes the kingmaker, and its role can be decisive. In 1932 Germany experienced precisely this situation: Hitler was in first place, the Social Democrats second, and the Communists third. But none of the three could control the absolute majority needed to come to power. In this case, Germany's fate, and the fate of Europe, was in the hands of the German Communists. If the Communists sided with the Social Democrats, Nazism would perish and never again resurface. If the Communists turned against the Social Democrats, Social Democracy would crumble. For the Communists, forming a coalition with the Social Democrats meant defeating Hitler. After this victory, the Communists

would automatically rise from third place to second, and share power with the first-place party, the Social Democrats—a very appealing option. The Communists had a second option: to go against the Social Democrats, thereby opening the way for Hitler to take power. The consequences of such a move were very predictable: Hitler, having come to power, would throw both Social Democrats and Communists into concentration camps. If the German Communists went against the Social Democrats, they would be sentencing to death both themselves and the Social Democrats.

Acting on Stalin's orders, the German Communist leaders chose the second option—they did not wish to form a block with the Social Democrats. Publicly, for regular Communists and workers, the Communist Party policy against the Social Democrats was explained with twisted reasoning: there is no radical difference between a regime of parliamentary democracy and a fascist dictatorship. Both are forms of dictatorship by the bourgeoisie, which was growing more and more reactionary. The German Communist leaders kept repeating, after their Moscow masters, that a fascist-like turn taken by the bourgeois parties and their Social Democrat supporters was even more dangerous than the Nazis because the Social Democrats hid their true motives. German Communist leaders told the workers: We are Communists, struggling against capitalism and fascism, while the Social Democrats are acting as protectors of capitalism, and are becoming de facto allies of the fascists. Therefore, the Social Democrats are really nothing more than a “left wing” of fascism, or they are “social fascists,” a party which conducts a policy of “hidden fascism” that is more dangerous than Nazi policy. The peace-loving policy of the Social Democrats prevents war; therefore it prevents revolution and, ultimately, prevents the victory of the Working Class, while the Nazi policy enhances the chances for war and revolution and, ultimately, the victory of the Working Class. From this bizarre dialectic, they concluded that Hitler's party must carry out the main attack on the Social Democrats, since they were the most dangerous enemy, which still retained some influence over the worker class and hindered an effective war on capitalism.

Hitler came to power as a result of this perverted ideological mind game. German Communists, out of instincts for self-preservation, should have joined a coalition with the Social Democrats. But Stalin intervened and opened the way for Hitler. The first time there was open cooperation between the Nazis and Communists was in August 1931 in Eastern Prussia, where the Social Democrats were in power. The Nazis initiated a referendum to oust the Social Democrats. At first the Communists were opposed to the referendum. However, after instructions from Moscow, they changed their minds. The Nazis and Communists joined forces under a common red flag, on which the swastika and the hammer and sickle were intertwined. Despite the Communists' calling the plebiscite a “Red Referendum” and the Nazis “working people's comrades,” the referendum failed to gain a majority. A year later, several days before the November 1932 elections for the Reichstag, a public transportation strike began in Berlin. The Communists and Nazis jointly coordinated the strike. Storm troopers and rotfronters (Communist paramilitary) paralyzed public transportation for five days, dug up tram tracks, picketed, beat up those

who came to work, and used force to stop the cars that the authorities managed to put to work.

Once the Nazis came to power, Stalin used all his might to push them toward war. When Germany attacked Poland, and France and Britain entered the war against Germany, Stalin ordered the Communists of the Western democracies to oppose the war. The Western democracies were branded as capitalist imperialists, and the Comintern ordered its members to weaken the armies of the Western democracies through strikes in armament and airplane factories. The Communist Parties were to demand an end to the “imperialist war.” Hitler was portrayed as a fighter for the working classes. But by pushing Hitler into conflict with democratic Europe, Stalin had issued Hitler a death sentence. By offering to divide Poland with Hitler, Stalin had dragged him into a larger scale war with no end in sight. Stalin expected that the Western allies and Germany would exhaust their strength by fighting against each other as they did in World War I. The struggle between Hitler and the Western democracies would create the moment for a “mighty strike” from the East and bring forth world revolution on the bayonets of the Red Army. Five years prior to the Nazis’ rise to power in Germany, Stalin had already planned their annihilation: “[We will] crush fascism, destroy capitalism, establish Soviet power, and liberate the colonies from slavery.”

9.11 Changing Economic Patterns

Introduction

An economic system does not have to be expansive—that is, constantly increasing its production of wealth—and it might well be possible for people to be completely happy in a non-expansive economic system if they were accustomed to it. In the twentieth century, however, the people of our culture have been living under expansive conditions for generations. Their minds are psychologically adjusted to expansion, and they feel deeply frustrated unless they are better off each year than they were the preceding year. The economic system itself has become organized for expansion, and if it does not expand it tends to collapse. The basic reason for this maladjustment is that investment has become an essential part of the system, and if investment falls off, consumers have insufficient incomes to buy the consumers’ goods which are being produced in another part of the system because part of the flow of purchasing power created by the production of goods was diverted from purchasing the goods it had produced into savings, and all the goods produced could not be sold until those savings came back into the market by being invested. In the system as a whole, everyone sought to improve his own position in the short run, but this jeopardized the functioning of the system in the long run. The contrast here is not merely between the individual and the system, but also between the long run and the short run.

The Harmony of Interests

The nineteenth century had accepted as one of its basic faiths the theory of “the harmony of interests.” This held that what was good for the individual was good for society as a whole and that the general advancement of society could be achieved best if individuals were left free to seek their own individual advantages. This harmony was assumed to exist between one individual and another, between the individual and the group, and between the short run and the long run. In the nineteenth century, such a theory was perfectly tenable, but in the twentieth century it could be accepted only with considerable modification. As a result of persons seeking their individual advantages, the economic organization of society was so modified that the actions of one such person were very likely to injure his fellows, the society as a whole, and his own long-range advantage. This situation led to such a conflict between theory and practice, between aims and accomplishments, between individuals and groups that a return to fundamentals in economics became necessary. Unfortunately, such a return was made difficult because of the conflict between interests and principles and because of the difficulty of finding principles in the extraordinary complexity of twentieth-century economic life.

The Factors of Economic Progress

The factors necessary to achieve economic progress are supplementary to the factors necessary for production. Production requires the organization of knowledge, time, energy, materials, land, labor, and so on. Economic progress requires three additional factors. These are: innovation, savings, and investment. Unless a society is organized to provide these three, it will not expand economically. “Innovation” means devising new and better ways of performing the tasks of production; “saving” means refraining from consumption of resources so that they can be mobilized for different purposes; and “investment” means the mobilization of resources into the new, better ways of production. The absence of the third factor (investment) is the most frequent cause of a failure of economic progress. It may be absent even when both of the other factors are working well. In such a case, the savings accumulated are not applied to inventions but are spent on consumption, on ostentatious social prestige, on war, on religion, on other nonproductive purposes, or even left unspent.

Powerful Groups Seek to Maintain Status Quo

Economic progress has always involved shifts in productive resources from old methods to new ones. Such shifts, however beneficial to certain groups and however welcome to people as a whole, were bound to be resisted and resented by other groups who had vested interests in the old ways of doing things and in the old ways of utilizing resources. In a progressive period, these vested interests are unable to defend their vested interests to the point of preventing progress; but, obviously, if the groups in a society who control

the savings which are necessary for progress are the same vested interests who benefit by the existing way of doing things, they are in a position to defend these vested interests and prevent progress merely by preventing the use of surpluses to finance new inventions. Such a situation is bound to give rise to an economic crisis. From one narrow point of view, the twentieth century's economic crisis was a situation of this type. To understand how such a situation could arise, we must examine the development in the chief capitalist countries and discover the causes of the crisis.

Great Britain

In Britain, throughout the nineteenth century, the supply of capital was so plentiful from private savings that industry was able to finance itself with little recourse to the banking system. The corporate form was adopted relatively slowly, and because of the benefits to be derived from limited liability rather than because it made it possible to appeal to a widespread public for equity capital. Savings were so plentiful that the surplus had to be exported, and interest rates fell steadily. Promoters and investment bankers were not much interested in domestic industrial securities (except railroads), and for most of the century concentrated their attention on government bonds (both foreign and domestic) and on foreign economic enterprises. Financial capitalism first appeared in foreign securities, and found a fruitful field of operations. The corporation law (as codified in 1862) was very lenient. There were few restrictions on formations of companies, and none on false prospectuses or false financial reports. Holding companies were not legally recognized until 1928, and no consolidated balance sheet was required then. As late as 1933, of 111 British investment trusts only 52 published a record of their holdings. Secrecy Is One of the Elements of the English

This element of secrecy is one of the outstanding features of English business and financial life. The weakest "right" an Englishman has is the "right to know," which is about as narrow as it is in American nuclear operations. Most duties, powers, and actions in business are controlled by customary procedures and conventions, not by explicit rules and regulations, and are often carried out by casual remarks between old friends. No record perpetuates such remarks, and they are generally regarded as private affairs which are no concern of others, even when they involve millions of pounds of the public's money. Although this situation is changing slowly, the inner circle of English financial life remains a matter of "whom one knows," rather than "what one knows." Jobs are still obtained by family, marriage, or school connections; character is considered far more important than knowledge or skill; and important positions, on this basis, are given to men who have no training, experience, or knowledge to qualify them.

As part of this system and at the core of English financial life have been seventeen private firms of "merchant bankers" who find money for established and wealthy enterprises on either a long-term (investment) or a short-term ("acceptances") basis. These merchant bankers, with a total of less than a hundred active partners, include the firms of Baring

Brothers, N. M. Rothschild, J. Henry Schroder, Morgan Grenfell, Hambros, and Lazard Brothers. These merchant bankers in the period of financial capitalism had a dominant position with the Bank of England and, strangely enough, still have retained some of this, despite the nationalization of the Bank by the Labour government in 1946. As late as 1961 a Baring (Lord Cromer) was named governor of the bank, and his board of directors, called the "Court" of the bank, included representatives of Lazard, of Hambros, and of Morgan Grenfell, as well as of an industrial firm (English Electric) controlled by these.

The heyday of English financial capitalism is associated with the governorship of Montagu Norman from 1920 to 1944, but it began about a century after the advent of industrial capitalism, with the promotion of Guinness, Ltd., by Barings in 1886, and continued with the creation of Allsopps, Ltd., by the Westminster Bank in 1887. In the latter year, only 10,000 companies were in existence although the creation of companies had been about 1,000 a year in the 1870's and about 1,000 a year in the 1880's. Of the companies registered, about a third fell bankrupt in their first year. This is a very large fraction when we consider that about one-half the companies created were private companies which did not offer securities to the public and presumably already were engaged in a flourishing business.... In two years (1894-1896) E. T. Hooley promoted twenty-six corporations with various noble lords as the directors of each. The total capital of this group was £18.6 million, of which Hooley took £5 million for himself.

From this date onward, financial capitalism grew rapidly in Britain, without ever achieving the heights it did in the United States or Germany. Domestic concerns remained small, owner-managed, and relatively unprogressive (especially in the older lines like textiles, iron, coal, shipbuilding). One chief field of exploitation for British financial capitalism continued to be in foreign countries until the crash of 1931. Financial capitalism in Britain, as elsewhere, was marked not only by a growing financial control of industry but also by an increasing concentration of this control and by an increasing banking control of government. As we have seen, this influence of the Bank of England over the government was an almost unmitigated disaster for Britain. The power of the bank in business circles was never as complete as it was in government, because British businesses remained self-financing to a greater extent than those of other countries. This self-financing power of business in Britain depended on the advantage which it held because of the early arrival of industrialism in England. As other countries became industrialized, reducing Britain's advantage and her extraordinary profits, British business was forced to seek outside financial aid or reduce its creation of capital plant. Both methods were used, with the result that financial capitalism grew at the same time as considerable sections of Britain's capital plant became obsolete.

The control of the Bank of England over business was exercised indirectly through the joint-stock banks. These banks became increasingly concentrated and increasingly powerful in the twentieth century. The number of such banks decreased through amalgamation from 109 in 1866 to 35 in 1919 and to 33 in 1933. This growth of a "money trust" in

Britain led to an investigation by a Treasury Committee on Bank Amalgamations. In its report (Colwyn Report, 1919) this committee admitted the danger and called for government action. A bill was drawn up to prevent further concentration but was withdrawn when the bankers made a "gentlemen's agreement" to ask Treasury permission for future amalgamations. The net result was to protect the influence of the Bank of England, since this might have been reduced by complete monopolization of joint-stock banking, and the bank was always in a position to influence the Treasury's attitude on all questions. Of the 33 joint-stock banks existing in 1933, 9 were in Ireland and 8 in Scotland, leaving only 16 for England and Wales. The 33 together had over £2,500 million in deposits in April 1933, of which £1,773 million were in the so-called "Big Five" (Midland, Lloyds, Barclays, Westminster, and National Provincial). The Big Five controlled at least 7 of the other 28 (in one case by ownership of 98 percent of the stock). Although competition among the Big Five was usually keen, all were subject to the powerful influence of the Bank of England, as exercised through the discount rate, interlocking directorships, and above all through the intangible influences of tradition, ambition, and prestige.

In Britain, as elsewhere, the influence of financial capitalism served to create the conditions of monopoly capitalism not only by creating monopoly conditions (which permitted industry to free itself from financial dependency on banks) but also by insisting on those deflationary, orthodox financial policies which eventually alienated industrialists from financiers. Although monopoly capitalism began to grow in Britain as far back as the British Salt Union of 1888 (which controlled 91 percent of the British supply), the victory of monopoly capitalism over financial capitalism did not arrive until 1931. The year 1931 represented for Britain the turning point from financial to monopoly capitalism. In that year financial capitalism, which had held the British economy in semidepression for a decade, achieved its last great victory when the financiers led by Montagu Norman and J. P. Morgan forced the resignation of the British Labour government. But the handwriting was already on the wall. Monopoly had already grown to such a degree that it aspired to make the banking system its ... [ally] instead of its master. The deflationary financial policy of the bankers had alienated politicians and industrialists and driven monopolist trade unions to form a united front against the bankers.

This was clearly evident in the Conference on Industrial Reorganization and Relationships of April 1928. This meeting contained representatives of the Trade Union Congress and the Employers' Federation and issued a Memorandum to the chancellor of the Exchequer signed by Sir Alfred Mond of Imperial Chemicals and Ben Turner of the trade unions. Similar declarations were issued by other monopolist groups, but the split of monopolist capitalists and of financial capitalists could not become overt until the latter were able to get rid of the Labour government. Once that was achieved, labor and industry were united in opposition to the continuance of the bankers' economic policy with its low prices and high unemployment. The decisive event which caused the end of financial capitalism in Britain was the revolt of the British fleet at Invergordon on September 15, 1931, and not the abandonment of gold six days later. [Actually the powers of financial capitalism

and monopoly capitalism have been cooperating to build and sustain the international financial system and the international economic system.]The mutiny made it clear that the policy of deflation must be ended. As a result, no real effort was made to defend the gold standard.

With the abandonment of gold and the adoption of a protective tariff, monopolist capital and labor joined in an effort to raise both wages and profits by a program of higher prices and restrictions on production. The old monopolies and cartels increased in strength and new ones were formed, usually with the blessing of the government. In 1942 a capable observer, Hermann Levy, wrote, "Today Britain is the only highly industrialized country in the world where no attempt has yet been made to restrict the domination of quasi-monopolist associations in industry and trade."

Germany

While Britain passed through the stages of capitalism in this fashion, Germany was passing through the same stages in a different way. In Germany, capital was scarce when industrialism arrived. Because savings from commerce, overseas trade, or small artisan shops were much less than in Britain, the stage of owner-management was relatively short. Industry found itself dependent upon banks almost at once. These banks were quite different from those in England, since they were "mixed" and not divided into separate establishments for different banking functions. The chief German credit banks, founded in the period 1848-1881, were at the same time savings banks, commercial banks, promotion and investment banks, stockbrokers, safety deposits, and so on. Their relationship to industry was close and intimate from the creation of the Darmstädter Bank in 1853. These banks floated securities for industry by granting credit to the firm, taking securities in return. These securities were then slowly sold to the investing public as the opportunity offered, the bank retaining enough stock to give it control and appointing its men as directors of the enterprise to give that control final form.

The importance of the holding of securities by banks can be seen from the fact that in 1908 the Dresdner Bank was holding 2 billion marks' worth. The importance of interlocking directorates can be seen from the fact that the same bank had its directors on the boards of over two hundred industrial concerns in 1913. In 1929, at the time of the amalgamation of the Deutsche Bank and the Disconto Gesellschaft, the two together had directorships in 660 industrial firms and held the chairmanship of the board in 192 of these. Before 1914, examples of individuals with thirty or even forty directorships were not uncommon.

This banking control of industry was made even closer by the use which the banks made of their positions as brokers and depositories for securities. The German credit banks acted as stockbrokers, and most investors left their securities on deposit with the banks so that they could be available for quick sale if needed. The banks voted all this stock for directorships and other control measures, unless the owners of the stock expressly forbade

it (which was very rare). In 1929 a law was passed preventing the banks from voting stocks deposited with them unless this had been expressly permitted by the owners. The change was of little significance, since by 1929 financial capitalism was on the wane in Germany. Moreover, permission to vote deposited stock was rarely refused. The banks also voted as a right all stock left as collateral for loans and all stock bought on margin. Unlike the situation in America, stocks bought on margin were considered to be the property of the bank (acting as stockbrokers) until the whole price has been paid. The importance of the stock-brokerage business to German banks may be seen in the fact that in the twenty-four years 1885-1908 one-quarter of the gross profits of the large credit banks came from commissions. This is all the more remarkable when we consider that the brokerage commissions charged by German banks were very small (sometimes as low as one-half per thousand).

By methods such as these, a highly centralized financial capitalism was built up in Germany. The period begins with the founding of the Darmstädter Bank in 1853. This was the first bank to establish a permanent, systematic control of the corporations it floated. It also was the first to use promotion syndicates (in 1859). Other banks followed this example, and the outburst of promotion reached a peak of activity and corruption in the four years 1870-1874. In these four years, 857 stock companies with 3,306,810,000 marks of assets were floated, compared to 295 companies with 2,405,000,000 in assets in the preceding nineteen years (1851-1870). Of these 857 companies founded in 1870-1874, 123 were in the process of liquidation and 37 were bankrupt as early as September 1874. These excesses of financial capitalist promotion led to a governmental investigation which resulted in a strict law regulating promotion in 1883. This law made it impossible for German bankers to make fortunes out of promotion and made it necessary for them to seek the same ends by consolidating their control of industrial corporations on a long-term basis. This was quite different from the United States, where the absence of any legal regulation of promotion previous to the SEC Act of 1933 made it more likely that investment bankers would seek to make short-term "killings" from promotions rather than long-term gains from the control of industrial companies. Another result is to be seen in the relatively sounder financing of German corporations through equity capital rather than through the more burdensome (but promoter-favored) method of fixed interest bonds.

The financial capitalism of Germany was at its peak in the years just before 1914. It was controlled by a highly centralized oligarchy. At the center was the Reichsbank whose control over the other banks was relatively weak at all times. This was welcomed by the financial oligarchy, for the Reichsbank, although privately owned, was controlled by the government to a considerable degree. The weakness of the Reichsbank's influence over the banking system arose from the weakness of its influence over the two usual instruments of central-banking control—the re-discount rate and open-market operations. The weakness of the former was based on the fact that the other banks rarely came to the Reichsbank for re-discounts, and usually had a discount rate below that of the Reichsbank. A law of 1899 tried to overcome this weakness by forcing the other banks to adjust their

discount rates to that of the Reichsbank, but it was never a very effective instrument of control. Open-market control was also weak because of an official German reluctance "to speculate" in government securities and because the other banks were more responsive to the condition of their portfolios of commercial paper and securities than they were to the size of their gold reserves. In this they were like French rather than British banks. Only in 1909 did the Reichsbank begin a deliberate policy of control through open-market operations, and it was never effective. It was ended completely from 1914 to 1929 by the war, the inflation, and the restrictions of the Dawes Plan.

Because of these weaknesses of the Reichsbank, the control of German financial capitalism rested in the credit banks. This is equivalent to saying that it was largely beyond the control of the government, and rested in private hands. Of the hundreds of German credit banks, the overwhelming preponderance of power was in the hands of the eight so-called "Great Banks." These were the masters of the German economy from 1865 to 1915. Their overwhelming position can be seen from the fact that of 421 German credit banks in 1907 with 13,204,220,000 marks capital, the eight Great Banks held 44 percent of the total capital of the group. Moreover, the position of the Great Banks was better than this because the Great Banks controlled numerous other banks. In consequence, Robert Franz, editor of *Der Deutsche Oekonomist*, estimated in 1907 that the eight Great Banks controlled 74 percent of the capital assets of all 421 banks.

German Oligarchy Uses Direct Financial Pressure and Interlocking

The beginnings of monopoly capitalism in Germany goes back at least a generation before the First World War. As early as 1870, the financial capitalists, using direct financial pressure as well as their system of interlocking directors, were working to integrate enterprises and reduce competition. In the older lines of activity, such as coal, iron, and steel, they tended to use cartels. In the newer lines, like electrical supplies and chemicals, they tended to use great monopolistic firms for this purpose. There are no official figures on cartels before 1905 but it is believed that there were 250 cartels in 1896, of which 80 were in iron and steel. The official investigation of cartels made by the Reichstag in 1905 revealed 385, of which 92 were in coal and metals. Shortly after this, the government began to help these cartels, the most famous example of this being a law of 1910 which forced potash manufacturers to become members of the potash cartel.

In 1923 there were 1,500 cartels, according to the Federation of German Industrialists. They were, as we have seen, given a special legal status and a special court the following year. By the time of the financial collapse of 1931 there were 2,500 cartels, and monopoly capitalism had grown to such an extent that it was prepared to take over complete control of the German economic system. As the banks fell under government control, private control of the economic system was assured by releasing it from its subservience to the banks. This was achieved by legislation such as that curtailing interlocking directorates and the new corporation law of 1937, but above all by the economic fact that the growth of large enterprises and of cartels had put industry in a position where it was able to finance itself without seeking help from the banks.

This new privately managed monopoly capitalism was organized in an intricate hierarchy whose details could be unraveled only by a lifetime of study. The size of enterprises had grown so big that in most fields a relatively small number were able to dominate the field. In addition, there was a very considerable amount of interlocking directorates and ownership by one corporation of the capital stock of another. Finally, cartels working between corporations fixed prices, markets, and output quotas for all important industrial products. An example of this—not by any means the worst—could be found in the German coal industry in 1937. There were 260 mining companies. Of the total output, 21 companies had 90 percent, 5 had 50 percent, and 1 had 14 percent. These mines were organized into five cartels of which 1 controlled 81 percent of the output, and 2 controlled 94 percent. And finally, most coal mines (69 percent of total output) were owned subsidiaries of other corporations which used coal, producers either of metals (54 percent of total coal output) or of chemicals (10 percent of total output).

Similar concentration existed in most other lines of economic activity. In ferrous metals in 1929, 3 firms out of 26 accounted for 68.8 percent of all German pig-iron production; 4 out of 49 produced 68.3 percent of all crude steel; 3 out of 59 produced 55.8 percent of all rolling mill products. In 1943, one firm (United Steel Works) produced 40 percent of all German steel production, while 12 firms produced over 90 percent. Competition could never exist with concentration as complete as this, but in addition the steel industry was organized into a series of steel cartels (one for each product). These cartels, which began about 1890, by 1930 had control of 100 percent of the German output of ferrous metal products. Member firm had achieved this figure by buying up the nonmembers in the years before 1930. These cartels managed prices, production, and markets within Germany, enforcing their decisions by means of fines or boycotts. They were also members of the International Steel Cartel, modeled on Germany's steel cartel and dominated by it. The International Cartel controlled two-fifths of the world's steel production and five-sixths of the total foreign trade in steel.

It is also very likely that the steel industry of Germany in 1937 was controlled by no more than five men of whom Flick was the most important.

These examples of the growth of monopoly capitalism in Germany are merely picked at random and are by no means exceptional. Another famous example can be found in the growth of I. G. Farbenindustrie, the German chemical organization. This was formed in 1904 of three chief firms, and grew steadily until after its last reorganization in 1926 it controlled about two-thirds of Germany's output of chemicals. It spread into every branch of industry, concentrating chiefly on dyes (in which it had 100 percent monopoly), drugs, plastics, explosives, and light metals. It had been said that Germany could not have fought either of the world wars without I. G. Farben. In the first war, by the Haber process for extracting nitrogen from the air, it provided supplies of explosives and fertilizers when the natural sources in Chile were cut off. In the second war, it provided numerous absolute necessities, of which artificial rubber and synthetic motor fuels were the most important. This company by the Second World War was the largest enterprise in Germany. It had

over 2,332.8 million reichsmarks in assets and 1,165 million in capitalization in 1942. It had about 100 important subsidiaries in Germany, and employed 350,000 persons in those in which it was directly concerned. It had interests in about 700 corporations outside Germany and had entered into over 500 restrictive agreements with foreign concerns.

The Entire German Industrial System Controlled by the Elite through Personal Friendships and Secret Agreements

While I. G. Farben was the greatest example of concentrated control in German monopoly capitalism, it was by no means untypical. The process of concentration by 1939 had been carried to a degree which can hardly be overemphasized. The Kilgore Committee of the United States Senate in 1945 decided, after a study of captured German records, that I. G. Farben and United Steel Works together could dominate the whole German industrial system. Since so much of this domination was based on personal friendships and relationships, on secret agreements and contracts, on economic pressures and duress as well as on property and other obvious control rights, it is not something which can be demonstrated by statistics. But even the statistics give evidence of a concentration of economic power. In Germany in 1936 there were about 40,000 limitedliability companies, with total nominal capitalization of about 20,000 million reichsmarks. I. G. Farben and United Steel Works had 1,344 million reichsmarks of this capital. A mere 18 companies out of the 40,000 had one-sixth of the total working capital of all companies. While monopolistic organization of economic life reached its peak in Germany, the differences in this respect between Germany and other countries have been overemphasized. It was a difference of degree only, and, even in degree, Britain, Japan, and a number of smaller countries were not so far behind the German development as one might believe at first glance. The error arose from two causes. On the one hand, German cartels and monopolies were well publicized, while similar organizations in other countries remained in hiding. As the British Committee on Trusts reported in 1929, "What is notable among British consolidations and associations is not their rarity or weakness so much as their unobtrusiveness." It is possible that the British vegetable-oil monopoly around Unilever was as powerful as the German chemical monopoly around I. G. Farben, but, while much has been heard about the latter, very little is heard about the former. After an effort to study the former, Fortune magazine wrote, "No other industry, perhaps, is quite so exasperatingly secretive as the soap and shortening industries."

This difference in attitude between German and other capitalists became increasingly evident in the 1930's. In that decade the German found his economic and his patriotic motives impelling him in the same direction (to build up the power and wealth of Germany against Russia and the West). The capitalists of France, Britain, and the United States, on the other hand, frequently experienced conflicting motives. Bolshevism presented itself as an economic threat ... at the same time that Nazism presented itself as a political threat to their countries. Many persons were willing to neglect or even increase the latter threat in order to use it against the former danger. This difference in attitude between German and other capitalists arose from many causes. Among these were (a) the

contrast between the German tradition of a national economy and the Western tradition of laissez-faire, (b) the fact that world depression caused the threat of social revolution to appear before Nazism rose as a political danger to the West, (c) the fact that cosmopolitan financial capitalism was replaced more rapidly by nationalist monopoly capitalism in Germany than in the West, and (d) the fact that many wealthy and influential persons like Montagu Norman, Ivar Kreuger, Basil Zaharoff, and Henri Deterding directed public attention to the danger of Bolshevism while maintaining a neutral, or favorable, attitude toward Nazism.

France

Financial capitalism lasted longer in France than in any other major country. The roots of financial capitalism there, like Holland but unlike Germany, go back to the period of commercial capitalism which preceded the Industrial Revolution. These roots grew rapidly in the last half of the eighteenth century and were well established with the founding of the Bank of France in 1800. At that date, financial power was in the hands of about ten or fifteen private banking houses whose founders, in most cases, had come from Switzerland in the second half of the eighteenth century. These bankers, all Protestant, were deeply involved in the agitations leading up to the French Revolution. When the revolutionary violence got out of hand, they were the chief forces behind the rise of Napoleon, whom they regarded as the restorer of order. As a reward for this support, Napoleon in 1800 gave these bankers a monopoly over French financial life by ... [allowing] them [to] control of the new Bank of France.

By 1811 most of these bankers had gone over to the opposition to Napoleon because they objected to his continuation of a warlike policy. France at that time was still in the stage of commercial capitalism, and constant war was injurious to commercial activity. As a result, this group shifted its allegiance from Bonaparte to Bourbon, and survived the change in regime in 1815. This established a pattern of political agility which was repeated with varying success in subsequent changes of regime. As a result, the Protestant bankers, who had controlled financial life under the First Empire, were still the main figures on the board of regents of the Bank of France until the reform of 1936. Among these figures the chief bore the names Mirabaud, Mallet, Neuflyze, and Hottinguer. In the course of the nineteenth century, a second group was added to French banking circles. This second group, largely Jewish, was also of non-French origin, the majority Germanic (like Rothschild, Heine, Fould, Stern, and Worms) and the minority of Iberian origin (like Pereire and Mires). A rivalry soon grew up between the older Protestant bankers and the newer Jewish bankers. This rivalry was largely political rather than religious in its basis, and the lines were confused by the fact that some of the Jewish group gave up their religion and moved over to the Protestant group (such as Pereire and Heine).

The rivalry between these two groups steadily increased because of their differing political

attitudes toward the July Monarchy (1830-1848), the Second Empire (1852- 1870), and the Third Republic 1871-1940). In this rivalry the Protestant group was more conservative than the Jewish group, the former being lukewarm toward the July Monarchy, enthusiastic toward the Second Empire, and opposed to the Third Republic. The Jewish group, on the other hand, warmly supported the July Monarchy and the Third Republic but opposed the Second Empire. In this rivalry the leadership of each group was centered in the richest and more moderate banking family. The leadership of the Protestant group was exercised by Mirabaud, which was on the left wing of the group. The leadership of the Jewish group was held by Rothschild, which was on the right wing of that group. These two wings were so close that Mirabaud and Rothschild (who together dominated the whole financial system, being richer and more powerful than all other private banks combined) frequently cooperated together even when their groups as a whole were in competition. This simple picture was complicated, after 1838, by the slow rise of a third group of bankers who were Catholics. This group (including such names as Demachy, Seillière, Davillier, de Germiny, Pillet-Will, Gouïn, and de Lubersac) rose slowly and late. It soon split into two halves. One half formed an alliance with the Rothschild group and accepted the Third Republic. The other half formed an alliance with the rising power of heavy industry (largely Catholic) and rose with it, forming under the Second Empire and early Third Republic a powerful industrial-banking group whose chief overt manifestation was the Comité des Forges (the French steel "trust").

Thus there were, in the period 1871-1900, three great groups in France: (a) the alliance of Jews and Catholics dominated by Rothschild; (b) the alliance of Catholic industrialists and Catholic bankers dominated by Schneider, the steel manufacturer; and (c) the group of Protestant bankers dominated by Mirabaud. The first of these accepted the Third Republic, the other two rejected the Third Republic. The first waxed wealthy in the period 1871-1900, chiefly through its control of the greatest French investment bank, the Banque de Paris et des Pays Bas (Paribas). This Paribas bloc by 1906 had a dominant position in French economic and political life. In opposition to Paribas the Protestant bankers established an investment bank of their own, the Union Parisienne, in 1904. In the course of the period 1904-1919 the Union Parisienne group and the Comité des Forges group formed an alliance based on their common opposition to the Third Republic and the Paribas bloc. This new combination we might call the Union-Comité bloc. The rivalry of these two great powers, the Paribas bloc and the Union-Comité bloc, fills the pages of French history in the period 1884-1940. It paralyzed the French political system, reaching the crisis stage in the Dreyfus case and again in 1934-1938. It also partially paralyzed the French economic system, delaying the development from financial capitalism to monopoly capitalism, and preventing economic recovery from the depression in the period 1935-1940. It contributed much to the French defeat in 1940. At present, we are concerned only with the economic aspects of this struggle.

In France the stage of commercial capitalism continued much longer than in Britain, and did not begin to be followed by industrial capitalism until after 1830. The stage

of financial capitalism in turn did not really begin until about 1880, and the stage of monopoly capitalism became evident only about 1925. During all this period the private bankers continued to exist and grow in power. Founded in commercial capitalism, they were at first chiefly interested in governmental obligations both domestic and foreign. As a result, the greatest private bankers, like the Rothschilds or Mallets, had intimate connections with governments and relatively weak connections with the economic life of the country. It was the advent of the railroad in the period 1830-1870 which changed this situation. The railroads required capital far beyond the ability of any private banker to supply from his own resources. The difficulty was met by establishing investment banks, deposit banks, saving banks, and insurance companies which gathered the small savings of a multitude of persons and made these available for the private banker to direct wherever he thought fitting. Thus, the private banker became a manager of other persons' funds rather than a lender of his own. In the second place, the private banker now became much more influential and must less noticeable. He now controlled billions where formerly he had controlled millions, and he did it unobtrusively, no longer in the open in his own name, but acting from the background, concealed from public view by the plethora of financial and credit institutions which had been set up to tap private savings. The public did not notice that the names of private bankers and their agents still graced the list of directors of the new financial enterprises. In the third place, the advent of the railroad brought into existence new economic powers, especially in iron-making and coal mining. These new powers, the first powerful economic influences in the state free from private banking control, arose in France from an activity very susceptible to governmental favor and disfavor: the armaments industry.

The industry grew, receiving its greatest boost from the advent of the railroad, with its increased demand for steel and coal, and from the government of Napoleon III (1852-1870), which added a new demand for armaments to the industrial market. Napoleon showed special favor to one firm of iron and armaments makers, the firm of Schneider at Le Creusot. Eugene Schneider obtained a monopoly in supplying arms to the French government, sold materials to government-encouraged railway construction, became president of the Chamber of Deputies, and minister of agriculture and commerce. It is hardly surprising that the industrialists looked back on the period of the Second Empire as a kind of golden age. The loss of political influence by the heavy industrialists after 1871 reduced their profits, and drove them to ally with the Catholic bankers. Thus, the struggle between financial capitalism and monopoly capitalism which appeared in most countries was replaced in France by a clash between two economic blocs, both of which were interested in both industry and banking and neither of which was prepared to accept the unorthodox banking procedures which became one of the chief goals of monopoly capitalism. As a result, monopoly capitalism appeared late in France and, when it did, arose between the two great blocs, with ramifications in both, but largely autonomous from the central control of either. This new autonomous and rather amorphous group which reflected the rise of monopoly capitalism may be called the Lille-Lyons Axis. It rose slowly after 1924, and took over the control of France after the defeat of 1940.

Once begun, financial capitalism in France displayed the same excesses as elsewhere. In France these were worse than those in Britain or Germany (after the reforms of 1884), although they were not to be compared with the excesses of frenzy and fraud displayed in the United States.

The center of the French economic system in the twentieth century was not to be found, as some have believed, in the Bank of France, but, instead, resided in a group of almost unknown institutions—the private banks. There were over a hundred of these private banks, but only about a score were of significance, and even in this restricted group two (Rothschild and Mirabaud) were more powerful than all the others combined. These private banks were known as the Haute Banque, and acted as the High Command of the French economic system. Their stock was closely held in the hands of about forty families, and they issued no reports on their financial activities. They were, with a few exceptions, the same private banks which had set up the Bank of France. They were divided into a group of seven Jewish banks (Rothschild, Stern, Cahen d'Anvers, Propper, Lazard, Spitzer, and Worms), a group of seven Protestant banks (Mallet, Mirabaud, Heine, Neuflyze, Hottinguer, Odier, and Vernes), and a group of five Catholic banks (Davillier, Lubersac, Lehideux, Goudchaux, and Demachy). By the twentieth century the basic fissure to which we have referred had appeared between the Jews and the Protestants, and the Catholic group had split to ally itself either with the Jews or with the forces of monopolistic heavy industry. None the less, the various groups continued to cooperate in the management of the Bank of France.

The Bank of France was not the center of French financial capitalism except nominally, and possessed no autonomous power of its own. It was controlled until 1936, as it had been in 1813, by the handful of private banks which created it, except that in the twentieth century some of these were closely allied with an equally small but more amorphous group of industrialists. In spite of the fissure, the two blocs cooperated with each other in their management of this important instrument of their power. The Bank of France was controlled by the forty families (not two hundred, as frequently stated) because of the provision in the bank's charter that only the 200 largest stockholders were entitled to vote for the members of the board of regents (the governing board of the bank). Of the 200 who could vote for the twelve elected regents, 78 were corporations or foundations and 122 were individuals. Both classes were dominated by the private banks, and had been for so long that the regents' seats had become practically hereditary. The chief changes in the names of regents were caused by the growth of heavy industry and the transfer of seats through female lines. Three seats were held by the same families for well over a century. In the twentieth century the names of Rothschild, Mallet, Mirabaud, Neuflyze, Davillier, Vernes, Hottinguer, and their relatives were consistently on the board of regents.

The Bank of France acted as a kind of general staff for the forty families which controlled the nineteen chief private banks. Little effort was made to influence affairs by the re-discount rate, and open-market operations were not used until 1938. The state was

influenced by the Treasury's need for funds from the Bank of France. Other banks were influenced by methods more exclusively French: by marriage alliances, by indirect bribery (that is, by control of well-paying sinecures in banking and industry), and by the complete dependence of French banks on the Bank of France in any crisis. This last arose from the fact that French banks did not emphasize gold reserves but instead regarded commercial paper as their chief reserve. In any crisis where this paper could not be liquidated fast enough, the banks resorted to the unlimited note-issuing power of the Bank of France. In the third line of control of the French economy were the investment banks called "barques d'affaires." These were dominated by two banks: the Banque de Paris et des Pays Bas set up by the Rothschild group in 1872 and the Banque de l'Union Parisienne founded by the rival bloc in 1904. These investment banks supplied long-term capital to industry, and took stock and directorships in return. Much of the stock was resold to the public, but the directorships were held indefinitely for control purposes.

The investment bank of the non-Jewish private banks and their industrial allies was the Union Parisienne. Among its sixteen directors were to be found such names as Mirabaud, Hottinguer, Neuflyze, Vernes, Wendel, Lubersac, and Schneider in the period before 1934. The two largest stock-holders in 1935-1937 were Lubersac and Mallet. The directors of this bank held 124 other directorships on 90 important corporations in 1933. At the same time it held stock in 338 corporations. The value of the stock held by the Union Parisienne in 1932 was 482.1 million francs and of that held by Paribas was 548.8 million francs, giving a total for both of 1,030.9 million francs. In the fourth line of control were five chief commercial banks with 4,416 branches in 1932. At the beginning of the century these had all been within the "Paribas Consortium," but after the founding of the Union Parisienne in 1904 they slowly drifted over to the new bloc, the Comptoir National d'Escompte going over almost at once, with the others following more slowly. As a result, the control of the two great blocs over the great deposit banks was rather mixed during the twentieth century, with the old Jewish group of private bankers losing ground rather steadily. The decline of this group was closely related to the decline of international financial capitalism, and received its worse blow in the losses in foreign bonds resulting from the First World War. Regional deposit banks were controlled in varying degrees by one or the other of the two blocs, the Paribas control being stronger in the north, west, and south, while the Union-Comité bloc was stronger in the northeast, east, and southeast. Control of savings banks and insurance companies was also shared, especially where they had been founded before the two blocs achieved their modern form. For example, the largest insurance company in France, with capital and reserves of 2,463 million francs in 1931, had as directors such names as Mallet, Rothschild, Neuflyze, Hottinguer, and so on.

Banking Families Divide Up Their Spheres of Interest in Various

This cooperation between the two blocs in regard to the lower levels of the banking system (and the Bank of France itself) did not usually extend to industrial or commercial activity. There, competition outside the market was severe, and became a struggle to the death

in 1932-1940. In some activities, spheres of interest were drawn between the two groups, and thus competition was reduced. Inside France, there was the basic division between east and west, the Jewish group emphasizing shipbuilding, transatlantic communications and transportation, and public utilities in the west, while the Protestant-Catholic group emphasized iron, steel, and armaments in the east. Outside France, the former group dominated the colonies, North Africa, and the eastern Mediterranean, while the latter group emphasized central and eastern Europe.

In some fields the rivalry of the two groups had worldwide ramifications. In petroleum products, for example, the Jewish bankers, through the Banque de Paris et des Pays Bas, controlled the Compagnie française des pétroles, which was allied to Standard Oil and Rockefeller, while the Catholic-Protestant bankers, through the Union Parisienne, controlled Petrofina, which was allied to Royal Dutch Shell and Deterding. Jules Exbrayat, partner of Demachy et Cie. (in which François de Wendel was majority owner) was a director of Union Parisienne and of Petrofina, and Alexandre Bungener, partner of Lubersac et Cie., was also a director of Union Parisienne and of Petrofina. Charles Sergeant, once undersecretary of the Ministry of Finance and sub-governor of the Bank of France, was for years chairman of the Union Parisienne, and played a role in one bloc similar to that played by Horace Finaly in the other bloc. He was a director of Petrofina and of the Union européenne industrielle et financière. When he retired for reasons of health in 1938 he was replaced in several positions (including Petrofina and Union Parisienne) by Jean Tannery, honorary governor of the Bank of France.

Outside the banking system which we have sketched, the French economy was organized in a series of trade associations, industrial monopolies, and cartels. These were usually controlled by the Catholic-Protestant bloc of private bankers, since the Jewish group continued to use the older methods of financial capitalism while their rivals moved forward to the more obvious methods of monopoly capitalism. In such cases, individual companies controlled by the Jewish group frequently jointed the cartels and associations set up by the rival bloc.

The United States of America

... From the beginning, the United States had a shortage of labor in the face of an unprecedented richness of resources. As a result, it sought labor-saving devices and high output per man-day of work, even in agriculture. This means that the amount of capital equipment per man was unusually high throughout American history, even in the earliest period, and this undoubtedly presented a problem in an undeveloped country where private savings were, for many generations, scarce. The accumulation of such savings for investment in labor-saving mechanisms brought an opportunity to financial capitalism at an early date. Accordingly, the United States had financial capitalism over a longer period and in a more extreme form than any other country. Moreover, the size of the country made the problem of transportation so acute that the capital necessary for

the early canals, railroads, and iron industry was large and had to be found from sources other than local private persons. Much of it came from government subsidies or from foreign investors. It was observable as early as 1850 and had overseas connections which were still in existence in the 1930's.

By the 1880's the techniques of financial capitalism were well developed in New York and northern New Jersey, and reached levels of corruption which were never approached in any European country. This corruption sought to cheat the ordinary investor by flotations and manipulations of securities for the benefit of "insiders." Success in this was its own justification, and the practitioners of these dishonesties were as socially acceptable as their wealth entitled them to be, without any animadversions on how that wealth had been obtained. Corrupt techniques, associated with the names of Daniel Drew or Jay Gould in the wildest days of railroad financial juggling, were also practiced by Morgan and others who became respectable from longer sustained success which allowed them to build up established firms.

Any reform of Wall Street practices came from pressure from the hinterlands, especially from the farming West, and was long delayed by the close alliance of Wall Street with the two major political parties, which grew up in 1880-1900. In this alliance, by 1900, the influence of Morgan in the Republican Party was dominant, his chief rivalry coming from the influence of a monopoly capitalist, Rockefeller of Ohio. By 1900 Wall Street had largely abandoned the Democratic Party, a shift indicated by the passage of the Whitney family from the Democrats to the Republican inner circles, shortly after they established a family alliance with Morgan. In the same period, the Rockefeller family reversed the ordinary direction of development by shifting from the monopoly fields of petroleum to New York banking circles by way of the Chase National Bank. Soon family as well as financial alliances grew up among the Morgans, Whitneys, and Rockefellers, chiefly through Payne and Aldrich family connections.

For almost fifty years, from 1880 to 1930, financial capitalism approximated a feudal structure in which two great powers, centered in New York, dominated a number of lesser powers, both in New York and in provincial cities. No description of this structure as it existed in the 1920's can be given in a brief compass, since it infiltrated all aspects of American life and especially all branches of economic life. At the center were a group of less than a dozen investment banks, which were, at the height of their powers, still unincorporated private partnerships. These included J. P. Morgan; the Rockefeller family; Kuhn, Loeb and Company; Dillon, Read and Company; Brown Brothers and Harriman; and others. Each of these was linked in organizational or personal relationships with various banks, insurance companies, railroads, utilities, and industrial firms. The result was to form a number of webs of economic power of which the more important centered in New York, while other provincial groups allied with these were to be found in Pittsburgh, Cleveland, Chicago, and Boston.

J. P. Morgan worked in close relationship to a group of banks and insurance companies, including the First National Bank of New York, the Guaranty Trust Company, the Bankers

Trust, the New York Trust Company, and the Metropolitan Life Insurance Company. The whole nexus dominated a network of business firms which included at least one-sixth of the two hundred largest nonfinancial corporations in American business. Among these were twelve utility companies, five or more railroad systems, thirteen industrial firms, and at least five of the fifty largest banks in the country. The combined assets of these firms were more than \$30 billion. They included American Telephone and Telegraph Company, International Telephone and Telegraph, Consolidated Gas of New York, the groups of electrical utilities known as Electric Bond and Share and as the United Corporation Group (which included Commonwealth and Southern, Public Service of New Jersey, and Columbia Gas and Electric), the New York Central railway system, the Van Sweringen railway system (Allegheny) of nine lines (including Chesapeake and Ohio; Erie; Missouri Pacific; the Nickel Plate; and Pere Marquette); the Santa Fe; the Northern system of five great lines (Great Northern; Northern Pacific; Burlington; and others); the Southern Railway; General Electric Company; United States Steel; Phelps Dodge; Montgomery Ward; National Biscuit; Kennecott Copper; American Radiator and Standard Sanitary; Continental Oil; Reading Coal and Iron; Baldwin Locomotive; and others.

The Rockefeller group, which was really a monopoly capitalist organization investing only its own profits, functioned as a financial capitalist unit in close cooperation with Morgan. Allied with the country's largest bank, the Chase National, it was involved as an industrial power in the various Standard Oil firms and the Atlantic Refining Company, but it controlled over half the assets of the oil industry, plus the \$2 1/3 billion assets in Chase National Bank. Kuhn, Loeb was chiefly interested in railroads, where it dominated the Pennsylvania, the Union Pacific, the Southern Pacific, the Milwaukee, the Chicago Northwestern, the Katy (Missouri-Kansas-Texas Railroad Company), and the Delaware and Hudson. It also dominated the Bank of Manhattan and the Western Union Telegraph Company for a total of almost \$11 billion in assets. The Mellon group centered in Pittsburgh dominated Gulf Oil, Koppers, Alcoa, Westinghouse Electric, Union Trust Company, the Mellon National Bank, Jones and Laughlin Steel, American Rolling Mill, Crucible Steel, and other firms for total assets of about \$3.3 billion.

It has been calculated that the 200 largest nonfinancial corporations in the United States, plus the fifty largest banks, in the mid-1930's, owned 34 percent of the assets of all industrial corporations, 48 percent of the assets of all commercial banks, 75 percent of the assets of all public utilities, and 95 percent of the assets of all railroads. The total assets of all four classes were almost \$100 billion, divided almost equally among the four classes. The four economic power blocs which we have mentioned (Morgan; Rockefeller; Kuhn, Loeb and Company; and Mellon) plus du Pont, and three local groups allied with these in Boston, Cleveland, and Chicago, together dominated the following percentages of the 250 corporations considered here: of industrial firms 58 percent of their total assets, of railroads 82 percent, and utilities 58 percent. The aggregate value of the assets controlled by the eight power groups was about \$61,205 million of the total assets of \$198,351 million in these 250 largest corporations at the end of 1935.

The economic power represented by these figures is almost beyond imagination to grasp, and was increased by the active role which these financial titans took in politics. Morgan and Rockefeller together frequently dominated the national Republican Party, while Morgan occasionally had extensive influence in the national Democratic Party (three of the Morgan partners were usually Democrats). These two were also powerful on the state level, especially Morgan in New York and Rockefeller in Ohio. Mellon was a power in Pennsylvania and du Pont was obviously a political power in Delaware. In the 1920's this system of economic and political power formed a hierarchy headed by the Morgan interests and played a principal role both in political and business life. Morgan, operating on the international level in cooperation with his allies abroad, especially in England, influenced the events of history to a degree which cannot be specified in detail but which certainly was tremendous....

In the United States, however, the ... [system] of financial capitalism was much more protracted than in most foreign countries, and was not followed by a clearly established system of monopoly capitalism. This blurring of the stages was caused by a number of events of which three should be mentioned: (1) the continued personal influence of many financiers and bankers ... ; (2) the decentralized condition of the United States itself, especially the federal political system; and (3) the long-sustained political and legal tradition of antimonopoly going back at least to the Sherman Antitrust Act of 1890. As a consequence, the United States did not reach a clearly monopolistic economy, and was unable to adopt a fully unorthodox financial policy capable of providing full use of resources. Unemployment, which had reached 13 million persons in 1933, was still at 10 million in 1940.

Of the diverse groups in the American economy, the financiers were most closely related to heavy industry because of the latter's great need for capital for its heavy equipment. The deflationary policies of the bankers were acceptable to heavy industry chiefly because the mass labor of heavy industry in the United States, notably in steel and automobile manufacturing, was not unionized, and the slowly declining prices of the products of heavy industry could continue to be produced profitably if costs could be reduced by large-scale elimination of labor by installing more heavy equipment. Much of this new equipment, which led to assembly-line techniques such as the continuous-strip steel mill, were financed by the bankers. With unorganized labor, the employers of mass labor could rearrange, curtail, or terminate labor without notice on a daily basis and could thus reduce labor costs to meet falls in prices from bankers' deflation. The fact that reductions in wages or large layoffs in mass-employment industries also reduced the volume of purchasing power in the economy as a whole, to the injury of other groups selling consumers' goods, was ignored by the makers of heavy producers' goods. In this way, farmers, light industry, real estate, commercial groups, and other segments of the society were injured by the deflationary policies of the bankers and by the employment policies of heavy industry, closely allied to the bankers. When these policies became unbearable in the depression of 1929-1933, these other interest blocs, who had been traditionally

Republican (or at least, like the western farmers, had refused to vote Democratic and had engaged in largely futile third-party movements), deserted the Republican Party, which remained subservient to high finance and heavy industry.

This shift of the farm bloc, light industry, commercial interests (notably department stores), real estate, professional people, and mass, unskilled, labor to the Democratic Party in 1932 resulted in the election of Franklin D. Roosevelt and the New Deal. The new administration sought to ... reward and help the groups which had elected it. The farmers were helped by subsidies; labor was helped by government spending to make jobs and provide purchasing power and by encouragement of unionization; while real estate, professional people, and commercial groups were helped by the increasing demand from the increased purchasing power of farmers and labor.

The New Deal's actions against finance and heavy industry were chiefly aimed at preventing these two from ever repeating their actions of the 1920-1933 period. The SEC Act sought to supervise securities issues and stock-exchange practices to protect investors. Railroad legislation sought to reduce the financial exploitation and even the deliberate bankruptcy of railroads by financial interests (as William Rockefeller had done to the Chicago, Milwaukee, and St. Paul or as Morgan had done to the New York, New Haven and Hartford). The Banking Act of 1933 separated investment banking from deposit banking. The wholesale manipulation of labor by heavy industry was curtailed by the National Labor Relations Act of 1933, which sought to protect labor's rights of collective bargaining. At the same time, with the blessings of the new administration, a drive was made by labor groups allied with it to unionize the masses of unskilled labor employed by heavy industry to prevent the latter from adopting any policy of mass layoffs or sharp and sudden wage reductions in any future period of decreasing demand. To this end a Committee for Industrial Organization was set up under the leadership of the one head of a mass labor union in the country, John L. Lewis of the United Mine Workers, and a drive was put on to organize the workers of the steel, automobile, electrical, and other industries which had no unions.

All this served to create more highly organized and more self-conscious interest blocs in American life, especially among farmers and labor, but it did not represent any victory for unorthodox financing, the real key to either monopoly capitalism or to a managed pluralist economy. The reason for this was that the New Deal, because of President Roosevelt, was fundamentally orthodox in its ideas on the nature of money. Roosevelt was quite willing to unbalance the budget and to spend in a depression in an unorthodox fashion because he had grasped the idea that lack of purchasing power was the cause of the lack of demand which made unsold goods and unemployment, ... and had quite orthodox ideas on the nature of money. As a result, his administration treated the symptoms rather than the causes of the depression and, while spending unorthodoxly to treat these symptoms, did so with money borrowed from the banks in the accepted fashion. The New Deal allowed the bankers to create the money, borrowed it from the banks, and spent it. This meant that the New Deal ran up the national debt to the credit of the banks, and

spent money in such a limited fashion that no drastic re-employment of idle resources was possible. One of the most significant facts about the New Deal was its orthodoxy on money. For the whole twelve years he was in the White House, Roosevelt had statutory power to issue fiat money in the form of greenbacks printed by the government without recourse to the banks. This authority was never used. As a result of such orthodoxy, the depression's symptoms of idle resources were overcome only when the emergency of the war in 1942 made it possible to justify a limitless increase in the national debt by limitless borrowing from private persons and the banks. But the whole episode showed a failure to grasp the nature of money and the function of the monetary system, of which considerable traces remained in the postwar period.

The Economic Factors

From an analytical point of view there are a number of important elements in the economic situation of the twentieth century. These elements did not all come into existence at the same time, nor did any single one come into existence everywhere simultaneously. The order in which these elements came into existence is roughly that in which we list them here:

1. rising standards of living
2. industrialism
3. growth of size of enterprises
4. dispersal of ownership of enterprises
5. separation of control from ownership
6. concentration of control
7. decline of competition
8. increasing disparity in the distribution of incomes
9. declining rate of expansion leading to crisis

1. A rise in the general or average standard of living in modern times is obvious and, with intermittent breaks, goes back for a thousand years. Such progress is welcome, but it obviously brings with it certain accompanying factors which must be understood and accepted. A rising standard of living, except in its earliest stages, does not involve any increase in consumption of necessities but instead involves an increase in the consumption of luxuries even to the point of replacing basic necessities by luxuries. As average incomes rise, people do not, after a certain level, eat more and more black bread, potatoes, and cabbage, or wear more and more clothing. Instead, they replace black bread with wheaten bread and add meat to their diet and replace coarse clothing by finer apparel; they shift their emphasis from energy foods to protective foods.

This process can be continued indefinitely. A number of students have divided goods from this point of view into three levels: (a) necessities, (b) industrial products, and (c) luxuries and services. The first would include food and clothing; the second would include

railroads, automobiles, and radios; the third would include movies, books, amusements, yachts, leisure, music, philosophy, and so on. Naturally, the dividing lines between the three groups are very vague, and the position of any particular item will vary from society to society and even from person to person. As standards of living rise, decreasing proportions of attention and resources are devoted to primary or secondary types of products, and increasing proportions to secondary and tertiary types of products. This has very important economic consequences. It means that luxuries tend to become relatively more important than necessities. It also means that attention is constantly being shifted from products for which the demand is relatively inelastic to products for which the demand is relatively elastic (that is, expansible). There are exceptions to this. For example, housing, which is obviously a necessity, is a product for which demand is fairly elastic and might continue to be so until most persons lived in palaces, but, on the whole, the demand for necessities is less elastic than the demand for luxuries.

A rising standard of living also means an increase in savings (or accumulation of surplus) out of all proportion to the rise in incomes. It is a fairly general rule both for societies and for individuals that savings go up faster than incomes as the latter rise, if for no other reason than the fact that a person with an adequate supply of necessities will take time to make up his mind on which luxuries he will expend any increase in income. Finally, a shift from primary to secondary production usually entails a very great increase in capital investment, while a shift from secondary to tertiary production may not result in any increase in capital investment proportionately as great. Leisure, amusements, music, philosophy, education, and personal services are not likely to require capital investments comparable to those required by the construction of railroads, steel factories, automotive plants, and electrical stations. As a result of these factors, it may well arise that a society whose rising standards of living have brought it to the point where it is passing from emphasis on secondary to emphasis on tertiary production will be faced with the necessity of adjusting itself to a situation which includes more emphasis on luxuries than on necessities, more attention to products of elastic demand than inelastic, and increased savings with decreasing demands for investment.

2. Industrialization is an obvious element in modern economic development. As used here, it has a very specific meaning, namely, the application of inanimate power to production. For long ages, production was made by using power from animate sources such as human bodies, slaves, or draft animals, with relatively little accomplished by power from such inanimate sources as wind or falling water. The so-called Industrial Revolution began when the energy from coal, released through a nonliving machine—the steam engine—became an important element in the productive process. It continued through improvements in the use of wind power and waterpower to the use of oil in internal-combustion engines and finally to power from atomic sources. The essential aspect of industrialism has been the great rise in the use of energy per capita of population.

As a result of this increase in the use of energy per capita, industrial output per man-hour rose significantly (in the United States 96 percent from 1899 to 1929). It was this increase

in output per man-hour which permitted the rise in standards of living and the increases in investment associated with the process of industrialization. The Industrial Revolution did not reach all parts of Europe, or even all parts of any single country, at the same moment. In general, it began in England late in the eighteenth century (about 1776) and spread slowly eastward and southward across Europe, reaching France after 1830, Germany after 1850, Italy and Russia after 1890. This eastward movement of industrialism had many significant results, among them the belief on the part of the newer countries that they were at a disadvantage in comparison with England because of the latter's head start. This was untrue, for, from a strictly temporal point of view, these newer countries had an advantage over England, since their newer industrial installations were less obsolescent and less hampered by vested interests. Whatever advantage England had arose from better natural resources, more plentiful supply of capital, and skilled labor.

3. The growth of size of enterprise was a natural result of the process of industrialism. This process required very considerable outlays for fixed capital, especially in the activities most closely associated with the early stages of industrialism, such as railroads, iron foundries, and textile mills. Such great outlays required a new legal structure for enterprise. This was found in the corporation or limited-liability joint-stock company. In this company large capital installations could be constructed and run, with ownership divided into small fractions among a large number of persons. This increase in size of units was apparent in all countries, but chiefly in the United States, Britain, and Germany. The statistics on this are incomplete and tricky to use, but, in general, they indicate that, while the number of corporations has been increasing, and the average size of all corporations has been falling, the absolute size of the largest corporations has been increasing rapidly in the twentieth century, and the share of total assets or of total output held by the largest corporations has been rising. As a result, the output of certain products, notably chemicals, metals, artificial fibers, electrical equipment, and so on, has been dominated in most countries by a few great firms.

In the United States, where this process has been studied most carefully, it was found that from 1909 to 1930 the number of billion-dollar corporations rose from 1 to 15, and the share of all corporation assets held by the 200 largest rose from 32 percent to over 49 percent. By 1939 this figure reached 57 percent. This meant that the largest 200 corporations were growing faster than other corporations (5.4 percent a year compared to 2.0 percent a year) and faster than total national wealth. As a result, by 1930 these 200 largest corporations had 49.2 percent of all corporate assets (or \$81 billion out of \$165 billion); they had 38 percent of all business wealth (or \$81 billion out of \$212 billion); they held 22 percent of all wealth in the country (or \$81 billion out of \$367 billion). In fact in 1930, a single corporation (American Telephone and Telegraph) had greater assets than the total wealth in 21 states. No such figures are available for European countries, but there can be no doubt that similar growth was taking place in most of them during this period.

4. Dispersal of ownership of enterprise was a natural result of the growth of size of enter-

prise, and was made possible by the corporate method of organization. As corporations increased in size, it became less and less possible for any individual or small group to own any important fractions of their stocks. [An individual or family can maintain control of a corporation by holding as little as 5-10 percent of the stock.] In most countries the number of security holders increased faster than the number of outstanding securities. In the United States the former increased in numbers seven times as fast as the latter from 1900 to 1928. This was a greater spread than in other countries, but elsewhere there was also a considerable spreading out of corporate ownership. This was exactly contrary to the prediction of Karl Marx that the owners of industry would get fewer and fewer as well as richer and richer.

5. The separation of ownership from control has already been mentioned. It was an inevitable counterpart of the advent of the corporate form of business organization; indeed, the corporate form was devised for this very purpose—that is, to mobilize the capital owned by many persons into a single enterprise controlled by a few. As we have seen, this inevitable counterpart was carried to a quite unexpected degree by the devices invented by financial capitalism.

6. The concentration of control was also inevitable in the long run, but here also was carried by special devices to an extraordinary degree. As a result, in highly industrialized countries, the economic systems were dominated by a handful of industrial complexes. The French economy was dominated by three powers (Rothschild, Mirabaud, and Schneider); the German economy was dominated by two (I. G. Farben and Vereinigte Stahl Werke); the United States was dominated by two (Morgan and Rockefeller). Other countries, like Italy or Britain, were dominated by somewhat larger numbers.... In the United States, Morgan ... [guided] the economic swing from financial to monopoly capitalism, and yielded quite gracefully to the rising power of du Pont. In Britain, likewise, the masters of financial capitalism yielded to the masters of chemical products and vegetable oils, once the inevitable writing on the wall had been traced out in a convincing fashion. But all these shifts of power within the individual economic systems indicate merely that individuals or groups are unable to maintain their positions in the complex flux of modern life, and do not indicate any decentralization of control. On the contrary, even as group succeeds group, the concentration of control becomes greater.

7. A decline in competition is a natural consequence of the concentration of control. This decline in competition refers, of course, only to price competition in the market, since this was the mechanism which made the economic system function in the nineteenth century. This decline is evident to all students of modern economics, and is one of the most widely discussed aspects of the modern economic system. It is caused not only by the activities of businessmen but also by the actions of labor unions, of governments, of private social welfare organizations, and even of the herd-like behavior of consumers themselves.

8. The increasing disparity in the distribution of income is the most controversial and least well-established characteristic of the system. The available statistical evidence is

so inadequate in all European countries that the characteristic itself cannot be proved conclusively. An extensive study of the subject, using the available materials for both Europe and the United States, with a careful analysis of the much better American materials, will permit the following tentative conclusions. Leaving aside all government action, it would appear that the disparity in the distribution of the national income has been getting wider. In the United States, for example, according to the National Industrial Conference Board, the richest one-fifth of the population received 46.2 percent of the national income in 1910, 51.3 percent in 1929, and 48.5 percent in 1937. In the same three years, the share of the poorest one-fifth of the population fell from 8.3 percent to 5.4 percent to 3.6 percent. Thus the ratios between the portion obtained by the richest one-fifth and that obtained by the poorest one-fifth increased in these three years from 5.6 to 9.3 to 13.5. If, instead of one-fifths, we examine the ratios between the percentage obtained by the richest one-tenth and that obtained by the poorest one-tenth, we find that in 1910 the ratio was 10; in 1929 it was 21.7; and in 1937 it was 34.4. This means that the rich in the United States were getting richer relatively and probably absolutely while the poor were getting poorer both relatively and absolutely. This last is caused by the fact that the increase in the real national income in the period 1910-1937 was not great enough to compensate for the decrease in percentage going to the poor or for the increase in number of persons in that class.

As a result of such an increase in disparity in the distribution of national income, there will be a tendency for savings to rise and for consumers' purchasing power to decline relative to each other. This is because the savings of a community are largely made by the richer persons in it, and savings increase out of all proportion as incomes rise. On the other hand, the incomes of the poor class are devoted primarily to expenditures for consumption. Thus, if it is correct that there is an increasing disparity in the distribution of the national income of a country, there will be a tendency for savings to rise and consumer purchasing power to decline relative to each other. If this is so, there will be an increasing reluctance on the part of the controllers of savings to invest their savings in new capital equipment, since the existing decline of purchasing power will make it increasingly difficult to sell the products of the existing capital equipment and highly unlikely that the products of any new capital equipment could be sold more easily.

This situation, as we have described it, assumes that the government has not intervened in such a way as to change the distribution of the national income as determined by economic factors. If, however, the government does intervene to disturb this distribution, its actions will either increase the disparity in its distribution or will decrease it. If these actions increase it, the problem of the discrepancy to which we have referred between savings, on one hand, and the level of purchasing power and investment, on the other, will be made worse. If, on the other hand, the government adopts a program which seeks to reduce the disparity in the distribution of the national income, by, for example, adopting a program of taxation which reduces the savings of the rich while increasing the purchasing power of the poor, the same problem of insufficient investment will arise. In this way,

the problem of increasing disparity in the distribution of national income leads to a single result (decline of investment relative to savings), whether the situation is left subject to purely economic factors or the government takes steps to decrease the disparity. The only difference is that, in the one case, the decline in investment may be attributed to a leak of consumer purchasing power, while, in the other case, it may be attributed to a "killing of incentive" by government action. Thus, we see that the controversy which has raged in both Europe and America since 1932 between progressives and conservatives in regard to the causes of the lack of investment is an artificial one. The progressives, who insisted that the lack of investment was caused by lack of consumer purchasing power, were correct. But the conservatives, who insisted that the lack of investment was caused by a lack of confidence, were also correct. Each was looking at the opposite side of what is a single continuous cycle.

This cycle runs roughly as follows: (a) purchasing power creates demand for goods; (b) demand for goods creates confidence in the minds of investors; (c) confidence creates new investment; and (d) new investment creates purchasing power, which then creates demand, and so on. To cut this cycle at any point and to insist that the cycle begins at that point is to falsify the situation. In the 1930's the progressives concentrated attention on stage (a), while the conservatives concentrated attention on stage (c). The progressives, who sought to increase purchasing power by some redistribution of the national income, undoubtedly did increase purchasing power under stage (a), but they lost purchasing power under stage (c) by reducing confidence of potential investors. This decrease of confidence was especially noticeable in countries (like France and the United States) which were still deeply involved in the stage of financial capitalism. It would appear that the economic factors alone affected the distribution of incomes in the direction of increasing disparity. In no major country, however, were the economic factors alone allowed to determine the issue. In all countries government action noticeably influenced the distribution....

In Germany the changes in distribution of the national income were similar to those in Italy, although complicated by the efforts to create a social-service state (an effort going back to Bismarck) and by the hyperinflation. In general, the trend toward increasing disparity in distribution of the national income continued, less rapidly than in Italy, until after 1918. The inflation, by wiping out unemployment for the lower class and by wiping out the savings of the middle class, created a complex situation in which the wealth of the richest class was increased while the poverty of the poorest class was reduced, and the general trend toward increased disparity in income was probably reduced. This reduction became great under the social-service state of 1924-1930, but was drastically reversed because of the great increase in poverty in the lower classes after 1929. After 1934 the adoption of an unorthodox financial policy and a policy of benefits to monopoly capitalism reinforced the normal trend toward increasing disparity in distribution of income. This was in accord with the desires of the Hitler government, but the full impact of this policy was not apparent on the distribution of incomes until the period of full employment after

1937. Until 1938 Hitler's policy, although aimed at favoring the high-income classes, raised the standards of living of the lower-income levels even more drastically by shifting them from unemployment with incomes close to nothing into wage-earning positions in industry) so that the disparity in distribution of income was probably even reduced for a short-run period in 1934-1937. This was not unacceptable to the high-income classes, because it stopped the threat of revolution by the discontented masses and because it was obviously of long-run benefit to them. This long-run benefit began to appear when capacity employment of capital and labor was achieved in 1937. The continuance of the policy of rearmament after 1936 increased the incomes of the high-income groups while decreasing the incomes of the lower-income groups and thus served, from 1937 onward, to reinforce the normal economic tendency toward an increasing disparity in the distribution of incomes. This, of course, is one of the essential features of a Fascist government, and is obvious not only in Germany since 1937, in Italy since 1927, but also in Spain since 1938.

9. A declining rate of economic expansion is the last important characteristic of the economic system of Europe in the present century up to 1950. This decline resulted almost inevitably from the other characteristics which we have already discussed. It varied from country to country, the countries of eastern Europe suffering less than those of western Europe on the whole, but chiefly because their previous rate of progress had been so much lower. The causes of this decline are basically to be found in a relative increase in the power of the vested interests within the community to defend the status quo against the efforts of the progressive and enterprising members of the community to change it. This was revealed in the market (the central mechanism of the economic system) as a result of a relative increase in savings in respect to investment. Savings have continued or have increased for several reasons. In the first place, a tradition which placed a high social esteem on savings existed in western Europe from the Protestant Reformation until the 1930'S. In the second place, there had grown up established institutionalized savings organizations like insurance companies. In the third place, the rising standards of living increased savings even more rapidly. In the fourth place, the increasing disparity in the distribution of incomes increased savings. In the fifth place, the increase in size of enterprises and the separation of ownership from control acted to increase the amount of corporate savings (undistributed profits).

On the other hand, the inclination to invest did not rise so rapidly as savings, or even decreased. Here, again, the reasons are numerous. In the first place, the shift in advanced industrial countries from secondary to tertiary production reduces the demand for heavy capital investment. In the second place, declining rates of population increase, and geographic expansion may adversely affect the demand for investment. In the third place, the increasing disparity in the distribution of incomes, whether it is counteracted by government action or not, has a tendency to reduce the demand for investment capital. In the fourth place, the decrease in competition has served to reduce the amount of investment by making it possible for the controllers of existing capital to maintain its

value by curtailing the investment of new capital which would make the existing capital less valuable. This last point may require additional explanation. In the past, investment was not only capital-creating but also capital-destroying— that is, it made some existing capital worthless by making it obsolete. The creation by investment, for example, of shipyards for making iron-hull steam vessels not only created this new capital but at the same time destroyed the value of the existing yards equipped to make wooden-hull sailing ships. In the past, new investment was made in only one of two cases: (a) if an old investor believed that the new capital would yield sufficient profit to pay for itself and for the old investment now made obsolete, or (b) if the new investor was completely free of the old one, so that the latter could do nothing to prevent the destruction of his existing capital holdings by the new investor. Both of these two alternatives, in the twentieth century tended to become less likely (until 1950), the former by the decline in consumer purchasing power and the latter by the decrease in competition.

The way in which the relative decline of investment in respect to savings results in economic crisis is not difficult to see. In the modern economic community, the sum total of goods and services appearing in the market is at one and the same time the income of the community and the aggregate cost of producing the goods and services in question. The sums expended by the entrepreneur on wages, rents, salaries, raw materials, interest, lawyers' fees, and so on, represent costs to him and income to those who receive them. His own profits also enter the picture, since they are his income and the cost of persuading him to produce the wealth in question. The goods are offered for sale at a price which is equal to the sum of all costs (including profits). In the community as a whole, aggregate costs, aggregate incomes, and aggregate prices are the same, since they are merely opposite sides of the identical expenditures.

The purchasing power available in the community is equal to income minus savings. If there are any savings, the available purchasing power will be less than the aggregate prices being asked for the products for sale and by the amount of the savings. Thus, all the goods and services produced cannot be sold as long as savings are held back. In order for all the goods to be sold, it is necessary for the savings to reappear in the market as purchasing power. The usual way in which this is done is by investment. When savings are invested, they are expended into the community and appear as purchasing power. Since the capital good made by the process of investment is not offered for sale to the community, the expenditures made by its creation appear completely as purchasing power. Thus, the disequilibrium between purchasing power and prices in which was created by the act of saving is restored completely by the act of investment, and all the goods can be sold at the prices asked. But whenever investment is less than savings, the available supply of purchasing power is inadequate by the same amount to buy the goods being offered. This margin by which purchasing power is inadequate because of an excess of savings over investment may be called the "deflationary gap." This "deflationary gap" is the key to the twentieth century economic crisis and one of the three central cores of the whole tragedy of the century.

9.12 The Crash of 1929 and Continuing Economic Warfare

Winston Churchill and Cecil Rhodes, intimate friends, shared the same Anglo-American beliefs of returning the United States to British rule. On June 2, 1899, Churchill and Rhodes had breakfast at London's Burlington Hotel and planned South Africa's war, which began on October 11, 1899. Rhodes, on behalf of the bankers, believed that he had found his "man of action" for returning America to British domination using economic warfare. Following America's financial obligations due to its costly participation in World War I, Churchill concocted an elaborate scheme, wherein he collaborated with US officials and media magnates, to launch an economic offensive against American citizens. He, with dozens of people, constructed a financial terrorist network to eventually facilitate the 1929 stock market crash that reverberated around the world to affect economics for decades.

Despite the deliberate New York Panic (1920-21), America remained resilient and industrially strong. Independent farms provided adequate food. American infrastructure and transportation systems were modern, efficient, and technologically advanced compared to the rest of the world. In 1921, per capita income was \$522. Churchill joined forces with Treasury Secretary Andrew Mellon, New York Federal Reserve Chairman Benjamin Strong, and Montagu Norman to provide easy money for speculation. It was possible for investors to purchase \$1,000 worth of stock for \$100. On April 28, 1925, Churchill, then Chancellor of the Exchequer, returned England to the gold standard, adjusted the British pound to \$4.86, limiting industry and the quantity of British goods and decreasing the amount of affordable goods for export, also a disaster for English consumers. Churchill and his accomplices invested heavily into the United States stock market. From 1923 to 1929, the Federal Reserve's printing press created a 62 percent inflation rate, and then abruptly stopped.

After World War I, America was Britain's principle competitor. On July 1, 1927, bankers, Montagu Norman of the Bank of England, and Hjalmar Schacht of the German Reichsbank arrived in New York aboard *The Mauretania*. They met with Benjamin Strong and Charles Rist, the Deputy Governor of the Banque de France. They laid the final plans to bankrupt America in order to rescue England's economy after Churchill's maneuvers. Strong planned to deliberately create inflation, by increasing domestic prices, making American goods less desirable and affordable. Importation of cheaper goods would shift the gold to the Bank of England. In what people refer to as the roaring twenties, a time of wealth, optimism and excess, numerous newspaper and magazine articles promoted stock market speculation, claiming that one could make a veritable fortune in a short time for minimum monthly investments. However, there were also special speculators who owned dozens of accounts in various names, which they could trade in enormous blocks. Small investors, never in any position to actually manipulate the market, suffered the consequences, and received the blame for the 1929 crash, just as homebuyers received the blame for the real estate bubble and the financial crisis of 2007-2010. In 1929,

Wall Street brokers reported that there were 1.6 million active stock market accounts and 600,000 margin accounts. Those margin accounts belonged to Churchill and his co-conspirators.

Churchill, his younger brother John "Jack," his 20-year old nephew Johnny, and his 18-year old son, Randolph, toured America for fiftyfour days prior to the crash. On October 4, 1939, Randolph would marry Pamela Beryl Digby, who people have described as a courtesan due to her numerous affairs with powerful millionaires including Baron Elie de Rothschild, William S. Paley, and others. On March 19, 1971, she contacted W. Averell Harriman the day after her husband, successful Hollywood producer Leland Hayward died. She married Harriman on September 27, 1971. She financially backed Bill Clinton who, after his election, rewarded her with an ambassadorship to England. Bernard Baruch, Winston's favorite American, persuaded Charles M. Schwab to allow the British visitors the use of his luxurious private railway car. Schwab had worked for Andrew Carnegie, and participated in the 1901 deal with J. Pierpont Morgan to merge Carnegie Steel with US Steel, with Schwab as its first president. In 1903, Schwab became president of Bethlehem Steel, a company that, in 1914, built twenty submarines for Britain, in only six months, all assembled in Montreal, to avoid the neutrality issue. Bethlehem Steel produced as much as all of Britain combined. Jack Churchill was partners with Horace C. Vickers in a huge stock market firm in London, Vickers da Costa. It had a key role, second to Baruch, in the economic storm that the Churchill brothers were brewing. Baruch introduced Churchill to William Crocker, head of the wealthy California banking family. The Churchill party spent the night of September 12, 1929, at the Crocker estate before visiting publisher William Randolph Hearst, another Baruch crony. They arrived at the \$30 million San Simeon Castle on September 13, 1929, where they spent several days while Hearst and Churchill discussed the world's future.

On September 23, 1929, Winston and Jack Churchill had dinner with William G. McAdoo, former Treasury Secretary (1913-1918) under Wilson. No doubt, this lifetime Morgan agent knew exactly what was going to occur within a month, and he could supply Churchill with an understanding of Treasury operations. In the mid-1920s, Baruch bought a seat on the Chicago Board of Trade for his brother, Sailing. On October 2, 1929, Baruch, with cozy relationships in Chicago, met Churchill, and his party when they arrived in Chicago. Churchill met with several prominent Chicago businessmen, and they devised a test to see how their plot would play out in New York in just three weeks. In the final hour of trading on October 3, they flooded the market with 1,500,000 shares, forcing Schwab's competitor, US Steel to drop \$10 a share. On October 18, 1929, Churchill, accompanied by Charles Duncombe, Third Earl of Feversham and Ronald I. Campbell, visited Republican President Hoover who certainly knew the names of the plungers. At the top of the list were Baruch and John J. Raskob, a DuPont and General Motors executive, and the builder of the Empire State Building. Raskob was also the chairman of the Democratic National Committee (1928-1932). Obviously, party affiliations were and are totally irrelevant. On October 25, 1929, Hoover, with foreknowledge of the

imminent financial catastrophe, about to destroy so many people, would proclaim, "The fundamental business of the country that is production and distribution of commodities, is on a sound and prosperous basis."

Churchill's grandfather, Leonard Jerome, had a seat on the New York Stock Exchange and was chummy with the Rockefellers and the Vanderbilts. During the final week before the crash, Churchill stayed with Percy A. Rockefeller (S&B), who arranged a special work area for him in his Manhattan office apartment. Percy's father, William Rockefeller, had been a close friend of Jerome, a Wall Street speculator and manipulator. On October 24, 1929, Black Thursday, Baruch maintained close contact with his brothers at Hentz & Company brokerage firm, where he kept a secret account, known only as number 19. At the opening of the market, huge transactions began taking place, 12.9 million shares that day, in blocks of 15,000 to 20,000 shares, held in some of the biggest companies. The final assault was scheduled to take place the following Tuesday. Churchill met with Baruch at Rockefeller's office then visited the Stock Exchange at 10:45. On the day of the initial crash, referred to as Black Thursday, Churchill, perhaps like other saboteurs, apparently wanted to observe some of his handiwork. He was also present for the calamitous finale on October 29, 1929, when investors traded about 16 million shares. He witnessed the devastating panic caused by his machinations in conjunction with those of his cronies, just before leaving America, much worse off than when he arrived.

On the evening of October 29, Black Tuesday, Baruch threw a lavish party at his Fifth Avenue mansion where forty guests, Wall Street's leading bankers and financiers, held a jubilant celebration that lasted well past midnight. While regular Americans commiserated over their devastating losses, the participants in the plunge partied. MacDonald joined the festivities. There were many suicides, either immediately after the crash or within a few years. On October 30, the Churchills left on *The Berengaria*. Winston Churchill wrote, "No one who has fazed on such a scene could doubt that this financial disaster, huge as it is, cruel as it is to thousands, is only a passing episode in the march of a valiant and serviceable people who by fierce experiment are hewing new paths for man, and showing to all nations much that they should attempt and much that they should avoid." The so-called serviceable people of America fought in World War I, where at least 115,000 serviceable Americans perished, and 206,000 suffered serious wounds. In World War II, 294,000 serviceable Americans perished, and 671,000 suffered wounds; the total number of serviceable Americans who perished in both wars equal 409,000 and the total wounded was 877,000. In 1929, Baruch had made repeated trips to Germany, England, and France. In September and October 1929, collaborators appropriated over \$100 billion from Wall Street and other American markets. On December 6, 1929, Baruch accompanied \$10 million in gold (16 tons) that bankers shipped to Lazard Freres, Guaranty Trust Company, Irving Trust, and Heidelbach Ickelheimer. Within five weeks after the crash, the bankers shipped \$30 million (1929 prices) to France. After the crash, gold exports exceeded \$111 million in gold, all shipped to Europe. In December 1929, \$68 million went to England and France.

In 1929-1930, like 2008-2009, the banks, purportedly short on resources, refused to make loans to small companies or individuals. Yet, J. P. Morgan, First National Bank of New York, and First National Bank of Chicago sent massive amounts of money to the Bank of International Settlements (BIS) in Geneva, which ultimately helped countries prepare Europe for another war. Then the bankers systematically reduced the money supply to prolong the crises into the great depression. The middle class unavoidably defaulted on loans and the banks repossessed farms, homes and business properties. The worldwide crash and the subsequent depression functioned to shift assets upwards. It caused joblessness, hunger, disintegration of production and national bankruptcies. At the same time that banks were crunching credit and devaluing the money in circulation, they were creating the massive build-up of the military in the Soviet Union. In May 1929, during Hoover's administration, before Roosevelt officially recognized the Soviet Union, the Ford Motor Company contracted with Stalin to oversee the construction of a production facility. The Soviets agreed to order 72,000 unassembled Fords over the next decade. In February 1930, Albert E. Kahn, Inc. of Detroit, Michigan, founded by a Germanborn Jew who immigrated in 1880, signed an agreement with the Soviets to clone the Ford River Rouge of Detroit as part of a mega industrial complex at Gorky, which soon became a Soviet Detroit.

At the same time that banks were crunching credit and devaluing the money in circulation, they were creating the massive build-up of the military in the Soviet Union. In May 1929, during Hoover's administration, before Roosevelt officially recognized the Soviet Union, the Ford Motor Company contracted with Stalin to oversee the construction of a production facility. The Soviets agreed to order 72,000 unassembled Fords over the next decade. In February 1930, Albert E. Kahn, Inc. of Detroit, Michigan, founded by a Germanborn Jew who immigrated in 1880, signed an agreement with the Soviets to clone the Ford River Rouge of Detroit as part of a mega industrial complex at Gorky, which soon became a Soviet Detroit. assets and waited for the Democratic administration of Baruchbacked Franklin D. Roosevelt. In September 1930, Baruch, after returning from visiting Churchill, sent a cable affirming his friend's views about British world supremacy. He wrote, "I better understand England and her people and her traditions and hope that new prosperity and happiness will come to her in order that she may continue for the world what she has done for so long. I trust that our country may join with yours in the great responsibility that lies before us." On December 11, 1930, New York's fourth largest bank, the Bank of the United States, failed. Its 450,000 depositors had no recourse and there was no FDIC insurance. Another 1,000 banks had already failed in 1930. 1979 In 1930, bankers exported at least \$52 million from the Federal Reserve to Guaranty Trust, a company that Morgan and Lazard Frères later gobbled up.

In January 1932, Hoover, going through the appropriate motions, told Richard Whitney, the New York Stock Exchange President that he was going to convene an investigation into the crash. Thomas W. Lamont, who spoke for other bankers, told him to forget about it. He persevered, and by the third quarter of 1932, another banking crisis devel-

oped. The public did not re-elect Hoover. The bankers would now bring in Roosevelt and his New Deal. By March 8, 1932, the Dow Jones Index was down to \$41.22, the bankers had wiped out nearly 90 percent of its value. Those with cash paid two cents on the dollar for equipment, farmland, and real estate—at the expense of those who had worked generations to acquire their land and assets. Meanwhile the plungers continued to strengthen their holdings. 1981 With every economic crisis, huge multinational corporations who care little about the land or the animals consume private farms and ranches. Government regulations routinely restrain the few remaining independent farmers and ranchers affecting their control over their own property. Churchill toured the United States again (December 1931-March 11, 1932) to arrange support for American involvement in another war. On February 9, 1932, he delivered a speech to the New York Economic Club. His old friends sat on the podium—Baruch, Schwab, Rockefeller, Kahn, Henry Morgenthau, Samuel Seabury, Merlin H. Aylesworth, James Speyer, William C. Osborn, Nathan Miller, Raymond B. Fosdick and Karl Bickel. He thanked the United States for pouring billions of dollars into European countries since the end of World War I, and then warned about the crisis of Communism. Meyer, Baruch, Strong, and Mellon instructed the New York Federal Reserve Board to purchase \$1,100,000,000 of US Treasuries over an eleven-week period then abruptly stopped in June 1932, which halted the economic recovery to prime the people to get rid of Hoover. Hope disappeared when another 5,000 banks closed which eliminated the banker's competition. The American citizens blamed Hoover and the Republicans. The citizens readily elected Roosevelt and the Democrats controlled the country for the next two decades.

On February 27, 1933, the Dow Jones bottomed out. Baruch's candidate, Roosevelt, inaugurated on March 4, 1933, immediately closed the banks until March 15, 1933. By then, there were 15,000,000 unemployed Americans. By 1937, there would still be 11,000,000 without jobs. In 1933, fiat money replaced gold. The contrived contraction of the economy was the result of the bankers shipping the gold out of the country. Roosevelt, ordered the printing of the Illuminati seal on one dollar bills in 1933, a seal that symbolizes its claim to control of America, regardless who occupies the White House. On March 9, 1933, Roosevelt issued Executive Orders 6073, 6102, 6111, and 6260, which declared that America was bankrupt. He announced, "All the property of this country now belongs to the state and will be used for the good of the state." That evening, a joint session of Congress passed the Emergency Banking Act, amid an atmosphere of chaos and uncertainty, in less than an hour, allowing only Federal Reserve-approved banks to operate. Roosevelt ones stated:

"In politics, nothing happens by accident. If it happens, you can bet it was planned that way."

On April 5, 1933, because of the stipulations in the Emergency Banking Act, Roosevelt made it illegal for citizens to own gold. He ordered people to turn in all gold coins, gold bullion, and gold certificates to the FR banks by May 1 (Illuminati was created on May 1, 1776). Baruch, the single greatest holder of gold bricks, retained possession of his gold.

People faced imprisonment and fines if they failed to surrender their gold. On June 5, 1933, Congress enacted a joint resolution outlawing all gold clauses in contracts. Now the FR was free to print unlimited amounts. While the FR augmented the war in Europe, Roosevelt's activities really energized it. Churchill and Norman had removed the English pound from the gold standard in 1931 which altered world trade. In September 1931, Britain defaulted on their gold payments, intensifying the depression. Rothschild's Bank of England calculated this move to trigger another war. 1987 Roosevelt took the United States off the domestic gold standard with The Gold Reserve Act of 1934, as requested by Baruch in his meeting with the Finance Committee and the Foreign Relations Committee.

Roosevelt, with his communistic New Deal, strengthened the FR and introduced the practice of deficit spending, the brainchild of Britain's John Maynard Keynes. In 1910, Lenin had said, "The surest way to overthrow an established social order is to debauch its currency." Keynes said, "The process engages all the hidden forces of economic law on the side of creeping socio-economic destruction, and does it in manner which not one man in a million is able to diagnose."

On November 8, 2002, Federal Reserve Chairman Ben Bernanke said, "Let me end my talk by abusing slightly my status as an official representative of the Federal Reserve. I would like to say to Milton and Anna, Regarding the Great Depression. You're right; we did it. We're very sorry. But thanks to you, we won't do it again." 1952 He was referring to Milton Friedman and Anna J. Schwartz who wrote Monetary History of the United States 1867-1960 in 1971. He told the truth. Rather than a stock market crash followed by a depression, they switched tactics. Starting at the end of the second Bush regime, members of Congress, the bank's accomplices, initiated bank bailouts, and did not conceal this huge resource transfer behind a contrived crash. Every economic crisis requires the same careful planning and preparations as the 1929 crash, executed by officials at the highest level of two governments — Britain and America.

9.13 From Balfour to Israel

Palestine was promised to the Jews in the Balfour Declaration during World War 1 to get the United State involved into the war on the side of Britain and France. But this was 1917 and Israel was created in 1948. Why did it take so long and what happened in between?

There was peace between Jews and Arabs until 1917, everywhere. There existed the "Dhimmi-Law" but this was not specifically for all Jews but for all non-muslims. It said that in the countries under Sharia-Law, non-muslims had the right to exists by paying a certain tax. Through European pressure this was no longer valid in the middle of the 19th Century in the Ottoman Empire and this law became less and less important during the 20th century. There existed big Jewish communities in the Arab world, which were accepted and were a big contributor of wealth to the region. All Jews of this region were

Sephardic Jews and were seen as semitic brothers by the Arabs. In the 19th Century, many Ashkenazi Jews fled from Europe to Palestine because of anti-Jewish pogroms but Jews from Germany were rarely among them. Until 1917, there was peaceful coexistence with the natives in the area.

The trouble began when Britain started to gain influence in the Arabic world after destroying the Ottoman Empire. During this time, Zionism became more and more important. Many Jews longed for their own homeland but this movement was also resented by the Jews who assimilated fully into their host nations. In Britain, Zionism was promoted in the 19th Century and the Balfour-Declaration was probably a logical consequence. But this document already starts with deception in its name. It was not written by Balfour, but by Lord Milner, the mastermind of the secret Round Table movement, which promoted British imperialism and racial superiority. He is also known as "the Tsar of the Press" to whom belonged, among others, the "London Times". Milner was a good friend to Cecil Rhodes, who was funded by Lionel Walter Rothschild for his "Diamond adventures" in Africa.

Time has shown that the Balfour Declaration was not worth the paper it was printed on. England never came through with their part of the deal. It started with two different versions of the declaration being created, one for the Zionists, one for the Arabs. In addition, the Arabs received verbal assurances directly in opposition to the assurances the Zionists received. In today's view and while looking at modern conditions in the middle east, historians agree that the Arab-Jewish conflict was started by England. Until today, this whole area is in permanent conflict which aligns with British geostrategic goals.

The Balfour Declaration were governed by the following calculations: It was the political goal to win the Jews to fight for the Allied cause in which the Zionists should put all their efforts. A pro-western nation should build a bridge between a British-Egypt and a British-Mesopotamia and not other power should be in between. One should also nullify the Sykes-Picot-Agreement with France from 1916 and win exclusive British control over Palestine and for propaganda reasons they made it look like that gaining control over Palestine was done for the moral reason for the right of self-determination of the Jews. The Arabs were not opposed to Jewish immigration to the area. This only changed when it became public that there exist different versions of the Balfour Declaration. Until that point, negotiations between Arabs and Zionists were friendly and it led to the "Faisal-Weizmann-Agreement" of January 3rd 1919.

King Faisal I was the King of Syria who also reigned over Palestine. This agreement was for friendship and cooperation and should also lead to the independence of Syria. The reign of Britain in this area shall be ended with the help of the Jews. King Faisal wrote:

"The Jews and Arabs are close by blood and between both people there exist no conflict." To Felix Frankfurter he wrote: "We welcome the Jews in their Home ... the Jewish movement is nationalistic and not imperialistic and there is enough room for all of us in Syria."

But all agreements between Faisal and the Zionists rested upon the promise of Britain to release Syria into independence. This promise was given by England to the Syrians during World War 1 if the Syrians join the fight against the Ottoman Empire. However, this promise was never honored and the Faisal-Weizmann-Agreement never came to be. Until the summer of 1919, British dishonesty became known and the Syrian attitude changed drastically. There was no longer a basis of trust and the immigration of Jews was declined. Britain then went even one step further and promoted the Jew Sir Herbert Samuel to be the British high commissioner of Palestine. This Jew did nothing to ease the tensions. He allowed further immigration which agitated the Syrians and in turn, created a bad atmosphere for the Jews already in Palestine. First pogroms against the Jews happened as soon as 1920, the first pogroms of Jerusalem. The Arab police and the British government did not intervene in the killings, they just let it happen. Afterwards, Britain looked into the matter, created a report and allowed the Jews to have weapons. Now, we had Arabs with guns against Jews with guns. But Herbert Samuel was still not finished.

In addition to providing guns to the Jews, Britain also rearmed the Syrians to support a riot against France. The British government must have known that these guns would also be used against the Jews very soon and to make sure this happened, a man named Hadij Amin al-Hussein was used by Samuel, the Grand Mufti of Jerusalem (a man who shall later work with Hitler for creating Muslim SS divisions in the tens of thousands). This happened against the will of the High Council of the Muslims, which saw Hussein as an ill educated bandit. Hussein was not unknown to Britain, so they knew who they were dealing with and used him in purpose. He was arrested by England in 1920 and sentenced to 15 years of forced labour because he was a strong protagonist in the first anti-Zionist pogroms and an Arabic nationalist. Only one year later, Britain gave him the possibility to flee and also to return to Palestine. It is rather strange that Samuel should promote this man to be the Grand Mufti of Jerusalem, a man who was not qualified in any way for the position.

Hussein would not disappoint Britain with a lack of fanatical engagement and the next pogroms happened in 1922. At the same time, Britain tolerated the armed defensive Jewish organization Haganah, whose founder had been arrested in 1920. Also in 1922, the USA started becoming interested in the area and supported British policies. This collaboration gave first fruits in 1926, when England, the US and France partitioned the Iraqi Petrol Company, with England getting 52.5%, France and the US getting 21.25% each. The Arabs could keep only 5%. Britain received the official mandate for Palestine from the League of Nations in 1922 and with that, Britain was responsible for everything that happened in this area. Britain promoted a strong stance for the Arabs against the Jews, supported the Arabs with money, weapons, propaganda and education to create an extreme Arabic-nationalistic spirit. They also made again promises for Arab independence which were never kept. Even Churchill became a prominent figure in this, as can be read in the British white book. In there he proclaimed that "Palestine will never become as

Jewish as England is English". Agitations between Jews and Arabs increased, additional pogroms happened, especially after the Arabs started to think that the Jews wanted to create their own nation state around Jerusalem.

Especially until 1929, al-Hussein killed Jews and Arabs alike, which was d'accord with Britain, to keep the area divided. Just how much the British schemes were against the Arab spirit was shown in 1930 in the Arab newspaper "Al Inqdam":

"We are led by a group of men who sell us out and who buy and sell us like kettle. The Arab people has not proclaimed its last word in the Jewish question. When this word is spoken, it will not be a word of hate, but of peace and brotherhood, it will be appropriate for two different peoples living in a single state."

There were no anti-Jewish disturbances following the years of 1930 in the Arab states. On the contrary. People from Syria and Lebanon started a petition to France to allow Jewish settlement in their lands. American historian William Ziff said in 1938 that the Jewish-Arab conflict was not due to religious or racial differences, but initiated by the British government. Just imagine what the existence of a state with hundreds of thousands of Jews would have meant for the British Empire, especially an Arab-Jewish alliance. We should remind us of the British foreign policy, which was solely for British imperialistic goals. Led by the promise "all the world is mine", England never thought twice about even using pirates, famines or fanatics to further their ambitions. Just remind yourself of the pirate Francis Drake in the Caribbeans, which later became Sir Francis Drake. The policies of the British Empire often led to numerous dead people, either through violence or hunger. Just in India alone, there died nearly 50 million people through famines in a span of 300 years under the rule of England. British reports claimed of course that this could not be prevented due to organizational difficulties but the archives of the Trading Company show that massive amounts of food were still exported while famines were taking lives. Britain took resources by force, they took the oil fields of Mossul after a war against Germany and the last imperialistic tendencies in South Africa were to massive resources of gold and diamonds. England switched alliances as fast as the changing politics demanded.

The whole situation changed in the 20th Century when the mainstream media became fast enough to send information around the world within minutes. This allowed the "free" press to gain more influence and it became harder to hide the imperialist schemes of the British Empire. Thus, deceiving the public became of Englands biggest traits. That way, there were able to blame others for crisis and war which in reality only served British interest. Britain created the Arab-Jewish conflict in Palestine by making promises to the Arabs it could not keep while encouraging them to have a strong stance against the Jews (to whom they promised Palestine). This can be also seen in other instances throughout history. Before World War 1, England encouraged Russia and Serbia to take a strong stance against Austria-Hungary and made conflict inevitable. Before World War 2, they encouraged Poland to have a strong stance against Germany, creating further friction and agitation along the border. They encouraged Poland to ignore all desires for negotiations

from Germany and immediately broke their promises, feeding them first to Germany and then to the Communists (as we will see in the coming chapters). That Britain did not care about the Jews could also be seen during World War 2. Germany asked for other countries to take Jewish refugees and they were declined, Britain found with reconnaissance planes the concentration camps in Poland and they ignored negotiations for Peace by Heinrich Himmler in 1944, which included sending 100.000 Hungarian Jews to Palestine and Britain would receive 10.000 trucks in return. Of course it was declined. 10 Jewish lives were not worth 1 Truck for Britain while at the same time, they supported Stalin with material.

In 1933, Hadij Amin al-Hussein saw that his personal goals could not be achieved by further working with Britain. After working together for more than 10 years, it finally came to conflicts after Hussein expanded his assassinations to British personal. He had to flee in 1937 and tried to get into contact with Germany, for which he became an Agent in 1938. With Hitlers support, al-Hussein continued his anti-Jewish stance in the middle east. He organized a riot in Badgdad 1941 which had to shut down by force by Britain. Hussein was free to move through the other Arabic countries and spread his hate for Jews. He could even travel back and forth to Berlin and he was never captured by Britain during this time, which makes one assume that Britain was content with his actions... he just continued his policy which he started under British authority after all. The end of the Second World War was experienced by al-Hussein in Switzerland (of course, all revolutionists and mass murderers seem to have had a place there...) but he was later deported to France. In turn, France declined deporting him to Yugoslavia because he was seen as a criminal of war in this country. The Allies did not put him to trial, instead they let him go to Egypt in peace where he was accepted as a national hero. From there, he continued his war against the Jews. When King Abdullah gave the position of Grand Mufti of Jerusalem to another person in 1951, Hussein assassinated his successor. He later became the mentor of Yassir Arafat and he died in 1974 in exile in Egypt by natural causes.

But why all this? Britain feared a possible Jewish-Arabic Empire because the Jews had many influential people backing them, especially the Rothschild's. All the wealthy Jews investing their money in a middle eastern Empire was certainly nothing Britain could have wanted... especially considering that the entire middle east basically already belonged to the Ottoman Empire at that time and them creating an alliance with the Jews all around the World was probably in no ones interest in the West.

In 1902, Ibn Saud decided to get an empire of his own. He thought himself to have a mission promised by god, he was a Wahabi and wanted to get Mecca and Medina under control of Wahabism. He would be seen as a fundamental Islamist today. He was well versed in politics and diplomacy, he strided through the lands, created alliances through marriages with literally hundreds of women. It was like this: As a Wahabi, he was only allowed to have 4 wives (this poor man, just 4...). When he moved to another region, he cast out these women and this was not a problem, not for him or

for the women. In the Islamic world, a woman who had a liaison with a dignitary was even more desirable for the men. In this way, Ibn Saud had 263 confirmed sons, the daughters were not counted. The Ottomans did not like his actions and tried to contain him, which failed. Their error was in focusing their control over Arabia into their naval powers and they lacked influence through ground forces. They were not able to stop Saud's troops that way. Saud increased his influence steadily but he would have failed, if it would not have been for World War 1. The Ottoman Empire started to build railways into Arabia and this would have ended the reign of Ibn Saud. The railway to Mekka and Medina was finished in 1906 with German help and the Bagdad-Bahn also made further progress. With these modern means of transportation could have easily moved troops around to stop Saud's troops. But with the defeat of the Ottoman Empire by Britain, he still could keep his power. Interestingly enough, Saud was nearly defeated by the Turks, not through weapons but through bacteria. The Turks carried for the Arabs unusual intestinal bacteria and with lacking hygiene, an epidemic arose in Ibn Saud's troops which stopped their movements for several weeks. We do not know if the Turks did not use this incident to their advantage out of honor or stupidity. Fact of the matter is: Ibn Saud was supported with money and weapons from the British Empire from the start to destabilize the Ottoman Empire.

The example of Saudi-Arabia in 1917 showed that creating a new empire in the middle east was not just fiction but reality and if the power vacuum left by the defeat of the Ottoman Empire were to be taken up by an alliance of Arabs and Jews, then the war in this area would have been for nothing for Britain, especially if they would have all relevant oil reservoirs which were of major importance for the British navy to keep their empire together. The Arabic leader knew before 1917 that an alliance with the Jews were only beneficial. They were not stupid people, they studied in Universities in Europe and especially London so there is no way to think that they could not see a useful alliance from being created.

Now we have to look at this from the view of the British Empire. The creation of a Jewish-Arabic empire would have been the biggest possible catastrophe for them. Not only would they have lost control of the oil fields which they have just stolen from the Germans (no other oil fields were discovered at that time), also the Suez Channel would have been blocked and with it their naval way to India. Added to that came the fear that the Jews would have a leading role in such an empire and it could have been possible that the Jews would have remembered how they were treated by Britain in the prior centuries. One shall also not forget the influence of the Bagdad-Bahn, which was one of the major reasons why Britain "needed" war. This railway would have connected Berlin with the Arabic world and the transportation of oil from Mosul to Germany would have been possible by means way faster than that of ships, no naval power could have competed. In addition, Germany could have supported the Arabic world with industrialization which could have finally led to a German-Arabic-Jewish alliance. There were enough Jews in Germany after all which would have benefited to get their home in Palestine in a peaceful

way with the help of Germany. Of course, this was a scenario which still could have been possible after World War 1 if Britain would not have made sure that the Arabs were agitated against the Jews. The current death and terror in the middle east between Jews and Arabs is directly caused by British policies after World War 1. This also helps to understand that Britain did not really allow the settlement of Jews in Palestine which where to be send there by Nazi Germany in the 1930s (more on that in another Chapter). There was a serious threat to Britain that the Jews actually might see Adolf Hitler himself as the one who delivered them their promised homeland after England broke their promise of the Balfourt Declaration. A turn of events many people today can't even begin to think about. Britain always justified their denial to allow further immigration of Jews into Palestine by saying the political situation in the Arab world would not have allowed this, completely ignoring that they have created this situation willingly in the first place.

Still during all this conflict, the Jews were able to secure Israel on May 14th 1948. Just one year prior there happened massive pogroms with many dead and the Jews finally pushed to receive a serious and safe refuge. Interestingly enough, the Founders of Israel basically followed the decisions of the United Nations, which created the borders as a worst case scenario, even splitting the capital of Jerusalem, create the most devide possible, making sure friction between Arabs and Jews never stops.

10. The 3rd Reich

10.1 The Nazi Regime

Coming to Power

When Adolf Hitler became chancellor of the German Reich on January 30, 1933, he was not yet forty-four years old. The outbreak of war in August 1914 gave Hitler the first real motivation of his life. He became a super-patriot, joined the Sixteenth Volunteer Bavarian Infantry, and served at the front for four years. In his way he was an excellent soldier. Attached to the regimental staff as messenger for the First Company, he was completely happy, always volunteering for the most dangerous tasks. He remained on active service at the front for four years. During that period his regiment of 3,500 suffered 3,260 killed in action, and Hitler himself was wounded twice. These were the only two occasions on which he left the front. In October 1918 he was blinded by mustard gas and sent to a hospital at Pasewalk, near Berlin. When he emerged a month later he found the war finished, Germany beaten, and the monarchy overthrown. He refused to become reconciled to this situation. Unable to accept either defeat or the republic, remembering the war as the second great love of his life (the first being his mother), he stayed with the army and eventually became a political spy for the Reichswehr, stationed near Munich. In the course of spying on the numerous political groups in Munich, Hitler became fascinated by the rantings of Gottfried Feder against the "interest slavery of the Jews." As a result he was asked to join the German Workers' Party, and did so, becoming one of about sixty regular members and the seventh member of its executive committee.

The German Workers' Party had been founded by a Munich locksmith, Anton Drexler, on January 5, 1919, as a nationalist, Pan-German, workers' group. In a few months Captain Ernst Rohm of Franz von Epp's corps of the Black Reichswehr joined the movement and became the conduit by which secret Reichswehr funds, coming through Epp, were conveyed to the party. He also began to organize a strong-arm militia within the group (the Storm Troops, or SA). When Hitler joined in September 1919, he was put in charge of party publicity. Since this was the chief expense, and since Hitler also became the party's leading orator, public opinion soon came to regard the whole movement as Hitler's, and Rohm paid the Reichswehr's funds to Hitler directly. During 1920 the party grew from 54 to 3,000 members; it changed its name to National Socialist German Workers' Party, purchased the *Völkischer Beobachter* with 60,000 marks of General von Epp's money, and drew up its "Twenty-five-Point Program."

The party program of 1920 was printed in the party literature for twenty-five years, but its provisions became more remote from attainment as years passed. Even in 1920, many

of its clauses were put in to win support from the lower classes rather than because they were sincerely desired by the party leaders. These included (1) Pan-Germanism; (2) German international equality, including the abrogation of the Treaty of Versailles; (3) living space for Germans, including colonial areas; (4) German citizenship to be based on blood only, with no naturalization, no immigration for non-Germans, and all Jews or "other aliens" eliminated; (5) all unearned incomes to be abolished, the state to control all monopolies, to impose an excess-profits tax on corporations, to "communalize" the large department stores, to encourage small business in the allotment of government contracts, to take agricultural land for public purposes without compensation, and to provide old-age pensions; (6) to punish all war profiteers and usurers with death; and (7) to see that the press, education, culture, and religion conform to "the morals and religious sense of the German race."

As the party grew, adding members and spreading out to link up with similar movements in other parts of Germany, Hitler strengthened his control of the group. He could do this because he had control of the party newspaper and of the chief source of money and was its chief public figure. In July 1921, he had the party constitution changed to give the president absolute power. He was elected president. As a consequence of this event, the SA was reorganized under Röhm, the word "Socialism" in the party name was interpreted to mean nationalism (or a society without class conflicts), and equality in party and state was replaced by the "leadership principle" and the doctrine of the elite. The next two years the party passed through a series of crises of which the chief was the attempted Putsch of November 9, 1923. During this period all kinds of violence and illegality, even murder, were condoned by the Bavarian and Munich authorities. As a result of the failures of this period, especially the abortive Putsch, Hitler became convinced that he must come to power by legal methods rather than by force. He broke with Ludendorff and ceased to be supported by the Reichswehr; he began to receive his chief financial support from the industrialists; he made a tacit alliance with the Bavarian People's Party by which Prime Minister Heinrich Held of Bavaria raised the ban on the Nazi Party in return for Hitler's repudiation of Ludendorff's anti-Christian teachings; and Hitler formed a new armed militia (the SS) to protect himself against Rohm's control of the old armed militia (the SA). (The SS and SA were of course also needed as protection against the Communists, which had far greater numbers in the first years)

In the period 1924-1930 the party continued, without any real growth, as a "lunatic fringe," subsidized by the industrialists. Among the chief contributors to the party in this period were Carl Bechstein (Berlin piano manufacturer), August Borsig (Berlin locomotive manufacturer), Emil Kirdorf (general manager of the Rhenish-Westphalian Coal Syndicate), Fritz Thyssen (owner of the United Steel Works and president of the German Industrial Council) and Albert Vögler (general manager of the Gelsenkirchen Iron and Steel Company and formerly general manager of United Steel Works). During this period neither Hitler nor his supporters were seeking to create a mass movement. That did not come until 1930. But during this earlier period the party itself was steadily centralized,

and the Leftish elements (like the Strasser brothers) were weakened or eliminated. In April 1927, Hitler spoke to 400 industrialists in Essen; in April 1928, he addressed a similar group of landlords from east of the Elbe; in January 1932 came one of his greatest triumphs when he spoke for 3 hours to the Industrial Club of Düsseldorf and won support and financial contributions from that powerful group. By that date he was seeking to build his movement into a mass political party capable of sweeping him into office. This project failed. As we have indicated, by the end of 1932 much of the financial support from industry had been cut off by Papen, and party membership was falling away, chiefly to the Communists. To stop this decline, Hitler agreed to become chancellor in a Cabinet in which there would be only three Nazis among eleven members.

Papen hoped in this way to control the Nazis and to obtain from them the popular support which Papen had so sorely lacked in his own chancellorship in 1932. But Papen was far too clever for his own good. He, Hugenberg, Hindenburg, and the rest of the intriguers had underestimated Hitler. The latter, in return for Hugenberg's acceptance of new elections on March 5, 1933, promised that there would be no Cabinet changes whatever the outcome of the voting. In spite of the fact that the Nazis obtained only 44 per cent of the ballots in the new election, Hitler became dictator of Germany within eighteen months. One of the chief reasons for this success rests on the position of Prussia within Germany. Prussia was the greatest of the fourteen states of Germany. Covering almost two-thirds of the country, it included both the great rural areas of the east and the great industrial areas of the west. Thus it included the most conservative as well as the most progressive portions of Germany. While its influence was almost as great under the republic as it had been under the empire, this influence was of quite a different character, having changed from the chief bulwark of conservatism in the earlier period to the chief area of progressivism in the later period. This change was made possible by the large numbers of enlightened groups in the Rhenish areas of Prussia, but chiefly by the fact that the so-called Weimar Coalition of Social Democrats, Center Party, and Liberal Democrats remained unbroken in Prussia from 1918 to 1932. As a consequence of this alliance, a Social Democrat, Otto Braun, held the position of prime minister of Prussia for almost the whole period 1920-1932, and Prussia was the chief obstacle in the path of the Nazis and of reaction in the critical days after 1930. As part of this movement the Prussian Cabinet in 1930 refused to allow either Communists or Nazis to hold municipal offices in Prussia, prohibited Prussian civil servants from holding membership in either of these two parties, and forbade the use of the Nazi uniform.

This obstacle to extremism was removed on July 20, 1932, when Hindenburg, by presidential decree based on Article 48, appointed Papen commissioner for Prussia. Papen at once dismissed the eight members of the Prussian parliamentary Cabinet and granted their governmental functions to men named by himself. The dismissed ministers were removed from their offices by the power of the army, but at once challenged the legality of this action before the German Supreme Court at Leipzig. By its verdict of October 25, 1932, the court decided for the removed officials. In spite of this decision, Hitler,

after only a week in the chancellorship, was able to obtain from Hindenburg a new decree which removed the Prussian ministers from office once more and conferred their powers on the federal vice-chancellor, Papen. Control of the police administration was conferred on Hermann Göring. The Nazis already held, through Wilhelm Frick, control of the Reich Ministry of Interior and thus of the national police powers. Thus Hitler, by February 7th, had control of the police powers both of the Reich and of Prussia.

Using this advantage, the Nazis began a twofold assault on the opposition. Göring and Frick worked under a cloak of legality from above, while Captain Rohm in command of the Nazi Party storm troops worked without pretense of legality from below. All uncooperative police officials were retired, removed, or given vacations and were replaced by Nazi substitutes, usually Storm Troop leaders. On February 4, 1933, Hindenburg signed an emergency decree which gave the government the right to prohibit or control any meetings, uniforms, or newspapers. In this way most opposition meetings and newspapers were prevented from reaching the public. This attack on the opposition from above was accompanied by a violent assault from below, carried out by the SA. In desperate attacks in which eighteen Nazis and fifty-one opposition were killed, all Communist, most Socialist, and many Center Party meetings were disrupted. In spite of all this, it was evident a week before the election that the German people were not convinced. Accordingly, under circumstances which are still mysterious, a plot was worked out to burn the Reichstag building and blame the Communists (Note: Thanks to post-war propaganda, people just say that the Reichstag fire was done by the Nazis (Because saying literally anything against the Nazis without proof is still accepted as truth). In reality, no such proof exists and evidence indicates that the high-ranking NSDAP members were in panic expecting a communist coup.). Most of the plotters were homosexuals and were able to persuade a degenerate moron from Holland named Van der Lubbe to go with them. After the building was set on fire, Van der Lubbe was left wandering about in it and was arrested by the police. The government at once arrested four Communists, including the party leader in the Reichstag (Ernst Torgler). The day following the fire (February 28, 1933) Hindenburg signed a decree suspending all civil liberties and giving the government power to invade any personal privacy, including the right to search private homes or confiscate property. At once all Communist members of the Reichstag, as well as thousands of others, were arrested, and all Communist and Social-Democrat papers were suspended for two weeks.

In spite of these drastic measures, the election of March 5, 1933, was a failure from the Nazi point of view. Hitler's party received only 288 of 647 seats, or 43.9 percent of the total vote. The Nationalists obtained only 8 percent. The Communists obtained 81 seats, a decrease of 19, but the Socialists obtained 125, an increase of 4. The Center Party fell from 89 to 74, and the People's Party from 11 to 2. The Nationalists stayed at 5: seats. In the simultaneous election to the Prussian Diet, the Nazis obtained 211 and the Nationalists 43 out of 474 seats. The period from the election of March 5, 1933, to the death of Hindenburg on August 2, 1934, is generally called the Period of Coordination

(Gleichschaltung). The process was carried on, like the electoral campaign just finished, by illegal actions from below and legalistic actions from above. From below, on March 7th throughout Germany, the SA swept away much of the opposition by violence, driving it into hiding. They marched to most offices of trade unions, periodicals, and local governments, smashing them up, expelling their occupants, and raising the swastika flag. Minister of the Interior Wilhelm Frick condoned these actions by naming Nazis as police presidents in various German states (Baden, Saxony, Württemberg, Bavaria), including General von Epp in Bavaria.

These men then proceeded to use their police powers to seize control of the apparatus of state government. The new Reichstag met on March 23rd at the Kroll Opera House. In order to secure a majority, the Nazis excluded from the session all of the Communist and 30 Socialist members, about 109 in all. The rest were asked to pass an “enabling act” which would give the government for four years the right to legislate by decree, without the need for the presidential signature, as in Article 48, and without constitutional restrictions except in respect to the powers of the Reichstag, the Reichsrat, and the presidency.

By using further schemes on the way to power, by August 1934, the Nazi movement had reached its goal—the establishment of an authoritarian state in Germany. The word used here is “authoritarian,” for, unlike the Fascist regime in Italy, the Nazi regime was not totalitarian. It was not totalitarian because two members of the Quartet were not coordinated, a third member was coordinated only incompletely and, unlike Italy or Soviet Russia, the economic system was not ruled by the state but was subject to “self-rule.” All this is not in accord with popular opinion about the nature of the Nazi system either at the time it was flourishing or since. Newspaper men and journalistic writers applied the term “totalitarian” to the Nazi system, and the name has stuck without any real analysis of the facts as they existed. In fact, the Nazi system was not totalitarian either in theory or in practice.

This movement was built up by the Quartet as a counterrevolutionary force against, first, the Weimar Republic, internationalism, and democracy, and against, second, the dangers of social revolution, especially Communism, engendered by the world economic depression. This movement, once it came to power at the behest of the Quartet, took on life and goals of its own quite different from, and, indeed, largely inimical to, the life and goals of the Quartet. No showdown or open conflict ever arose between the movement and the Quartet. Instead, a *modus vivendi* was worked out by which the two chief members of the Quartet, industry and the army, obtained their desires, while the Nazis obtained the power and privileges for which they yearned. The seeds of conflict continued to exist and even to grow between the movement and its creators, especially because of the fact that the movement worked continually to create a substitute industrial system and a substitute army parallel to the old industrial system and the old Reichswehr. Here again the threatening conflict never broke out because the Second World War had the double result that it demonstrated the need for solidarity in the face of the enemy, and

it brought great booty and profits to both sides—to the industrialists and Reichswehr on one hand and to the party on the other hand.

Except for the rise of the party, and the profits, power, and prestige which accrued to the leaders (but not to the ordinary members) of the party, the structure of German society was not drastically changed after 1933. It was still sharply divided into two parts—the rulers and the ruled.

10.2 Ideology

Certain historical eras are timeless in their facility to inspire curiosity and imagination. Ancient Egypt and Rome recall grandeur and power while the Renaissance stands as a marvelous expression of human creativity. Napoleonic France demonstrates that one man's purpose can define an age, and the American Wild West personifies the ruggedness and adventurous spirit of the pioneer generations that conquered a continent. There is much to be learned from milestones of civilization, though people interpret events differently, conforming to their particular beliefs and interests. A comparative newcomer to the chronology of significant epochs is National Socialist Germany. Richly intriguing and not without arousing a sense of awe, she exerted tremendous influence in her time. The antithesis of democratic values in a century witnessing the triumph of democracy, Germany went down fighting. The task of recording the history of the period is therefore largely in the hands of the country's former enemies. One of the flaws in their annals is the superficial assumption that National Socialism was a rootless political program and the product of one man's world view. There was in fact a conscious endeavor by the National Socialists to align policies with German and European customs and practices. They believed their goals corresponded to the natural progression of their continent and found the diametrical Western-democratic concept to be foreign and immoral.

A political creed advocating freedom of choice, democracy ascended not through popular appeal, but through overwhelming economic and military force. This in no sense diminishes its claim to moral leadership in the realm of statecraft. Against somewhat novel democratic beliefs in multiculturalism, majority rule, feminism, universal equality and globalization once stood social and political conventions of Europe that had matured over centuries of conflict and compromise, of contemplation and discovery. The conviction that a nation possesses its own ethos, a collective personality based on related ethnic heritage and not just on language or environment, has no merit in democratic thinking; nor does the belief in a natural ranking within mankind determined by performance. During the first half of the 20th Century, two world wars ultimately imposed democratic governments on European states that had been pursuing a separate way of life. One of the most successful weapons in the arsenal of democracy was atrocity propaganda. It demonized the enemy, motivating Allied armies and promoting their cause abroad. It justified the most ruthless means to destroy him. It defined the struggle as one of good

versus evil, simplifying understanding for the populations of the United States and the British Commonwealth. The atrocities that Allied propagandists attribute to Germany, the backbone of resistance against Western democracy, remain lavishly publicized to this day. Conducted more zealously by the entertainment industry than by historians, this is largely an emotional presentation. The lurid appeal negates for the future a logical, impartial evaluation of political alternatives. This is unfortunate, since comparison is one of life's best tools for learning.

It is a common trait of human nature to often judge the validity of an argument less by what is said than by who is saying it. Casting doubt on the personal integrity of an opponent can be more influential than rational discussion to refute his doctrines. In Adolf Hitler, Germany had a wartime leader whose concept of an authoritarian, socialist state represented a serious challenge to democratic opinion. Indignant that anyone could harbor such views in so enlightened an age, and especially that he could promote them so effectively, contemporary historians provide a myriad of theories for his dissent. Thus we read that Hitler's obsession with black magic and astrology impelled him to start the war, he was mentally deranged due to inbreeding in the family, he was embarrassed by his Jewish ancestry, he was homosexual, he had a dysfunctional childhood, he became frustrated by failing as an artist, he was born with underdeveloped testicles and so forth.

It would be more useful for the authors of such legends to question for example why, after the victorious Allies established democratic governments throughout Europe in 1919, this state form became practically extinct there in 20 years. Russia, Italy, Hungary, Poland, Lithuania, Austria, Germany, Greece, Spain, Slovakia, and soon thereafter France adopted authoritarian regimes. Several of these countries closed ranks with Germany. Hitler gave viable, popular political form to a growing anti-liberal tendency on the continent. Volunteers from over 30 nations enlisted to fight in the German armed forces during World War II. Only by the sword did the Western democracies and their Soviet ally bring them to heel. Surely the motives of such men merit investigation. Simply dismissing the leader who harnessed and directed these dynamic human resources as a demented megalomaniac is no explanation.

During the 1990's, Russian historians gained temporary access to previously classified Soviet war archives. In recent decades, the British government has gradually released long-sealed, relevant papers to the Public Record Office. Their perusal provides a more balanced insight into the causes of the war and the aims of world leaders involved. This study draws on the published research of primarily German historians, minimizing sources in print in English. This is to provide readers in America and in the United Kingdom with material otherwise unavailable to them. Liberally quoting from German periodicals circulated during the Hitler era will acquaint the student of history with essential elements of National Socialist ideology just as it was presented to the German public. No one can accurately judge the actions of a people during a particular epoch without grasping the spirit of the times in which they lived. The goal of this book is to contribute to this understanding.

The Rise of Liberalism

National Socialism was not a spontaneous phenomenon that derailed Germany's evolution and led the country astray. It was a movement anchored deeply in the traditions and heritage of the German people and their fundamental requirements for life. Adolf Hitler gave tangible political expression to ideas nurtured by many of his countrymen that they considered complimentary to their national character. Though his "opposition" party's popular support was mainly a reaction to universal economic distress, Hitler's coming to power was nonetheless a logical consequence of German development. True to the nationalist trend of his age, Hitler promoted Germany's selfsufficiency and independence. His party advocated the sovereignty of nations. This helped place the German realm, or Reich, on a collision course with a diametrical philosophy of life, a world ideology established in Europe and North America for well over a century: liberalism. During Hitler's time, it already exercised considerable influence on Western civilization. It was an ambitious ideal, inspiring followers with an international sense of mission to spread "liberty, equality, and brotherhood" to mankind. National Socialism rejected liberal democracy as repugnant to German morality and to natural order.

Liberalism had been crucial for humanity's transition into the modern age. During medieval times, feudalism had prevailed in Europe. Local lords parceled land to farmers and artisans in exchange for foodstuffs, labor and military service. This fragmented political system, void of central government, gradually succumbed to the authority of kings. Supported by narrow strata of noblesse and clergy, the royals became "absolute monarchs", supposedly ruling by divine right. Common people found little opportunity for advancement. Only those choosing a career with the church received an education. Kingdoms provided the basis for modern central governments but contributed little else to progress. The Revival of Learning, with its interest in surviving literature from the Ancient World, led men to contemplate alternatives to the socially and politically stagnant royal regimens. The Renaissance was Europe's intellectual and cultural rebellion against "absolute monarchy" and its spiritual ally, the clergy. Defying religious superstition and intolerance, the great minds of the age exalted reason above all. Awareness of the common man's latent mental aptitude animated respect for the individual. Liberalism emerged as his liberator from the bondage of absolutism. It defined the state's primary role as guarantor of one's freedom and right to realize full potential in life.

This concept acquired political form during the 18th Century. Discoveries by British and European inventors provided a suitable compliment to the new emphasis on intellect. The American Revolution of 1776 - 1783, waged against the English Crown, founded the first modern state based on liberal principles. It represented a near reversal in the roles of government and governed: The United States Constitution included a Bill of Rights that placed significant limitations on the authority of the elected representatives rather than on the population. In theory the people themselves ruled. The French Revolution introduced democracy to Europe and opened a promising field of opportunity for the common man.

The Declaration of Human Rights guaranteed the French citizen freedom of thought and expression, private ownership and security. The new Republic released the French peasant from bondage and dismantled royal restrictions on commerce. Republican France fought a series of wars against European monarchies. The French army, comprising all strata of society, mirrored the revolutionary spirit that dethroned absolutism. The Republic's minister of war, Nicolas Carnot, held military commanders to standards of conduct toward their subordinates. When the elder General Philippe de Custine once threatened deserters with the firing squad, Carnot rebuked him, explaining that "free citizens of France obey orders not out of fear, but because of confidence in their brothers" in command.

In a 1940 essay, the German historian Bernhard Schwertfeger analyzed the French army: "In the absolutist state structure of the 18th Century, the population customarily regarded grand politics with indifference. The revolution in France drew the people into its vortex. . . . One of the chief principles of the French Revolution was that in case of war everyone had to defend the fatherland. The entire resources of the nation were therefore available in an instant. While wars were previously just private affairs of the princes, now they evolved into a question of survival for the entire nation." Napoleon Bonaparte became emperor of France in 1804, but retained liberal principles adopted by the army. He arranged for soldiers demonstrating leadership qualities to be promoted regardless of birth or status. Since two thirds of France's imperial officers had left service from the time of the revolution, positions of command became open to men displaying ability. Napoleon granted field officers greater latitude in judgment calls during combat.

In October 1806, the French citizens' army routed Germany's elite, the Prussian and Saxon armies, at Jena and Auerstadt. The Prussian infantry was disciplined and obedient with a defined command structure, while Napoleon made tactical decisions as the fighting developed and relied on the initiative of subordinates to outmaneuver the enemy as opportunities arose. At Auerstadt, the German frontline troops resisted bravely for hours, while 18,000 reserves stood idly by because there were no orders from the commander-in-chief, the Duke of Brunswick, to advance. None of their officers displayed independent judgment and led the men forward. Witnessing the German defeat was the infantry Captain Neidhard von Gneisenau. His recommendations for reforming the Prussian army, summarized the following July, maintained that not superior strategy, but a new philosophy of life was the genesis of the enemy's success: "The revolution has awakened all the power of the nation and given each an appropriate field of endeavor. In this way heroes came to lead the army, statesmen the loftiest administrative posts, and finally at the head of a great people the greatest man among them. What limitless power lies undeveloped and unused within the womb of a nation! . . . Why do the nobles not choose this source to increase their power a thousand-fold, and open the portal of triumph for the ordinary citizen, the portal through which now only the nobility may pass? The new age needs more than ancient names, titles, and parchment. It needs fresh deeds and vitality!"

Gneisenau defined how to overcome France's control of Europe: "Should the other states

want to restore the balance, they must open the same resources and utilize them. They must embrace the consequences of the revolution as their own." At the Treaty of Tilsit, Bonaparte had allowed the Prussian king to maintain just 42,000 men under arms. This drastically reduced the number of active officers; of 143 generals only eight remained in service. Gneisenau and General Gerhard Johann von Scharnhorst restructured the armed service free from the interference of a professional military hierarchy. Local militias became the nucleus of a national army. The broad participation of the public unavoidably began shifting political power from the monarchy to the people. As the king reviewed the first militia battalions, he remarked, "There below marches the revolution." At this time, German patriots such as Freiherr von Stein, Ernst Moritz Arndt and Gottfried Fichte promoted civil reform, partially adopting liberal values. A populist revolutionary movement led to the Prussian- German uprising against Napoleon and drove the French out. Unlike France in 1789, the Germans, not consolidated under a central government, did not revolt against the royal house. The German patriots advocated unity among their countrymen. The goal was to reform and not overthrow the existing order. Thus, after a limited revolution in 1848, Germany evolved into a constitutional monarchy.

German reforms were, of course, a necessity. A foreign invader had conquered and partially occupied the country. Napoleon had ruthlessly drained Prussia of resources; three out of four children born in Berlin under French rule died of malnourishment. The failure of the aristocracy to defend the land revealed the need for a revised state form, and German thinkers recognized the role that the population must now play as a decisive military and political factor. They acknowledged the potential of the individual. Maintaining faith in state authority, however, the Germans did not envision government purely as the people's servant. Liberalism nonetheless became popular in Germany during the 19th Century. It eclipsed the influence of the German intellectual movement, which groped for a balance between freedom and authority. This latent force became a cornerstone of Hitler's ideology in the time to come.

Democracy

As Europe lost confidence in the feudal-monarchical system that had ruled for centuries, liberalism offered a political alternative. Its great legacy was making people conscious of their individual human rights, regardless of birth, and their right to representation in government. To many, the democratic concept became synonymous with liberty itself. Hitler gained power in Germany in 1933 through constitutional means, yet campaigned to eradicate democracy. The National Socialists interpreted individual freedom differently, in a way which they argued was more realistic for Germany's circumstances. National Socialist propagandists publicly acknowledged the contribution of liberalism. Writing in *Die SA* (The S.A.), the weekly magazine of the party's storm troops, Dr. Theo Rehm cited liberalism's decisive role in leading Germany into the modern age: "Thanks to the triumph of liberal thinking, the middle class and other social strata experienced a major

spiritual and economic impetus. Many valuable elements that would otherwise have lain fallow and undiscovered were unleashed to the benefit of all and put into action. It should also not be forgotten that after the wars of liberation (against Napoleon), the best representatives of German liberalism stood at the vanguard of the struggle for Germany's unity against the interests of the egocentric princely dynasties."

Rehm nevertheless condemned the basic premise of liberalism: "The absolute freedom of liberalism will ultimately jeopardize the benefits of community life for people in a state. Attempting to place the individual ahead of the nation is wrong. . . . For the individual to live, the nation first must itself live; this requires that one cannot do what he wants, but must align himself with the common interests of the people and accordingly accept limitations and sacrifices."

Hitler advocated an organic state form. Like a biological organism, the government organizes society so that every component performs an individual function for the common good. No single stratum elevates itself to the detriment of the others. The organism prospers as an entity. In this way, so does each individual person or class. Society works in harmony, healthy and strongly unified against external influences or intrusion. As defined in the periodical *Germanisches Leitheft* (Germanic Guidelines), "Every individual element within the Reich preserves its independent character, yet nonetheless subordinates itself to its role in the community." In Hitler's words from a November 1930 speech, "Proper is what serves the entire community and not the individual.... The whole is paramount, is essential. Only through it does the individual receive his share in life, and when his share defies the laws of the entity, then human reason dictates that the interest of the whole must precede his interests."

To organize persons into a cooperative, functional society requires that its members renounce certain personal ambitions for the welfare of others. Mutual concessions signify a willingness to work together. The common goals of society, such as defense, trade, prosperity, companionship, and securing nourishment, people achieve through compromise for the good of all. Hitler believed that a nation disregarding this will not survive. He declared in an address in April 1937, "This state came into being, and all states come into being, through overcoming interests of pure personal will and individual selfishness. Democracy steers recklessly toward placing the individual in the center of everything. In the long run, it is impossible to escape the crisis such a conflict will produce." In *Die SA*, Rehm warned that without controls, the free reign of personal ambition leads to abuse: "In as much as liberalism was once of service in promoting the value of individual initiative and qualities of leadership, its ideals of freedom and personality have degenerated into the concept of downright arbitrary conduct in personal life, but even more so in economic and commercial life."

An article in the May 1937 *Der Schulungsbrief* (Instructional Essays), a monthly ideological journal, discussed liberalism's naive faith in "the natural goodness of the free personality." The author, Eberhard Kautter, explained the logic of how this applies to business life in a democracy: "Liberalism assumes that one must simply leave economic

arrangements to the individual active in commerce as he pursues his interests undisturbed.... The liberal social principle is based on the expectation that the liberation of the individual, in harmony with the free play of forces, will lead to independently formed and fair economic conditions and social order." The German Institute for the Science of Labor concluded in its 1940/41 yearbook that liberal economic policies bring about "the destruction of any orderly society," since persons in commerce "are released from every political and social responsibility." Germanisches Leitheft saw in the free play of forces an unbridled pursuit of personal wealth that contradicts the spirit of an organized society: "There is no longer a sacred moral bonding of the individual person to a community, and no bond of person to person through honor or personal trust. There is no mutual connection or relationship among them beyond purely material, self-seeking interests; that is, acquiring money." The journalist Giselher Wirsing cited the United States, the paragon of capitalist free enterprise, as an example of how liberal economic policies gradually create social imbalance with crass discrepancies between want and abundance: "Even in America herself, Americanism no longer spreads prosperity and improves the standard of living of the broad masses, but only maintains the lifestyle of the privileged upper class." German study on the depression-era United States, *Was will Roosevelt? (What Does Roosevelt Want?)*, added this: "So in the USA, one finds along with dazzling displays of wealth in extravagant, parvenu luxury, unimaginable poverty and social depravity. ... In the richest country in the world, the vaunted paradise of democracy, tens of thousands of American families endure the most meager existence. Millions of children and other citizens are underfed."

As for the parliamentary system of representative government, the same publication condemned it as follows: "The demand of the people to participate in government was justifiable and understandable in the new age, when politics was no longer purely an affair of the ruling dynasties. The damaging influence and weakness of the parliamentary form of government soon became apparent. . . . The participation of the people exists only on paper. In reality, career politicians get regularly elected to parliament through various parties they founded. They have made a novel occupation out of this activity. They focus not on the welfare of the people and of the state, but on their personal interests or certain financial circles standing behind them."

Hitler argued that the absence of sufficient state controls in a democracy enables the wealthy class to manipulate the economy, the press and elected representatives for its own gain. A widening gulf between poverty and affluence develops, gradually dragging the working class to ruin. Addressing Berlin armaments workers in December 1940, he claimed that the public's voice in democratic systems is an illusion: "In these countries, money in fact rules. That ultimately means a group of a few hundred persons who possess enormous fortunes. As a result of the singular construction of the state, this group is more or less totally independent and free.... Free enterprise this group understands as the freedom not only to amass capital, but especially to use it freely; that is, free from state or national supervision. (Note: The fight against these few, super rich capitalists

is the real reason why National Socialism is so utterly condemned to this day.)

"So one might imagine that in these countries of freedom and wealth, unheard-of public prosperity exists. ... On the contrary, in those countries class distinctions are the most crass one could think of: unimaginable poverty on one hand and equally unimaginable riches on the other. These are the lands that control the treasures of the earth, and their workers live in miserable dumps. ... In these lands of so-called democracy, the people are never the primary consideration. Paramount is the existence of those few who pull the strings in a democracy, the several hundred major capitalists. The broad masses don't interest them in the least, except during elections."

Die SA discussed another fault of parliamentary systems particularly irksome to Hitler: "There is practically no responsibility in a democracy. The anonymity of the majority of the moment decides. Government ministers are subject to it, but there is no opportunity to hold this majority responsible. As a result, the door is open to political carelessness and negligence, to corruption and fiscal mismanagement. The history of democracies mostly represents a history of scandals." According to *Was will Roosevelt?*, "Corruption has spread so much that...no American citizen gets upset anymore over incidents of shameless corruption in civil service, because mismanagement is regarded as a natural phenomenon of government." Hitler once recalled how a visit in his youth to the Austrian parliament revealed "the obvious lack of responsibility in a single person." *Germanisches Leitheft* stated, "Absence of responsibility is the most striking indication of a lack of morality."

Democracy failed because it was a product of liberalism. Focus on the individual led to "self-idolatry and renunciation of the community, the unraveling of healthy, orderly natural life," according to the German army brochure *Wofuer kaempfen wir?* (What do we fight for?). "The inordinate value placed on material possessions from the economic standpoint formed social classes and fractured the community. Not those of good character enjoyed greater respect, but the rich. . . . Labor no longer served as a means to elevate the worth of the community, but purely one's own interests. Commerce developed independently of the people and the state, into an entity whose only purpose was to pile up fortunes." The periodical *NS Briefe* (NS Essays) summarized, "Freedom cannot be made identical to arbitrariness, lack of restraint and egoistic inconsideration."

Hitler regarded liberalism's de-emphasis on communal responsibility as an obstacle to national unity. He endorsed the words of the statesman Niccolo Machiavelli: "It is not the well-being of the individual, but the well-being of all that makes us great." Hitler took the rein of government in hand in a liberal political climate. To overcome the liberal ideal, which for many was freedom personified, he introduced an alternative state form. It created opportunities for self-development, but also instructed Germans in obedience. In so doing, Hitler eventually achieved the parity between individual liberty and state authority long contemplated by the German intellectual movement of the previous century.

The Authoritarian State

The National Socialists described their government as an authoritarian state. This was roughly a compromise between the liberal concept that administrations exist to serve the public, and absolutism's doctrine granting the head of state supreme authority to make political decisions. It disallowed the majority's voice in government, but promoted the welfare of diverse social and economic groups evenly. Die SA offered this definition of the authoritarian state: "It rests in the hands of the leader alone. He forms and directs his cabinet which makes policy decisions. But he also bears sole accountability to the nation for his actions. The diverse interests of individual strata of society he brings into harmony and balances in conformity with the general interests of the people. This is accomplished through the endeavors of representatives who work within their group's respective occupations, but possess no political authority. In this way, conflicts of interest and class struggle are eliminated, as is unilateral control by any commercial or political special interest group."

In 1936, Hitler stressed that "a regime must be independent of such special interests. It must keep focused on the interests of everyone before the interests of one." With respect to commerce, he announced that he intended "to crush the illusion that the economy in a state can conduct an unbridled, uncontrollable, and unsupervised life of its own." As Fuhrer, or leader of the nation, he reserved the right to take whatever action he considered appropriate. During a wartime speech he told military personnel, "When I recognize a concept as correct, I not only have the duty to convey this to my fellow citizens, but moreover the duty to eliminate contrary interpretations."

Under National Socialism, the head of state wielded supreme power. This was with the understanding that there would be no favoritism directing public affairs, and that "along with the loftiest unlimited authority, the leader bears the final, heaviest responsibility," as stated in NS Briefe. Rehm offered this explanation in Die SA: "This system differs from dictatorship in that the appointed leader accepts responsibility before the people and is sustained by the confidence of the nation. . . . His actions insure that the leadership of the state is in harmony with the overall interests of the nation and its views. The essence of this system is overcoming party differences, formation of a genuine national community, and the unsurpassed greatness of the leadership as prerequisites. The leader of the authoritarian state personifies the principle of Friedrich the Great: I am the first servant of the state." Dr. Joseph Goebbels, in charge of propaganda in Hitler's cabinet, contrasted democracy with the authoritarian state in a speech to foreign journalists in Geneva in September 1933: "The people and the government in Germany are one. The will of the people is the will of the government and vice versa. The modern state form in Germany is a refined type of democracy, governed by authoritarian principles through the power of the people's mandate. There is no possibility that through parliamentary fluctuations, the will of the people can somehow be swept aside or rendered unproductive. . . . The principle of democracy is completely misunderstood if one concludes from it

that nations want to govern themselves. They can't do it nor do they want to. Their only wish is that the regime governs well."

The authoritarian state form required that only persons exhibiting natural leadership ability assume positions of responsibility. Hitler spoke of the importance of finding such individuals during a speech in Berlin in February 1933: "We want to re-establish the value of personality as an eternal priority; that is, the creative genius of the individual. In this way, we want to sever ties with any appearance of a listless democracy. We want to replace it with the timeless awareness that everything great can only spring from the force of the individual personality, and that everything destined to last must again be entrusted to the abilities of the individual personality."

National Socialism adopted liberalism's practice of creating opportunities for advancement for persons in the community. It disputed however, the population's right and ability to select leaders. Democracy allows the voters to choose their representatives. As a safeguard against tyrants, the parliamentary system favors moderation. It supposedly frowns on assertive persons accustomed to independent initiative. Hitler argued that this practice "thwarts the freedom of action and creative possibilities of the personality and shackles any talent for leadership." He later wrote that the "true leader will distance himself from political activity that does not consist for the most part of creative achievement and industriousness." Conversely, "timid do-nothings and blabbermouths," especially those fearing decision-making and accountability, will seek office:³⁸ "Democracy is the mortal enemy of all talent."

When Goebbels announced at the 1933 Berlin radio exhibition that Hitler's revolution has "dethroned unbridled individualism," this did not imply curtailing freedom for personal development. Hitler clarified his party's position in a January 1941 address: "Our ideal is the nation. In it we behold a mental and physical community which providence created and therefore wanted, which we belong to. Through it alone we can control our existence. ... It represents a triumph over individualism, but not in the sense that individual aptitude is stifled or the initiative of the individual is paralyzed; only in the sense that common interests stand above individual freedom and all individual initiative." The National Socialist government assigned German schools to train the country's cadre of future leaders. *Der Schulungsbrief* defined it in this way: "Education receives the twofold task of molding strong personalities and committing them to community thinking. The primary objective of ideological instruction is formation of a solid, community-oriented viewpoint. Building assertive personalities demands steady competitive performance, selecting the most accomplished, and setting standards of achievement according to questions of character, will and ability. Only achievement justifies advancement." Opportunities for self-development in the authoritarian state conformed to the National Socialist concept of individual freedom: "Being free is not doing what you want, but becoming what you are supposed to be."

Socialism

There is considerable difference in the socialism of Hitler and that of Marxist doctrine. Die SA explained that the objective of a socialist state is "not the greatest possible good fortune of the individual or a particular party, but the welfare of the whole community." Marx's purely economic socialism "stands against private property... and private ownership." Marx saw socialism as international, unifying the world's working class people who were social pariahs in their own country. He therefore considered nationalism, advocating the interests and independence of one's own nation, incompatible with socialist ideals. Die SA argued that since socialism really stands for collective welfare, "Marxist socialism divides the people and in this way buries any prerequisite for achieving genuine socialist goals." Hitler saw nationalism as a patriotic motive to place the good of one's country before personal ambition. Socialism was a political, social and economic system that demanded the same subordination of self-interest for the benefit of the community. As Hitler said in 1927, "Socialism and nationalism are the great fighters for one's own kind, are the hardest fighters in the struggle for survival on this earth. Therefore they are no longer battle cries against one another." Die SA summarized, "Marxism makes the distinction of haves and have-nots. It demands the destruction of the former in order to bring all property into possession of the public. National Socialism places the concept of the national community in the foreground. . . . The collective welfare of a people is not achieved through superficially equal distribution of all possessions, but by accepting the principle that before the interests of the individual stand those of the nation."

It should be noted that in the Soviet Union, the flagship Marxist state, the regime dealt with the non-proletariat far more harshly than what downtrodden labor suffered during the Industrial Revolution in Western countries. The Soviet police official Martyn Latsis for example, defined the criteria for trials of dissidents: "Don't seek proof of whether or not he rose against the Soviet with weapon or word. You must first ask him what class he belongs to, what extraction he is, what education and what occupation he has. These questions should decide the fate of the accused." The Russian historian Dimitri Volkogonov wrote that Soviet purges targeted "the most energetic, most capable, frugal and imaginative" elements in society. Systematic mass starvation, imprisonment, deportation, and execution in the Marxist utopia so decimated the Russian population that the Soviet dictator, Joseph Stalin, forbade the 1937 census from being published. Der Schulungsbrief stated in a 1942 issue, "The senseless extermination of all intelligence and talent, replacing every impulse of personality with passive herd mentality, has wiped out any natural creative aptitude" in Russia.

Hitler regarded Marxist economic policy as no less repugnant to genuine socialism as the concept of class warfare was. Marx advocated deprivatizing all production and property. State control would supposedly insure equitable distribution of manufactured goods and foodstuffs, and protect the population from capitalist exploitation. Hitler advocated private ownership and free enterprise. He believed that competition and opportunities for

personal development encourage individual initiative. He said in 1934, "on one hand, the free play of forces must be guaranteed as broad a field of endeavor as possible. On the other, it should be stressed that this free play of forces must remain for the person within the framework of communal goals, which we refer to as the people and the national community. Only in this way can we attain ... the highest level of human achievement and human productivity."

Der Schulungsbrief dismissed Marx's disparate clamor for equitable shares in national assets and equal pay for all work as stifling to personal motivation: "The man capable of greater achievement had no interest in realizing his full potential, when he saw that the lazy man sitting next to him received just as much as he himself. . . . Any initiative to do more and willingness to accept responsibility could only die out under this system."

Well before taking power, Hitler combated a tendency toward Marxist socialism in his own movement. In November 1925, district party leaders in Hannover proposed dividing large farms and distributing the land among farmhands. The state would require everyone employed in the agrarian economy to join a cooperative. Independent sale of foodstuffs would be illegal. "Critical industries" such as power companies, banks and armaments manufacturers were to yield 51 percent of the shares as "property of the nation," in other words become state controlled. The program also recommended that the government acquire 49 percent of other large business enterprises. In May 1930, Hitler met with a Berlin subordinate, Otto Strasser, who supported a similar program. Hitler told him his ideas were "pure Marxism" and would wreck the entire economy.⁷³ He bounced Strasser out of the party that July, underscoring his intolerance of Marxist socialism. Hitler considered the opportunity to acquire wealth and property an incentive for "eternal, enterprising personal initiative." Enabling talented individuals to realize their full potential in life also elevated the society they belong to and serve.

Nationalism

A definitive characteristic of National Socialism was its rejection of foreign beliefs, customs and ideas within the German community. It holds that a nation consists of its blood and soil: an ethnically homogenous people and the land they cultivate, the domain that provides shelter, refuge and nourishment from the soil where their ancestors lie buried. Through self-development will a people realize their potential; through awareness of their intrinsic identity will generations fulfill the role nature and providence intended. The NSDAP held that every nation exhibits a collective personality. The influence of foreign peoples whose life experience, environment and ancestry formed them differently will debauch the nation and is hence immoral. Leers saw the introduction of liberalism and Marxism to Germany during the 19th Century as "threatening to destroy our own values.... The history of the German people is a centuries-long struggle against spiritual foreign penetration into the realms of politics, law, tradition and our way of life, a struggle against the destruction of our race and perversion of our souls."

The trend toward German independence of custom and spirit became more tangible in the 18th Century. It contributed to the wave of nationalism prevalent in the new German Reich founded in 1871. Rediscovered in the 15th Century, publication of the long-lost *Germania* (completed in 98 A.D. by the Roman historian Cornelius Tacitus) had already provided Germans with details of their ancestors. Tacitus had written, "The peoples of Germania have never contaminated themselves by intermarriage with foreigners but remain of pure blood, distinct and unlike any other nation." He praised Rome's ancient adversary for the men's prowess and courage in battle, the women's virtue, and strong family values: "Good morality is more effective in Germania than good laws are elsewhere."

The writings of Tacitus, together with those of other Roman historians, provide accounts of the empire's unsuccessful bid to conquer Germania. The details are worth summarizing here, because of their contribution to the surge of German nationalism in the 19th Century and their significance for National Socialist ideology. Slowly advancing into German territory, the Romans established commerce, built towns and concluded tribal alliances. Many indigenous inhabitants traded with them or joined their army as auxiliaries. Rome also garrisoned troops, enacted laws and levied taxes. Aware of its military superiority, the Roman Empire was not prone to compromise. Decades earlier in neighboring Gaul, the Celtic princes had offered armed resistance to Roman rule. The Roman general Julius Caesar mercilessly crushed Gaul, killing or enslaving a third of the population.

Arminius (also known as Hermann), the son of a chieftain in the Cheruskan clan, led several large Germanic tribes in 9 A.D. to fight the Romans. A loosely unified nation of some three million farmers faced a seasoned, well-equipped army supported by the resources of an empire encompassing 60 million inhabitants. Arminius appealed to the various tribes to rise against the foreign laws, taxes, garrisons and settlements gradually spreading across their land. Assailing the summer encampment of the Roman governor Quintilius Varus, presumably at the site of the modern German city of Horn, the Cheruskans and their allies annihilated three Roman legions. A Roman general, Drusus Germanicus, launched punitive expeditions in 15 A.D. and again the following year. He told his army of over 80,000 men, "This war will not be over until the entire German nation is exterminated." The legions vengefully massacred numerous village populations en route, but were unable to capture Arminius. Early in each of the two campaign seasons, Germanicus withdrew his forces completely after a pitched battle with the Germans, a circumstance discreetly understated by Tacitus.

The Roman emperor Tiberius called off the invasion in 16 A.D. "Heavy losses in combat during 15 and 16 A.D. broke the Roman will to invade and conquer. Stopped in their tracks, the Romans from then on assumed the defensive." This spared Germany the Latin influence that helped shape the civilizations of Italy, Spain, France, Britain, the Balkans, and the Near East. To 19th Century nationalists, Arminius was the "first German." He saw beyond the local rivalries that made his people vulnerable to foreign domination. He unified the German tribes in a war of liberation that preserved his country's independence

for centuries. His life became symbolic of national solidarity and resistance to foreign values. In the opinion of the National Socialists, a Roman conquest of Germania would have corrupted the German people for all time. Johannes von Leers cited the "morally destructive influence ... the habitual lying, swindles, calculated cruelty, treachery, duplicity, and inward insincerity of the sick, mixed race that wanted to rule the Germanic peoples." Arminius rescued Germany from the fate of Gaul, as *Germanisches Leitheft* maintained: "Thanks to the deeds of the Cheruskan prince Hermann . . . the heartland of Germania was preserved from being sucked into the racially chaotic vortex of the crumbling Roman Empire."

Well before the 20th Century, the story of Arminius had inspired Germans with a sense of national unity and independence. It remained popular under Hitler's rule, though not accorded as much attention as the wars of liberation against Napoleon. These two events became pillars of National Socialism's stand against foreign influence, be it military aggression or of an ideological nature. France's liberalism, by virtue of its international character, was still a menace. "What makes the French Revolution significant for Germany," wrote Ganzer in *Der Schulungsbrief*, "is the fact that it advanced as a movement with a mission. It claimed the right to make demands for all humanity. ... It presented the 'citizen of the world' concept as binding for all nations and every race." Ganzer added that French liberalism "no longer acknowledges as valid the realities of natural origins, ethnic harmony and racial differences."

Certain arrangements of an international character were acceptable from the National Socialist viewpoint. Commerce, sports competitions like the Olympics, and humanitarian institutions such as Christian charities or the Red Cross foster good will among civilized nations. Internationalism was another matter, *Die SA* explained, if "connected with specific political objectives which ultimately sever the inner bond of a person to his people, in favor of a belief in universal humanity and commitment to so-called universal humanitarian goals to the detriment of service to one's own nation. . . . The objective of political internationalism is not the establishment of peaceful relations among nations, but undermining national vitality and the inner cohesion of a people." The NSDAP capitalized on the strong nationalist current that took shape during the previous century and was common among the Great Powers at that time. The party appealed to pride in German heritage and pointed out the benefits of the country's unmolested, natural historic development. These ideas were chauvinistic but politically expedient as well; Marxism was a genuine threat to German freedom. Promoting nationalism was an effective counterweight to this destructive foreign influence.

Racial Hygiene

A fundamental principle of liberalism and Marxism is the belief in universal equality of mankind. It challenged the bastion of absolutism, which had held that a superior privileged class was ordained to rule. It established a moral and legal foundation for individual

freedom and parliament. The dictum of America's Declaration of Independence, that "all men are created equal," underscored a political demand for representative government. The French Revolution interpreted universal equality in a biological sense as well. It maintained that "all who bear the human countenance" possess comparable natural ability regardless of physical dissimilitude, gender or historic performance. Scientists and historians disputed this view long before Hitler's time. The 19th Century English naturalist, Charles Darwin, theorized natural selection and evolution based on the study of animals and fossils. He concluded that species develop unequally, and that nature strives for improvement by favoring reproduction of those exhibiting superior traits and eliminating the unfit. Francis Galton researched the human personality, deducing that intellectual prowess and morality are inherited from parents. He advocated marriages among talented people, believing superior offspring important to advance civilization.

The French aristocrats Arthur de Gobineau and Georges Vacher questioned universal equality from a historical perspective. Gobineau identified a correlation between the growth and vitality of cultures and the races that founded them. Both men argued that ancient civilizations like Persia and India gradually crumbled as the original white populations intermarried with captive or neighboring non-white tribes. Published in 1899, Houston Steward Chamberlain's *The Foundations of the 19th Century* attributes all great cultures to the creativity of Germanic peoples. German language editions of Gobineau's and Chamberlain's writing appeared in Germany at the turn of the century. Newly formed institutions there challenged the liberal doctrine of equality on scientific and historical grounds. Similar movements came to life in Scandinavia and in Italy, where Paolo Mantegazza and Giuseppe Sergi founded academies for anthropology and race studies. Eugenics, Galton's term for the biological investigation of inheritable traits in human lineage, became racial hygiene in Germany. European universities excluded these studies from the curriculum. Racial hygiene nonetheless acquired some legitimacy early in 20th Century. Grounded in the theories of Darwin and Galton, its proponents offered cogent arguments, based on research and analysis, to establish it as a valid science. In a 1925 study, Professor Hans Gunther acknowledged that 19th Century education helped lower class individuals advance vocationally and socially. However, the more successful among them had fewer children and "this drained away more vitality than it fostered." According to Gunther, this contradicted the main priority for a healthy society: "The progress of humanity ... is only possible through augmenting the higher-quality genetic traits, which means having a greater number of children among the superior and stopping propagation of the unfit."

The study of race received public funding in Nationalist Socialist Germany. The NSDAP founded the Racial Policy Office in November 1933. Its director, Dr. Walter Gross, published articles on the subject in the monthly *Der Schulungsbrief*. This journal was an important medium for ideological propaganda, with a circulation of several million. In April 1934, Gross pointed out, "scientific literature in a democracy . . . understands a nation purely as a community unified by language and culture, disregarding blood ties."

His interpretation of the rise and fall of nations reveals how closely National Socialist doctrine conformed to the principles of Gobineau, Chamberlain and Gunther: "The old civilized states owe their existence to the Aryan man of Nordic blood who created them along with their cultures. When he encountered natives in a foreign land, he did not intermix but subjugated them. He placed those of his own kind over them as a ruling caste. "Everything the ancient peoples produced of value and accomplished came from this stratum of Nordic conqueror. Their greatness lasted only so long as the Nordic blood that created it was strong and influential enough. As soon as the pure strain and sense of awareness of differences among races became lost, as soon as the foreign blood intermingled, so began the decay of the civilizations and states. . . . The influx of foreign blood undermines traditions, religion, good character and morality."

The Racial Policy Office cited three biological factors which cause cultures to perish. The first was a decline in birthrate. This "weakens the national strength in the face of a somewhat stronger growing neighbor. It shifts the proportionate power of the two peoples so that the numerically weaker, despite potential inner superiority, will eventually be overwhelmed." A 1937 article in *Der Schulungsbrief* observed, "today, the birthrate among practically all nations of the white race is declining perilously swiftly." The second factor was a decrease in births among society's more talented elements, versus a parallel increase in children from families exhibiting "mediocre or below average ability, character, or physical and mental endowment." One author blamed the policy in many democracies of "maintaining the weak and ignoring development of the strong" on the liberal perception that everything human is "unconditionally worth preserving." *Der Schulungsbrief* pointed out how regarding education in democratic states, the liberal administrator "groups the mentally deficient into small classes in special schools staffed by exceptionally proficient teachers. He then jams 50 to 60 talented and healthy youngsters together into classrooms that are too small due to budgetary constraints, and instructs them only in the basics."

Largely influenced by mankind's more benevolent religions, sympathy for the weak or helpless has become a natural human emotion. Gross countered this with scientific arguments: "Decisive for the historic fate of a people is whether over the centuries, bloodlines of the loftiest and most gifted elements increase in number and in so doing elevate the nation, or ... in their place those bloodlines augment that are genetically inferior and unfit. . . . The result will be that the outstanding talent will gradually disappear, while the less worthwhile will become dominant. Sooner or later that means the inevitable downfall of the civilization." The third factor leading to the fall of cultures addressed intermarriage with foreign races. This causes a drop in the birthrate among the people who founded the civilization and a corresponding rise in that of society's less creative elements from cross-breeding: "The resulting group of intermixed types and bastards lacks what alone brings enduring vitality to the comparatively pure-blooded ethnic community: the harmony of body and soul, of spirit and character in every person." Dr. Theodor Artz listed the "ABC's" of National Socialist policy: "Bringing forth sufficient numbers of offspring, stifling procreation of the inferior, and preventing the assimilation

of racially foreign elements." What constitutes "racially foreign elements" was a matter of controversy within the NSDAP. Various ethnic groups comprise European civilization: Nordic, Gallic, Basque, Slavic, Baltic, Mediterranean and so forth. Pioneer racial hygienists maintained that intermarriage among diverse white clans produces a superior being. In 1924, the analyst Hildebrandt published an essay explaining, "The highest standard of living evolved where the Nordic race represented the leadership, but intermixed with others who adopted its culture." Hans Gunther wrote, "The French anatomist and race researcher de Quatresages observed in 1857 that the greatest mental and physical activity rests not among those of pure race, but among racially cross-bred populations."

Gunther argued that just as competition can motivate people, the merger of different bloodlines creates a conflict within the psyche of the individual or population itself, animating a hitherto latent zest for struggle: "Stress, confrontation, and the urge to prevail produce the greatest achievements of mind and spirit. There is more potential for tension and altercation in the racially intermixed person than is the case for a pure-blooded one....The pure-blooded man harbors too little restlessness. Germans, Englishmen, or non-Scandinavians in general are struck by the 'all too placid demeanor' of many purely Nordic Scandinavians."

Under Gross, the Racial Policy Office walked a thin line between the more relaxed criteria envisioned by Gunther and many of his contemporaries, and the "blond rapture" they cautioned against. In 1934, Gross' colleague, Wolfgang Abel, published generalizations of Germany's ethnic tribes: the Nordic, Pflazish, Eastern Baltic, Dinaric, Alpine, Western Nordic, and Western Mediterranean. He described physical characteristics, illustrated with camera portraits resembling mug shots, and collective personality traits of each. Abel offered for example, this profile of the Nordic type: "The least spontaneous, he surpasses all other races in steadfastness of purpose and cautious foresight. Thinking ahead, he subordinates his driving impulses to long-range goals. Self-composure is perhaps the most distinguishable trait of the Nordic race. In this lies a significant part of the ability to create civilizations. Races lacking this quality are incapable of following through and implementing long-term Pflaz Germans were "more steadfast than pliant, more grounded than adaptable, more level-headed than daring, more freedom-loving than power seeking." The Western Mediterranean German "takes life less seriously. Empty formula courtesies and insincere gestures play a major role, such as promising gifts and extending invitations he doesn't really expect people to accept. His inclination toward truthfulness and ethics is weaker than the Nordic person's." Hitler disapproved of such comparisons. He especially opposed reference to physical contrasts of stature, coloring, or physiognomy among German ethnic groups. In 1930 he told an aid, "Discussions about the race problem will only divide the German people further, incite them against one another, atomize them, and in this way make them inconsequential with respect to foreign affairs." He admonished senior officials of the party to avoid the subject of ethnic diversity in speeches and articles: "Everything that unifies and welds the classes together must be brought forth, what divides them, what re-animates old prejudices, must be avoided. . .

.They are the surest way to destroy a community.” He remarked that people should be selected for leadership roles “not according to outward appearance, but by demonstrating inward ability.” Goebbels, himself a diminutive man with a slight limp, recorded in his diary in October 1937, “Discussed race policy with Dr. Gross. I reproached him for our flawed standards for making selections. According to them, practically every officer today would be dismissed.”

Like the earlier race hygienist Gunther, Hitler believed that the more capable and fit among the Germans should not set themselves above other groups to preserve or advance their particular bloodline. It was their duty to help elevate the German nation as an entity. As summarized by his chronicler Dr. Henry Picker, Hitler was “firmly resolved to transfer racially excellent military units, such as formations of the Waffen SS, to every region where the indigenous people are substandard. They will provide for the population by replenishing its bloodlines.” (The Waffen SS was an elite branch of the German military requiring high physical standards for enrollment.) forming or elitist attitudes among his countrymen’s more gifted persons or ethnic groups. He measured people not by what nature gave them, but by how they contributed their talents, be they lofty or modest, to advance the national community. This was a standard every German could aspire to, regardless of his or her station in society. Personal attitude and endeavor, not the circumstances of birth, determine the superior being.

In a speech as chancellor of Germany, Hitler described the evolution of his country into a social, national, and spiritual entity: “The German people came into being no differently than almost every truly creative civilized nation we know of in the world. A numerically small, talented race, capable of organizing and creating civilization, established itself over other peoples in the course of many centuries. It in part absorbed them, in part adapted to them. All members of our people have of course contributed their special talents to this union. It was, however, created by a nation-and-state forming elite alone. This race imposed its language, naturally not without borrowing from those it subjugated. And all shared a common fate for so long, that the life of the people directing the affairs of state became inseparably bound to the life of the gradually assimilating other members. All the while, conqueror and conquered had long become a community. This is our German people of today. . . . Our only wish is that all members contribute their best to the prosperity of our national life. As long as every element gives what it has to give, this element in so doing will help benefit all our lives.”

Racism versus Marxism

The NSDAP also perceived racial hygiene as a political controversy. Der Schulungsbrief pointed out that National Socialism “is the first ideology in history to consciously incorporate the laws of nature and apply their wisdom and efficiency to mankind.”¹⁰⁸ Germanisches Leitheft contended that emphasis on race is the “antithesis of the western perception, especially former France. It was there that the grand revolution proclaimed

the equality of all who bear the human countenance. . . . Intermixing of human types was a main thrust of French democracy." The revolution of 1789, the periodical noted, was a poor example for such an altruistic ideal: "The revolution became a power struggle among ambitious party leaders. This no longer led toward a new order, but climaxed in the elimination of those public representatives still conscious of their responsibility to the people. . . . The so-called reign of terror began. It depopulated entire towns and districts. 'Death to the blondes' was the battle cry."

The National Socialists viewed Marxism as the political descendant of revolutionary France. It leveled humanity off to a "faceless mass" by destroying society's more talented, productive elements.¹¹⁰ According to *Der Schulungsbrief*, "Marxism is a radicalized variant of liberalism strongly rooted in the brutality of the French Revolution."¹¹¹ The journal *Volk und Reich* (Nation and Realm) wrote, "The Bolshevik revolution regards itself as the legitimate successor to the French."¹¹² Brutality was indeed an element common to both France's Reign of Terror and Bolshevik Russia. The first Soviet dictator, Nicolai Lenin, became the only member of the original Politburo, the governing council, to die a natural death. Stalin proclaimed a "war on terror" in December 1934, personally writing a new law imposing a death sentence for "acts of terrorism" and leading to massive executions for several years. In 1937, the Soviet state carried out 353,074 death sentences, the following year 328,618.¹¹³ Houston Stewart Chamberlain described Russia's Bolshevik regime as under "the influence of the French revolutionary ideal, which in the course of a century, turned decent people into half-beasts filled with envy and loathing."

Goebbels described the rise of the NSDAP as "one continuous confrontation with the problem of Marxism." The ideologies were at loggerheads regarding questions of the significance of race. The German study *Der bolschewistische Weltbetrug* (*The Bolshevik World Swindle*) provides this comparison: "The National Socialist world view interprets the nation racially, as a national community grounded in common historical blood ties of its people as determined by fate. The primary conviction of Marxist ideology is the class concept defining those with possessions and those who possess nothing. This class concept is bound neither by nationality nor by race. It stands like a dividing wall between people of the same nation. At the same time, it joins as brothers persons of the most diverse racial types. 'society is dividing into two immense, diametrical, hostile camps, bourgeois and proletariat,' declared the Communist Manifesto.... Adolf Hitler's judgment runs a different course. It desires the unity of naturally related people, the removal of class distinctions, and the personal feeling within every individual of belonging to the national community that the person, through fate, was born into."

A primary liberal argument against the significance of race is environmentalism. Supported by democracy and Marxism alike, this theory holds that not racial ancestry, but factors such as climate, arable land, education, luck, and social opportunities determine group or individual achievement. As *Der Schulungsbrief* explained it, "Marxism is built on the teaching that all men are equal at birth. Differences that become apparent in the course of a lifetime are the result of external influences. Personal development therefore

depends on surroundings. The more favorable the environment, the better the person will turn out." The periodical *NS Briefe* countered that this view "degrades man to a slave of his circumstances.... The determining factor supposedly rests with the environment; that man does not mold the age, the age molds the man." Application of environmentalism's principles as a matter of state policy, according to Gross, demonstrates how impractical the theory is: "The habitual criminal, the cold-blooded murderer who since boyhood went through life harboring asocial instincts detrimental to society, was just a 'victim of his surroundings.' The ruthless eradication of those manifesting such bestial, menacing natures is not the obvious solution, but attentive, painstaking education, and improvement through transfer to a 'better environment'; the prison with radios, billiards, and a library. Here the killer experiences a more comfortable lifestyle than the hard-working laborer in the land. This is the logical consequence of the belief that exterior influences decide or can alter the nature of a person."

The periodical *NS Briefe* related the German position: "No amount of education can change the inner substance of a person, since the factors that determine who he is do not come from without. They rest within him, given to him by his parents and grandparents" *Germanisches Leitheft* summarized that race alone "makes the individual and indeed the whole society masters of their environment and external circumstances, to shape them according to their will."

The Nation as One

The crux of National Socialist ideology and state form was German unity. Hitler promoted whatever contributed to this goal and rejected what did not. A literate man with a profound grasp of history, he fashioned a political philosophy that interpreted Germany's past as a continuous, progressive struggle for independence and unification. Disharmony among the Germans had cost them freedom and life. The Roman Empire had imposed an immoral foreign influence until the Cheruskan Arminius unified prominent German tribes to force the invaders out. During the 17th Century, a politically discordant Germany became the battleground for the 30 Years' War. More than half the population perished. The subsequent Peace of Westphalia in 1648, engineered by Sweden and France, partitioned Germany into a myriad of insignificant duchies and principalities. The treaty established a parliament at Regensburg for their common representation. "Our diplomacy set the wheels of the Reichstag in motion for the purpose of making any serious government in Germany impossible," boasted the French historian Jacques Bainville in 1915.

Austria and Prussia regained diplomatic and military poise during the 18th Century. Due to a lack of connection between the royal hierarchy and the population, neither state could later repulse the invasion by Napoleonic France. Conquered in 1806, only through nationalism did the Prussians again become free. Prussia unified Germany in 1871, and this introduced prosperity and progress. Crass social discrepancies nonetheless persisted.

At that time, the philosopher Friedrich Nietzsche expressed the yearning among his people for a deeper, enduring bond: "There are many fine threads in the German soul, but they are not woven into a single, solid and mighty knot; a sorry spectacle and a solemn peril. This must be remedied, a greater solidarity in the nature and soul of our people created, the rupture between the internal and the external eliminated. In the loftiest sense we must strive for German unity, and strive more passionately than for mere political unification. . . . Create the concept of a nation."

Hitler grew up in the social milieu that Nietzsche criticized for its class distinctions. World War I, during which Hitler saw combat in an infantry regiment, welded various social factions into an entity. "At the front, the feeling of being destined to belong together, the feeling of a community, was by and large reborn," Gross wrote in *Der Schulungsbrief*. Hitler and his comrades felt solidarity in the trenches but found it undermined by political discord at home. "The enemy no longer faced the frontline soldier just as an honorable fighting man, but also made trouble behind the front," a journal for the German armed forces related. During the post-war period, the country suffered economic distress, political disharmony and foreign exploitation. Hitler later declared that when the German people "form a unified bloc, they are a power. When they are divided, they are defenseless and impotent."

By emphasizing German unity, National Socialism followed in the footsteps of the Romans' nemesis Arminius, the Prussian reformers who rose against Napoleon, the statesman Bismarck, and the eminent Nietzsche. The matter of Germany's moral, social, and political harmony influenced the NSDAP's stand on virtually every major issue. National Socialism, the journal *Der SA. Fuhrer* (The SA Officer) wrote, recognized that "the labor question was the cardinal social problem of the 19th and 20th Centuries. . . . It confronted liberalism's materialistic, distorted idea of freedom, which leads to abuse and to the rule of a capitalist minority, with a new freedom; one based on the growth of the individual fellow citizen within the national community according to achievement. Unlike the disfranchisement of labor through liberalism, National Socialism incorporates the worker into German society, elevating him and his accomplishments onto par with the rest of the nation."

Judging someone's worth according to performance, as far as Hitler was concerned, superseded questions of ethnic standing within the German community. Though many National Socialists based their world view on scientific research on race, the government under Hitler also relied on education to realize human potential. Goebbels wrote in his diary in June 1936, "the Fuhrer sharply disapproves of the work of all the race committees." Hitler based his attitude on the potential negative impact such activities could exercise on national unity.

National Socialism was largely a product of 18th and 19th Century values. Hitler saw how the fall of absolutism released powerful forces slumbering within mankind. But as the creative surge burst traditional bonds and restraints associated with the old order, it gave birth to doctrines that evolved independently of one another and were without

historical precedent. Liberalism, the dominant philosophy, shattered convention and institution alike, entering uncharted political waters in the unassailable conviction that individual freedom was the future of humanity. Composed at the dawn of the liberal age, the fable of the sorcerer's apprentice, who tampered with and unleashed extraordinary powers he was unable to control, proved a prophetic allegory. The National Socialists believed that the exaltation of the individual in the liberal-democratic sense would "dissolve the healthy social order and lead to ruin." They nonetheless sanctioned the free play of forces, opportunity for personal development and free enterprise. The task of their authoritarian government was to promote these practices, simultaneously insuring that the collective interests of the population remain decisive. As the individual advanced in National Socialist Germany, so did the nation. Hitler harnessed yet stimulated the forces of human creativity reanimated by the Enlightenment, giving them a form, purpose, and direction not envisioned by the pioneers of liberalism and democracy.

10.3 The New Germany

On February 10, 1933, Hitler discussed his economic program at a mass meeting in Berlin for the first time as chancellor. Telling the audience, "We have no faith in foreign help, in assistance from outside our own nation", the Fuhrer opined that Germany had no friends beyond her own borders. World War I had ended in 1918 when the German Reich and Austria-Hungary surrendered, and harsh terms imposed by the Allies, despite U.S. President Woodrow Wilson's promise of an equitable settlement, had left the Reich more or less on a solitary course. Allied delegates opened the peace conference in Versailles, France, in January 1919. They demanded that Germany accept blame for the war and compensate the victors for damages. This enabled them to initiate reparations requirements that reduced the Germans to virtual bondage. To extort the Reich's signature onto the treaty, Britain's Royal Navy maintained a blockade of food imports destined for Germany. The blockade had been in force since early in the war. Over 750,000 German civilians, mainly children and the elderly, perished from malnourishment.

Despite Germany's capitulation, the British continued to block food deliveries until the summer of 1919. On March 3 of that year, the English cabinet minister Winston Churchill told the House of Commons, "We are holding all our means of coercion in full operation or in immediate readiness for use. We are enforcing the blockade with vigor. We have strong armies ready to advance at the shortest notice. Germany is very near starvation. The evidence I have received from the officers sent by the War Office all over Germany shows first of all, the great privations which the German people are suffering, and secondly, the great danger of a collapse of the entire structure of German social and national life under the pressure of hunger and malnutrition. Now is therefore the moment to settle." Allied leaders bluntly told German delegates at Versailles to accept the treaty or face a military invasion and extension of the blockade. The Germans signed on June 28, 1919. The Allies' conditions degraded Germany to a secondary power. The victors divided 13 percent

of the Reich's territory among neighboring states. The 7,325,000 Germans residing there became second-class citizens in their new countries. Lost natural resources and industry included 67 percent of Germany's zinc production, 75 percent of iron ore, a third of the coal output and 7.7 percent of lead. The Allies demanded twelve percent of Germany's exports, with the option of raising the amount to 25 percent, for the next 42 years. The malnourished German nation also surrendered a million cattle including 149,000 milking cows, plus 15 percent of the harvest. The Allies confiscated a quarter of Germany's fishing fleet. In addition to large amounts of timber, 7,500 German locomotives and 200,000 freight cars went to the former enemy. Germany also relinquished her prosperous African colonies to the Anglo-French overseas empires. Every transport vessel exceeding 1,600 tons, practically the Reich's entire merchant fleet, enriched the Allies' war booty. Germans forfeited private investments abroad.

Morally justifying the terms, the British Prime Minister, David Lloyd George, described how the Allied victory accomplished Germany's "liberation from militarism." He gloated on another occasion, "We have got most of the things we set out to get. The German navy has been handed over, the German merchant shipping has been handed over, and the German colonies have been given up. One of our chief trade competitors has been most seriously crippled and our allies are about to become Germany's biggest creditors. This is no small achievement!" Between 1880 and 1900, Germany's share of world trade had risen from 10.7 percent to 13.8 percent. During that period, Britain's had declined from 22 to 16 percent, and France's from 13 to eight percent. Woodrow Wilson remarked in September 1919, "Is there any man or woman-let me say, is there any child-who does not know that the seed of war in the modern world is industrial and commercial rivalry? This was an industrial and commercial war."

The war transformed Germany from a flourishing industrial power to a distressed state. Military service had cost 1,808,545 German soldiers their lives. Another 4,247,143 had been wounded. The country was bankrupt from defense expenditures. Marxist agitation provoked labor walk-outs. There were 3,682 strikes in 1919, which impacted 32,825 businesses and 2,750,000 workers.¹³ Decline in industrial output and reparations burdens contributed to massive unemployment. Demobilized soldiers couldn't find jobs. A new law required managers to reinstate former employees who had served on active duty during the war; however, many business owners were among the slain and their companies were gone. Additionally, large numbers of foreign workers were in Germany, having taken over the manufacturing positions of men inducted into the army. Soldiers returning home found their pre-war jobs occupied by ersatz labor. People out of work lacked purchasing power. This decreased demand for consumer goods, leading to production cut-backs and further lay-offs. Unemployment fluctuated dramatically. The downward spiral began late in 1927. In 1931 alone, 13,736 companies filed for bankruptcy. An average of 107,000 people per month lost their livelihood. In mid-1932, almost 23 million Germans (36 percent of the population) were receiving public assistance.

The London Declaration of May 5, 1921, established Germany's aggregate debt at 132

billion reichsmarks (RM). One mark equaled approximately 50 cents. It also imposed a "retroactive payment" of twelve billion gold marks plus another billion in interest. The German government in Weimar could not meet the obligation. Without foreign commerce, Germany had little income. Fearing inordinate taxation to meet Allied demands, affluent Germans invested capital abroad. The flight of currency and the national deficit contributed to inflation. In November 1922, Weimar requested a moratorium on cash payments. The Inter-Allied Reparations Commission declared Germany in default. The French army garrisoned the Ruhr-Lippe region, source of almost 80 percent of Germany's coal, steel and pig iron production. Demonstrating passive resistance, civil servants and laborers there boycotted the work places. This increased the number of persons on public aid and further reduced productivity. The Ruhr debacle precipitated the currency's slide into worthlessness. Inflation wiped out the savings of Germany's middle class. A commission chaired by the American Charles Dawes made recommendations to balance Germany's budget and stabilize the money system. The Allies assumed control of the Reich's Bank and sold shares in the national railroad. They fixed annual payments at \$250 million. Another committee convened in Paris in February 1929 under the American banker Owen Young. The Young Plan arranged a new payment plan for Germany to extend to 1988. Since 1924, Weimar had been borrowing from Wall Street banks to meet reparations demands. The worldwide fiscal crisis of 1929 curtailed this source of capital. Despite tax increases, the German government failed to generate sufficient revenue to restore the economy. By March 1933, the German national debt amounted to 24.5 billion reichsmarks.

In mid-1931, the Allies reluctantly approved Germany's request for a one-year moratorium on reparations. In June 1932, Chancellor Franz von Papen negotiated a further three years' suspension of payments. Another benefit for Germany at this time was two consecutive mild winters. This created a favorable climate for agriculture and new construction. From January to October 1932, another 560,000 Germans found jobs. Even with this improvement, unemployment still exceeded five million. In July 1932, Hitler described the Reich's economic woes in a speech distributed on gramophone records during an election campaign: "The German farmer destitute, the middle class ruined, the social aspirations of millions of people destroyed, a third of all occupational German men and women out of work and therefore without earnings, the Reich, municipalities and provinces in debt, revenue departments in disarray and every treasury empty." These were the consequences of Allied exploitation of Germany after World War I. It deeply scarred the German people. Doctors reported alarming statistics of undernourishment among children. The divorce rate was disproportionately high. During the Weimar Republic's 13 years, thousands of Germans committed suicide, many driven by despair and frustration over months of inactivity. The German author Rudolf Binding placed the number at 224,900. Throughout the period, the Germans endured violations of their sovereignty by countries whose armies had never conquered Germany but had persuaded her leaders to surrender in 1918 through the insincere promise of a conciliatory peace. It was a disillusioned and destitute nation that Hitler inherited when he took office on January 30, 1933.

The Road to Recovery

Two days after becoming chancellor, Hitler outlined his economic program in a national radio address: "Within four years, the German farmer must be rescued from poverty. Within four years, unemployment must be finally overcome." The government enacted laws based on the strategy conceived by Fritz Reinhardt, a state secretary in the Reich's Ministry of Finance. This unassuming, pragmatic economist introduced a national program to create jobs on the premise that it is better to pay people to work than to award them jobless benefits. The Labor Procurement Law of June 1, 1933, allotted RM 1 billion to finance construction projects nationwide. It focused on repair or remodeling of public buildings, business structures, residential housing and farms, construction of subdivisions and farming communities, regulating waterways, and building gas and electrical works. Men who had been out of work the longest or who were fathers of large families received preference in hiring. None were allowed to work more than 40 hours per week. The law stipulated that German construction materials be used.

Also passed that summer, the Building Repair Law provided an additional RM 500 million for smaller individual projects. Home owners received a grant covering 20 percent of the cost of each project, including repairs and additions. Owners of commercial establishments became eligible for grants for conducting renovations, plus for installing elevators or ventilation systems. Renters could apply for grants to upgrade apartments. Under the law's provisions, property owners receiving grants borrowed the balance of new construction costs from local banks or savings & loans. The government provided borrowers coupons to reimburse them for the interest on the loans. The Tax Relief Law of September 21, 1933, offered income and corporate tax credits for repairs. The regime covered nearly 40 percent of the cost for each renovation. The Company Refinancing Law, legislated the same day, converted short term loans into long term ones with lower interest. The law reduced the previous seven percent interest rate to four (and ultimately to three) percent. This did not hamper finance companies, since it prevented defaults on loans. The refinancing law released businesses from the obligation to pay their portion of unemployment benefits to former associates. The resulting available capital enabled them to re-hire employees and expand production.

The Labor Procurement Law provided newlyweds loans of RM 1,000 at one percent monthly interest. The loans came in the form of coupons to buy furniture, household appliances and clothing. To be eligible, the bride had to have been employed for at least six months during the previous two years, and had to agree to leave her job. Returning women to the home vacated positions in commerce and industry, creating openings for unemployed men. For each child born to a couple, the government reduced the loan by 25 percent and deferred payments on the balance for one year. For larger families, upon birth of the fourth child, the state forgave the loan. It financed the program by imposing surtaxes on single men and women. By June 1936, the government approved 750,000 marriage loans. Reinhardt described the policy of diverting women

into the household economy as "steadily regrouping our German women with regard to the labor market and with respect to social policy. This regrouping alone will ... in a few years be sufficient to eliminate unemployment, and bring about an enormous impetus in every branch of German economic life." The marriage law released approximately 20,000 women per month from the work force after September 1933. The increase in newlyweds created a corresponding need for additional housing. More tradesmen found work in new home construction. In the furniture industry, manufacture increased by 50 percent during 1933. Factories producing stoves and other kitchen appliances could not keep pace with consumer demand. The state imposed no property tax on young couples purchasing small single family homes. As Reinhardt predicted, reduced payments in jobless benefits and increased revenue through corporate, income and sales taxes largely offset the enormous cost of the program to reduce unemployment and revive the economy. He stated in Bremen on October 16, 1933, "In the first five months of the present fiscal year, expenditures and income of the Reich have balanced out."

When Hitler took power, labor represented 46 percent of German working people and 82 percent of the nation's unemployed.²³ The government initiated massive public works projects to expand the job market for labor. It especially concentrated on upgrading the national railway. Also, construction of a modern superhighway began in September 1933, which found work for an additional 100,000 men each year. The production and delivery of building materials for pavement, bridges and rest stops simultaneously employed another 100,000. The Reich's Autobahn project, originally planned for over 3,700 miles of new highway construction, relied primarily on manual labor. Limiting the use of modern paving machinery enabled the Autobahn commission not only to keep more men on the job, but devote 79 percent of the budget to workers' salaries. The Autobahn was a toll road; however, reduced wear on vehicles using this efficient highway system and savings in travel time were worthwhile compensation to motorists for the fee.

On the ideological plain, Hitler regarded a robust agrarian class to be essential for a healthy general population. In the turbulence of the modern age, industrialization and progress removed man further and further from his natural surroundings. Bound to the soil and the family homestead for generations, the farming community was an anchor rooted in traditional German customs and values. It drew sustenance from the land and passed it on to the nation. While labor represented a dynamic political force, the farming stratum remained the "cornerstone of ethnic life." The Fuhrer esteemed such self-reliant, rugged people as an indispensable mainstay for the nation. Addressing half a million farm folk in Buckeberg in October 1933, he stated, "In the same measure that liberalism and democratic Marxism disregard the farmer, the National Socialist revolution acknowledges him as the soundest pillar of the present, as the sole guarantee for the future." Hitler not only maintained Germany's agrarian class but augmented it; housing planners sited many new settlements of single family homes in rural areas where residents took up farming. The government provided interest-free loans and grants for the purchase of farm implements along with special marriage loans for newlyweds. The debts were to be

forgiven after the family had worked the farm ten years.

Tax reform was a major element of Reinhardt's recovery program. Initial measures legislated to this end demonstrate what a crippling influence the Reich's runaway taxation had previously exercised on commerce. The first to benefit from tax relief was Germany's automotive industry. The Motor Vehicle Tax Law of April 1933 abolished at one stroke all operating taxes and fees for privately purchased cars and motorcycles licensed after March 31 of that year. The reduction in consumer costs to own and operate a car was so dramatic as to significantly boost sales. While the industry produced just 43,430 passenger vehicles in 1932, the number rose to 92,160 during Hitler's first year in office. New car production increased annually. The number of people employed in automobile manufacture climbed from 34,392 in 1932 to 110,148 in less than four years. From 1933 to 1935, the industry built 15 more assembly plants.

Under the Reinhardt system, the government gradually supplanted the plethora of municipal, provincial and state taxes and fees with a single national tax. The finance office calculated the budgets of local and state administrations, collected all revenue and distributed it to agencies and municipalities. During the year, each citizen received an annual income tax invoice and paid the amount in twelve monthly installments. This covered his or her total tax liability. The arrangement greatly reduced administrative costs of mailing local tax bills, collecting individual fees and pursuing delinquencies. It also simplified the accounting of private corporations no longer required to determine withholding taxes on employees' salaries. In the long run, Germany's policy of reducing taxes to promote commerce increased public revenues. During the first half of 1939, the finance office reported over RM 8.3 billion in revenue, compared to RM 6.6 billion in fiscal year 1932/33.³⁰ These were evenly assessed taxes in 1939, paid by a fully employed population; not an imbalanced, excessive liability burdening working people to provide jobless benefits for the less fortunate.

In a Nuremberg speech in 1936, Reinhardt described income tax as "the main source of revenue. Income tax is measured according to (the citizen's) actual income and is therefore the most socially just form of collecting taxes."³¹ A 1933 Swedish study comparing taxation among Great Powers established that the German people paid 23 percent of their income in taxes. In the United States the amount was 23.4 percent, in Norway 25.1 percent, Britain 25.2 and Italy 30.6 percent.³² (The figure did not take into account America's numerous hidden taxes that were nonexistent in Germany.)

No program to restore German prosperity could omit international trade. Deprived of its colonies, the Reich had to develop foreign markets to acquire raw materials for industry and a portion of the food supply. With gold reserves exhausted, the National Socialist administration had to create an alternative source of purchasing power. Despite objections from Hjalmar Schacht, president of the Reich's Bank, Hitler withdrew Germany's money system from the gold standard. Gold was the recognized medium of exchange for international commerce. Over centuries, it had become a commodity as well. Financiers bought and sold gold, speculated on its fluctuations in price, and loaned it abroad at high

interest. Hitler substituted a direct barter system in foreign dealings. German currency became defined as measuring units of human productivity. The British General J.F.C. Fuller observed, "Germany is already beginning to operate more on the concept of labor than on the concept of money."

In January 1938, the Soviet diplomat Kristyan Rakovsky commented on the German money system. Rakovsky had held posts in London and in Paris and was acquainted with Wall Street financiers. He explained, "Hitler, this uneducated ordinary man, has out of natural intuition and even despite the opposition of the technician Schacht, **created an especially dangerous economic system. An illiterate in every theory of economics driven only by necessity, he has cut out international as well as private high finance.** Hitler possesses almost no gold, and so he can't endeavor to make it a basis for currency. Since the only available collateral for his money is the technical aptitude and great industriousness of the German people, technology and labor became his 'gold'.... As you know, like magic it's eliminated all unemployment for more than six million skilled employees and laborers."

Germany's withdrawal from the gold-based, internationally linked monetary system in favor of a medium of exchange founded on domestic productivity corresponded to Hitler's belief in maintaining the sovereignty of nations. This was an unwelcome development in London, Paris and New York, where cosmopolitan investment and banking institutions profited from loaning money to foreign countries. Germany no longer had to borrow in order to trade on the world market. Foreign demand for German goods correspondingly created more jobs within the Reich.

Upon taking office, Hitler had assigned the elimination of unemployment as his first priority. During the first twelve months of his administration, unemployment declined by nearly 2.3 million. In 1934, 2,973,544 persons were still out of work, but by November 1935, 1,750,000 more Germans had found full time jobs. Addressing the National Socialist party congress in Nuremberg on September 12, 1936, Reinhardt presented statistics demonstrating that "mass unemployment in Germany has been overcome. In some occupations, there is already a shortage of workers." He stated that among other civilized nations, of the 20 million people out of work in 1932, only two million had returned to the work force over the previous four years (The statistics did not include the USSR, since no figures were available). During the same period in Germany, the economy created jobs for over five million previously unemployed persons. In addition, the average work day within this time frame increased from six hours 23 minutes to over seven hours per shift.

In November 1938, the German government officially recorded 461,244 citizens as unemployed. The statistic included individuals who were physically or mentally disabled, mostly homebound and hence unemployable. It also incorporated the populations of Austria and the Sudetenland. Germany had annexed these economically depressed lands the same year. Both had suffered massive unemployment, which Hitler had not yet had time to fully alleviate. From 1934 to 1937, the number of women in the work force increased from 4.5 million to 5.7 million. Despite programs to encourage women to return to tra-

ditional family roles, the government did not restrict those choosing a career. They were equally eligible for tax incentives offered for starting small businesses.

An interesting element of Germany's recovery is that Hitler, against the recommendations of Germany's principle financier, Schacht, authorized the economic programs developed by Reinhardt, a man possessing comparatively little influence. A disciple of the liberal economic theory, Schacht disapproved of government interference in commerce. He opposed state-sponsored programs to combat unemployment. Otto Wagener, head of the NSDAP's economic policy branch, told Hitler that Schacht was "an exponent of world capitalism" and hostile to the state's revolutionary approach to economics. Historians have nonetheless described Schacht as a "genius of improvisation" and a "financial wizard." One British author credits this American-educated, international banker with "financing ... unemployment programs by greatly expanding public works and stimulating private enterprise." Schacht's pre-1933 writings and verbal statements reveal no trace of the ideas introduced by Reinhardt to revitalize the economy and create jobs. Regarding unemployment, the "solutions" Schacht suggested were to reduce workers' wages, encourage thrift, and resettle people out of work in stateoperated camps,

The campaign to stabilize Germany's economy witnessed measures that were only possible in an authoritarian state. The National Socialist maxim, "community interest before self-interest," guided a policy that was efficient and uncompromising. Among the first to feel its weight were Germany's trade unions. By 1932, they had far less influence than during the previous decade. Few workers were prepared to risk their jobs by striking. Union representatives voiced no protest when Hitler, five weeks after taking power, banned the Iron Front and the Reichsbanner. These organizations had provided muscle at public demonstrations of the Social Democratic Party, which was closely affiliated with labor. In April 1933, the German trade unions issued a public statement declaring their desire to cooperate with the new government.

The Social Renaissance

Germany's triumph over unemployment, without foreign help and during worldwide economic depression, was in itself an accomplishment any government could be satisfied with. For Hitler, it was a step toward far-reaching social programs intended to elevate and unify the population. Like other elements of National Socialist rule, subsequent reforms realized ideas that long had been developing in German society. During the mid-18th Century, the Prussian monarch Friedrich the Great created an efficient state bureaucracy and revised taxation. His law providing pensions for civil servants and officers invited criticism that it would bankrupt the treasury.

The progressive thinking in the Prussian-German civil service led to the country's first labor law the following century. The regulation, ratified on April 6, 1839, banned the practice of working small children in mines. No boy could enter the work force until after at least three years of schooling. It became illegal for children to work night shifts or

Sundays. More child labor laws followed in 1853. Though primitive by modern standards, the regulations were advanced for the time. The North German League's Vocational Decree of 1869 and further measures to safeguard labor after the country's unification in 1871 placed Germany in the lead among industrial nations in the realm of social reform.

The social programs Hitler introduced had two objectives. One was to improve the standard of living of the average citizen. The other was to create a classless society in which the bourgeois, labor, agrarian folk and nobility enjoyed equal status as Volksgenossen. This translates literally to "ethnic national comrades," though the expression "fellow Germans" better conveys its spirit. Hitler believed that removing traditional class barriers would create social mobility for talented individuals to advance. All Germany would benefit through the maturation of the more promising human resources. An important organization for promoting National Socialist community values was the Volunteer Labor Service (FAD). Founded in August 1931, the FAD recruited the unemployed for public works. Paying volunteers two reichsmarks a day, a primary purpose of the FAD was to improve the physical and mental well-being of unemployed and unoccupied young Germans. Upon assuming power, Hitler expanded the organization and raised the pay scale. It numbered 263,000 members by mid-1933. The Fuhrer considered it "superbly suited for conscious instruction in the concept of a Volksgemeinschaft (national community)."⁵⁵ Membership in the FAD declined as more jobs became available. In June 1935, Hitler enacted a law making six months' labor service compulsory for teenagers upon high school graduation. No longer voluntary, the FAD became the RAD: Reich's Labor Service. Members assisted in Autobahn construction, drained swamps, planted trees, upgraded poorer farms and improved waterways.

At the NSDAP congress in September 1935, Hitler defined the RAD's social purpose to 54,000 assembled members: "To us National Socialists, the idea of sending all Germans through a single school of labor is among the means of making this national community a reality. In this way, Germans will get to know one another. The prejudices common among different occupations will then be so thoroughly wiped away as to never again resurface. Life unavoidably divides us into many groups and vocations.... This is the primary task of the labor service; to bring all Germans together through work and form them into a community." At an earlier NSDAP congress, Hitler had described the labor service as "an assault against a horrible pre-conceived notion, namely that manual labor is inferior." Having disbanded the trade unions in 1933, Hitler wanted an umbrella organization devoted to the welfare of both labor and management, so that "Within its ranks the worker will stand beside the employer, no longer divided by groups and associations that serve to protect a particular economic and social stratum and its interests." In his own proclamation defining the organization's objectives, Hitler stated, "It is in essence to bring together members of the former trade unions, the previous office worker associations and the former managers' leagues as equal members."

The structure supported the goal of eliminating strife within industry by encouraging mutual respect, based not on position but on performance. As defined in one publication,

"There is neither employer nor employee, but only those entrusted with the work of the entire nation.... Everyone works for the people, regardless of whether a so-called employer or so-called employee, as it was in the previous middle class order." This represented a revolutionary departure from the liberal democratic perception, as another German study maintained: "In the capitalist system of the past, money became the goal of work for the employee as well as for the employer. It was the individual's wages that appeared to give work a sense of purpose. The employee saw the employer simply as someone who 'earns more.' And the employer regarded the staff of workers in his firm only as a means to an end, an instrument for him to earn more. The consequences of this thinking were ominous. Should the working man have any ambition to work anymore when he says to himself, 'I'm only working so that the man over in the office can earn more?' Can a business deliver quality work if everyone thinks only of himself? . . . Labor-its purpose, its honor, the creative value, the German worker as a master of his trade and a proud, capable working man, all this became secondary. Reorganizing labor does not just mean removing the crass material deficiencies of life. It must penetrate the relationship of person to person."

In May 1933, the first congress of the German Labor Front took place in Berlin. Known by the acronym DAF, it replaced the disbanded unions and managers' associations. Hitler stated, "The goal of the German Labor Front is the creation of genuine cooperative fellowship and efficiency among all Germans. It must see to it that every single person can find a place in the economic life of the nation according to his mental and physical capabilities that will insure his highest level of achievement. In this way, the greatest benefit to the overall community will be realized." The DAF therefore contributed to Hitler's goal of welding the Germans into a Volksgemeinschaft. Here, he stated, "the head and the hand are one. The eternal petty differences will of course still exist. But there must be a common foundation, the national interests of all, that grows beyond the ridiculous, trivial personal squabbles, occupational rivalries, economic conflicts and so forth." The Fuhrer's blueprint for eliminating class division was largely an equalization process. Through useful work, everyone could earn the respect of the community. "No one has the right to elevate himself socially above another because some outward circumstance makes him appear better," Hitler argued. "The loftiest individual is not the one who has the most, but the one who does the most for everyone else.... The honest man, even if he is poor, is worth more than a wealthy one possessing fewer virtues."

One revolutionary measure, appalling to laissez faire disciples like the banker Schacht, was the government's regulation of salaries and managerial privileges. It first addressed the custom in private sector of paying white collar workers monthly stipends even when absent from the job, while according no similar benefit to factory personnel. The government abolished this discrepancy. It arranged instead "to insure the laborer a certain measure of compensation when missing work due to important family matters, plus a fixed, company-financed subsidy in case of illness." The Law for Regulation of Wages introduced guidelines for calculating salaries. Based on the principle of comparable pay

for equal demands on an individual's time and energy, its goal was to guarantee a decent standard of living for everyone who worked hard. The law stated, "Grading of salaries must correspond to the actual demands of the work involved. It therefore doesn't matter what job the individual has. Personal engagement is the decisive factor."⁶⁶ The regulation further called for an adjustment in salary for employees with unavoidable financial hardships, in order to guarantee their standard of living. Even time lost from work due to weather conditions became a factor. It also required that every citizen receive pay for overtime. The wage law did not level off personal income regardless of occupation. Grading took such factors into consideration as physical or mental demands of a job, the precision or independent initiative required, education, hazards and experience. Its purpose was to establish a system that could be applied to the most diverse careers and activities and help reduce social and economic differences. It acknowledged the value of honest labor and the need to adequately compensate all who perform it. A guiding principle of the wage grading program was not to reduce the standard of living of previously higher paid associates, but to elevate that of those who earned less.

Funneling officers into the same mess hall as the sailors corresponded to Hitler's commitment to demolish class barriers throughout society. The German navy custom of providing four menus per ship, the quality of meals varying according to rank, he also abolished. Observing once at dinner that "during the World War, the field kitchen was incomparably better when officers had to be fed from it to," Hitler arranged that henceforth, the German armed forces nourish all ranks with the same rations. "The view that it will weaken authority if distinctions are not maintained is groundless," he contended. "Whoever can do more and knows more than another will have the authority he needs. For one who is not superior in ability and knowledge, his rank in whatever office he tenants won't help."

Corrections in salary, benefits and accommodations not only raised the standard of living for labor, but helped integrate it socially. Advantages previously associated with middle class prestige became universal. This diminished one more status symbol dividing the complacent, privileged caste from those seeking acceptance. Hitler had no faith in the good will of the bourgeois and in fact blamed it for Germany's class barriers. He passed laws making exploitation of labor a punishable offense: "This must be considered necessary as long as there are employers who not only have no sense of social responsibility, but possess not even the most primitive feeling for human rights." In January 1934, the government enacted the Law for Regulation of National Labor, containing 73 paragraphs. At a press conference, Reich's Labor Minister Franz Seldte defined the foundation of the law as removal of "unsavory" class distinctions which had previously contributed to the collapse of the German economy, in favor now of "emphasizing the concept of social esteem," and the leadership idea in business life. The law's vocabulary replaced the terms "employer and employee" with "leader and follower." It designated respective roles in this way: "The leader of the facility makes decisions for the followers in all matters of production in so far as they fall under the law's regulation. He is responsible for the

welfare of the followers. They are to be dutiful to him, in accordance with the mutual trust expected in a cooperative working environment." The law imposed moral obligations on both. The German economist Dr. Hans Leistriz described them in these words: "Both the facility leader and the followers are under the commission of the people. Each always faces the same choice, of whether he should fulfill his duty or become caught up in self-serving goals. Both the facility leader and the followers can face disciplinary action that punishes transgressions against this social code of honor." The law cited examples, such as "if a contractor, leader of the facility or other supervisory personnel misuse their authority in the workplace to unethically exploit the labors of members of the following or insult their esteem." The law likewise held workers accountable for "jeopardizing the harmony of the workplace by intentionally stirring up their co-workers."

Though according management autonomy in decision-making, the law included serious restrictions as well. Business owners and directors were responsible not only for sound fiscal management of the company, but for the protection of employees from abuse. This was not presented as benign advice from the government. It was a law word for word. Income and profit were no longer the primary objectives of an enterprise. The wellbeing of its associates became a concurrent purpose. The Reich's Ministry of Labor published a table of offenses under the category of unjust exploitation of employees. These included paying salaries below fixed wage scales or failure to compensate workers for overtime, refusing to grant employees vacations, cutting back hours, providing insufficient meals, inadequate heating of work stations, and maintaining an unhygienic or hazardous work environment. Supervisors were even disciplined for browbeating their staff to work harder.

The record of court proceedings for 1939 demonstrates that the labor law primarily safeguarded the well-being of employees rather than their overseers. During that year, the courts conducted 14 hearings against workers and 153 against plant managers, assistant managers and supervisors. In seven cases, the directors lost their jobs. For more serious violations, the labor ministry enlisted Germany's Secret State Police, the Gestapo. This generally resulted in the arrest and confinement of "asocial" managers and usually involved cases where consciously allowing hazardous or unsanitary working conditions impaired an employee's health.

Despite the involvement of law enforcement, the DAF's long-term goal was to voluntarily correct attitudes that led to social injustices. Hitler opined that "the police should not be on people's backs everywhere. Otherwise, life for people in the homeland will become just like living in prison. The job of the police is to spot asocial elements and ruthlessly stamp them out." A 1937 issue of *Soziale Praxis* maintained, "The state does not want to run businesses itself. It only wants to arrange that they operate with a sense of social awareness." The DAF acknowledged that any labor law will "remain ineffective as long as it fails to persuade the leaders and followers working in the factories of the correctness and necessity of such a perception of labor, and train them in a corresponding viewpoint.

In October 1934, Hitler published a decree defining the nature and the tasks of the DAF. He wrote, "The German Labor Front is to insure harmony in the work place by creating

an understanding among facility leaders for the justifiable requirements of their followers, and balancing this with an appreciation among the followers for the circumstances of and for what is feasible for their factory.” In this sense, Hitler assigned the DAF an educational mission as well. It was but a single element of an extensive, lengthy process of “total inward re-education of people as a prerequisite” to achieve “genuine socialism.” At the party congress in 1935, Hitler pledged to “continue educating the German people to become a true community.”

Hitler told German youngsters in a 1938 speech in Nuremburg that the job of inwardly transforming the population “can only be accomplished by a unified body of our people, which did not come into being through wishes and hopes, but only through education. Through it alone can we create the nation we need.” In this way, the Fuhrer strove to achieve acceptance of the party’s socialist program among the German people with voluntary obedience rather than compliance based on law enforcement. “With police, machine guns and rubber clubs, no regimen can be maintained in the long run,” he warned.⁸⁷ In 1939, he called for drastic reduction of the national police force to release manpower to relieve the industrial labor shortage.

Rearming the Reich

Promoting programs to alleviate unemployment, rebuild the economy and socially unify the nation, Hitler devoted far less attention to strengthening national defense. Provisions of the Versailles treaty had reduced the German army to a 100,000-man force comprising professional soldiers with long enlistments. It possessed no armor, heavy artillery or chemical weapons. The treaty forbade Germany to maintain an air force. Following the London Ultimatum, the Allies banned production of motorized airplanes within the Reich. This drove Germany’s leading aeronautics firms Junkers, Dornier and Heinkel to continue aircraft development in Sweden, Switzerland and Russia. After World War I, the Allies had required the Reich’s navy to steam its modern surface fleet to a British port. Remaining with the navy, reduced to just 15,000 sailors, were six obsolete ships of the line, six small cruisers, twelve destroyers and twelve torpedo boats. There were no submarines.

In June 1919, French Prime Minister Georges Clemenceau had stated, “German disarmament represents the first step toward multilateral reduction and limitation of arms.... After Germany has shown the way, the Allied and associated powers will follow the same path in complete security.” Nonetheless, during the 1920s, France, Britain, the United States, Italy, Japan and the USSR had resumed a partial arms race, focusing on the expansion of naval and air forces. This breach of faith offered Germany the moral foundation to rearm in defiance of the treaty. Thanks to the small size and limited weaponry of the German army, the country possessed virtually no armaments industry in 1933. The Germans had to conduct secret experimental development of armored vehicles, artillery and military aircraft, since it was still illegal. Though engineers re-tooled some factories

for arms production, Hitler introduced proposals for international armaments reduction during the first two years in office. During 1933 and 1934, the Reich devoted less than four percent of the budget to defense. This was not even half the percentage spent by France, Japan and the USSR, which already maintained large arsenals. Germany was in a position to implement a massive rearmament program, had Hitler wanted it, by 1936. Factories were operating at nearly full capacity. The Reich possessed a modern, efficient machine tool industry. The USA and Germany controlled 70 percent of the international export market of this commodity, with minimal corresponding import. In fact, in 1938 Germany had 1.3 million machine tools in industry, twice the number of England's. This circumstance, however, proved of little value to Germany's armed forces because Hitler did not assign priority to the manufacture of military hardware.

Industry in Germany focused on housing construction, improving working conditions for labor, public works, consumer goods, and KdF automobile and ship-building programs. These projects consumed large quantities of materials such as metals, rubber and timber, and employed a significant percentage of skilled labor. Qualified tradesmen, engineers and technicians were unavailable for the arms industry. One German historian concluded, "In the six-and-a-half years until the outbreak of the war, the German economy achieved enormous success. But the result of these huge endeavors remained relatively small for the armed forces, in the face of demands from the civilian sector."

One of Germany's more famous public works, the Autobahn, was without strategic value, contrary to popular assumption. The general staff concluded that the expressway system would be too easy for enemy airmen to spot from high altitude in wartime, and motorized units using the autobahn, if strafed, would have no place to take cover. Few prewar military formations were motorized anyway, and the army relied mainly on rail transport. In contrast to his senior army commanders, Freiherr von Fritsch and Ludwig Beck, Hitler fully recognized the tactical value of armor in future warfare. However, as to the expansion of this service branch, the attention he customarily devoted to parallel civil projects was again lacking. In the opinion of a renowned military analyst, Sir Basil Liddell-Hart, "He ultimately paid the penalty for not promoting it more emphatically."

In November 1934, the Army Ordnance Department opted for the manufacture of a main battle tank mounting a 75 mm cannon. The army produced two lightly armored, under-gunned types, the Panzer I and Panzer II, for troop training during development of the combat model. In the interim, the army also introduced the Panzer III medium tank, which proved suitable for frontline service. The Panzer IV, the main battle tank contracted in 1934, was actually in the planning stage before Hitler took power. The first did not roll off the assembly line until 1936. During 1936 and 1937, the factory in Magdeburg manufactured just 35 Panzer IV tanks. In 1939, the number was 45. In comparison, the German automobile industry produced 244,289 cars in 1936. During the final months of peace, the German army helped fill out its few armored divisions with Czechbuilt tanks it acquired when occupying Bohemia and Moravia in March 1939.

Production of other crucial ordnance suffered similar neglect. By the summer of 1939,

German factories were turning out only 30 heavy field howitzers per month. The manufacture of all kinds of ammunition was so limited that when war broke out in September, the army only had enough stockpiled for six weeks of combat. The air force had a three-month supply of light and medium bombs and no reserves of heavier calibers. Considering that most weapons are a means of delivering projectiles to a target, an insufficient store of ammunition decisively influences their effectiveness. Hitler used the armed forces first as an instrument of diplomacy. He told General Erhard Milch in 1938, "No one asks about whether I have bombs or how much ammunition I have. All that matters is the number of airplanes and cannons."¹¹⁶ During 1938, Germany produced less than onesixth the munitions its plants would manufacture throughout the war year 1944. In the verdict of General Georg Thomas, chief of the Armed Forces Armaments Staff, "Germany went to war with completely insufficient economic preparations.... The enormous economic preparations that would have been necessary for a new world war were practically not even implemented."

When Hitler assumed the chancellorship, his navy was significantly smaller than fleets of rival European powers. Between the end of World War I and 1931, German wharves laid keel on three new warships; during the same period France built 81.¹¹⁸ The Anglo-German Naval Agreement, concluded in June 1935, limited the size of the Reich's surface fleet to 35 percent of Britain's Royal Navy. At war's outbreak over four years later, the German navy comprised just 17.5 percent of the tonnage of its nautical adversary; only half what was allowed. Shipbuilders had postponed the pre-war launching of Germany's formidable battleships Bismarck and Tirpitz due to a shortage of steel. Simultaneous construction of the KdF liners Wilhelm Gustloff and Robert Ley, at a cost of over RM 50 million, continued on schedule.

Shipyards began fabricating submarines, or U-boats, around 1935. This weapon, potentially the most decisive in Germany's arsenal, received a low priority. During 1937, the year work began on the Wilhelm Gustloff, the wharves launched just one U-boat. The Germans built nine the following year and 18 in 1939.¹²⁰ Germany began the war with 22 boats capable of Atlantic sorties, of which only a third could patrol target areas at any one time.

Military commanders met with Hitler in November 1938 to discuss coordinating rearmament among the three principle service branches. One German military historian summarized, "The vague instructions as to how these as yet unspecified armaments objectives were to be realized over the next several years, do not suggest that Hitler at this time expected to be at war just three quarters of a year later." Between September 1937 and February 1939, German firms holding arms contracts filled only 58.6 percent of the orders. During 1938, barely nine percent of German industry produced military wares. The amount increased as the war approached, reaching around 15 percent by the end of 1939, though some estimates are slightly higher. England by contrast, spent 15 percent of her budget on rearmament in 1935 and 38 percent during 1938. The economist Dr. Anja Bagel-Bohlen concluded that the Reich's "arms production in reality never received

unrestricted priority in the economy as it appeared.... The German industry was in no way prepared for an extended confrontation with the enemy's industrial potential."

The German army lagged well behind other Great Powers with respect to manpower as well. In 1935, the French army numbered 655,000 men, Poland's 298,000, and the Czech army 140,000. The Soviet Union had 885,000 men under arms. None of these countries were well-disposed toward Germany. Since the Reich had had no draft for the last 15 years, there were no reservists. These are militarily-trained men who return to civilian life, but can be recalled to active duty in order to rapidly expand an armed force in the event of war. France possessed 4.5 million, Poland 3.2 million, and Czechoslovakia 1.3 million reservists.

Hitler concentrated Germany's human resources on developing social programs for his people rather than on correcting the military disparity. In January 1933, the German army and navy totaled 113,523 personnel. By the end of the year, the roster rose to just 122,000. On March 21, 1935, Hitler reinstated compulsory military service. The draft did not actually begin until October. The army added 200,000 more men, the navy 10,000. Another 20,000 joined the new air force, the Luftwaffe. The German economy had created 3.6 million new jobs by 1935. Military recruitment therefore made a small contribution to alleviating unemployment. The government in fact began increasing troop strength by transferring 56,000 policemen to the army. "The frequent argument that Hitler found the unemployed population work and bread solely through a massive build-up of the armed forces is untenable, when the actual statistics are examined," the historian Ralf Wittrich observed. Schacht confirmed this when he stated, "The elimination of unemployment in Germany... succeeded without rearmament."

The American historian David Schoenbaum concluded, "In many respects...the National Socialists went to war with a peacetime economy rather than having created a war-based economy in peacetime." An indepth study by professors William Langer and Everett Gleason stated, "Nazi military power and war production in 1939 were greatly overestimated by the democracies. There can now be little doubt that the Germans in 1939 were far from prepared for a long war on a large scale.. .war production was inferior to that of the combined British and French and they had very little in the way of reserves."

Despite comparative unpreparedness, the German armed forces would conquer larger, better equipped armies during the early war years. The German army's custom of training junior officers, down to squad leader, to exercise independent initiative in combat gave Hitler's troops a decisive tactical advantage over the French, British and Soviet armies with their inflexible command structure. Adjutant Julius Schaub later wrote that he often heard the Fuhrer complain to his closest associates, "This damned war has ruined all my plans...it's wrecked everything, all of my grand plans for rebuilding." Hitler served in the infantry throughout World War I, and he was seriously wounded. His military service record states that he participated in 84 battles. It seems unlikely that a man who experienced first-hand the devastation, privations and pointlessness of war in such measure, could aggressively prepare the nation he fought for to precipitate a similar

carnage, especially considering the secondary role he historically assigned to rearmament.

10.4 The Case for Germany

The following chapter is an excerpt from *The Case for Germany - A Study of Modern Germany* from 1939, written by A.P. Laurie (1861 - 1949), a Scottish professor of chemistry, and giving his impressions after visiting Germany himself. The document can be found by a quick online search and it might be interesting to read it in full, since I will not present all 180 pages here.

The Führer

It has often been said here of the Fuhrer that he was "only a house painter" or that he had "no education", and the general tendency of opinion in England is that he was not a public school man and therefore is not much good. This attitude shows not only a regrettable snobbishness, but a total ignorance of the origin of so many great men. It is an error which we in Scotland are not likely to fall into, as so many of our famous Scotsmen have come from a similar stock, and have had a similar upbringing and education to that of the Fuhrer. The Highland crofter with his fierce independence, and the poor Scottish student who worked on the farm all summer to pay his university fees, are our equivalent to the finest type of European peasant, who produces a Mussolini, and a Hitler, and the small farmers of America who produced an Abraham Lincoln.

It is among the peasants of Europe that the old customs and traditions are maintained; the townspeople tend to become all of one pattern, and it is to the country that we must go to find the old costumes handed down for centuries, and the old legends and fairy tales. The people in the mountain and forest districts of Germany still live in the houses, and wear on gala days the costumes with which the Grimms fairy tales are illustrated; through these tales we live in an imaginary world in our childhood, with which the familiar Grimms fairy tales are illustrated; through these tales we live in an imaginary world in our childhood which is the familiar every day world to them. However strong may be our link with Germany in later life, through the Protestant religion which we owe to her, and through her philosophy and music, the ties formed at our most impressionable age are with the peasant. In the district of Waldviertel, lives a race of peasants who, in spite of having been part of the Austrian Empire, still speak the Bavarian dialect, and have clung fiercely to their traditions and racial independence. In 1672 a son was born to two of these peasants who bore the name of Stephan Hitler. His descendants lived on in the same district, until Alois Hitler, the Führer's father, determined to see the world, and set off on foot for Vienna. He became a Customs official, but love of the soil was strong in him, and he soon bought a farm in the beautiful district where the Inn joins the Danube, where he established his family, and to which he went on his retirement to take up again

the life of a farmer which had been led by his ancestors.

It was here that Hitler passed his early childhood, and attended the monastery school where he first saw the Swastika carved on the arch of a stone well. As a boy his desire was to be an artist. On the death of his parents he went to Vienna with a few coins in his pocket taking his portfolio of drawings with which he hoped to gain entrance to the Vienna art school. "You will never be a painter", said the Professor who glanced through his drawings, "but you show some talent for architecture". An interesting prophesy for the future of the boy who was to superintend the rebuilding of Berlin. Rejected as a pupil both at the school of art and architecture, he found himself alone in Vienna with only a few coins between him and starvation. Building was going on everywhere and he found employment as a builder's labourer: the boy of 18 entering on a life of desperate poverty learnt to know all that was most sordid and cruel in the life of a great city. For long his only home was the corner of a cellar which he shared with other workmen. His fellow workmen were all followers of Karl Marx, and endless discussions went on in which young Hitler joined. He became convinced that the Socialists and Communists were on the wrong lines, refused to join the trade union and for this refusal suffered an early martyrdom,-he had no sooner got a job than his fellow workmen had him dismissed.

During this period he learnt the close connection between the Socialist movement in Vienna and the Jews. He has told us of his astonishment when he met in the street a Rabbi with long locks dressed in his caftan. He realised for the first time the existence in the heart of his civilisation of a people of an Eastern race and Eastern religion, foreign to all his racial and religious traditions and exercising an enormous influence through their control of finance. A people bound together by devotion to their race, which had survived being scattered broadcast through the world and persecuted through the centuries. Finding it impossible to earn his living as a labourer unless he accepted the teaching of Karl Marx, he managed to pick up a scanty living by painting and selling cards. Many of his sketches made at this time survive, and show considerable artistic talent. After a time he migrated from Vienna to Munich and found a lodging with a small working tailor's family. He continued to earn a small pittance by his painted cards, and began to devour all the books he could get out of the public library on history and politics. The tailor and his family have always remained his good friends, and have the pleasantest recollection of the courteous young Austrian who was adored by the children and made his good landlady anxious for his health by his omniverous reading on history and politics, which often continued through the night.

He denied himself bread in order to have the means to visit the theatre, especially the great works of Wagner whom he revered and still reveres today. When war broke out he got permission from Austria to join a German regiment, and went joyfully to fight for his beloved Fatherland; at last, he felt, he could do something for Germany. He was chosen for the dangerous task of dispatch carrier from the trenches, was twice decorated for valour, was wounded, and won the affection and admiration of his fellow soldiers. His final decoration, the Iron Cross of the First Class, was won for capturing single handed

a small French force and leading them back to his own trenches by sheer bluff and personality. At the close of the war he was blinded by a gas attack and lost his sight for some time, and ultimately returned to Munich still in the army. Munich like the rest of Germany was in a state of anarchy and after a desperate struggle had suppressed a Communist rising which committed the most brutal atrocities. Hitler was employed to lecture to the troops to correct the disaffection among them and show them the follies of Communism.

A few months after his return the disastrous terms of the Treaty of Versailles were made known to the Germans. They were received with a feeling of utter dismay which was soon succeeded by one of hopeless despair. Hitler in the meantime had discovered during his lectures to the soldiers where his real future lay, and determined to return to civilian life and devote himself to politics. He investigated all the various groups which had formed themselves, each sure that they had the means of saving Germany, but none of them had grasped what seemed to Hitler the only road to salvation. He alone conceived the bold idea of refusing to accept the exactions of the Treaty of Versailles; but how was he, an unknown soldier, to get his ideas to the people of Germany? One night he read a pamphlet, which had been given him at a meeting, by a workman called Anton Drexler, and realised that here at last was someone who was thinking along the right lines. Next evening he went to a meeting of this "Deutsche Arbeiterpartei", a group of seven men with only 7.50 marks for funds, which was later to emerge as the National Socialist Party and sweep the whole of Germany.

Hitler inevitably became their leader and convinced them that the only chance of success was to hold public meetings. One of their first modest ventures was a meeting in the Munich Hofbräu Keller, which held about 130 people. Hitler rose to address them and laid before them his whole plan for regenerating Germany. As he spoke the audience became wildly enthusiastic. He realised that he had the gift of oratory, and that by the use of this gift he could rouse Germany to action. The audience went out to spread everywhere the name of Hitler. Their future meetings grew larger and funds began to flow into the empty cash box. The Socialists became alarmed and decided to break up Hitler's meetings by physical violence; but he had foreseen this development and had called to him a handful of his old comrades of the battlefield and organised them as a militant body whom he called his Storm Troopers.

In November 1921 he decided to hold a great mass demonstration to test the real strength of the new movement, and if it succeeded to spread his organisation over the whole Reich. The Socialists determined that it should fail, and arranged to make an attack at the meeting which would smash the movement once and for all. The audience sat at little tables and refreshed themselves with beer while listening to the speaker. In Munich these beer mugs are heavy earthenware vessels. While Hitler was speaking the Socialists had been storing the empty mugs under their tables for ammunition, and at a given signal began hurling them at the heads of the audience and at Hitler who was standing on a table. During the rain of mugs Hitler never moved, and by some miracle was not hit.

His Storm Troopers went promptly into action and though they were unarmed and their opponents had knives and other ugly weapons and greatly outnumbered them, the Storm Troopers after a desperate fight drove them out of the meeting. The scene was one of the wildest description and the hall was littered with broken mugs and smashed tables and chairs. Hitler calmly continued his speech where he had left off as if nothing had happened. Henceforth the Storm Troopers were known as "Storm Detachment" (Sturm Abteilung or SA.).

While the Nazi movement was spreading through Bavaria, the Bavarians were getting more and more dissatisfied with the central government in Berlin, and a movement was spreading to separate Bavaria from the Republic. The Bavarian Minister von Knilling appointed, Herr von Kahr as Commissar with almost absolute power. Herr von Kahr broke off relations with Berlin and was joined in his revolt by the heads of the army and the police in Bavaria. There was talk of a march on Berlin, while Ebert was considering the possibility of ordering the army of the Republic to march on Bavaria. Von Kahr and Hitler were in agreement, but von Kahr hesitated and failed to push the rebellion. On November 9th 1923, Hitler and Ludendorff were marching through Munich at the head of their comrades and fellow members through cheering crowds, when they were stopped by a cordon of police who fired upon them. The scene was one of the wildest panic, the street was strewn with dead and wounded, eighteen of Hitler's comrades were killed, and Hitler was thrown down injuring his shoulder. This attack by the police was followed up by the arrest of Hitler and many of his party. At his trial he made a speech in which he unfolded his whole policy; a speech which made a great impression in Germany. "It is not you, Gentlemen",-he told the Court-"who pass judgment on us. We shall be judged before the eternal bar of history." He was condemned to five years imprisonment in the fortress of Landsberg, a sentence which was afterwards commuted to nine months, and was soon joined in prison by many of his followers who were allowed by the prison rules to mix together in the daytime. While there letters and presents poured in from all over Germany, but his organisation was rapidly falling to pieces without the presence of its leader. It was during his imprisonment that he dictated "Mein Kampf" to Hess.

When he left prison in December 1924 he had come to the conclusion that a revolution based on a coup d'état did not provide a permanent foundation on which to build a new state, and determined to undertake the colossal task of converting the whole German people and obtaining power by their votes. In spite of being forbidden to speak in several of the German federal states, his movement made rapid progress, and returned larger and larger numbers of members to the Reichstag at each election. The work of building up this great organisation was stupendous, and during elections he flew in a plane all over Germany speaking everywhere and organising his followers. Finally he had a large majority over any other party in the Reichstag, and Hindenburg conferred on him the post of Chancellor, on January 30, 1933. Hitler asked the Reichstag for absolute power for four years; this was granted, and afterwards confirmed by a plebiscite of the whole German people. Placed in power, he did not follow the usual practice of Dictators

and shoot his opponents . The more dangerous enemies of the new government were put in concentration camps, where they suffered no more hardships than the common soldier. Civil servants opposed to him and Jewish professors and heads of institutions, were pensioned off at the full value they would have received in old age. Then began the vast task of re-organising Germany; the most bloodless revolution the world has ever seen had been accomplished .

One cannot read the story of Hitler's early life without realising that everything went to form his mind for his future task. Consciously his ambition was to become a painter, but his early absorption in history and geography pointed in another direction. As a young boy, he came to realise what it meant to be separated from Germany, and to live in an Empire which is largely dominated by alien Slavonic influences. He read a history of the war of 1870 when he was a boy, and asked himself, why did we not go to the help of the Germans? The answer was plain. Because although we are Germans, we are divided from our blood brothers; the peoples would have joined, but the outside influence of rival dynasties kept them apart. Can we not see in this deep impression the reason behind his resolve to unite Austria and Germany, and his determination to bring the Sudeten Germans back to their fatherland? He has denounced the folly of conquering and subduing foreign peoples. He had a perfect example before him in his youth, in the endless struggles to subdue the turbulent slav populations of the Austrian Empire, which finally caused its destruction. He was horrified when he visited as a young man the Austrian parliament, and found it full of Slavs who were making long speeches in languages which only a few could understand, and whose racial hatreds finally boiled up into a free fight.

The great social reforms which he has carried out can in the same way be attributed to his early experience . His sufferings of poverty, uncertainty of employment, and starvation in Vienna, when he was left an orphan at eighteen and had to become a labourer, made a deep impression on his mind, and unconsciously again, fate was shaping his destiny, giving him by this harsh treatment an understanding and insight into the difficulties and struggles of the working classes, which he could never have had otherwise. He has fought and conquered for Germany the terrible disease of unemployment, remembering his own misery when he was workless, and the pressing anxiety of where the next meal was to come from.

Brought into contact with Communism, the accepted faith of his fellow workmen, he was faced at an early age with fundamental political problems . Communism aims at a class war which would split Europe horizontally and result in an international communist state. Hitler saw in nationalism an emotional force which could unite all the peoples of a nation in a common purpose of justice for all classes. Communism appeals to hate, and denies the national bond, while nationalism appeals to the natural good feeling between the members of the same community. Communism is therefore necessarily anti-Christian, and nationalism is Christian, so long as it is used as a motive for internal reform, and does not result, as it has done so often in the past, in the proof of patriotism being the

extent of our hatred of other nations . Brought into intimate contact with Communism as an active political force, and not as a subject for discussion in the study, he learnt to hate it, and to hate the men who were exploiting the workmen for their own purposes . His contact with Communism was therefore a part of his training for his future task ; still a boy in years, he had to choose between the risk of starvation or the acceptance of Communism, and he chose to suffer hunger rather than bow the knee to the god of hate and class war. As a soldier in the battlefield, he was to learn the horror and the mad futility of war, and the wickedness of hatred between nation and nation . Patriotism, according to Hitler, means, thou shalt love the people of thine own nation as thyself . Patriotism according to the Peace treaties, means, thou shalt hate the people of other nations.

The solution of these fundamental problems was hammered out by the young Hitler in suffering, and the lessons learnt burnt into his soul. Most men who had endured what he had, would have joined the ranks of those preaching the gospel of hate; hatred of the rich and powerful, and hatred of the peoples of other nations. It is true that in "Mein Kampf", he shows something of the old Adam, but the fires of suffering have burnt all dross out of his soul, so that he comes today before men with a message of Peace and goodwill. We have many impressions of Hitler from those who have known him personally, but perhaps the most interesting is the one given by his jailer . The relation of jailer and prisoner is naturally a difficult one, and yet he speaks of Hitler's unfailing courtesy, and prompt recognition of the necessity for prison discipline. The jailer occasionally had difficulties with the young Nazis, who were indignant at their imprisonment, and chafed at prison rules. When trouble arose he had only to go to Hitler, who would say, "leave it to me", and everything was put right . He speaks of his unfailing cheerfulness, how he encouraged his followers, and kept them interested to break the monotony of prison life, and of his invincible courage in spite of the apparent wreckage of his party. His kindly personality, simplicity, modesty and absence of all pretence are spoken of by everyone . When his old Munich landlady summoned up courage to call upon him, she had only to explain to the two S. S. men on guard that she had known Hitler in the old days, to have every door opened to her and to be greeted by Hitler as a dear old friend. While Hitler has this charming personality, he is of the stern stuff of which leaders of revolutions are made . He stands apart and like all men of genius who have led great movements he is simple and direct, and puzzles and alarms the complex confused personalities of the ordinary diplomatist; yet anyone who will with an open mind study his speeches and watch his actions can learn to understand him . Dwelling among his beloved mountains he makes his decisions and carries them out swiftly and with absolute certainty.

He burns with one consuming passion, his love of Germany and the German people, rich and poor, old and young, and above all the children . "How wonderful", he has said, "are the children of Germany." He feels bitterly her wrongs, the Treaty of Versailles and all that followed. The writer of "Mein Kampf" is there today, with its cynical exposure of European statesmanship, and its call for revenge, but he has found a better way. He has

realised that the war and the infamous Treaty were symptoms of a deep rooted disease and that Europe must begin anew. He bases his political creed on an idealised conception of nationality, and of race of which nationality is the flower. God, he tells us, has made different nations. Each nationality has some thing to contribute to civilisation but the value of the contribution lies in its being essentially national. Those who say that Hitler is out for the conquest of other peoples show a complete misconception of his beliefs. To introduce an alien element by conquest of another country is to injure your own. A race can only reach its highest perfection if it is kept pure, and a nation must work out its own salvation and must care above all else for its own people. Patriotism in its highest form means the complete subjugation of individual gain for the whole community. He believes that no alien element can be expected to work in with this ideal, and herein lies one of his main arguments against the Jewish community in Germany.

Instead of suppressing nationalities, the policy of the treaties which the League supported, he takes that deep emotion-love of country-and bends it to a new purpose, service to one's own people and peace with one's neighbours. There are times when God in compassion for the self inflicted sufferings of men sends a man simple and direct in thought and inspired by one passion, to carry out an ideal which controls him. Hitler has been entrusted with the task not only of saving the German people, but of securing peace in a distracted Europe. Future generations will recognise him as the man who led Europe into the paths of peace.

Side note: **General Leon Degrelle on the education of Adolf Hitler**

"Hitler was self-taught and he made no attempt to hide the fact. The smug conceit of intellectuals, their shiny ideas packaged like so many flashlight batteries, irritated him at times. His own knowledge he had acquired through selective and unremitting study, and he knew far more than thousands of diploma-decorated academics. I don't think anyone ever read as much as he did. He normally read one book every day, always first reading the conclusion and the index in order to gauge the work's interest for him. He had the power to extract the essence of each book and then store it in his computer-like mind. I have heard him talk about complicated scientific books with faultless precision, even at the height of the war.

His intellectual curiosity was limitless. He was readily familiar with the writings of the most diverse authors, and nothing was too complex for his comprehension. He had a deep knowledge and understanding of Buddha, Confucius and Jesus Christ, as well as Luther, Calvin, and Savonarola; of literary giants such as Dante, Schiller, Shakespeare and Goethe; and analytical writers such as Renan and Gobineau, Chamberlain and Sorel. He trained himself in philosophy by studying Aristotle and Plato. He could quote entire paragraphs of Schopenhauer from memory, and for a long time carried a pocket edition of Schopenhauer with him. Nietzsche taught him much about willpower.

His thirst for knowledge was unquenchable. He spent hundreds of hours studying the works of Tacitus and Mommsen, military strategists such as Clausewitz, and empire

builders such as Bismarck. Nothing escaped him: world history or the history of civilizations, the study of the Bible and the Talmud, Thomistic philosophy and all the masterpieces of Homer, Sophocles, Horace, Ovid, Titus Livius and Cicero. He knew Julian the Apostate as if he had been his contemporary. His knowledge also extended to mechanics. He knew how engines worked; he understood the ballistics of various weapons; and he astonished the best medical scientists with his knowledge of medicine and biology.

The universality of Hitler's knowledge may surprise or displease those unaware of it, but it is nonetheless a historical fact: Hitler was one of the most cultivated men of this century. Many times more so than Churchill, an intellectual mediocrity; or than Pierre Laval, who had a merely cursory knowledge of history; or than Roosevelt; or Eisenhower, who never got beyond detective novels." - Leon Degrelle (1993)

The Beleaguered City

In order to understand Hitler's denunciation of the Treaty of Versailles, it is necessary to realise the strategic position of Germany at the time he came into power, and to compare the map of Europe at that time with the map before the war. Germany is bounded by other countries, except along the Baltic, and if we proceed to trace this post-war frontier we shall find that the title given to this chapter was fully justified at that time. We shall begin with the frontier facing France. Alsace and Lorraine, which had belonged to Germany since the war of 1870, were restored to France. These territories which contain a mixed French and German population, have changed hands more than once. Louis XIV seized them in time of peace, and they continued to be part of France after the close of the Napoleonic wars, to be regained by Germany in 1870. France never ceased to look forward to their recovery; the statues in Paris representing the two provinces being always draped in black. It is probable that if they had not been taken by Germany in 1870, the war of 1914 would have been confined to Eastern Europe. While the Treaty of Versailles was being drafted, Foch wished to have the whole of the Rhine Provinces added to France, and during their occupation after the Treaty was signed, attempts were made to agitate for their separation from Germany. The plebiscite taken in the Saar at the end of its occupation under the League, showed clearly that these provinces had no desire for separation, but they were included in the neutral zone, and German troops were forbidden to enter them. France built the Maginot line of forts within five miles of the frontier, armed with powerful siege guns able to throw shells twenty miles inside the German frontier. These forts extended from the Rhine to the borders of Luxembourg.

The Treaty of Versailles re-created the country of Poland out of Russian, German and Austrian territory, and in order to give Poland an outlet to the sea, presented her with a broad strip of land on the Vistula, ending in the town of Danzig, which was made a free city under the suzerainty of Poland and the League. This strip of territory cuts off East Prussia from the rest of Germany. Difficulties have arisen over Danzig, the population of which is more than 90% German, difficulties which have been increased by Poland

building the new port of Gdynia in the neighbourhood, on Polish territory, to which her sea-going trade is being diverted. The Polish corridor contains a mixed population of Poles and Germans, and was given to Poland without a plebiscite. According to the German census of 1910, it contained a majority of Germans. A considerable section of Silesia, including three quarters of the valuable Silesian coal fields, was given to Poland in spite of a plebiscite in favour of retention by Germany. As this extensive minefield had been developed by German capital, and contained a considerable German population, this region has also been the source of endless difficulties. One of the causes of trouble is the low standard of living and wages of the Polish miner, wages which the German miner who was handed over has had to accept.

The Treaty of Versailles carved up the whole Austrian Empire, creating the new country of Czecho-Slovakia, which contained six different races over whom the Czechs, having a small majority, have ruled. Bohemia which, as can be seen from the map, cuts into the heart of Germany, was formerly part of the friendly Austrian Empire, but now belongs to Czecho-Slovakia. It has been a bone of contention between the Czechs and the Germans for centuries, contains a population one third German and two thirds Czech, and includes the important historical city of Prague. The German population suffered severely under Czech rule; the Czechs never having carried out the clauses in the Peace treaties designed for the protection of minorities. Czecho-Slovakia is a democracy, but a democratic government is no protection to an alien race in a permanent minority, and the Czechs kept their prisons full of German political prisoners. It is generally admitted today that the commissioners who drew up the new frontiers showed very little wisdom or knowledge of the various peoples whose fate they were deciding in an arbitrary manner. They refused a plebiscite which had been promised by Wilson whenever it suited their purpose.

If we now look at the geographical position of Germany as a whole when Hitler came into power, it is obvious that she had extensive frontiers on the other side of which were peoples who were far from friendly, not through any faults of the German people of today, but because of long enmity extending into the past. France and Germany had been foes since the days of Louis XIV both for racial and historical reasons, and France hastened, as soon as the war was concluded, to build up an army far more formidable than the one she had possessed in 1914, to make alliances with Poland and Czecho-Slovakia directed against Germany, and to lend these countries large sums to enable them to buy arms. In Bohemia, in place of the friendly Austrian Empire, Germany had the Czechs who were her hereditary foes, and resuscitated Poland was not too friendly to the Germans who assisted in carving up her territory in the 18th century. Behind Poland and Czecho-Slovakia lies the Soviet Republic which has two reasons for hating Germany: the racial reason that as Slavs they hate Germans; and the political reason that the Soviet is a Communist Government bitterly opposed to National Socialism, the Nazi revolution being just in time to prevent a Communist revolution in Germany. Finally, France, after the signing of the Treaty of Locarno, which seemed to give Germany some security, entered into an alliance

with Russia which Czecho- Slovakia also joined. Czecho-Slovakia offered Bohemia to Russia as a base for her bombing planes, within 150 to 250 miles of every important city in Germany except Hamburg, and promised a free passage to the Soviet troops through her territory to attack Germany.

No one therefore who looks at the map can doubt the correctness of the title I have given to this chapter. The huge guns of the Maginot line can destroy the German towns to 20 miles behind the frontier, and it forms a military base for the invasion of the Rhine provinces ; while a Russian fleet of bombing planes planted in Bohemia can destroy the cities of Germany. The invasion of the Ruhr by France in time of peace had shown Germany what to expect from her neighbours if she remained in this vulnerable position to the enemy without the gates. In addition, at the time when Hitler came into power, the Communist vote had risen to 7 million, and the German people had already experienced the horrors of a Communist rising in Munich, Central Germany, the Ruhr Valley and in Hamburg. Horrors that would have been repeated all over Germany if Hitler had not acted promptly. Germany's very existence depended on a highly centralised government; a stern internal discipline; the training to arms of the young men; the possession of munitions not inferior to her neighbours; and the organisation of the whole nation for one purpose, the preservation of the German people from attack. Germany is not in the position to attack, nor desirous of attacking any nation in Europe; but no nation could be expected to tolerate for long this policy of encirclement without taking measures for defence.

National Socialism

Before describing National Socialism, it is necessary to discuss the ideas that inspired the political systems of the 19th century, which saw the rapid spread of democratic forms of government originating from the writers of the 18th century . Brought up from childhood in the belief that Democracy was the last word in perfect government I may be allowed to criticize it in my old age. The stress of the war and the aftermath of war has led not only to the flight of Kings but the collapse of Parliaments and the rise to power of rulers from the people . Dictators govern or non-parliamentary regimes exist in Turkey, Russia, Poland, Germany, Italy and Spain, dictators who have risen to power by the sheer necessity of the situation . The average man, peasant or workman, is not interested in theories of Government . All he asks is law and order and a reasonable modicum of honesty and efficiency. The failure to obtain this minimum has resulted in the rise of Dictators, to replace anarchy and revolution by law and order.

The Government of our country, which has grown up through the centuries and like a patched old coat sits comfortably on the shoulders of John Bull, is not to be taken as a typical example of Democratic Government . Artificially created Democracies are very different. A Democratic Government gives every adult citizen a vote for the election of a member of Parliament and from among the members of Parliament the Government of

the day is chosen . He therefore has a part in the Government and the utmost freedom of opinion is necessarily allowed so that the elector can decide what he wants and vote accordingly. The defect in Democracy is that while it gives the individual citizen certain powers and privileges it asks nothing from him in return for the benefit of the community. In fact the community has no organized conscious national life. The voter having recorded his vote has no further duties to the State than to keep the law and avoid the police. It is true the citizen may be called upon by the State to fight as a soldier, but in time of peace nothing is asked of him . Parliament may pass laws for the common good but they are administered by State officials. The only organized life with an ethical idea of service is centred round the Churches or voluntary organizations . The Democratic State having given the utmost tolerance to freedom of opinion leaves the citizen to act as best he can for his own aggrandisement. The State consists of separate disconnected units and is not a living organism . It has made a God of Intellect but left out Ethics . It is notorious that in continental Parliaments each Party is willing to sacrifice the common good to its own advancement, and that they are incompetent and apt to become corrupt.

We have been saved from these defects because centuries of tradition have planted in us certain instincts which cause us to regard the body politic as a whole and to pull together in times of crisis in defence of the Nation; but that does not necessarily happen in artificial Democracies. Our constitution is so complex, with a Monarchy, with a House of Lords, with traditions and customs derived from the past, and with all kinds of influences flowing into the national life, that it cannot be compared with any other Democracy. We have above all traditions of service which come from the Aristocracy and landed classes of this country who, though deprived of power and to a great extent of wealth, still occupy the front pages as news, because of what they stood for in the past, and still in many instances stand for to-day. It is true the new rich and the more frivolous members of the Aristocracy have lowered the standard, but the best of the old families continue quietly their social duties. I can admire an old family who, like the Cecils, through generations have preserved a standard of public service, but I cannot admire a successful soap boiler.

To them we owe the fact that our public schools still carry on that ideal of service-though never expressed-to the State and the Empire, and the ruling classes trained in them still keep control of the government. It is not without interest that just as our public schools with their system of monitors and heads of games and houses are training boys to rule in the best sense of the word, so Hitler has found the need for the same idea in Germany and through the Hitler Youth Organisation is giving that training which is so essential and which has always been absent from the German schools. The Established Church has also kept up a tradition of Christian conduct, and the Society of Friends has always set a high standard of public service. I remember visiting a linen mill at Belfast many years ago and being horrified to see the girls at the machines in a room full of steam, soaked to the waist, and with no opportunity of changing before going home in the bitter cold outside. I asked: "Are all your mills like this?" "All but one", was the reply, "but", with a shrug of the shoulders, "that belongs to a Quaker".

We can call our constitution a Democracy if we like, but it is modified by traditions drawn from the past which make it workable. All these traditions of national life are necessarily absent in Germany, because of her history, and have to be created. We have another advantage owing to the fact that a stable though changing form of Government has existed so long in this country. Like pebbles in a stream, we have rubbed together until we are rounded and trained in toleration and moderation. It was the absence of any idea of the State as an organized whole that led the thinkers of the 18th and early 19th century to try to plan a State in which the individual served the community. If by Socialism we mean the idea of the State as an organic whole to which the individual members must render service, it is as old as Plato's Republic, and certain early writers on Socialism, and Hegel in his Political Philosophy, developed this conception. Democracy combined with the false interpretation of the Economics of Adam Smith into a rule of conduct, had reduced the people of this country to such a condition by the middle of the 19th century that if the State had not interfered by legislation, we would have committed race suicide!

Unfortunately for the advance of civilized communities Karl Marx, by means of an unsound economic theory, side-tracked the Socialist movement from its purpose of remodelling the whole State, into a class war by which the Proletariat was to seize all the means of production and eliminate the middle class. The movement towards a true Socialistic development of the State which we owe to Ruskin, Owen, Kinglery, and Disraeli, was directed into a class war which has produced red revolution in Russia and been barren of any productive results in this country. Social legislation has been passed by both the Conservative and Liberal parties, but since a separate Labour Party was formed, though twice in office, they have produced no results, the last progressive piece of legislation-the Housing and Unemployment Acts-having been passed by the Coalition Government under Lloyd George. The attempts to create a class party and a class war in this country have proved a failure. The people of this country, tired of political strife, have now twice returned by large majorities a Coalition Government, not because they necessarily admire its capacity or efficiency but because they are determined not to trust the country or the Empire to those who lead the Labour Party and still mumble the ideas derived from Karl Marx. The Bovril of Communism mixed with luke warm water does not attract the majority of voters. The complaint is made that the youth of the country takes no interest in politics. They have too much sense.

The time has come when we must return to Plato and the conception of the State as an organic whole to which each citizen must give service, and the sacrifice of individual interests for the common good. We must remember that we profess Christianity and that the principles governing the relations of the individual to his fellows have been laid down for all time in the Gospels, and given us the right ideals on which to found a living organic State. This does not mean that we have to deny Democracy, but on the contrary endow Democracy with an ethical principle. We are not wanting as a community in ethical instincts and desire to benefit our fellow creatures, but the whole needs co-ordinating as

a conscious ethic guiding the Government and the individual. Without such an ethic, Democracy demoralizes the politician and the Press. We need therefore to return to a genuine Socialism, that is, the conception of the State as an organic living entity demanding service and sacrifice of individual gain from its members, and ending class war and spoliation. There are times in history when a great leader arises and sweeping aside all forms of Government establishes a personal rule. Such a crisis had arisen in Germany, and Hitler has become a great leader, but the main interest to the student is not his personal rule but the ideal of a State which he has evolved and is working out in Germany. He is the product of all those, from Plato onwards, who have imagined the State as an organic whole consciously guided by an ethical principle and calling on its individual members to play their part each in his place in helping forward the ethical idea by which the State is guided. His originality lies in converting these abstract ideas into a living principle of life by substituting for the abstraction the State, the living reality—the German Nation.

The sufferings of the German people have made them ardent Nationalists. The Fatherland, crushed and trampled on by the Nations of Europe, suffering every humiliation, has become to the German people the one object of their devotion. The love of the Reich has become a living and consuming flame. Hitler has seized upon that and directed it to an ethical aim. If we wish to appeal to youth we must ask them for service and if need be sacrifice. Only in that way can we utilize their ethical inspiration, and so he has appealed to the youth of Germany. He will accept no class division; he will stamp out all class war. No man can ask more than to be a citizen of the German Nation, and it is as a member of the body corporate that Hitler addresses his appeal to him. He has fused all parties together to cast them in a new mould. He has accepted the economic system of Germany as he found it, though he is modifying it in many ways by the action of the State, and while he has carried out many sound reforms profoundly modifying conditions in Germany, these are merely the outward and visible sign. He is aiming at a change of heart, a new ideal of action, a conversion of the German people, without which external machinery is of little use. Doubtless many of the experiments will fail and fresh plans be worked out, but as long as the ethical idea is there, reforms are easy which here would be difficult.

It must be remembered that the Continental Trades Unions are very different to ours, being almost entirely in the hands of political agitators. Obviously the existence of Trades Unions whose leaders were paid to promote class war, was intolerable to the Nazi idea, and Hitler substituted the organization called the Labour Front, with committees of masters and men elected by secret ballot, and State officials who act as overseers and have the last word. Most elaborate labour laws have been passed guarding the workman in every kind of way, and while wages are low the conditions of life are very much improved. Not only are full wages paid during all holidays but the "Strength through Joy" organization has brought to every workman the opportunity of attending concerts and theatres and of cheap holiday travel including sea voyages and visits to foreign countries. Two special

25,000 ton ships have been built and four others chartered for this purpose, and hiking hostels are provided everywhere. Housing is being carried out on an enormous scale, both in town and country, and factories are not only being made sanitary but pleasant to work in with the provision of dining rooms and bathing facilities. There is still much distress in big cities and the most complete and remarkable voluntary association has been created to deal with this problem, while the "one pot meal" every month during winter has helped to provide funds. It may be truthfully said that in Berlin last winter no person went without sufficient food and clothing and enough coal to keep one fire burning. The Nazi organization puts at the service of the State a million and a half willing voluntary workers.

Hitler has said that a healthy State is built on the peasant, and Germany has over half a million peasant families cultivating their own land. Our peasants alas are landless. He has made the house and land the possession of the family for all time descending from father to son, and has made it illegal to mortgage the house and farm. Any destitute member of the family has the right to food and shelter in the ancestral home. Prices are fixed and the State organizes distribution. Good food is cheap and plentiful in Germany, yet the peasant is doing well. The middle man is retained for distribution but can no longer rig the market and ruin the farmer with low prices, and plunder the consumer. The only way the traveller can judge internal prices is by what he pays in restaurants. Two of us made an excellent meal on roast venison with cranberry sauce, Swiss cheese, butter, brown bread and beer for a total of three and a half marks in Nuremberg.

When Hitler first got control there were six million unemployed in Germany. To-day there is a shortage of workmen, and Italian, Dutch and Polish workmen are being brought in. Those for whom work could not be found during the first years were employed in road making, land reclamation and similar tasks. They had to move from place to place and so live in camp, and were necessarily under discipline to ensure order and train them to a form of labour which was new to many of them. Our plan of paying men the dole and allowing them to loaf in idleness is utterly abhorrent to the German mind. The employment of the unemployed on public works in this country was destroyed by the Trades Unions demanding standard rates of wages for unskilled labour. The cost was prohibitive. Clothed, fed and housed, and his family looked after, the German unemployed are glad to work. This has been described by our Labour Party as slave labour. No one would be more astonished than the German unemployed at such a description. I shall deal in more detail with parts of this social re-organization in subsequent chapters, but I have said enough to show the general lines. They will make mistakes; but the team spirit is there and the determination to succeed. Our Policy under the false application of the teaching of Adam Smith was in the 19th century to put economic gain first. Hitler's policy has been to put the well being of the people first, to consider the race not the multiplication of goods. He has been rewarded by success in the field of economics.

Nothing has caused more criticism of the German revolution than their handling of the Jewish question. I do not propose to defend it, but give certain explanations which are

worthy of consideration. It is perhaps unnecessary to say that the whole business has been grossly exaggerated and active imaginations have been at work inventing unspeakable horrors. During the early days of the revolution brutalities were committed on both sides, many of Hitler's followers being shot down by Communists, and rightly or wrongly they hold in Germany that Communism is a Jewish revolutionary movement. The hatred of the Jew on the continent is not confined to Germany. The anti-Jewish pogroms that have taken place in Poland were so dreadful that the Polish Government did not allow any news of them to leave the country, and there can be no doubt that Hitler, by bringing the whole matter under law and regulation, saved the Jews from massacre. It is difficult for us to understand this bitter hatred. We find the Jew a law-abiding, hard-working citizen, and have no complaint to make. It is doubtless true of the Jew as of all human beings, that good treatment makes a good citizen and bad treatment a bad citizen.

The only law passed by the Government dealing with the Jewish question, when Hitler came into power, was the Nuremberg Law dealing with marriage. There are to-day some 500,000 Jews in Germany but they are excluded from many professions and Government service. On the other hand they have their own cultural society, theatres and concerts and are protected from ill treatment by the Police. Mixed up with this Jewish question is the racial question. The Nordic peoples differ from the Latin peoples in guarding jealously the purity of the blood. We have never in this country objected to intermixed marriages with Jews, but an officer in the army in India who marries a Hindu girl would have to resign his commission, while in the U.S.A. and South Africa etc. the slightest taint of negro blood means social ostracism. In dealing with this difficult question I merely wish to point out that enmity to the Jew is not peculiar to Germany, and that it is better to regulate the Jewish position by law than to have outbreaks of fanaticism. True, Karl Marx was a Jew and rightly or wrongly, as I have said, Communism is regarded in Germany as being Jewish in origin and being organized by Jews.

The dismissal from their posts of distinguished men of learning, artists, musicians, scholars and men of science because they were of Jewish blood gave great offence among the intellectual classes. Art, science and learning recognizes no boundaries of race. What was not known in this country was that these men were offered full retiring pensions if they remained in Germany and that they had managed to fill a large preponderance of posts to the exclusion of Germans. It is true that our Government is doing its best to-day to exclude foreign musicians and actors from this country, a most indefensible proceeding which makes it difficult to criticize the action of Germany, but it was the dismissal given in the highest ranks of learning that shocked Europe and America. Every revolutionary political movement like every religious movement has its excesses and intolerances, and far too much has been made of their blunders. To-day we regard the French Revolution with all its horrors and excesses as marking a step forward in political history. It is only necessary to look back at contemporary writing in this country to realize we could not see the wood for the trees. The quarrel with Rome was inevitable, because the Vatican will interfere in politics, and just as we had to fight the Vatican to a finish for two hundred

years, so any strong Government which wishes to be master in its own home has sooner or later to face the opposition of Rome. We at any rate should understand and sympathize with the position of the German Government.

To us the whole idea of imprisonment for political opinions is abhorrent, but we do not hesitate to arrest and imprison thousands of prisoners without trial in India, and in Belfast to-day any Roman Catholic is liable to arrest and trial before a secret tribunal and can be imprisoned merely on "suspicion" without trial. Political prisoners are not peculiar to Germany. All continental countries, including Democratic Czecho-Slovakia and even France have their political prisoners and secret police.

The Foreign Policy of Germany

Before explaining the foreign policy of Germany it is necessary to describe briefly the mental attitude of the Nations of Europe towards each other, as expressed by their Press and their politicians, - an attitude that has been clearly revealed by all that has happened in connection with the Spanish civil war. This civil war has inevitably resulted in different nations taking sides, Germany and Italy supporting Franco, and Russia and France the Government in Madrid, while in this country both sides are represented. From the beginning of the civil war armament manufacturers in all countries have been busy supplying munitions to both sides. In addition to munitions thousands of volunteers have poured into the country, more especially from Italy where the people and the Government are both violently pro-Franco. Our Government, by setting up the non-intervention committee have tried to restrain the flood of armaments. Germany was the first to propose that all Governments pledge themselves to restrain to the best of their ability the entrance into Spain of volunteers, and after considerable delay the non-intervention committee adopted that policy.

Since the date when that pledge was given both Germany and Italy have been repeatedly accused by the French and English Press and by prominent politicians, of having broken faith in this matter, on no evidence except the excited statements of the Madrid Government, and the rumours collected and transmitted as facts by the journalists. The most outrageous statements have been published, from the accusation that the bombing raid on Guernica was ordered from Berlin, to the accusation by Litvinoff that the Italian Government were responsible for the pirate submarines. Anything in the way of unreliable rumours can be excused to the Madrid Government, suffering from war hysteria, but the accusations in our Press and by prominent politicians are a different matter.

Let us probe a little deeper into this mental attitude of distrust. France has busied herself making "mutual security" Pacts and lending large sums for the purchase of arms to various nations, so as to secure an overwhelming combination of force directed against Germany. The assumption underlying this policy is that owing to the rapacious instincts of Germany, Peace can only be kept by the threat of war, and by collecting on one side the biggest battalions. Our military alliance with France is made on the assumption that the German

Nation is ready at any moment to make an unprovoked aggressive attack on France, an action of which the German Nation has never been guilty. The same atavistic conceptions of the relations between nations is to be found in the League Covenant itself. In that Covenant the Nations solemnly pledge themselves to refer disputes to the League and accept the League's decision, and even if this prove impossible, to delay war for so many months. Yet in Articles 10-16 it is assumed that the responsible Governments of these Nations are capable at any time of making unprovoked attacks on each other and therefore according to the suppositions of the League Policy, Peace can only be preserved among these treacherous ruffians by organizing under the League an overwhelming military force composed of a similar collection of scoundrels.

If the members of the League cannot be trusted, the mutual security pacts are worthless, as all agreements and arrangements between people or nations with the mentality of crooks is unreliable. I do not propose to be led here into a discussion of the complex and highly disputatious question of Japan in Manchuria and Italy in Abyssinia, but in so far as Europe is concerned, since the formation of the League of Nations only three cases of unprovoked aggression have taken place in Europe, - the seizure of Vilna by Poland, of Memel by Lithuania and the occupation of the Ruhr by France. That wars may arise in Europe is quite possible. The Treaties of Versailles and Trianon have sown the seeds of numerous wars, but the first step towards Peace is that Nations should accept and believe the honest intention and desire for Peace and for fair play of other nations. That we have departed so far from this reasonable attitude is not due to the peoples of Europe, but to their Press and their politicians. If I print in a newspaper that Mr. Jones is a liar and a treacherous scoundrel Mr. Jones is able to bring an action for libel, but there is no law of libel for Nations or the rulers of Nations, and the most that can be done is for the aggrieved Government to demand an apology. When a very distinguished politician calls Hitler a gangster in the House of Commons there is no redress.

Evil speaking, lying and slandering is specially forbidden in the Prayer Book but apparently it does not apply to Nations or the Governments of Nations. When M. Blum made a speech while still Prime Minister, in which he promised Czechoslovakia that in case of an unprovoked aggression by Germany, France would declare war, he assumed that an unprovoked aggression was just the kind of thing that Germany would indulge in. We have been told in the French Press that Germany intends to make war on Czechoslovakia, that next spring she intends to attack France, that she is preparing for war against Russia to conquer and annex the Ukraine. I have discussed this mental attitude at some length because it is so universal that it is assumed as a matter of course, and the grossest insults against a friendly Power are allowed in Parliament with no protest from our minister of foreign affairs. In discussing, therefore, the foreign policy of Germany, I am handicapped by the reply that Hitler in his speeches is telling lies to deceive Europe. It is no use stating that his foreign policy is thoroughly understood and accepted by the German people.

The reply is that they are ordered with the dread of imprisonment to deceive foreigners, and quotations torn from the context and taken from "Mein Kampf" are given as proof

of their duplicity . No one in Germany, including Hitler himself, regards the extreme foreign policy in "Mein Kampf" as a guide to German foreign policy to-day. Let me in spite of these disadvantages do my best to explain . We have seen that the Nazi movement is one welding the German people into a living organic State developing their own nationality and culture. From this devotion to their own nationality comes a respect for other nations. Hitler expressed the faith within him when he said God has created different nations that each should fulfil its own life and culture as its contribution to civilization. He therefore regards the conquest of another Nation as a crime against the national idea, and territory so acquired as a source of weakness to the conquering Nation, because alien elements are introduced into the national life and the conquered people have to be held in subjection, thus destroying their right to fulfil their own national life . He points out that Europe has been engaged for centuries in territorial conquests and in the end the nations have retained their original boundaries. He regards war for territorial conquest in Europe as a crime against civilization and a useless and unwise expenditure of force. I believe that if Alsace and Lorraine were offered to Germany as a gift she would refuse . He therefore quite truthfully says he cannot conceive of any possible cause for quarrel with France.

On the other hand the German Nation is intensely interested in the conditions under which Germans are living under alien rule, and it has long been obvious that the Germans in Austria and the Germans in the Sudeten German area would ultimately become members of the Reich . Wherever Germans are living they wish them to become converted to the Nazi conception of a State, but that does not mean disloyalty to the people among whom they dwell. On the contrary it will make them better citizens. There is nothing aggressive towards other Nations in the Nazi faith, and many passages in "Mein Kampf" have been misunderstood because Hitler is discussing the German people in alien lands. This conceptions of the true attitude of the German Nation to other Nations is thoroughly understood in Germany. If we examine the foreign policy of Germany, we find this new conception running through their political action. Hitler has introduced a new idea of the relations between countries in his Peace Pacts, a Treaty between two neighbouring States not to make war on each other for a term of years. This Treaty contains no obligations to act as allies against other Nations. It is the only genuine Peace Treaty ever suggested, all other Treaties being alliances for purposes of war. This idea is transforming the whole political situation in Europe. Germany will never sign again a Treaty like the Treaty of Locarno which pledged the members to war under certain circumstances, nor join the League of Nations while Article 16 is operative. She alone of all Nations in Europe is free from obligations to make war under certain circumstances . The extent to which we are committed no citizen of this country knows.

Germany has offered these Peace Pacts to all her neighbours including ourselves. In addition Germany has agreed to a navy only one third the size of ours, and has pledged herself to respect the neutrality of Holland, Belgium and Switzerland. She has established very friendly relations with Italy as they both dread the spread of revolutionary Commu-

nism, but she will form no Treaty or Alliance involving possibilities of war. Germany is very far removed in her mentality from a Pacifist policy. She believes in armed national defence and quick reprisals to an outrage like the bombing of the "Deutschland", but her conception of the right relations between the Nations of Europe is so new and the mental attitude of the other European politicians towards each other so atavistic that it is a difficult mental gulf for them to cross, and yet it is plain ordinary common sense.

A striking instance of German diplomacy is the agreement that she has made with Belgium . Under the Treaty of Locarno, France and England were pledged to go to the assistance of Belgium if attacked, and Belgium was equally obliged to go to their assistance. France and England proposed to Belgium the renewal of the old arrangements but Hitler dropped an explosive bomb into the negotiations by announcing that Germany was prepared to pledge herself to protect the neutrality of Belgium without any conditions. The Belgians being astute diplomatists used this to compel France and England to drop the clause requiring assistance from Belgium in case they were attacked, and France proceeded at once to spend vast sums on a line of forts between herself and her old ally. The Treaty between Germany and Belgium has now been ratified . Germany pledges herself not only to respect Belgian neutrality but to go to her defence if she is invaded, thus protecting her from an act of aggression by France . As the Daily Express says, the new Independence of Belgium is Independence from France. Germany has entered into the closest relations of friendship with Italy, and Yugoslavia has signed a Peace Pact with Italy and Bulgaria on the German model . Bulgaria has signed a Treaty of Friendship and of arrangement for mutual arbitration with Turkey, and Turkey has signed a Peace Pact on the German model with Persia, Iraq and Afghanistan . We alone have failed to realise the implications of a Peace Pact, and have shown more hostility to Germany since we signed it than we did before.

In none of these Treaties is there a hint of an alliance for purposes of war. The Pax Germanica now extends from the Channel to the Baltic, from the Baltic to the Mediterranean, and to the frontiers of India. Ultimately the Peace Pacts will result in the denunciation of the mutual security pacts . Poland having signed a Peace Pact both with Germany and with Russia is getting restive about her mutual security pact with France, which she realises is an obligation that might force her into war against a friendly neighbour. The great mass of mankind ask for Peace and security abroad, and law, order, and efficient government at home. Alone among European nations by her home and foreign policy Germany is securing this for the peoples of Europe and therefore the smaller nations are clustering round Germany. There is another aspect of this question that requires to be dealt with before leaving it. It is probably true that in 1914 the outbreak of war was very largely due to those in military command in the various countries involved. The last serious war in Europe had been in 1870. It was quickly over, the loss of life was according to our present standards insignificant, and it did not profoundly disturb the economics of Europe or even of France. Those in command of the armies of Europe in 1914 envisaged a war like that of 1870 and if they did not deliberately promote war, did nothing to avert

it. After all war is a soldier's business. To-day the situation is very different. Those in responsible command in Europe dread the idea of war, as they realize from their intimate knowledge what a fearful business it will be. The demand for war comes not from the Totalitarian States, not from the dictator or the soldier, but from the parties of the left in the Western Democracies. The whole policy of France was formerly directed to the oppression of Germany, and the creation of a divided Europe, and the danger of France setting fire to Europe was much increased by having a party of the left in power including the Communists. Daladier had to break with the Communists before he could get his Peace Pact signed.

Athens we know was forced into the Syracusan war by the mob, and to-day it is the parties of the left who are always clamouring for war. They work themselves into a state of hysteria over the sensational, unverified and one-sided statements published by the Press, and pass resolutions at public meetings urging war on the Government. At the end of the Abyssinian campaign I was present at a meeting of the Council of Action with Mr. Lloyd George in the chair, a body which consists of Nonconformists and Liberals. They carried a resolution with one dissentient vote, which I gave, in favour of a blockade of the Suez Canal and the Red Sea by our fleet. This would not only have meant war with Italy but as Italy was already in possession of Abyssinia, would have meant serious complications with other Powers including the U.S.A. At a meeting of the Labour Party not long ago they carried a resolution in favour of our expenditure on armaments because, the leaders explained, if returned to power they would require these armaments to make aggressive war on nations like Germany whose form of Government they did not approve, or undertake ventures like attacking Italy or Japan. The absurdity of their attitude towards the use of bombing planes by Japan is that we are building a huge fleet of bombing planes to use in exactly the same way if there is war in Europe, the proposals of Germany to limit the use of bombing planes to the actual battle areas having been rejected or at any rate ignored by our Government. As General Goering said when addressing the war veterans, "I believe that those who rattle the sabres have not participated in war."

In pre-war days we used to complain of the German Emperor rattling the sabre. To-day the rattling is done by the Labour leaders in England, and the real danger of war in Europe would be the success of the Labour Party in a general election. While pretending to be in favour of peace they are the firebrands that might set Europe alight. It is madness to have the mob of the left attacking and insulting Nation after Nation in public meetings, and our foreign office entering into commitments in Europe unless we are prepared at once to introduce conscription. We sent our half trained boys to fight trained soldiers in 1914 with the result that in the war of attrition that Earl Haig was always talking about three English soldiers were killed for one German. Is the same slaughter of our youth to take place again? Why can we not go quietly about our lawful occasions and leave other Nations alone?

England and Germany

In regard to Anglo-German relationship there has existed no reason for complaint during the last twenty years. The Germans have made a number of approaches with a view to establishing a better and closer understanding but all without avail. There is no evidence to show that these German approaches were not made honestly and fairly. I will quote only two examples from a number of such statements. The first is the relative passage in the Führer's speech of April 28, 1939, when he stated:

"During the whole of my political activity I have always expounded the idea of a close friendship and collaboration between Germany and England. In my Movement I found innumerable others of like mind. Perhaps they joined me because of my attitude in this matter. This desire for Anglo-German friendship and cooperation conforms not merely with sentiments which result from the racial origins of our two peoples, but also to my realization of the importance for the whole of mankind of the existence of the British Empire. I have never left room for any doubt of my belief that existence of this Empire is an inestimable factor of value for the whole of human cultural and economic life. By whatever means Great Britain has acquired her colonial territories—and I know that they were those of force and often brutality—nevertheless I know full well that no other Empire has ever come into being in any other way, and that in the final resort it is not so much the methods that are taken into account in history as success, and not the success of the methods as such, but rather the general good which the methods yield. Now there is no doubt that the Anglo-Saxon people have accomplished immeasurable colonizing work in the world. For this work I have a sincere admiration. The thought of destroying this labour appeared and still appears to me, seen from a higher human point of view, as nothing but the effluence of human wanton destructiveness. However, this sincere respect of mine for this achievement does not mean foregoing the securing of the life of my own people. I regard it as impossible to achieve a lasting friendship between the German and Anglo-Saxon peoples if the other side does not recognize that there are German as well as British interests, that not only is the preservation of the British Empire the meaning and purpose of the lives of Britishers, but also that for Germans the freedom and preservation of the German Reich is their life purpose. A genuine, lasting friendship between these two nations is only conceivable on the basis of mutual regard. The English rule a great Empire. They built up this Empire at a time when the German people were internally weak. Previously Germany had been a great Empire. At one time she ruled the Occident. In bloody struggles and religious dissensions, and as a result of internal political disintegration, this empire declined in power and greatness and finally fell into a deep sleep. But as this old empire appeared to have reached its end, the seeds of its rebirth were springing up. From Brandenburg and Prussia, there arose a new Germany, the second Reich, and out of it has grown at last the German People's Reich. And I hope that all English people understand that we do not possess the slightest feeling of inferiority to Britishers. Our historical past is far too great for that!

England has given the world many great men, and Germany no fewer. The severe struggle for the maintenance of the life of our people has in the course of three centuries cost a sacrifice in lives, which, far exceeds that which other peoples have had to make in asserting their existence. If Germany, a country that was for ever being attacked, was, not able to retain her possessions, but was compelled to sacrifice many of her provinces, this was due only to her political misdevelopment and her impotence as a result thereof. That ; condition has now been overcome . Therefore we Germans do not feel in the least inferior to the British Nation. Our self-esteem is just as great as that of an Englishman for England. In the history of our people, now of approximately two thousand years standing, there are occasions and actions enough to fill us with sincere pride. Now if England cannot understand our point of view, thinking perchance she may look upon Germany as a vassal state, then our love and friendly feelings have indeed been wasted on her . We shall not despair or lose heart on that account, but-relying on the consciousness of our own strength and on the strength of our friends-we shall then find ways and means to secure our independence without impairing our dignity. I have heard the statement of the British Prime Minister to the effect that he is not able to put any trust in German assurances. Under the circumstances I consider it a matter of course that we no longer wish to expect him or the British people to bear the burden of a situation which is only conceivable in an atmosphere of mutual confidence. When Germany became National Socialist and thus paved the way for her national resurrection, in pursuance of my unswerving policy of friendship with England, of my own accord I made the proposal for a voluntary restriction of German naval armaments. That restriction was, however, based on one condition, namely, the will and the conviction that a war between England and Germany would never again be possible. This wish and this conviction is alive in me today."

Secondly, in "Mein Kampf" there are many long references to Great Britain, and all of them are couched in tones of great appreciation. Hitler says that if German statesmen had had sufficient foresight to conclude an alliance with England early in the twentieth century, as Japan did in 1904, there would have been no Great War. Another important mistake made by German diplomats was to underestimate the fighting strength of the British Empire. Britain's total effectives were calculated in the basis of her standing army, a most fatal mistake . In this connexion Hitler writes "The fact that England did not possess a national army proved nothing; for it is not the actual military structure of the moment that matters, but rather the will and determination to use whatever military strength is available. England has always had the armament which she needed. She always fought with those weapons which were necessary for success. She sent mercenary troops to fight as long as mercenaries sufficed; but she never hesitated to draw heavily and deeply from the best blood of the whole nation when victory could be obtained only by such a sacrifice. And in every case the fighting spirit, dogged determination, and use of brutal means in conducting military operations have always remained the same. But in Germany, through the medium of the schools, the Press and the comic papers, an idea of the Englishman was gradually formed which was bound eventually to lead to the worst

kind of self-deception . This absurdity slowly but persistently spread into every quarter of German life. The result was an undervaluation for which we have had to pay a heavy penalty.

The delusion was so profound that the Englishman was looked upon as a shrewd business man, but personally a coward even to an incredible degree. Unfortunately, our lofty teachers of professorial history did not bring home to the minds of their pupils the truth that it is not possible to build up such a mighty organisation as the British Empire by mere swindle and fraud. The few who called attention to that truth were either ignored or silenced. I can vividly recall to mind the astonished looks of my comrades when they found themselves personally face to face for the first time with the Tommies in Flanders. After a few days of fighting the consciousness slowly dawned on our soldiers that those Scotsmen were not like the ones we had seen described and caricatured in the comic papers and mentioned in the communiqués."Soon after the War there was a widespread movement in Europe which had as a leitmotif the liberation of India. On this point Hitler writes in "Mein Kampf":

" I remember well the childish and incomprehensible hopes which arose suddenly in nationalist circles in the years 1920-21, to the effect that England was just nearing its downfall in India . A few Asiatic mountebanks, who put themselves forward as the champions of Indian Freedom', then began to peregrinate throughout Europe and succeeded in inspiring otherwise quite reasonable people with the fixed notion that the British World Empire, which had its pivot in India, was just about to collapse there. They never realised that their own wish was the father of all these ideas. Nor did they stop to think how absurd their wishes were . For inasmuch as they expected the end of the British Empire and of England's power to follow the collapse of its dominion over India, they themselves admitted that India was of the most outstanding importance for England. Now in all likelihood the deep mysteries of this most important problem must have been known not only to the German-National prophets but also to those who had the direction of British history in their hands. It is down right puerile to suppose that in England itself the importance of India for the British Empire was not adequately appreciated . And it is a proof of having learned nothing from the World War and of thoroughly misunderstanding or knowing nothing about Anglo-Saxon determination, when they imagine that England could lose India without first having put forth the last ounce of her strength in the struggle to hold it . Moreover, it shows how complete is the ignorance prevailing in Germany as to the manner in which the spirit of England permeates and administers her Empire . England will never lose India unless she admits racial disruption in the machinery of her administration (which at present is entirely out of the question in India), or unless she is overcome by the sword of some powerful enemy . But Indian risings will never bring this about. We Germans have had sufficient experience to know how hard it is to coerce England . And, apart from all this, I as a German would far rather see India under British domination than under that of any other nation."

The real Enemy of Europe

In the former chapters I have tried to show that Germany is engaged in building up a state on new and original lines which is entirely her own affair, whether we like it or not, has no aggressive designs on any other country and wishes to be left alone to develop her internal economy and external trade. She is also quite willing to continue to pay the salaries of Protestant Pastors and Roman Catholic Priests on condition that they leave politics alone and do not use the pulpit to attack the Government. This being her policy there seems no reason why other Nations and other ideologies should not have left her alone. She is, it is true, strongly armed but so are her neighbours and they began it.

After the threat of war by both France and Great Britain over the Sudeten German question, which was not the business of either of us, she naturally fortified her French frontier, an essential net of defence. As far as we are concerned as we had fallen far below the standard of other countries it was in an uncertain world, but it is obvious that these armaments are not directed against Germany unless our intention is a war of aggression. Nor is Germany arming against us. She has no cause of quarrel with us and no reason to believe that as long as we have a responsible Government in spite of the continued attacks in our Press and by certain politicians, that she has any reason to fear hostility on our part. She is not looking towards France and England but is looking across the plains of Poland at a much more dangerous enemy. The Soviet with 2,000,000 men on a Peace footing under arms, spent last year £1,000 millions on additional armaments and has behind her an unlimited supply of man power in Asia.

On the contrary while showing occasional nervousness at our expenditure on armaments, which if a popular front coalition came into power would be directed against her, she realises that all the armed forces of Germany, France, Italy and England may be needed to rescue Europe from an Asiatic invasion more formidable than any of the invasions of the past. I myself share her confidence in our peaceful intention. To-day Germany is no longer anxious to keep a watch on the Rhine, but on the Dneiper. The suggestions therefore of a mutual reduction of armaments between France, England and Germany are now out of date though at one time Germany would have considered them. She would rather say keep up your bombing plots and your munitions. They may all be needed to defend European civilisation from going down in a hideous massacre.

It is extraordinary how we shut our eyes to this danger with the horrible example of Spain before us. How we talk about the help given to Franco by Germany and Italy but ignore the help given to the Red Government by the Soviet. While the Nazi form of Government is, as Hitler has said again and again, intended for home consumption, Communism is international and is carrying on an underground agitation throughout the world, and insinuating itself into society and other organisations under various plausible names and disguises, having at its disposal the most formidable secret society in the world, continental Free Masonry, which is a very different affair to our amiable Free Masonry over here, and is revolutionary and anti-Christian. The centre of the Comintern is Moscow

and the Soviet Government gave themselves away when they broke of diplomatic relations with Hungary because she joined the anti-Comintern pact.

One of the cleverest lies put forth by the Communists and accepted over here, is that the anti-Comintern pact is directed against Democracy. It is true Germany resents the continued attacks made upon her in the name of Democracy and occasionally shows up the claims of Democracy to be the one perfect political system, but she has no desire to attack or replace Democracy in any Democratic country by another system. To each country the Government it prefers, is her motto. It is true that there is Nazi agitation in some European countries, because throughout the world many people have been convinced in favour of a Nazi State, but such agitation is not encouraged by the German Government. Communism is an international movement organising revolution in every country, and it has now been clearly demonstrated that the hideous massacres in Spain of Priests, Monks and Nuns, and the burning of Churches was connived at by the Government of the adventurers in Madrid made up of adventurers who had seized power.

The sustained attack on the German Government and the propagation of lie upon lie through our Press and by means of an endless stream of publications is to be traced back to Communist propaganda. While active Communist agitation has made little progress in this country, India and Burmah are rotten with Communism and Communism is wishing to set the four Powers at each other's throats. Whenever a step has been made towards agreement it swings back again, through a poisonous propaganda in which the British Press leads. Certain enmity to Germany is therefore to be expected on the part of Socialists, Extreme Protestants and the Roman Catholic Church. Germany has also another enemy-International Finance, because she will not borrow money outside but is holding up an economic system in which there is no room for the international financier.

If she would only borrow £100,000,000 in the City all our Press would coo like sucking doves and our friendship or hostility to the new Spanish Government will depend on whether she consults the City for money. All the different sources of hostility are at work, but they do not account for the persistent agitation on which large sums of money are being spent, an agitation for a deliberate purpose, a war in which the four Capitalist States will destroy each other so that a Communist state will be built on the ruins, and the one organised source of this persistent agitation is the Comintern with ample funds behind it in Moscow.

The Japanese war in China is not directed against the independence of China or for the possession of territory. It is war against the Soviet. The complete control of the Soviet over Czechoslovakia has been amply proved. When Hitler said he would if compelled fight his way into Sudeten Germany it was not only to free the Sudeten Germans but to close the open door into Europe for the Soviet armies. As I have already pointed out if we had been so rash as to plunge Europe into war on that question and invite the assistance of the Soviet, Europe would have been doomed. In the strategic position of the mountains of Poland, the guns are now pointed not towards Germany but towards Russia. Hungary in past centuries fought bravely against Asiatic invasion holding the strategic position

where the Danube turns abruptly to the east. We cannot trust the Slavonic peoples because of their racial affinity and Benes did his best to organise them against Germany. If Spain had turned red and we had supported Benes against Germany, the day might already have arrived for which the Soviet is waiting. Everyone who however innocently helps the agitation against Germany is playing for war and the triumph of Communism.

Communism vs National Socialism

I have already dealt with the dangerous war propaganda of the Labour Party in this country supported by politicians who do not belong to the Party, but it is necessary to look a little deeper into this matter. The word Socialism is used with so many different meanings that it is necessary before writing these observations to define in which sense it is used in Germany. The broadest definition is the conception of a State which is a living organic whole, in which the members of the State are inspired and guided by the duty of service to the State as paramount. That is the meaning given to the word by the German to-day when he describes the German State as a National Socialist State.

The meaning attached to the word by the Communists and the members of our Labour Party who are followers of the Jew Karl Marx, is quite different. By Socialism they mean the ownership of all Capital and administration of production, distribution and exchange by the State, and the elimination of the producer and trader for private profit. The Communist differs from the official Labour Party Leaders, not in his aim but in his method, which is certainly somewhat drastic. The Communist proposes confiscation of all private Capital, the Labour Party leaders propose to buy out the owner of Capital and property. He is to become a pensioner of the State and will no longer be allowed to use his Capital for private venture, a proposal more soothing to the Capitalist than the firing line. The Socialism of our Labour Party is the Bovril of Communism diluted with luke warm water.

The experiment of running a State on these lines is being tried in Russia to-day, but it is too early to say whether it can be successfully done and whether it improves the conditions of the masses of the people. I do not propose to discuss the merits and demerits of such a system, in which private enterprise is replaced by a huge bureaucracy, in whatever form it be disguised. I merely wish to point out that such a system is incompatible with Democracy, a free Parliament, and freedom of the individual as we understand it. As we see in Russia to-day such a system results in political trials and the firing squad. The Government cannot and dare not allow the slightest divergence in action or opinion. These political trials are an instructive preliminary to establishing universal suffrage in Russia, and remind me of the Colonel who shot every tenth soldier in a regiment "pour encourager les autres". The Labour Party has failed to convert the majority of the British people to their economic theory of a State. It is true that by adopting the name the Labour Party, they have swept into their organization the Trades Unions and rely on them as a source of income and so create a class party which is supported by a large minority

principally composed of wage earners; but these wage earners are not necessarily followers of Karl Marx and many, while subscribing through their union to the party funds, vote for the Conservative Government. The political issue is therefore confused.

The policy of this country has been and is based on individualism in production and trade, modified in two directions, -protection for the wage earner, and when open unregulated barter has proved inefficient, modification of it by a certain amount of organization and arrangement of prices by the State. If we turn now to Germany we find that the Germans have completely and utterly repudiated Karl Marx Socialism. The best proof of this is, that they are building their whole economic system on the peasant proprietor, and doing all they can to conserve and strengthen his position, thus pursuing the opposite policy to the Soviet which tried to abolish the peasant proprietor and convert him into the wage slave of the Communist Government. After a fierce struggle in which millions died of starvation the Soviet have arrived at a grudging compromise in which the peasant is allowed a little land and a small modicum of stock of his own. The German economic experiments are all on our lines. They have carried the protection of the wage earner much further than we have. They have adopted as universal the organization that we have established in the railways for settling disputes about wages. They have improved on our factory inspectors by appointing state officials who have cognizance of the whole conditions of labour.

In the other province they are bringing in State regulation of prices when they think that free competition has been ruinous to the small producer, injurious to the consumer, and only benefited the middle man with ready Capital at this command. There is another interesting point in this connection. The German Government is building up in trade, in manufacture, in agriculture, organizations of those engaged in the industry with the minimum of State control, in direct contradiction to Karl Marx Socialist ideas, and preserving in that way the liberty of the producer from too much State interference. They are following and improving the lines we have always followed, basing the economic State on individual effort. The result is that their bitterest enemies to-day are the followers of Karl Marx from Moscow to the T.U.C. They attack and misrepresent the Nazi rule on every platform and are ready to plunge Europe and this country into war to crush the economic system adopted by the Nazi Government. As the real issue would not appeal to the public, they raise a false cry of Democracy in danger, while they advocate an economic system which would destroy Democracy. There need be no quarrel about forms of Government between us and Germany. They frankly prefer their own as we frankly prefer ours; but they have no desire to force their opinion on other nations, while our Labour Party are prepared to go to extremes to force their opinion on Germany. A prominent Labour leader said at a "Peace" meeting the other day that he was willing his son should fight and die to destroy the Nazi rule in Germany.

The aggressive party in Europe to-day is not the Nazi party but the followers of Karl Marx whether they call themselves Communists or Socialists. This quarrel therefore between the Nazis and the followers of Karl Marx is influencing foreign politics and our foreign

relations and involving the possibility of war. It is therefore necessary for the sober British citizen to regard with suspicion what he reads in the Press in the journalistic world here and abroad. It would be the very irony of fate if we were dragged into a war to promote Communism abroad when we have rejected it at home. Passing from internal organization to external politics, we find German foreign policy governed by a revolt against control of the nations by a super State centred at Geneva so that whether we examine their domestic or foreign policy, we find the fundamental principle of freedom, freedom of the individual in his own development, and freedom of the group of individuals (the nation) in its development. These ideas are fundamental and strike much deeper than the form of Government. Behind the Labour Party in this country is the Comintern carrying on Communist propaganda in every corner of the world. It is therefore necessary for us to recognise what is the real ideological battle which is going on in Europe. It is the battle between Communism on the one hand, which means not only the State ownership of all property, and the crushing of individual enterprise, but the denial of God and the destruction of Christianity; and the idea, on the other hand, of a State built on the right of individual enterprise and ownership of private property which are the foundations on which liberty is built.

The issue has been cleverly falsified by representing the struggle of the two ideologies as a war between Communism and "Capitalism". If by "Capitalism" we mean the right to private ownership of property, then the war is rightly described as being between Communism and "Capitalism," but the word "Capitalism" calls up a vision of a fat financier smoking cigars at five shillings apiece, as he rides to the city in his Rolls Royce. The establishment of Communism and its maintenance necessitates a ruthless tyranny over the individual. We hear little about Russia from the Labour Party to-day. It is buried under a black cloud through which comes the rattle of the shots from the firing squads. If we had been dragged into war over the quarrel between the Germans and the Czechs we would have fought with Stalin as our ally, and we have rightly drawn back shuddering from such a catastrophe. The revolution in Spain began with horrible massacres accompanied by bestial cruelty in which it is estimated some 400,000 perished, and the ferocity of the murderers was principally directed against the Church.

Behind the struggle of the Sudeten Germans, the Poles and the Hungarians, for freedom from Czech rule, the real contest was with Communism. When Benes made his treaty with Russia it was hailed by the Comintern as a victory for Communism, and Benes was a favoured guest at Moscow because he had opened the door for the entry of the Soviet armies into the heart of Europe. The first act of the new Government in Czecho-Slovakia, which is as democratic as the former government, has been to break the treaty with the Soviet and suppress the Communist societies. Communism has received its severest blow since the Soviet Government was defeated by the armies of Poland. France has oscillated between the policy of friendship with and enmity against Germany according to whether the parties of the right or the left were in power, and the Communist party refused to support Daladier in his policy of reconciliation with Germany, and organized a

general strike to prevent the signing of the Peace Pact, and M. Blum, Communist and leader of the Socialist party, has declared against the Peace Pact with Germany.

The world struggle is not between democratic and totalitarian forms of government, but between the civilization of Western Europe built on individual liberty of action and the ownership of private property, and a State in which all are wage slaves: who, if they fail in their quota of production are shot. The shooting of the brilliant inventor who designed the planes which reached the North Pole, because one of the planes came down, should have filled the civilised world with horror. The amiable idealists of our Labour Party think they can get the best of both worlds with one foot in the Communist camp and the other in the democratic camp. It cannot be done. It is necessary for the democratic countries to decide on which side they stand. There need be no quarrel between Democracy and National Socialism; we both have the task of saving European civilization from the inroads of Asiatic barbarians inspired by a theory which is fundamentally opposed to our conception of civilization. The vanguard facing Communistic Asia is Germany, sword in hand, protecting Europe.

The Hitler Youth Movement

We regret in England, and many Germans with whom I have discussed the matter share the regret, that the German Youth movement so closely following the model of the Boy Scouts, has been made into a separate organization. They told me that more than one imitation of the Boy Scouts movement had been started in Germany and that it was essential at the present stage of the training of the whole country to a new conception of a Nation of people, bound to service and the development of the German national life, to have a separate German organization. I sympathise with the German point of view and am glad that the friendliest relations have been established and exchange of visiting members arranged, between the two organizations. The lie has frequently been repeated in this country that the German Youth movement is military in its object and practice. This is an invention of the enemy and is not true. I owe the following account of the Hitler Youth Movement to Baldur von Schirach.

Nothing is more suited to a friendly exchange of opinion between educationalists of different nations than the matter of youthful upbringing. The more the youth leaders in the various nations of culture succeed in agreeing on certain fundamental points, the more chance there is of our young people growing up in a friendly spirit toward each other instead of antagonistic. In this field of international understanding the aim should not be to effect certain political ideas and maxims but rather the more human aspects, those of mutual respect, comradeship and real sincerity. The more the youth of all nations gets to know each other by means of personal contact the more it will come to respect each other's individualities and to understand existing differences, for each country produces the kind of youth movement expressive of its characteristics and its nature. I am convinced that the Hitler boy, just as the English boy scout and the small

fry of the Italian Balila typifies the essential qualities of his native land. The National Socialist Youth developed in 1926 out of an enthusiasm felt by a few young Germans for the personality and the ideas of our Führer. The principle laid down in the very beginning, - "Youth must be led by youth" - supplies the necessary balance to pure School education by the early shouldering of duties and personal responsibility. The mistakes that may still be found in this system and its possible deficiencies, in my opinion, fade away when faced with the enormous gain resulting from the early development of responsibility and the attendant stimulus to exert all faculties. The key to each situation is efficiency and the efficiency of a young person is no less valuable than that of an older one.

During the development of the Hitler Youth Movement the necessity arose for organized formations . Apart from the fact that the girls were organized from the very beginning in a special body known as the B .D.M. (Association of German Girls), the boys from 10 to 14 grouped under the "Young Folk" and from 14 to 18 as the "Hitler Youth", all these were divided up into a special system of units. The training of leaders for these various units takes place in special training schools which are almost without exception to be found in beautiful surroundings . Here they go in for sport, receive physical training and theoretical instruction in the theory of life with the team spirit pervading everything. Contrary to many other countries the young people in Germany are not trained in the handling of military effectives. Shooting which is practised to a very small degree only in the training schools for leaders is only with air guns and is a form of sport. Such words as "home", "camp" and "outing" are so much a part of the Hitler boys that I could not fail to touch on them briefly. The homes are as it were clubs providing a place of congregation for the boys and making them independent of cafes and so of alcohol and nicotine. In the "Hour of the Young Nation" broadcast throughout Germany the uniform spirit is inculcated. By camping is naturally meant tent life which provides an equable balance for the city lads, above all for the industrial workers. The days in camp are spent in play and the evenings round an open space with singing and performances etc. Opportunities are given for swimming and riding. Last year about one million youths slept out in tents and we hope before long that there will be no Hitler boys who have not spent at least three weeks a year out camping. The hiking Hitler youth is afforded cheap night lodgings through a special organization and facilities for sojourn. This is the German Youth Hostel Association. There are some 2,000 hostels scattered throughout the country in castle ruins or old town turrets and the like which are especially maintained for the youthful wanderers.

Referring now to the essential political aspect of my organization I should like to point out first and foremost that today as from the beginning the pride of the Hitler Youth is the fact that the young workmen are with us whom we have been struggling to win over for so long. With the advent of the regime the struggle of the National Socialist youth was by no means ended ; on the contrary, the hard fight for effecting the claim to totality began and with it the decisive question whether other organizations and units aside from the Hitler Youth should have the right to train the rising generation. National Socialist Germany

maintained then as now that outside the schools there should be no educational body in Germany other than the Hitler Youth. This viewpoint was propounded in 1933 . At the commencement of 1934 the inclusion of all protestant youth was provisionally completed and outside the Hitler Youth there was only one other youth organization, a catholic one, all other belong to our community, the fellowship of young Germany. Nevertheless, there is a plane on which the confessional organization is essentially justified and recognised by the Hitler Youth. If the former refrains from exerting temporal powers and confines its sphere of influence to matters of the soul I see no reason why there should be no confessional organization of the youth of the country.

And now with reference to something of material importance. Of all the Hitler Youth activities I would like to touch on but one here, namely, the Reich Crafts Competition which the youth of Germany organized in conjunction with the German Labour Front. This is looked upon by the young people as the most idealistic avowal of an entire generation to German Labour. In his "Wilhelm Meister" Goethe denoted respect as the keynote to all education . The youth whose leader I have the honour to be is aiming at this ideal in the spirit of the great Master who has named it as the aim of the world youth common to all and uniting all. When Hitler was reviewing the Hitler youth in Nuremberg the other day he said, giving us a glimpse into the heart and soul of the man, "How wonderful how beautiful are the children of Germany".

The Winter Help Organization

Apart from the extreme poverty which seems to haunt our modern civilization especially in large cities, Germany has suffered terribly not only from the war but from the reparation payments; the occupation of the Ruhr which, under the incompetent socialist administration, brought about the flight from the mark ruining thousands of homes ; and later on the appalling amount of unemployment. The National Socialist Party as soon as they came into power decided that the distress, especially in great cities, quite apart from Government relief and work for the unemployed, required the personal touch of a voluntary association and so with characteristic German thoroughness they proceeded to do it. In this as in all other matters where the volunteer worker is wanted, the Nazi organization covering the whole country is of course invaluable. The aim of the National Socialist Welfare Society is the relief of persons who are physically and mentally sound, but who, in consequence of adverse general conditions, have fallen into a state of distress which threatens the health and development of both themselves and their dependents.

In accordance with this principle of preserving the healthy part of the German Nation, the National Socialist Welfare Society does not help those who are hereditarily diseased or suffering from incurable mental or physical diseases. These persons are cared for by the State. Any person in Germany may be given relief by the National Socialist Welfare Society, whether he is employed or not. Special attention is paid to persons who are employed, but whose wages scarcely suffice to support their large families. Since the

foundation of the Winter Help Scheme, the number of persons assisted has decreased steadily from 16,617,681 in 1933/34 to 13,866,571 in 1934/35 and 12,909,469 in 1935/36 and 10,711,526 in 1936/37, owing to the favourable development of employment and trade in Germany. It is to be noted that these figures include family members. The National Socialist Welfare Society never distributes money as relief. Relief always takes the form of goods. In this way any possibility of the relief being used for other purposes or unnecessary purchases is avoided. In order to increase the possibility of choice, increasing use has been made of vouchers for food, clothing, electricity, gas and other necessities.

The Winter Help Scheme operates during the six months from October to March which experience has shown to be the most critical period of the year in regard to employment and sustenance. Many seasonal trades have to cease work during a great part of this period owing to inclement weather, and for the unemployed and those in receipt of small pensions the necessity of buying heating materials and winter clothing weighs heavily on a budget already burdened by the normal increase in price of many foodstuffs during winter time. The Winter Help Organization began in October 1933, with an initial contribution of 15,000,000 marks by the State. It collected not only contributions in kind, but also monetary contributions in many and varied appeals throughout the country, and used the funds collected for large scale buying of the necessities for daily life, thus making the money go considerably further than it would have gone had it been distributed as money. Apart from the initial gift mentioned, this organization receives no State assistance, and is supported entirely by individual people in Germany, through their contributions and sacrifices. It is a fundamental principle that the contributions must be absolutely voluntary. No one is in the slightest way forced to contribute. The National Socialist Welfare Society's main sources of income are as follows:

Contributions from individuals. These contributions may be divided into two kinds. First there are those from persons in receipt of wages, who may volunteer a monthly contribution of an amount equal to about 10 per cent of their monthly Wages Tax. This sum is collected by the firm, in so far as the employees have declared their consent. Secondly, those who are not employed, but who have a private income, volunteer contributions in the form of small deductions from their Postal or Bank accounts. Special advantages are gained through the free transport of coal for the Winter Help given by the German Railways. The transport costs must be paid, but are refunded later. Contributions by Germans living abroad, which are collected by the Foreign Department of the National Socialist Party. The proceeds from the "One Pot Meal". On the second Sunday in every month, a simple meal is prepared in all households. The money saved by giving up a more costly meal is forwarded to the Winter Help.

1. The National Socialist Welfare Society is organized with the object of helping so far as possible all those in need of relief. This is only possible through a considerable participation of the population in voluntary assistance work. The "helpers" are thus divided into two classes - those in receipt of salaries or remuneration, and honorary permanent and occasional helpers. The National Socialist organizations and unions are

also called upon to help, as well as other societies dedicated to social work and whose membership is entirely voluntary.

2. The National Socialist Welfare Society is organized in the following unified system:

a) Block Leader. This leader is responsible for social supervision in a block which usually contains three or four tenements. He collects the regular contributions and his most important duty is to ascertain persons in need of assistance and to supervise their relief. This is a difficult and responsible position, as often, especially in the case of the most respectable people - those in distress are reluctant to acknowledge their condition. All the contributions collected, together with the reports on the position of those in need of relief and further developments are directed to the

b) Cell Leader . This official is in charge of eight to ten blocks, and he gives exact, and where necessary, personal information about the cases reported, to the

c) Local Group . The Local Group also receives all contributions in money and in kind from the cell leader . The Local Group, after consulting the Block and Cell Leaders, decides the relief which must be administered. d) The District Group, the Regional Group and the Reich

administration are competent to administrate the organization of the National Socialist Welfare Society, and to administrate the monetary proceeds.

The District and Regional Groups receive mostly goods presented by business concerns . The District Groups have often stocks of clothing, etc ., and the Regional Groups always have supplies . Apart from the smaller relief, such as potatoes, coal and food, given regularly by the Local Group, the Regional Group provides more relief in the form of clothing, shoes, domestic utensils, furniture, and sends people to the country to recover their health . The person in need of relief is provided with the necessities on production of a certificate from his Local Group.

All the money contributed is administered by the Regional and Reich administration. As mentioned above, no relief is given in the form of money, so these contributions are used to buy large quantities of goods, which makes it possible to obtain considerably lower prices. The difference of these wholesale prices and the retail values of the goods distributed appears as "added value" in the accounts of the Society. The costs of administration, of wages and compensation for the helpers are extremely small. During the Winter 1936/37 the total costs for salaries, wages, compensation, office work, printing, rent, light, heating etc . came to 1 .84 per cent of the total proceeds. The total income for 1936/37 amounted to 387,088,000 marks without the "added value". This scheme has several good points worthy of our consideration. In the first place the whole ground of charitable relief is covered by one Society. There is no overlapping. In the second place the whole of a city is divided into small circles of three or four tenements in charge of the Block Leader, thus enabling the close personal supervision which alleviating real distress requires to prevent fraud. In the third place the payment is in kind . This does not of course eliminate the sale of food tickets for drink and similar abuses, but it is the best that can be done, and the Block Leader will soon discover such cases of fraud.

The remarkably low administrative expense. The Society has 1,349,008 helpers of whom only 8,652 are paid. The "One Pot Meal" is an excellent idea and has become universal in Germany. It is a definite reminder of the needs of our poorer brethren and a simple sacrifice in which all participate. It is not only a source of income but has a symbolical meaning and an ethical value. It is the boast of the Society that in Berlin last Winter not one person was inadequately fed or clothed or without a fire all the winter in one room. One of the interesting features of National Socialism is that it is developing its own symbolism. The march of the burnished spades, the slowly moving river of the blood red flags in the Stadium in the temple of light, the one pot meal, which will become a social sacrament, are all examples of this symbolism to impress the hearts as well as the minds of the people with a new conception of service one to another.

The Four Years Plan

Extraordinary misconceptions of the nature and purpose of the four years' plan have become common in this country. According to the Daily Express our Foreign Office have made it a condition of more friendly relations with Germany that the four years' plan be withdrawn, a most remarkable request as my readers will agree when I have explained what the plan is. The economic position of Germany, with no gold reserves, heavily indebted abroad and with no colonies and foreign investments, has been dealt with already. Evidently under these circumstances she is thrown entirely on her own resources, and must find what possibilities of development are to be found within her own country. It is also necessary for her to consider what would happen in case of an attack by the allied powers of Europe. In the last war she was starved out and had in addition a serious shortage of materials required for munitions. She must therefore be prepared for this eventuality.

These considerations are not absent from the councils of other Nations. We are taxing all users of petrol to enable the I.C.I. to make petrol from coal without a loss and are heavily subsidizing agriculture without, it must be admitted, much success. It is also obvious that increased use of imported raw materials for purposes of manufacture will not do anything to relieve the situation. She must seek to utilize the land to its highest capacity to produce food, and in addition call upon the ingenuity of her chemists to utilize fully her two raw materials, coal and wood. In order to carry out this task in a comprehensive manner Field Marshall Goering has been appointed as the head of the four years' plan and an organization has been created divided into six offices. The Board for the production of raw materials has undertaken

- a) to increase the production of natural raw materials,
- b) the prevention of waste through the use of raw materials for purposes not absolutely necessary,
- c) the production of certain synthetic raw materials such as petrol, mineral oils, rubber and artificial wool which are made from coal or wood,

- d) the encouragement of relevant research including a complex examination of the German subsoil,
- e) the organization and direction of the production of industrial fats.

The section dealing with agriculture has to aim at producing raw materials which are scarce in Germany wherever there is a possibility of agriculture being able to do so. The cultivation of the Soya bean to obtain a supply of vegetable fats is an excellent example, the production of vegetable fibres and an increase in sheep farming to add to the supply of wool. It is also the duty of this department to take all possible steps to increase the production of food. In connection with food an interesting enquiry is to be made into the loss and deterioration of foodstuffs in transit and in the home. The estimated loss from these two causes is put at 1,500 million marks a year. When we consider how careful and economical the German housewife is, the loss in this country is probably much greater. The savings in this direction involve correct storage of perishable foods and the collection and classification of refuse. This household refuse is to be used for feeding pigs. Some 4,000 pigs are fed in this way on State property in Magdeburg. A similar arrangement prevails in other cities. Powers are given in connection with the whole plan for the control of prices.

The difference between the position of Germany before the war and to-day is well illustrated by the following figures. Before the war she had 30,000 million marks invested abroad; to-day she has foreign debts of 13,000 million marks. Her export trade has now improved sufficiently to show a surplus which is sufficient but no more than sufficient to pay the interest on her foreign debts. The aim of the whole plan is not self-sufficiency, which is both undesirable and impossible, but the making of an economically sound Germany which will lead to a natural development of her export and import trade.

The Labour Front

To imagine that when we speak of the Trades Unions in Germany before National Socialism we are speaking of organisations which were the same as our Trades Unions in this country, is to misread the whole situation that existed in 1933. There are three organisations in this country which the wage earning class have built up for themselves, -the Friendly Societies, the Trades Unions and the Co-operative Societies. The Trades Unions, built up through years of struggle when they were illegal institutions, have become part of the recognised organisations of Labour in this country and in some cases a complete scheme for dealing with the problems which arise between Labour and Capital has been developed like that which exists in our railways, with the Trades Unions, the employers organisation and the railway board as final arbiters. It is also necessary to remember that the Trades Unions not only represent the organised workers in labour disputes but are also benefit societies. There is no necessary connection between Trades Unionism and Socialism. There is no reason why a Trades Union secretary should not be a member of the Primrose League and walk on to the platform of the congress with a primrose in his

buttonhole, except that it is one of the things which is not done. To-day he is expected to be a member of the Labour Party and accept without question the pale pink brand of Socialism produced by the Bureaucratic mind, the mere thought of which makes a genuine Communist vomit.

The Socialist resolutions passed every year by the T.U.C. do no harm to anyone, and do not produce the mildest flutter on the Stock Exchange. Every man voting for them is more or less a Capitalist, the Trades Unions themselves have their funds well invested, the Friendly Societies and the Co-operative Societies have hundreds of millions of invested capital. Harcourt once said we are all Socialists now. He might as well have said we are all Capitalists now. Keir Hardie did the workman a bad turn when he persuaded the Trades Unions to hoist the banner embroidered by the fair hands of Mrs. Webb, but he secured ample funds for the political organisation. Both the Liberal and the Conservative Parties can claim credit for the advance in social conditions in this country. Only one Party is absolutely sterile and for this reason, that they have adopted a dogma of foreign origin, a patent medicine to cure all social ills, and the Englishman rightly distrusts cure ails and suspects a neatly logical system because he instinctively distrusts logic outside the Book of Euclid. The marriage of Trades Unionism to Socialism has been an unfortunate marriage for the workman, but it has not wrecked the Trades Union organisation.

If we now study the Trades Unionism in Germany before 1933, we find the Trades Unions run by political adventurers, entirely absorbed in politics, riddled with Communism, hopelessly in debt, and with an income insufficient to pay the official salaries. It was necessary in the interests of the German workman to sweep away the whole rotten system by which he was being exploited. It is forgotten that Hitler as a youth and young man lived in great poverty picking up casual labour in Vienna, and he had the inestimable advantage of studying international socialism and communism from the inside, a victim with an intelligent and critical mind. He found out two things in Vienna, -one that the class war leads nowhere, the other that the only people who made money out of the class war were the Jews. He himself, one of the workers and one of the victims, had long thought out his solution when he ordered his followers to take over the Trades Union organisation, to dismiss the official parasites, and organise in its place the Labour Front, which took over the liabilities of the old Trades Unions and secured for the old members the benefits for which they had paid the money which had been squandered. Quite apart from National Socialism, the Trades Unions were rotten, were bankrupt and something had to be done in the interests of the working man.

The central idea of the Labour Front is an organisation of industry workshop by workshop, in which all those employed in production including the employer and employed are in one organisation with the object of honest production for the good of the German people. Your interests, said Hitler, are not divided, they are the same. While you quarrel over the share of the payment for production, production itself ceases. He determined to replace the economic system of the 19th century, under which labour is bought as a ton of coal is bought and the employer admits no responsibility to the worker, and the State has to

intervene at every stage to protect his health and life, by the ideas permeating the old mediaeval guilds. Production was to become human instead of inhuman. We look back with horror upon the exploitation of child labour in the middle of the 19th century. Karl Marx and Hitler were equally horrified by the inhuman exploitation of the 19th century, but Karl Marx a journalist, saw it from the outside . Hitler lived and suffered inside the system, and Karl Marx gave the world a message of hate, of spoliation, of a brutal materialism, while Hitler brought it a message of Peace and revival of the message of the gospel. You are all wrong, he cries to the revolutionary Socialists, your way is the way of death. The negative of evil must be driven out by the positive of good . We need an ethical idea with which to permeate the body politic. Lenin in his frenzy used to cry out for torrents of blood. He bathed in them before the end, and the Russian workman has got a new master, the Communist official. "He beat you with whips but I will beat you with scorpions."

Man moves forward by new ethical ideas or rather by the unfolding of the inner meaning of old ideas like the opening of a flower from its green case, petal after petal is displayed and each means a step upwards. I do not deny that our English Socialism, though I believe it to be wrong on economic lines, is an ethical movement, but Continental Socialism is and has been a very different affair controlled by men lusting for power and exploiting labour for its own ends. The new organisation of labour is known as the Labour Front, which not only carries on the old benefits of the Trades Unions, and supplies them for half the subscription but has undertaken new activities in the "Strength through Joy" movement which we have never thought of in this country. It has also made universal the payment for holidays, which is based upon the National Socialist idea of the workman as a man with rights as a citizen of the German State, and not merely a penny-in-the- slot machine who is only to be paid when his wheels turn inside. If the T.U.C. instead of passing Socialist resolutions would take up the practical tasks of the Labour Front, they would find universal support in this country and double their membership.

Besides the Labour Front which contains to-day over 20,000,000 members, the National Socialist Government has passed an elaborate Labour Law which I shall make some attempt to describe, but before doing so deal with one of the main accusations against the National Socialist Government, that they have forbidden strikes. Strikes are a form of war, and in the U.S.A. are frequently accompanied by actual warfare, and are destructive and ruinous to both parties and to the community. It took us a long time to recover from the blow to trade of the General Strike. I remember in the Coal Strike of 1921, the Miners Union called out the men at the pumps, thus destroying many millions of pounds of property on which their own living depended. At that time being head of the Technical College in Edinburgh, I wired for our mining students to return from their holidays and go straight to the Fife coal fields and man the pumps. In two days the water was under control, but the Government who had promised to send soldiers to protect the mines were of course not ready, so the mob of miners threw out our boys, the mines were flooded and millions of pounds of property destroyed, and after the strike was over the

Fife miners had to wait six months before they could resume their work underground.

I was violently abused by the Fife miners secretary who afterwards became Secretary for Scotland in the Labour Government for taking the side of the mine owners. I replied I have nothing to do with the quarrel between the miners and the mine owners. The mines do not belong either to the mine owners or the miners. They are my property as a member of the British Commonwealth and I have a right to protect my property, a sound National Socialist principle. It must not be forgotten that while strikes are forbidden lock outs are also forbidden and it was a lock-out of the miners by the mine owners, before the Commission had reported, that caused the general strike. If the dreams of the T.U.C. are fulfilled and we become a Socialist State one of the first acts of the State will be to abolish the Trades Unions and forbid strikes.

The Labour Law

The Labour Law is so utterly different from any Act of Parliament in its ideas and expression that it is difficult to follow an intelligible path through its intricate proposals. In the first place there is the new constitution known as the confidential council in every factory. This body contains representatives from every section of the industry, the workman's representatives being chosen by secret ballot from a list prepared in consultation with the Labour Front, a list for which certain qualifications are necessary such as that to be on the list, a workman must be over 25 and must have belonged to the establishment for a year, with not less than two years' previous experience in a similar industry. The office of a member of the council is an honorary one, and the employer or manager is bound to give the council information necessary for carrying out their duties.

The employer or manager is responsible for the welfare of the workers and the council is to assist the employer in his duties with a view to increase the efficiency of the factory and to deal with any disputes arising between the employer and the employed. The members of the council must all belong to the Labour Front organisation. The majority of the council may lodge an appeal in writing to the "Labour Front" against any decision of the employer. The voting list for members is drawn up by the employer and the chairman of the National Socialist cell organisation. The "Labour Trustee" is a government official and appointed to supervise a group of factories; he has no connection with trade or industry. The duties of the Labour Trustee are as follows: They supervise the formation and operation of the confidential councils and give a decision in case of a dispute. They decide in cases of appeal by the council and may reverse a decision of an employer and issue the necessary ruling themselves.

The Labour Trustee decides respecting proposed dismissals. The employer is bound to give notice in writing of more than 9 dismissals out of a 100 employees, and more than 10% of dismissals over 100. The dismissals cannot take place until four weeks after the Labour Trustee has been notified. Establishment rules of hours and wages and grounds for dismissal without notice must be issued in writing by the employer to the work

people. The Labour Trustees may lay down guiding principles for each establishment and rules and general rates where minimum conditions of employment are needed, for the protection of the work people. The Labour Trustee has great powers over his district and can make rules to apply to the special conditions of that district. The Labour Trustee appoints an advisory council of experts for the various branches of industry in his district for consultation on questions which are of a general nature or which involve a principle. Three fourths of the experts must be chosen from lists of individuals drawn up by the Labour Front.

Employers and members of the confidential councils shall be selected in equal numbers . One fourth of the members can be appointed by the Labour Trustee from suitable persons in the district. The Labour Trustee can appoint a committee of experts to advise in individual cases.

One of the most interesting ideas in the Labour Law is the Social Honour Court. The idea of the Social Honour Court is that a person can harm the State by actions which are not illegal and that the employers and employees in a working community have responsibilities to each other, the works and the State. Offences under this category are as follows: If an employer exploits his workmen, or abuses his authority, or is disobedient to instructions given by the Labour Trustee: If a member of the confidential council reveals without authority confidential information or technical or business secrets which have become known to him through his duties as a member of the confidential council: If an employee endangers industrial peace by maliciously provoking other employees, or if a confidential man interferes unduly in the conduct of the establishment, or continually disturbs the community spirit. The Honour Court consists of an official of the judiciary appointed by the Federal Minister of Justice and the Federal Minister of Labour, as chairman, one leader of an establishment and one confidential man as assessors. These two are selected by the chairman from a list drawn up by the German Labour Front. The Honour Courts may impose a warning, a reprimand, a disciplinary fine, disqualification for the position of leader, or confidential man, and removal of the offender from his post. Decisions on offences against social honour are given on the application of the Labour Trustee by an Honour Court established for each Labour Trustee's district.

Strength through Joy

There must have been a time before the black cloud of industrialisation pouring from a million factory chimneys destroyed joy in life, when the people however poor they may have been had some communal pleasures. The folk songs, the peasant dancing, the beautiful peasant costumes worn on important occasions all indicate that such a time once existed . The beauty of the buildings in our villages also show a people living in the land who had the capacity for appreciating and the pleasure in building the house and the Church . Mankind does not live by bread alone and this is the central idea of the "Strength through joy" (KdF, Kraft durch Freude) organisation which is a branch of the

Labour Front.

The movement has taken four directions. One is that the pleasures of the theatre, the concert hall and travel, even as far as Madeira could be put in the reach of all at a very small expenditure by the individual. Last year by means of the "Strength through joy" organisation 4,850,000 German work people attended theatres. Travelling companies that go from village to village have been organised, the theatres have agreed to give certain special performances at cheap prices, the whole movement has not only brought the theatre to every door but has proved profitable for the theatres themselves. Excellent music is now also available and the German has always had a love for good music.

The organisation of travel during holidays at first confined to Germany is now being extended overseas and the organisation is now building its own ships for holiday excursions. Last year eleven million workers enjoyed travel in Germany and abroad through the organisation. The second side of their organisation is the development of music and dramatic societies and athletic clubs. All this of course would have been impossible by a central organisation. The fact is the "Strength through Joy" idea has caught on in Germany, and with a little guidance from headquarters the villages and the workshops are organising these things for themselves. Broadcasting is being used to transmit the best of their local efforts. The third idea is improving factory conditions, not only by providing washing and bathing facilities and dining rooms, but by making the factories inside more pleasant places, and turning waste ground outside into gardens, and even converting the hideous dumps into things pleasant to look at. Factories in this country are often pleasant places and well equipped. Bryant and Mays in East London is surrounded by gardens and tennis grounds for their employees. But it is only necessary to penetrate the industrial quarters of Manchester, of the Five Towns, of Birmingham, or of Glasgow, to realise their appallingly dreary ugliness.

50,000,000 marks have been spent on improving the factories since the "Strength through Joy" movement was started, and prizes are given for the most beautiful villages. The fourth side is their very complete organisation of educational work. The astounding success of this movement would never have been achieved, as I have said, by a central organisation alone. The people of Germany have grasped the idea of National Socialism and with a little direction and suggestions from headquarters are working out the practical application for themselves. Hitler is right when he says, "I represent to-day the German people more closely than any Prime Minister of a Democratic country". The lightest touch on the wheel from the captain is all that is needed to steer the ship.

Munich and After

Since the signing of the Peace Pact between Chamberlain and Hitler in September events have moved rapidly in Europe. The reply in Great Britain to the Peace Pact was a violent campaign in the British Press against Germany, and an attack on Chamberlain's policy both by the Opposition in Parliament and by many members of his own party. The Peace

Pact was ignored and war with Germany discussed as a matter of course. Chamberlain was only able to save his position by increasing enormously the expenditure on armaments. The large number of people in this country, who believe a good understanding with Germany essential had no opportunity of putting forward their point of view in the press. The members of Parliament were intimidated by the press campaign. The only institution left where a free expression of opinion was possible was the House of Lords. The warmongers controlled both the press and the B.B.C.

The final victory of Franco enormously strengthened the position of the Axis in Europe to the great astonishment of our press who, having pursued him with a vile campaign of calumny during the war, assisted by a political agitation in this country, imagined that he would join with us. Franco's reply to our advances was to join the anti-Comintern Pact and France, who had taken the side of the Communists, found herself with three potential enemies on her three frontiers. Hungary also joined the anti-Comintern Pact, and Yugoslavia entered into the closest friendship with Germany and Italy, so that Great Britain and France found themselves faced with a formidable bloc in Europe, of nations they had treated with hostility or indifference. President Roosevelt next joined the campaign against Germany and Italy. The Press and the wireless had been used for months to spread lies about Germany and when the ground had been prepared Roosevelt made a violent attack on Germany and Italy, and proposed a combination of the Democracies against them and a trade boycott. As Senator Pittman put it clearly, "Why kill them when we can starve them?" These proposals by Roosevelt were acclaimed by our Press but it soon became evident that the people in the U.S.A. were not going to be drawn into another European war and that Roosevelt would find it very difficult to get the Neutrality Law altered so that he could if he chose supply munitions to one side and not to the other, thus putting into the hands of the President the decision of Peace or War.

It was obvious that Germany and Italy could not continue to ignore the feverish preparations for war in Great Britain, France and the U.S.A., and consequently two dramatic events took place, one quickly following on the other. Slovakia separated herself from Czechoslovakia, claiming independence. The Czech Government, faced by internal revolution, asked Germany to intervene and Germany occupied Bohemia and Moravia incorporating them as a Protectorate in the Reich. It was impossible any longer to tolerate this promontory penetrating deep into Germany and governed by people who were largely communistic and hostile to Germany, an area which French military authorities had openly stated would be used as a base for bombing planes, aiming at destroying the cities of Germany. It was evident from the replies made by Mr. Chamberlain and Lord Halifax that they did not regard the occupation of Bohemia and Moravia as a matter affecting our interests, as, owing to the break away of Slovakia, Czechoslovakia had ceased to exist and an occupation by German troops made at the request of the Czech Government could hardly be described as an act of military aggression.

Then the storm cloud, organised by those working for war, burst and has swept the Government like helpless logs in its torrent towards war. The public excitement was

increased by the publication in the London Press of a message purporting to come from Rumania - but now believed to have been concocted in London, to the effect that Germany had threatened Rumania with war if she did not give her a complete monopoly of all her external trade. The British Ambassador in Berlin was instructed to lodge a protest with the German Government, and to tear up the Peace Pact signed by Herr Hitler and Mr. Chamberlain. This was followed later by the occupation of Albania by Italy thus securing the Adriatic from the hostile fleets of England and France bombarding Italian towns.

According to Mr. Chamberlain these two necessary acts of self defence filled the whole world with "horror". I have been young and now am old and in my lifetime I have seen Great Britain wage war after war to "extend" the Empire. It is not for us, satiated with conquest, and oppressing today by force the Arabs in Palestine, a country in which we are interlopers, and which incidentally occupies a strategic position on the Mediterranean, to criticise the actions of other nations. These two inevitable acts were received quite calmly in Europe but were made the excuse for a fresh campaign here and in the States in which it was stated that Germany and Italy meant to invade and annex all the small nations in Europe as a preliminary to world conquest, and our Press arranged for alarmist messages from every capital in Europe. An imaginary crisis was created and the enemies of Chamberlain gathered their forces to turn him out of office. Churchill, Eden, and their friends worked night and day to organise a revolt in the Conservative Party, and Fleet Street said he would not remain in power for another week. If he fell Eden, who cannot speak without showing his insolent attitude to the German people, Churchill and their friends would form a government Churchill and their friends would form a government. Chamberlain saved himself by his speech in Birmingham attacking Hitler, and by proposing to resuscitate the old plan which he had only a year ago condemned as unworkable, a coalition of the small nations in Europe against Germany.

Without waiting to be asked, we promised Poland to defend her if Germany attacked her independence, went round Europe trying to draw the small nations into a combination against Germany, and approached the Soviet for the same purpose. When Italy occupied Albania, we hastened to offer Greece and Albania our defence if their independence was attacked. The response to these efforts has been very remarkable. Ten nations in addition to France and Italy, are in contact with the German frontier. Of these Belgium is guaranteed by England France and Germany. Of the other nine, only Poland has accepted. The other eight have declined our offer of protection, saying they have no cause for alarm, and in addition, Norway, Sweden, Finland, Latvia, Estonia and Bulgaria stand aloof. A Norwegian Minister speaking the other day, declared that for three hundred years, the Scandinavian countries have been fighting with England for the right to maintain their neutrality. Rumania and Greece have thanked us for our offer to defend them, but have explained that they have no intention of entering into a reciprocal treaty and only Portugal, Poland and Turkey, have agreed to a mutually defensive treaty.

Rumania has been rewarded with a loan of five million pounds, for graciously allowing us to defend her. The Soviet in spite of our beseeching attitude has so far not come

to any agreement with us. The part they will play if war should come, is that of the jackal feasting on the corpses of the slain. All we have done is to present Hitler with a splendid testimonial from the small nations in Europe. Just as we were forced by the "City" to crush the small independent Boer Republic in order to gain control of the gold mines, so the real reason why we are interfering in Poland, Rumania and Greece, is that our financiers have large interests in the Polish coal mines, where the miners wages are disgracefully low, Rumanian oil and Greek banking. A pipe line runs from the oil fields of poverty stricken Rumania to the city of London, pouring the wealth of that country into the pockets of our financiers. They are determined that Germany be warned off these countries, where they have established a monopoly of financial control. The British public are deceived by the cry "Defend the independence of small nations".

The attempt we are making to persuade the Soviet to invade Europe pouring in hordes of barbaric troops from European and Asiatic Russia, whose advance would be accompanied by Communist risings and massacres, is probably the greatest crime against Christianity and civilization in the history of Europe. By following this extraordinary foreign policy our Government has sinned against four principles which should govern the foreign policy of nations. No Government has the right to pledge the lives of the people, except in self defence or defence of a vital interest. The inclusion of Bohemia in the Reich touches no interest of ours. No Government has a right to hand the control of its foreign policy to another nation or nations. Let us suppose, for instance, that Greece quarrelled with Italy and they went to war; we are bound to fight for Greece whether she is right or wrong. The following quotation from a speech made by Captain Euan Wallace, Minister of Transport, at Bognor, condemns the government foreign policy out of their own mouths. "Let us make no mistake about it, the decision whether we will fight has been taken out of the hands of the people of this country, and out of the hands of our governors. We have made commitments which are automatic. If those commitments are broken, this country is committed for better or for worse to take up arms."

It is the duty of a Government to reduce outside commitments which may lead to war, and to secure the friendship of all nations. Our Government has increased our commitments which may lead to war, and by this action caused the Peace Pact and the Naval Treaty with Germany to be torn up. We had' torn up the Peace Pact and Germany has now quite reasonably denounced the Naval Pact which was of great value to us. The final result of our action has been that Hitler is freed from his Peace Treaty with Poland and any restraint in strengthening his navy, so that he is left with a distinct diplomatic gain by our action. No Government has the right to lure a nation into war with a third nation if they cannot fulfil their offers of help. If Poland, having accepted our advances, makes war on Germany, we could not by any possibility go to her assistance. As the Fuhrer pointed out in his speech on April 28, 1939, when he first signed a Peace Pact with Poland he made no objections to the existing "Mutual Security Treaty" with France; but for Poland, having signed the Peace Pact, to make a treaty with Great Britain undertaking to make war on Germany under certain conditions, is an obvious breach of the Peace Pact.

What does Poland imagine she gains by this move? The Polish Corridor is an injustice to Germany and many people are astonished that she has put up with it so long. Danzig is as much a German city as Liverpool is English. Suppose we had lost the War and Germany had given Liverpool to De Valera ? How long would we have tolerated that state of affairs? Hitler made the Peace Pact with Poland and has faithfully observed it. Now they have broken it he is free to take back the Polish Corridor and include Danzig in the Reich. If Poland imagines that she can drag England into a war with Germany about Danzig she is greatly mistaken. Our Government has been careful to guard themselves on that point. Supposing Poland declares war and does manage to bring us in it will not save her. We are as helpless to save her as if she was on the Planet Mars. For us to tempt her to make such a suicidal war is an act of mischief deliberately disturbing the Peace of Europe. Roosevelt who hopes for a third term of office in spite of having landed the U.S.A. with a huge internal debt and 20 millions people on the dole, was looking out for a good slogan and thought that a call to the Democracies to defend "Christianity, Democracy and International Good Faith" would do.

He has had to retreat, and has thrown out a smoke screen to hide his retreat by sending to the World Press and Hitler and Mussolini an absurd document, in which they are told to pledge themselves to Peace for 25 years with a long list of nations, and then hand their future over to a world congress controlled by the three Democracies who were responsible for the Treaty of Versailles . This has been hailed as a wonderful document by the Governments of Great Britain and France. In the meantime Peace among the nations of the Danube Basin and of the Balkans is being assured by Hitler and Mussolini, who are having conference with the various Prime Ministers and Foreign Secretaries. There are three dangers to Peace, - the territorial demands of Hungary and of Bulgaria, and the trouble with the Croatians, but with the friendly assistance of Germany and Italy both nations will doubtless be able to come to terms with their neighbours.

These nations are all centering round the Axis because it will give them the three things which the people of Europe most desire, Peace, ordered stable Government, and trade . The Totalitarian States stand for certain fundamental principles Peace among the nations, each following out its own economic life. Government with only one object the good of the people, instead of being used for the struggle for power of rival political Parties. The abolition of Politicians. The abolition of the use of the Press controlled by financial groups to promote war by spreading lies. A higher conception of the relation of the individual to the community, which is not merely negative-the obeying of the law-but positive,-the service of the community being the first duty.

A stable economic and financial system and work for all. Freedom from control by international finance. Arms for defence but not for attack. It is obvious that the European nations are grouping themselves in friendly alliance round the Axis and it is time we recognised that fact and accepted the friendship which has been offered us by Germany and Italy. It is also time that France, for long under the influence of our foreign office with its pernicious traditions, reversed her policy and made friends with her neighbours who

have no quarrel with her, settled the quite reasonable demands of Italy, and developed trade with the three countries on her frontiers. Why should France sacrifice so much because we choose to quarrel with Germany? There will probably be no war in Europe because Hitler and Mussolini stand for Peace. The Europeans are settling down to a long Peace, which clears the deck for the larger question of World Trade and the huge monopoly of Gold, Raw materials and tropical and sub-tropical products held by the three Democracies and the Soviet. In every speech Hitler and Mussolini have given warning on this matter and they not only represent the needs of themselves and Japan but many other nations. This of course is what Roosevelt is really thinking about. He is prepared to plunge into a World War to defend Monopoly in the name of "Christianity, Democracy and Good Faith." The power of the Monopolists is colossal. They possess the world's wealth, rule a great part of the world's population, and have at their command our overwhelming sea power, which enables them to control trade on the high seas, and as we have seen, Roosevelt has already proposed that a trade boycott force the Have Nots into submission.

It is really for this reason that Germany is seeking to develop trade on the old trade route from Asia to Europe and it is for this reason that we are trying to prevent it. While in Parliament the Government talk about small nationalities, the Conservative Party organisation through its political instructors is telling us that we do not care what happens to small nationalities, but we must stop the development of Germany's trade in the Danube Basin and the Balkans so as to be able to starve her out by a blockade. It is obviously not only in the interest of the Have Nots, but of the whole world and even of the Monopolists themselves that the trade of the world be set free. Strangely enough the Monopolists are suffering most from their own policy having huge armies of unemployed. The British Empire when it was a Free Trade Empire had the goodwill of all the world. To-day when it has surrounded itself with tariffs, Ottawa agreements, quotas and international restrictions on output, it no longer has that goodwill which was its real strength, and piling armaments on armaments is not the solution of the question.

Not so important but of great interest is the Gold monopoly, a monopoly not only of the Gold available but the world's Gold mines which the Monopolists share with the Soviet. The U.S.A. is still hoarding larger and larger quantities of Gold. It does not seem to occur to her economists that to exchange goods for Gold, which is buried in their Bank Vaults and is "sterilized" to use the Stock Exchange jargon, is to give away their goods for nothing. Trade is the exchange of goods which have a utility value for other goods which have a utility value, and sterilized gold has no utility value at all. As long as Gold is still regarded as wealth by the mass of mankind, it is thought necessary for a trading nation to have a Gold reserve, but Germany - deprived by her creditors of all her Gold - has challenged that idea and is building up an export trade without it and is to-day our largest customer. Germany has not only challenged the political system of the Democracies but the economic system of international finance and international monopolies, and it is to that challenge that all the attacks in the Press and the attempts to force the people of

this country into war are due.

If Germany succeeds in her economic system of basing her currency on labour values and exchanging goods for goods, the whole of the Gold stored in the Bank vaults of the U.S.A. can be written off as a dead loss, and Gold mining which depends on selling Gold at a higher and higher price to the Governments who buy the Gold bars and do nothing with them, will collapse. The old story of King Midas who starved because everything he touched turned to Gold will come true. The German Government has shown that Gold is not necessary and that is one of the reasons for the policy pursued against them by Great Britain, France and the U.S.A. Millions are being spent on this propaganda, but when once the peoples of Great Britain, France and the U.S.A. realise that the cry that Germany aims at universal dominion is a lie to-day just as it was a lie in 1914; that the only danger facing Democracy is its own misrule, weakness in the face of vested interests and sacrifice of public interest to the greedy scramble of politicians for power; that they are being driven like sheep to the slaughter by big finance just as they were driven into the Boer war, they will turn in revolt. The revolt has already begun in England though not reported by our Press. Germany has symbolized international finance by calling it "the Jew". It is true Jews are to a great extent interested. International finance is the public enemy and the promoter of war among the peoples, but those controlling it belong to all nations, and it is centred in London, Paris and New York. The "City" rules this country. They threw the Labour Party out of power when it suited them, and they control our Government today. When Roosevelt and our Government say they are willing to consider how to set free the supply of raw materials they are promising what they cannot perform as they are helpless in the grip of the huge combines. Only the Totalitarian States are free states. King Midas is the Public Enemy number one. While the Monopolists combine to accumulate Gold it is no longer the basis of their paper currency. We have ourselves abolished the ratio between Gold and paper, and France devalues the Franc at intervals. The confusion between the world currencies continues and will end in a collapse. The only sound currency to-day is the German currency.

It is also necessary for the world to return in some form or other to Free Trade, but it must be a Free Trade that does not cause a competition between different standards of living. Germany has solved these problems by exchanging goods for goods based on barter. Before these international questions are discussed the Monopolists have to ask themselves why, with the world wealth in their possession, they suffer from serious unemployment, which has reached in the U.S.A. the appalling figure of 20 million people on the dole, while Germany has to hire surplus labour abroad. They must reform their own economic system before they reform the world. They have also to ask themselves two very fundamental questions, namely, is it possible to combine the Democratic idea with the principle that the first duty of the citizen is the welfare of the community, and with honest government not controlled behind the scenes by the Financiers.

Democracies are in many cases financially corrupt Governments. In our case that is not true but our Government and Parliament are intellectually dishonest. Truth is sacrificed

every day to a party advantage. If lies were only consciously told it would not be so serious but political life produces a mental degeneration in which it is no longer possible for the politicians to distinguish between truth and falsehood. An excellent example occurred in the House of Commons the other day when the leaders of the Opposition accused Franco of dropping from his planes chocolate boxes containing infernal machines so that when children picked them up they were blown to pieces. Men who can say such things are really mentally insane and these champions of Democracy are our rulers to whom we submit the safety of our State. The Parliamentary system is becoming unworkable. The Peoples of the Democracies, owing to the iron control of publicity, are dumb and can be driven to war without a protest. Even a pig is allowed to squeal before he is killed. We shall owe to Germany not only the abolition of the Politician, but a new ethical conception of a community, Peace in Europe and a reformed economic and trading system which will reconstruct world economics and abolish the evil influences of international finance and huge trading monopolies.

The great speech made by the Führer has deflated the war balloon blown out with poison gas by the Press. Germany makes no threat of war against any nation. The war anxiety among the small nations of Europe is not due to German action but to the uncertainty as to whether we do not intend to provoke war and the fear of our hysterical and unbalanced Democracy, for they know that Great Britain is dangerous when she is filled with moral indignation at the sins of her neighbours. When the giants are fighting the small nations will suffer. It is true Holland is busy arming her frontier facing Germany but she is just as busy arming her harbours facing England. France is evidently hesitating between Peace, Trade and friendship with Germany and being further involved in our reckless foreign policy. It is said that our beginning of conscription is the price we are paying to keep her with us. Before finally considering the two policies put before the peoples of Europe and the peoples of this country by the Führer and the British Government respectively, let us briefly look at the present condition of Europe as revealed by our attempts to consolidate it in a new policy against Germany. Switzerland, Belgium, Holland, Denmark, Norway, Sweden, Finland, Estonia, Latvia and Lithuania deny that they fear any act aggression on the part of Germany, refuse to be drawn into any alliance that may commit them to war, and state that if war comes they will remain neutral. Germany, Italy, Spain, Slovakia, Hungary and Jugoslavia are united in the closest bonds of friendship and mutual confidence. Rumania and Greece, while not refusing our offer of assistance if attacked, will not sign a Treaty which will in any way commit them to war. A chain of Peace Pacts beginning in Italy joins Italy to Jugoslavia, Jugoslavia to Bulgaria, Bulgaria to Turkey. Poland alone has formed a mutual security pact with us, and by so doing broken her Peace Pact with Germany.

France is isolated in Europe to-day and has chosen to quarrel with her three neighbours on her frontiers-Spain, Italy and Germany. This attitude of hostility can be ended when she chooses, and grants the quite reasonable requests of Italy. Before Hitler rose to power all countries in Europe had armed and a criss cross of mutual security pacts made war

possible and no one could say where it would stop. Since Germany rose to power the consolidation of Europe into friendly nations promoting trade has proceeded apace. A central area of Europe from the frontiers of Holland to the frontiers of Rumania, and united to Italy and Spain is settled as a permanent area of Peace,-an area equal to the old Austrian Empire and united to Germany by friendship not by dominance of a central Government. If Germany and Italy acting jointly are able to settle the differences about land frontiers between Hungary and Rumania, this will extend to the Black Sea. Formerly Poland could be included. Unfortunately for her she has broken away owing to our interference. This Pax Germanica which is gradually extending over Europe is the work of two men-Hitler and Mussolini.

Let us now consider the two policies offered by Hitler on the one hand and our Government on the other. To Hitler we owe the idea of Peace Pacts. Two nations agree not to go to war for a term of years. This does not involve any alliance against a third Power. This policy has spread over Europe and into Asia. Turkey, Iraq, Persia and Afghanistan are united by Peace Pacts. The first Peace Pact between Germany and Poland resulted in the friendly settlement of very delicate and difficult points and it is disastrous for her that Poland has broken it. The other policy of mutual security pacts is simply the Policy of Treaties between two nations directed against a third nation under a new name which existed before the war and had such disastrous consequences. Germany was bound to Austria, England was bound to France, and France to Russia, and so an insignificant Balkan war involved all Europe in a catastrophe . This policy was tried during the reign of the League and produced unrest and fear of war all over Europe. It means the assumption by a nation of obligations to fight for a foreign policy over which it has no control, and it ensures automatically a local war between two powers involving all those linked by mutual security pacts. A break at any point in the complicated chain involves the whole in disaster. It means dividing Europe into two hostile camps, which must end in war sooner or later. Hitler has always denounced mutual security and Germany beyond her guarantee of the integrity of Belgium and of Slovakia is free from all such commitments. Our alliance with France has been disastrous to both countries as neither country is free to follow the foreign policy suited to its own interests. It is, for instance, essential for France to-day to develop friendly relations with Spain and Italy, and above all with Germany. Many intelligent Frenchmen curse the alliance with us dragging France into our disastrous and reckless Foreign Policy.

The peoples of Europe, of Great Britain and the British Empire have the chance of adopting the policy of Hitler and Peace, or of Chamberlain who is being driven by forces hostile to Germany to war. I thank God that the Peace of Europe is in the guardianship of the Fiihrer and therefore, in spite of the frantic efforts of all those here and in Europe and America who want war, secure.

10.5 Finance and Economy

Bleeding Germany Dry

From "The Jewish Declaration of War on Nazi Germany, Article from The Barnes Review, Jan./Feb. 2001, pp. 41-45.", we learn:

Long before the Hitler government began restricting the rights of the German Jews, the leaders of the worldwide Jewish community formally declared war on the "New Germany" at a time when the U.S. government and even the Jewish leaders in Germany were urging caution in dealing with the new Hitler regime. The war by the international Jewish leadership on Germany not only sparked definite reprisals by the German government but also set the stage for a little-known economic and political alliance between the Hitler government and the leaders of the Zionist movement who hoped that the tension between the Germans and the Jews would lead to massive emigration to Palestine. In short, the result was a tactical alliance between the Nazis and the founders of the modern-day state of Israel - a fact that many today would prefer be forgotten.

To this day, it is generally (although incorrectly) believed that when Adolf Hitler was appointed German chancellor in January of 1933, the German government began policies to suppress the Jews of Germany, including rounding up of Jews and putting them in concentration camps and launching campaigns of terror and violence against the domestic Jewish population. While there were sporadic eruptions of violence against Jews in Germany after Hitler came to power, this was not officially sanctioned or encouraged. And the truth is that anti-Jewish sentiments in Germany (or elsewhere in Europe) were actually nothing new. As all Jewish historians attest with much fervor, anti-Semitic uprisings of various degrees had been ever-present in European history. In any case, in early 1933, Hitler was not the undisputed leader of Germany, nor did he have full command of the armed forces. Hitler was a major figure in a coalition government, but he was far from being the government himself. That was the result of a process of consolidation which evolved later.

Even Germany's Jewish Central Association, known as the Verein, contested the suggestion (made by some Jewish leaders outside Germany) that the new government was deliberately provoking anti-Jewish uprisings. The Verein issued a statement that "the responsible government authorities [i.e. the Hitler regime] are unaware of the threatening situation," saying, "we do not believe our German fellow citizens will let themselves be carried away into committing excesses against the Jews." Despite this, Jewish leaders in the United States and Britain determined on their own that it was necessary to launch a war against the Hitler government. On March 12, 1933 the American Jewish Congress announced a massive protest at Madison Square Gardens for March 27. At that time the commander in chief of the Jewish War Veterans called for an American boycott of German goods. In the meantime, on March 23, 20,000 Jews protested at New York's City Hall as rallies were staged outside the North German Lloyd and Hamburg-American

shipping lines and boycotts were mounted against German goods throughout shops and businesses in New York City.

According to The Daily Express of London of March 24, 1933, the Jews had already launched their boycott against Germany and her elected government. The headline read "Judea Declares War on Germany - Jews of All the World Unite - Boycott of German Goods - Mass Demonstrations." The article described a forthcoming "holy war" and went on to implore Jews everywhere to boycott German goods and engage in mass demonstrations against German economic interests. According to the Express:

"The whole of Israel throughout the world is uniting to declare an economic and financial war on Germany. The appearance of the Swastika as the symbol of the new Germany has revived the old war symbol of Judas to new life. Fourteen million Jews scattered over the entire world are tight to each other as if one man, in order to declare war against the German persecutors of their fellow believers. The Jewish wholesaler will quit his house, the banker his stock exchange, the merchant his business, and the beggar his humble hut, in order to join the holy war against Hitler's people."

The Express said that Germany was "now confronted with an international boycott of its trade, its finances, and its industry.... In London, New York, Paris and Warsaw, Jewish businessmen are united to go on an economic crusade." The article said "worldwide preparations are being made to organize protest demonstrations," and reported that "the old and reunited nation of Israel gets in formation with new and modern weapons to fight out its age old battle against its persecutors." This truly could be described as "the first shot fired in the Second World War."

In a similar vein, the Jewish newspaper Natscha Retsch wrote:

"The war against Germany will be waged by all Jewish communities, conferences, congresses... by every individual Jew. Thereby the war against Germany will ideologically enliven and promote our interests, which require that Germany be wholly destroyed. The danger for us Jews lies in the whole German people, in Germany as a whole as well as individually. It must be rendered harmless for all time.... In this war we Jews have to participate, and this with all the strength and might we have at our disposal."

However, note well that the Zionist Association of Germany put out a telegram on the 26th of March rejecting many of the allegations made against the National Socialists as "propaganda," "mendacious" and "sensational." In fact, the Zionist faction had every reason to ensure the permanence of National Socialist ideology in Germany. Klaus Polkehn, writing in the Journal of Palestine Studies ("The Secret Contacts: Zionism and Nazi Germany, 1933-1941"; JPS v. 3/4, spring/summer 1976), claims that the moderate attitude of the Zionists was due to their vested interest in seeing the financial victory of National Socialism to force immigration to Palestine. This little-known factor would ultimately come to play a pivotal part in the relationship between Nazi Germany and the Jews.

In the meantime, though, German Foreign Minister Konstantin von Neurath complained of the “vilification campaign” and said:

“As concerns Jews, I can only say that their propagandists abroad are rendering their co-religionists in Germany no service by giving the German public, through their distorted and untruthful news about persecution and torture of Jews, the impression that they actually halt at nothing, not even at lies and calumny, to fight the present German government.”

The fledgling Hitler government itself was clearly trying to contain the growing tension - both within Germany and without. In the United States, even U.S. Secretary of State Cordell Hull wired Rabbi Stephen Wise of the American Jewish Congress and urged caution:

“Whereas there was for a short time considerable physical mistreatment of Jews, this phase may be considered virtually terminated.... A stabilization appears to have been reached in the field of personal mistreatment.... I feel hopeful that the situation which has caused such widespread concern throughout this country will soon revert to normal.”

Despite all this, the leaders of the Jewish community refused to relent. On March 27 there were simultaneous protest rallies at Madison Square Garden, in Chicago, Boston, Philadelphia, Baltimore, Cleveland and 70 other locations. The New York rally was broadcast worldwide. The bottom line is that “the New Germany” was declared to be an enemy of Jewish interests and thus needed to be economically strangled. This was before Hitler decided to boycott Jewish goods. It was in direct response to this that the German government announced a one-day boycott of Jewish businesses in Germany on April 1. German Propaganda Minister Dr. Joseph Goebbels announced that if, after the one-day boycott, there were no further attacks on Germany, the boycott would be stopped. Hitler himself responded to the Jewish boycott and the threats in a speech on March 28 - four days after the original Jewish declaration of war - saying:

“Now that the domestic enemies of the nation have been eliminated by the Volk itself, what we have long been waiting for will not come to pass. The Communist and Marxist criminals and their Jewish-intellectual instigators, who, having made off with their capital stocks across the border in the nick of time, are now unfolding an unscrupulous, treasonous campaign of agitation against the German Volk as a whole from there.... Lies and slander of positively hair-raising perversity are being launched about Germany. Horror stories of dismembered Jewish corpses, gouged out eyes and hacked off hands are circulating for the purpose of defaming the German Volk in the world for the second time, just as they had succeeded in doing once before in 1914.”

Thus, the fact - one conveniently left out of nearly all history on the subject - is that Hitler’s March 28, 1933 boycott order was in direct response to the declaration of war on Germany by the worldwide Jewish leadership just four days earlier. Today, Hitler’s boycott order is described as a naked act of aggression, yet the full circumstances leading up to his order are seldom described in even the most ponderous and detailed histories of

“the Holocaust”. Not even Saul Friedlander in his otherwise comprehensive overview of German policy, Nazi Germany and the Jews, mentions the fact that the Jewish declaration of war and boycott preceded Hitler’s speech of March 28, 1933. Discerning readers would be wise to ask why Friedlander felt this item of history so irrelevant. The simple fact is that it was organized Jewry as a political entity - and not even the German Jewish community per se - that actually initiated the first shot in the war with Germany.

Germany’s response was a defensive - not an offensive - measure. Were that fact widely known today, it would cast new light on the subsequent events that ultimately led to the world-wide conflagration that followed. To understand Hitler’s reaction to the Jewish declaration of war, it is vital to understand the critical state of the German economy at the time. In 1933, the German economy was in a shambles. Some 3 million Germans were on public assistance with a total of 6 million unemployed. Hyper-inflation had destroyed the economic vitality of the German nation. Furthermore, the anti-German propaganda pouring out of the global press strengthened the resolve of Germany’s enemies, especially the Poles and their hawkish military high command.

The Jewish leaders were not bluffing. The boycott was an act of war not solely in metaphor: it was a means, well crafted, to destroy Germany as a political, social and economic entity. The long term purpose of the Jewish boycott against Germany was to bankrupt her with respect to the reparation payments imposed on Germany after World War I and to keep Germany demilitarized and vulnerable. The boycott, in fact, was quite crippling to Germany. Jewish scholars such as Edwin Black have reported that, in response to the boycott, German exports were cut by 10 percent, and that many were demanding seizing German assets in foreign countries (Edwin Black, *The Transfer Agreement - The Untold Story of the Secret Pact between the Third Reich and Jewish Palestine*, New York, 1984). The attacks on Germany did not cease. The worldwide Jewish leadership became ever the more belligerent and worked itself into a frenzy. An International Jewish Boycott Conference was held in Amsterdam to coordinate the ongoing boycott campaign. It was held under the auspices of the self-styled World Jewish Economic Federation, of which famous New York City attorney and longtime political power broker, Samuel Untermyer, was elected president. Upon returning to the United States in the wake of the conference, Untermyer delivered a speech over WABC Radio (New York), a transcript of which was printed in *The New York Times* on August 7, 1933.

Untermyer’s inflammatory oratory called for a “sacred war” against Germany, making the flat-out allegation that Germany was engaged in a plan to “exterminate the Jews.” He said (in part):

“...Germany [has] been converted from a nation of culture into a veritable hell of cruel and savage beasts. We owe it not only to our persecuted brethren but to the entire world to now strike in self-defense a blow that will free humanity from a repetition of this incredible outrage.... Now or never must all the nations of the earth make common cause against the... slaughter, starvation and annihilation... fiendish torture, cruelty and persecution that are being inflicted day by day upon these men, women and children....

When the tale is told... the world will confront a picture so fearful in its barbarous cruelty that the hell of war and the alleged Belgian atrocities pale into insignificance as compared to this devilishly, deliberately, cold-bloodedly planned and already partially executed campaign for the extermination of a proud, gentle, loyal, law-abiding people... The Jews are the aristocrats of the world. From time immemorial they have been persecuted and have seen their persecutors come and go. They alone have survived. And so will history repeat itself, but that furnishes no reason why we should permit this reversion of a once great nation to the Dark Ages or fail to rescue these 600,000 human souls from the tortures of hell.... ...What we are proposing and have already gone far toward doing, is to prosecute a purely defensive economic boycott that will undermine the Hitler regime and bring the German people to their senses by destroying their export trade on which their very existence depends. ...We propose to and are organizing world opinion to express itself in the only way Germany can be made to understand...."

Untermeyer then proceeded to provide his listeners with a wholly fraudulent history of the circumstances of the German boycott and how it originated. He also proclaimed that the Germans were bent on a plan to "exterminate the Jews":

"The Hitler regime originated and are fiendishly prosecuting their boycott to exterminate the Jews by placarding Jewish shops, warning Germans against dealing with them, by imprisoning Jewish shopkeepers and parading them through the streets by the hundreds under guard of Nazi troops for the sole crime of being Jews, by ejecting them from the learned professions in which many of them had attained eminence, by excluding their children from the schools, their men from the labor unions, closing against them every avenue of livelihood, locking them in vile concentration camps and starving and torturing them without cause and resorting to every other conceivable form of torture, inhuman beyond conception, until suicide has become their only means of escape, and all solely because they are or their remote ancestors were Jews, and all with the avowed object of exterminating them."

Untermeyer concluded his largely fantastic and hysterical address by declaring that with the support of "Christian friends... we will drive the last nail in the coffin of bigotry and fanaticism...." That his allegations against Germany were made long before even Jewish historians today claim there were any gas chambers or even a plan to "exterminate" the Jews, displays the nature of the propaganda campaign confronting Germany. However, during this same period there were some unusual developments at work: The spring of 1933 also witnessed the beginning of a period of private cooperation between the German government and the Zionist movement in Germany and Palestine (and actually worldwide) to increase the flow of German-Jewish immigrants and capital to Palestine.

The modern-day supporters of Zionist Israel and many historians have succeeded in keeping this Nazi-Zionist pact a secret to the general public for decades and while most Americans have no concept of the possibility that there could have been outright collaboration between the Nazi leadership and the founders of what became the state of Israel, the truth has begun to emerge. Dissident Jewish writer Lenni Brenner's *Zionism In the Age*

of the Dictators, published by a small press and not given the publicity it deserves by the so-called "mainstream" media (which is otherwise obsessed with the Holocaust era), was perhaps the first major endeavor in this realm. In response to Brennar and others, the Zionist reaction has usually consisted of declarations that their collaboration with Nazi Germany was undertaken solely to save the lives of Jews. But the collaboration was all the more remarkable because it took place at a time when many Jews and Jewish organizations demanded a boycott of Germany.

To the Zionist leaders, Hitler's assumption of power held out the possibility of a flow of immigrants to Palestine. Previously, the majority of German Jews, who identified themselves as Germans, had little sympathy with the Zionist cause of promoting the ingathering of world Jewry to Palestine. But the Zionists saw that only the anti-Semitic Hitler was likely to push the anti-Zionist German Jews into the arms of Zionism. For all the modern-day wailing by worldwide supporters of Israel (not to mention the Israelis themselves) about "the Holocaust", they neglect to mention that making the situation in Germany as uncomfortable for the Jews as possible - in cooperation with German National Socialism - was part of the plan. This was the genesis of the so-called Transfer Agreement, the agreement between Zionist Jews and the National Socialist government to transfer German Jewry to Palestine.

According to Jewish historian Walter Laqueur and many others, German Jews were far from convinced that immigration to Palestine was the answer. Furthermore, although the majority of German Jews refused to consider the Zionists as their political leaders, it is clear that Hitler protected and cooperated with the Zionists for the purposes of implementing the final solution: the mass transfer of Jews to the Middle East. Edwin Black, in his massive tome *The Transfer Agreement* (Macmillan, 1984), stated that although most Jews did not want to flee to Palestine at all, due to the Zionist movement's influence within Nazi Germany a Jew's best chance of getting out of Germany was by emigrating to Palestine. In other words, the Transfer Agreement itself mandated that Jewish capital could only go Palestine.

Thus, according to the Zionists, a Jew could leave Germany only if he went to the Levant. The primary difficulty with the Transfer Agreement (or even the idea of such an agreement) was that the English [!!!; Scriptorium] were demanding, as a condition of immigration, that each immigrant pay 1,000 pounds sterling upon arrival in Haifa or elsewhere. The difficulty was that such hard currency was nearly impossible to come by in a cash-strapped and radically inflationary Germany. This was the main idea behind the final Transfer Agreement. Laqueur writes:

"A large German bank would freeze funds paid in by immigrants in blocked accounts for German exporters, while a bank in Palestine would control the sale of German goods to Palestine, thereby providing the immigrants with the necessary foreign currency on the spot. Sam Cohen, co-owner of Hanoaiah Ltd. and initiator of the transfer endeavors, was however subjected to long-lasting objections from his own people and finally had to concede that such a transfer agreement could only be concluded on a much higher

level with a bank of its own rather than that of a private company. The renowned Anglo-Palestine Bank in London would be included in this transfer deal and create a trust company for [this] purpose."

Of course, this is of major historical importance in dealing with the relationship between Zionism and National Socialism in Germany in the 1930s. The relationship was not one merely of mutual interest and political favoritism on the part of Hitler, but a close financial relationship with German banking families and financial institutions as well. Black writes:

"It was one thing for the Zionists to subvert the anti-Nazi boycott. Zionism needed to transfer out the capital of German Jews, and merchandise was the only available medium. But soon Zionist leaders understood that the success of the future Jewish Palestinian economy would be inextricably bound up with the survival of the Nazi economy. So the Zionist leadership was compelled to go further. The German economy would have to be safeguarded, stabilized, and if necessary reinforced. Hence, the Nazi party and the Zionist organizers shared a common stake in the recovery of Germany."

Thus one sees a radical fissure in world Jewry around 1933 and beyond. There were, first, the non-Zionist Jews (specifically the World Jewish Congress founded in 1933), who, on the one hand, demanded the boycott and eventual destruction of Germany. Black notes that many of these people were not just in New York and Amsterdam, but a major source for this also came from Palestine proper. On the other hand, one can see the judicious use of such feelings by the Zionists for the sake of eventual resettlement in Palestine. In other words, it can be said (and Black does hint at this) that Zionism believed that, since Jews would be moving to the Levant, capital flight would be necessary for any new economy to function. The result was the understanding that Zionism would have to ally itself with National Socialism, so that the German government would not impede the flow of Jewish capital out of the country.

It served the Zionist interests at the time that Jews be loud in their denunciations of German practices against the Jews to scare them into the Levant, but, on the other hand, Laqueur states that "The Zionists became motivated not to jeopardize the German economy or currency." In other words, the Zionist leadership of the Jewish Diaspora was one of subterfuge and underhandedness, with only the advent of German hostility towards Jewry convincing the world's Jews that immigration was the only escape. The fact is that the ultimate establishment of the state of Israel was based on fraud. The Zionists did not represent anything more than a small minority of German Jews in 1933. On the one hand, the Zionist fathers of Israel wanted loud denunciations of Germany's "cruelties" to the world's Jews while at the same time demanding moderation so that the National Socialist government would remain stable, financially and politically. Thus Zionism boycotted the boycott.

For all intents and purposes, the National Socialist government was the best thing to happen to Zionism in its history, for it "proved" to many Jews that Europeans were irredeemably anti-Jewish and that Palestine was the only answer: Zionism came to represent

the overwhelming majority of Jews solely by trickery and cooperation with Adolf Hitler. For the Zionists, both the denunciations of German policies towards Jews (to keep Jews frightened), plus the reinvigoration of the German economy (for the sake of final resettlement) was imperative for the Zionist movement. Ironically, today the Zionist leaders of Israel complain bitterly about the horrific and inhuman regime of the National Socialists. So the fraud continues.

Using the Greenback-System

From "The Web of Debt" we learn:

The Treaty of Versailles had imposed crushing reparations payments on Germany. The German people were expected to reimburse the costs of the war for all participants – costs totaling three times the value of all the property in the country. Speculation in the German mark had caused it to plummet, precipitating one of the worst runaway inflations in modern times. At its peak, a wheelbarrow full of 100 billion-mark banknotes could not buy a loaf of bread. The national treasury was completely broke, and huge numbers of homes and farms had been lost to the banks and speculators. People were living in hovels and starving. Nothing like it had ever happened before – the total destruction of the national currency, wiping out people's savings, their businesses, and the economy generally.

What to do? The German government followed the lead of the American Greenbackers and issued its own fiat money. Hjalmar Schacht, then head of the German central bank, is quoted in a bit of wit that sums up the German version of the "Greenback" miracle. An American banker had commented, "Dr. Schacht, you should come to America. We've lots of money and that's real banking." Schacht replied, "You should come to Berlin. We don't have money. That's real banking." The German people were in such desperate straits that they relinquished control of the country to a dictator, and in this they obviously deviated from the "American system," which presupposed a democratically-governed Commonwealth. But autocratic authority did give Adolf Hitler something the American Greenbackers could only dream about – total control of the economy.

He was able to test their theories, and he proved that they worked. Like for Lincoln, Hitler's choices were to either submit to total debt slavery or create his own fiat money; and like Lincoln, he chose the fiat solution. He implemented a plan of public works along the lines proposed by Jacob Coxey and the Greenbackers in the 1890s. Projects earmarked for funding included flood control, repair of public buildings and private residences, and construction of new buildings, roads, bridges, canals, and port facilities. The projected cost of the various programs was fixed at one billion units of the national currency. One billion noninflationary bills of exchange, called Labor Treasury Certificates (Money backed by work), were then issued against this cost. Millions of people were put to work on these projects, and the workers were paid with the Treasury Certificates. The workers then spent the certificates on goods and services, creating more jobs for more people.

The certificates were also referred to as MEFO bills, or sometimes as “Feder money.” They were not actually debt-free; they were issued as bonds, and the government paid interest on them. But they circulated as money and were renewable indefinitely, and they avoided the need to borrow from international lenders or to pay off international debts.

Within two years, the unemployment problem had been solved and the country was back on its feet. It had a solid, stable currency and no inflation, at a time when millions of people in the United States and other Western countries were still out of work and living on welfare. Germany even managed to restore foreign trade, although it was denied foreign credit and was faced with an economic boycott abroad. It did this by using a barter system: equipment and commodities were exchanged directly with other countries, circumventing the international banks. This system of direct exchange occurred without debt and without trade deficits. Germany’s economic experiment, like Lincoln’s, was short-lived; but it left some lasting monuments to its success, including the famous Autobahn, the world’s first extensive superhighway.

According to Stephen Zarlenga in *The Lost Science of Money*, Hitler was exposed to the fiat-money solution when he was assigned by German Army intelligence to watch the German Workers Party after World War I. He attended a meeting that made a deep impression on him, at which the views of Gottfried Feder were propounded: The basis of Feder’s ideas was that the state should create and control its money supply through a nationalized central bank rather than have it created by privately owned banks, to whom interest would have to be paid. From this view derived the conclusion that finance had enslaved the population by usurping the nation’s control of money. Hitler was enormously popular with the German people, at least for a time. Zarlenga suggests that this was because he temporarily rescued Germany from English economic theory – the theory that money must be borrowed against the gold reserves of a private banking cartel rather than issued outright by the government. Again, the reasons for war are complex; but Zarlenga postulates one that is not found in the history books:

“Perhaps [Germany] was expected to borrow gold internationally, and that would have meant external control over her domestic policies. Her decision to use alternatives to gold, would mean that the international financiers would be unable to exercise this control through the international gold standard, . . . and this may have led to controlling Germany through warfare instead.”

Dr. Henry Makow, a Canadian researcher, adds some evidence for this theory. He quotes from the 1938 interrogation of C. G. Rakovsky, one of the founders of Soviet Bolshevism and a Trotsky intimate, who was tried in show trials in the USSR under Stalin. Rakovsky maintained that Hitler had actually been funded by the international bankers through their agent Hjalmar Schacht in order to control Stalin, who had usurped power from their agent Trotsky. But Hitler had become an even bigger threat than Stalin when he took the bold step of creating his own money. Rakovsky said:

“[Hitler] took over for himself the privile[ge] of manufacturing money and not only phys-

ical moneys, but also financial ones; he took over the untouched machinery of falsification and put it to work for the benefit of the state Are you capable of imagining what would have come . . . if it had infected a number of other states and brought about the creation of a period of autarchy. If you can, then imagine its counter-revolutionary functions.”

Autarchy is a national economic policy that aims at achieving selfsufficiency and eliminating the need for imports. Countries that take protectionist measures and try to prevent free trade are sometimes described as autarchical. Rakowsky's statement recalls the editorial attributed to the *The London Times*, warning that if Lincoln's Greenback plan were not destroyed, “that government will furnish its own money without cost. It will pay off debts and be without a debt. It will have all the money necessary to carry on its commerce. It will become prosperous beyond precedent in the history of the civilized governments of the world.” Germany was well on its way to achieving those goals. Henry C K Liu writes of the country's remarkable transformation:

“The Nazis came to power in Germany in 1933, at a time when its economy was in total collapse, with ruinous war-reparation obligations and zero prospects for foreign investment or credit. Yet through an independent monetary policy of sovereign credit and a full-employment public-works program, the Third Reich was able to turn a bankrupt Germany, stripped of overseas colonies it could exploit, into the strongest economy in Europe within four years, even before armament spending began.”

In *Billions for the Bankers, Debts for the People* (1984), Sheldon Emry also credited Germany's startling rise from bankruptcy to a world power to its decision to issue its own money. He wrote:

“Germany financed its entire government and war operation from 1935 to 1945 without gold and without (national) debt (debt to other countries was still there), and it took the whole Capitalist and Communist world to destroy the German power over Europe and bring Europe back under the heel of the Bankers. Such history of money does not even appear in the textbooks of public (government) schools today.”

What does appear in modern textbooks is the disastrous runaway inflation suffered in 1923 by the Weimar Republic (the common name for the republic that governed Germany from 1919 to 1933). The radical devaluation of the German mark is cited as the textbook example of what can go wrong when governments are given the unfettered power to print money. That is what it is cited for; but again, in the complex world of economics, things are not always as they seem.

(Note: By 1939, Nazi Germany did indeed suffer from heavy inflation showing that you can't just print money at will without suffering consequences. Yet, they were free of the international debt slavery. The Nazis themselves expected to run into some economic problems by 1942 (war not expected), but not a complete economic collapse. This is usually falsely given as evidence that the 3rd Reich needed war to survive.)

10.6 The Jewish Question

The book “Germany and the Jewish Problem“ by Dr. F. K. Wiebe from 1939 describes “The Jewish Question“ from the viewpoint of Nazi Germany at that time. It was published on behalf of the Institute for the Study of the Jewish Problem, Berlin. Some excerpts are to be found here:

Introduction

Ever since the day when the National Socialists came into power in Germany, thereby placing the solution of the Jewish problem in the forefront of German politics, public opinion the world over has become increasingly interested in that problem. Anti-semitism has been frequently described as a phenomenon exclusively confined to Germany, as a National Socialist invention which must necessarily remain incomprehensible to the rest of the world. But to-day it is evident that the Jewish question is by no means a purely German question, that it causes on the contrary grave anxiety to statesmen in many countries, and that in many lands a pronounced anti-Jewish reaction has already set in. We do not propose to enquire, for the moment, whether these phenomena are a result of the example set by Germany. It is sufficient to register the fact that the Jewish question has, or is about to become everywhere acute, and that there is scarcely a country nowadays which does not find itself compelled to contribute in some way or other to its solution.

It is a mistake to believe that the Jewish question has only arisen within the last few years, or, indeed, that its origin is to be sought in modern times. The Jewish question is not an invention of National Socialism, nor is it derived from the anti-semitic movements that marked the close of the nineteenth century. If National Socialism can lay claim to any originality in the matter, then only because the National Socialist Party was the first to deduce the logical conclusions from a historical fact. The present German attitude towards the Jewish question is based on the experience made by Europe in the course of two thousand years. And this experience has been a particularly bad one for Germany, especially during the last few decades. The Jewish question undoubtedly dates back some two thousand years. Strictly speaking it is even older — namely, as old as the history of the Jews. The Jewish question arises everywhere where the nomadic Jewish race comes into contact with other peoples having a settled abode.

This historical fact is admitted by the Jews themselves. The Jüdische Lexikon, which is the standard work of the German Jews—published long before the advent of National Socialism to power—confirms the historical continuity of the Jewish question throughout the centuries when it writes (vol. III, column 421): “this Jewish problem is as old as the association of the pronouncedly differentiated and dissimilar Jewish people with other peoples.“ It is a unique, and in the last resort inexplicable phenomenon, that on the one hand the Jews have never been able to find a permanent home in which to develop a

political and social existence "sui generis," while on the other hand they have never proved capable of being absorbed by any of the innumerable countries in which they have sought hospitality. This peculiar destiny of the Jews is, however, subject to variations. But these variations, in their turn, are only the perpetual ebbing and flowing of an unbroken tide. There were times in which the Jewish problem appeared definitely solved, in which the foreign immigrants appeared to have become completely assimilated and to have lost their distinct ethnical personality. In such halcyon days no Jewish problem seemed to exist. But sooner or later the illusion was dispelled, and after many years of comparative rest and quiet Ahasuerus was compelled to again resume his eternal wanderings.

The first expulsions of Jews on a large scale occurred already in the earliest history of Palestine. 700 years before the Christian era the Assyrian King Sarrukin forced the Jews to leave the country, and his example was followed in 586 B. C. by King Nebuchadnezzar of Babylon. Persecutions in Alexandria and the destruction of Jerusalem by the Romans in A. D. 70 opened a period in which the Jewish question was not less acute than it is to-day. Further milestones in the eternal wanderings of the Jews are the crusades, the expulsion of the Jews from England under Edward I in 1290, and their expulsion from Spain under Ferdinand and Isabella the Catholic in 1492. There is not a single century in which an expulsion of Jews has not taken place. Every nation in Europe has sought to preserve itself against Jewish domination by all the means at its disposal.

It is an incontrovertible historical fact that those peoples with a settled abode who throughout the ages afforded hospitality to nomadic Jewish tribes, invariably regarded the latter as an essentially dissimilar race and not merely as a different religious community. Hence hospitality was only granted to the Jews under special conditions. It is interesting to observe in this connection that in every case where a European State was weak and financially impoverished, the restrictions imposed on the Jews were greatly relaxed and eventually abrogated. The numerical preponderance of the Jews in Eastern Europe — which has become the reservoir of Jewry in modern times — is to a large extent attributable to the political and financial weakness of the former Kingdom of Poland. The opening of the so-called "modern era" seemed nevertheless to herald a period of permanent peace and rest for the hitherto restless wandering Jew. It was the era of enlightenment, of liberalism, of belief in the ideals of progress and the rights of man. Conformably with the principles in vogue in this era, the Jews only differed by their religion from other citizens and as such enjoyed equality with the adherents of other religious bodies. They were no longer considered as appertaining to a different race, in other words as strangers. Differentiation on ethnical grounds between the Jews and the native population was on principle abolished by the French Revolution, and this principle was adhered to alike by the legislation and the social custom of ensuing decades.

The nineteenth century was thus dominated by the tenet of the emancipation and assimilation of the Jews. It was considered best not even to mention the Jewish question and to act as if such a question did not exist. In the countries of Western Europe the Jews themselves were animated by an intense desire for assimilation. Conversions and mixed

marriages were the principal means employed by the Jews for acquiring, in the words of Heinrich Heine, himself a Jew, an "admission ticket to European culture", and thereby acquiring a preponderating influence in political, cultural, and economic life. It should be added that a number of Jews were inspired by a sincere desire to throw-off their skin and obliterate as far as possible their hereditary tracks. This process of assimilation reached its culminating point in the first three decades of the twentieth century, during which Israel became King of the Western world. But it cannot be reasonably doubted that this epoch has come to an end. The most farsighted among the Jews had clearly perceived the inevitability of a reaction. Forty years ago a leading German Jew, Dr. Walther Rathenau, in a book entitled *Höre, Israel!* had criticised the policy of assimilation and uttered a warning for the benefit of those of his co-racists who occupied, or were about to occupy, prominent positions in Germany. "They apparently do not even dream," wrote Rathenau, "that only in an epoch in which all the forces of Nature are artificially enchained, can they be protected against that which their fathers endured."

That modern Jewry did not heed the many warning voices in its own ranks affords another proof of the fact that the Children of Israel have not learnt, or wished to learn, the lessons taught by their own fate — that they are blind to the errors so often committed by themselves in their selfcomplacency. It is also typical of the Jewish mind that even Walther Rathenau himself failed to draw the logical consequences from his own perception of ultimate events. Some forty years ago a comparatively small number of Jews, headed by Dr. Theodore Herzl, founded what is known as the Zionist movement in the conscious recognition of the uselessness — nay, harmfulness — of the "assimilation policy," and of the consequences that were bound to follow. The Zionist movement represented an effort to avoid those consequences. Influenced by the anti-semitic movement that arose in France at the close of the nineteenth century in connection with the Dreyfus case, Herzl proclaimed to his co-racists the doctrine: "return to Palestine." Such a doctrine, although backed by an energy inspired by Herzl's lofty persuasive idealism, appeared nothing short of astounding at a time when the so-called "assimilation policy" had reached its zenith. Hence it was explicable that Herzl's exhortation found a resounding echo chiefly among the great mass of East European Jews, in Jewry's immense reservoir in Poland, Lithuania, and Rumania. These Jews had never had any share in the benefits of emancipation and "assimilation." Their economic and social position was as a general rule unsatisfactory, and their political situation was such as to render them particularly susceptible to an appeal to found their own national home in an independent Jewish State.

But despite their numerical superiority, these East European Jews were of minor importance from the point of view of the realisation of Herzl's ambitious plans, for they lacked both economic and political significance. Economically and politically, the influence of the West European and North American Jews was decisive, and for these the novel doctrine preached by Herzl was like unto the seed sown on rocky and hence unfruitful ground. Blinded by the alluring glitter of an artificial "golden age," the Western Jews had only an ironical smile for what they considered as the vagaries of Zionism, to which, moreover,

they were profoundly hostile. And even after this much derided Zionism had assumed a more or less concrete shape in the following decades, the participation of Western Jews in the movement was almost exclusively confined to financial support. Practical Zionists among them were very few in number. On the other hand, Herzl's plan to establish a Jewish National Home soon awakened great interest among Western nations which had the questionable privilege of harbouring the descendants of Abraham. Already in 1903 Joseph Chamberlain — the father of the present Prime Minister — in his capacity as Colonial Secretary, submitted, on behalf of the British Government, a plan for establishing a Jewish settlement on a large scale in Uganda. The realisation of this practical plan, which was laid before the Zionist Congress in Bâle, was frustrated by the doctrinaire attitude of the Zionists, who insisted on an exclusive settlement of the Jews in Palestine.

It will thus be seen that the British Government recognised expressly the existence of a Jewish question, and the necessity of its solution, at a time when belief in the blessings of an "assimilation of the Jewish race" prevailed without contestation in Germany. In 1917 Zionism won a decisive victory with the publication of the Balfour Declaration, by the British Government which promised unreserved British support of the endeavour to create a Jewish National Home in Palestine. The fulfilment of this promise began shortly after the Great War. But after the lapse of twenty years the failure of the effort is obvious. In the light of experience, Herzl's scheme has been proved impracticable. Herzl did not foresee the wave of anti-semitism which is now sweeping over Europe — or, at any rate, did not calculate its rapidity. What we may call the "assimilation era" has come to an end after about 150 years, without any possibility for the Jews to escape in time the inevitable consequences of an unavoidable reaction. There can be no doubt whatever that the counter-current of anti-semitism is rapidly increasing in strength the world over. Even a cursory glance at the papers of many lands suffices to show that the responsible leaders of states in all corners of the globe are compelled in varying degrees to take account of this phenomenon. Foreign critics who maintain that anti-semitism is limited to Germany may be reminded of the well known words of the Zionist champion Dr. Chaim Weizmann that the world is divided into two groups: namely, those countries which desire to expel the Jews, and those which do not desire to receive them.

The first of these groups includes not only Germany but also Italy. In the latter country comprehensive legislative measures have been directed alike to excluding Italian Jews from public life and to getting rid of foreign Jews. Mention may also be made of Poland with a Jewish population of over three millions, or over 10% of the entire population. Not only have various specified professions already been entirely closed to the Jews in Poland, but it has been officially stated in Warsaw that the problem of the Polish Jews can only be solved by emigration. In Hungary, a Bill, originally brought in by the Daranyi Cabinet and reintroduced by the Imredy Cabinet, aims at restricting Jewish participation in economic and cultural life. In Rumania, which has some 1,500,000 Jews, the anti-semitic movement has by no means come to an end with the collapse of the Goga ministry, as is shown by the extensive measures since adopted and by aiming at the deprivation

of their recently acquired Rumanian nationality of all Jews who have immigrated into Rumania since the Great War. There can be no doubt that anti-semitism is constantly progressing in Rumania and will sooner or later become the dominating factor in that country.

The above mentioned countries are those whose Governments have already adopted pronouncedly anti-semitic measures. It would lead too far were we to enumerate the countries — such as Holland, France, and Great Britain — which have not adopted similar measures, but in which anti-semitic movements are none the less noticeable and the influence of anti-semitic organisations on public opinion is none the less increasing. The second group of countries — those who do not desire to receive the Jews — comprises the States into which Jewish immigrants have poured as a result of the growing antisemitic peril. They are mostly oversea countries, first and foremost among them being South American republics and the Union of South Africa. These countries had at first opened their doors wide to Jewish immigration and offered the immigrants a wide field for the exercise of their activities. But they have had meanwhile every reason to regret their hospitality. The consequence is that they have been compelled to restrict ever more and more the extremely liberal regulations originally enacted by them concerning immigration, so that to-day there is practically no country in which Jewish immigrants can hope to find adequate means of subsistence. This was clearly shown at the international conference at Evian, convened in the summer of 1938 for the purpose of dealing with the problem of Jewish emigration, but which failed to achieve any concrete result for the reason that none of the numerous States represented at the conference was willing to declare its readiness to admit Jewish refugees. (Note: In the summer of 1938, delegates from thirty-two countries met at the French resort of Evian. Roosevelt chose not to send a high-level official, such as the secretary of state, to Evian; instead, Myron C. Taylor, a businessman and close friend of Roosevelt's, represented the US at the conference. During the nine-day meeting, delegate after delegate rose to express sympathy for the refugees. But most countries, including the United States and Britain, offered excuses for not letting in more Jewish refugees. Responding to Evian, the German government was able to state with great pleasure how "astounding" it was that foreign countries criticized Germany for their treatment of the Jews, but none of them wanted to open the doors to them when "the opportunity offer[ed].")

It has been proved beyond any possibility of a doubt that Jewish refugees, fleeing before the menace of anti-semitism in the lands in which they were formerly domiciled, bring with them the deadly anti-semitic bacillus into the promised land in which they had fondly hoped to found a new home. Thereby is once more proved the fact, solidly established by the experience of millenniums, that Jewry and Anti-semitism are interchangeable terms, that the Wandering Jew is himself the carrier and transmitter of the anti-semitic germ. Hence it is explicable that in countries in which anti-semitism was formerly unknown, and to which Jewish emigrants have recently flocked, anti-semitic currents should have been created, sufficiently strong for no Government to be able to ignore them.

“[Anti-Semitism] is an understandable reaction to Jewish defects“ - Theodor Herzl, the founder of modern Zionism

Anti-semitism is nothing but the antagonistic attitude produced in non-Jews by the Jewish group. This is a normal social reaction. - Albert Einstein

Thus no one who is far removed from the overheated contemporary political atmosphere, and who seriously and with a due sense of responsibility studies the Jewish question, can conscientiously maintain that anti-semitism is exclusively confined to Germany. Such an objective study must also lead to a negation of the proposition occasionally formulated, that the spread of anti-semitism is exclusively attributable to the example set by Germany. As a matter of plain fact, can anyone really believe that such a doctrine could be artificially fostered in a country fundamentally unreceptive to it? Or was it not really the case that the seed had already been sown on ground so fertile, that it only needed a certain chain of circumstances to cause it to bear fruit?

Germany's attitude towards the Jewish question can be rightly understood only if we consider it from the standpoint of a philosophy of history based on the conception of the race as fundamental factor of social evolution — i. e. of the philosophy which from the outset has inspired the National Socialist effort to reconstruct and reorganise the entire life of the German nation. According to this philosophy, the differentiation and variety of the heterogeneous human races, as well as of the peoples who descend from them, constitute an essential element of the Divine creative purpose. Pro vidence has assigned to each people the task of freely and fully developing its own specific characteristic traits. Hence it is contrary to the Divine purpose if a people allows its destiny to be shaped by extraneous forces; and such a people will assuredly perish in the struggle for existence. The question of the intrinsic value of such forces is irrelevant. The sole thing that matters is that they are extraneous — that they have no part in or relation to the hereditary structure, biological and traditional, of the people among whom they operate. No clearer demonstration of this truth has been furnished in the history of the world than by the downfall of the Roman empire, which was doomed from the moment when the ancient Roman element that formed its nucleus began to be stifled by the inroad of foreign influences. The whole life — political, social, economic, military — of the Roman Empire was finally dominated by alien influences, the result being a racial and cultural syncretism which could not but prove fatal to the Empire in the long run.

The family, as the cell of the social community, is naturally subject to the same law of heredity as the aggregate. Those peoples who are derived from the Germanic race, to cite only this particular example, have a strongly developed family instinct. They know, thanks to instinctive intuition fortified by hereditary experience, that the destiny of every family is determined throughout successive generations by the predominance of certain biological and traditional factors. Hence in all families where the consciousness of this truth has not been obliterated, the greatest possible care is invariably taken that there shall be no admixture of new blood susceptible of adulterating the racial composition or debasing the traditional standard of the family. A number of families illustrious in history

have consistently maintained this standard by a rigorous adherence to the principle of consanguinity. Germany, starting from a philosophy of history based on the principle of racial differentiation, is the first country to have consistently drawn the conclusions resulting from the lessons of the past two thousand years in regard to the Jewish question. Those lessons have taught us the reason why the attempt to solve that question by means of the abortive attempt to assimilate the Jews was pre-doomed to failure. Those lessons have proved to the hilt the utter impossibility of assimilating the Jews, and have shown the inevitability of the periodical recurrence of anti-semitism in consequence.

The lessons taught by the past two thousand years may be résuméd as follows:

1) The Jewish question is not a religious, but exclusively a racial, question. The Jews, the overwhelming majority of whom are of Oriental, i. e. Near Eastern descent, have no racial affinity whatever with the peoples of Europe. It should be observed that the attitude of the German Government towards the Jewish question is dictated solely by the fact that the Jews are an alien race, without any consideration of the intrinsic value of the specific qualities of that race. Even in the era of emancipation, during which the Jews were on principle incorporated in the national communities of the Western world, and which was characterised by the "conversion" of millions of Jews to Christianity, it proved impossible to blot out the traces of their ineradicably alien nature. Sufficient evidence of this fact is forthcoming from Jewish sources. In his book *Höre, Israel*, the late Dr. Walther Rathenau wrote: "In the life of the German national the Jews are a clearly differentiated alien race . . . In the Marches of Brandenburg they are like unto an Asiatic horde." The well known Jewish author Jakob Klatzkin expressed himself with refreshing candour in his work *Krisis und Entscheidung im Judentum* (1921) as follows: "Everywhere we are strangers in the lands in which we live, and it is our inflexible resolve to maintain our racial idiosyncrasy."

2) For the past 2000 years the Jewish race has been perpetually on the move. The whole world is its home, conformably with the motto *ubi bene, ibi patria*. True to their destiny, the Jews will never admit being bound by any national ties. The abnormal structure of the Jewish community, in which neither peasants nor handicraftsmen find a place, renders it impossible for the Jews to adapt themselves to the conditions of life in the countries which give them hospitality.

3) Racial predisposition and historical destiny combine to incline the Jews to certain categories of activity, whose sphere of influence is, by their very nature, international. It is consequently explicable that, during the era of emancipation, the Jews should have successfully sought to obtain control of a) public opinion, b) the stock and share markets, c) wholesale and retail trade, d) certain influential cultural organisations, and — last, but not least — e) political life. At the close of the emancipation era in Germany, the Jews enjoyed a practical monopoly of all the professions exerting intellectual and political influence. This enabled them to stamp their entirely alien features on the whole public life of the country.

4) One of the results achieved by the policy of "assimilation" during the era of emancipation was the release of the Jews in Eastern Europe from their ghettos, and their emigration to the more liberal-minded States of Western Europe and North America. Between 1890 and 1900, some 200,000 East European Jews found their way into Great Britain. The number of Jews who emigrated to the United States between 1912 and 1935 is computed at upwards of 1,500,000. If the Jewish question has to-day attained such vital importance, this is to a large extent due to those migrations of Jews — migrations which, on the one hand, demonstrated the illusory nature of the theory of the Jews' capacity for assimilation, and, on the other, hastened the process of the domination of West European and North American States by Jewish elements. The process in question had been practically completed in Germany before the advent of National Socialism to power. An alien race, without roots in German soil and without even the most remote affiliation with the German people, had taken possession of Germany. The poison of an alien spirit, of an alien manner of thinking, had been instilled, cunningly and systematically, into the German mind. Hence the whole German organism necessarily conveyed a totally misleading impression to an observer from outside. National Socialism was therefore faced by the urgent necessity of solving a problem which vitally affected the very existence of the German nation.

Impartial foreign observers had long since recognised the inevitability of a radical solution of the Jewish question in Germany. Already in December, 1910, the Times, in a review of Houston Stewart Chamberlain's book "The Foundations of the Nineteenth Century," remarked that nearly everything in Germany had come under Jewish control — not only business life, but the Press, the theatre, the film, etc., in short, everything susceptible of influencing German spiritual life, and that it would be inconceivable that the Germans could tolerate such a state of affairs in the long run. A clash must sooner or later inevitably occur, in the view of the Times. Since a solution of the Jewish problem by means of the assimilation of the Jewish race, of its absorption in German national life, had proved wholly impossible, there remained to the National Socialists but the single alternative of solving the Jewish question by the elimination of that unassimilable race from Germany. Foreign critics take particular exception to this view. Even objective observers, fully aware of the consequences of Jewish ascendancy and of the resulting inevitability of an anti-semitic reaction, condemn the methods adopted by National Socialism for the solution of the Jewish question in Germany as inhuman and barbarous when pushed to their only logical conclusion. Whether considered from a purely psychological, or from a concrete political, point of view, this criticism of Germany's attitude is bound to exert great influence on Germany's relations with other countries. It is therefore necessary to carefully examine the grounds on which that criticism is based. It is incontestable — in fact no attempt has been made to deny or even to minimise the fact — that the policy of the German Government towards the Jews has entailed numerous hardships — amounting in certain individual cases to a positive miscarriage of justice. It cannot be denied that a number of Jews affected by recent legislative measures directed against their race honestly felt themselves to be thoroughgoing Germans. Such Jews had done

their best to render service to the State as functionaries, artists, men of letters, scientists, and — last but not least — as soldiers in the Great War.

In order to understand why Germany has proceeded to such a radical solution of the Jewish problem by means of methods of such relentless severity, it is necessary to make abstraction of individual cases, however interesting they may be intrinsically, and to bear in mind that no legislative measure, nor indeed any far-reaching political action, can be conceived, which does not inevitably entail more or less numerous individual hardships. But in order to understand the German attitude towards the Jewish question it is necessary to go still farther — to remember (as has already been indicated) that the unceasing encroachment of the Jews on the entire public life of Germany within the last few decades finally resulted in a terrible national catastrophe. The disastrous end of the Great War for Germany, followed as it was by complete political and economic collapse, by cultural and moral deterioration, by unemployment on a colossal scale with its consequent impoverishment of all social classes to a degree hitherto undreamt-of in modern times — this epoch of Germany's greatest and most cruel humiliation coincided with the final triumph of Jewish emancipation, with the culminating point of Jewish ascendancy in Germany, just as the aforementioned writer in the Times had prophesied in 1910.

Already more than a generation ago, one of the most sincere and farsighted minds in international Jewry, the late Zionist leader Theodore Herzl, described this interdependence of general distress and Jewish ascendancy in a passage of his *Zionistische Schriften* (vol. 1, pp. 238/9), which is by no means applicable solely to Germany, but which has, on the contrary, universal validity. Therein Herzl characterised as follows the part played by the Jews:

“There are among them a few persons who hold in their hands the financial threads that envelop the world. A few persons who absolutely control the shaping of the most vitally important conditions of life of the nations. Every invention and innovation are for their sole benefit, whilst every misfortune increases their power. And to what use do they put this power? Have they ever placed it at the service of any moral ideal — nay, have they ever placed it at the disposal of their own people, who are in dire distress? . . . Without those persons no war can be waged and no peace be concluded. The credit of States and individual enterprises are alike at the mercy of their rapacious ambition. The inventor must humbly wait at their doors, and in their arrogance they claim to sit in judgment on the requirements of their fellow beings.”

Nothing could be better calculated to clear Germany from the reproach of sinning against the laws of humanity, than a detailed enumeration of the facts which prove to what an appalling degree Germany herself experienced the truth of Herzl's words — of the facts which incontestably show what immeasurably bitter experiences have forced Germany to seek a radical solution of the Jewish problem, as far as she is concerned, by the ruthless elimination of all Jewish influence in German life. The following chapters endeavour to present a résumé of the importance of the part played by the Jews at the peak of the era

of emancipation — i.e. up to the advent to power of National Socialism.

Population and the Social Structure of German Jews

It is essential, in the first place, to get an accurate picture of the numerical significance of German Jews in those days, as well as their regional distribution within the Reich and their social structure. The result of the census in 1925 — the last to be held before national socialism took over power — showed that out of a total population of 62.5 millions there were 546,379 professing the Jewish faith. In other words, this was just less than 1% of the total population. It must be noted however that this statistic merely embraced those Jews professing Jewish faith and not those who were Jews by blood and race but who for some reason or another had accepted a Christian faith. No method whatsoever existed for compiling statistics in respect of this latter category. All that one could do was to set up a statistic for those who were orthodox Jews. Hence all statistics that follow are necessarily still based on the figures for orthodox Jewry.

We have shown that the total percentage of German confessional Jews in 1925 was just below 1%, to be exact, 0.90%. But this did not mean that the regional distribution within the Reich was on the same scale. Whereas the purely rural districts of Mecklenburg, Oldenburg, Thuringia or Anhalt possessed only a very sparse Jewish population (0.16 to 0.32%), the majority of Jews were heavily concentrated in the large urban areas, particularly in Prussia, Hamburg or Hessen (1.05 to 1.72%). In Prussia, the largest of the German federal states, the census showed that nearly 73% of the total number of Jews were concentrated in the large cities with a population of more than 100,000 — whereas the corresponding ratio for the non-Jewish population reached barely 30%. A comparison with the results of the various census since 1871 shows that the status of Jews in the rural districts of Germany has consistently decreased, whereas all urban districts have shown a constant increase. This can be ascribed to a veritable and phenomenal domestic migration of German Jews within the last 50 years towards the large urban areas. One of the main objectives of this Jewish migration was Berlin, the capital of the Reich, where the number of Jews had become trebled between 1871 and 1910, (36,000—90,000). In this metropolis, the centre of national, political and cultural activity, Jews had established their headquarters. Here they were able to develop unhampered their own peculiar racial characteristics.

The 1925 census returns for Berlin showed that there were 172,500 Jews or 4.25% out of a total population of approximately 4 millions. This percentage is four times greater than the percentage of Jews in the whole German population. Berlin, the capital of Prussia, the largest of the federal states, therefore possessed 42% of the 400,000 Prussian Jews. Twenty-five percent of these 172,500 Berlin Jews were aliens. This fact alone illustrates clearly the total lack of Jewish affinity for national ties and national sentiment. Nearly one-quarter or 18.5% of the 400,000 Jews in Prussia possessed foreign nationality.

It is self-evident that the complete one-sided distribution of German Jews and their

systematic migration to, and concentration in, the large urban areas was an unsound policy and disastrous not only for the Jews but also for the national life of Germany. But the structure of professional life also suffered from this morbid one-sidedness. Here statistics show that Jewry was a tree without roots, without any anchorage whatsoever in social life. This abnormal social composition was responsible for the fact that the Jews exclusively preferred the commercial professions and steered clear of all manual work. These facts can be checked by the results of the trades records established in the various German federal states in 1925. In Prussia, Württemberg and Hessen, these census gave the following results in regard to the percentage of Jews employed in the various groups:

Group	Prussia	Wuerttemberg	Hessen
Trade & Commerce	58.8%	64.6%	69%
Industry	25.8%	24.6%	22%
Agriculture	1.7%	1.8%	4%

It is often asserted that external pressure, political and social considerations, as well as ghetto and boycott have squeezed the Jews out of handicraft trades and forced them into commercial spheres. Here however we must reply by stating that in rural districts, particularly in the former province of Posen and in Hessen-Nassau, the Jews had every opportunity of working as farmers or craftsmen. There were certainly no restrictions placed on them. Felix A. Theilhaber, the well-known Jewish economist, reporting his observations on the causes of Jewish disintegration in *Der Untergang der deutschen Juden — The Decline and Fall of German Jewry—* (Berlin 1921), confirms the fact that so-called primitive production is not in keeping with Jewish characteristics. He admits, primarily, that racial talents force the Jews into the so-called business professions as they are more easily able to guarantee commercial success and material security. Theilhaber finally arrives at the following conclusion:

“Agriculture has little material attraction for German Jews. . . . Racial instincts, traditions and economic preconditions compel them to choose other professions Hence it is natural that certain types dominate in German Jewry, for example, clothiers, agents, lawyers and doctors. Jewish characteristics and peculiarities are also evident in other branches (departmental stores, furs, tobacco and even the press). One peculiar Jewish feature is the craving for individualism,— the urge to become independent and wealthy.”

Among the intellectual professions named by this Jewish author, that of medicine and law were the two most attractive. They were the professions that offered most material gain. Jewish influence in these professions was therefore most marked and finally assumed a dominating character. In 1932 there were approximately 50,000 German medical practitioners of which 6,488, — 13% — were Jews. That is to say, a figure ten times greater than that to which they were entitled on the basis of population ratio. It is noteworthy to mention in this connexion that the majority of these Jewish doctors classed themselves as specialists in venereal diseases. In Berlin, the capital of the Reich, the percentage of

Jewish doctors was still greater. The figure was 42% and 52% for the panel doctors. In the leading Berlin hospitals 45% of all the doctors were Jews. An abnormal and disproportionate state of affairs also existed in the legal professions as compared with the population ratio. In 1933 there were 11,795 lawyers practising in Prussia of which 3,350 or nearly 30% were Jews; 2,051 or 33% of the total number of 6,236 public notaries were Jews. In Berlin itself the percentage was much higher, — bordering between 48% and 56%.

In 1931, in the bigger cities, law teachers were around 30% Jewish, medicine teachers were nearly 40% Jewish and philosophy teachers were around 30% Jewish. Two of the most important phases of public life, law and public health were thus in danger of coming under complete Jewish control.

Jews in German Economic Life

Jewish penetration into German economic life was still more pronounced. In strict accordance with the objectives referred to in the previous chapter, trade and commerce were the principle spheres in which Jews centred their attention. Their peak activity in this respect, be it noted, was reached during the currency inflation from 1919 to 1923. In that particular period very little material benefit accrued to anyone engaged in productive and strenuous work. An instinct for speculation and commercial shrewdness was the ruling factor in those days. It is no wonder therefore that Jewish business concerns sprang up like mushrooms overnight in that period. We need only recall such well-known Jewish names as Jakob Michael, Richard Kahn and Jacob Shapiro or the corrupt business concerns associated with the Austrian Jewish speculators, Siegfried Bosel and Castiglioni, two names that became notorious far beyond Germany's frontiers. At huge cost to the national budget all these concerns finally collapsed when German currency was stabilized.

In 1931, Dr. Alfred Marcus, the Jewish statistician previously referred to, carefully examined Jewish participation in individual branches of German trade in his book *Die wirtschaftliche Krise des deutschen Juden*, — *The Economic Crisis of German Jews*. — His investigations led to the following remarkable results:

In 1930, 346 or 57.3% of the total of 603 firms in the metal trades were in Jewish hands; in scrap-metal there were 514 firms of which 211 or 41% were Jews; grain merchants totalled 6,809 of which 1,543 or 22.7% were Jews; textile wholesalers numbered 9,984 of which 3,938 or 39.4% were Jews; in the ladies dress branch there were 81 Jewish firms out of a total of 133, or 60.9%. In the art and booksellers trades, both of which possess an extremely cultural value, many of the most important firms were Jewish. We need only mention S. Fischer, Cassirer, Flechtheim, Ullstein and Springer.

Still more important is the financial or banking business. Here well-nigh every leading business was in the hands of Jews. A few individual instances can be quoted. Both the governing directors of the Deutsche Bank und Discontogesellschaft (1929) and four of its

twelve board members were Jews. The chairman, two vice-chairmen and three of the five governing members of the board of the Darmstädter und Nationalbank were Jews. The chairman, vice-chairman and three of the seven members of the governing board of the Dresdner Bank (1928) were Jews. Finally, every one of the three owners of the Berliner Handelsgesellschaft were also Jews. The big private banks were also nearly all in Jewish hands. We need only recall such well-known firms as Arnhold, Behrens, Warburg, Bleichröder, Mendelsohn, Goldschmidt, Rothschild, Dreyfuss, Bondi and Maron, Aufhäuser, Oppenheim, Levy, Speyer-Ellissen, Heimann, Stern. By means of these key positions in the financial world Jewish influence penetrated by way of the boards of directors to every section of German industry. The Adress Buch der Direktoren und Aufsichtsräte — A Guide to Company Directors & Boards of Management — published in 1930, i.e. long before the national socialists assumed power — proves the alarming influence of Jewish capital or capital controlled by Jews on German economic life.

Outstanding among Jewish financiers in this respect was Jacob Goldschmidt, a member of the boards of no less than 115 companies. He was closely followed by Louis Hagen, a Jewish banker, with 62 appointments. Third on the list was a Christian lawyer, followed successively by four Jewish bankers who together held 166 positions on the boards of various companies. Further down this list Jews continued to play a very prominent role. This concentration of business-company authority in the hands of a small group of Jewish financiers was certainly not compatible with a conscientious fulfilment of the exacting duties of a company director. On the other hand no effort or work was necessary in producing extraordinary handsome returns. This was one of the most important factors that led to discrediting the political and economic systems of that period, and also formed one of the causes which led to a widespread growth of anti-semitism among the broad masses in Germany.

The domination of German industry by a system of Jewish boards of business directors certainly went hand in hand with direct Jewish penetration and subsequent control of industrial production. The complicated nature of this vast field and its complex structure makes it possible to give only a few illustrations which, however, by no means exhaust the real extent of Jewish expansion. In the electrical branch for example, mention must be made of the AEG, — the German General Electric Company. This company was established by the Jew Emil Rathenau and after the Great War, was controlled by two Jews. The whole of the metal market was controlled by the Jew Merton, head of the Frankfurt Metal Bank. The Osram Company, the leading electric globe concern, was controlled by Meinhardt, a Jew. The Continental Rubber Company in Hannover, Germany's largest productive plant, and the Calmon Rubber Company at Hamburg were established and controlled by Jews. Adler, Oppenheim, Salamander and Conrad Tack & Co., four Jewish firms, dominated the entire German leather industry. The iron market was controlled by the Jew Ottmar Strauss. Hugo Herzfeld, a Jew, exercised a decided influence in the potash industry. In the mining industry section, Paul Silverberg dominated the Rhenish lignite or brown coal industry whilst two co-religionists, the Petschek brothers had a

similar function in the Central German lignite district.

Jewish participation was also extraordinarily large in industrial organisations and in official organs of German economic life. This influence was particularly pronounced in the Chambers of Commerce and Industry. To quote one example: The Berlin Chamber of Commerce and Industry, the largest of its kind in Germany, had 98 members in 1931 of which no less than 50 were Jews or half-caste Jews. Fourhundred of the 1,300 members attached to the Chamber as advisory experts were Jews, whilst 131 of the 209 commercial judges appointed by the Chamber were also Jews. The Chamber itself was presided over by a President and five vice-presidents. The president himself and three of his deputies were Jews. The position was far worse on the exchanges. We need do no more than give the Berlin Exchange, the most important one in Germany, as an example. Twenty-five of the 36 committee members of the Securities and Bonds Exchange were Jews. Twelve of the 16 committee members of the Produce Exchange were Jews and ten of the 12 committee members of the Metal Exchange were also Jews. The committee of the whole Exchange was composed of 70 members of whom 45 were Jews. Attendance at the Exchange was also more or less a Jewish monopoly. In 1930 for example, the attendance at the Securities and Bonds Exchange totalled 1,474 of which number approximately 1,200 were Jews. The Produce Exchange had an attendance of 578 of which 520 were Jews, and at the Metal Exchange out of an attendance of 89 there were 80 Jews.

It is obvious that the Reichsbank, the official bank for the issue of paper money, was in no position to resist permanently this well-nigh Jewish monopoly of capital and economic interests. The result was that in the period between 1925 and 1929 four of the six members of the controlling board of Reichsbank directors were Jews or half-caste Jews. All three members of the Central Council of the Reichsbank and two of their deputies were Jews. It is necessary now to supplement the aforementioned quantitative analysis of Jewish participation in German economic life by a qualitative one in which the following facts must be borne in mind: When compiling the aforementioned statistics in regard to certain professions in the various German states since 1925, it was ascertained that in Prussia, the largest State, out of a total of approximately 3 million employed in the professions — either independently or in leading capacities — approximately 92,000 were orthodox Jews.

This means that 48% of all Jews professionally employed held leading positions, whereas the corresponding ratio for the remainder of the population amounted to only 16%. If we compare this with the Jewish share in the nonindependent manual work branch, then the whole abnormal social structure of Jewry stands revealed in its true light: Whereas Prussia in 1925 employed approximately 8.5 million ordinary workers (i. e. 46.9% of the sum total of all in employment). Jews totalled only 16,000 i.e. (8.4% of all Jews in employment). The percentage of Jews (which in the leading positions was three times greater than that of the whole population) dropped therefore in the manual trades to onesixth of the figure for the rest of the population, and for all practical purposes had reached zero. This supplementary qualitative assessment makes it perfectly plain that

prior to the national socialist regime the whole of German economic life had reached that alarming stage where it was under foreign domination by Jews and principally by Jews in leading key positions.

Summarizing the aforementioned particulars, it must be emphasized once more that the Jews concentrated themselves exclusively on commercial and financial undertakings and assumed therein absolute leading positions. Agriculture and other manual work were severely left alone. Abnormal concentration of Jews in large cities, particularly in Berlin, must not be forgotten. It does not require much intelligence to realize that such an abnormal social and regional structure must ultimately lead to a state of severe tension, if not to serious disturbances in public life.

Jews and Corruption

It is no exaggeration to say that public life in those days was governed by an epidemic of corruption. This was by no means confined to Germany. Europe and the United States of America were similarly affected. Jews played a leading part in corruption scandals everywhere. In France it was Hanau, Oustric and Stavisky; in the United States of America it was Insull and in Austria, Bosel, Berliner and Castiglioni were the outstanding figures. Fundamentally it is not surprising that this plague of corruption became most widespread and acute in the period which followed the disastrous World War. On the other hand, however, it is typical of the Jew and his character that he should be the bearer and the principal beneficiary of this process of disintegration. It is understandable that Germany, as the loser of the war, became infected to a particularly acute degree with the germ of corruption. During its most distressful period of trial and tribulation — the result of the Dictate of Versailles — Germany therefore became acquainted with Jewry as the exploiters and beneficiaries of its national misfortunes. No other country can point to a similar experience.

The list of Jewish profiteers in those years of national distress who veritably swamped the crumbling structure of German economic life and finally were responsible for its total collapse and ruin — ranges from the company promoter type and inflation profiteer to all the various types of soldiers of fortune and large-scale swindlers. In no other national economy has Jewish nature with its selfishness, its unscrupulousness and its urge for quick profits developed itself so unrestrictedly as in Germany throughout that particular tragic period. Even the war companies, which during the Great War attended to the supplies of raw materials, were allowed to come more and more under Jewish influence. The largest concern of its kind, the Zentral Einkaufsgesellschaft — the Central Buying Company — for example, was controlled by a Jew. The important Kriegs Metall Company — the War Metals Company — was in charge of 14 governing men of whom 12 were Jews. A public scandal as the result of the business methods of this company was avoided for the simple reason that the political and military developments of the war confronted Germany with other and more pressing tasks.

Jewry's great and triumphant hour of corruption came with the end of the Great War. The liquidation of the armaments factories and the sale of military stores and equipment offered splendid opportunities for handsome profits and the Jews were not backward in exploiting this state of affairs. The Jew, Richard Kahn, to mention an example, made a contract with the Deutsche Werke — the largest state-owned armaments plant — whereby the whole of its valuable stock was sold to him at scrap-metal price. Business in deflated currency in the years 1919 to 1923 brought many outstanding triumphs to corruptive and speculative dealers. The Jews in particular were prominent in floating large companies as the result of shady transactions on the exchange. These concerns, which were none too securely established, paid out large dividends in the early stages before finally crashing. The most well-known names in this respect are the Jews Jakob Michael, Richard Kahn and the Eastern Jew Ciprut and his brother. These two brothers are referred to by Pinner, the Jewish author, in his book from which we have already quoted. He states: "The Ciprut brothers are of the breed that comes from the south-eastern plains of Roumania or Persia; soldiers of fortune attracted by the decomposing stench of German currency."

All these cases however were not the deciding factors that turned the Jewish question in Germany into a most burning problem for the whole nation. No. They took place at a time when all phases of economic and political law and order were extremely lax. To a certain extent they even passed unnoticed in the general chaotic state of affairs during the first post-war years. But nothing was more calculated to open the eyes of the general public in Germany and fan the flame of anti-semitism than the huge wave of Jewish corruption which had assumed such a criminal character that one public scandal followed another in rapid succession. We refer in particular to the five Sklarz brothers, the three Barmat, the three Sklarek and the two Rotter brothers as well as the scandals associated with Michael Holzmann and Ludwig Katzenellenbogen. All these Jewish past-masters in corruption were, with the exception of Katzenellenbogen, Easterners i. e. Galician or Polish Jews who had migrated to Germany either during or after the Great War. The first of the big corruption cases was the one in connexion with the five Sklarz brothers. With the help of influential connexions in the social-democrat party they succeeded, shortly after the war, in obtaining a monopoly for supplies to those troops that had been commissioned with the task of restoring domestic law and order. These contracts led to enormous profits within a short space of time. These brothers increased their wealth considerably by further shady manipulations and by discreet bribes to leading government officials. All this helped these unscrupulous Jewish blackguards materially when they subsequently came up for trial. Very little light could be thrown on their shady conduct and after a well-nigh endless trial, only one of the five brothers was convicted in 1926. These five brothers were ably assisted by a Russian Jew, Parvus-Helphand, one of the most unscrupulous blackguards and swindlers produced by the war. He utilized the millions he made out of war supplies in order to establish good relations with the social-democrats in power at that time. As a principal wire-puller he remained in the background of many corruption scandals. No one dared to institute proceedings against

a man who had successfully bribed so many leading government officials.

The three Barmat brothers were artists in corruption on a more imposing scale. Their home was at Kiev and during the war they were engaged in business in Holland as food merchants. With the help of Heilmann, the Jewish politician, the five Sklarz brothers and Parvus - Helphand these three Barmat brothers ultimately received permission to settle in Germany. By means of ruthless exploitation of human weaknesses, small and large favours which culminated in direct bribes, these brothers were able finally to win the confidence of influential friends and members of the government. In this way they soon became the owners of ten banks and a great number of industrial concerns. With the help of fraudulent balance sheets they procured a loan of 38 million Marks, partly granted by the Prussian State bank and partly by the Reich Ministry of Posts and Telegraphs. When finally this inflated Barmat concern crashed, its debts were estimated at 70 million gold Marks, and half of this sum had to be covered by the savings of small investors. The subsequent court proceedings against these Barmat brothers ended in very small terms of imprisonment. Herr Bauer, the social-democrat Reich Chancellor at that time, who had become involved in the proceedings was forced to resign. After the crash, Julius Barmat went abroad again. In his new surroundings he applied with great success the methods which he had adopted in Germany. By bribing influential politicians he was able to obtain loans and finally defrauded the Belgian National Bank of 34 million gold francs. He evaded the law by committing suicide in 1937. The three Jews, Iwan Baruch, Alexander Kutisker and Michael Holzmann were less successful in their efforts than their predecessors. Nevertheless they are worthy of mention. They turned their attention to the Prussian State Bank which Barmat had previously defrauded. They also succeeded in defrauding this institution to the extent of 14 million gold Marks. By far the largest scandal however was brought about by the Sklarek brothers of whom there were three. The case is certainly unparalleled in the history of crime, politics, business and bribery. The principle sufferers were the city authorities in Berlin.

The Jews in German Political Life

In Imperial Germany the Jews did not play any important roles in the political life of the country, that is to say, not insofar as they were in possession of important key positions. But this state of affairs changed radically with the outbreak of the 1918 revolution and the introduction of a new constitution. There is no need here to examine the question of whether this new state structure was in line with the governing political ideas of Jewry. The facts, however, are that with the commencement of November 1918, a veritable rush was made by the Jews to capture the leading key positions in the Reich and in the federal states. Among the six so-called "Representatives of the People" who formed the first Reich Government after the collapse, there were two Jews, Hugo Haase and Otto Landsberg. Kurt Eisner, a Jew, headed the list as Minister-President in Bavaria; in Prussia the Jew Paul Hirsch assumed a similar function. The first Reich government

established in 1919 on a parliamentary basis contained five Jews. Many of the most important departments in the Reich ministries were controlled by Jews. To thoroughly appreciate the significance of this fact, one must bear in mind, that Jewish usurpation of political leadership commenced with the beginning of an epoch of political weakness which, in foreign affairs led to complete surrender and shameful servility; in the domestic sphere to complete disunion and disruption.

Those particular Jewish politicians were also in no way satisfied that a change from constitutional monarchy to a parliamentary-republican regime had taken place in German affairs. This is testified to by the Jewish author, Rudolf Schay, in his book *Juden in der deutschen Politik* (Jews in German Politics) published in 1929. He states:

“Among the elements who carry on the revolution, and will not accept a free and bourgeois and a democratic-republican order — but who insist on the complete fulfillment of all social demands, — Jews have played a dominant role; viz: Rosa Luxemburg, Eisner and Landauer . . .”

This complete fulfillment of all socialist demands was nothing else than a realization of the communist manifest inspired and dictated by the Jew Karl Marx. But that was only possible by completely surrendering all national ideas and interests of the German nation. It is therefore not surprising that Jewish politicians were playing a leading role, even during the Great War, in all those movements which aimed at undermining the political and military strength of Germany. Which of the Allied countries would not have taken immediate steps to punish the author of a treacherous article such as that which appeared on October 20, 1918, in the social-democratic paper *Vorwärts*, written by its editor, the Jew Friedrich Stampfer. He stated:

“Germany must — that is our inflexible will as socialists - strike her war flag for ever, without bearing it home in victory for the last time.”

Prominent among these organisation was the *Neues Vaterland* (The New Fatherland) subsequently known as “The German League for Human Rights.” Its policy was principally dictated by the Jews Witting, Grelling, Bernstein, Magnus, Hirschfeld, Heymann, Gumbel, Wulfsohn etc. The pacifist Youth Organisation was also led by Jews: Max Hodann, Jakob Feldner, the Jewish communist Scholen and the half-caste Jewish sons of Karl Liebknecht. It is not our intention to criticize pacifism as such. Unquestionably pacifism is a political conviction of great moral significance and is certainly worthy of every effort to support it.

Prominent in this work is the Jew already referred to, Dr. Richard Grelling — a name undoubtedly still well-remembered in the former Allied countries. Before the War he emigrated to Switzerland and there published his two books *J'accuse* and *Das Verbrechen* (The Crime) in which he attempted to prove Germany's alleged guilt for the outbreak of hostilities. This book was very widely circulated in the Allied and neutral countries as an “authoritative and convincing” personal document of Germany's war guilt and all the attendant horrors. In 1917, Karl Federn, Grelling's co-religionist and also an author, replied

by denouncing Grelling's conduct as "dishonourable" and stating further that Grelling had built up his case "by lies and the use of false and forged documents." Grelling never replied to these severe charges which were constantly repeated in later years. Geheimrat Willing, a highly placed German official, brother of the Jewish author Maximilian Harden, was responsible for the unlawful and widespread publication in pamphlet form of a private memorandum ("My London Mission"), the property of Count Lichnowsky, the former German Ambassador in London. This memorandum contained observations of a purely personal character but their unlawful publication was just as disastrous to Germany's political position as the works of Grelling.

Jews also took a prominent part in the work of planning the 1918 revolution in Germany which finally, led to the collapse of the entire western front. It was Dr. Oscar Cohn, the social-democratic deputy who early in November 1918 accepted the sum of four million gold roubles from M. Joffe, the Soviet-Russian ambassador to Berlin in those days, and also a Jew. This money was intended to finance the German revolution. Hugo Haase, a Jewish Reichstag deputy, was the master-mind behind the Sailors' revolt at Kiel, which was the signal for general revolution throughout Germany. At the national meeting of protest held on May 12, 1919, when it was unanimously decided to vote against signing the peace terms, it was the Jew Haase, as leader of the Independent Social Democrats, who alone insisted on accepting the terms. It must also be added that in the Prussian Diet of that period it was a Jew, Kurt Rosenfeld, who on May 7, 1919, on the occasion of a similar protest meeting demanded that these terms should be accepted.

It is not possible to conclude this chapter of Jewish defeatism without mentioning the following: It is true that there were also numbers of non-Jewish Germans who both during and after the war committed treason on strictly Jewish lines. But the Jewish percentage in this dastardly political work is not only relative but actually incomparably higher. In fact, the percentage is so abnormally great, that the list of non-Jewish perpetrators is almost insignificant. Seeking for an explanation of this curious fact one finds that Jewry is outwardly as well as inwardly completely rootless; on the basis of its racial habits and its historical past it recognizes no ties which can in any way be connected with love for a homeland. At the same time, however, this political attitude of the Jews clearly shows up the glaring ingratitude which they have demonstrated in Germany. There is no country where the requirements of Jewish emancipation have been more justly fulfilled than in Germany; and there is not another country in which Jews were so accommodatingly allowed to fill positions in the public services. But in no other country in the world have Jews in times of severe national distress played such an inglorious, destructive and treacherous role as in Germany.

The Jews in the German Press

Jews have always possessed a special aptitude for journalism and the organisation of press work. Accordingly, they played a prominent part in the establishment of German

newspapers. Hardly any other function has given them so much power as their influence on the press. They soon proved however that they had little or no interest in that sense of high moral obligation which is the duty of those who are responsible for influencing public opinion. If one examines the Jewish controlled German press of the last decades, one realizes that for purely material reasons it served a craving for sensation, for vanity and the lower instincts of the masses. Circulation was increased in proportion as newspapers undermined in the most grave manner all respect for morals, law and order. The two largest German newspaper concerns were, before 1933, in Jewish hands: viz. Ullstein and Mosse. Both these firms were founded by Jews and their directorates and editorial staffs were comprised of nearly all Jews.

Ullstein. Publishers & Printers

The circulation of this largest newspaper concern averaged 4 million daily. They published five large daily newspapers, several weekly papers and many periodicals and magazines of every description. The Ullstein News Agency influenced a great number of provincial papers. In addition to this, Ullstein possessed also an extensive book publishing branch. The whole of the shares in this vast concern were held by the five Jewish Ullstein brothers. The directorate consisted of these brothers, three other Jews and only two Christians. The largest newspaper issued by this concern was the Berliner Morgenpost which had a larger circulation than any other German paper (more than 600,000 daily). Besides a Jewish editor this paper had in 1927 ten other Jews as members of the editorial staff. The editorial staff of the Vossische Zeitung — an extremely influential political organ — was in charge of the Jew Georg Bernhard and fourteen Jewish sub-editors. Bernhard at that time was keen on making a name for himself in politics. The position in regard to the remaining Ullstein papers was practically the same.

Mosse. Publishers & Printers

This firm was, as far as size is concerned, not so important as Ullstein. Its daily circulation was 350,000. Established and maintained as a family concern by the Eastern Jew, Rudolf Mosse (formerly Moses), its influence was none the less very great. Its chief publication was the Berliner Tageblatt established long before 1933. It was this paper which for many years was looked upon abroad as representative of German public opinion. The editor of this paper was the Jew Theodor Wolff, who also took a prominent part in politics. Apart from him the important positions on the editorial staff were filled by seventeen other Jews. In five important capitals outside the Reich the Berliner Tageblatt was represented by Jews. Another paper issued by this concern was the Acht-Uhr- Abendblatt, another politically influential publication in which Jews were dominant with a chief editor and eight co-religionists as sub-editors.

It was only natural that the rest of the German press could play only a very insignificant part when compared with the activities of these two mammoth concerns. Neither the provincial press with its economic disunity nor the publishing house of August Scherl — the only large Christian undertaking in the capital — were able to exercise influence

sufficient to seriously challenge the united power of these two big all-Jewish undertakings. That the marxist party press was overwhelmingly directed and influenced by Jews has already been stated above. Moreover the official press departments of the government — particularly in Prussia — were also in charge of Jews. The three most important press departments in Prussia, the largest of the German federal states were, in 1930 for example, in charge of four Jews. It was therefore only a matter of course that the professional and economic organisations of German journalists came entirely under Jewish influence. The largest of these organisations, the Reichsverband der deutschen Presse — the German Press Association — was directed for many years and until 1933 by the Jewish chief editor of the *Vossische Zeitung*, Georg Bernhard. In the *Verein Berliner Presse* — the Berlin Press Union — which was the leading social and benefit society for all journalists in the capital, the right to nominate and elect members had been vested from 1888 in the hands of a purely Jewish committee.

Finally, the official organisation of “free lance” German writers, the *Schutzverband deutscher Schriftsteller* was controlled by a directorate which, in 1928 and 1929, consisted of 90% Jews. Its president was at that time the Jewish publicist Arnold Zweig, author of the war novel, *Streit um den Sergeanten Grischa*, in which he foully besmirched the national honour of the German people. In this connexion it is necessary to examine the work and the significance of those Jews who for many years were regarded in Germany and abroad as the most authentic apostles of German publicism. We refer in particular to Georg Bernhard, Theodor Wolff and Maximilian Harden. All three were Jews. All three were journalists of surpassing technical skill, men who, through their masterly handling of the written word alone, were well able to make “converts” to the ideas they represented.

But behind the winning exterior was hidden the same dangerous spirit of denial of all traditional values, of criticism for criticism’s sake, the spirit of destruction, disintegration and instability which we have been compelled to recognize as the main characteristics of Jewry in all spheres. It is exceptionally significant that Georg Bernhard’s real profession was that of banker and stock exchange financier. He belonged until shortly before the Great War to social democracy, and his whole life displays a remarkable vacillation between two such contradictory things as stock exchange journalism and marxist activity. Then, in 1913, he was appointed chief editor of Ullstein’s *Vossische Zeitung*. In this position, in two different hours of destiny in Germany’s post-war history, he played a calamitous part:

In the critical weeks before the signing of the Versailles Treaty, when the German people and its leaders well-nigh unanimously rejected the intolerable and harsh conditions of that dictated peace, he made common cause with those really comparatively few men of public influence who, through the medium of the spoken and printed word, ruthlessly suppressed every flickering of the spirit of national resistance, and thereby destroyed all hopes of securing more bearable conditions. One requires only to glance at the old issues of the *Vossische Zeitung* for those weeks and months to realize how systematically Bernhard went about this work (Note: When reading these lines, it reminds me of the

mainstream media in the US Presidential elections “Trump vs. Clinton“, or how the “rise“ of a new conservative party in Germany is handled starting mid-2015). Even the most humiliating terms of this treaty — the “War-Guilt“ clause, he attempted to represent as a mere bagatelle. Thus he wrote — to give only one example — on June 18th 1919:

“The German reader of the Note will most easily be able to reconcile himself with those parts which deal with the historical origin of the war and with the question of guilt for it . . . if one regards the matter in this manner, one cannot take the scolding in the war-guilt paragraph tragically.“

With these words Bernhard attacked the German government from behind whilst the latter was waging a dramatic struggle regarding these points of honour, in particular the clause relating to war-guilt and the release of German officers. It will be understood outside Germany as well that we cannot forget such a betrayal of national interests, such a lack of proper pride and feeling for honour as was displayed by the Jewish journalist Bernhard. In the second case, we already find Bernhard committing open criminal treason. During the occupation of the Rhineland, there arose in the occupied zone a movement, supported and forwarded for political reasons by foreign money, which strove to prevent for ever the return of the occupied Rhineland to the Reich, and to establish its complete independence. Georg Bernhard with his *Vossische Zeitung* got into contact with these Rhenish separatists. The separatists received from him political advice and financial support. In the year 1930, one of the owners of Ullstein, the Jew Dr. Franz Ullstein, published this fact in the periodical *Tagebuch*. He declared that Georg Bernhard’s agent in Paris, the Jew Dr. Leo Stahl, had paid a sum of money to Matthes, the leader of the separatists, and that Bernhard himself had corresponded and associated with Matthes. This political scandal forced Bernhard eventually to retire from political journalism. He became, and this is also characteristic, the head of a large departmental store association. Since 1933 he has been busy abroad publishing an anti-German emigre paper.

Theodor Wolff, the editor of the *Berliner Tageblatt* behaved in a different but equally objectional manner. An apparently convinced monarchist during the war, there was, after the change of constitution in Germany, no one who reviled and slandered the deposed Hohenzollerns in so evil a manner as Wolff. Even if we could forgive him such opportunism, quite inexcusable is his behaviour at the time when the increasing spread of indecency and immorality in Germany forced the government in 1926 to take constitutional steps for the suppression of filthy and otherwise low-grade literature. The intention was, above all, to protect youth from coarsening and indecent influences. Theodor Wolff openly opposed this effort. He condemned the new law and as a protest, resigned from the democratic party which he had helped to found because they had supported the new measure. In order to understand the whole frivolous irresponsibility of this Jewish publicist, one must know just how far the flooding of the German book and periodical markets with dirty, pornographic productions had gone. We shall have more to say about this later on. Still more influential than Georg Bernhard and Theodor Wolff, certainly the mightiest man of the pen which Germany had for a generation, was Maximilian Harden, a brother of

Witting, the previously mentioned Jewish defeatist. With his periodical, *Die Zukunft* — The Future — he indulged in high politics for more than twenty years. Hardly any other man has shown so much fluctuation in character and principles as he. He began by setting himself up as judge of morality in Imperial Germany and dealt a death blow to the reputation of the monarchic system by his journalistic scandalmongering about the Hohenzollern court. During the Great War he was certainly the only real “annexationist” in Germany, demanding as the price of victory the whole of Belgium, the French coast opposite England and the Congo Basin, (Vide *Zukunft* of 17th October 1914). Then when the fortunes of war, in 1916, began to turn away from Germany, Harden also retreated. He attacked German war policy and became an enthusiastic admirer of President Wilson. In 1919, he finally conducted a cowardly campaign against the national resistance to the tyrannical peace treaty terms, naming this resistance “artificially-forced hysteria and miserable falsehood.”

The driving forces of such characterless behaviour were vanity and petty selfish ambition. Harden is rightly described by the world-renowned historian, Friedrich Thimme, as “The Judas of the German people.”

Jews in German Art and Literature

Many years before the National Socialist régime, indeed, even before the War and prior to the period when Jewish emancipation had reached its climax, anxious observers pointed out that cultural life in Germany hardly deserved the epithet of “German” any more and that it had actually become a merely Jewish sphere of activity. The crisis in German cultural life has never been more aptly described and the Jewish problem has never been discussed in clearer terms than in the article by the Jewish essayist Moritz Goldstein, already published as early as 1912 in the *Kunstwart* (issue dated March 1912), a German Art magazine of very high standing. Goldstein depicts how the Jews, at the beginning of their emancipation, generally invaded all branches of German cultural life and, as alert scholars, soon commenced to supplant their masters. Goldstein gives the following synopsis of the consequences resulting from this development:

“Jews suddenly filled all those positions which are not withheld from them by force, they have converted German aims and tasks into their own and they strive for them accordingly. It seems as if German cultural life were to be completely transferred into Jewish hands. This was neither anticipated nor desired by the Christians at the time they granted the pariah in their midst a share in European cultural life. They began to take defensive measures, they resumed their custom of calling us aliens, they commenced to regard us as a danger in the Temple of their Art. Consequently we are now faced by the following problem. We Jews guide and administrate the intellectual property of a nation which denies our qualification and competency to do so.”

Goldstein describes this Jewish administration and control of German art and culture as a “prodigious fact.” A retrospective examination of German intellectual life as it was

before 1933 will corroborate Goldstein's testimony. In all spheres, be it on the stage, in literature, music, painting and the plastic arts, be it in the film or, more recently, in broadcasting, Jews always occupied the leading positions, compelling all to follow their intellectual guidance. To take the theatre, for instance, — the Berlin stages, which, as the most modern, are naturally always imitated by the theatres of all the provinces, were all under Jewish management. The choice of the programmes was made according to an entirely Jewish outlook and the result was that Jewish authors predominated.

In the domain of literature, the best-sellers were invariably the output of Jewish authors or publishers. Readers abroad, who took an interest in German literature during those days, will still be able to recall such names as Emil Ludwig, Jakob Wassermann, Arnold Zweig, Lion Feuchtwanger and various others. The sale of their books outweighed that of all other German authors by far. Statistics have shown that practically the half of all German belletristic literature circulating abroad during the last ten years was the product of Jewish authors. Music life was similarly dominated by Jewish influence. In the great majority of cases, the important conductors' positions in Berlin and in the provinces were occupied by Jews. The intellectual influence resulting from this trend was decisive for the choice of the works appearing on the programmes of opera and concert hall. The participation of Jewish composers grew to astonishing dimensions. — Gustav Mahler and Arnold Schönberg were substituted for Beethoven, Richard Wagner and Hans Pfitzner were supplanted by Franz Schreker. Music critiques written by Jews and the influence of the professional agencies, which were practically totally in Jewish hands, naturally did their part to support this development.

This tendency was even more evident in the sphere of the lighter type of entertainment music such as the operetta, the film, in the gramophone industry and in broadcasting. An ever increasing Jewish influence upon conservatories, in the publishing branch as a whole and in professional music literature could be observed so that, taken as a whole, the conclusion was justified that Jewish preponderance in music life was indeed alarming. The situation was no different with regard to the plastic arts and painting. Jewish art traffic and Jewish art literature paved the way to success for a whole generation of Jewish painters and sculptors, — a way which was barred to the majority of German artists. Film and broadcasting were practically exclusively reserved to Jewish activity, so that it is nearly impossible to speak of a German participation in these domains. To destroy any possible doubt as to the accuracy of these statements regarding the Jewish preponderance in German intellectual life, it is merely necessary to revert to the testimony of such a trustworthy Jew as Moritz Goldstein who, already in 1912, made the following observations in the essay quoted above:

“Nobody actually questions the power the Jews exercise in the press. Criticism, in particular, at least as far as the larger towns and their influential newspapers are concerned, seems to be becoming a Jewish monopoly. Predominance of the Jewish element in the theatre is also generally recognized: nearly all the managers of Berlin stages are Jews; the same may be said of a large part, even perhaps of the majority of the actors,

whilst the fact that the concert and theatre are dependent upon the Jewish public is continuously being proudly asserted and also deplored . . . Many an apostle of German art has been forced, much against his will, to convince himself of the enormous number of Jews amongst German poets."

Since 1912 this development progressed very rapidly. The main cause was that Jews even invaded the official administration of German intellectual life. They were granted governmental positions which had been closed to them before the War. For many years the Jewish lawyer Seelig acted as the responsible head of the Department for Theatres in the Prussian Ministry for Culture, whilst the Department for Music was in the hands of the Jew Leo Kestenberg. As the policy of the German press was controlled by Jews, indeed, the supreme official administration was conducted by Secretary of State Weismann, it is easily possible to conjecture to what an extent the Jewish usurpation of the entire German intellectual life was officially sponsored and propagated. This Jewish preponderance was by no means the result of an intellectual superiority, of greater talents or creative powers on the part of the Jewish race. On the contrary, it was mainly the Jewish economic ascendancy described above which led to the establishment of their dominant position in German cultural life. This economic domination was the instrument to attain the practical application of their intellectual and cultural influence. In this connection it is even more important to bear in mind that the characteristic Jewish intellectual attitude, which manifested itself in all spheres of cultural life, decisively favoured the realization of their craving for predominance. Their lack of national sentiment, their egoism, their absolute rationalism, their absence of scruples and their characteristic habit of speculating upon the basest instincts, — traits which have already been mentioned in the chapter devoted to Jewish journalism, — were the foundation for their economic success, upon which their intellectual domination was based.

The consequence was the disintegration and decay of German cultural life. As a matter of fact, it was not so much the dimensions of Jewish power, nor the extent of the alien usurpation which aroused opposition and protest on the part of the German nation, finally leading to the most acute anti-semitism, but it was rather the characteristic Jewish moral standpoint, their innate spirit and the methods applied by the Jewish race to use and abuse this intellectual power.

The book then goes on to depict detailed examples in Literature, Theatre and Cinema spanning 20 pages. The interested reader can find the book with a quick online search for free. Their conclusion:

The disintegration and decay of German intellectual life under Jewish supremacy are most apparent and assume their crudest aspects in the sphere of light entertainment art. In the operetta, and especially the revue, frivolity and licentiousness had developed to such an unbelievable extent that Berlin was regarded as the most immoral town in the world in those days; under the circumstances this was not at all astonishing. None others than the Jews introduced the new form of public amusement, the revue, a branch of art utterly unknown in the Germany of pre-War days. Not content with the introduction of

this novelty, they abused it and converted the revue into that species of entertainment which was to blame for quite a large part of the depravity and laxity which had attacked German moral life.

It is extremely characteristic that every one of the Berlin Revue proprietors — in the provinces there were very few enterprises of this nature — were Jews without a single exception. Many a former visitor to Berlin will still associate such names as James Klein, Hermann Haller, Rudolf Nelson, the two Rotter brothers and Eric Charell with most unpleasant recollections. The complementary staff of authors, composers, directors and stars were also generally chosen amongst the members of the Jewish race. These revues were veritable orgies of sexuality and licentiousness. All realities of life were regarded from the one and only aspect of erotic desire and its satisfaction. Modesty and decency were scoffed at as being old fashioned and ridiculous. The loud and vulgar titles given to these revues, for which enormous propaganda was made, speak for themselves. The following translations give an impression of what was presented to the public:

“Undress yourselves“ - “A thousand Naked Women“ — “The Sins of the World“ - “Houses of Lust“ — “Strictly Prohibited“ - “O Gee, A thousand Pretty Girls“ — “Sweet and Sinful.“

The advertisements for James Klein’s Revue “Undress yourselves“ were deliberately designed to awaken the lowest instincts of the public by enticing it with the following enumeration: “An evening without morals and principles — Sixty nude models, winners of beauty prizes — The adventures of beautiful women — Experiences with a girl of fifteen —.“

The posters advertising the revue “A Thousand Naked Women“ announced: “The grand revue of Free Love — Forty Pictures of Morality and Immorality.“

The performances themselves absolutely fulfilled the expectations. The scenes on the stage revealed all what the most daring phantasy can imagine, in short, a display of absolute libertinism and a complete surrender to sensual passions.

The Jewish Share in Immorality

Even a strictly impartial and sober observer without any pronounced anti-semitic views cannot any longer remain unimpressed by such examples of laxity and frivolity which all point to typical Jewish indecent and immoral characteristics. At the same time such characteristics are contrary to the spirit which animates all cultured nations. For all that, the reproach that the Jews are an inferior race, which these facts reveal, is so grave that it seems necessary to make a few further observations in this respect. It will be seen however as far as Germany is concerned, that everywhere where existing moral standards have been deliberately relaxed — where immorality was made into a business — Jews were prominent, if not dominant in this work. Even the so-called “Sexual Science“ — one of the unsavoury products of the last century — was a purely Jewish invention and

exploited by them into a most flourishing and lucrative branch of trade.

The authentic "Jewish Encyclopedia" was even compelled to admit a marked racial sexuality in its co-religionists. Cautiously it stated: "The Bible itself contains many references to the fact that the sensual element in sexual intercourse was often very pronounced . . . The words of the Prophets resound with complaints and threats in regard to adultery of which one hears so much." (Vol. V, p. 384.) With the advent of emancipation this Jewish urge, restrained by the ghettos of the middle ages, poured forth into the public life of the state. A clear field however was only given to it when, as the result of the revolution in Germany in 1918, all barriers of law, order and censorship were broken down. A veritable storm flood of Jewish immoral literature, obscene films and plays then broke over Germany. Cinemas and theatres have already been exhaustively dealt with. It remains to be said that in literature all authors of obscene works were Jews in every case. Among the hundreds of thousands of books confiscated by the national socialists in 1933 very familiar names repeatedly cropped up. Together with publishing firms such as Benjamin Harz, Richard Jacobsthal, Leon Hirsch, M. Jacobsohn or Jacobsthal & Co. mention must be made of the publishers of *Kulturforschung* — Cultural Research — a Vienna firm whose production was sufficient to fill many libraries. The titles speak for themselves. *Sittengeschichte des Lasters* (The Moral Story of Depravity), *Sittengeschichte der Schamlosigkeit* (The Moral Story of Profligacy), *Bilderlexikon der Erotik* (Illustrated Lexicon of Sexual Love), *Sittengeschichte des Geheimen und Verbotenen* (The Moral Story of Secret and Forbidden Things), etc. etc.

Among the publishers, the following must be recalled to mind: Dr. Ludwig Levy-Lenz, Leo Schidrowitz, Dr. Iwan Bloch, Franz Rabinowitsch, Georg Cohen, Dr. Albert Eulenburg, Dr. Magnus Hirschfeld. Iwan Bloch and Magnus Hirschfeld were in reality the real exponents of this so-called scientific sexual research. In reality it was nothing else than a downright treatise on obscene subjects and a degradation of all marriage and family ties. Their assistants were Felix Abraham and Levy-Lenz. No amount of search will ever reveal a Christian collaborator in this "sexual science." The publications issued by these obscene pseudo-scientists tell their own particular story of what took place in Magnus Hirschfeld's "Institution for Sexual Science" and in similar concerns: "Sexual Catastrophes," "Sexual Pathology," "Love Chains," "How to avoid Pregnancy" (by Magnus Hirschfeld), "The Perverters," "Prostitution," "Sexual Life in our Age" (by Iwan Bloch), — these were the popular subjects.

It was due to their unrestricted and infamous efforts that the general public became acquainted with all the noisy talk of free love, a call for unlimited right to allow all passions and instincts to run riot, as well as the demand to make homo-sexuality and abortion non-punishable offences. A heated campaign was waged on the question of unrestricted and non-punishable acts of abortion championed by Jews: Dr. Max Hodann, Dr. Lothar Wolf, Dr. Levy-Lenz, Martha Ruben-Wolf, Felix Halle and Alfons Goldschmidt. This circle of Jews issued at the same time numerous publications advocating greater birth restriction and the avoidance of pregnancy. Finally we must not overlook Dr. Max Hodann, Berlin's

Medical Officer of Health. With his "Workers' Sexual Magazine" he contrived to inject the poison of moral disintegration into the broad masses. He also earned for himself a particularly unsavoury reputation for his outspoken propaganda for sexual self-abuse. Hr. Scavenius, the Danish Chargé d'Affaires at the Hague, was undoubtedly right when he declared three years ago in a wireless lecture that "Germany at that time was the pornographic centre of the world."

The Jewish Share in Crime

It is difficult indeed to ascertain the real extent of the German Jewish share in crime throughout the Reich for the following reasons: The criminal records kept in Germany since 1882 recognized only orthodox Jews. Those innumerable Jews who had accepted a Christian faith or who were not associated with any established religion, were never embraced in these records. Therefore a great number of criminals, Jewish by race, has been absorbed in other statistical categories. To this must be added the fact that commencing with the year 1918, criminal records ceased to show any subdivision into confessions. This step was in all probability the result of Jewish intervention. The following statistics therefore cannot in any way be regarded as complete. Nevertheless they are food for thought in throwing light on Jewish characteristics. When taking all this into account, the official "Statistics of the German Reich" (New Edition, Vol. 146) reveal the fact that a number of certain crimes were committed more frequently by Jews than by Christians. Taking an average valuation for the period 1892 to 1901, we obtain the following table:

Crime	Jewish percentage compared with Christian criminals
Fraud & Trickery	14 times greater
Usury	13 times greater
Copyright infringement	11 times greater
Fraudulent bankruptcy	9 times greater
Fraudulent insolvency	6 times greater
Receiving stolen property	5 times greater

It will be seen from this that Jews have a strong liking for commercial crime. That this fact has in no way been sufficiently explained by the large percentage of Jews in business is revealed by the investigations conducted by the Jew Ruppin. In his book, *Die Juden der Gegenwart — Contemporary Jews —* (Berlin 1904), with the aid of comparative statistics Ruppin arrives at considerably greater figures for commercial crime than Jewish participation in commerce would seem to indicate. The Jew Wassermann arrives at the same conclusion in his book *Beruf, Konfession und Verbrechen, — Profession, Confession and Crime —*, (Munich 1907). He proves that Jewish criminality in bankruptcy in 1900 was seven times greater than among non-Jewish criminals and six times greater in cases of fraudulent insolvency. Wassermann obtained these statistics by being guided expressly by the percentage participation in commercial professions. The official "Statistics of the

German Reich“ for the period 1910 to 1914 furthermore prove that at a later stage very little alteration had taken place. The following table exemplifies this:

Crime	Jewish percentage compared with Christian criminals
Commercial Fraud	3 times greater
Usury	12 times greater
Copyright infringement	8 times greater
Fraudulent bankruptcy	13 times greater
Fraud	2 times greater
Receiving stolen property	5 times greater

Quite apart from these commercial crimes Jews have taken a still greater share in other branches of crime far more reprehensible. We refer to the drug traffic and prostitution, illicit gambling and pickpocketing. The “Central Organisation for Combatting Drug Crime“ has established that in 1931, out of 272 international drug traffickers no less than 69 (25%) were Jews. In 1932 the figures were 294 and 73 (again 25%). In 1933, the Jewish percentage had increased to 30%. The Central Organisation for Combatting Unlawful Gambling and Games of Chance registered 57 Jews out of a total of 94 cases which came to its notice in 1933. In 411 cases of pickpocketing in 1932 193 Jews were involved. In the same year it was found that among the international pickpocketing gangs, out of a total of 163 criminals 134 were Jews or 82%. The high percentage of Jews in immoral crime — already referred to in the chapter on Jewish immorality — is frankly admitted by the Jewish scientist Ruppin, to whom we have already referred. He writes:

“That Jews live principally in the large towns and cities is responsible for the fact that certain crimes usually limited to city life are associated with them; for example, procuration, cooperation in immorality.“

In view of the limited space at our disposal, we could necessarily only give a r é s u m é of the part played by the Jews in Germany before 1933. It would be easy to write a substantial volume on the subject¹). But even such a work could only reach the same conclusions at practically every page. Our r é s u m é will suffice to convince unprejudiced and objectively minded readers of that which it was our object to prove—namely, that the preponderating influence of the Jews developed into a national calamity of the worst sort for Germany, and that the previously cited words of Theodore Herzl, “every misfortune increases their power,“ have proved in the result to be only too true. The interdependence of national distress and Jewish ascendancy has scarcely ever been manifested with such luminous clearness as in Germany. Under these circumstances, it surely behoves us to seek to understand the fundamental reasons underlying the Jewish problem in this country as it has presented itself during the past decades.

Animated by a desire to solve this ancient problem if possible, by the emancipation and assimilation of Jewish elements, Germany had shown herself more accessible to the absorption of Jews than many other countries had done. All barriers had been taken

down, all restrictions abolished, all spheres of activity opened unreservedly to the Jews — nay, leading positions were assigned to them even in those domains which were of the most vital importance for national life. The Jews, who numbered less than 1% of the total population of Germany, occupied the key posts in German industry. Political leadership was to a large extent in their hands. The Press and cultural life in general were predominantly under their influence. Their aggregate income exceeded that of the 99% remaining inhabitants by over one-third. Truly, the Jews had every conceivable opportunity for merging their distinctive existence in the collective life of the German community — a distinctiveness, moreover, frequently deplored by some of the best Jewish elements. But the Jews consistently ignored the rules of fair play as far as their credulous German partner was concerned. The overwhelming majority of them never desired to be merged in the German nation, because they were aware of the fact that their racial dissimilarity constituted an insuperable obstacle to assimilation. During the years of great tribulation they never hesitated to betray Germany, and to shamelessly misuse the opportunities afforded them in such abundance for their own egoistical purposes and interests. Defeatism and treason, political degradation and economic corruption, moral depravity, the debasement of all national and religious values — these were the outstanding features of a Germany dominated by the alien Jewish race.

Germany had to pay dearly for the illusion that it is possible to solve the Jewish question by means of a generous effort to assimilate the Jews. She had reckoned without a factor of decisive importance: namely, the congenital, ingrained, boundless ingratitude of the Jewish race. Not the least of the reasons for the uncompromising attitude of German anti-semitism — an attitude that has often been misunderstood abroad — is the glaring contrast, irrefutably evidenced by the events of the past decades, between the incontestable good faith of the Germans and the cynical ingratitude of the Jews. That this contrast constitutes, so to speak, the nucleus of the whole Jewish problem, has been publicly admitted by two leading Jews. The Chief Rabbi of Hamburg, Dr. Joseph Karlebach, wrote in the Jewish review *Der Morgen* (vol. II, p. 129, 1930): “to be a Jew, is to be opposed to the natural attitude of human beings.” The French Jew Bernard Lazare, who was well known at the close of the last century, was even more candid in his book *l'Antisémitisme*, in which he puts the question: “By what qualities or defects has the Jew drawn upon himself such universal reprobation? Why has he alternately and in equal measure been maltreated and hated by Egyptians and Romans, by Persians and Arabs, by Turks and Christian nations? It is because the Jew is everywhere, and right down to the present day has remained, an asocial being.”

These admissions by candid Jewish writers, whose authority is undisputed, explain better than any words of ours why National Socialism was compelled to give a definite and final solution to the Jewish question, so far as Germany is concerned. Anti-semitic feeling in this country has not been roused to such a degree by the mere fact of the preponderance of an utterly alien influence, but by the spirit underlying that influence and inseparable from it — a spirit of an essentially asocial nature, which requited evil for good and invariably

prompted those inspired by it to repay hospitality and benevolence with treachery and unrelenting, destructive hatred. When the National Socialists came into power in 1933, they endeavoured to solve the Jewish question by methods calculated to peacefully reduce the excessive influence of the Jews on public life to proportions compatible, firstly, with the position of the Jews as an alien race, and, secondly, with their number — which, as has already been said, was less than 1% of the total German population. When the amount of misfortune brought on Germany by the Jews prior to 1933 is recalled, the methods adopted to diminish their influence on German public life must be accounted remarkably moderate, and as evidencing extraordinary restraint and discipline among the leaders of the new Germany. The fact is too easily overlooked, that the advent to power of National Socialism constituted a revolution in the truest sense of the word, and it may without exaggeration be asserted that scarcely a revolution in history has been accomplished with such exemplary discipline.

The Nuremberg Laws of 1935 formed the basis of a peaceful and orderly settlement of the Jewish question in Germany. But the Jews themselves were not prepared to reckon with the incontestable fact that their era of emancipation in Germany was definitely at an end. They were not willing to abandon their usurped supremacy without a struggle, and since this was no longer possible in Germany itself, they deliberately stirred up an agitation abroad, hardly less dangerous than an openly proclaimed war. By means of a consistently carried out poisoning of the sources of public opinion, they have succeeded in creating a caricature of National Socialist Germany and inflaming international opinion against the latter. By organising a boycott of German goods, they have endeavoured to throttle Germany economically. They have even gone so far as to reply to the measures of the National Socialist Government by the assassination of Wilhelm Gustloff and Ernst vom Rath.

The world-embracing associations and interests of Jewry as an international power, as well as the asocial spirit animating it, could not be evidenced in more convincing manner than by its success in putting the whole world instantaneously, so to speak, into movement against National Socialist Germany. For the world has taken very much less notice of processes of elimination carried out elsewhere on a far greater scale. Who has championed the cause of those millions of Russians driven from their land by the Bolshevist revolution, or who, unable to escape in time, were tortured and massacred? Who ever spent a thought on the Germans in the Baltic States, 80% of whom were forced to emigrate after the Great War, and who to a large extent are condemned to a life of perpetual hardship in foreign countries? On the other hand, wherever the interests of even a single Jew are affected, international Jewry howls for redress and assistance until international peace is seriously menaced by its bellowings. Germany knows full well where the source of the everlasting disquiet is to be found, which perpetually enervates the world and effectively prevents the realisation of all efforts to reach international understanding and peace. The German Government, conscious of its responsibilities, has drawn the logical conclusion, and surely and definitely eliminated all Jewish influence, of whatever nature it

may be, at home. It has thus contributed, for its part, to getting rid of an element which, in the words of the illustrious historian Theodor Mommsen, is “an operative ferment of national disintegration.”

At the close of our study of the Jewish problem in Germany, the problem arises of what is to be done with the Jews. For it is evident that the effects of the policy of the German Government towards the Jews cannot remain confined solely to Germany, but must be far-reaching. Anti-semitism has been awakened in all countries where belief in the blessings of “assimilation” has been rudely shaken by the course of events, and by the spiritual and political renaissance which characterises the present era. The multitude of Jewish emigrants carry with them the Jewish question, with all its inevitable consequences, into such new “homes” as may be opened to them. Hence it is clear that the Jewish problem is susceptible of solution only on an international basis. The Jews themselves have unambiguously recognised the necessities arising out of the existing situation. The *Jüdisches Nachrichtenblatt* of December 30, 1938, wrote: “For all who wish to see, it is evident that territories will ere long be required for the settlement, not only of Jews from Germany, but of Jews from other European countries also. Whoever is able to interpret current events cannot fail to observe the rapidity with which the Jewish question is becoming increasingly urgent in a number of European States and the consequent necessity of a correspondingly rapid solution of it.” It has already been said that the projected creation of a National Home for Jews in Palestine will not afford a solution of the Jewish problem. What is needed, is to find territories, the ownership of which is not, as is the case in Palestine, claimed by others — territories which by virtue of a general agreement shall be allotted exclusively to the Jews. This need is reflected in the fact that even in England, the Mandatory Power, herself, the possibility of settling Jews in overseas territories is envisaged. Germany, having no colonies, is not in a position to make any effective contribution to these international discussions.

Racial characteristics and historical destiny combine to render it somewhat more than problematical that the attempt to solve the Jewish question by means of the creation of a Jewish State can ever hope to be successful. We have exposed this point of view in detail when dealing with the problem of Palestine. In the long run it must depend on the Jews themselves, and on their immense financial power, whether the united efforts of the Western countries to find a solution will be fruitful or not — whether, after two thousand years of incessant wanderings, Ahasuerus will eventually find rest.

To show that other countries were seeing “The Jewish Question” in a similar matter... From “Hitler’s War” we learn:

Early in November 1938 Hitler’s uncritical loyalty to his Party henchmen was put to its most severe test – by an incident symptomatic of racial troubles that had been festering in Central Europe for many decades. The Jewish problem was at its root. In Czechoslovakia, for instance, there were 259,000 Jews; they were not popular, and the new regime steered a delicate course, pandering to its powerful neighbour. President Emil Hacha, the venerable lawyer who had succeeded Benes, initiated a series of anti-Jewish measures,

obliging Jewish industrialists to resign. The influx of Jewish refugees from the Sudeten territories led to fresh antisemitism, particularly among the Czech academics who publicly demanded the removal of these 'immigrants.' In Bohemia and Moravia there were about 99,000 Jews; in Slovakia 87,000, and in the tiny Carpatho-Ukraine no fewer than 66,000 (or 12 percent of the population.) Slovakia eagerly enacted the anti-Jewish decrees that the Reich demanded. A wave of deportations began. Nobody, however, wanted to house these homeless Jews. When Ribbentrop (Reich Foreign Minister) journeyed to Paris with much pomp in December to sign the joint declaration that Hitler had first suggested to François-Poncet, foreign minister Georges Bonnet begged him not to flood France with German Jews, as they already had enough Jews of their own. ('In fact,' Ribbentrop informed Hitler, 'they are considering Madagascar for this purpose.') Poland's attitude was no more sympathetic. Ambassador Joseph Lipski had assured Hitler as recently as October 21 that if he ever succeeded in solving Europe's Jewish problem, Warsaw would happily erect a statue in honour of his achievement. The Polish government had followed developments throughout 1938 most closely. Fearing, after Hitler's occupation of Austria, that he would repatriate the thousands of Polish Jews from Vienna, in March they had speedily enacted a Law of Expatriation designed to deprive such Jews of their native Polish citizenship. The Munich agreement panicked Warsaw into the further ruling that after October 31 no expatriate Poles would be allowed back into their country without a special entry visa. The last days of October thus saw frenzied scenes on the frontier. While Polish frontier officials slept, the Nazis quietly shunted unscheduled trains loaded with Jews across the line into Poland.

11. 1933-1939

11.1 The Anschluss

Austria-Hungary, ruled by the Hapsburg dynasty, had been Germany's ally during World War I. In 1919, the victorious powers dismembered this vast, motley empire. Hungary and Czechoslovakia became independent countries. Other components fell to Poland, Rumania, Yugoslavia and Italy. Multiple cultures often populated each region. It was impossible to apportion provinces to their respective new countries without placing some of the ethnic colonies inhabiting them under the dominion of the prevailing foreign nationality. Austria, the nucleus of the old realm, shrunk from sovereignty over nearly 30 million people to a diminutive, landlocked republic of 6,500,000 persons. Southern and eastern Europe's smaller nations had traditionally belonged to larger empires. The decision to establish independent states for them conformed to Wilson's proclaimed ideal of self-determination; the right of every people to govern themselves. U.S. Secretary of State Robert Lansing interpreted Wilson's cartographic experiment as follows: "If the right of self-determination were sound in principle and uniformly applicable in establishing political allegiance and territorial sovereignty, the endeavor of the Southern States to secede from the American Union in 1861 would have been wholly justifiable."

On November 12, 1918, Austria's provisional national assembly declared its country "a component of the German republic." It officially adopted the name "German Austria." This contradicted the Allied objective of eliminating the former Central Powers as a future rival. To sanction the Austrian-German union would have helped restore the Reich to its pre-war magnitude. It would also have facilitated German economic influence in the Balkan and Danube regions. Allied delegates at the peace conference informed Austria that she must "abstain from any act which might directly or indirectly, or by any means whatsoever, compromise her independence." It also forbade the country from using the name German-Austria. Chancellor Karl Renner protested to the Allies that this violates the population's right to selfdetermination, to which they responded that this right does not extend to defeated enemy countries. Britain forced Vienna to comply by threatening to resume the blockade of foodstuffs.

Post-war Austria became the only part of the former Habsburg realm from which the Entente demanded reparations. Deprived of its industrial base, which fell to Czechoslovakia, Hungary's agrarian economy and the Danube export market, this was catastrophic for the little country. Discharged soldiers and German-speaking civil servants from the lost provinces returned to the homeland, unable to find work. Unemployment rose to 557,000. Most Austrians favored unification with Germany. Hitler, reared in Linz, shared this sentiment. In April 1934, he assigned the Reich's Foreign Office to prepare a report

defining policy. Regarding possible annexation of the country, the report opined that "German efforts in this direction will be frustrated by the unanimous resistance of all European Great Powers." In a Reichstag speech in May, Hitler declared, "The German people and the German government have, out of the simple feeling of solidarity toward common national heritage, the understandable wish that not just foreign peoples, but also German people everywhere will be guaranteed the right to self-determination."

The Austrian government had become a dictatorship. In 1931, the country elected Engelbert Dollfuss Bundeskanzler (National Chancellor). He dissolved parliament in 1933, founded the Fatherland Front, and proscribed other political parties. Dollfuss established detention camps in September, which corralled members of the Communist and National Socialist parties. Dollfuss reinstated the death penalty. The following February, he ordered the police to disarm the Social Democrats' Defense League. This led to armed resistance in Vienna and in Linz. Dollfuss deployed the army, which bombarded workers' housing districts in the capital with artillery. Over 300 people died in the fighting. Having suppressed the revolt, he banned the Social Democratic Party, abolished the trade unions, and hanged eleven Defense League members. The bantam dictator died in July 1934, during an equally abortive coup staged by Vienna's National Socialist underground (No connection to the German National Socialists could be proven). Minister of Justice Kurt Schuschnigg replaced Dollfuss. Under the new chancellor, 13 of the conspirators received death sentences, based on a proposed statute not signed into law until the day after their execution. The police arrested the chief defense attorney three days after the trial. Without a hearing, he spent the next six months in the Wöllersdorf detention camp.

Having attained power without a single vote, Schuschnigg relied on the Fatherland Front to maintain the dictatorship. Political dissidents, lumped together as "national opposition," landed in concentration camps. Documented cases of inmate abuse include confinement without trial, house arrest for prisoners' relatives, two or more trials and sentences for the same crime, convictions and fines without evidence, the presumption of guilt until proven innocent, withholding medical care from inmates who were ill, sometimes resulting in death, and forced confessions. The regime denied persons of "deficient civic reliability" the right to practice their occupation. Schuschnigg judicially persecuted Austrians who favored unification with the Reich. The verdict often fell on members of choral societies and sports clubs nurturing cultural ties with Germany. "Suspicion of nationalistic convictions" cost civil servants their jobs. This included forfeiture of pension and loss of unemployment compensation. The dictator sought an alliance with Italy to support Austrian sovereignty. The Italian head of state, Benito Mussolini, anticipated that an Austrian-German union would jeopardize his country's control of southern Tirol. The Entente had awarded this province, populated by 250,000 ethnic Germans, to Italy after World War I. During Dollfuss's tenure, Mussolini had supplied aid to Austria. The new Bundeskanzler failed to maintain the good relationship that Dollfuss had cultivated with Rome. The vivacious Mussolini did not relate well to the austere, impersonal Schuschnigg. The Austrian government's human rights violations alienated France and Czechoslo-

vakia. The Italian-German dissonance that Schuschnigg hoped to capitalize on diminished in 1936. When Italy invaded Abyssinia, she was able to defy League of Nations sanctions through Hitler's economic support. Mussolini advised Schuschnigg to normalize relations with Germany.

Hitler, unjustly blamed for the 1934 coup to topple Dollfuss, sought to break the diplomatic deadlock. He appointed Franz von Papen, a conservative aristocrat distant to National Socialism and a devout Catholic, special ambassador to Vienna. Papen presented Austrian Foreign Minister Egon Berger with the draft for an Austrian-German "Gentleman's Agreement." The compact corroborated Hitler's strategy for incorporating Austria as an evolutionary process, promoting economic and cultural ties between both countries. The preamble stated, "The German Reich's Government recognizes the complete sovereignty of the Austrian national state." It bound Germany not to interfere in Austria's internal political affairs. In return, the preamble obligated Schuschnigg "with respect to the German Reich, to maintain a basic position that conforms to the fact that Austria sees herself as a German state." The document required that "all decisive elements for shaping public opinion in both countries shall serve the purpose of developing mutual relations which are once again normal and friendly." The agreement offered general guidelines for promoting commerce, such as lifting restrictions on travel and trade across the frontier. Schuschnigg agreed to allow members of the "national opposition" to participate in government. He released 15,583 political prisoners. Many were National Socialists whom Hitler arranged to resettle in Germany. Upon the Führer's insistence, Schuschnigg relaxed restrictions on the press. An important element of the agreement stipulated, "Both governments will exchange views in foreign policy matters that affect both countries." Papen and Schuschnigg signed the agreement in Vienna on July 11, 1936. Germany's assurance to respect Austrian independence drew praise from the international press, even in France. Hitler summoned Josef Leopold, leader of the Austrian National Socialists, and instructed him to take the new treaty "very seriously." The Führer warned Leopold that he wanted no encore of the 1934 coup: "The Austrian National Socialists must maintain exemplary discipline and regard unification as an internal German matter, a solution to which can only be found within the scope of negotiations between Berlin and Vienna." Hitler was hopeful, thanks in part to Schuschnigg's encouraging remark that Austrian-German unification was "an attainable political objective for the future."

The Bundeskanzler, however, had no interest in honoring the compact. He openly criticized Hitler for allegedly misinterpreting the mission of the Reich: "With his assertion that the unity of the Reich is based on the harmony of the race and the language of the people living within it, Hitler has falsified and betrayed the spirit of the Reich. The Reich is not determined by race and is not heathenish; it is Christian and universal." Schuschnigg publicly described Austria as "the last bulwark of civilization in central Europe," a studied insult to his ethnic neighbor to the north. During 1937, Schuschnigg entreated the British government to guarantee Austrian sovereignty. This clandestine diplomatic maneuver, as well as the unfriendly public statements regarding Germany, directly violated

the agreement signed in July.

Europe was in the age of nationalism; the average Austrian rejected Schuschnigg's liberal perception of Austria as a universal realm transcending ethnic roots and customs. While the country wallowed in the throes of economic depression, commerce in the Reich flourished. Unification with Germany promised employment and prosperity. Schuschnigg was himself a dictator; he could not argue that incorporating his country into the German authoritarian state would cost Austrians their liberties. England and France showed no interest in guaranteeing a country that flouted democratic principles. In an atmosphere of internal unrest and diplomatic isolation, the Bundeskanzler turned again to Germany.

Hitler invited Schuschnigg to meet at the Berghof on February 12, 1938. The Führer hoped to get Austrian-German relations back on track toward unification as an evolutionary process. A member of Austria's "national opposition," Arthur Seyss-Inquart, prepared a list of proposals for Schuschnigg as a basis for negotiations in Berchtesgaden. These included bringing political opponents into the government. Informed of the proposals, Hitler prepared his own list. The ten German proposals, among others, called for joint consultation in foreign policy matters mutually affecting Austria and Germany, amnesty for political prisoners, pensions for dismissed civil servants, and legalization of the National Socialist party in Austria. They demanded freedom of the press and preparations to merge the two countries' economic systems. This last would be particularly beneficial to the Austrian population. The list recommended several names - none of them hard-line National Socialists - for cabinet posts, including Seyss-Inquart. Point eight proposed a military officers exchange program, joint general staff conferences, promoting camaraderie, and sharing knowledge in weapons development.

Schuschnigg attended the Berchtesgaden session with his military adjutant, Lieutenant-Colonel Bartl, and Guido Schmidt. During the initial private session between the two heads of state, Schuschnigg became defensive and asserted that it was he, not Hitler, who represented Austria. Hitler, born an Austrian, retorted, "Just once, try holding a free election in Austria, with you and I opposing each other as candidates. Then we'll see." During parallel talks between Guido Schmidt and Germany's newly appointed foreign minister, Joachim von Ribbentrop, the Austrian government won significant concessions. It reduced the obligation to joint consultation on foreign policy matters to "an exchange of thoughts." It limited the political activity of National Socialists in Austria. Hitler agreed to publicly condemn illegal acts, such as sabotage, of his followers there. The Führer approved Vienna's request that aggressive National Socialists be relocated to Germany. The Germans withdrew those candidates suggested for Austrian cabinet posts that Schuschnigg objected to. Berlin abandoned its plan for a joint economic system and reduced the scope of military cooperation. At the conclusion of the conference, Hitler told Schuschnigg, "This is the best way. The Austrian question is regulated for the next five years." Newspapers in England, France, and the USA claimed that Hitler presented his demands as an ultimatum, intimidated Schuschnigg by inviting three German generals to the conference, and threatened invasion if the Bundeskanzler failed to sign. The fact that

the Austrians negotiated significant modifications demonstrates that Germany's proposals were not an ultimatum. The generals attended to provide consultation on questions of integrating the two countries' armed forces. Schuschnigg brought along his own military advisor. Guido Schmidt testified later that he had no recollection of a German threat to invade Austria.

Papen stated that it was his impression that Schuschnigg enjoyed full freedom of decision throughout the sessions. The Bundeskanzler confessed that he had been under considerable mental stress but nothing more. The British ambassador to Austria, Sir Charles Palaret, reported to London on a number of initial demands which Hitler withdrew. He confirmed that Schmidt told him nothing of German threats. Palaret cited "Herr Hitler's desire to achieve his aims in regard to Austria by evolutionary means." Schuschnigg appointed Hitler's choice, Arthur Seyss-Inquart, interior minister and national police chief on February 15. The next day in Berlin, Seyss-Inquart told Hitler of his intention to operate "strictly on the basis of a self-sufficient and independent Austria" and "within the framework of the constitution." Hitler accepted this. Addressing the German parliament on February 20, the Führer thanked Schuschnigg for his "understanding and kindness." He predicted that "friendly cooperation between the two countries in every field has been assured." The following day, he received Austria's underground National Socialist leader, Josef Leopold. Calling his activities "insane," he brusquely ordered Leopold and his four chief lieutenants to pack up and move to Germany. Hitler believed that the compact insured a period of harmony that would gradually bring Austria into the German realm through democratic means. Schuschnigg did not share this belief. Theodor Hornbostel, chief of the Austrian State Chancery, told the British ambassador that month, that the loosely defined guidelines of the agreement with Hitler would be easy to circumvent. Hornbostel confided that his government "really doesn't want to put them into practice."

Stability in Austria however, deteriorated. The international stock exchange, with its usual nose for ominous developments, experienced a sudden flight from the Austrian shilling. Austrian government bonds plummeted in value, especially in London and Zurich. National Socialist sympathizers in the Fatherland Front and in the Austrian youth organizations steadily transformed the political disposition of these groups. Spontaneous mass demonstrations by National Socialists enjoyed popular support. Graz, for all practical purposes, came under their control. In many areas, Schuschnigg's followers scarcely risked appearing in public. Displaying his customary lack of political finesse, Schuschnigg took a desperate step to rescue his career. In Innsbruck on March 9, he announced a national plebiscite to take place in four days' time. The purpose was to give voters the opportunity to affirm their confidence in the government and preference for Austrian independence. Such a poll could only accentuate the division between German and Austrian. It transgressed against the spirit of the evolutionary process of assimilating the two cultures, a process Schuschnigg had accepted by signing the agreement with Germany.

Since no elections had taken place since 1932, there were no current lists of registered

voters. There was insufficient time to prepare new rosters. Only citizens above 25 years of age were eligible. This prevented young adults, a disproportionately large percentage of whom backed National Socialism, from participating. The general secretary of the Fatherland Front, Guido Zernatto, prepared guidelines that allowed only members of the reigning political party to staff the balloting stations. The ballot cards had the word "yes" printed on one side but were blank on the other. This required people voting "no" to write the word in the same size characters on the back of the card. Polling station personnel, all members of the Fatherland Front, would therefore be able to identify dissenters. During preparations for the election, the government press announced that anyone voting "no" would be guilty of treason. Publication of these details evoked protests from the "national opposition." Fearing German intervention, Schuschnigg appealed to France and Britain for assistance. In the midst of another cabinet crisis, France could not respond. The British recognized the plebiscite as a flagrant challenge to Hitler. Chamberlain called the plebiscite a "blunder." Foreign Secretary Lord Halifax considered Schuschnigg's maneuver "foolish and provocative."⁶⁵ He blandly informed the Austrian dictator that England could offer neither advice nor protection. Halifax could not help adding that Schuschnigg failed to seek Britain's counsel before announcing the plebiscite, "which has caused so much trouble."

Hitler was aghast that Schuschnigg violated their agreement only weeks after signing. At first he simply refused to believe the news; however, once he did, his reaction was temperate. He flew his diplomatic troubleshooter, Wilhelm Keppler, to Vienna. Keppler's instructions were to either prevent the plebiscite "without military threats" or at least arrange for it to include the opportunity to vote for Anschluss, or unification, with Germany. Seyss-Inquart and General Edmund von Glase-Horstenau, minority representative in the Austrian cabinet, confronted Schuschnigg. They pointed out that the entire balloting process drawn up by the Fatherland Front violated the constitution. They demanded a postponement, allowing time to prepare a plebiscite in which all parties would be fairly represented. The dictator summoned Defense Secretary General Zehner, security chief Colonel Skubl, and Lieutenant-Marshal Hülgerth of the Fatherland Front militia. He asked whether armed resistance against a German invasion was feasible. The Austrian army, reduced to 30,000 men by the 1919 treaty, was not mobilized. Skubl dismissed the police force as too saturated with National Socialists to be reliable. Only the militia, Hülgerth assured the Bundeskanzler, was prepared. Recognizing this force as insufficient, Schuschnigg attempted without success to telephone Mussolini to solicit military aid. Out of options, he resigned as chancellor. This terminated the era of a politician who entreated Austria's wartime enemies France, Britain, and Italy, and called upon his own followers as well, to transform his country into a battleground in a war against his German brethren and former comrades-in-arms of the World War.

Schuschnigg's entire cabinet withdrew, and Austria was, practically speaking, without a government. Throughout the land, members of Austria's SA and its smaller, elite cousin, the SS, began assuming administrative functions. The following day, March 12, 1938,

German troops crossed into Austria. Schuschnigg ordered the Austrian army not to resist. Hitler's decision to militarily occupy Austria was neither premeditated nor desired by him. He had hoped to maintain a semblance of legality in assimilating Austria. With Seyss-Inquart as Bundeskanzler and a new cabinet, the two governments could have coordinated the transition smoothly via the evolutionary process. In fact, the German army general staff had no operational plan for an invasion of Austria in place; the entire maneuver was impromptu. The Führer was aware of the bad publicity abroad such an apparent act of force would generate; however, he feared that Austrian Marxists might capitalize on the country's momentary political vacuum and stage an uprising. Göring warned of the possibility that the Alpine republic's neighbors might also exploit its temporary weakness. Italy could occupy eastern Tirol, Yugoslavia the Kärnten province, or Hungary the Burgenland. Yugoslavia had already annexed part of Kärnten in 1919 during Austria's post-war impotence.

Described as aggression by the foreign press, the German army's advance made a welcome impression inside Austria. A sergeant in the SS Signals Battalion related his experience while sent with a comrade ahead of the column to reconnoiter the route to Vienna. Two days under way, the pair stopped at an inn. As the soldiers entered, "Almost everyone present rose and greeted us with shouts of 'Heil! '... We were pressed to a table, the waiters rushed over with coffee and pastries, and we kept shaking hands with people, answering questions and expressing our gratitude for all the attention.... It was harder to leave the inn. The guests stood up, clapped, wished us well and stuffed cigarettes in our pockets." Another member of the battalion gave this account: "The closer the column approached Vienna, the greater was the rejoicing of the people lining the roads. Often with tears in their eyes, they gave full expression to their joy, shook hands with the soldiers in the vehicles and tossed flowers and packs of cigarettes to them. Everyone seemed seized with frenzy." Throughout the military occupation of Austria, largely symbolic in nature, not a single shot was fired nor was one person injured.

Hitler scheduled joint plebiscites in Austria and Germany for April 10, 1938. Both populations decided on whether to incorporate the two countries into a single state. The people of Austria cast 99.73 percent of their ballots in favor of Anschluss with Germany. The Germans voted 99.08 percent for unification. As testimony to how distant Schuschnigg had been to the heartbeat of his nation, he had personally estimated in early March that 70 percent of the Austrian populace supported his regime's policy of independence. On March 18, 1938, the German government notified the League of Nations that Austria had cancelled its affiliation. This international body, which had never manifest concern for the plight of the distressed little nation, now debated whether Germany was responsible for paying Austria's delinquent membership dues of 50,000 Swiss francs from January 1 to March 13. This ended the chain of circumstances leading to the unification of Hitler's homeland with the German Reich, an event known to history as "the rape of Austria."

11.2 Czechoslovakia

A few months after the Anschluss [with Austria], Germany annexed the Sudetenland, the ethnic German territory lining the periphery of western Czechoslovakia. The transfer of the region to German control provoked a serious war scare. The controversy traced its origin to the 1919 Versailles system. During World War I, Czechs served in the Austro-Hungarian army. Immigrants in London and Paris established the Czech Committee on November 14, 1915. Two Czechs in exile, Tomas Masaryk and Eduard Benes, won the Entente's endorsement for a future Czechoslovak state to be carved from portions of the Hapsburg realm. On October 18, 1918, Czechs in Paris and in the USA claimed Czechoslovakian independence. The new country had three components. Furthest east was Ruthenia, the population of which voluntarily joined Czechoslovakia. In the center was Slovakia, and many Slovaks wanted independence or at least considerable autonomy. The western part consisted of Bohemia and Moravia, where three million German Austrians dwelled with the Czechs. These Germans wished to remain with Austria.

Masaryk and Benes enjoyed prevailing influence in fashioning the post-war structure of Czechoslovakia. Masaryk persuaded Wilson to alter his 14 points, which promised each nationality of Austria-Hungary the opportunity for autonomous development, to exclude Germans. Benes consciously underestimated the number of Sudeten Germans by nearly a million. He falsely claimed that they were not a unified minority, but lived in settlements integrated with Czechs. "The Germans in Bohemia are only colonists," he asserted.

Rich in raw materials and industry, the border territory offered Czechoslovakia a topographical defensive barrier against Germany. Benes based his deliberations more on economic and strategic advantages than on the natural rights of the population. The 1910 census offered a comparison of the number of German "colonists" wishing to remain with Austria in the affected areas to Czechs residing there. In Bohemia lived 2,070,438 Germans to 116,275 Czechs; in the Sudetenland 643,804 Germans to 25,028 Czechs; in the Bohemian Forest 176,237 Germans to 6,131 Czechs; in southern Moravia 180,449 Germans compared to 12,477 Czechs. Since the Paris peace conference continued until mid-1919, the German provinces were technically still part of Austria when the Austrian republic held its first democratic election that February 16. The Sudeten Germans prepared ballots to participate. The Czech army forcibly disrupted the arrangements. On March 4, thousands of Sudeten Germans organized peaceful demonstrations in their towns and villages to protest. Czech soldiers fired into the unarmed crowds, killing 54 Germans, 20 of them women.

The Allies finalized a compact with Czechoslovakia formally recognizing her statehood. The preamble to the document endorsed the arrangement, "in consideration that the peoples of Bohemia, Moravia, and part of Silesia, as well as the people of Slovakia have decided of their own free will to join into a lasting union." Benes promised the Allies "to give the Germans all rights they are entitled to. . . . It will all in all be a very liberal regime." Denigrating the ethnic German population to "immigrant" status, the Czech

government instituted a policy of “rapid de-Germanizing” in Bohemia and in the Sudetenland. Prague transferred military garrisons, railroad personnel, civil servants, prison populations and even hospital patients in large numbers there to manipulate the census figures. Czech officials tallied Czech transients as residents, even though “residency” seldom extended beyond two days. In Trautenau in northern Bohemia, a 600-man Czech infantry battalion spent one winter day in an unfinished barracks to be counted in the survey. The resulting statistics deprived German districts of adequate representation in parliament. Prague occasionally employed less subtle means to maintain its minorities’ political impotence. At an election rally of the Sudeten German Party in Teplitz-Schönau in 1937, the key speaker, Karl Frank, criticized Benes. Czech police scattered the assembly. Fifty-three Germans died in the melee and hundreds suffered injuries.

Prague authorities closed smaller German schools throughout the Sudetenland. They replaced them with Czech language institutions, often requiring German youngsters to attend. The government closed nine of Bohemia’s 19 German universities. Only 4.7 percent of state financial assistance went to German college students, although ethnic Germans comprised nearly a fourth of Czechoslovakia’s population. The government issued all public forms and applications in Czech language, even in the Sudetenland. Half the German municipal and rural officials lost their jobs, 41 percent of German postmen and 48.5 percent of railroad personnel. The Czechoslovakian government’s Land Reform Act redistributed real estate so that every rural family would receive sufficient acreage to subsist from the soil. The head of the program, Karel Viskovsky, defined the results as follows: “The soil is passing from the hands of the foreigners into the hands of the Czech people.”⁸⁰ Most went to Czech legionnaires and their families. Viskovsky auctioned off the balance to affluent Czechs and Slovaks. They purchased the properties below market value, allowing the former owners to return as tenant farmers. The Germans in Bohemia and Moravia lost 25 percent of their land to Czechs through the state-sponsored land reform. Approximately one third of the Sudetenland consisted of woodlands, of which the state took over administration. The authorities dismissed some 40,000 German forestry workers, replacing them with Czechs. By 1931, the number of ethnic German tradesmen out of work was three times that of Czechs. Relief efforts concentrated on areas with predominantly Czech populations. A study by the British Foreign Office in 1936 estimated that Czechoslovakia’s German colony - approximately 22 percent of the population - comprised 60 percent of the unemployed.⁸¹ Among the most economically distressed areas was Reichenberg, once home to a thriving glass and textile industry. Between 1922 and 1936, 153 factories there closed. Prague awarded contracts for construction and other public works projects for Reichenberg to foreign companies who brought in their own labor.

Benes described his people as “mortal enemies of the Germans.”⁸³ In May 1919, during the inauguration ceremony in Pilsen for President Tomas In 1921, Masaryk deployed Czech troops in German settlements without provocation. In Grasslitz, four miles from the frontier with Germany, protestors clashed with entering Czech military personnel.

The soldiers shot 15 Bohemian Germans dead. Under the "Law to Protect the Republic," Czech authorities arrested Sudeten Germans demanding self-determination as traitors or spies. They jailed for espionage tourists from Germany visiting Czechoslovakia for sports competitions or for ethnic festivals. Between 1923 and 1932, the state conducted 8,972 legal proceedings against dissident members of ethnic minorities. Defendants in sedition trials often included Sudeten Germans belonging to sports leagues, youth groups, singing societies, or backpacking clubs. Prague established an immense "border zone" in which lived 85 percent of all Sudeten Germans, the entire Polish and Ruthenian populations, and 95 percent of the Hungarian colony. It came under permanent martial law. The army supervised the administration of factories, major construction projects, public works, the telephone service and forestry. Military authorities limited the civil liberties of citizens in the "border zone," which comprised 56 percent of the entire country. This did not prevent Benes from lauding Czechoslovakia as a "lighthouse of democracy."

Although during the first years of Hitler's chancellorship, few among the German public were concerned with Czechoslovakia, for Hitler himself, the fate of the Sudetenland symbolized the tragedy of Germans under foreign rule. The Sudeten people waged a dogged, solitary struggle to maintain their German identity. Hitler made it his personal mission to recover the Sudetenland. He introduced the topic during the Reichstag speech on February 20, 1938: "As long as Germany was herself weak and defenseless, she had to simply accept the continuous persecution of German people along our borders. . . . The interests of the German Reich also include the protection of those fellow Germans who are unable on their own, on our very frontier, to insure their right to basic human, political and ideological freedoms."

Benes replaced the 85-year old Masaryk as president of the republic in December 1935. Only months before becoming president, Benes as foreign minister had concluded a military alliance with the Soviet Union. The pact provided for significant Czech-Russian cooperation. By the beginning of 1936, the Czechs had completed 32 air fields sited near the German frontier as bases for the rapidly expanding Red Air Force. They established depots to stockpile aviation fuel, aerial bombs and other war materiel. The Red Army stationed troops in Bohemia and Moravia to undergo parachute training for a possible airborne assault against Germany. It transferred officers to the Czechoslovakian War Ministry in Prague and to local command centers. On February 12, 1937, the London Daily Mail reported that immediately after ratification of the Prague-Moscow pact, Russian flight officers inspected Czech air bases and fuel dumps for their air force. Hence, a possible communist threat was again right at Germany's doorstep.

Prague was a converging point for Communist immigrants who had fled Germany in 1933 and Austria after the Anschluss. Sir Orme Sargent of the British Foreign Office called Czechoslovakia a "distribution center" for Stalin's Comintern propaganda against Germany.⁹¹ With France, Czechoslovakia and the USSR connected by military alliances since 1936, the Führer felt boxed in. When he re-garrisoned the Rhineland on March 7 of that year, Benes offered France the support of the Czechoslovakian army for a joint

invasion of Germany. During the months to follow, it swelled to a force of 1,453,000 men.

The Germans were undecided on how to recover the Sudetenland. In 1938, the British ambassador in Prague, Sir Basil Newton, advised the Foreign Office, "How precisely they will proceed it is impossible to prophesy, but the indications are that they will at first seek to achieve their aims by friendly diplomacy rather than by physical or economic terrorism." On May 6, British newspaper magnate Lord Harold Rothermere praised the Germans as "very patient people" in an editorial in the Daily Mail. The Austrian Anschluss encouraged the Sudeten German Party, the SdP. Under the leadership of its founder, Konrad Henlein, it had already won 44 seats in the Czechoslovakian chamber of deputies and 23 in the senate in the May 1935 elections. At an SdP assembly in Carlsbad on April 25, 1938, Henlein demanded autonomy for the ethnic German region. With 90 percent of Sudeten voters behind him, he had sufficient influence to compel the Czechs to enter negotiations. Henlein and Karl Frank had met with Hitler on March 28, but were unable to persuade the Führer to pressure the Czechs. Ribbentrop told the two guests that it was not Germany's task "to offer individual suggestions as to what demands should be made of the Czechoslovakian government." Berlin instructed the German embassy in Prague to limit support of the SdP to private talks with Czechoslovakian statesmen, "if the occasion presents itself." The allegation of post-war historians that at the meeting, Hitler ordered Henlein to impose impossible terms in order to provoke the Czechs, is without substance. The British government monitored the escalating controversy. "The plain fact is that the Sudetendeutsche are being oppressed by the Czechs," noted Vansittart. Newton sent London a detailed analysis from Prague on March 15. He predicted that as long as they can reckon with Anglo-French support in present policy. The Germans cannot be deterred from aggression if they consider it necessary. If Paris and London encourage Prague to resist compromise, war is inevitable.

England and France, Newton continued, cannot prevent Czechoslovakia from being overrun. At most they can wage war to restore a status quo that is already proving unworkable. He concluded that no German government will accept "a hostile Czechoslovakia in their flank." Having read Newton's report, the British ambassador in Berlin, Henderson, cabled his ministry on May 17, "I share unreservedly and in all respects views expressed by Mr. Newton in his telegram." The Cabinet Committee on Foreign Policy discussed Newton's analysis the following day. As its minutes record, "The Minister for Co-ordination of Defence said that he had been struck by Mr. Newton's view that Czechoslovakia's present political position was not permanently tenable and that she was in fact an unstable unit in Central Europe. If, as he believed, this truly represented the position he could see no reason why we should take any steps to maintain such a unit in being."

On March 21, the chiefs of staff submitted a report to the committee explaining that the British and French armies were too weak to go to war against Germany, Italy, and Japan in an expanding conflict over Czechoslovakia. Chamberlain and Halifax considered the military assessment "an extremely melancholy document." Halifax summarized on April

27, "Neither we nor France were equipped for a war with Germany." That month, Hitler ordered General Wilhelm Keitel, chief of the Armed Forces Supreme Command (OKW), to prepare a study on the possible invasion of Czechoslovakia. He told Keitel that he did not at present intend to invade. Guidelines Hitler furnished the OKW emphasized that he would reject any scenario proposing a "strategic surprise attack out of the clear sky without grounds or possibility of justification." The Führer described "an untenable situation for us should the major confrontation in the East... with Bolshevism ever come.... Czechoslovakia would then be the springboard for the Red Army and a landing place for its air force." While Hitler did not know that the Soviet Union already had their hands in Czechoslovakia, his foresight was correct, like already described.

On May 20, Benes called up over 150,000 military reservists to active duty, claiming that the measure was necessary because of a secret mobilization of the German armed forces. The Czech war office charged that eight to ten German divisions were marching toward the common frontier. The French military attaché in Berlin cabled his government that he saw no evidence of larger troop movements. Henderson sent two British army officers on his Berlin embassy staff on an extensive reconnaissance through the German border provinces of Saxony and Silesia. He wrote later, "They could discover no sign of unusual or significant Germany military activity, nor indeed could any of the military attachés of other foreign missions in Berlin, who were similarly engaged in scouring the country." Hitler more or less ignored Benes' provocation and took no action, military or otherwise. Journalists in Paris, Prague, London, and New York accepted Benes' spurious allegations about German troop deployments. They published stories about how the Führer had massed his divisions to bluff the Czechs into submitting to his demands. When Benes defiantly countered with his own partial mobilization, Hitler supposedly "backed down" and recalled his formations, a profound humiliation for a dictator who was "incapable of acting on his own threats." His declarations regarding the Sudetenland were "nothing but hot air." This is just one instance how the "free press" produces propaganda which fools the masses.

Halifax warned Herbert von Dirksen, the German ambassador in London, that a Czech-German war would bring France and Britain into the conflict against the Reich. The foreign secretary then composed a personal letter to Ribbentrop admonishing him of the hazards any "rash actions" would lead to for European civilization. Henderson recorded, "What Hitler could not stomach was the exultation of the press.... Every newspaper in Europe and America joined in the chorus. 'No' had been said, and Hitler had been forced to yield. The democratic powers had brought the totalitarian states to heel, etc." The British conducted partial mobilization of their fleet and the French garrisoned their fortifications along the German border, even though both knew that their Czech ally had instigated the crisis. For Hitler, threats and accusations of cowardice were his reward for the forbearance he had exercised.

The May crisis impressed Hitler with how hostile the western democracies and Czechoslovakia were toward Germany. Even the USSR had publicly reaffirmed its military obligation

to the Czechs. He concluded that a peaceful settlement of the Sudeten issue was unlikely. On May 30, he revised the earlier armed forces directive addressing potential war with the Czechs to begin with the sentence, "It is my unalterable resolve to smash Czechoslovakia through a military action in the foreseeable future." The document stressed that "preparations are to be implemented without delay."

Historians present this statement as proof of Hitler's warlike intentions. Yet just 18 days later, he revised the classified directive, deleting the sentence about the resolve to smash the Czechs. He stated instead that the "solution of the Czech question" was "the near-term objective." There is little evidence here of a clear intent to wage war. Henderson wrote Halifax, "It stands to reason that Hitler himself must equally be prepared for all eventualities. But from there to say that he has already decided on aggressive action against Czechoslovakia this autumn is, I think, untrue." The British ambassador wrote again in August, "But I do not believe he wants war." In his own memoirs, Henderson later reflected on the May crisis: "When we were thinking only that Germany was on the point of attacking the Czechs, the Germans were apprehensive lest the latter meant to provoke a European war before they themselves were ready for it."

Hitler still possessed a diplomatic trump; democracy's own arguments about human rights. The Führer publicly stated, "What the Germans insist on is the right to self-determination that every other nation also possesses. ... I demand that the oppression of the three-and-a-half million Germans in Czechoslovakia stop, and that in its place the free right to self-determination step in." This was the Achilles heel of his adversaries. Henderson confessed, "On the broadest moral grounds it was thus difficult to justify offhand the refusal of the right to self-determination to the 2,750,000 Sudetens living in solid blocks just across Germany's border. Its flat denial would have been contrary to a principle on which the British Empire itself was founded, and would consequently never have rallied to us the wholehearted support either of the British People or of that Empire." The permanent undersecretary for the Foreign Office, Alexander Cadogan, concluded that the Sudeten problem "was not an issue on which we should be on very strong ground for plunging Europe into war." But it becomes quite apparent that Britain is willing to play Europe's police force if something might happen that goes against their policy, even if their empire isn't threatened in any way.

Chamberlain assessed England's position: His country had not yet sufficiently rearmed to honor the commitment to support France in the event of war (meaning that they have to stall in order to increase their armaments first). To allow Hitler a free hand to settle accounts with Benes would have marred British esteem abroad; "We shall be despised forever," ventured Halifax's secretary, Sir Oliver Harvey. A plebiscite for the Sudetenland also had pitfalls. Prague opposed the idea because the precedent would encourage the Slovaks, Hungarians, Poles, and Ruthenians to demand one as well. Since these minorities suffered under-representation in government and from oppression, the result would likely dissolve Czechoslovakia. Daladier proposed a compromise: Czechoslovakia would cede the Sudetenland to Germany without conducting a plebiscite. In this way, the Czech

state would remain reasonably intact. Its importance to France, as Daladier explained to Chamberlain, was that "in any military operation there are wonderful possibilities for attacking Germany from Czechoslovak territory." French Aviation Minister Pierre Cot echoed this attitude with a remark quoted in London's News Chronicle of July 1, 1938. Cot stated that France and England needed Czechoslovakia, "because from this state the German economy and the German industry are most easily to be destroyed with bombs... Joint attacks of the French and Czech air forces can very quickly destroy all German production facilities."

In August, Chamberlain proposed travelling to Germany to meet with Hitler to settle the Sudeten question together. He elicited a promise from his host that Germany would take no military action during the negotiations. Czech Foreign Minister Kamil Krofta told the British and French governments that his country refused to cede the Sudetenland to Germany. London countered bluntly, "The Franco-British plan is the only means of preventing the threat of a German attack," and that if Prague rejects it, England and France will not intervene (i.e. They couldn't even if they wanted to) if Germany invades Czechoslovakia. On September 21, Benes unconditionally acquiesced to the proposal. During September, Chamberlain visited Germany three times. The first meeting with Hitler took place in Berchtesgaden on September 15. The session was cordial and constructive. Chamberlain approved Hitler's proposals for the Sudeten areas to be annexed. Halifax wrote his ambassadors, "In fact it corresponded very closely to the line we have been examining." Chamberlain spent the following week in meetings with Daladier and the Czechs to obtain their consent. In Berlin, the German monitoring station in the Reich's Ministry of Aviation eavesdropped on a telephone conversation between Benes and French Colonial Minister Georges Mandel. Undermining Daladier, Mandel told Benes, "Paris and London have no right to dictate your attitude to you. If your territory is violated, you should not wait a second to issue orders to your army to defend the homeland... If you fire the first shot in selfdefense... the cannons of France, Great Britain and also Soviet Russia will begin firing on their own." The Germans also intercepted communications between Prague and its London and Paris embassies. The Benes government had instructed them to stall for time until the "war parties" in England and in France topple Chamberlain and Daladier.

On September 22, Hitler conferred with Chamberlain at the Hotel Dreesen in Bad Godesberg. Reports of mounting unrest in the Sudetenland clouded the atmosphere. Henlein had formed an ethnic German militia, numbering nearly 40,000 men, which skirmished with Czech soldiers and police. The Czech government correspondingly implemented more repressive measures. In 14 days, 120,000 Sudeten Germans crossed into the Reich to escape the violence. Henlein appealed to Hitler to send in the German army, "to put an end to any more murders resulting from Czech fanaticism." At Bad Godesberg, the Führer demanded the right to militarily occupy the territory to be annexed in four days. He cited mounting turmoil there as justification. Chamberlain was taken aback. Bitter haggling followed. The tension pervaded the next night's conference, until an orderly

interrupted with news that Benes had just declared general mobilization. Another 1.2 million Czech reservists were returning to active duty. Hitler thereupon reassured his English guest that he would keep his promise to withhold any military response, "despite this unheard-of provocation." This relaxed the atmosphere and the discussion assumed a friendlier tone.

In the days following the conference, Chamberlain negotiated with the Czechs. British and French diplomats ultimately prevailed upon Hitler to relax his additional demands. Göring showed Henderson transcripts of the telephone dialogs between Benes and Jan Masaryk illuminating the Czech intrigues. Neither the British nor the French doubted their authenticity. At Munich on September 28, Chamberlain, Hitler, Daladier, and Mussolini finalized details of the annexation of the Sudetenland which Prague had agreed to on the 21st. Angry with Chamberlain, Jan Masaryk could only bluster, "What bad luck that this stupid, badly informed person is the English prime minister." French Foreign Minister Georges Bonnet praised Hitler for softening his Godesberg terms. The Führer also reaped an accolade in the London Times on October 2 for his concessions and for reducing military measures to "solely a symbolic partial occupation." Choosing exile in London, Benes later told an associate, "We needed a war and I did everything to bring the war on."

Once Benes was gone, Germany attempted to improve relations with Prague. There remained 378,000 ethnic Germans in portions of Bohemia-Moravia not annexed by the Reich. Hitler ordered on October 3 that this minority, while nurturing its cultural heritage, was to relinquish political activity toward autonomy or returning its lands to German sovereignty. He met with the new Czech foreign minister, Frantisek Chvalkovsky, on the 14th. Hitler urged him to help "normalize relations in a friendly way." In November, the legal department of the German Foreign Office submitted a draft for a Czech-German friendship treaty. Though Hitler postponed the matter until January 1939, the initiative indicates his interest in working with Prague. His first gesture to the new regime was a generous policy toward Czech residents of the annexed Sudetenland. There were 743,000 of them who initially came under German dominion. 260,000 Czech soldiers, civil servants and their families returned to Czech territory under orders from their government. Another 160,000 not wishing to live under German jurisdiction migrated voluntarily.

A treaty the two states ratified on November 20 permitted Czechs and Slovaks remaining in the Sudetenland to choose their citizenship. Men at least 28 years of age, together with their wives and children, received German citizenship upon request. The Reich's Government allowed people opting to remain Czechoslovak nationals to stay on as guest residents. People leaving the Sudeten territory retained ownership of private property there with the option to sell or rent it. Under the treaty's provisions, the German and Czech governments respectively could expel foreigners considered a political risk. Out of the more than 300,000 Czechs choosing to continue to live in the Sudetenland, the Germans deported just 140 "undesirable persons." Hitler exempted Czechs and Slovaks absorbed into the Reich from service in its armed forces.

The ethnic German minority residing in Prague-controlled sections of Bohemia-Moravia experienced the resentment of the Czechs after their defeat at Munich. Thousands of Germans lost their jobs. Many were unnecessarily watched by the police. The government denied them and their families unemployment benefits. Czech health insurance companies refused claims for the German university clinic in Prague. Hitler confronted Chvalkovsky on January 21, 1939, with a list of grievances resulting from what he called a lingering "Benes mentality" throughout the republic. Citing the hostile tone of the Czech press, the Führer warned that no Great Power can tolerate a smaller neighboring country representing a perpetual threat in its flank. He stressed once more the necessity of improving relations. Ribbentrop read Chvalkovsky passages from prominent Czech newspapers. One predicted, "Four months after Munich it is already clear that a war is unavoidable." Another read, "The momentary political situation will not be regarded as unchangeable and a permanent circumstance." Henderson advised Voytech Mastny, the Czech ambassador in Berlin, to urge his government to avoid abuse of its ethnic German residents.

None of the rivalries in this political constellation would matter long. The Munich Accord, engineered by the western democracies to save Czechoslovakia, was ironically her death sentence. Its precedent for selfdetermination encouraged the country's other captive minorities to follow the example of the Sudeten Germans. Most prominent among them were the Slovaks. The Czech army and militia had occupied their land in 1919. Tomas Masaryk failed to deliver on his promise of regional autonomy. Nor were Slovaks equally represented in public administration; of 8,000 civil servants in Prague's government offices, just 200 were Slovak. Hitler wished to remain neutral in the friction dividing Czechs and Slovaks. On November 19, the Reich's Foreign Office directed its mission in Prague to watch events with reserve. The German press received instructions to maintain a non-partisan attitude in reporting on tensions in Slovakia. Hitler ordered, "For the time being, no political talks with the Slovaks are opportune."

Prague lost its grip on the disaffected minorities. In October, the Slovaks and Ruthenians established regional parliaments; a right finally conceded by the central government as a step toward autonomy. Delegates used their influence and authority to steer the regions more toward independence. The new Czech president, Dr. Emil Hacha, resorted to the usual hammer methods. On March 6, he deployed troops in the Carpatho-Ukraine and appointed General Lev Prchala, their commander, minister of the interior and finance. In Slovakia, Hacha dissolved the regional parliament. He placed the capital, Pressburg, under martial law and jailed 60 Slovakian politicians. Czech soldiers and police transferred to Pressburg. Hacha faced mounting chaos and the threat of open rebellion. He appealed to Dr. Joseph Tiso, whom the Slovaks had elected their prime minister, to help restore order. On March 13, Tiso visited Berlin to ask Hitler how he would react to a Slovakian declaration of independence. The Führer replied only that he has no interest in occupying Slovakia, since the land had never belonged to the German Reich.

Tiso returned to Pressburg. He proclaimed national independence in parliament the

next day. Fearing that the Hungarian army would invade and annex Slovakia, Tiso asked for German protection. Hitler replied, "I acknowledge the receipt of your telegram and hereby assume the security of the Slovakian state." On this day, Czechoslovakia ceased to exist as a republic. The German chancellor pacified the Hungarians by allowing them to occupy the Carpatho-Ukraine. Hacha requested an audience with Hitler. He and Chvalkovsky arrived in Berlin by train the night of the 14th. Since taking office, both men had worked to improve relations with Germany. The machinations of Benes's remaining associates, the anti-German press, and a public attitude tainted by nearly 20 years of Czech chauvinism promoted by Benes had sabotaged their efforts. Prior to meeting Hitler, Hacha told Ribbentrop that he had come to "place the fate of the Czech state in the hands of the Führer."

During their subsequent conversation, Hitler told Hacha that he was sending the German army across the frontier the following day. He had ordered the OKW to prepare the operation three days earlier. The Führer advised his guests to order the Czech army not to resist: "In this case your people still have good prospects for the future. I will guarantee them autonomy far beyond what they could ever have dreamed of in the time of Austria." Hacha duly relayed instructions to his army chief, General Jan Syrový, to stand down. The German troops who entered Czech territory at 6:00 a.m. on March 15 had orders forbidding them to fire their weapons. Advanced elements of the German army occupied the Morava-Ostrava industrial complex near the Polish frontier. Warsaw was about to exploit the momentary turmoil in Czechoslovakia to militarily seize the center and hold it for Poland. Local Czech residents understood the German initiative and offered no resistance.¹³⁴ The Polish government was angry with Hitler for this rebuff of its ambitions.

The Germans mollified the initial hostility of the Czech people, largely thanks to the efforts of the Nationalsozialistische Volkswohlfahrt (NSV), Germany's national social welfare organization. In the first ten days of the occupation, it distributed RM 7,000,000 worth of food to the distressed population. The NSV freely handed out RM 5,000,000 worth of clothing. The organization concentrated on cities and industrial regions, where shortages were more likely to occur than in rural areas. The German military authorities also arranged for the prompt restocking of grocery and department stores. Relief efforts favored the Czech populace and not the remaining ethnic German colony. The army also guarded against spontaneous attempts by members of the local *Volksdeutsche Partei* (Ethnic German Party) to gain control of the economy or of public administration. The Germans entered a land with 148,000 unemployed. Demobilization of the Czech army substantially increased the number. The Reich's Ministry of Labor established offices in the Czech Protectorate - as it now became known - to recruit out-of-work persons for German industry. During the first month of the occupation, 15,000 people took advantage of the opportunity and found jobs. Over the next few months, unemployment continued to decline, and in June, the Czech government negotiated trade agreements with Norway, Holland, and several other nations to boost commerce.

The Germans entered a land with 148,000 unemployed. Demobilization of the Czech army substantially increased the number. The Reich's Ministry of Labor established offices in the Czech Protectorate - as it now became known - to recruit out-of-work persons for German industry. During the first month of the occupation, 15,000 people took advantage of the opportunity and found jobs. Over the next few months, unemployment continued to decline, and in June, the Czech government negotiated trade agreements with Norway, Holland, and several other nations to boost commerce. Their German Army Group Command 3 estimated there were roughly 140,000 German refugees and immigrants in the Sudetenland and Bohemia-Moravia who had settled there to escape National Socialist rule. The German police arrested 2,500 Communists. The assistance of the Czech police facilitated the round-up. On June 7, Hitler declared general amnesty for all Czech political prisoners in the Sudetenland and in their own country. The Germans maintained a permanent force of 5,000 police officers throughout the Protectorate to combat sabotage and Communist subversion. The Czech population experienced more autonomy, civil liberty and absence of discrimination under German hegemony than Tomas Masaryk and Benes had accorded the Sudeten German, Slovak, and Hungarian minorities during the earlier years of the republic.

The Germans confiscated most Czech army ordnance and integrated it into their own armed forces. German troops briefly entered Slovakian territory to empty Czech military depots near the frontier. The vast quantity of war materiel substantiated Hitler's protest that Czechoslovakia in a coalition with other European powers represented a threat to Germany. During the first week of the occupation, the Germans shipped 24 freight trains filled with military hardware into the Reich. They estimated 500 trains would be necessary to complete the transfer. Quartermaster General Eduard Wagner wrote his wife on March 30 that the quantity of combat ordnance discovered in this small country was "downright frightening."¹³⁹ The inventory included 1,582 aircraft, 2,175 field guns, 468 tanks, 501 anti-aircraft guns, 785 mortars, 43,856 machine guns, over a million rifles, three million artillery rounds, a considerable array of military specialty items such as bridge building equipment and searchlights, plus over a billion rifle rounds for the infantry. It consisted of up-to-date, well-designed weaponry. Modern production facilities such as the Skoda plant were expansive enough to simultaneously fill defense contracts for the USSR. Ribbentrop sent Dr. Friedrich Berber to Prague with a special research staff to peruse documents in the Czech diplomatic archives dating from March 1938 to March 1939. The team examined records "related to the English and French approach to the Czech question."

Based on an abundance of documentary evidence assessed both in Prague and a few months earlier in Vienna, Berber's analysis concluded that London had systematically intervened "in the politics of these countries" in order to "maintain their independence and weaken Germany." The records also revealed that the British "have acted in the same manner regarding Poland," the report deduced. Hitler concluded from the findings that "England wants war."

11.3 The Munich Agreement

The conference held in Munich on 29 September 1938, at which Chamberlain for Britain, Daladier for France, Mussolini for Italy and Hitler had set down the procedure for the transfer of the Sudetenland to Germany, was the consequence of the Versailles politics that could have no long-lasting existence:

1. because no state is viable which, to a large extent, comprises ethnic minorities, and which discriminates and terrorizes these minorities with all its state-approved means;
2. because in such a State, where the leadership speaks of “democracy”, “equality”, “autonomy” and the “will to mutual understanding”, but practices the exact opposite, there can be no thought of reconciliation in the field of domestic affairs;
3. because the majority in the State – the Czechs – failed to gain the friendship of a single one of the minority groups nor of any of the neighbouring countries; in fact, these minorities (principally the Slovaks) and neighbouring Poland and Hungary were even working, on their own initiative, towards the destruction of the Czech State during the crucial year of 1938;
4. because the creation of a state for purely strategic reasons as was done by the victorious World Powers³) was bound to founder, as soon as decisive strategic weights would shift in the course of time. Thus, in 1938 the following strategic aspects changed in comparison with 1919:
 - a) From a military standpoint, Germany had to be taken seriously again in 1938, while France was weakened in her internal affairs.
 - b) The Anschluss of Austria led to an almost complete geographical encirclement of Czecho-Slovakia and opened up a border for Germany which was not fortified on the Czech side.
 - c) The German West Wall (Siegfried Line), under construction since 1936, hastily accelerated after the May 1938 crisis that had been provoked by Benes, was nearing completion in September 1938 and, therefore, would frustrate any prompt assistance from France to be given to the Prague government.
 - d) The strategic importance of Czecho-Slovakia to France and Britain was dependent upon whether approximately 40 German divisions in the area of Bohemia-Moravia could be pinned down until the French army could make a successful breakthrough across the Rhine. The Anschluss, the Siegfried Line, the superiority of the German air force over the Czech air force and the secure leadership situation in Germany nullified these requirements.
 - e) The Prague government has produced during its 20-year rule such an aggravated domestic situation that the soldiers – from the ethnic minorities – could no longer be considered as reliable.
 - f) Great Britain, 1918 joint victor with France, more or less withdrew after the First World War, concentrating on her Empire, and was in 1938 not prepared to get drawn into a European war by Czecho-Slovakia; especially since it was perfectly plain for the British politicians that Stalin would exploit such a conflict for the implementation of Bolshevik world revolutionary interests.

g) France was not able in 1938 to rally any support for Czecho-Slovakia from Eastern Europe, since none of these countries was willing – and they made this very clear to Paris! – to lift a finger for the Prague government. These countries categorically refused to give any concession for Soviet troops to be passing through their territories. Poland and Rumania especially feared “that the secret intention behind Russia’s request was to recapture Bessarabia without a fight”. Poland, incidentally, was making demands herself on Czecho-Slovakia. Furthermore, Poland was also no longer in tune with France, not having got over the French- Soviet Mutual Assistance Pact of 1935/36.

“The adjoining countries were hostile or indifferent towards Czecho- Slovakia. Poland, Hungary and Yugoslavia openly declared their hostility towards the Prague government. Rumania refused to allow Russian troops to pass through her territory. Thus the conditions set forth by Russia for her intervention [in favour of Czecho-Slovakia] were not fulfilled.”

h) The military and political allies of Czecho-Slovakia – France and Great Britain – did an about-turn against their Czech protégé because of the strategic shift in the balance of power in September 1938. With this action, they thwarted E. Benes’ intentions to solve his problems of the internal affairs by means of a European war.

The creation of Czecho-Slovakia with her 49.5% minorities that never wanted to co-exist in a state ruled by the Czechs was questionable from the beginning. The British Lord Chancellor, Lord Maugham, was to declare in the Munich conference debate in the House of Lords that this state, for which one had gone to the brink of war, should never have been set up.⁸) Viscount Rothermere, director of the Ministry of Information’s press office at the time, judged similarly:

“This caricature of a country under its Czech leaders has from the moment of its birth committed almost every conceivable folly.”

The British Foreign Minister, Lord Halifax, also was to inform on 9 September 1938 his Ambassador in Paris that one had to consider carefully

“ whether it was worthwhile to make war for something that nobody can maintain and that nobody seriously wants to restore. ”

A Polish diplomat, Count Grzybowski, personal friend of the Polish Foreign Minister Beck, explained during a private conversation with his French colleague Coulondre on 26 May 1938, thus months before the Munich conference:

“ Trying to save Czecho-Slovakia is a wild dream. Sooner or later she will collapse like a house of cards.”

Even Marshal Pilsudski has, ever since 1918, considered Czecho-Slovakia to be not viable – in the same way as he considered Austria to be not viable. For him the only question was which of the two states would disappear first. The Polish Foreign Minister, Colonel Beck,

had regarded Czecho-Slovakia, "with whom one cannot engage in politics anyway", merely as an European disgrace. On 25-26 May 1938 – months before the Munich conference! – Polish diplomacy was to let the European governments know, "that Czecho-Slovakia, an arbitrary combination of words, of several exceptionally mutually hostile minorities, was a country condemned to death."

"Already at the peace negotiations after the First World War the Czech 'Memorandum 3' denied to the Sudeten Germans the right of self-determination, as they were held to be the descendants of immigrants and settlers."

A Czech historian admitted the fact as well:

"The widespread belief that without the capitulation of the Western Powers in Munich, Czecho-Slovakia could hold her own ground is not based upon facts. This is only one of the many propagandist legends which found their way into the public mind."

The antagonism towards German national traditions and culture was continually added to by the – since Versailles 1919 – existing determination of the Czechs in their drive of inflicting damage to that German entity living alongside the frontier who had resigned themselves to the newly – and against their will – created order, in a social, economical and cultural way, to spoil their feeling of belonging to this state and to force them out of the country.

"From the beginning the Czechs considered themselves to be the people who represented the state and did not think it worthwhile to try to give the two main minorities – German and Slovak – the feeling that the new state was also theirs."

F. Gause states:

"The unification of the Germans in Czecho-Slovakia was not only the result of Hitler's coming to power in 1933, but was equally as well the consequence of the conduct displayed by the Czechs in the sphere of internal development of the state. Therefore, their efforts to obtain autonomy within the state were genuine, and the situation in 1938 was self-induced by Czecho-Slovakia when all German proposals for concord were rejected."

The culture war of the Czech people was not directed against National Socialism but rather against German traditions and culture. Therefore, National Socialism could not have been responsible, especially since this fight for national identity was already begun in 1919. Many years before Hitler was politically effective the Czech newspapers had adopted the habit – in spite of national censorship – of circulating in this thoroughly unfriendly tone:

"The 'Ceske slovo' of 29 October 1920 demanded that one ought not to give equal rights to the Germans, but rather 'have them hanged from gallows and candelabras'. 'Zlata Praha' stated on the occasion of the Sokol festival in 1919 that one ought to have the Germans 'flogged' across the border. 'Vonkov' regretted on 6 January 1926 that the Sudeten Germans had not taken up arms against the Czechs after the putsch in 1918, as that would have presented the best opportunity 'for sorting things out'. The

official state newspaper 'Cesko-Slovenska' wrote in October 1921: 'The German minority in Brünn will melt away like a piece of ice in the sun and nothing can save them. To be contributing to the acceleration of this development is a self-evident duty of the Czech majority'."

At a military celebration in 1923 in Podersam a Czech speaker stated:

"We Czechs must strive to seize all industry. For as long as the last chimney stack of German factories has not... disappeared, and as long as German assets are not all in our hands, until then we must fight."

This attitude, which had as a consequence that the Sudetenland under Czech rule had the highest infant mortality and the highest suicide rate in the world, was surely not an appropriate reaction to the attention that had been given to the Czech people in the Austro-Hungarian monarchy.

Czecho-Slovakia was evaluated and viewed by Britain and France almost exclusively on the basis of a possible military deployment against Germany, not as a free state that might also at some stage have good relations with the Reich or that might at least be encouraged to adopt a reasonable line of conduct for the sake of peace in Europe. The culture war against the ethnic Germans instigated by the Czechs and the subsequent "crimes against humanity" were deliberately overlooked in the capitals of Western Europe. In France the political leadership had other interests. In 1919 the French Marshal Foch had already declared, in his capacity as principal military advisor at the Versailles peace negotiations:

"You see [looking at a map of Czecho-Slovakia], here is a great bastion. You will not give me permission to extend the frontier to the Rhine, then at least leave me this bulwark."

In his memoirs Churchill also admitted this attitude:

"The mere neutralisation of Czecho-Slovakia means the liberation of twentyfive German divisions, which will threaten the Western front; in addition to which it will open up for the triumphant Nazis the road to the Black Sea. ... The subjugation of Czecho-Slovakia robbed the Allies... of twenty-one regular, fifteen or sixteen second-line divisions..."

A historian corroborated that the old Czecho-Slovakia, allied to France and the Soviet Union, had been "a dagger pointed at Germany's heart, a hostile stronghold right inside German territory, a gate of entry of the Reichs' enemies". She was created for this purpose.

That Eduard Benes, at that time Czech Foreign Minister, was involved during the years 1918-1921 in the enforced transference of German territory to Poland is mentioned only in passing. This Benes, having advanced to President in 1935, deemed himself qualified in home affairs on the basis of his strategy in foreign affairs, as described in his memoirs:

“During all those exacting and exhausting negotiations (from 1935 onwards), I tried my utmost to steer a straight course with the Soviet Union on one side and France on the other. On June 4th 1936, after the French elections which resulted in the formation of the Government of the Popular Front, the new Premier, Léon Blum, had sent me a message that France would never again behave with such weakness as his predecessor had done at the time of the occupation of the left bank of the Rhine and assured me that his Government would be strong and firm towards Germany and that we might count on this. This was really France’s last stand. The Foreign Minister, J. Paul-Boncour, sent me a number of messages in the same strain. He tried especially to reestablish the Eastern front of the Little Entente and he also tried to win over Poland.”

It now becomes evident that the political and military co-operation between Czecho-Slovakia and a Soviet Union geared for world conquest, with the purchasing of Soviet bombers and the Soviet promise of assistance in spite of the absence of a common frontier, as well the French attempt to open up a route to Prague for the Red Army in the event of war, was to have a disastrous effect on the development in Europe.

H.E. Barnes states:

“Russia had already delivered three hundred war planes to Czecho-Slovakia, and in addition several squadrons of Soviet planes were on Czechoslovak airfields.”

Not Hitler, but Eduard Benes, had been aggravating the Sudetenland crisis more and more! The British historian A.J.P. Taylor was to confirm that “In the spring of 1938 Hitler did not see his way clearly”, but that Benes, however, was willing to settle his Sudetenland problem – “insoluble at home” – “on the international field”. The diplomatic records show that on 12 March 1938 the assurance was given by Göring to the Czechs that “Germany is not considering taking action against Czecho-Slovakia”. After the Anschluss, Hitler stated that the “solving of the Czechoslovak question was not urgent”, and there is no proof that he acted otherwise.

P.H. Nicoll states:

“It is often said that the Nazis deliberately roused up otherwise contented German minorities to imagine their grievances and make political capital for Germany out of them. The impartial investigations of Lord Runciman effectually routed this charge. Hitler had not stirred up discontent in the Sudetenland. On the contrary! German diplomats in Bohemia tried to hold back the Sudeten Germans in the face of any Czech provocation, when the excitement over the union of Austria with Germany was at its peak.”

Other politicians, on the other hand, were already examining the Czecho-Slovak question “long before Hitler had formulated his intentions”. “Not only did the British and French urge concessions on the Czechs. The British also urged Hitler (already on 10 May 1938) to make demands. This took him by surprise.”

Before the May 1938 crisis, the Reich government had on six occasions endeavoured to negotiate with Benes. He turned down the German negotiators every time. The

May crisis in 1938 was triggered off by President Benes with his order for mobilization of the Czechoslovak army. As a pretext he used rumours of alleged concentration of German troops on the Czech border. The source of these rumours were British news services, "apparently from the Foreign Office". In any case, they were originating from the same capital city whence it had just recently been put to Hitler to make demands in respect to Czecho-Slovakia "which had surprised him very much". Needless to say that these rumours and their consequence in the shape of the Czech mobilization likewise "surprised" him.

"In actual fact there is no movement of German troops – as was established beyond a doubt at the Nuremberg trials after the war. What then induced the Czech government to start these clear provocations for war? There are only two possibilities, the accuracy of which, however, can only be a matter of conjecture for now. Either the Czech government, similar to Schuschnigg with his 'plebiscite', simply took a leap forward and quite deliberately provoked a war. . . . There is the other possibility in that German resistance circles learned of the drawing up of the second survey 'Green', but not the contents. Possibly London was informed of the designing of this study – anti-Nazi circles at the highest military level were in fact giving information of the most secret military nature to the British government – and from that would have drawn the conclusion that the study was a short-term plan of attack. The British and French press is filled with alarming reports. War seems directly imminent! Henderson, the British Ambassador in Berlin, advises his civil servants to send their wives and children back home. He makes the same recommendation to the press corps. The protests continued to pour in – not against the Czech mobilization, but against the non-existent German troop movements. The governments of France and the Soviet Union openly threaten with military intervention."

In fact, mobilization signifies to be in a state of war, even today after the Second World War! Benes was upholding the mobilization even when the rumors that had been used as pretext were disproven by (neutral) foreign journalists and military attachés; the reservists would only be demobbed mid June 1938. Britain and France, in spite of Hitler's appeals, never advised the Czechs to cancel their mobilization! The Czechs, were not content with mobilization only. They were, at the same time, intensifying their military action against the inhabitants of the border zones and were also escalating their hostile press campaign with the mocking argument, Hitler's restraint and inactivity was to be taken as a sign of weakness. Therefore, as Hitler had apparently already retreated from tiny Czecho-Slovakia, how easy it should be, then, for the Great Powers to finish the Reich! Thus, this and more could be thrust at Germany without running any risk whatsoever! The press of the West collaborated and

"was praising the Czech military machine again and again for the unexpected efficiency and quickness with which it was working. We regained our confidence, seeing that we were not alone."

How provocative the moves were from Eduard Benes would also be evident in the weeks before the Munich conference in that he could not even be persuaded by the pressure ex-

erted by the Western Powers to propose a compromise solution to the Sudeten-Germans. The reason for this was that besides the Western Powers he could bring yet another “friend” into the game: Stalin.

“The Soviet government, which had declared itself ready to fulfil its commitments under the Soviet-Czech agreement, confirmed in mid-May 1938 its willingness to defend Czecho-Slovakia against any aggressor, even if France should refuse to help.” “The Soviet government approached the governments of Great Britain and France several times suggesting combined operations in support of Czecho-Slovakia. . . . The Soviet Union declared itself ready to intervene on behalf of Czecho-Slovakia, even if France were not to grant her support, which, however, had been a prerequisite for Soviet aid. . . . even if Poland or. . . Rumania should refuse to allow Soviet troops to pass through their territory. The Soviet government informed the President and the government of Czecho-Slovakia that the Soviet Union would assist Czecho-Slovakia under one condition: when Czecho-Slovakia is willing to defend herself and will ask for Soviet help.”

For the rest, this Soviet promise of aid was unconditional, i.e. independent of the legal position and of the “question of the aggressor”. According to Soviet teaching, everybody is an aggressor anyway, who has been labelled as such by the Communists, irrespective of the circumstances. Even the US Ambassador in Paris, Bullit, seemed to be getting perturbed by the crisis- and war-promoting influence of the Soviet Union on the Czech government. In a letter to President Roosevelt of 22 May 1938 he advised that the general mobilization ordered by the Czech government

“has to be understood as provoking war, which could have only one result: establishing Bolshevism on the whole continent.”

The Munich conference, which took place four months after these events, could have been avoided if President Benes had accorded to the German minorities the rights which had already been guaranteed in 1919, and if he had not let himself get carried away in continual provocations in the certitude of enjoying the support of his many and powerful and, sometimes, goading “friends”.

At that time there were 500,000 Sudeten Germans permanently unemployed, without any support from insurance benefits and without assistance from the trade union or health funds (out of 800,000 in the whole of Czecho-Slovakia); to those numbers the destitute dependants need to be added – such a state of affairs could not remain unchanged. In Czecho-Slovakia, payment of unemployment benefits was tied to membership of a trade union and would in this instance still only be paid for six months. The subsequent phase would be social welfare or the relief fund of the community. This would amount to a weekly payment (monthly in the case of money from the relief fund) of 10 Crowns for single people and 20 Crowns (one to two Reichsmark) for married people. This whole picture of misery is enlarged by the consequential result of this situation in the form of malnutrition and disease, a rising death rate and a severe decline in marriages and births. The systematic ousting of the Sudeten Germans from the economy and the

administration, even in their exclusively German spheres, remained a political concept, and as such was bound to lead to an aggravation of the situation. The 200 paragraph "Defence of the Realm Act" and its implementation decrees of 23 June 1936 supplied the "legal basis" for the elimination and weeding out of the Sudeten Germans complete with their culture and traditions. This law was embarked upon immediately by the newly elected President and thus "Commander-in-Chief of the armed forces", Eduard Benes, upon his election on 18 December 1935, and it remained one of the longest lasting corpus of law. With the aid of ambiguous phraseology concerning "national unreliability", any employee could be dismissed and any employer dispossessed, who did not suit the Prague government. Any remaining possibilities left to the Sudeten Germans for eking out a living, which had not been covered by this last regulation, were eliminated by the "borderland" rule. The refusal to exert any political influence on these entire happenings, the flight of more than 214,000 Sudeten Germans across the border to Germany, the slaying of 200 Sudeten Germans and much suffering were bound to bring the situation, without any influence from Hitler, continually to a head. Every foreign visitor, who was travelling in those parts at that time, was agreed that this state of affairs was intolerable. Lord Runciman, the British government's special Envoy, who stayed in Czecho-Slovakia from 25 July until mid-September 1938 to investigate the situation on the spot, was just one amongst many.

Hitler had not demanded the Munich conference in the context of an ultimatum. It had been likewise proposed by other powers and justified on the grounds of a common European interest. In this connection, the role of US President Roosevelt is, more often than not, misjudged. Yet it was he who, on 26 September 1938, was urging Chamberlain, Daladier, Hitler and Benes in pertinent communications to call an international conference in order to solve the Sudeten question. Since Roosevelt took many of his decisions in secret, without consultation or counselling from anyone in his Cabinet, and since the US State Department documents on the Munich conference are, to a large extent, still unavailable, one can only guess at Roosevelt's motives.

"Meanwhile we have some clues, all of which point in the same direction, namely, that Mr. Roosevelt did not regard Munich as any final settlement with Hitler but believed that it might lead to war at no distant period. Hence, he continued his plans for a vast armament program, with emphasis on airplanes, which would help to provide Britain and France with the sinews of war and make the United States ready for possible involvement in the impending struggle."

Roosevelt knew, or should have known, what was about to be negotiated at the Munich conference. But in spite of this knowledge he did not encourage Britain and France to support the status quo in Czecho-Slovakia. He favoured the Franco-British decision for a transfer of the Sudetenland to the German Reich (messages from Roosevelt of 26 September). Shortly after the ratification of this decision (29 September), his manoeuvres were such "that Chamberlain was made generally responsible for the whole disgrace". At the same time he encouraged London, Paris, but also Warsaw

“... to take a stand relative to Germany that was likely, if not sure, to bring war...”

The backdrop to this stand had been, in the main, correctly perceived by the Polish Ambassador in Washington, Jerzy Potocki, even though the threads which Roosevelt had personally woven for the Munich conference, remained hidden from him. On 12 January 1939, Potocki wrote to the Foreign Minister:

“I can only add that, as an astute politician and expert on American mentality, he [President Roosevelt] has succeeded in quickly and adroitly diverting public opinion from the true domestic situation and interesting that opinion in foreign policy. The ‘modus operandi’ was perfectly simple. All Roosevelt had to do was to stage correctly, on the one hand, the menace of world-war brought about by Chancellor Hitler, while on the other hand, a bogey had to be found that would gabble about an attack on the U.S.A. by the totalitarian countries. The Munich Pact was indeed a godsend to President Roosevelt. He lost no opportunity in translating it as France’s and England’s capitulation to bellicose German militarism. As people say in this country: Hitler drew a gun on Chamberlain. In other words, France and England had no choice and had to conclude a most shameful peace.”

But France and Britain refused to be drawn into a conflict over Czecho-Slovakia by Benes or Roosevelt. Chamberlain, who liked to call Czecho-Slovakia “a faraway country” and the Czechs “people of whom we know nothing”,

“believed also that the country ‘would not have followed us if we had tried to lead it into war to prevent a minority from obtaining autonomy, or even from choosing to pass under some other government’.”

The actions of the British government before Munich were not dictated by fear of war, but rather because of a “belief that Germany had a moral right to the Sudeten German territories”. Chamberlain himself had already stated in May 1938:

“ that not even a victorious peace would restore their [Czech] present frontiers.”

The Western Powers induced the Czechs on 19 September 1938 to cede the Sudeten German territories to the Reich. Hitler had neither been consulted about this decision nor about talks with the Prague government. Czecho-Slovakia had already capitulated in the face of the Anglo-French intervention eight days prior to the Munich accords and was not, as it is still commonly depicted to this day, destroyed by “Munich”. So it was that Chamberlain and Daladier flew to Munich with precise instructions from their Cabinets and with an agreement already accepted by the Czechs. At Munich it was merely a question of sorting out the agreement. Word-for- word, this is what the agreement states:

“Germany, the United Kingdom, France and Italy, taking into consideration the agreement, which has been already reached in principle for the cession to Germany of the Sudeten German territory, have agreed on the following terms and conditions governing the said cession and the measures consequent thereon...”

Neville Chamberlain explained in the ensuing, quite extended debates in the House of Commons at the beginning of October 1938:

“We did not go [to Munich] to decide whether the predominantly German areas in the Sudetenland should be passed over to the German Reich. That had been decided already.”

The conservative member Raikes, stated to the House:

“Do not forget that the Czechs annexed the German areas before the Treaty of Versailles accepted it. Honorable Members talk about time limits, but I would remind the House that it took the Czechs twenty years before rights were conferred on the Sudeten Germans.”

Sir H. Croft remarked on the same occasion:

“The Labour Party and the Liberal Party at the time of the treaty were most emphatic against the whole of this patchwork-quilt of Czecho-Slovakia.”

The fact that Chamberlain flew to Munich and not Hitler to London cannot be interpreted as a ‘dictate’ by Hitler. While Hitler was justifiably concerned that hostile demonstrations might ruin the chances of a successful outcome of a conference, so it fitted Chamberlain’s policy to come to Germany, as he wrote in a private letter on 13 September 1938:

“Indeed it would not have suited me [if Hitler had come to London], for it would have deprived my coup of much of its dramatic force.”

Chamberlain declared in his important speech in Birmingham on 17 March 1939:

“Not one voice of criticism was to be heard when I first announced that I would go to Munich. Everybody applauded that experiment.”

During that same speech he added:

“It [the ceding of the Sudetenland to Germany] was something in existence ever since the Treaty of Versailles, a problem that could have been solved long ago if the statesmen of the previous 20 years had only had a more generous, more extensive and more enlightened attitude towards their duties. It had become like a long neglected malady, and a surgical operation was necessary to save the life of the patient.”

It seems incredible that from October 1938 onwards there appears a persistent fondness for describing the Munich conference as a prime example of the “cynical power politics of dictators in relation to the peace-loving and fair-acting democracies”. By considering the facts it is absurd to maintain that in the discussions Hitler had “taken by surprise”, “humiliated” or suchlike his opposite number at the talks, a claim that in fact was never made by the two Western heads of government themselves. After the signing of the Munich agreement the two Western statesmen were not only wildly acclaimed in Paris and London by the population (as indeed also in Munich), but also the respective parliaments expressed their approval by an overwhelming majority.

Therefore, one cannot assert afterwards, as Chamberlain did on 17 March 1939 at Birmingham, that Hitler had sprung upon the world with the Sudeten question “an unpleasant surprise” which “shocked and affronted public opinion throughout the world.” The “offending surprise” is to be charged exclusively to the Versailles “peace politicians”, as indeed was confirmed by Chamberlain and Daladier with their signatures in Munich. After all, anything associated with the name “Versailles” after the First World War, was far more than “an offending surprise”! There would not have been a Munich conference, had it not been for the victors’ practice of transgressing against all equality and justice for the past twenty years. The “peaceable methods” of diplomacy had been tried and tested for the resolution of the hair-raising state of affairs in Eastern Europe by the various German politicians for twenty years – all without success. So it is hardly surprising, when after twenty years of patience the manner of amicably asking and complaining is being gradually changed in order to deal with these urgent matters of concern. Without a doubt, the yielding at this late stage was only attained through the notion of an impending war which however, should not be placed solely on Hitler’s shoulders, because the one who was calling for war and who caused the tension to intensify into the threat of war was Eduard Benes! To this should be added certain circles in the “Western democracies” as well as the Soviet leadership!

11.4 Prague

The “brutal violation of little, defenceless Czecho-Slovakia” – a statement that was given as reason for concluding that Hitler had broken his promise and was also in breach of trust – was another example of the falsehood which was unceasingly pounded into the masses by the opinion-makers of the press. The incorporation of Bohemia and Moravia into the Reich had equally as little to do with the realization of territorial claims as it had with a plan of attack, a “plot against peace”, or the “creation of a platform for the encirclement of Poland and for a breakthrough to the Black Sea”. This action arose from the inevitable consequence and the interplay of various historical, ethnographic, political and military factors.

The disintegration of this multi-cultural creation, joined together in total disregard of historical and national principles, happened without any German help and would already have come about in 1918 had not Russia and Germany been utterly and totally destroyed. Who in the world is aware nowadays that there were in existence – just to give an example of the diverse tension-producing elements in this State – in Czecho-Slovakia, apart from the different languages of all the minority groups, even two national anthems, one for the Czechs and one for the Slovaks? Poland and Hungary were asserting territorial claims and Carpatho- Ukrainians were demanding their independence. The People’s Party of Hlinka was already insisting strongly at Whitsun 1938 (30 May) – months before the new Sudeten solution! – actually on the occasion of the twentieth anniversary of the Pittsburgh agreement, on autonomy for the Slovaks. The Pittsburgh agreement of 31

May 1918 had been negotiated during the First World War by Tomas G. Masaryk, who was to become the first president of the Czecho-Slovak Republic, and a group of Slovakian emigrants to the United States. It was the "Pittsburgh Post" that announced then to the world the founding of this Czecho-Slovakia.

"Professor T.G. Masaryk was the only representative of the smallest Czech party – the so-called Progressives – in the Vienna parliament. He was in no way entitled to speak in the name of the Czech nation. During the war his conduct was sharply criticised abroad and in Bohemia... The Czech people by no means echoed Masaryk's battle-cry: 'Destroy Austria!' "

The Slovaks for their part were insisting from the beginning that the "Slovakian League in America" did not have the authority to consider themselves as the executor for the Slovak people.²⁾ At any rate, there is – out of consideration for Woodrow Wilson alone, on whose approval the whole project depended in 1918 – in the agreement an assurance given for a cultural special position for the Slovaks, i.e. independence in cultural matters. In addition it was set forth that the elected representatives of the Slovakian people should, within the next ten years at the latest, be given the opportunity to decide for themselves on the future of Slovakia. The Pittsburgh treaty had placed the government, or rather the parliament, of the planned state under the obligation to incorporate this fact in the constitution and to organize on federal lines the state that was to be established. Already in 1919 the Pittsburgh agreement was broken when the so-called Revolutionary National Assembly that was not made up of lawfully elected representatives of the people but was rather arbitrarily put together – and where Slovaks were actually represented by Czech delegates – approved a constitution of the Czecho-Slovakian Republic which did not respect fundamental clauses of the Pittsburgh accord. Since the Allied Powers were not lifting a finger for the rights of the Slovaks as laid down in the Pittsburgh agreement, so over the years a constantly growing tension which was already exacerbated by the leadership in Prague, was building up between the Czechs and the Slovaks.

As all the posited demands made on the occasion of the twentieth anniversary of the Pittsburgh agreement had been denied, all Slovakian members of parliament, with the exception of the Communists and Social Democrats – there was neither pressure nor encouragement from Hitler – on the 6 October 1938 were requesting autonomy once again. This did not come about, first and foremost, as a reaction to the policies of the German Reich, but rather because of the Pittsburgh agreement and its violation by the Czechs.

For twenty long years the Czechs have flouted their commitments. On the basis of the parliamentary decision of 6 October 1938, Dr. Tiso had formed on the 7 October 1938 an autonomous Slovakian government in Pressburg which was recognized by the Prague Cabinet, the Munich accord still fresh in their minds. Immediately after, on 9 October 1938, the Carpatho-Ukraine likewise organized in Ushchorod an autonomous government under Brody, which was also accepted by Prague. The two Prime Ministers of both nationalities were sworn in on the constitution of the State in Prague, having now become

a Federal Republic. On the 22 November 1938 a formal constitutional amendment in Prague – the Slovak Autonomy Law – came into force. Although its provisions did not satisfy the hopes of the Slovakian people, it was, nevertheless, a further milestone along the route of an internal political development where sections of the population were agitating for independence. With the help of this Autonomy Law a provincial Slovak government was envisaged: It would have administrative and executive powers, i.e. a Slovak Diet (parliament) with wide legislative authority, but certain subjects of common interest would be reserved for the central government in Prague.

Hitler had, at first, even encouraged Czech opposition to the impatience of the Slovakian people and also to the Hungarian territorial claims after the Munich conference. For example, he had endeavoured still in February 1939 to impede the Slovakian struggle for independence (There were still 113,000 Germans in Slovakia). Yet, Hitler could not resolve the fundamental differences in these two peoples. By invoking the Slovak Autonomy Law the Slovaks were demanding, in the spring of 1939, the right to have a say in the allocation of taxes, the right to self-administration and to be given a voice deciding the leadership of the Czecho- Slovakian armed forces. The Czechs turned down these demands, and the Slovaks remained second class citizens in their own country, although they were now able, in contrast to previous times, to intensify their actions for independence. While the British Ambassador in Prague, Newton, had already reported on 6 March 1939 that “relations between Czechs and Slovaks to be ‘heading for a crisis’”, so the “Foreign Office Memorandum on the Position of His Majesty’s Government in connection with possible Developments of the Slovak Crisis” of 13 March referred to “The position in Slovakia” as “thoroughly unsatisfactory since Munich”. It conveyed the expectancy that in view of the German press reports on Czech acts of terrorism Hitler may be marching upon Prague, and it stated in these actual words:

“Until very recently there were no signs of German intervention on the lines of (b)... [b = deliberate disintegration of the Czechoslovak state by Germany.] Both the official Czech broadcast and Dr. Chvalkowsky maintained that there was no evidence that such propaganda had been inspired from the Reich or by the German minority in Czecho-Slovakia... The most likely development of the present situation would therefore seem to be a Slovakia either nominally independent or bound by even looser federal ties than at present to Prague and dominated in either event by German influence.”

The Prague crisis intensified to such an extent that the British Ambassador in Berlin, Henderson, recommended, on his own authority, to the Czech Envoy, Mastny, to have their Foreign Minister Chvalkowski come to Berlin.

A.J.P. Taylor states:

“He [Hitler] acted only when events had already destroyed the settlement of Munich.”

There had been no encouragement from Hitler to induce Poland to incorporate the Olsa territory that included the town of Teschen, where part of the population was German. Further, he had not ordered provincial parliamentary elections in Slovakia and Carpatho-

Ukraine and did not pre-determine their result. The population there had voted 98% and 92.4% respectively in favour of setting up an autonomous government and against centralism from Prague. Furthermore, no fault attaches to Hitler for the fact that for the Czechs, after the annexation of Austria and the breaking away of Slovakia, there remained a frontier area of only 50 kilometres bordering the outside world which, actually in this case, was a far from friendly Poland. Hitler had not summoned the Slovak leader, Prof. Tuka, to Berlin. More accurately, he came on his own initiative on 12 February 1939 because, in his opinion, "continued co-existence with the Czechs had become impossible for the Slovaks". He was laying the destiny of his people into "your hands, my Führer (he addressed Hitler as 'My Führer'); my people await their complete liberation by you" (9). In spite of the request for German protection, Hitler was still refusing, in this month before the crisis, to advocate an independent Slovak state.

"Hitler answers evasively. He wants on no account to tie himself down and he fears that an official German intervention in favour of the Slovaks could do harm to the newly reached German-French agreement. Hitler ... merely assures that he will, if Slovakia should become independent, guarantee the independence that the people want."

The improper dissolving of the Ruthenian government on 6 March and the equally unconstitutional removal from office of the Slovakian Prime Minister Tiso and two of his staff, as well as the arrest of several Slovakian politicians and the appointment of the Sidor government by the Prague powers-that-be, all took place on the 9 and 13 March without any help from Hitler. K. Zentner writes:

"The Czech actions have taken everyone in Germany totally by surprise. Hitler is in Vienna attending the celebration of the anniversary of the Anschluss, Göring is on holiday in San Remo.... Hitler's anger at the repeated provocation – for this is how he perceives the Czech conduct – knows no bounds. He immediately orders to prepare for an invasion of Czecho-Slovakia."

If Dr. Tiso, after these happenings in Slovakia, should be asking for a consultation with Hitler and if, subsequently, he should have the Slovak Diet declare unanimously the independence of the State, then the Reich Chancellor cannot be held responsible for this development. Similarly, there is no ground for assuming that Hitler had caused or requested the declaration of independence of the Carpatho- Ukrainian government on the 14 March 1939 or their appeal for protection to the Reich. Nor had Hitler advised, much less ordered, the Hungarians, even before the German occupation, as a trigger – so to speak – for further radical changes in that area (Poland was interested in Mährisch-Ostrau and had already early on concentrated military reinforcement on the border), to invade Carpatho-Ukraine – on the 14 March 1939. Winston Churchill was to admit that the Hungarian troops advancing into the eastern province of Czecho-Slovakia (Carpatho-Russia) were secretly being supported by Poland – not Germany! – and that the Polish Foreign Minister had stated publicly in Warsaw on 14 March 1939,

"that his Government had full sympathy with the aspirations of the Slovaks."

The Polish government was the first to say openly that the dissolution of Czecho-Slovakia was inevitable. In stark contrast to Hitler, Colonel Beck, who liked to call Czecho-Slovakia a “temporary arrangement” and “a caricature of a state”, set to work after the Munich conference towards achieving the further disintegration of this state, a common Polish-Hungarian frontier and the acquisition of Slovakian areas of territory and of Czech industrial areas by resorting to “extremely strong . . . pressure”, “if necessary, by force.” G. Bonnet writes:

“Even more so, Poland was of the opinion that Czecho-Slovakia had to disappear in the near future, and she was preparing herself to take a part of the legacy. I for my part spoke with the Polish Ambassador in Paris, Lukasiewicz, on this very subject on 25 May 1938 and requested that he urge his government to put itself willingly on the side of the Great Powers that defended Czecho-Slovakia. Lukasiewicz answered that Czecho-Slovakia was a state arbitrarily composed of numerous minorities decidedly hostile towards one other, a country condemned to death. To try, in spite of all, to preserve it would be a grave error on the part of France and Great Britain.”

The Czech President Eduard Benes had already on 21 September 1938, in his response to the British-French plan – not being aware of the constitutional amendments towards federative alignment of Czecho-Slovakia that were to follow later – stressed:

“In the opinion of the Government, acceptance of a proposal of this kind would be tantamount to acquiescence in the complete mutilation of the State in every respect; from an economic point of view and from that of transport, Czecho-Slovakia would be completely paralysed, and from the strategic point of view she would find herself in an extremely difficult situation; and especially, she would sooner or later fall under the absolute influence of Germany.”

No one can seriously maintain that all small states in Europe – here we are discussing Hungary and Poland – had been “vassals of Hitler”. Winston Churchill was also surprised at the Polish attitude which did not suit his plans:

“We see them [the Poles] hurrying, while the might of Germany glowered up against them, to grasp their share of the pillage and ruin of Czecho-Slovakia. During the crisis the door was shut in the face of the British and French Ambassadors, who were denied even access to the Foreign Secretary of the Polish State. It is a mystery and tragedy of European history that a people capable of every heroic virtue, gifted, valiant, charming, as individuals, should repeatedly show such inveterate faults in almost every aspect of their governmental life. . . . The Hungarians had also been on the fringe of the Munich discussions. Horthy had visited Germany at the end of August, 1938, but Hitler had been very reserved in his attitude.”

The Czech order of 23 September 1938, for general mobilization and the planning – highly dangerous and menacing for Germany – on the part of the Soviet Union and France for a ‘mother-ship’ base, depositing war planes on Czech airfields, were not, on the whole, made inoperative after the Munich conference. Winston Churchill in a speech

from Speech on 14 March 1938 in the House of Commons:

“No doubt they [the Czechs] are only a small democratic State, no doubt they have an army only two or three times as large as ours, no doubt they have a munitions supply only three times as great as that of Italy...”

For Winston Churchill, this was but harmless number games. But for Germany it was deadly reality. Even more so, as in every looming crisis situation Czecho- Slovakia and her military ally, the Soviet Union, plus France, would have formed a common front against Germany. The Soviet-Czechoslovak mutual assistance made aware of the diplomatic activities that were undertaken on a broad scale against Germany, when he became mindful of the policy of stirring up rumours to plant in the public mind, when he was to find out about the British armament, about the forecast of a German-Polish break-up, the intimidation of Italy, the disdain shown for the German attempts towards peace and of the rejection of the new disarmament proposals – only then did he decide to support the Slovaks rather than the Czechs. P.H. Nicoll writes:

“In leader articles that were given a big spread in the British press the assertion was made that Hitler had broken his promise, made at the Sportpalast in Berlin on 26 September 1938, not to make any further territorial claims in Europe. It was declared that he had not kept his previously given word and, subsequently, he was no longer to be trusted. No mention was made, however, about Chamberlain going back on his word that he had given to Hitler on 30 September 1938, with regard to the British-German friendship declaration, when he was informing Mussolini during the period of 11 and 14 January 1939, that he was considering using military action against Hitler – weeks before Hitler took any steps against Czecho-Slovakia.”

In spite of this British activity immediately after “Munich”, matters might still have developed differently, had not the Czechs continued oppressing their minorities in the accustomed manner as practised since 1919, and had the Poles not caused a change in conditions by delivering one ultimatum after another to Prague. The Slovaks did not have the protection of the German troops imposed upon them, and because of that had forced their independence, but Tiso, the Prime Minister of the autonomous Slovakian government, was of the opinion that Slovak independence was only then guaranteed, when the unwarranted territorial and political demands of the Poles, Hungarians and Czechs could be effectively opposed.

The “No” of the Polish government in reply to the German negotiation proposals regarding Danzig and the Corridor through West Prussia also accelerated events in Czecho-Slovakia, if indeed it did not trigger them. The Polish “No” was becoming, from January, February and March of 1939 onwards, ever more determined, and it was accompanied by the combined actions of mobilization and of oppression of the German element – in the Olsa region already since October 1938 – as well as ever more unrestrained journalistic endeavours. The British Prime Minister, Neville Chamberlain, declared on the morning of 16 March 1939 in the House of Commons:

“With that [the breaking up of Czecho-Slovakia from the inside], a situation has ceased to exist which His Majesty’s government has always regarded as temporary.”

With that statement, Chamberlain confirmed that the British leadership also, since the Munich conference, had not rated the chances of a long life very high for the remainder of the Czech State. There is no evidence for it that Hitler had prepared this march on Prague with long-term and precise planning, which might possibly have warranted the British steps taken since October 1938. The Czech Foreign Minister Chvalkowsky stated in a document of 21 January 1939 that was accepted by the Inter-allied Military Tribunal in Nuremberg 1945-1946

“that he [Hitler] had strictly fulfilled the promise made on 14 October 1938, although under very trying circumstances.”

After all, it goes without saying, that this hotbed of unrest called Czecho- Slovakia in the year 1939 – without Hitler’s help – could easily have sparked off a war and in any case, that by re-arranging affairs in this way the shedding of blood in the heartland of Europe, which might not have remained limited to local areas only, was averted. There is plentiful evidence showing that the Czechoslovak state, especially while continuing with their present policy, after the separation of the Sudetenland was, in the long term, no longer able to exist. President Benes told the French and the British Ambassador on 19 September 1938:

“The Anglo-French plan of 19 September 1938 [cession of territories with more than 50% German population] signifies the crippling of the state, economic paralysis, strategically the handing over to Germany and complete subjugation to Germany in the near future.”

British and French documents, also recognized as genuine by the IMT (International Military Trial at Nuremberg), also make it clear:

“In Slovakia the long-anticipated crisis came on 10 March 1939.”

Only after the dismissal of the Slovakian ministers, that is, after the Prague-triggered crisis, are there references appearing in those documents to a German action – reaction, in this case, would be more appropriate – and not before. This, though, irrespective of the fact that the Slovak independence leader, Prof. Tuka, had already in February 1939 turned to Hitler with the appeal for the liberation of his country from Czech rule. Winston Churchill stated after the re-integration of the Sudetenland into Germany:

“I venture to think that in future the Czechoslovak State cannot be maintained as an independent entity. . . Perhaps they [Czecho-Slovakia] may join it [the Nazi regime] in despair or in revenge.”

The territorial demands of Poland and Hungary and the efforts by the Slovaks and Carpatho-Ukrainians to attain independence marked the start of the realization of the Churchill forecast. The state dissolved in such a way that Neville Chamberlain, on 14 March 1939, that is one whole day before the German march on Prague, could state in

the House of Commons that no unprovoked aggression on Czecho-Slovakia had taken place by Germany. P.H. Nicoll writes:

“Chamberlain, as well as Sir John Simon, stated that the Slovakian and Ruthenian independence movements, which they had no intention of weakening or suppressing, signalled the demise of the Czech state. Consequently, protection of the Czech borders had become unnecessary.”

The British Ambassador in Berlin, Neville Henderson, who was in favour of appeasement and, because of that, had been put under considerable pressure in Britain after the outbreak of war, wrote about this in his memoirs, published in London in 1941:

“Unfortunately the Czechs were incredibly short-sighted: they were domineering in their treatment of the Slovaks, and the separatists among the latter were no less blindly disloyal in their attitude towards the Czechs. It was obvious that the controversy which had arisen between them was exposing both equally to German influence, and during the week which preceded the occupation of Prague I did my utmost to persuade the Czech Minister at Berlin to use all his influence with his Government to induce it to lose no time in settling its dispute with the Slovaks and in withdrawing its troops from Bratislava before it was too late....”

The Czech President, Dr. Hacha, travelled to Berlin on the 14 March 1939 – of his own free will and at his own request. P.H. Nicoll further writes:

“The break away by Slovakia and Ruthenia was to lead to a grave crisis in Prague, and Sir Basil Newton, the British Envoy in Czecho-Slovakia, advised President Hacha that it would be best to travel to Berlin to discuss the situation with Hitler.”

In any case, it was not Hitler who “brought things to a head”.⁴⁰) With prior approval from his Cabinet, Dr. Hacha set out for his journey to Berlin in order to avert chaos breaking out in Bohemia and Moravia, which was threatening to erupt unless the Reich government intervened, following the declaration of independence by the Slovakian Diet on 14 March 1939. Dr. Hacha, who had been forbidden to make the journey by air because of his heart trouble and had left Prague by special train,

“ was received with full military honours due to a visiting head of state: The guard of honour was presenting arms at the station to the sound of the Czech and German national anthems ringing out. At the Reichskanzlei (Reich Chancellery) the ‘Leibstandarte Adolf Hitler’ (special body-guard for the Führer) stands to attention, the band of the ‘Leibstandarte’ is playing the Präsentiermarsch, while Dr. Hacha inspects the guard of honour.”

Already on the way from the station to his quarters at the Hotel Adlon, Dr. Hacha was telling State Secretary Meissner ‘in excited tones’,

“that he had, in view of the now intolerable situation in his country, come to the decision to ask the Führer and Chancellor of the Reich for help and protection, and he was hoping that he might find him willing to establish a common political ground.”

There is no international principle which entitles foreign governments to scream blue murder when a freely elected and confirmed president, who is congratulated by his predecessor, Eduard Benes,⁴⁴) voluntarily transfers the sovereignty of his state to a superior power as his country is in a hopeless situation. Although much tragedy and explosive material might be embodied in such an act as Dr. Hacha's, so there are often varied factors that cannot be put down to the "malicious" intention of one solitary man which make it necessary every now and then to have to take decisions of this magnitude. Deserted by the minorities (even without the Sudeten Germans there still remained 3.5 million people in a state of 7 million Czechs), as well as by her big friends Britain, France and the USSR, threatened by Hungary and Poland, economically without protection and militarily helpless, Prague was no longer in control of the situation.

The fact, that after the Munich conference, the Hungarian government, as well as Dr. Tiso for the Slovaks and Dr. Hacha for the Czechs, had consulted Hitler and Mussolini rather than the four Great Powers of Munich, in order to have the Hungarian territorial claims adjudicated by an impartial arbiter, cannot be laid to Hitler's charge. During the negotiations, resulting in the "Vienna arbitration award" of 2 November 1938, Germany was lending her decisive support to the Czechs, which is all the more remarkable as the Czechs had been living for two full decades – in fact, right up to the time of the recent arrangement – at daggers drawn with the Reich, while the Reich, on the other hand, was allied in friendship to Hungary. Furthermore is this Vienna arbitral award additional proof that Hitler had not been making long-term plans, or that he had "intended" anyway, to smash or eliminate Czecho-Slovakia. If that had been the objective, then there would not have been a more favourable opportunity as when he was presented with this request at the conference in Vienna.

That Hitler, in view of Dr. Hacha's deliberate Berlin visit, intervened actively in these changes that were taking place in the Czech sphere, one may find regrettable. To pass judgment on this in the name of humanitarianism, of peace and in the name of a generally binding system of values arising from occidental ethics, could prove extremely difficult. Those Powers, however, who considered it appropriate to compel 3.5 million Germans against their will to have to live within a state of 7 million Czechs, and who themselves had appropriated, with varying degrees of violence, colonial territories and protectorates all over the world with the intention of keeping them forever, are then most emphatically not in a position to protest, when later on the Czech government felt induced to endorse the policy of becoming integrated into a state federation with 75 million Germans, while retaining their autonomy. If Hitler had remained inactive, then his passivity would have made a peaceable impression, but the results would probably have proved disastrous for peace in this area and for the security of the Reich, because other powers would have exploited these changes and, without question, would have increased the belligerent atmosphere in Europe – in fact, against the intention of the Czech government.

The Czech national identity was not in any way demeaned by the Reich and cultural autonomy and economic prosperity throughout the war was ensured, no Czech was con-

scripted for military service, and the entry and settlement in Bohemia required a special permit. Thus did Hitler “violate” a country that had been part of the Reich for 1,000 years, where in the centre was to be found the oldest and one of the most outstanding German universities, yes, whose capital city Prague had been, for more than fifty years during the Middle Ages, the capital of the Reich. What the Czechs had never granted the Sudeten Germans – autonomy, being in charge of their own national, cultural and economic life and exemption from military service – this was offered by Hitler to the protectorate.

11.5 American Affairs

American Press Opinion Relative to the Rhineland

In the United States the news of the Nazi occupation of the Rhineland evoked nationwide interest. The Baltimore Sun and the Louisville Courier-Journal were suspicious of Hitler’s proposals, and the San Francisco Chronicle was confident that anything that emanated from Hitler was counterfeit: “The world does not trust him at all.” The Oklahoma City Daily Oklahoman feared that a general European war was imminent. After this Hitler coup, war would “ensue inevitably.” The Emporia Gazette shared this view: “The danger of a European war draws nearer.” The Portland Morning Oregonian refused to be frightened by the specter of war, and the Hearst press put on a similar brave front. The 5th Louis Post-Dispatch was inclined to look with favor upon Hitler’s peace proposals: it was high time for a New Deal in Europe. The Omaha World-Herald expressed a similar opinion: “One can only wait and see—and hope. Hitler presents the possibility that he may become the post-war peacemaker... . The Versailles Treaty could well be sacrificed for such positive gains.” The Cincinnati Enquirer went so far as to defend Hitler’s bold move into the Rhineland: “Great Britain and France, not to mention Russia, Japan and the United States are at work building unprecedentedly great military machines. . . . The Powers, therefore, have no logical objection to Chancellor Hitler’s newest move into the Rhineland.”

Points of Friction along the Economic Front

This rising tide of American dislike for Nazi Germany was not contained within strong dykes of mutual economic interest. The foreign commerce between Germany and the United States was seriously affected by different theories of international trade. Under the terms of the Trade Agreements Act of 1934, Secretary Hull pushed a program which emphasized the principle of equality of treatment as the basis of commercial relations. He was insistent that the idea of equality should not be defeated by the imposition on the part of other nations of exchange controls, government monopolies, and quotas. He was particularly opposed to barter deals. In 1934, President Roosevelt named George N.

Peck to the Office of Foreign Trade Adviser, and Peck lost no time in negotiating with Germany a barter agreement whereby the Nazi Government would buy 800,000 bales of American cotton through the facilities of the Export-Import Bank. Payment for this cotton would be arranged so that one-fourth of the price would be paid in American dollars and three-fourths in German currency plus a premium of 22.5 per cent. The banks would sell this currency to American importers of German goods who could use it for their purchases.

Secretary Hull voiced vehement opposition to this barter deal and was able to secure not only its defeat but also the abolition of the Office of Foreign Trade Adviser. Needless to say, this action was a blow to everyone who had hoped that the development of economic ties with Germany might lead to better political relations. The difficulties of 1934 expanded into further friction in 1936. Under the terms of a ruling by the Attorney General, the German plan for subsidizing exports was classified as a discriminatory trade practice. The Treasury Department then applied the antibounty provisions of the Tariff Act of 1930 with countervailing duties ranging from 22 to 56 per cent on about a dozen German commodities. The German Government at once sent a group of experts to Washington in an effort to obtain the removal of these high duties.⁵¹ Failing in this endeavor, it then tried to conciliate the Treasury Department by issuing a decree which forbade the use of Aski marks and barter deals in German-American trade. The Treasury Department refused to look with favor upon these gestures of accommodation. Instead, it struck another blow at German-American trade by instructing American consular officials in Germany to require that every invoice of exported German goods should be accompanied by a complete declaration of "any benefits or privileges, including marks subject to special exchange" which had been extended to the shipper by his government. Since under German law the revelation of business secrets to foreigners was strictly forbidden, the new regulation by the Treasury Department was highly effective in depressing the volume of trade between the Reich and the United States.⁵² On August 13 the German Government announced that subsidies on exports to the United States would be discontinued. The Treasury Department cautiously replied that the countervailing duties would be revoked when satisfactory assurances were received that German exports actually did not receive any artificial stimulation. To conserve the small volume of trade that continued despite all these difficulties, the Continental Export and Import Company was established to act as a clearinghouse for German-American commercial exchanges. Exporters of American raw materials were brought into contact with American importers of German goods, and a balance was struck between the respective debits and credits. It was a condition of trade upon weak crutches with the probability that either might slip or break at any moment.

Secretary Ickes Widens the Breach between the United States and Germany

In the early months of 1937 the Department of Commerce became deeply interested in promoting commercial travel by airships. This type of travel had been developed to a point of high efficiency by German scientists, with the Hindenburg as the test dirigible. On February 2, 1937, Colonel Johnson, the Assistant Secretary of Commerce, wrote to Walton Moore, the Assistant Secretary of State, to inform him that the matter of additional flights for "the Hindenburg to and from the United States has been discussed at the White House. The reaction there is favorable." In view of this fact the Department of Commerce was willing to grant a German request for a "reasonable number of flights, say ten or twelve." On February 17 the Department granted "permission for not to exceed eighteen round trip flights by the Hindenburg between Frankfort-on-the-Main, Germany, and Lakehurst, New Jersey." The Hindenburg was making its first flight under this permission when it exploded and burned on May 6. Secretary Roper was deeply shocked by this disaster, and on May 12 he issued a statement to the press in which he remarked that "some wellguarded plan will be worked out whereby helium gas from our reserves can be made available for world commercial needs without . . . any sacrifice whatever of our peace policy." The following day Colonel Johnson expressed the opinion that Americans could look forward to a "modification of our national policy with respect to the release of helium for use beyond our own frontiers."

President Roosevelt acted promptly in this matter and appointed a five-member inter-Cabinet committee to "formulate and recommend a policy for the sale and exportation of helium gas." On May 25 this committee consisting of the Secretaries of State, War, Navy, Commerce, and Interior sent a letter to the President stating that the helium reserves of the United States were "adequate for many years." It therefore recommended that the Government be authorized to "make both domestic and export sales for operation of commercial lighter-than-air craft plying between the United States and other countries." It was believed that these sales could be surrounded with safeguards that would "prevent the use of helium by foreign countries for military purposes." Congress responded to this Executive pressure by passing the Helium Act of September 1, 1937, which permitted the exportation of helium gas for use in "commercial airships operating between the United States and a foreign country." Sales of this gas would have to be approved by the National Munitions Control Board consisting of the Secretaries of State, Treasury, War, Navy, and Commerce. The concurrence of the Secretary of the Interior was added as an extra precaution against any unwise sale of helium gas. Regulations governing the exportation of helium were promulgated on September 3.

In accordance with the terms of these regulations the German Zeppelin Company, through its agent, American Zeppelin Transport, Inc., applied to the Secretary of State for an allotment of 17,900,000 cubic feet of helium gas. On November 23, 1937, this application was granted by the Secretary of State with "the unanimous approval of all the members of the National Munitions Control Board and the Secretary of the Interior." On January 31,

1938, a license was issued to the American Zeppelin Transport, Inc., to export 2,600,000 cubic feet of helium gas. The company then submitted to the Secretary of the Interior a contract for the purchase of 10,000,000 cubic feet of helium gas, and deposited with him a check for \$76,850 as required by the sales regulations. All formalities had now been fulfilled and the company was informed "by officers of the Interior Department that the contract would be ready for signature within a few days." After receiving this assurance, the American Zeppelin Transport, Inc., sent a vessel to Houston, Texas, with empty gas containers for the promised supply of helium gas. But this matter of the sale of helium gas assumed a political aspect in the early months of 1938 when it became apparent that Germany had aggressive intentions towards Austria. Representatives Bruce Barton, John M. O'Connell, Donald L. OToole, Alfred N. Phillips, James G. Polk, and Mark Wilcox voiced objections to the sale of helium to any German agency, their main argument being that such a sale would "exhaust for a year the available supply of helium and thus jeopardize the national defense." The Secretary of War, Admiral Leahy, and a series of experts in the War and Navy departments testified that it was "almost inconceivable that the German Government could contemplate the use of this helium for bombing purposes or that it could carry out such an intention." After reviewing these facts, the executive secretary of the National Munitions Control Board remarked that "recent developments in the European situation do not affect the fundamental issues involved in this case. . . . This Government would lay itself open to a charge of bad faith if it were now to refuse to permit the proposed exportation or to employ indirect means such as the requirement of an exorbitant bond from the purchaser in order to make the proposed exportation impossible."

This charge of "bad faith" was given definite substance by the very "indirect means" that Mr. Green had feared. On March 31 a new set of regulations was issued which provided "both for the posting of a bond to guarantee the non-utilization of helium for war purposes and for control within Germany by American officers of the disposition of helium." The German Foreign Office complained to Ambassador Hugh Wilson that "both of these conditions were impossible of acceptance for the reason that they cast doubt upon the good faith of the German Government." Wilson himself expressed to Secretary Hull the opinion that the German Government was "sincere in its belief that the new regulations would constitute an unfair departure from the original understanding." He was afraid that they would arouse "so deep a resentment" in the Foreign Office that it would be difficult thereafter to "obtain effective protection and fair treatment for American individuals and interests" in Germany. As soon as Hugo Eckener, the genius behind the German Zeppelin Company, heard of the regulations of March 31, he sent a telegram to President Roosevelt in which he emphasized the fact that it was the unanimous opinion of all experts in Germany that it was "absolutely impossible" for a helium-inflated airship to conduct military operations. He therefore begged the President to take immediate favorable action upon the pending application for the export of helium gas. It was obvious that a crisis in German-American relations was inevitably approaching, and many important German leaders were apprehensive of what might happen. According to a

competent American observer who had recently visited Germany, Hitler was "exceedingly perturbed at the relations between Germany and the United States and the extent of the feeling in America against him personally and to the Nazi regime in general." Secretary Lckes shared this feeling of deep dislike for Hitler, and it was his refusal to approve any contract for the sale of helium gas to Germany that shattered the hope of Dr. Eckener. Many Americans regarded the action of Secretary Lckes as unfortunate. The periodical *American Aviation* published an editorial which commented upon the new regulation which required the posting of a bond to guarantee the non-military use of purchased helium. How any

"domestic bonding agency can guarantee that a foreign government would not confiscate helium in time of war is one of those matters beyond human conception. The irony in the whole helium business is that Secretary Lckes is going on the assumption that helium for lighter-than-air craft is of military value. On the other hand, the Navy Department has refused to recognize any military value in the dirigible. . . . We fear that Secretary Lckes has acquired another one of his publicity phobias."

On April 27 the Office of the National Munitions Control Board prepared a memorandum which frankly stated that all the evidence available to the board indicated that neither the German Zeppelin Company nor the German Government had "any intention whatever of using any of the helium, to be exported under the allotment mentioned above, otherwise than for the inflation of the airship LZ-130 in commercial operations between Germany and the United States."¹¹ During a conversation with Ambassador Wilson on April 28, General Goring spoke with "deep emotion and bluntness" about the helium matter. The American reversal of policy concerning the sale of helium gas to the German Zeppelin Company "could only mean deliberate unfriendliness on the part of the American Government." Relations between Germany and the United States had been brought

"to the lowest possible point and this over a matter of minor importance to both nations. He said "I cannot understand what leads a nation to earn the enmity of another over such a little thing." . . . If it was impossible to get helium the German people would not forget America's attitude."

In a final effort to secure the delivery of helium gas the German Government, in May 1938, sent Dr. Eckener to the United States to talk with American officials. On May 21, Ambassador Dieckhoff and Dr. Eckener were received by President Roosevelt who was "plainly embarrassed." He greeted them in an "excessively friendly manner" and said that he was "firmly convinced that helium should be delivered to us." Regret was expressed that the stubborn opposition of Secretary Lckes had delayed any decision in the matter. Nothing could be done without his approval. But the question of the sale of helium to Germany was still under consideration, and there was "hope" that it would finally be settled to the "satisfaction" of the German Zeppelin Company. These hopes were never realized and the helium gas was never shipped to Germany. On May 14, Ambassador Wilson reported that hostile feeling was running "exceedingly high in German circles among those who are aware of our decision respecting helium." It was

apparent, however, that restraint had "been exercised on the German press," and the Foreign Office was seemingly anxious to cultivate American good will. A week later Wilson informed Secretary Hull that Hitler was making a personal study of the "current strain in German-American relations" in the hope of finding a basis for a "rapprochement." In this regard it was said that the Chancellor was considering approaching the President directly, proposing a joint effort to liquidate outstanding "controversies." Before making such a proposal he would have to take steps to curb the activities of certain German societies in the United States. He was ready to take these steps.

Ambassador Bullitt Has Some Important Conversations

A few days after this important conference in the Reich Chancellery in Berlin, Ambassador Bullitt decided to pay a visit to Poland and Germany in order to discover if the ship of European peace were likely to founder upon some hidden rock of misunderstanding. During his visit to Warsaw, November 14-17, 1937, he had some extended conferences with important Polish leaders. Colonel Beck, the Polish Foreign Minister, confided to him that he believed that Germany

"in the near future would take some action against Czechoslovakia. . . . He and Marshal Smigly-Rydz both expressed the opinion that France would not intervene to save Czechoslovakia. . . . I [Bullitt] disagreed with this opinion as I believe that at the present moment the French would mobilize at once in case of a German attack on Czechoslovakia, either direct or through the Germans of Bohemia. I do not know how long this state of mind on the part of the French Government will prevail. . . . I asked Beck what Poland would do in case France should become involved in war with Germany because of a German attack on Czechoslovakia. Beck replied that in the hypothetical case I had presented . . . Poland positively would not march under no circumstances would Poland become involved in protecting French satellites in Central Europe, especially Czechoslovakia. . . . In discussing the question of Danzig, Beck said that Hitler personally had given Lipski, the Polish Ambassador in Berlin, the most absolute assurance that he cared too much about Germany's good relations with Poland to permit the Germans of Danzig to do anything which would be totally unacceptable to Poland."

From Warsaw, Bullitt went to Berlin where he had several conversations with German officials. He found Baron von Neurath, the Foreign Minister, to be "supremely self-confident" and the atmosphere of "the Wilhelmstrasse was as cocky as before the war." Neurath gave assurances that

"Germany certainly desired peace. So far as France was concerned, there was absolutely no outstanding question whatsoever between Germany and France. . . . The national economies of the two countries supplemented each other perfectly, and there was no reason why their trade should conflict. . . . Furthermore, the French had made it clear that they were ready to return the German colonies they had been given by the

Treaty of Versailles, provided that England should take a similar course.... He feared that the British were going to be extremely stiff-necked on the subject of the German colonies. . . .“ In conclusion, Neurath said to me: “Tell your French friends that we are quite ready to establish the best possible relations with them.”

Bullitt found that Dr. Schacht was rather cautious in his comments. He did feel impelled to speak of the “absolute necessity for doing something to produce peace in Europe before the outbreak of war toward which the Continent was drifting.” Hitler was “determined to have Austria eventually and to obtain at least autonomy for the Germans of Bohemia.” The one way “he could see peace was through direct negotiations between France and Germany.” General Goring was quite voluble. He repeated Dr. Schacht’s opinion that there was no real quarrel between France and Germany. With regard to many of the problems that faced Germany, Goring expressed himself in great detail:

“I asked Goering if . . . Germany was absolutely determined to annex Austria to the Reich. He replied that this was an absolute determination of the German Government. . . . Germany would tolerate no solution of the Austrian question other than the consolidation of Austria in the German Reich. . . . I asked Goering if the German Government was as decided in its views with regard to the Germans in Bohemia as it was with regard to Austria. He replied that there could be only one final solution of this question: the Sudeten Germans must enter the German Reich as all other Germans who lived contiguous to the Reich. Goering then went on to say that he deplored greatly the present state of trade relations between Germany and the United States. The trade between the two countries was ceasing to be of any importance which was contrary to all reason. . . . He then asked me why I believed there was such hostility to Germany in the United States. I replied that there were many sources of this hostility. All Americans were devoted to the ideal of democracy. There has been a democratic government in Germany . . . which had been destroyed and replaced by Nazi dictatorship.... Furthermore, the German Government had at the same time attacked with the utmost violence the Jews, the Catholic Church and the Protestant Church. . . . He thought that the violence of the reaction in the United States probably was due to the Jews. I replied that in some measure it was due to the Jews as was only natural. . . . I then added that . . . it appeared that the Nazi Government was engaged in forming Nazi organizations in the United States. Neither the Government nor the people of the United States could tolerate the formation on their soil of any national group . . . directed by any foreign country. . . . Goering said that he considered this entirely reasonable and understandable. . . . The German Government had forbidden any German citizen to participate in any way in the formation of such groups. . . . Goering then said that he hoped I realized there was an intense desire on the part of the German Government to develop better relations with the United States.”

Hitler Plays Host to Lord Halifax

Germany desired "better relations" not only with the United States but also with Great Britain. Goring had been very frank with Ambassador Bullitt with regard to the absorption of Austria. This same candor might pay big dividends with some important British statesman. Goring felt that he and Lord Halifax had a common denominator of understanding that was created by a mutual love of hunting. In the autumn of 1937, Goring, as game warden of the Reich, invited Halifax to Berlin to attend the International Exhibition of Hunting. As a well-known master of foxhounds, Halifax had never accepted Oscar Wilde's tart description of fox hunting: "The pursuit of the uneatable by the unspeakable."

Before Halifax reached Berlin the German Government made a quick survey of the situation. Franz von Papen had left Vienna for a brief visit to Paris where he discussed with French statesmen some of the important problems that required prompt settlement. He was a more devious person than Goring and did not speak as frankly of Hitler's ultimate aims. In a conversation with the French Minister of Finance he expressed the hope that France would "stop calling every extension of German influence in the Danube region a threat to French interests." When Bonnet inquired as to the real objectives of Germany in that region, von Papen answered with the glib lie that Germany wished merely the "closest community of economic and intellectual interests, with the preservation of Austrian independence." Later when talking with Premier Chautemps, von Papen repeated this exercise in mendacity. He did not reveal Hitler's determination to absorb Austria. The Fiihrer desired a "marked extension of German influence in Austria obtained through evolutionary means." When Chautemps heard von Papen's assurance that Hitler's policy in the Danubian region was evolutionary rather than revolutionary, he was so overcome with emotion that he impulsively embraced the Nazi diplomat and exclaimed with delight: "Tell the Fiihrer it would be a milestone in world history if we two were to place European politics on a new and healthier basis."

In London, Halifax had a brief talk with Ambassador Ribbentrop with reference to his approaching visit to Berchtesgaden. It was apparent that his conversations with the Fiihrer would deal mainly with the "Austrian and Czech questions," and with the important matter of the restoration of German colonies. Halifax stressed the viewpoint that a war between Britain and Germany would "mean the end of civilization." Ribbentrop agreed with this dire prediction and then observed that "not a single German desired such a conflict."

On November 10, Halifax arrived in Berlin and soon had a talk with General Goring who confided to him that the German Government was bent upon incorporating Austria and the Sudetenland into the Reich. He made the further statement that Hitler also wished the return of Danzig to Germany and a reasonable solution of the Polish Corridor problem. After hearing Goring's candid statements concerning the aims of the Nazi Government, Halifax went to Berchtesgaden to match wits with Hitler. On November 19 he had his

momentous conversation with the Fiihrer. There are four versions of this conversation, three of them from the German Foreign Office,³³ the fourth from the unpublished report Lord Halifax made to the British Foreign Office. A copy of this Foreign Office version was sent to the Department of State in order that President Roosevelt might have an "inside picture" of the European diplomatic crisis.

After the conversation had been formally opened by Lord Halifax, Hitler remarked that an agreement between Britain, France, Germany, and Italy would not be worth much "unless it took account of realities however unpleasant." The status quo "could not last forever. Changes could be brought about by (1) the play of forces—which meant war; (2) settlement by reason. We had had experience of (1) and it was therefore imperative to turn to (2), the way of reasonable solution." Hitler then complained that "democracies were difficult to do business with owing to the party system and freedom of the press. All his previous efforts except the Naval Agreement had failed owing to this difficulty of doing business with democracies." Lord Halifax drily replied that "if agreement had to wait upon the abandonment of democracy by Great Britain, it was a waste of time to talk of an agreement." Hitler then hurriedly remarked that his reference had been "mainly to French democracy."

Halifax then remarked that in England it was believed that it was "perfectly possible to clear out of the way the misunderstandings which existed at the present moment" between Britain and Germany. The solution sought for might be found in an "open exchange of views." These views could possibly lead to an agreement that would include not only Britain and Germany but also France and Italy. Hitler thought that such an agreement should go much farther than merely "mutually polite relations." Germany should first of all be treated as a nation that "no longer bore the moral or material stigma of the Treaty of Versailles." The nucleus of the problem was the question as to "what active political co-operation could be accorded by a country which in other respects was not even accorded the most urgent necessities of life." Halifax quickly replied that everyone in England "respected Germany as a great and sovereign country and that it was only upon this basis that she would be treated." The British Government did not necessarily believe that the status quo "must be maintained under all circumstances." Changes, however, should take place only upon "the basis of reasonable agreements reasonably reached."

But Hitler expressed the fear that it would be difficult for democracies to negotiate "reasonable agreements" because of the pressure exerted by demagogues. In the matter of restoring the colonies taken from Germany at the close of the World War he knew that the British Conservatives would vigorously oppose such a measure. The "same was the case in France." Political parties with their constant need to build political fences would erect high barriers along the road to realism. Lord Halifax sharply challenged the view that the British Government was the "slave" of politicians with demagogic views. In England, no government "which was worthy of the name was under the domination of outside parties." He wished also to make it clear that Britain did not take the position that the question of the return of German colonies must not be discussed. British statesmen, however, were

firm in their belief that it was a problem that required a general settlement and therefore negotiations between Britain and Germany should be merely of a preparatory character.

As far as Austria was concerned Hitler referred to the Austro-German Agreement of July 11, 1936, and expressed the hope that "it would lead to the removal of all difficulties." In the case of Czechoslovakia the Czechs themselves were in a "position to clear away any existing difficulties." Germany "set great store by good relations with all her neighbours." In his report to the British Foreign Office, Lord Halifax remarked that the atmosphere at Berchtesgaden and the

"whole conversation was quiet and friendly although the Chancellor showed a certain reserve due perhaps to tiredness or perhaps to a feeling that his outlook has so little in common with that of democratic Governments. Herr Hitler said that he hoped we might get away from the atmosphere of "imminent catastrophe." The situation in Europe was not dangerous and of all the nations only Russia might think of war today. The German Chancellor and others gave the impression that they were not likely to embark on adventures involving force or at least war.... Lord Halifax formed the view that they would pursue their objectives in Central or Eastern Europe in a fashion that would be perhaps unlikely to give other nations cause or at least the opportunity for intervention."

On November 29, Prime Minister Chamberlain and Lord Halifax had a conference in London with the French Premier and the French Foreign Minister. Lord Halifax reviewed his conversation with Hitler and expressed the "general conclusion" that Germany thought that it was now up to Britain and France to "propose a solution of the colonial question if they wanted one." In this regard Germany believed that "all her former African colonies should be restored." Halifax then gave his personal impressions of Hitler and of the European situation. His main impression was

"that the Germans intended to press their colonial claim, but that they would not press it to the point of war. Unless the claim could be met in some form it would be impossible to improve relations in such a way as to make an advance towards the object which we all had in view. The question we had to ask ourselves, therefore, was whether it was possible to use this problem as a lever for getting some of the things both the French and British Governments wanted, such for example, as a contribution by Germany towards European peace.... His [Lord Halifax's] broad impression was that Germany was extremely anxious for friendly relations with us. The Germans to whom he had spoken were also anxious to convince him that Germany had no direct cause of difficulty with France. . . . At the same time, while he [Hitler] desired to be friendly with us, the Chancellor was not prepared to run after us and was conscious of his own strength. He was not bent on early adventures, partly because these might be unprofitable, and partly because he was busy building up Germany internally. . . . General Goering had assured him that not one drop of German blood would be shed in Europe unless Germany was absolutely forced to it. The Germans gave him [Lord Halifax] the impression of being convinced that time was on their side and of intending to achieve their aims in orderly fashion."

remier Chautemps broke into the Halifax discourse and asked about the sincerity of Hitler's "reassuring words about Czechoslovakia." Halifax replied that he had been "surprised at the moderation of Herr Hitler's remarks on this point. He could only suppose the degree of permanence would in part depend on Germany's general international position and on the influence which we might exercise on the later developments of German policy." It was obvious, he believed, that Hitler was awaiting for some concrete proposal on the colonial issue before engaging in a discussion of other issues. Shortly after Premier Chautemps returned to Paris, Ambassador Bullitt had a long talk with him concerning the European situation. Chautemps stated that he

"believed any immediate practical developments would be impossible due to the unwillingness of the British to make any concessions in the colonial domain to Germany. During the conversations in London his [Chamberlain's] Government had begun to approach delicately the question of whether France might be disposed to hand the Cameroons to Germany at once without any quid pro quo. Chamberlain had not made any direct statement on this subject, but he, Chautemps, had perceived what was in Chamberlain's thoughts and had therefore said at once that France could not place herself in the position of being the only country to make concessions to Germany in the colonial domain and would do so only if England was prepared to make similar concessions, and if such concessions should be a part of a general settlement. . . ."

American Reaction to Anschluss

American reaction to the absorption of Austria by Nazi Germany was recounted in considerable detail in the dispatches of Ambassador Dieckhoff. On March 12 the ambassador called at the Department of State to discuss the situation in Austria. Although Secretary Hull asked a number of questions, he did not "express any critical or even disapproving attitude." This was also largely true of the American press on March 12 and 13, but the next day a "sudden change took place." The absorption of Austria was now stigmatized as "a breach of treaty, as militarism, as the rape of defenceless little Austria by her big neighbor bristling with arms." As far as the "shaping of the opinion of the American Government was concerned," the ambassador believed that the President himself had "intervened personally and gave instructions to both the State Department and the press." In the Department of State "they were probably, from the very outset, thinking less of Austria than of Czechoslovakia, with all the possible complications." On March 14, Dieckhoff had another conversation with Secretary Hull who maintained a calm and courteous demeanor, but Sumner Welles received the German Ambassador with a sour expression. Indeed, in a dispatch to the Foreign Office on March 15, Dieckhoff complained that Welles "gave expression to a sort of malevolent bitterness" when he alluded to the Nazi absorption of Austria.

In the Department of State there is a copy of the conversation between Dieckhoff and Welles on March 14. After the ambassador had turned over to the Under Secretary of

State the texts of the decrees incorporating Austria into the Reich, he evidently expected Welles to make some comments upon them. When Welles remained silent, Dieckhoff, with a show of "very considerable degree of nervous excitement," broke out with the exclamation: "This is a great day, a wonderful day for Germany." When Welles continued to remain silent, Dieckhoff then "embarked upon a tirade" against the critics of the recent Anschluss. He was particularly disturbed over the comments in the American press which he condemned as outright "lies." Next he sharply attacked the Jews and asked Welles why they were permitted "to dominate the press and public opinion." The Under Secretary denied the truth of such a statement and then remarked that "the Jewish element in the population of the United States was only a small percentage of our total population, nevertheless, the people of the United States felt that that element among them was as much a part of the United States as any other element of the population."

Dr. Goebbels, in Berlin, was also greatly perturbed over the hostile attitude of the American press. He thought that it was

"lamentable that this campaign of hatred should be carried on. He did not in any way expect that Germany would escape criticism, but. . . what he did not expect and what he deeply deplored were wilful misstatements of fact and slander and libel against the persons of the Reich Chancellor and those immediately around him. He said that the person of the Fuehrer was venerated by every German. . . . Therefore the Germans deeply resented the personal attacks upon him. . . . He was sure that in the coming months I would have frequent opportunity to talk with and know the Fuehrer, and I could not but be impressed with the singleness of purpose and the undeviating honesty of the man's character. . . ."

Many people in Germany felt that relations with America were so bad through the press that there was no use trying to do anything about it. . . . But he was not one of those and such a point of view was to him a stultifying attitude. He thought there were possibilities of making it better and believed that if we could work with some measure of confidence we could bring about an improved relationship. Ambassador Wilson expressed the opinion that the

"most crucial thing that stood between any betterment of our Press relationship was the Jewish question. . . . Hatreds so deep as those which existed in my country on this question could not be mitigated in weeks or even months. It was a matter of years before such hatreds would lessen or be forgotten, and then only if new incidents did not give fresh fuel to the flames."

Turning from this outstanding question, Ambassador Wilson then remarked that much of the existing American hostility towards Germany was the result of a Freudian complex

"by which deep affection which is shattered turns inevitably to hatred. . . . Americans of my age and generation had been accustomed to see the best intellectuals in our country go to Germany for education in medicine, technical matters, arts, and so on; . . . that ten thousands of families had German relatives. Thus the bonds between the two lands

went so deep that we could not regard what happened in Germany with indifference."

Goebbels confessed that this was "an entirely new and interesting point of view," and he voiced the hope that the American Ambassador would come often to talk over matters of common interest.⁴⁵ There was little doubt that Goebbels was anxious to explore the reasons that lay behind German-American hostility. He had uncovered one of the important causes for friction when he referred to the German veneration for Hitler and the ceaseless attacks in the American press upon the Fiihrer. It was obvious to many close observers of the scene in Germany that Goebbels himself had been indefatigable in his efforts to create this veneration for the Fiihrer. His speech on April 20, in honor of Hitler's birthday, was a typical example of the Goebbels rhetoric in this regard. He was certain that an air of divinity surrounded the Chancellor. He recounted that after Hitler entered Austria his attendants saw a man "rush up to the Fiihrer's car with his hands uplifted in prayer, and we had the feeling that here the emotion of the human soul had found its consummate expression." With vast numbers of Germans sharing this viewpoint it became more and more difficult to maintain friendly relations between the two countries when the American press continued its campaign of criticism and ridicule.

This matter of the hostility of the American press continually thrust itself into the diplomatic picture in Berlin. At the end of April, Ambassador Wilson had a long talk with Foreign Minister Ribbentrop and the familiar topic of press criticism inevitably came up for discussion. Ribbentrop said that he had just been looking through a mass of clippings from American newspapers and they showed

"a depth of hostility which had startled and shocked him. There was a lack of comprehension of everything that Germany had done and an immense proportion of complete misstatement of fact. . . . These reports could only be based upon gossip and rumor and usually originated from those who by race or politics were hostile to the regime and therefore inclined to distort facts."

He then observed that he had

"spent a long and happy time in the United States as a boy, as well as in Canada; that he had numerous American friends with some of whom he still corresponded; that no one could spend a portion of his youth in a country without leaving a bit of his heart there; . . . hence it was doubly depressing to him that this outpouring of wrath should take place against his country."

Wilson interrupted this discourse to venture the opinion that this American hostility to Germany had many causes. The persecutions of Protestants and Catholics, the intimate relations between Germany and Japan, the Jewish question, and the manner in which the Nazi Government had absorbed Austria were important factors in creating a widespread dislike in America for the Nazi Government. Ribbentrop then commented upon this factor of German absorption of Austria. Britain and France were far more concerned with the Austrian question than the United States, yet the press in those countries had taken a much more objective attitude than the American press. When the German editors read

the vehement criticisms in American newspapers, they promptly "pled for the right to reply to them in their press. So far the German Government had refused to permit it. He defied me [Wilson], for instance, to find a personal criticism of President Roosevelt." Wilson made no attempt to disprove this statement. He merely confessed that he was afraid that the hostility in the American press "would not disappear for some years." In the meantime it was obviously the "part of those dealing in foreign affairs to try" to hold "their countries in normal and friendly relationships."

Ambassador Wilson was entirely correct in his belief that the criticisms in the American press of Nazi Germany would "not disappear for some years." As they continued, the reaction in Germany became more pronounced. On the night of August 10 a reception was given in the Italian Embassy in honor of Marshal Balbo. During the course of the evening, Mr. Riddleberger, a member of the staff of the American Embassy, had a talk with Marshal Goring who immediately ascribed much of the hostility in America towards Germany to the machinations of the Jews and then launched into a

"discussion of the Jewish problem. He predicted that within "ten years from this night" the United States would have become the most anti-Semitic country in the world. . . . I [Mr. Riddleberger] said to General Goering that this statement respecting the possibilities of anti-Semitism in the United States had interested me although I naturally did not agree with his prediction. I said that without going into a discussion of German policy with respect to the Jews, I was sure he would understand how this policy had caused grave concern to our and other Governments within whose jurisdiction the German Jews were seeking refuge. . . . General Goering made no answer to this, but went on to declare that the Jews must be eliminated from German economic life. . . . Returning again to the problem of German-American relations, General Goering said that although they were none too harmonious, it was not necessary to despair and that we must hope for better days. . . . He ended his remarks by stating that the combination of Negroes and Jews in the United States, with the latter furnishing the leadership, was a matter that should give rise to considerable anxiety as to our future."

It was apparent to Ambassador Wilson that while the German Government cordially disliked the American press it was nevertheless quite anxious to remain on friendly terms with the Department of State. For this reason Wilson accepted the invitation to attend the Nazi Party celebration in September at Niirnberg. He made plans to be present "during approximately the same period as the French and British Ambassadors." This decision evoked from the B'nai Israel Jewish Centre of Brooklyn, New York, a spirited protest. Attendance at the Niirnberg celebration would be a "tacit condonance of the Nazi program of racial and minority persecution." The Department of State refused to accept this viewpoint, and Ambassador Wilson went to Niirnberg with his British and French colleagues.

It was the last Niirnberg celebration that any American Ambassador would attend. Underneath the surface of German-American relations there were many points of difference that constantly threatened to pierce the thin texture of political accord. The American

press was unceasing in its attacks upon the German way of life and in many parts of the United States there were gestures of contempt that must have infuriated the Nazi leaders. On the amusement pier at Venice, California, there was an archery stand that used a life-size painting of Hitler as a target for a patronage that was "mostly Jewish, Italian and German."⁵² In other cities Hitler was depicted on toilet paper and on other articles of toilet use. These forms of vulgar ridicule were infuriating to multitudes of Germans and they created a background for eventual war. Hatred is one of the heralds of conflict and already in the summer of 1938 he was busily blowing upon his trumpet all along the German- American front. After Munich his blasts would gain in volume and in tempo, but most Americans closed their ears to his din and continued to cherish the hope that President Roosevelt would keep them out of war. They did not realize that, like Lincoln, he was so fond of peace that he was ready to fight for it.

Kennedy Predicts U.S. Intervention in World War II

In London, Ambassador Kennedy was watching the situation in Prague and Niirnberg with evident apprehension. During a conversation with Lord Halifax he voiced the opinion that it was "essential to take every possible step to avoid a misunderstanding in Herr Hitler's mind." The British Government should be ready for any emergency and he wondered if "it might not be possible for the Soviet Government to make some movement that would compel attention, such as a concentration of aeroplanes near the frontier." As far as America was concerned, he had been interested to notice that "American opinion was much more excited against Germany now than he had ever known it." If Britain were drawn into the war now threatening Europe, and if London were bombed, the "history of the last war would be repeated, leading a good deal more rapidly than in the last war to American intervention.⁷⁰ While Ambassador Kennedy was predicting American intervention in a second world war on the side of Britain, the German charge d'affaires in Washington was writing in the same key. Although President Roosevelt was trying to preserve peace in Europe, it was very likely that if a German invasion of Czechoslovakia caused Britain and France to come to the aid of the Czechs, then America would be "found on their side."

As an offset to these widespread rumors of probable American intervention in any new war that might break out in Europe, President Roosevelt, at a press conference (September 9), blamed American newspapers for creating a war psychosis. Any inference that he was ready to support "the Democracies" against the totalitarian bloc in the event of war was not warranted by his formal or informal remarks. If newspapermen would pay careful attention to his exact words they would discover that they had been "100 per cent wrong."

President Roosevelt Extends Monroe Doctrine

As tension developed in Europe over the problem of the Sudeten Germans, President Roosevelt became deeply concerned over the possible outbreak of war. In January 1938 he had vainly endeavored to secure British support of a plan for world peace, but Prime Minister Chamberlain had rejected this appeal on the ground that it might adversely affect his efforts to conciliate Italy and thus dislodge the uneasy Duce from the eager arms of Hitler. In the midsummer of 1938 the President decided to take an independent step in foreign policy which apparently would be along a road familiar to Americans since 1823. He would have his fellow countrymen raise their eyes from accustomed American sights to a distant horizon where a one-world concept could be dimly seen. Since 1932 he had been lustily singing in a chorus of isolationists but had been furtively eyeing the exotic wench of collective security who waited in the wings for the cue that would inevitably come.

In order to give this cue in the most impressive manner, he paid a visit to Queens University in Kingston, Ontario (August 18) for the ostensible purpose of receiving one of his innumerable honorary degrees. As a part of this ritual for securing knowledge by degrees, Roosevelt then made an address which formally placed Canada under the protection of the Monroe Doctrine: "I give to you assurance that the people of the United States will not stand idly by if domination of Canadian soil is threatened by any other empire." After this broad promise of protection he then began to talk as though the Monroe Doctrine had some far-flung implications. He made it clear that the Dominion of Canada was a "part of the sisterhood of the British Empire." The question then arose: if America would help one of these sisters in distress would she stand idly by if the others were reduced to dire straits? In partial answer to this query he repeated one of the Hull clichés to the effect that "we in the Americas are no longer a far-away continent, to which the eddies of controversies beyond the seas could bring no interest or no harm. . . . The vast amount of our resources, the vigor of our commerce, and the strength of our men have made us vital factors in world peace whether we choose or not."

Some American newspapers regarded the President's address at Kingston as a "somewhat startling statement" of a familiar fact,² but it was admitted that he had given it a "calculated portentousness" by timing it at "a tense moment in international affairs."³ In London, J. L. Garvin, noted editor of the *Observer*, interpreted the President's words as an "intimation to the dictatorships that at a pinch the United States would be unable to keep out,"⁴ while the *Manchester Guardian* was certain that they were "virtually a guarantee of help against aggression."

In France, the Kingston address was received as a definite assurance of support to the "democracies" if a serious crisis arose. Bonnet, the Foreign Minister, was moved to make several suggestions to Ambassador Bullitt. He thought it would be helpful if the American Ambassador in Berlin were instructed to inform the German Foreign Office that the Department of State believed the negotiations at Prague between the Sudeten Germans

and the Czech Government “offered substantial possibilities for success.” Therefore, the “use of force” to influence these negotiations would be regarded with disfavor. Bonnet also suggested that “in case of dire necessity” the President could offer to serve as a mediator in the difficulties between the Czechs and the Sudeten Germans and thus save the situation. A few days later, Leon Blum, former Premier of France, urged the President “to address himself to Europe with all the prestige of his person and with all the authority of the State whose moral or material support would be finally decisive in any general war.”⁷ It was obvious that a large part of the world was looking to the United States for leadership in a crisis that threatened war, and the President was strongly tempted to respond to this pressure. But Prime Minister Chamberlain was once more devising a settlement through appeasement, so the American Chief Executive had to bide his time.

American Opinion of Munich

This Presidential indifference to the implications of the Munich Agreement was not shared by the American press. To the Miami Herald, on the eve of Munich, it seemed that Europe was about to be “plunged into the mass murder of modern war because of the will of one man.” The Richmond Times-Dispatch was confident that the “responsibility for war, if it comes, will remain on the shoulders of Nazi Germany, where it belongs,” and the New Orleans Times-Picayune voiced a similar opinion: “In the event that the world is thrown again into chaos, the war guilt almost inevitably will be chained to the neck of Adolf Hitler.”

When the text of the Munich Agreement was made public many papers had words of praise for Chamberlain. The New York Herald-Tribune thought that there could be “only heartfelt applause for the scrupulous integrity and the self-sacrificing devotion with which he [Prime Minister Chamberlain] labored for peace.” Other papers were equally laudatory. The Washington Post regarded the agreement as a step down the road to peace. The sacrifices of the Czechs would “seem a small price to pay for peace, particularly if the peace thereby obtained is stabilized.” The Washington Evening Star had no doubt that Hitler had “won a considerable victory,” but of “paramount importance is the fact that a bloodless solution has been found for the gravest threat to international tranquility in the last quarter of a century.” The Atlanta Constitution thought the Munich accord had many imperfections, but “hope has come where only yesterday was despair, and the peoples of the world can take heart anew.”

The New York Times had words of praise for Munich: “Let no man say that too high a price has been paid for peace in Europe until he has searched his soul and found himself willing to risk in war the lives of those who are nearest and dearest to him.” The Chicago Tribune was also impressed with the importance of preserving the peace of Europe: “No doubt there were neurotics and hotheads in all the countries concerned who were eager for war, but they were outnumbered a thousand to one by those who were willing to make substantial sacrifices for peace.” The Los Angeles Times belonged to this large group of

papers that had words of praise for the results of the Munich Conference: "There was no doubt that war was narrowly averted at Munich." Therefore, in comparison "with its immediate alternatives it rates among the first diplomatic achievements of history." The Cleveland Press had a similar viewpoint. The critics who heaped blame upon Chamberlain and Daladier should pause a moment and think of the horrors of war. Then they would "thank God for the truce thus achieved." The Boston Evening Transcript stressed the fact that the "big thing at the moment is that there is still peace in the world. Reason has not abdicated, it is only trampled a bit." This theme was repeated by the Christian Science Monitor: "Reason has played a part in the present agreement. . . . It is a peace made without war—possibly the most notable one in history."

These favorable comments in the press were balanced by adverse remarks in many other papers. The Philadelphia Inquirer believed there were "aspects of this so-called settlement . . . which thoughtful persons the world over must view with a profound sense of futility and foreboding." The Norfolk Virginian-Pilot could see nothing to praise in the Munich negotiations. The net result was an "ill-smelling peace." The Emporia Gazette saw the settlement at Munich as only a stopgap. Real peace had not been achieved: "America may breathe deeply now, but she should tighten-up her belt for tomorrow, gird up her loins for the inevitable strife." The Portland Oregonian was openly derisive of a peace with Hitler: "What good is a peace pact with this curser of democracy, torturer of Jews, coercer of minorities, and maestro of brutal prison camps?"

The Atlanta Constitution was of the opinion that the Munich Agreement conclusively showed that the United States could "no longer trust Great Britain. The policy of the empire is expediency and the people of this country cannot rely upon England's word under these circumstances." The Constitution, however, had warm words of praise for the policy of President Roosevelt. It was he who had "almost singlehandedly tugged the world back from the brink. . . . To his eternal credit, Franklin Roosevelt did not falter in his purpose, now so dramatically brought to a fruitful conclusion." The Hearst press had the same surprising viewpoint: "There can be no doubt that if a peaceful adjustment of the crisis in Europe is achieved, as a result of the Four-Power agreement in Munich, President Roosevelt will have contributed enormously to that end...."

Not to be outdone in passing out words of praise for individuals who supposedly worked for peace in Europe, the New York Daily News had some friendly words for Adolf Hitler: "Now is the time for haters of Hitler to hold their harsh words. He has made a significant gesture towards peace; one that nobody but himself could have made at this time."

The Economic Offensive against Germany Is Accelerated

While political relations with Germany were daily becoming more strained, Secretary Hull widened the breach between the Department of State and the German Foreign Office by pushing with increasing ardor his economic offensive against the Reich. In order for his trade agreements program to be really effective it was necessary for him

to enlist the support of Britain. In the early part of 1936, Hull bluntly informed the British Ambassador in Washington that the "clearing arrangements reached by Britain with Argentina, Germany, Italy and other countries were handicapping the efforts of this Government to carry forward its broad program with the favored-nation policy underlying it." The tendency in most of these arrangements was "to drive straight toward bilateral trading and to restrict and obstruct the sum total of world trade." These restrictions and obstructions were milestones along the road to war.

In October 1936, Hull instructed James C. Dunn, chief of the Western European Division, to write a letter to Ambassador Bingham in which the situation was placed squarely before the British Government. No time should be lost in establishing "sound and substantial trade upon a firm basis of equality of treatment and exchange of opportunities for trade to the greatest extent each nation can possibly contribute." Widened trade opportunities would provide a basis for world peace.

Finally, on November 17, 1938, a formal ceremony was held at the White House at which Secretary Hull, Prime Minister Mackenzie King of Canada, and Sir Ronald Lindsay, the British Ambassador, signed important trade agreements on behalf of their respective governments. The capstone was thus placed upon the large economic structure sponsored by Secretary Hull. The most important trading nations were now lowering barriers while many other countries were raising theirs. The concessions provided for in these agreements were "generalized" so that a considerable number of nations could profit by them if they could supply any of the products affected. American farmers were particularly benefited by reduced rates on important agricultural exports. Duties were entirely removed from wheat and lard. Canadian concessions to the United States included reductions in the duties on fruits, vegetables, and types of machinery not manufactured in the Dominion. In return, three of Canada's major exports to the United States were "bound" to the free list—pulpwood, wood pulp, and newsprint paper. America's answer to Munich was given in strong economic accents which grated loudly upon German ears that were closely attuned to the dubious harmonies of bilateral agreements.

Germany Is Anxious for an Accord with the United States

The actions of Secretary Hull and the acidulous comments of Sumner Welles seemed to point the way to a definite deterioration in German-American relations. Mr. Gilbert, the American charge d'affaires in Berlin, thought that it was possible that Hitler had decided to break off diplomatic relations with the United States "immediately after Christmas." He had learned that the Fihrer had become "exceedingly irate" upon being informed of the reply of Sumner Welles to the protest of Dr. Thomsen relative to the tart remarks of Secretary Ickes on December 18. Ribbentrop was believed to be preparing a counterblast to the pungent comments of the Secretary of the Interior. Although Ribbentrop did not make this expected attack upon American officials, Mr. Gilbert was told that "certain extremists" close to Hitler were "urging a break with the United States." But such a break

in relations would not be "popular in Germany," and the charge had not been able to detect "even a hint" of hostility in his conversations with German officials.

From Paris, Hugh Wilson reported that Dr. Goebbels had recently requested the Havas correspondent in Berlin "not to present in his despatches the future of German-American relations in too gloomy fashion." The German Government had "no intention of aggravating the present conflict and sincerely desired the re-establishment of normal relations between the two countries." It was apparent that Goebbels and other Nazi officials awaited with deep interest the President's message to Congress in January 1939. It contained the expected warning that acts of new aggression were all "about us" and that the "God-fearing democracies of the world" could not "forever let pass without effective protest" these threats to their way of life. But it was made clear that democratic protests must be along "peaceful lines." It was also emphasized that there were many methods "short of war" that could be employed to bring home to aggressor nations "the aggregate sentiments of our own people." The temperate language of this Presidential message to Congress gave reassurance to the German Government and led it to continue the recent gestures of conciliation. These gestures were listed by Mr. Gilbert as follows:

- 1) A cessation of the unrestrained violence of the press.
- 2) The invitation to the Evian Committee to come to Berlin.
- 3) More conciliatory replies to our notes respecting discrimination against certain classes of American citizens together with publicity given to recent exchanges.

The question of whether these actions were "gestures for immediate ends" or whether they represented a "considered change of policy" remained to be seen. It should appear obvious to German leaders that "self-interest would suggest the desirability of better relations with the United States." This self-interest led General Goring to have a conference with Mr. Rublee on the refugee problem and to arrange for a series of talks between Rublee and Ministerial Direktor Wohltat. Goring then invited Mr. Gilbert to his private residence for a discussion of German-American relations. The atmosphere of the meeting was

"most cordial and friendly and Goering stressed repeatedly that he was anxious to find a solution of the Jewish problem. He appeared to be fully conscious of the importance of settling the problem from the point of view of good relations with other countries particularly the United States. . . . He discussed the subject of Jewish emigration generally and particularly emphasized the necessity of moving rapidly... In concluding the conversation, Goering laid great stress at considerable length on the desirability of good relations between Germany and the United States. Outside of the Jewish problem he saw no concrete problems which should trouble relations between the two countries."

Dr. Schacht was equally conciliatory. In a talk with Donald Heath, third secretary of the American Embassy, he said that he would be interested in "taking over any worth-while project which might be offered him either in Germany or abroad." After this intimation that he might be willing to accept a position with some large American banking institu-

tion, he stated that he was largely responsible for the invitation that had been extended to Mr. Rublee to visit Berlin with reference to the refugee problem. It was due to "his initiative" that the recent conversations between Rublee and Nazi officials had taken place. He had personally suggested the matter to "Hitler and had his approval before he started his talks." He had also "gotten Hitler's approval of each stage of the conversations."

Germany Fears the U.S. Will Intervene in World War II

From London, Kennedy sent further information on the threatening situation in Europe. Halifax had asked the Nazi Ambassador in London (von Dirksen) why Hitler, if he really wished to have peace, was continuing his "terrific armament program." Dirksen replied that "they were greatly disturbed in Germany at the almost weekly utterances of the President of the United States and they had become convinced that the United States would come to the aid of England and France not in two years, but probably in two days and they therefore felt that the only thing to do was to keep making themselves strong." It was Kennedy's own belief that the "top-side men" in the British Government asked themselves every night how Hitler, in the face of the tremendous armament program in Germany, could possibly proceed to a peacetime basis. There was little doubt that the "long-term outlook for England was exceedingly dark."

These German fears of American intervention in a possible second world war were confirmed by the statements of American diplomats like Kennedy and Bullitt. Before the Munich crisis, Kennedy repeatedly told Chamberlain that America would rush to the assistance of Britain and France in the event of unprovoked aggression. Bullitt had been more cautious but at times he gave similar assurances. In a conversation with Count Potocki, Polish Ambassador at Washington, he spoke of the possibility of a conflict between Germany and the European democracies. When asked if the United States would enter such a war he replied: "Undoubtedly yes, but only after Great Britain and France had made the first move." Sentiment in the United States was "so tense against Nazism and Hitlerism" that it amounted to a "psychosis" similar to that which existed "before America's declaration of war on Germany in 1917." After stating that this "psychosis" was partly created by "emigrants from Germany and Czechoslovakia" who incited the American public against Germany by the use of "various calumnies," he finally came to the topic of American sentiment towards Russia:

"It is interesting to note that in this extremely well-planned campaign which is conducted above all against National Socialism, Soviet Russia is almost completely eliminated. Soviet Russia, if mentioned at all, is mentioned in a friendly manner and things are presented in such a way that it would seem that the Soviet Union were co-operating with the bloc of democratic states. Thanks to the clever propaganda the sympathies of the American public are completely on the side of Red Spain."

On January 14, Bullitt had a last talk with Ambassador Potocki before leaving for Paris with instructions from President Roosevelt. He stated that he was prepared to assure

Britain and France that they could rely upon the fact that the United States would be prepared "to intervene actively on the side of Britain and France in case of war." America was ready to "place its whole wealth of money and raw materials at their disposal."⁵⁶ In February 1939, after he reached Paris, Bullitt informed the Polish Ambassador, Jules Lukasiewicz, that if hostilities should break out one could "foresee right from the beginning the participation of the United States in the war on the side of France and Britain."

Secretary Hull Makes a Statement on U.S. Policy

The approach of a general war between China and Japan was viewed with open dismay by the British Foreign Office. As early as May 1937, Prime Minister Chamberlain had expressed great concern about the situation in the Far East and had proposed an exchange of views between the Foreign Office and the Department of State with reference to various means whereby Anglo-American-Japanese relations could be improved. On June 1, Secretary Hull handed to Sir Ronald Lindsay his reply to this British proposal. It had been intimated to the Department of State that Japan might be ready to adopt a policy of "co-operation with her neighbors in the Far East and with the Powers that had great interests there." This intimation had been received by Secretary Hull with great interest. He believed that "there were forces within and between Japan and China working toward peace." In the event, however, that war would break out in the Far East the American Government would follow traditional procedures with reference to the situation.

The British Foreign Office favored a "combined Anglo-American demarche" in Tokyo and Nanking. Ambassador Grew sent a long dispatch to Secretary Hull which stated that the British Embassy in Tokyo was opposed to any precipitate action on the part of Secretary Eden. A strong suggestion along this line had been sent to London. As far as American action was concerned, Grew advised that "the American Government refrain from offering its good offices toward settlement of the North China incident." One of the principal objectives of Japanese foreign policy was "the elimination of the influence of western powers as a factor in Far Eastern politics." There was no reason, therefore, for any belief that Japan would look with favor upon any attempt at American mediation. In conclusion Grew emphasized the fact that the recent improvement in Japanese-American relations had resulted from the fact that the Department of State had transferred the stress of its representations to Japan from an "endeavor to restrain the use by Japan of force to the laying down of reservations of American rights in China."

After Secretary Hull had made it clear to the British Foreign Office that he preferred to follow a policy along independent rather than joint lines, he issued (July 16) a public statement indicating the attitude of the Department of State with reference to the situation in the Far East. He began by expressing a viewpoint which had become quite familiar: "There can be no serious hostilities anywhere in the world which will not in one way or another affect interests or rights or obligations of this country." American policy, therefore, strongly accented the importance of settling international disputes by peaceful

means. Other items in the American creed were then cited: "We advocate national and international self-restraint. We advocate abstinence by all nations from use of force in pursuit of policy and from interference in the internal affairs of other nations."

On July 21 he repeated to Ambassador Saito his earnest desire for peace in the Far East and gave further assurances of his "impartial" attitude towards both nations.²⁰ When Ambassador Grew communicated to the Japanese Foreign Minister these sentiments of Secretary Hull, Hirota replied that he was still hopeful for peace. Everything depended upon the execution of "the agreement drawn up on July 11 and signed on July 19 by General Chang." Japan was not asking Nanking to recognize the agreement "but only that it shall withhold obstruction."

The Mission of Admiral Ingersoll to London

It was evident to most statesmen that Britain could exert pressure upon Japan only in close concert with the United States. In order to prepare the way for that concert, Sir Robert Craigie, British Ambassador in Tokyo, kept hammering upon this theme in his conversations with Ambassador Grew. He insisted that the United States "should stand shoulder to shoulder with Great Britain in opposing Japanese depredations because injury to British interest in the Far East would automatically injure the interests of the United States." Grew realized the danger that attended the proposed close concert with Britain, and feared that America would have to pay the price "of British ineptitudes, both of action and of statement, which have contributed their full measure toward the developing of the feeling of exacerbation now prevailing between Great Britain and Japan."

President Roosevelt was now convinced that we should move closer to Britain, and with this thought in mind he decided to send Admiral R. E. Ingersoll to London to explore the situation. Ingersoll arrived in the British metropolis in January 1938. The "primary purpose" of his mission was

"to investigate and to talk with the British Admiralty officials as to what we could do if the United States and England would find themselves at war with Japan in the Pacific, to explore all the means, what means could be used, what arrangements it would be necessary to make in regard to command relationships, in regard to communicating with each other, of establishing liaison officers and preparing certain codes and ciphers, and so forth."

After extensive conversations with the officials in the War Plans Division of the British Admiralty it was arranged that there should be a "distribution of codes and ciphers." There was no definite agreement based upon these conversations, but the exploration of the probability of Anglo-American joint action was significant. As Admiral Ingersoll frankly stated: "Everybody knew as indicated by this trip that I made to London in 1938, that sooner or later, we were all going to be involved in a war in the Pacific which would include the Dutch, the Chinese possibly, the Russians, the British, and ourselves, and we had to

make preliminary arrangements to explore what could be done to arrange for a means of communicating with each other." If "everybody" in the Roosevelt circle knew that "sooner or later" we would intervene in World War II, the pointed Roosevelt protestations in 1940 to the contrary would indicate how he became a master of mendacity.

The Role of Russia Becomes Increasingly Important

As Chamberlain's dreams of co-operation with Hitler and Mussolini began to fade he slowly turned in the direction of another dictator, Joseph Stalin. In the third week in March he had devised a four-power formula that might stop Hitler, but the Polish Government had objected to any association with Russia. Chamberlain did not blame the Poles for their suspicious attitude because he himself had long cherished a "most profound distrust of Russia." The British Foreign Office shared this viewpoint and was ready to "relegate Russia to a second line of defence not only because of the practical difficulties of including her in any agreement reached with the Poles but also because they have little confidence in Russia's reliability."

Lord Halifax, however, cautiously kept the line to Moscow open, and on April 11, he had a conference with Maisky, the Soviet Ambassador in London. He found Maisky "cynical about the whole situation and rather of the opinion that the fat is in the fire as far as everybody is concerned with Russia sitting on the side lines." This candid cynicism caused Halifax "completely to distrust" Maisky and led him to refrain from telling the ambassador anything of importance for fear that it might be passed on to possible enemies. French officials felt much the same way. Bonnet informed Bullitt that the Soviet Government had "replied evasively" to French proposals for military conversations between French and Russian staff officers. He found the Russians were "much stronger in their speeches and statements than they were when it came to negotiation." But Bonnet had persisted in asking the Russians for a "unilateral guarantee" of Romanian frontiers in the event of German aggression against that country. He had also suggested that the Soviet Union seriously consider the negotiation of an "agreement with France for immediate assistance in case of war similar to the Anglo-Polish Agreement."

It is evident that despite the distrust that both Britain and France had for Russia, they still tried to extract from the Russian Foreign Office some promises of aid if Hitler made another step along the road to German expansion. On April 15, Sir William Seeds, at Moscow, presented to Litvinov a suggestion that his government, following British and French action, should make upon its own initiative a public declaration that "in the event of any act of aggression against any neighboring State to the Soviet Union which that State were to resist, the assistance of the Soviet Government would be given, if the desire for it were expressed."

Bonnet told Bullitt that the Soviet Government had rejected this British proposal and had suggested instead that "Great Britain, the Soviet Union and France should conclude accords for immediate military support in case of aggression similar to the pact recently

concluded between Great Britain and Poland.⁵⁴ Apparently the Russian proposals also included suggestions that British assistance to Poland should be restricted to the contingency of German aggression and that any Polish-Romanian alliance should apply to all States and not merely to Russia. According to the Polish Ambassador at Moscow, Grzbowski, the terms of the Russian proposals included permission for Soviet troops to enter Poland by northern and southern routes and for a declaration by Britain that her guarantee of Poland applied only to her western frontier.⁵⁵ Jules Lukasiewicz, Polish Ambassador at Paris, adds that Russia also wished a free hand in the Baltic states and a Polish-Russian treaty with far-reaching implications.

But even though Polish officials knew of these Russian hopes to control her future, they continued to reject any German proposal for an understanding. On March 26, Ribbentrop once more pressed upon Ambassador Lipski an agreement that would include the "reunion of Danzig with the Reich and the construction of an extra-territorial motor-road and railway connection between the Reich and East Prussia." Lipski curtly countered with the remark that "any further pursuance of these German plans . . . meant war with Poland."⁵⁷ By May 2 the Polish press had proceeded to the point where a demand was made that "Danzig become Polish."⁵⁸ With Warsaw expressing a rising sentiment of Polish nationalism there was little prospect for a German- Polish agreement.

Chamberlain Begins to Pursue the Russian Phantom

British opposition to Russian demands became weaker as the European situation grew more grave. By the last of June the British Foreign Office was ready to go to great lengths to appease Russia. This story was told very frankly by Daladier to Ambassador Bullitt:

"Daladier said that the British were now falling over themselves to accede to the Russian demands. Two texts for submission to the Soviet Government had been prepared today. The first contained no specific mention of the Baltic States, the Netherlands, Belgium and Switzerland, but would be accompanied by a secret memorandum covering them. The second contained a complete acceptance of the Russian demands. Strang in Moscow would be instructed tonight or tomorrow to present these two texts to the Soviet Government and to state that the British and French preferred the first text but were ready to accept the second if the Russians should insist. I asked Daladier if he believed that this would conclude the negotiations or if he believed the Russians would insist upon subjecting this political accord to the conclusion of a future military agreement. He said that he had urged the British to take up the question of a military agreement with the Russians before taking up the matter of the political agreement but the British had refused to do this. He was by no means certain that the Russians would surrender this demand and feared that the negotiations might be dragged out indefinitely. . . . He added that the Soviet Government had repeatedly assured the French and British Governments that it was not negotiating in any way with the German Government."

Britain and France Make New Overtures to Russia

Daladier had some doubts about Russian assurances, but he had no idea that the Nazi-Soviet accord was really moving towards an early conclusion. Leger expressed to Bullitt the opinion that "there were eighty chances in a hundred" that the Anglo-French conversations with Molotov in Moscow "would be concluded successfully in the near future." But there were other difficulties:

"Relations between Poland and France had again become extraordinarily unpleasant. At a moment when it was absolutely essential for the French Government to know the exact thoughts of the Polish Government with regard to Danzig, the Polish Ambassador in Paris was so nervous and irritable that it was impossible to have any really intimate conversation with him. He had insulted both Daladier and Bonnet so grossly that Daladier would no longer see him and Bonnet could get nothing out of him. Similarly, Beck in Warsaw had no relations of an intimate nature with the French Ambassador. As a result, all the French Ministers from Daladier down were reluctant to do anything of a concrete nature for Poland."

Leger's optimism concerning the satisfactory progress of the Anglo-French negotiations with the Soviet Government was distinctly premature. The matter of guarantees caused serious concern because some of the states that would be covered by these proposed pledges were openly against them. Finland, the Netherlands, and Switzerland strongly voiced their objections in the first week in July,²⁸ and this fact forced Britain and France to seek desperately for some formula that would be generally satisfactory. The British Ambassador in Moscow was also instructed to indicate the "prejudicial effect on the peace front (in view of public or private objection by Baltic States and Rumania and the unknown attitude of Holland to a Soviet or tripartite guarantee) of Russian demands for publication in treaty of a list of States guaranteed against aggression." He should express British preference for the enumeration of these guaranteed states in a secret supplementary agreement. It was also important to include the Netherlands, Switzerland, and possibly Luxemburg in the list of states whose protection would be guaranteed.

Molotov was willing to have the list of guaranteed states extended so as to include Belgium, Estonia, Finland, Greece, Latvia, Poland, Romania, and Turkey, but he strongly objected to the addition of the Netherlands and Switzerland unless pacts of mutual assistance between the U.S.S.R. and Poland and Turkey be immediately concluded. He also wished the term "indirect aggression" to be defined as "an internal coup d'etat or a reversal of policy in the interest of an aggressor."

There were several alternative formulas dealing with "indirect aggression," but none of them was satisfactory and conversations continued. Agreement upon the matter of a military convention was also difficult. On July 7, Lord Halifax was ready to make further concessions to the Soviet Government. He would accept the following definition of indirect aggression: "Action accepted by State in question under threat of force by another Power and involving abandonment of its independence or neutrality." The British

Ambassador in Moscow was directed to endeavor to include "consultation in case of aggression against Holland, Switzerland or Luxemburg." If agreement was impossible on this suggestion then he was to try to secure a "limited tripartite agreement susceptible of extension and providing for consultation in the event of aggression against another Power." It was made clear that the Foreign Office would not "agree to make entry into force of agreement depend on conclusion of military conversations."

Some two weeks later [July 19], the British Foreign Office made another concession but would not accept the entire Russian program. The situation was tersely described to Ambassador Kennedy by Lord Halifax:

"Halifax said that their final words to the Russians now is that they will accept the military pact but will not accept the Russians' definition of indirect aggression and if the Russians insist on it the English are going to call the whole deal off."

The following day Kennedy had a talk with Prime Minister Chamberlain. Although he was fairly optimistic about the general outlook for the next thirty days, he was

"sick and disgusted with the Russians and while he believes that the Russians are willing to continue talking without accomplishing anything, his patience is exhausted. He told me he had a conversation with Prince Paul, of Yugoslavia, and Prince Paul was definitely of the opinion that if England did not consummate a deal with the Russians, Germany would. The Prime Minister said he does not feel there is any danger of that."

On August 5, Lord Halifax sent to Sir Ronald Lindsay, in Washington, a brief notation: "At interview on August 2nd, Molotov again refused to accept our definition of indirect aggression." The game was just about up and Molotov was almost ready to show his hand. The farce of further conversations continued on August 12 when the British and French military missions arrived in Moscow. Voroshilov promptly asked the highly embarrassing question whether Poland and Rumania would permit the passage of Russian troops through their territories in the event of German aggression. General Doumenc telegraphed to Paris and urged the Daladier Government to accept the Soviet viewpoint and exert pressure upon Poland in favor of concessions to Russia. (Note: Interestingly, Britain was ready to put pressure on Poland for a British-Soviet pact Germany, but they were not willing to put pressure on Poland for further negotiations with Germany which would prevent the war from starting.)

11.6 Britain after Munich

Hitler's Bid for British Friendship

The Anglo-German relationship was the most important European issue after the Munich conference. An Anglo-German understanding could mean peace, prosperity, and security for Europe. A new Anglo-German war would bring destruction, ruin, and despair. The

former condition would offer nothing to the doctrine of Bolshevism, which thrived on human misery. The latter situation would present a unique opportunity for expansion to the Bolshevik leaders. It is not to be wondered that the Bolshevik leaders hated the Munich conference which had prevented an Anglo-German war. They feared that from its aftermath a permanent Anglo-German understanding would emerge.

The British attitude toward Germany was the crux of the problem. The attitude of Hitler toward Great Britain was favorable from the standpoint of establishing the permanent peace between the two nations which had been envisaged in the Anglo-German friendship declaration of September 30, 1938. Hitler hoped to avoid what he considered to have been the failures of Hohenzollern Germany. He condemned the idea of a large German navy, which had been brilliantly advocated before 1914 by Admiral von Tirpitz. He was unenthusiastic about the acquisition of German colonies overseas, and he regarded Germany's legal right to her former colonies as a mere bargaining counter. Hitler opposed trade rivalry between Germany and Great Britain. He wished the British to preserve their world commercial supremacy. The attitude of Hitler was familiar to the British leaders. The prominent Labour Party spokesman, George Lansbury, who had been the chief of the British Labour Party until 1935, had done what he could to inform the British Conservative leaders of Hitler's ideas. Lansbury met Hitler in Berlin on April 19, 1937. He was greatly impressed with the German leader, and he was convinced that he did not desire war. Lansbury discussed Hitler with Lord Halifax, and he rendered strong support to Chamberlain at the time of the Munich conference. He emphasized that no important section of the British population opposed Chamberlain's trip to Munich.

Arnold Toynbee, a leading English historian and an expert on international affairs, had visited Hitler in March 1936. He returned to England with a clear impression of Hitler's ideas. He informed Conservative Prime Minister Stanley Baldwin that Adolf Hitler was a sincere advocate of peace and close friendship between Great Britain and Germany. Thomas Jones, the closest friend of Lloyd George and Stanley Baldwin, had excellent connections with British statesmen. He was with Hitler in Munich on May 17, 1936. Jones was on close terms with Ribbentrop, and he was fully informed about Hitler's attitudes. Hitler had said that, if an Anglo-German understanding was achieved, "my biggest life's desire will be accomplished." Jones promised Hitler in Munich that Great Britain hoped "to get alongside Germany," and he praised Hitler's decision to give the English language priority after German, in the German schools, as a significant contribution to future contacts between the two nations.

Leopold Amery, one of the principal Conservative statesmen, was in Germany on a vacation in August 1935. He was hostile toward Hitler's aspirations, and he had not intended visiting the German leader. Hitler was informed that Amery was in Germany and he immediately extended an invitation to him. He and Amery discussed recent developments in Germany and future German aims for several hours. Hitler assured Amery that Germany accepted the Polish Corridor settlement, and he hoped one day to be in a position to offer Poland a German guarantee of her western frontier. Amery reluctantly concluded that

Hitler was “not unpleasantly boastful,” and he was charmed by Hitler’s statement that he “could not claim originality for any of his reforms.” Viscount Rothermere was a prominent British newspaper publisher and a leader of the British armament campaign. He was with Hitler in Berchtesgaden in 1937 shortly before the Hitler-Halifax conversations. Rothermere believed that the Hitler with whom he spoke was “convinced that he had been called from his social obscurity to power not to make war, but to preserve peace and rebuild both spiritual and physical Germany.” Rothermere and Hitler were also in correspondence. Hitler wrote to Rothermere that his ultimate objective was a comprehensive understanding among Germany, Great Britain, and the United States. Rothermere also remained in correspondence with Ribbentrop until a few weeks before the outbreak of World War II in 1939. Rothermere explained in a wartime book, which contained an introduction by Winston Churchill, that Ribbentrop had never been unfriendly toward Great Britain.

David Lloyd George, the Prime Minister of the victorious British coalition Government of 1918, visited Hitler in September 1936. Hitler made no secret of the fact that he was tremendously impressed with the achievements of the British wartime leader, and it was evident that he was extensively informed about his career. Lloyd George replied that he “was deeply touched by the personal tribute of the Führer and was proud to hear it paid to him by the greatest German of the age.” Lloyd George returned to Great Britain convinced that Hitler had performed a Herculean task in restoring prosperity and happiness to truncated Germany. The prominent British Conservative leader, Lord Londonderry, and the popular British journalist, Ward Price, both visited Hitler on numerous occasions. Each of these men published books in 1938 which favored an Anglo-German understanding, and which explained the aims and ideas of Hitler to their countrymen. Hitler tried repeatedly to arrange a meeting with British Prime Minister Stanley Baldwin in 1936, but neither he nor Ribbentrop were able to overcome Baldwin’s anti-German prejudices. Baldwin remarked at the time of his retirement on April 20, 1937, that he “envied Lansbury the faith which enabled him to go and tackle Hitler.” He might also have envied Hitler the faith which enabled him to seek out Baldwin and other British leaders in a vain effort to appease their distrust of Germany.

Hitler knew that a personal visit to Great Britain, before an Anglo-German understanding had been achieved, would not be possible because of this anti-German prejudice. He had offered to meet Baldwin at sea in the vicinity of the British coast. Later he received three visits from Prime Minister Chamberlain, but these occurred during a crisis when conditions were not normal. Chamberlain noted that Hitler “seemed very shy” at their first meeting on September 15, 1938. Hitler confessed his fear that he would “be received with demonstrations of disapproval” if he visited England, and Chamberlain agreed that it would be wise to choose the right moment.

Winston Churchill never met Hitler. He was in Munich for a few days in April 1932 and he expressed a desire to see Hitler. He claimed later, on the strength of an unlikely supposition, that Hitler refused to see him because Churchill had allegedly criticized Hitler’s attitude toward the Jews. Ernst Hanfstaengl, who was commissioned by Hitler to

entertain Churchill in Munich, explained that Hitler was in Nuremberg and that he was distracted by several important crises during a crucial phase of his struggle for power. Churchill made no effort to see Hitler after the latter was appointed Chancellor. There is no evidence that he had criticized Hitler's attitude toward the Jews prior to 1932. Churchill wrote in 1937: "If our country were defeated I hope we should find a champion as indomitable to restore our courage and lead us back to our place among the nations." The champion to whom he referred with such enthusiasm was Adolf Hitler. Anthony Eden met Hitler on several occasions. The first meeting took place in 1934; Eden noted that Hitler was "restrained and friendly" and "showed himself completely master of his subject (European armaments)." The second meeting occurred in March 1935 after the British Government had severely criticized Hitler for introducing peacetime military conscription a few days earlier. The personal relations between Eden and Hitler remained friendly at the second meeting. But there was not much real communication, because Eden had little awareness of German problems. This fact was apparent at a discussion between Foreign Minister Eden and Neville Henderson at Cliveden on October 24, 1937. Thomas Jones noted that the British Ambassador to Germany "has lived in the countries we talked about and Eden has not and this was apparent."

Sir John Simon, one of the closest advisers to Chamberlain in 1938, accompanied Eden to Berlin in March 1935, and he afterward recorded his impressions of Hitler at that meeting. He noted that Hitler displayed no desire during their conversation to play the role of dictator. He had no doubt that Hitler was sincere in his desire for a permanent understanding with the British. He was equally convinced that Hitler considered the moral rehabilitation of defeated Germany an urgent task. But Simon also remained convinced that it was a vital British interest to challenge Hitler at the favorable moment. It was this attitude, based on anti-German prejudice, which constituted the great obstacle to an understanding between Great Britain and Germany.

Chamberlain's Failure to Criticize Duff Cooper

The first few days after the Munich conference provided a startling revelation of the depth of resentment toward Germany among British officials. It should be emphasized that it was the hostility within the British leadership which constituted the danger. The mass of the British people were obviously desirous of peace with Germany. The ovation which Chamberlain received in London on the rainy Friday afternoon of September 30, 1938, when he returned from Munich, was unprecedented. He was the hero of the hour among the common people because he had prevented war. The enthusiasm remained unbroken until the debates on the Munich conference opened in the British Parliament on Monday, October 3, 1938. King George VI departed for Balmoral castle in Scotland on October 2nd. He issued an announcement prior to his departure in which he expressed his confidence in Chamberlain and his hope that the peace of Europe would be preserved. The British war enthusiasts lost no time in launching their effort to spoil the celebration

of peace. The first blow was a message to Chamberlain from Parliamentary First Lord of the Admiralty, Alfred Duff Cooper, on October 1, 1938. Duff Cooper announced that he distrusted the policy which had avoided war. He was resigning from the British Cabinet, and he intended to deliver a major speech in Parliament to explain this decision. Chamberlain replied in mild tones that he was aware of the fundamental disagreement which existed. Duff Cooper was an ideal ally of Churchill in the struggle against peace. He hated the Germans, and he had disliked the German language and German literature since his student days. He was appointed Secretary of State for War in 1935, and by that time his principal concern was the "ever-growing German menace." He agreed with Sir Robert Vansittart, the Permanent Under Secretary at the Foreign Office, that everything possible should be done to prevent Italy from aligning with Germany. He was convinced that it was more important to oppose Hitler than to oppose Communism. He condemned the entire German nation as a "cruel people," and he criticized Englishmen who were inclined to forget the German "crimes" of World War I. He had been convinced since 1936, as had Lord Halifax, that an Anglo-German war was inevitable.

The derogatory comments which Chamberlain made about Hitler after their first meeting failed to appease Duff Cooper. He wanted war with Germany, and he feared that the chance might be lost. He believed that he could do more to promote war if he joined the Churchill faction of Conservatives outside the Cabinet. Duff Cooper was allowed to deliver the first speech of the debate in the House of Commons on October 3, 1938. He criticized the Government for not assuming a definite commitment during the Czech crisis. He asserted that Great Britain would not have been fighting for the Czechs, because this would have been an insufficient basis for war. He insisted that she would have been fighting for the balance of power, which was precious to some British hearts. He believed that it was his mission and that of his country to prevent Germany from achieving a dominant position on the continent.

Chamberlain astonished his critics by refusing to reply to this condemnation of his policy by a former subordinate. He said instead, in the tones of mawkish sentimentality which he frequently employed, that he always was moved by the resignation speeches of Cabinet ministers. It was obvious that he cherished a deep affection for Duff Cooper, and the differences between them were those of tactics rather than basic principles. He praised Duff Cooper for doing a good job at the Admiralty, and he apologized for him by observing that many of the Cabinet ministers would carry the scars of the recent crisis for a long time to come.

The British Tories in Fundamental Agreement

There was no disagreement between Chamberlain and Duff Cooper about the antiquated British policy of the balance of power. The theory had first been espoused in England in the 16th century by Thomas Cromwell, a disciple of Machiavelli, and a wealthy adventurer who had witnessed at first hand the late phase of balance of power diplomacy

in Renaissance Italy. It was Thomas Cromwell who persuaded Cardinal Wolsey to conduct English policy along these lines. The policy had been employed to prevent a strong state, such as Milan, from gaining supremacy over the weaker Italian states. It was useless when outside Powers such as France and Spain appeared on the scene with overwhelming forces and crushed a divided Italy. The balance of power policy was effectively employed in Europe by England for several centuries to prevent any single Power from attaining the sort of supremacy over the divided continent which was enjoyed in North America by the United States after 1865. It meant the relentless curtailment of any seemingly preponderant continental state, regardless of the domestic institutions or foreign policy of such a state. The purpose of the policy was to give Great Britain a permanent position of control over the destinies of her neighbors. The policy was futile by the 1930's, when outside Powers such as the Soviet Union and the United States were in a position to appear upon the scene with overwhelming forces and to share dominion over a crushed and divided Europe.

There were several occasions, after Thomas Cromwell and Henry VIII, when English policy rejected the balance of power. Oliver Cromwell, the Lord Protector of England during the 1650's, was scornful of the balance of power theory, which he regarded as a decadent basis for policy. The balance of power policy was revived by King William III of England in the 1690's in a remarkable series of speeches from the throne to Parliament. King William, the great-grandson of the German prince of Nassau-Orange, William the Silent, was flexible in his national loyalties. He built up English power at the expense of his native Holland because in England there was greater respect for the monarchical institutions which he cherished. William used French support of the Catholic Scotch-English Stuarts as the pretext for plunging England into the war of the League of Augsburg, but he explained after the war was well under way that the balance of power was his primary consideration.

The balance of power was used to justify English participation in the next major European and Overseas struggle, the War of the Spanish Succession. England made great gains when she concluded a separate peace with France at Utrecht in 1713, and the balance of power received a new lease on life, once the horrors of the war had been forgotten. The English statesman, James Stanhope, led a brief attempt to organize a preponderant League of European States, but it collapsed in 1720 during a severe economic depression and a change in English leadership. England returned to the balance of power under Robert Walpole, and no subsequent English Statesman was able to equal his skill in conducting English policy under this system. He kept England out of the European War of the Polish Succession in the 1730's because he realized that the balance of power was not threatened by the war. He was unable to prevent England's entry into an unnecessary war against Spain in 1739, and he was soon forced from power.

England was the principal European Power when her American mainland colonies revolted in 1775. She was unable to crush the insurgent American colonies because of her inability to hire sufficient mercenary troops in Europe, but she defended her European position

with the ease against an enemy coalition which included France, Spain, and Holland. The English leaders sought to frustrate the attempts of Russia, France, and Spain to expand during the decade between the end of the American war in 1783 and the outbreak of war between England and Republican France. No single Power offered an impressive challenge to the balance of power at that time. The balance of power received dramatic emphasis during the four wars of coalition waged against France under the first Republic, and after 1804 under the first Napoleonic Empire. The fourth coalition waged a second war against Napoleon when he returned from Elba in 1815. The balance of power was used on several occasions during this period to justify the continuation of English warfare against France, when the other enemies of France had left the field. Robert Castlereagh was conducting British foreign policy when France was crushed in 1815, and he hoped to abandon the balance of power policy.

England followed the balance of power policy without interruption after 1822. This was true either when she was in "splendid isolations" or when she was a member of some alliance system. England supported Napoleon III against Russia in the Crimean War of the 1850's because she believed that Russia was stronger than France. She refused to protect Belgium from a possible German invasion in 1887, because she believed that a Franco-Russian combination was more powerful than Germany and her allies. Decisions were difficult during these years, because opposing forces were almost in perfect balance without England. This meant, on the positive side, that England could pursue her balance of power policy in "splendid isolation" without promoting a complicated system of alliances, although at one time she was closely associated with Bismarck's Triple Alliance.

There was a period of great confusion in English foreign policy during the 1890's. The five principal continental Powers were organized into two alliance systems. It was feared in London that the two systems might combine against England in one of the frequent colonial crises of these years. Joseph Chamberlain, the father of Neville, led a group who favored an English alliance policy. Prime Minister Salisbury opposed an alliance policy. He insisted that alliances were superfluous for England and would impair the flexibility of English policy. The military reverses suffered by England in the early phase of the Boer War helped to carry the day for Chamberlain and alliances. Salisbury was right when he insisted that the opposite conclusion should have been drawn, because the continental Powers did not intervene against England in this crisis when she was most vulnerable. The growth of German wealth and productive power during these years was phenomenal, and it seemed to more than compensate for the reverses currently suffered by Germany in diplomatic affairs. Many of the British leaders began to suspect that German growth was a challenge to the balance of power. The balance of power had its own morality. Any nation which seemed to challenge it should be treated as an enemy. It did not matter whether or not Germany planned to attack British interests, or whether or not she was in a position to strike a blow at England. The prospect that she might become stronger than any possible hostile continental combination suggested that it was time "to redress

the balance of power.”

The situation was more complicated than it had been during earlier centuries. Great Britain launched her alliance policy by concluding an Anglo-Japanese alliance in 1902, but it was easy to see that the rising imperial power of Japan might become a real challenge to British interests in Asia. Both the United States and Germany surpassed Great Britain in industrial strength before 1914. British power since 1750 had been based more on industrial and naval supremacy than on diplomacy, and the loss of industrial supremacy made the British position more difficult. A challenge to Germany would play into the hands of the United States, just as a challenge to America, which almost occurred during the 1895-1896 Venezuelan crisis, would have played into the hands of Germany. Cecil Rhodes, the architect of British imperial expansion in Africa, recognized this dilemma, and this prompted him to advocate permanent peace and cooperation among Great Britain, Germany, and the United States. This would have meant the abandonment of the balance of power policy, but Cecil Rhodes was sufficiently shrewd to see that the policy was obsolete. The ruling British leaders did not see it that way and Great Britain suffered an enormous loss of power and prestige in World War I despite her victory over Germany.

The Soviet Union began to emerge as an industrial giant of incalculable power during the two decades after World War I. It was evident that there were at least four nations immediately or potentially far more powerful than Great Britain. These four nations were the United States, the Soviet Union, Germany, and Japan. This was different than in the old days when it had merely been a question of one preponderant Spain, or one preponderant France. It seemed momentarily that Great Britain might be returning to the policies of Stanhope and Castlereagh when she joined the League of Nations in 1919. Unfortunately this was not the case. France after 1919 was no longer as powerful as Great Britain, but she enjoyed continental preponderance for several years because of the treaty restrictions on Germany, the intrinsic feebleness of Italy, and the disappearance of Austria-Hungary. Revolutionary upheavals after the defeat in World War I temporarily reduced Russian power. The British responded by employing their balance of power policy against France. There had been notorious rivalry between the two nations in the Near East during World War I, because of oil and traditional prestige factors, and the British nearly succeeded in “biffing” the French out of their Syrian claims. The British and French took opposite sides in the post-war struggle between the Greeks and the Turks. The British continued to oppose French policies with increasing vigor when the Turks emerged victorious with French support.

The climax came when Great Britain opposed the efforts of France and Belgium to collect reparations in the Ruhr in 1923-1924. The French were confidently pursuing a policy of independence under Poincaré's bold leadership, but the debacle suffered in the Ruhr was a stunning psychological blow to the French. Edouard Herriot, who took the reins of policy from Poincaré, concluded that nothing could succeed without British cooperation. There were later instances of friction between France and Great Britain,

but the French leaders were always inclined to accept the British lead. It was apparent to everyone during the Czech crisis in 1938 that Anglo-French policy was conducted from London. The British occasionally pursued policies which seemed to strengthen French preponderance on the continent. They joined France and Italy in squelching the feeble attempt of Chancellor Brüning of Germany to conclude a customs union with Austria in 1931. It did not seem that the "Hunger Chancellor" was capable of removing the threat of Communism in Germany, which implied a new preponderant Russo-German combination, or of challenging the old preponderance of France.

The situation changed with the arrival of Hitler in 1933. The new Chancellor dealt a few annihilating blows to German Communism, and challenged France by withdrawing Germany from the disarmament conference at Geneva, where German claims to equality received farcical treatment. The balance of power on the continent was restored when Hitler sent German troops into the Rhineland in 1936. The French might have challenged this move successfully had they received an assurance of British support. As it was, the French feared that action would mean an Anglo-German combination against them as in 1923. Duff Cooper and Chamberlain agreed in October 1938 that Great Britain should continue the balance of power policy. They agreed that everything possible should be done to prevent a permanent alignment of Italy with Germany. They both underestimated the Soviet Union and believed that she was much less powerful than Germany. They also agreed that the Czech cause as such was not worth British participation in a European war. The sole point where they disagreed was whether or not it would be wise for Great Britain to attack Germany in 1938. Duff Cooper believed that Great Britain was sufficiently strong in 1938 to attack Germany, but Chamberlain believed that it would be wiser to play for time. Neither Chamberlain nor Duff Cooper had any sympathy for Germany, the nation which Chamberlain called the bully of Europe as early as 1935. It is possible from this perspective to see that the differences within the British Conservative Party in October 1938 were not really very profound. Anti-German prejudice was the dominant attitude within the entire Conservative Party.

Tory and Labour War Sentiment

The London Times seemed to incline toward the evaluation of Duff Cooper when it announced on October 3, 1938, that Germany was relieved to escape from a war "which, in the opinion of most sections of the population, it would almost certainly have lost." The Times predicted that "Mr. Chamberlain will find plenty of critics" in the current parliamentary debates. It is important to recall that Geoffrey Dawson, the editor of the Times, had provided valuable support for Halifax and Chamberlain during the Czech crisis. On the afternoon of September 6, 1938, he had revised the famous article which appeared in the Times on the following day, and advocated the cession of the Sudeten districts to Germany. Dawson was especially close to Halifax, whom he had met in South Africa in 1905. He published an article on October 30, 1925, which praised Halifax without stint

or limit when it was announced in London that the latter had been appointed Viceroy of India. Halifax had given Dawson a detailed private analysis of his visit to Hitler in November 1937, and he had told Dawson that he was well-satisfied with the visit. Dawson noted that Halifax probably could have negotiated a lasting agreement with Germany at that time, had Great Britain agreed to remain aloof from possible complications between Germany and her eastern neighbors. Dawson also realized that Halifax was not willing to do this.

It was significant that the London Times, which had been the principal journalistic organ of appeasement during the Czech crisis, began to adopt a more critical attitude toward Germany immediately after the Munich conference. It followed the policy of Halifax in this respect. The differences between the attitudes of the Times and of the Daily Express toward Germany became increasingly pronounced. This was because Lord Beaverbrook, the owner of the Daily Express, was a sincere advocate of appeasement as a permanent policy, whereas Geoffrey Dawson was not. The Daily Express continued to hope and to predict that there would be no war with Germany until within a few days of the outbreak of World War II in September 1939. This attitude reflected the wishes of wide sections of the British population in the autumn of 1938, and in November 1938 the Daily Express noted that its circulation had increased to over 2 million within a very short time, which gave it the largest circulation of any newspaper in British history. When Halifax at last launched a gigantic propaganda campaign in March 1939 to sell the British public on war with Germany, the editorial policy of the Daily Express gradually became a liability for circulation rather than an asset. It is not surprising that Beaverbrook finally made concessions to the warlike mood in order to preserve his newspaper. It became evident that a large-circulation British newspaper with consistent principles was an impossibility in the modern age. Chamberlain paid special tribute to Halifax in the British House of Commons on October 3, 1938. He claimed that Halifax felt a duty not only to England, but to all humanity. There was no point in wondering what prompted Chamberlain to make this sentimental statement, because it was consistent with his usual oratorical style. There is no record that Halifax ever recanted his maiden speech to Parliament, in which he denied that all men were equal and insisted that the British were the "superior race" within an Empire which comprised more than a quarter of the population of the world. Chamberlain leaned on the prestige of Halifax to protect his own position.

The War Party hoped that by contesting the results of the Munich conference they could either unseat Chamberlain or push him into an anti-German policy. They knew that the Labour Opposition was much too weak in Parliament to accomplish this result without important allies from the British Conservative Party. The Labour Party leaders professed to believe that cooperation with National Socialist Germany in foreign affairs would discourage necessary reforms at home. Chamberlain continued his speech by reading the text of the Anglo-German declaration of friendship of September 30, 1938. He mentioned that this agreement would not be effective unless there was good will on both sides. This left room to claim later that the British had to oppose Germany because Hitler did not

show good will toward England. Chamberlain noted that Munich had merely provided a foundation for peace and that the structure was still lacking. He then turned to his favorite theme of British armament, and he reminded the House with pride that the pace of the British armament campaign was increasing daily. He promised that the British Empire would not relax her efforts unless the rest of the world disarmed. He concluded with the announcement that military power was the key to successful British diplomacy.

Halifax delivered an important speech in the British House of Lords on October 3, 1938. He shared the opinion of Hoare that Great Britain should never fight for a foreign state unless she was in a position to restore its old frontiers after a victorious war. This was an interesting idea, especially when one considers that Halifax refused to guarantee the Polish frontier with the Soviet Union when he concluded the Anglo-Polish alliance of August 25, 1939. It was obvious that this argument was largely sophistry to Halifax, and a sop to appease the Opposition. He revealed to the Lords that he had done what he could to improve British relations with the Soviet Union by placing the blame solely on Germany and Italy for refusing to invite the Soviets to Munich. The key to the Halifax speech of October 3rd was the statement that Great Britain would continue to prepare for a possible war against Germany despite the Anglo-German friendship declaration of September 30, 1938. Halifax, like Chamberlain, devoted the latter part of his speech to a discussion of the British armament campaign. He emphasized that the need for more weapons was the principal British concern at the moment.

Baldwin delivered a speech in Lords on the following day. He complained that it had been difficult to establish personal contact with the German and Italian dictators during the past five years. This was an astonishing statement when one recalls that Hitler had made repeated efforts to meet Baldwin at any time or place while the latter was Prime Minister. Baldwin dropped the mask completely when he claimed that Great Britain needed the spirit of 1914 to solve contemporary world problems. He was supposedly defending the peace settlement of Chamberlain, but in reality he was invoking the glory of the British attack on Germany in 1914.

It was known that President Roosevelt in January 1938 had advocated a world conference on European problems, which was supposed to include both the United States and the Soviet Union. The Labour leaders adopted the world conference slogan and stressed the importance of the voice of the Soviet Union in the councils of Europe. Leslie Burgin, Minister of Transport, spoke on behalf of Chamberlain, and he repeated the argument that a war for the Czechs would have been immoral, unless it could have been shown that it was possible to restore the Czech state in its entirety after the war. It is astonishing that these same people accepted war on behalf of Poland without a murmur, when it was obvious after August 22, 1939, that the Soviet Union was hostile to Poland, and that Great Britain had no intention of opposing Russia. It should have been apparent to anyone that the defeat of Germany would not enable the British to restore the new Polish state. In reality, the British leaders were not truly concerned about either the Czechs or the Poles. The same argument about not being able to restore the Czechs was

repeated on October 4th by Sir Thomas Inskip, another British Cabinet member. In the following weeks the argument was repeated ad nauseam. It seems impossible that anyone could have forgotten it within the short span of one year. Nevertheless, the deluge of propaganda in England, after March 1939, was so great that it would have been easy to forget the Ten Commandments.

On October 5, 1938, Winston Churchill followed with his long awaited anti-German speech. The other English war enthusiasts hoped that he would make his speech as provocative as possible, and he did not disappoint them. He agreed with his close friend in America, Bernard Baruch, that Hitler should not be allowed to "get away with it." Churchill claimed that Hitler had extracted British concessions at pistol point, and he loved to use the image of Hitler as a highwayman or a gangster. He hoped to worry Hitler by intimating that he had contacts with an underground movement in Germany. He suggested that a common Anglo-Franco-Soviet front in support of the Czechs would have enabled an opposition movement within Germany to cause trouble for Hitler, and possibly to overthrow him. He used flowery rhetoric to describe the allegedly mournful Czechs slipping away into a darkness comparable to the Black Hole of Calcutta. The speech was couched in elegant phrases dear to the hearts of many of Churchill's countrymen. The simple and stark purpose of the speech was to foment a war of annihilation against Germany. Churchill had been excluded from Conservative Governments in England for many years, but he had made countless speeches, and his personal influence remained tremendous. He had propagated the myth that Great Britain was disarmed in 1932, indeed, that she had wrongly practiced a policy of unilateral disarmament in response to the noble sentiment of the League Covenant. In reality, the British military establishment in 1932 was gigantic compared to that of Germany, and much larger than that of the United States. Great Britain had less than one million men in all of her ground forces throughout the Empire, but it had never been traditional British policy to maintain a large standing army. She had the largest navy in the world, despite the Washington conference of 1921-1922 which envisaged eventual British equality with the United States. The maintenance of a navy was no less expensive or militaristic than the upkeep of an army.

Churchill had conducted an uninterrupted campaign of agitation against Germany since March 1933, and he was a veteran in the field. Some of his inaccurate statements about alleged German armaments in this period are contained in his 1948 volume, *The Gathering Storm*, and in his 1938 book of speeches, *When England Slept*. Churchill wanted to convince his countrymen that Germany was governed by an insatiable desire for world conquest. In his speech of October 5, 1938, he did more than anyone else to warn Hitler that Germany was in danger of being strangled by a British coalition in the style of 1914. Churchill does not bear direct responsibility for the attack on Germany in 1939, because he was not admitted to the British Cabinet until the die was cast. The crucial decisions on policy were made without his knowledge, and he was frankly amazed when Halifax suddenly shifted to a war policy in March 1939. Churchill was useful to Halifax in building up British prejudice against Germany, but he was a mere instrument,

at the most, in the conduct of British policy in 1938 and 1939.

Tory Confidence in War Preparations

The alarmist public utterances of the British leaders, when Hitler had done nothing contrary to the Anglo-German declaration or the Munich agreement, were mild compared to statements made through the channels of secret diplomacy. The January 1939 visit of Halifax and Chamberlain to Rome offered eloquent testimony of hostile British intentions toward Germany. The British leaders were in excellent spirits because of the unexpected successes of the aerial armament campaign after the Munich conference. The production of British fighter aircraft was 25% beyond the figure which had been predicted at the time of Munich in the early autumn of 1938. The American expert Charles Lindbergh, who lived in England, made a considerable impression on the English leaders before Munich with his report on German air power. Lindbergh praised the quality of German aerial armament in the strongest terms which the facts would permit. He was glad to contribute what he could to pointing out the senselessness of a new European war, and he surmised correctly that the British attitude was the key factor in deciding whether or not there would be such a war. He was overjoyed by the news of Munich, and he sincerely hoped that peace had been saved.

Unfortunately, the British leaders realized that the German lead in the air was very narrow in 1938. They were not merely interested in defense against a possible German aerial offensive. They hoped that their own air power would be a decisive offensive instrument in a future war. British aerial strategy since 1936 had been based on the doctrine of mass attacks against objectives far behind the military front. Their strategy contrasted sharply with that of the Germans, who hoped that aerial bombardment would be restricted to frontline military action in the event of war. The difference in strategy was reflected in the types of aircraft produced by the two countries. Germany produced many light and medium bombers for tactical operations in support of ground troops, but the major British emphasis was on the construction of heavy bombers to attack civilian objectives far behind the front. The British Defence Requirements Committee decided as early as February 1934 that "the ultimate potential enemy" in any major war would be Germany.

The British in the Spring of 1938 were hoping to build 8,000 military aircraft in the year beginning April 1939, and this goal was later achieved and surpassed. They had expected to build only 4,000 military aircraft in the year April 1938 to April 1939, but they were far ahead of schedule by January 1939, and their key secret defense weapon, the "radar project," had made gigantic strides since 1935. The British leaders and experts were concerned about their air defenses, but they had not lost sight of a possible aerial offensive against the civilian population of Germany. The ratio of fighters to bombers in the autumn of 1938 program of Air Minister Sir Kingsley Wood was 1:1.7. The construction of medium bombers had been discontinued, and the emphasis was solely on heavy bombers capable of attacking distant objectives. The British leaders admitted that

defensive preparation of British civilian centers to meet German retaliation bombing was “insufficient to dispel anxiety“ during the final months before the outbreak of World War II. Nevertheless, they were convinced that they were reasonably secure against successful German retaliation, and hence the strategy for the bombardment of the German civilian masses was developed with single-minded energy.

Mussolini Frightened by Halifax and Chamberlain

It is not surprising that the sudden and unexpected increase in military power made the British leaders more aggressive in attitude, and this was reflected in their conversations with the Italian leaders. It is interesting to compare the British and Italian records of these talks. Two of the principal conversations included Chamberlain, Halifax, Mussolini, and Ciano, one included Halifax and Ciano, and one included Chamberlain and Mussolini. The first conversation of the four leaders took place at Mussolini's office in the Palazzo Venezia in Rome on the afternoon of January 11, 1939. The British record noted that Mussolini pledged Italy to a policy of peace for internal reasons, and for the general stability of Europe. The Italian leader asserted that a new war could destroy civilization, and he deplored the failure of the Four Munich Powers to cooperate more closely to preserve peace. He reminded Chamberlain and Halifax that he had envisaged close cooperation when he proposed a Four Power Pact of consultation and friendship among Great Britain, France, Italy, and Germany in 1933. He favored the limitation of arms. The Jewish question was discussed, and Mussolini stated his personal opinion that the best solution would be for all Jews to come under the laws of a sovereign Jewish state, although they need not all live there. Mussolini was concerned about the British attitude toward Germany. Chamberlain declared that he had considered the possibility of conversations with the Germans toward the end of 1938, but that he had changed his mind. He claimed that he had reconsidered because he was disappointed in the German attitude.

Mussolini, Ciano, Chamberlain, and Halifax met at the Palazzo Venezia again on the afternoon of January 12, 1939. Franco-Italian relations were on the agenda. The Italian leaders insisted that the mysterious recent demonstrations against France in the Italian Chamber of Deputies on November 30, 1938, were entirely spontaneous. They blamed the French for much of the recent tension between Italy and France, which had culminated in this incident. Chamberlain turned the discussion to Germany. He claimed to be impressed by rumors of sinister German intentions. He had heard that Germany was planning to establish an independent Ukraine, and to attack Great Britain, France, Poland, and the Soviet Union (False information given to Britain by the German underground resistance movement).

Mussolini assured the British leaders that German armaments were defensive, and that Hitler had no plans for an independent Ukraine or for attacks on the various countries which Chamberlain had mentioned. He added that Germany desired peace. Chamberlain disagreed. He declared that German arms were more than sufficient to deal with attacks

from countries immediately adjacent to Germany, and that hence the Germans must be harboring aggressive plans. He claimed that Great Britain, on the other hand, was merely concerned with defending herself from the German menace. He defended the extremists of the British Conservative Party, and he denied that anyone, including Churchill, advocated a British military offensive against Germany. The British and Italian leaders agreed that it would be difficult to guarantee the Czechs, and the British mentioned a guarantee formula which the French had previously rejected. This formula stipulated no aid to the Czechs unless three of the Four Munich Powers agreed that aggression had taken place. Mussolini mentioned a series of requirements, including the need for stable conditions within the Czech state, which would have to be met before a guarantee could be considered. The conversation concluded with comments about the British General Election planned for the autumn of 1940 and the Rome International Exposition scheduled for 1942. Mussolini was much concerned about plans for the Rome Exposition, and Chamberlain made the obvious remark that the British would like to participate.

The British also neglected another major point made by Mussolini. The Italian leader could understand British concern about rumors suggesting an impending attack on their own country or on neighboring France. He could not appreciate their apparent concern about the welfare of the Soviet leadership. Mussolini denied that Hitler had plans for the dismemberment of Russia, but he could not refrain from commenting that the end of Communism in Russia would be a blessing for the Russian people. This remark did not impress the British leaders. Mussolini swore that he knew with absolute certainty that Hitler had no hostile plans against the West. Mussolini also was surprised that Chamberlain was predicting trouble between Germany and Poland. He shared the optimism of Hitler that an understanding between Germany and Poland could be attained. Polish Foreign Minister Beck had recently visited Hitler, and the German Foreign Minister was scheduled to visit Beck at Warsaw in a few days. The Italian leader was unaware that Polish Ambassador Raczynski in London had requested British support against Germany in December 1938, or that Halifax had expressed a desire to support Poland at Danzig as early as September 1938. Mussolini warned Chamberlain not to be influenced by anti-National Socialist propaganda. Chamberlain stridently denied Mussolini's claims about German defensive needs, and he insisted that Russia did not have the strength to be a menace to anyone. One is reminded here of the statement of Anthony Eden in March 1935 that the Soviet Union would not be in a position to wage a war of aggression for fifty years. Mussolini was amazed by Chamberlain's remark, and he repeated that Germany had good reason to fear a hostile coalition of overwhelming strength.

The Italian leader used every possible argument to cope with Chamberlain's anti-German phobia. He cited the Siegfried line, along the German frontier with France and Belgium, as an indication of the defensive nature of German armament. Chamberlain insisted that German armament was far too impressive, and he suggested that Hitler should speak publicly of his desire for peace, if he was truly peaceful. This suggestion astonished Mussolini, and he inquired if Chamberlain was unaware of Hitler's New Year Declaration

of January 1, 1939, in which the German leader had professed a fervent desire for the perpetuation of European peace. Mussolini repeated that the current scope of German armament was fully justified by the existing situation. He wished to be helpful in allaying Chamberlain's alleged fear of German intentions. He was willing to cooperate with Chamberlain in organizing a conference for qualitative disarmament as soon as the war in Spain had ended. Chamberlain displayed no interest in this proposal. Mussolini referred to the inner instability of the Czech state, the failure of the Czechs to dissolve their ties with Russia or to adopt a policy of neutrality, and the fact that the new Czech borders in many directions had not received their final definition on the ground by international border commissions. The Italian record was emphatic in stating that Chamberlain agreed with Mussolini's remarks about the Czechs.

The Italian record also shows that Mussolini was disappointed by Chamberlain's attitude. The visit was successful from the British perspective, but unsuccessful from the Italian standpoint. The British leaders had hoped to intimidate Mussolini, and to discourage him from supporting Hitler if and when war came. They were successful in this effort, although this diplomatic success was cancelled in 1940 because of the unexpected fall of France. The Italians, on the other hand, had hoped that their assurances would prompt the British to adopt a more tolerant attitude toward Germany and a more cooperative policy toward the settlement of current European problems. They were fully disappointed in this expectation. It was evident that British hostility toward Germany was implacable. Mussolini discussed the situation with German Ambassador Mackensen at the British Embassy reception on the evening of January 13, 1939. He said that the results of the visit were meager, and he complained that the British had made him feel like a lawyer in one of their courts when he had attempted to explain German armaments and German foreign policy. He left no doubt in Mackensen's mind that the British leaders were ready to find Germany guilty of every crime. The Germans received further information about the Rome visit from Italian Ambassador Attolico in Berlin on January 17, 1939. This included an excellent condensed summary of the conversation of January 11, 1939. It was followed by a report from Mackensen, which contained an account of the conversation of Chamberlain, Halifax, Mussolini, and Ciano on January 12, 1939. The Germans learned that their armament program provided the main topic of discussion. Mackensen also discovered that Chamberlain had been clever in making table-talk propaganda with Mussolini. Chamberlain referred to Italy and Great Britain as imperial Powers, with colonies overseas, in contrast to Germany, a mere continental nation. This was satisfactory to Hitler, who had no desire to hoist the German flag in distant parts.

Hitler's Continued Optimism

The tragedy which overtook Italy in World War II indicates that Mussolini's alarm at British hostility toward Germany in January 1939 was amply justified. There had been no German moves since Munich. Nevertheless, the same British Prime Minister who had

persuaded Hitler to sign the declaration of Anglo-German friendship on September 30, 1938, was branding Germany an aggressor nation in January 1939. His assurance that Great Britain was ready for war with Germany indicated that he envisaged the likelihood of a conflict, and his defense of Churchill's attitude toward Germany was ominous.

Cohn Brooks was one of the leading British writers of the 1930's who advocated huge British armaments. He explained in his persuasive book, *Can Chamberlain Save Britain? The Lesson of Munich*, which was written in October 1938, that "the Four Power Conference of Munich in September 1938 gave to the world either an uneasy postponement of conflict or the promise of a lasting peace." This was true, but the promise of lasting peace was undermined by the attitude of the British leaders toward Germany. Brooks was an alarmist. He claimed that Great Britain was in peril because the balance of power was threatened. He called on British youth to be equal to the British imperialistic tradition, and not to be further influenced in their attitudes by the unusually heavy losses suffered by Great Britain in World War I. He reminded his readers that Great Britain had spent 102 years fighting major wars during the past 236 years since 1702, and that she had fought many minor wars during the otherwise peaceful intervals. He recognized that Great Britain had a record of aggressive military action unequalled by any other Power in modern times. He wished British youth to recognize this obvious fact, and to prepare for the new struggle against Germany.

Karl Heinz Pfeffer, a cosmopolitan German expert on British and American attitudes, attempted in a 1940 book, *England: Vormacht der bürgerlichen Welt* (*England: Guardian of the bourgeois World*), to explain British hostility toward Germany during this period. He noted that the alleged British disarmament between World War I and World War II was a myth, but that the British public had been deluged with the peace propaganda of private groups late in 1931, on the eve of the much-heralded general disarmament conference of February 1932. French obstruction wrecked the conference, and Great Britain began to search for justification for an increase in her already considerable armament. Propaganda was needed to overcome the popular longing for peace. The experience of World War I suggested the answer, and this partially explained the initial hate campaign against Germany in the period 1932-1938.

Hitler had been warned by Mussolini. Ribbentrop's prediction of January 2, 1938, that it would be impossible for Germany to arrive at a lasting agreement with England, before Hitler had completed his program of peaceful revision, had received new confirmation. Hitler hoped that he could complete his program before the British were ready to attack Germany, and that he could persuade them afterward to accept the new situation. This had been the sole answer to the dilemma of British hostility in the age of Bismarck. It offered a fair prospect of success, but a policy of drift offered none at all. Germany was the major Power in the European region between Great Britain in the West and the Soviet Union in the East. British hostility was reaching a crest, and the alternatives were peace or war. Hitler was in the middle of the stream. He was determined to reach the high bank. He wished to rescue Germany from the swampland of insecurity, decline,

and despair. He wished Germany to have the national security and the opportunity for development which had been the heritage of Great Britain and the United States for many generations. He hoped to bring Germany out of danger, and to reach solid ground which was safe from any hostile British tide. He believed that this objective could be attained without harming Great Britain or the United States in any way. Hitler looked forward to an era of Anglo-American-German cooperation. This would have been the best possible guarantee of stability and peace in the world. There was good reason to believe in January 1939 that this objective could be achieved, although the perils which faced Germany were very great. The worst of these was British hostility after Munich.

11.7 The Danzig Problem

The Repudiation of Self-Determination at Danzig

The establishment of the so-called Free City of Danzig by the victorious Allied and Associated Powers in 1919 was the least defensible territorial provision of the Versailles Treaty. It was soon evident to observers in the Western World, and to the people of Germany, Poland, and Danzig, that this incredibly complicated international arrangement could never function satisfactorily. Danzig in 1919 was an ordinary provincial German city without any expectation or desire to occupy a central position on the stage of world politics. The Danzigers would have welcomed special Polish economic privileges in their city as a means of increasing the commerce of their port. They were horrified at the prospect of being detached from Germany and separately constituted in an anomalous position under the jurisdiction of an experimental League of Nations, which did not begin to exist until 1920. One might well ask what the attitude of the people of Portland, Oregon, would be if their city were suddenly detached from the United States and placed under the jurisdiction of the United Nations in the interest of guaranteeing special port facilities to Canada near the estuary of the Columbia River. It would be small consolation to recall that the area around Portland, before passing under the sovereignty of the United States in 1846, was settled by the British Hudson Bay Company. The traditionally friendly relations between Canadians and Portlanders would soon deteriorate under such exacerbating conditions. It is not surprising that the National Socialists of Adolf Hitler won an electoral majority at Danzig before this was possible in Germany. The Danzigers hoped that perhaps Hitler could do something to change the intolerable conditions established during 1919 and the following years.

The issue exploited by Lord Halifax of Great Britain to destroy the friendship between Germany and Poland in March 1939 was the Danzig problem. The final collapse of the Czech state in March 1939 produced less effect in neighboring Poland, where the leaders were inclined to welcome the event, than in the distant United States. The Polish leaders had agreed that the return of Memel from Lithuania to Germany in March 1939 would not constitute an issue of conflict between Germany and Poland. Hitler emphasized

that Germany would not claim one inch of Polish territory, and that she was prepared to recognize the Versailles Polish frontier on a permanent basis. Polish diplomats had suggested that a settlement of German requests for improved transit to German East Prussia would not present an insuperable problem. The German leaders were disturbed by Polish discrimination against the Germans within Poland, but they were not inclined to recognize this problem as an issue which could produce a conflict between the two states. It was primarily Danzig which made the breach. It was the discussion of Danzig between Germany and Poland which prompted the Polish leaders to warn Hitler that the pursuance of German aims in this area would produce a Polish-German war.

Polish defiance of Hitler on the Danzig question did not occur until the British leaders had launched a vigorous encirclement policy designed to throttle the German Reich. It is very unlikely that the Polish leaders would have defied Hitler had they not expected British support. The Polish leaders had received assurances ever since September 1938 that the British leaders would support them against Hitler at Danzig. Many of the Polish leaders said that they would have fought to frustrate German aims in Danzig had Poland been without an ally in the world. They were seeking to emphasize the importance which they attached to Danzig in discussing what they might have done in this hypothetical situation. This does not mean that they actually would have fought for Danzig in a real situation of this kind, and it is doubtful if Pilsudski would have fought for Danzig in 1939 even with British support. It is evident that Danzig was the issue selected by the Polish leaders to defy Hitler after the British had offered an alliance to Poland.

The Poles were usually impervious to logic when Danzig was discussed. This in itself made a preposterous situation more difficult, although a compromise settlement on the basis of generous terms from Hitler might have been possible had it not been for British meddling.

The Establishment of the Free City Regime

Danzig was historically the key port at the mouth of the great Vistula River artery. The modern city of Danzig was founded in the early 14th century, and it was inhabited almost exclusively by Germans from the beginning. There had previously been a fishing village at Danzig inhabited by local non-Polish West Slavs which was mentioned in a church chronicle of the 10th century. The Germans first came to the Danzig region during the eastward colonization movement of the German people in the late Middle Ages. Danzig was the capital of the Prussian province of West Prussia when the victors of World War I decided to separate this Baltic port from Germany. The city had been a provincial capital within the German Kingdom of Prussia prior to the establishment of the North German Federation in 1867 and of the German Second Empire in 1871.

The Allied Powers in 1920 converted Danzig from a German provincial capital to a German city state in the style prevailing in the other Hanseatic cities of Bremen, Hamburg, and Lübeck. The latter three cities remained separate federal states within the German

Empire created by Bismarck. The renunciation of Danzig by Germany and the creation of the Free City regime was stipulated by articles 100 to 108 of the Versailles Treaty. A League High Commissioner was to be the first instance of appeal in disputes between Poland and Danzig. The foreign relations of Danzig were delegated to Poland, and the Free City was to be assigned to the Polish customs area. The Poles were allowed unrestricted use of Danzig canals, docks, railroads, and roads for trading purposes and they were delegated control over river traffic, and over telegraph, telephone, and postal communications between Poland and Danzig harbor. The Poles had the privilege of improving, leasing, or selling transit facilities. The residents of Danzig forfeited German citizenship, although formal provision was made for adults to request German citizenship within a two year period. Double citizenship in Danzig and Germany was forbidden. The League of Nations, as the Sovereign authority, was granted ownership over all possessions of the German and Prussian administrations on Danzig territory.

The formal treaty which assigned specific property of Poland was ratified on May 3, 1923. Facilities were assigned to the Free Harbor Commission supervised by the League of Nations in which the Poles participated. The Poles requested a munitions depot and base for a small Polish Army garrison. The Westerplatte peninsula close to the densely populated Neufahrwasser district was assigned to Poland on October 22, 1925. The Danzig Parliament protested in vain that this decision constituted "a new rape of Danzig." The Poles also received permission to station warships and naval personnel in the area. These various awards meant that by 1925 the Polish Government was the largest owner of property in the Free City area.

The Danzig constitution was promulgated on June 14, 1922, after approval by Poland and the League of Nations. The constitution provided for a Volkstag (assembly) of 120 members with four year terms. It was primarily a consultative body with the right to demand information about public policy, although the formal approval of the Volkstag for current legislation enacted by the Senate was required. The Senate with its 22 members was the seat of carefully circumscribed local autonomy. The President and the other seven major administrative officers, who were comparable to city commissioners, were elected for four years and received fixed salaries. The British Government played a more active role than any other Power, including Poland, in the organization of the Danzig regime. British policy was decisive in the regulation of early disputes between Danzig and Poland. The British at Danzig furnished the first three League High Commissioners, Sir Reginald Tower, General Sir Richard Haking, and Malcolm S. MacDonnell, and the last of the British High Commissioners, after an Italian and Danish interlude, was Sean Lester from Ulster, who held office from 1934 until late 1936. British interest was largely a reflection of British investment and trade, and much of the industrial enterprise of Danzig came under the control of British citizens during these years. The British also played a decisive role in securing the appointment of Carl Jacob Burckhardt, the Swiss historian who succeeded Lester and who held office until the liberation of Danzig by Germany on September 1, 1939. The so-called liberation of Danzig by the Red Army

on March 30, 1945, referred to in recent editions of the Encyclopaedia Britannica, was actually the annihilation of the city.

The territory of the Free City had approximately 365,000 inhabitants in 1922. The Polish minority constituted less than 3% of the population at that time, but the continued influx of Poles raised the proportion to 4% by 1939. The German vote was badly split among the usual assortment of Weimar German parties. The Conservatives (DNVP) elected 34 deputies and the Communists elected 11. The Social Democrat Marxists elected 30 and the Catholic Center 15. The remaining 25 deputies were elected by strictly local Danzig German parties. This disastrous fragmentation in the face of a crisis situation was changed after the National Socialists won the Danzig election of 1933. The divided Danzig Senate presided over by a Conservative president was followed by a united National Socialist Senate. This created a slightly more favorable situation for coping with the moves of the Polish Dictatorship at Danzig.

The Poles with varying success began an uninterrupted campaign in 1920 to push their rights at Danzig beyond the explicit terms of Versailles and the subsequent treaties. One of the earliest Polish aims was to establish the Polish Supreme Court as the final court of jurisdiction over Danzig law. This objective was never achieved because of opposition from the League High Commissioners, but Poland was eventually able to establish her Westerplatte garrison despite the early opposition of League High Commissioner General Sir Richard Haking. The Poles never abandoned these efforts, and everyone in Danzig knew that their ultimate objective was annexation of the Free City. The existing system was unsatisfactory for Poland, Germany, and Danzig. The Poles wished to usurp the role of the League, and both Germany and Danzig favored the return of the new state to the German Reich. There could be no talk of the change of system in Germany in 1933 alienating the Danzigers, because the National Socialists won their majority in Danzig before this had been accomplished in Germany. The change of system in Germany was matched by the unification of Danzig under National Socialist leadership.

Danzig's at Separation from Germany

Danzig saw nothing of war or invasion from 1814 until the defeat of Germany in 1918. The Danzigers did not contemplate the possibility of annexation by the new Polish state until after the close of World War I. They were assured by German Chancellor Hertling in February 1918 that President Wilson's peace program with its 13th Point on Polish access to the Sea did not threaten their affiliation with Germany in any way. The President's Ambassador had assured the German Government that this was the case when the point about Polish access to the Sea was discussed before American entry into the war. The President's program was based on national self-determination, and Danzig was exclusively German. The Danzigers thought of port facilities for the Poles in German harbors along the lines subsequently granted to the Czechs at Hamburg and Stettin. This arrangement satisfied the Czech demand for access to the Sea. No one thought of Polish rule at Danzig

until it became known that the Poles were demanding Danzig at the peace conference, and that President Wilson favored their case. The disillusioned Danzigers petitioned the German authorities at Weimar to reject any peace terms which envisaged the separation of Danzig from Germany. There was still some hope in April 1919, when the Allies refused to permit Polish troops in the West under General Haller to return to Poland by way of Danzig. German troops occupied Danzig at that time, and the Poles were required to return home by rail.

The Danzigers were in despair after receiving the preliminary draft of the Versailles Treaty in May 1919. They discovered that some queer fate was conspiring to force them into the ludicrous and dubious situation of a separate state. Danzig discovered in May 1919 that the 14 Points and self-determination had been a trick, a ruse de guerre à l'américaine, and in June 1919, with the acceptance of the treaty by the Weimar Government; it was evident that Danzig must turn her back on her German Fatherland. The Allied spokesmen in Danzig urged her to hasten about it, and not be sentimental. The Germans had been tricked and outsmarted by the Allies. After all, Danzig had lost World War I.

Poland's Desire for a Maritime Role

The distinguished Polish historian, Oskar Halecki, has declared that the demands of Dmowski at Versailles were "unanimously put forward by the whole nation." Polish spokesmen have insisted that the entire Polish nation was longing for a free marine frontier in the North, and for a coastal position which would enable Poland to play an active maritime role. This was doubtless true after 1918, although for more than three hundred years, when Poland from the 15th to the 18th centuries held most of the West Prussian coastline, the Poles played no maritime role. Poland made no effort to build a merchant marine or to acquire colonies, although the neighboring German principality of Brandenburg, with a less favorable 17th century geographic and maritime position, engaged in foreign trade and acquired colonies in Africa. These facts in no way diminished the Polish right to play a maritime role in the 20th century, but it was unwarranted for Polish spokesmen to mislead the Polish people about their past.

An especially crass example of this was offered by Eugeniusz Kwiatkowski, Vice-Premier of Poland from 1935 to 1939, and from 1926 the leading Government figure in Polish commerce and industry. Kwiatkowski was a close personal friend of President Moscicki, and he was entrusted with the organization of the Central Industrial Region (COP) of Poland before World War II. He was an expert engineer who had studied in Krakow, Lvov, and Munich, and he had earned the proud title "creator of Gdynia" for his collaboration with Danish colleagues in the construction of Poland's principal port. Kwiatkowski, like some other scientists, was guilty of distorting history, and he went to absurd lengths to identify Poland with the nests of West Slavic pirates of the early Middle Ages who had operated from Rügen Island off the coast of Pomerania. Kwiatkowski announced at a maritime celebration on July 31, 1932, that, if the heroes of Poland's great naval past

could raise their voices once again, "one great, mighty, unending cry would resound along a stretch of hundreds of miles from the Oder to the Memel: 'Long live Poland!'"

At Paris the Poles had argued that Danzig was indispensable for their future maritime position. Lloyd George frustrated their plan to annex Danzig, but they were told by the Danes that the West Prussian coast north of Danzig presented the same physical characteristics as the north-eastern coast of Danish Zealand. The Danes had built Copenhagen, and there was no reason why the Poles could not build their own port instead of seeking to confiscate a city built by another nation. The Poles were fascinated by this prospect, and they were soon busy with plans for the future port of Gdynia. The construction of Gdynia and Polish economic discrimination in favor of the new city after 1924 produced a catastrophic effect on the trade of the unfortunate Danzigers. The Poles had originally insisted that Danzig was the one great port they needed to guarantee their maritime access. They soon began to speak of modern sea power, and it was easy to demonstrate that one port was a narrow foundation for a major naval power. They described Danzig as their second lung, which they needed to breathe properly. It was a matter of complete indifference to them that Danzig did not wish to be a Polish lung.

They were equally unmoved by the fact that millions of their Ukrainian subjects did not care to live within the Polish state, and that nearly one million Germans had left Poland in despair during the eighteen years after the Treaty of Versailles. Life had been made sufficiently miserable for them to do otherwise. It could be expected that the Germans would also evacuate a Polish Danzig, and thus make room for a Polish Gdansk. The Polish leaders were encouraged to hope for this result because of the manifestly ridiculous and humiliating situation created for Danzig by the Treaty of Versailles.

Pilsudski's preventive war plans dated from 1933, when Germany was weak. After the 1934 Pact, the Poles opened an intensive propaganda campaign against the Czechs, and the prospects for a Polish success at Teschen, in cooperation with Germany, were not entirely unfavorable. It seemed by contrast that Poland had nothing more to seek at Danzig. Pilsudski had declared in March 1935 that no Power on earth could intimidate Germany any longer. Hitler talked with good sense and conviction of abandoning claims to many German territories in Europe which had been lost after World War I. These included territories held by Denmark in the North, France in the West, Italy in the South, and Poland in the East. Hitler expected Poland to reciprocate by conceding the failure of her earlier effort to acquire Danzig. Hitler was not prepared to concede that Danzig was lost to Germany merely because she had been placed under the shadowy jurisdiction of the League. Danzig was a German National Socialist community plagued with a Polish economic depression and prevented from pursuing policies of recovery to improve her position. Danzig wished to return to Germany.

Hitler's Effort to Prevent Friction at Danzig

The Poles were seeking to extend their privileges at Danzig when Hitler was appointed Chancellor in 1933. There had been chronic tension between Danzig and Poland throughout the period of the Weimar Republic in Germany. Indeed, the 1919 settlement at Danzig virtually precluded conditions of any other kind. The improvement of German-Polish relations shortly after the advent of Hitler was accompanied by a temporary relaxation of tension between Poland and Danzig, but it would have required a superhuman effort to maintain a lasting *détente* within the context of the Versailles status quo. Hermann Rauschning, the first National Socialist Danzig Senate leader, was known to be extremely hostile to Poland, but Hitler persuaded him to go to Warsaw for talks with the Polish leaders in July 1933. Rauschning was accompanied by Senator Artur Greiser, who was known for his moderate views on Poland. A favorable development took place on August 5, 1933. Danzig and Poland agreed to settle important disputes by bilateral negotiation instead of carrying their complaints to the League of Nations. Either party was obliged to give three months' notice before appealing to the League if bilateral negotiations failed. The Poles also agreed to modify their policies of economic discrimination against Danzig, but they failed to keep this promise.

The following year was relatively calm although there were many irritating minor incidents involving economic problems and the operations of Polish pressure groups on Danzig territory. Danzig and Poland concluded an economic pact on August 8, 1934, which contained mutual advantages on taxes and the marketing of Polish goods in Danzig territory. The conciliatory trend at Danzig was strengthened when Greiser succeeded Rauschning as Senate President on November 23, 1934. The Poles had no complaints about Greiser, but they objected to Albert Forster, the National Socialist District Party Leader. Forster was an energetic and forceful Franconian with the *Sturheit* (stubbornness) characteristic of the men of his district. He was one of Hitler's best men, and his assignment at Danzig was a significant indication of the seriousness of Germany's intentions. Forster was less cosmopolitan than Greiser, but he was highly intelligent, and he fully understood the scope and significance of the Danzig problem despite his West German origin. He was a stubborn negotiator with both Poland and the League, but he loyally supported Hitler's plans for a lasting agreement with Poland. He also shared Hitler's enthusiasm for an understanding with England. Lord Vansittart described Forster in his memoirs as "a rogue [Forster was exceptionally handsome] who came to our house with glib professions and a loving mate [Forster's wife was exceptionally beautiful]." This brief rejection of Forster by the leading British Germanophobe tallied closely with the negative attitude of the Poles.

The effort of Hitler to achieve greater harmony with Poland at Danzig did not achieve lasting results. Friction began to increase again early in 1935, and this trend continued until the outbreak of war in 1939. Many of the new disputes were economic in nature. Danzig was experiencing a severe depression, and the local National Socialist regime wished to do more to help the people than had been done by the Conservative regime in

the past. The lack of freedom made it impossible to emulate the increasing prosperity which existed in Germany. The deflationary monetary policies of Poland were anathema in Danzig, where the Danziger Gulden was tied to the scarce Zloty of the Poles. An attempt to free the Gulden from the Zloty, without leaving the Polish customs union, produced a crisis in May 1935. Danzig received much expert advice from Hjalmar Schacht, the President of the German Reichsbank. The Polish financial experts regarded this as unwarranted German interference in the affairs of German Danzig. The crisis reached a climax on July 18, 1935, when Poland put Danzig under a blockade, and commanded the shipment of all goods through Gdynia. Danzig responded by opening her economic border with East Prussia in defiance of Poland. This involved an attempt to circumvent the Polish customs inspectors and to ignore the Polish tariff requirements. Hitler intervened at this critical point and used his influence to obtain the agreement of August 8, 1935, which amounted to a total retreat for Danzig. This capitulation ended any hope that Danzig might be able to ameliorate the economic depression through her own efforts.

A typical dispute of this drab period transpired in 1936 when the Poles abruptly issued regular Army uniforms to the Polish customs inspectors in the hope of accustoming the Danzig population to a regular Polish military occupation. The Danzig Government protested, but the Poles, as usual, refused to accept protests from Danzig. A dangerous atmosphere was maintained by the constant agitation of the Polish pressure groups. The Polish Marine and Colonial League demonstrated in Warsaw in July 1936 for the expansion of existing Polish privileges at Danzig, and its activities were accompanied by a new campaign against Danzig in the Polish press. Relations between Poland and Danzig were as bad as they had been during the Weimar Republic. Hitler had attempted to reduce friction on the basis of the status quo, but this effort had failed.

The Deterioration of the Danzig Situation after 1936

Issues of dispute between Danzig and Poland were markedly on the increase throughout 1937. Chodacki later declared that fifteen one thousand page volumes would be required to describe the Danzig-Polish disputes prior to World War II. There can be no doubt that the year 1937 contributed its share. Times remained hard in both Danzig and Poland, and the great majority of disputes were economic in nature. The Poles placed heavy excise taxes on imports from the huge Danzig margarine industry to protect Polish competitors. They rejected the contention of Danzig that this measure was a violation of the August 6, 1934, economic treaties to eliminate trade barriers between the two countries. This single dispute produced an endless series of reprisals and recriminations. Irresponsible fishing in troubled waters by foreigners also occasioned much bad feeling. A typical example was the circulation of rumors by the Daily Telegraph, an English newspaper. The Daily Telegraph reported on May 10, 1937, that Joseph Goebbels had announced Germany's intention to annex Danzig in the near future. It is easy to understand the effect produced on the excitable Poles in the Danzig area by such reporting, and it would

have been a pleasant surprise if this particular newspaper of Kaiser-interview and Hoare-Laval Pact fame had not contributed to alarmism at Danzig. The statement attributed to Goebbels in this instance was purely an invention. By 1938, tension had been built up to a point where incidents of violence played an increasingly prominent role. Meetings of protest, more frequently than otherwise about imaginary wrongs, were organized by pressure groups in surrounding Polish towns. They invariably ended with cries of: 'We want to march on Danzig!' and with the murderous slogan: 'Kin the Hitlerites!'

Chodacki told Smigly-Rydz at Polish Army maneuvers in September 1937 that the National Socialist revolution in Danzig was virtually completed, and that the "Gleichschaltung" (coordination) of Danzig within the German system had been achieved. The one exception was that Danzig still had her made-in Poland depression, whereas Germany was swimming in plenty. The effective organization work of Albert Forster convinced the Poles that Danzig was at last slipping through their fingers. Awareness of this increased Polish exasperation. Chodacki claimed that in 1938 one of his speeches at Torun or elsewhere in West Prussia would have been sufficient to set a crowd of tens of thousands marching against Danzig. He admitted that he was often tempted to deliver such a speech. He felt goaded by fantastic attacks in the Krakow press that he was too conciliatory toward Danzig.

The Need for a Solution

The Danzig problem by 1938 was a skein of conflicting interests between exasperated Poles and impatient Danzigers. The absurd regime established at Versailles was a failure. Hitler intervened repeatedly for moderation, but he was no less disgusted with the humiliating farce than the Danzigers, and he was weary of conciliation at Danzig's expense. Intelligent foreign observers expected this attitude. Lord Halifax, who had out-manuevered Gandhi of India on many occasions, visited Hitler at Berchtesgaden on November 19, 1937. He inquired whether Hitler planned to do something about Danzig. Hitler was understandably evasive in his reply, but Halifax made no secret of the fact that he expected German action to recover Danzig. The current mentality of the Polish leaders indicated that a solution would be difficult, and it is painful to recall that the entire problem would not have existed had Danzig not been placed in a fantastic situation by the peacemakers of 1919. The Danzig problem resulted from a wretched compromise between Lloyd George and Woodrow Wilson. It epitomized the comment of the American publicist, Porter Sargent: "The Anglo-Saxon peoples held the world in the palms of their hands, and what a mess they made of it". There was nothing left but to try for a solution. It would be scant consolation in the event of failure to know that the blame would be shared by men of two generations. The cost of failure would be paid by untold generations.

11.8 German-Polish Relations 1918 – 1939

Poland declared independence upon the collapse of Russia, and the defeat of the Central Powers in 1918. France supported Polish claims for additional territory in order to strengthen the emerging state. Wilson remarked, "The only real interest of France in Poland is in weakening Germany by giving Poland territory to which she has no right." The French historian and political analyst Jacques Bainville observed, "The liberated peoples of the East have been entrusted with the task of serving as a counterweight to the German multitude."

At this time, the Bolsheviks under Lenin were consolidating their control of Russia. The Red Army invaded Lithuania, which had declared independence in January 1919. The Polish army drove the Bolshevik forces back. Poland's popular military leader, Marshal Joseph Pilsudski, became head of state. An aggressive field commander, he invaded the Ukraine in April 1920 to destroy a Soviet troop concentration on the frontier. Believing that Poland must become "a power equal to the great powers of the world," Pilsudski conquered territories where less than five percent of the population was Polish. The Treaty of Riga ended the see-saw war against the Red Army on March 18, 1921, with Poland gaining Galicia. On Poland's western frontier in December 1918, the Polish secret military organization, Polska Organizacja Wojskowa (POW), seized Posen, where Polish and German residents lived in harmony. German Freikorps militia launched a successful counterthrust. France's Field Marshal Ferdinand Foch demanded that the Reich's Government withdraw these troops from Posen. Too weak to resist the French ultimatum, German Prime Minister Friedrich Ebert complied. Polish insurgents continued attacking German villages in the region.

President Wilson proposed a plebiscite for Upper Silesia to allow the inhabitants to choose their country. 22,000 POW men staged an insurrection in August 1919 to take the region by force. The Freikorps broke the revolt in less than a week. In February 1920, the Inter-Allied Control Commission assumed the administration of Upper Silesia. Over 11,000 French soldiers, supported by small contingents from the Italian and British armies, arrived to supervise the plebiscite. In the spring 1921 poll, 706,820 Silesians cast for union with Germany and 479,414 for Poland. Many Polish residents voted for Germany.

While the Allied commission fumbled with determining the ultimate boundaries, the POW staged another uprising in May 1921. Supplied with French weapons, the insurgents organized an army of 30,000 men. The Polish government officially denied supporting Wojciech Korfanty, the instigator of the revolts. The correspondent for the London Times observed ammunition trains passing regularly from Poland into Upper Silesia. The frontier was as "freely traversed as our London Bridge" he wrote on May 10. Though outnumbered, 25,000 Freikorps volunteers counterattacked on May 21, and forced the Poles onto the defensive. Once the Germans began to advance, the French and British stepped in to restore order. In October, the League of Nations awarded nearly a third of

the contested territory to Poland. Based on the plebiscite, the entire region should have fallen to Germany. In the portion granted Poland dwelled 40 percent of the Upper Silesian population. It contained six-sevenths of the zinc and lead production, all the iron, and 91 percent of the coal. Among the lands Germany lost was a 6,300 square-mile vertical strip of West Prussia extending from the Baltic coast down to Upper Silesia. Poland required this corridor, the Allies reasoned, to permit her to have unrestricted access to the sea. Within the corridor was the German port of Danzig. Just 15,000 of the city's 400,000 inhabitants were Polish. The people of Danzig overwhelmingly demonstrated for union with Germany, but the Peace Commission favored Poland. Lloyd George's tenacious resistance forced a compromise: the town became a "Free City" under League of Nations jurisdiction, subject to Polish customs administration.

During the Weimar Republic, every German administration and most influential political parties had advocated Poland's destruction. This attitude prevailed in the Reich's Foreign Office and in the Reichswehr as well. In September 1922, General Hans von Seeckt wrote to Chancellor Joseph Wirth, "Poland's existence is intolerable and incompatible with Germany's vital interests. It must disappear, and will do so through its own weakness and through Russia with our aid."

The Polish government's oppressive minority policy provoked the ire of other European states. Poland's Jewish, Ukrainian, and German populations suffered legal persecution to disenfranchise them, strip them of political influence, or force their migration out. The regime dismissed German officials and employees from civil service. It confiscated German farms, closed ethnic schools and forced the pupils to enroll in Polish educational institutions. These measures compelled many Prussian and Silesian Germans to move into Germany. A quarter of the ethnic German population had left Poland by 1926. Heinrich Brüning, German chancellor from 1930-1932, pursued a trade policy the Poles considered disadvantageous to their commerce. Pilsudski responded by conducting military maneuvers and massing troops near Germany's border. The Polish army concentrated formations in a ring around East Prussia, geographically separated by the corridor from the Reich. In 1930, *Mocarstwowiec* (The League of Great Powers), a newspaper mirroring Pilsudski's views, published this editorial: "We know that war between Poland and Germany cannot be avoided. We must prepare for this war systematically and energetically. ... In this war there will be no prisoners taken. There will be no place for humanitarian feelings." The Polish general staff had been weighing options for invading the Reich since 1921. German diplomats considered the appointment to Polish foreign minister of Joseph Beck, an army colonel and confidant of Pilsudski's, in November 1932 as indicative of a more militant policy.

Polish saber-rattling provoked resentment in Germany. The Reich's Foreign Office refused to renew even minor compacts with Poland about to expire. When Hitler became chancellor in January 1933, relations with his eastern neighbor were strained to the utmost. The Polish press launched a campaign of vilification against the new chancellor. Pilsudski deployed combat divisions near Danzig and reinforced the 82-man garrison guarding the

Westerplatte.

In April 1933, Pilsudski asked Paris for the second time in less than two months to join in a "preventative war" to invade the Reich. The French showed no interest. The German representative in Warsaw, Hans von Moltke, discovered the plan and duly warned Hitler. The Führer sidestepped a confrontation. During his first meeting with the Polish envoy on May 2, 1933, he proved gracious and reassuring. Hitler agreed to a public declaration that his government would observe all Polish-German treaties currently in force. In his foreign policy speech to the Reichstag on May 17, the German chancellor spoke of "finding a solution to satisfy the understandable demands of Poland just as much as Germany's natural rights." In November, Hitler offered Pilsudski a friendship and non-aggression pact. Only after another discreet, unsuccessful bid to enlist France for his "preventative war" hobbyhorse did the marshal agree. The two governments ratified a ten-year treaty the following January. New trade agreements provided a fresh market for Poland's depressed economy. Hitler banned newspaper editorials addressing German claims in the East. Warsaw relaxed the anti-German tendency of its own press. The Führer directed Danzig's National Socialist senate to cease complaining to the League of Nations about Polish violations of legal compacts there.

The German public disapproved of Hitler's rapprochement toward Poland. U.S. Ambassador William Dodd reported that even convinced National Socialists were disillusioned that the Führer had concluded a pact with Warsaw. Prussian nobles in the general staff and foreign office harbored anti-Polish sentiments and likewise rejected the change of policy. In October 1935, Moltke cabled from Warsaw, "Today the German minority in Poland feels left in the lurch by the German Reich." Hitler stayed on course. Warsaw's new emissary in Berlin, Joseph Lipski, experienced a warmth and popularity among his hosts previously unimaginable for a Polish diplomat.

After Pilsudski's death in May 1935, two government officials assumed virtual autonomy in their respective ministries, much to the detriment of Polish-German relations. These were Foreign Minister Beck and the army commander-in-chief, Marshal Edward Rydz-Smigly. Both were disciples of an expansionist foreign policy.

The friendship treaty with Germany evoked little sense of obligation on Poland's part. From Warsaw, Moltke informed his superiors, "The Poles think that they no longer need to restrict their steps against the German minority. They must be gaining the impression from the lack of any reaction in the German press, that all infringements will be accepted by German public opinion without objection." In February 1936, the German consul general in Thorn, Kiichler, wrote Berlin about the disproportionate transfer of German farms into Polish hands through government-implemented land reform: "As much German property as possible is supposed to be broken up before expiration of the ten-year agreement." Consul Nöldeke in Katowice described how on March 15, "In Königshütte, an assembly of the German Farmers Union was dispersed by a mob armed with sticks and clubs, during which German performers of the Upper Silesian country theater who were uninvolved bystanders were physically abused."

Diplomatic relations between Poland and the Reich further deteriorated due to a simultaneous tariff dispute. Dissatisfied with Germany's compensation for coal trains crossing the corridor from the Reich to supply East Prussia's energy needs, Warsaw announced in January 1936 that it would curtail 50 to 80 percent of German rail traffic there. The Polish Ministry of Transportation threatened to block it completely during negotiations. In March, Beck informed the French that Poland was ready to join France in a war against Germany. Marshal Rydz-Smigly visited Paris in September. He persuaded the French to loan Poland \$500 million in cash and war materiel to upgrade the Polish army. Warsaw already devoted over a third of the budget to armaments, even though the country suffered one of the highest illiteracy rates in Europe and much of the population lived in poverty. Rydz-Smigly ordered General Tadeusz Kutrzeba to draft a war plan against Germany. Completed in January 1938, the study envisioned a war with the Reich for 1939. To date, Hitler had never made a threatening gesture to Poland.

Of all territories robbed from the Reich after World War I, the German people felt most keenly the loss of Danzig and the lands taken by Poland. To placate his own public and remove one more obstacle to improving relations with Warsaw, Hitler required at least a nominal correction of the Versailles arrangement. He limited his proposal to two revisions. First, he asked to construct an Autobahn and railroad line across the corridor to connect Germany with East Prussia. The German diplomat Julius Schnurre had already suggested this to Beck in 1935 without receiving an answer. Secondly, Hitler wanted Danzig to come under German sovereignty. In return, he was prepared to acknowledge Germany's eastern border fixed by the Allied Peace Commission as final, something no Weimar administration had hitherto done, and offer Poland a 25-year non-aggression pact.

The Autobahn plan meant that Hitler was willing to renounce an entire province in exchange for a strip of real estate wide enough to accommodate a highway. Financed by the Reich, the project would utilize Polish labor and construction materials to help relieve unemployment in Poland. The recovery of Danzig required even less of Warsaw. The Danzig territory, encompassing 730 square miles, was under League of Nations, not Polish, jurisdiction. Regarding the city's value as a harbor, the Poles no longer needed it for nautical export; further up the coast they had constructed the port city of Gdynia, which opened in 1926. Offering economic incentives to shippers, they had taken more than half of Danzig's commerce by 1930. Hitler's package called for the Reich's forfeiture of Upper Silesia with its valuable industry, Posen and West Prussia. These provinces had been German for centuries and had belonged to Germany less than 20 years before. Nevertheless, it would abandon nearly a million ethnic Germans residing there to foreign rule, despite the fact that since March 1933, the Reich's Foreign Office had documented 15,000 cases of abuse against Poland's ethnic German colony. The Führer was willing to publicly announce that no more territorial issues exist with Poland. No Weimar administration could have survived such an offer.

Meeting in Berchtesgaden with Polish Ambassador Lipski on October 24, 1938, Ribben-

trop brought the German revisions to the table. His guest disputed the Reich's perception of Danzig's status as a "product of Versailles." Only Poland's rise, Lipski contended, had lifted the city from "insignificance." He told Ribbentrop that public opinion would never accept the city's transfer to Germany. Warsaw reaffirmed Lipski's position in writing on October 31. The letter conceded that Poland was prepared to guarantee the right of "Danzig's German minority" to preserve its national and cultural identity. Describing the population of a city that was 96 percent German as a minority was a studied provocation which Hitler decided to overlook. The Polish press campaign against Germany resumed.

On January 5, 1939, Beck visited Germany to negotiate with Hitler. The Führer insisted that Danzig's return to Germany must be a part of any final settlement with Poland. He reassured Beck that the Reich would never simply declare that the city has returned to Germany and present Warsaw with a *fait accompli*. He pledged that no final arrangement would deprive Poland of her access to the sea. Beck asked for time to weigh the situation carefully. In mid-January, Beck told Rydz-Smigly of his decision to reject the German proposals, though two weeks later he mendaciously reassured Ribbentrop that he was still contemplating the matter. A wave of fresh persecution swept over the ethnic German minority. On February 25, the British ambassador there, Sir Howard Kennard, reported to Halifax on a dialog with Moltke concerning farmhands and industrial workers in Poland who "were being dismissed because they happened to be Germans." In addition to the forced closing of German schools, it was becoming practically impossible for a German living in Poland to earn enough to exist. Kennard concluded that there was "little likelihood of the Polish authorities doing anything to improve matters."

An unrelated episode aggravated tensions. On March 22, the Germans recovered Memel from Lithuania. This was a narrow, 700-square mile strip of northeastern Prussia which the Lithuanians seized by force in 1923. The League of Nations demanded that the territory be governed according to democratic principles. In the 1925 elections, 94 percent of the voters – including many Lithuanian residents – cast for German parties. The Lithuanian government in Kaunas refused to recognize the results. The entire country fell under a dictatorship the following year. The authorities began jailing Prussian residents found guilty of "preserving German heritage."

After the Austrian Anschluss, Memel-Germans organized public demonstrations. In November 1938, Kaunas offered to negotiate with Berlin over the region's future. In an internationally supervised plebiscite in December, 87 percent of voters decided for union with Germany. Ribbentrop promised Lithuanian Foreign Minister Juozas Urbys economic incentives for his country. Upon the transfer of Memel back to Germany, the Lithuanians employed their own dock workers and administrative personnel at the harbor there. They also operated a railroad across the now-German strip of Memel territory directly connecting the port to Lithuania. This was the same solution that Hitler had proposed to Warsaw regarding Danzig and the corridor. During the weeks before the final settlement with Kaunas, Berlin deployed the three army divisions garrisoned in East Prussia on the border with Memel. Rydz-Smigly declared this to be evidence that Ger-

many was about to annex Danzig. On March 23, 1939, he accordingly mobilized a large part of Poland's army reserve. Since Memel was at the opposite end of the province from Danzig, the three divisions were actually moving away from the city that Rydz-Smigly claimed they were about to seize. The Memel affair coincided with Germany's occupation of the Czech rump-state on March 15. Beck exploited the occasion to negotiate with London to form an alliance against Germany. On March 24, Beck told Lipski and senior members of his staff that Hitler was losing the faculty to think and act rationally. Poland's "determined resistance" might bring him to his senses. Otherwise, Beck proclaimed, "We will fight."

Hitler maintained a conciliatory posture. His army commander-in-chief, General Brauchitsch, noted, "Führer does not want to settle the Danzig question by force." Hitler cancelled a March 24 directive that the diplomat Ernst von Weizsäcker had prepared for Moltke as a guideline for resuming negotiations. The Führer considered it "somewhat harshly formulated" and objected to its tenor "confronting the Poles with a sort of friend-or-foe option."

Returning to Berlin, Lipski delivered a letter to Ribbentrop on March 26 formally rejecting the Danzig-Autobahn proposal. Lipski bluntly told his host, "Any further pursuit of these German plans, especially as far as the return of Danzig to the Reich is concerned, will mean war with Poland." This threat, together with Rydz-Smigly's partial mobilization against Germany, violated the 1934 non-aggression and friendship treaty: The pact stated word for word, "Under no circumstances will (the signatories) resort to the use of force for the purpose of settling issues in controversy."

The British responded favorably to an alliance with Poland. The western democracies had just lost Czechoslovakia as an ally flanking the Reich. Her military-industrial resources were now at German disposal. The British army chief of staff warned Chamberlain that in the event of war against Germany, it would be better to have Poland on the Allies' side. On March 30, Kennard received instructions from London to present the British offer to guarantee Poland. Beck accepted immediately. The next day, Chamberlain explained the details in the House of Commons: "In the event of any action which clearly threatens Polish independence and which the Polish government accordingly considered it vital to resist with their national forces, His Majesty's Government would feel themselves bound at once to lend the Polish government all support in their power."

Beck visited London to conclude details for the alliance on April 3. On the 23rd, Warsaw mobilized another 334,000 army reservists, again in the absence of threats from Germany.

Hitler addressed the Reichstag on April 28. He explained how the Anglo-Polish agreement obligated the Poles to take a military position against the Reich, should it enter into an armed conflict with any state guaranteed by England. Hitler continued, "This obligation contradicts the agreement I previously made with Marshal Pilsudski; since the (1934) agreement only takes into account obligations already in existence at that time, namely Poland's commitments regarding France. To belatedly expand these commitments is

contrary to the German-Polish non-aggression pact. Under these circumstances, I would never have concluded this pact back then; for what sense does it make to have a non-aggression pact, if it leaves a number of exceptions for one partner practically wide open? Hitler voided the compact. He added in his speech that he would welcome a Polish initiative to negotiate a new treaty governing Polish-German relations.

Warsaw's agreement with London opened a floodgate of war scares and hostile editorials in the Polish press. The German consul general in Posen reported to Berlin on March 31, "Scarcely a day goes by in which Posen newspapers don't publish more or less aggressive articles or insulting observations about Germans." Although Hitler had personally instructed his foreign office that there must be "no talk of war" in the negotiations, the French ambassador in Warsaw, Leon Noel, reported to Paris, "Patriotic sentiment among the Poles has reached a zenith in all parties and classes, thanks to the German threats."

Poland's ethnic German community suffered the backlash of media-generated Polish chauvinism. On April 13, the German consul in Danzig cabled to Berlin that rural Germans in the corridor "are so cowed that they have already buried their most valuable possessions. They no longer risk traversing roads and fields by daylight. They spend their nights in hiding places beyond the farms, for fear of being attacked."

The May 11 edition of the Polish newspaper *Dziennik Bydgoski Bromberg Daily News*) published an editorial asserting that the Germans in Poland "know that in case of war, no indigenous enemy will escape alive. The Führer is far away but the Polish soldier close by, and in the woods there's no shortage of limbs." The previous month, the Polish mayor of Bromberg, a town with a comparatively large German population, told journalists that if Hitler invaded there, he'd be stepping over the corpses of Bromberg's Germans.

Beck explained his policy to the Polish parliament on May 5. He claimed that Danzig was not German, but has belonged to Poland for centuries. He attributed the city's prosperity to commerce conducted by Poland ferrying export wares into Danzig via the Vistula River, omitting the fact that the waterway was no longer navigable, thanks to 19 years of improper maintenance under Polish administration. Beck disparaged Hitler's offer to recognize Polish sovereignty over the corridor, Posen, and Upper Silesia in exchange for Danzig. Since the provinces were already incorporated into Poland, he argued, Hitler was giving nothing in return. "A nation with self-respect makes no one-sided concessions," he crowed.

Historians praise Beck for defiantly defending his country from becoming a German satellite. Since Hitler's proposal included an offer for Poland to join the Anti-Comintern Pact, reaching a Danzig settlement with the Reich would have supposedly drawn the Poles into an alliance with Germany against the USSR. Warsaw would then have eventually become embroiled in Hitler's planned military crusade against Russia. Beyond the fact that no German documents exist to support this theory, it overlooks the essence of the Anti-Comintern Pact. Its purpose was to promote cooperation among civilized nations to prevent internal Communist subversion. Governments would share intelligence, much

in the same way that Interpol affiliates do to combat global terrorism today. Also, Hitler had expressed his often-quoted ideas about invading Russia when he wrote *Mein Kampf* during the previous decade. After the Bolsheviks consolidated power in the former Czarist empire, the Führer no longer advocated such an option.

Through personal observation and discussions with diplomats in Berlin, Henderson was able to convey to London a realistic picture of German opinion. He wrote Halifax in May, "It must be borne in mind that Danzig and the corridor was the big question prior to 1933. One of the most unpopular actions which Hitler ever did was his 1934 treaty with Pilsudski. He had the whole of his party against him. Today the most moderate Germans, who are opposed to a world war, are behind him in his present offer to Poland." Henderson added that foreign emissaries in Berlin also consider Hitler's proposals justifiable: "According to my Belgian colleague, practically all the diplomatic representatives here regard the German offer in itself as a surprisingly favorable one."

Henderson grasped that Hitler's package was not a demand for Polish territory but accepted a significant loss of formerly German lands to Poland. In a May 17 dispatch to Halifax, Henderson wrote, "The fact that what was regarded here as a generous offer of a 25-year German guarantee of the existing Polish frontier in exchange for a satisfactory settlement of the Danzig and Corridor problem had been rejected out of hand by Poland has not only incensed Herr Hitler personally, but has made a deep impression on the country as a whole." The ambassador also referred to "the traditional German feeling of hatred for Poland, particularly in the army, and Polish ingratitude for Germany's past services." On May 16, Henderson summarized a conversation with Weizsäcker in a letter to Sir Miles Cadogan, the undersecretary in the Foreign Office: "He like all Germans feels bitterly about the Poles. They grabbed what they could after Vienna and Munich and then bit the hand that fed them on these occasions. That is the German view nor is there a single German who does not regard Hitler's offer to Poland as excessively generous and broadminded."

Hitler understood that he could never normalize relations with Poland without a Danzig settlement. The British guarantee for Poland had robbed Hitler of the opportunity to withdraw his demands without losing face. On April 3, 1939, he ordered the OKW to draft a study for combat operations against Poland. He stipulated that the military solution would only be exercised "if Warsaw revises its policy toward Germany and assumes a posture threatening to the Reich."

Berlin continued to receive reports from its consulates in Poland regarding harsh treatment of the German colony there. On May 8, on instructions from Hitler, press chief Otto Dietrich directed newspaper editors to "practice a certain restraint in reporting such incidents" and not publish them on the front page. Regarding the Polish media, Henderson observed, "The fantastic claims of irresponsible Polish elements for domination over East Prussia and other German territory afford cheap fuel to the flames."

In June, Hubert Gladwyn Jebb and Sir William Strang of the British Foreign Office

visited Warsaw. Jebb sent back a report on the 9th that summarized the discussions with Polish government ministers and army officers. He quoted a Polish economist in Warsaw's foreign ministry as describing how Polish farmers anticipated generous grants of German land after the war with Germany. Jebb opined that the Polish general staff was "overly optimistic" and that officials in Warsaw had become "amazingly arrogant" since the British guarantee.¹ The following month, British General Sir Edmund Ironside visited Poland. Rydz-Smigly told him that war with Germany is unavoidable. None of the British emissaries said anything to the Poles to mollify this bellicose attitude. Since June, as reported by Moltke, 70 percent of the Germans in Upper Silesia were out of work, compared to Poland's national unemployment rate of 16 percent. The Reich's Government registered 70,000 ethnic German refugees who had recently fled Polish sovereign territory. Another 15,000 had taken refuge in Danzig. Among the acts of brutality inflicted on those still in Poland were five documented cases of castration. Kennard protested to the Polish government about the abuse of the German minority. The complaint "did not appear to have had any definite results," he notified his superiors.

The crisis also focused on Danzig, still administered by League of Nations Commissioner Carl Burckhardt but under Poland's customs union. The city's senate was embroiled in a perpetual controversy over the conduct of the Polish tariff inspectors. Originally numbering six, in 1939 the roster had climbed to well over 100. Polish officials performing these duties roamed areas beyond their jurisdiction, primarily interested in potential military details. They rendezvoused at Danzig's rail terminal, which was under Polish administration. A transmitter there relayed intelligence to Warsaw. In the event of war, the inspectors were to lead irregular troops, supplied from arms caches concealed in the city, to hold positions in Danzig until the Polish army arrived. Danzig's senate president, Arthur Greiser, protested to the Polish commissioner in Danzig, Marjan Chodaki, on June 3, 1939, about the customs inspectors. Chodaki replied that the number of his customs agents was still insufficient, because German inspectors were not doing their job. He threatened economic sanctions against Danzig. In another note on August 4, Chodaki stated that Polish customs officials would henceforth be armed. Interference with their activity would result in an immediate reprisal against Danzig; the Poles threatened to block the import of foodstuffs. Beck informed Kennard that Poland would intervene militarily if the Danzig senate failed to comply with Polish terms.

On August 9, Weizsäcker met with the Polish chargé de affaires in Berlin, Michael Lubomirski. He protested the Polish ultimatum to Danzig of August 4. Sanctions against the "Free City", Weizsäcker warned, may result in Danzig seeking stronger economic ties with Germany herself. The next day, an undersecretary in Warsaw's foreign ministry told the German chargé de affaires that any involvement by the Reich's Government in the Danzig issue would be regarded by Poland as an act of war. Rydz-Smigly contributed to tensions with remarks made in a public speech: "Soon we'll be marching against the hereditary German enemy to finally knock out his poison fangs. The first step on this march will be Danzig. . . . Keep ready for the day of reckoning with this arrogant

Germanic race]’ Burckhardt described Poland’s intentions as “excessively belligerent.”

Warsaw issued an official press release detailing how Greiser had withdrawn his demands after the note exchange with Chodaki. According to the Polish press, a single, mildly harsh note had “forced Hitler to his knees.” The Anglo-French media triumphantly reported that the Führer had had to “climb down.” Hitler told Burckhardt on August 11, “The press said I lost my nerve, that threats are the only way to deal with me. That we backed down when the Poles stood firm, that I had only been bluffing last year, and my bluff flopped thanks to Poland’s courage that the Czechs didn’t have. I’ve read idiotic remarks in the French press that I lost my nerve while the Poles kept theirs.”

Hitler asked Burckhardt, “Could you go yourself to London? If we want to avoid catastrophes, the matter is rather urgent.” Halifax, certainly no friend of Germany, cabled Kennard on August 15, “I have the impression that Hitler is still undecided and anxious to avoid war.” The day before, Roger Makins in the British Foreign Office wrote England’s delegate in Geneva, Frank Walter, that the Führer wanted to open negotiations to prevent an armed clash. Historians assert that Hitler was determined to invade Poland. However, had this been his intention, he could have instructed the Danzig senate to pass a resolution abolishing League of Nations jurisdiction and returning the city to the Reich’s sovereignty. This would have provoked the Polish military response Beck warned of, and Germany could then intervene with her own army in order to defend the Danzig population’s right to self-determination. Given the sensitive issue of democratic principles, and the fact that Poland was striking the first blow, it would then have been difficult for Britain to justify support for Poland under the provisions of the guarantee.

The Polish government rounded up “disloyal” ethnic Germans and transported them to concentration camps. Authorities closed daily traffic between Upper Silesia and Germany, preventing thousands of ethnic Germans from commuting to their jobs in the Reich. Polish coastal anti-aircraft batteries fired on Lufthansa passenger planes flying over the Baltic Sea to East Prussia. The Luftwaffe provided fighter escorts for the airliners. In Danzig, the police chief formed his law enforcement personnel into two rifle regiments. In defiance of the League of Nations charter, the city re-militarized. The Germans transferred a battalion from SS Death’s Head Regiment 4 to Danzig. The 1,500-man “SS Home Guard Danzig” paraded publicly on Danzig’s May Field on August 18. The Poles evacuated the families of their civil servants, fortified public buildings and installations with armor plate or barbed wire and posted machine gun nests at bridges.

In his directive to the armed forces the previous April, Hitler had cited isolating Poland as a prerequisite for the military option. On August 23, Germany concluded a non-aggression pact with the Soviet Union. The pact, signed in Moscow, contained a secret clause defining mutual spheres of interest. It stated, “The question of whether or not maintaining an independent Polish state will appear desirable for both parties’ interests, and how this state should be divided, can be clarified in the course of further political developments.” In return for roughly half of Poland, the Soviet dictator gave Germany a free hand to invade. The Germans hoped that news of Soviet-German rapprochement would demonstrate to

Beck that his country's position had become precarious, compelling him to return to the conference table. Beck however, dismissed the alliance as untenable, because Russia and Germany harbored a serious ideological rivalry. A Warsaw communiqué stated, "The conclusion of the non-aggression pact has no influence on Poland's situation or policy."

On August 23, Hitler told his armed forces adjutant that the military must be ready to invade Poland by the morning of the 26th. The Führer then postponed the attack, explaining to General Keitel that he needed to "gain time for further negotiations," still seeking a "solution without bloodshed." The Poles, without provocation from Germany, closed Danzig's borders. Since the metropolis imported much of its foodstuffs, this created a critical situation for the population. Hitler and Göring requested British mediation to help persuade Warsaw to resume talks. From Warsaw, Kennard cabled London on August 25 that, were Beck or Lipski to seek an audience with Hitler, the Führer would consider this a "sign of weakness" and respond with an ultimatum. Chamberlain concluded the alliance with Poland the same day.

Along the German-Polish frontier, Polish border guards fired on ethnic German refugees attempting to flee into Germany. German infantry patrols crossed into Poland and fought to free them. On the 26th, a Polish cavalry unit rode boldly through German villages near Neidenburg in East Prussia. The German army's Artillery Regiment 57 engaged the horsemen on sovereign Reich territory. The Poles withdrew, leaving 47 dead on the battlefield. Hitler told Ribbentrop, "I would like to think that Beck and Lipski have good intentions. But they are no longer in control of the situation. They are captives of a public attitude that has become white-hot through the excesses of their own propaganda and the bragging of the military. Even if they wanted to negotiate, they aren't in a position to do so. This is the real root of the tragedy." Ribbentrop handed Hitler a telegram describing three further incidents of Polish gunners firing on German commercial aircraft. The Führer responded, "This is pure anarchy. What are we supposed to do?"

On August 29, Hitler received a half-hearted pledge from London to urge the Poles to enter negotiations, without, however, stating when. Tired of these dilatory tactics, Hitler wrote back that he expected a Polish diplomat empowered to negotiate by the following day. Examining the note in front of Hitler that evening, Henderson protested that it "has the ring of an ultimatum." The Führer retorted, "This sentence only emphasizes the urgency of the moment. Consider that at any time it could come to a serious incident, when two mobilized armies are confronting one another." Henderson insisted that the deadline was too short. Hitler responded, "We've been repeating the same thing for a week. . . . This senseless game can't go on forever.... My people are bleeding day after day." In Warsaw, Beck, Rydz-Smigly and the defense minister, Tadeusz Kasprzycki, conferred. They decided to declare general mobilization the next morning.

German diplomats and lawyers spent the morning of August 30 preparing the 16-point Marienwerder proposal as a basis for discussions with the Poles. The salient points were Danzig's immediate return to the Reich, a German transit route linking East Prussia to Germany, Gdynia remaining under Polish sovereignty, a minority protection treaty,

and a plebiscite for the population of the northern corridor region. Göring emphasized that the Führer is trying to avoid infringement of Poland's vital interests. Henderson confessed to London that Hitler is considering how generous he can be. Chamberlain's cabinet concluded that the proposal does not harm Poland's interests nor threaten her independence. Even the suggested corridor plebiscite should not have concerned Warsaw, since it claimed that the population there was 90 percent Polish. The French government recommended to the Poles that they negotiate. London telegraphed Kennard, instructing him to formally protest Poland's recent practice of shooting at German refugees.

The Polish Foreign Office assumed that Hitler would interpret any willingness on its part to negotiate as a sign of weakness. In reality, simply receiving the German 16-point plan represented no threat to Poland. It would have opened a dialog, and at the very least postponed the outbreak of war. The Poles could have broken off the discussions if Berlin imposed an ultimatum. They could then have fully relied on the support of the Western powers. Beck however, wanted no negotiations. On August 31, he cabled Lipski with instructions to inform Ribbentrop that Warsaw will "weigh the recommendation of the British government (to negotiate) in a favorable light and give a formal answer to this question in a few hours."

In the same message, Beck instructed his ambassador not to discuss anything with the Germans, and that he is not authorized to receive their proposals. That morning, Sir George Ogilvie-Forbes tried to give a copy of Hitler's 16-point program to Lipski at the Polish embassy in Berlin. The Pole refused, replying that "in the event of war, civil strife will break out in this country and Polish troops will march successfully to Berlin."

The radio monitoring station in the Reich's Air Ministry intercepted Beck's transmission ordering Lipski not to accept a copy of Germany's Marienwerder proposals. Hitler now knew that Poland would not compromise over Danzig and the corridor. He nonetheless postponed the military operation once more, upon Göring's request for a last-minute conference with Henderson and the Swedish mediator Birger Dahlerus. Later that day, Göring's conference took place. He showed Henderson a transcript of Beck's instructions sent to Lipski. Henderson wrote Halifax, "The highly efficient German intelligence system proved its worth that afternoon in Berlin. Beck's telephone call, including the secret message, was instantly decoded. Here was proof to the German Government of Poland's delaying tactics and refusal to negotiate seriously." The meeting between Henderson and Göring was cordial, but failed to reach a solution. A session between Lipski and Ribbentrop the same evening was also fruitless. Hitler summoned Keitel at 9:00p.m. The directive he gave the general began, "Now that all political possibilities for relieving the intolerable conditions for Germany on her eastern border by peaceful means are exhausted, I have decided for a solution by force." Less than eight hours later, the German armed forces invaded Poland.

Historical documents reveal that the attack on Poland was not a step in a long-planned, systematic program to expand Germany's living space. Hitler ordered the offensive upon the failure to achieve a negotiated settlement. Among the most important issues was

the welfare of the ethnic German colony beyond the Reich's borders, though to wage war for the sake of people related by blood, but no longer by nationality, may today seem unjustified. The present-day "global community" concept rejects the notion that a nation can be defined more by its race than by geographical boundaries. During the 1930's, however, pride of ethnic heritage was a powerful force in the consciousness of the European peoples. The 1938 Munich Accord, by which Germany regained the Sudeten territory populated by ethnic Germans under foreign rule, was regarded by the Reich's Foreign Office as a legal precedent: "The right of protection from the mother state was fundamentally acknowledged once and for all, through an international act in which the four Great Powers and three other states took part." In August 1939, Hitler confronted a serious situation regarding Danzig and the German minority in Poland. Blockaded by the Poles since August 24, the Free City's German population faced economic ruin and potential starvation. During the month's final days, Polish radicals murdered over 200 ethnic German residents of western Poland. "German intervention was completely legitimate in accordance with on one hand, the right of the mother state to protect its ethnic families living under foreign rule, and on the other hand, with respect to their right to self-determination," as a German diplomat asserted. Hitler wrote Daladier on August 27, "I would despair of an honorable future for my people, if under such circumstances we were not resolved to settle the matter no matter what."

Beyond the moral and legal issues was that of national security. As mentioned, the Germans had discovered documents in Vienna and Prague revealing a covert policy of the British Foreign Office to weaken Germany. Chamberlain's arbitration of the 1938 Sudetenland crisis had satisfied Hitler's demands but also had rescued Czechoslovakia; at that time, Britain and France had not been equipped to wage war to defend this small but useful ally. Once Czechoslovakia collapsed in March 1939, the Anglo-French lost an integral component of their "collective security" alliance system. London's public guarantee of Poland followed immediately. Hitler surmised that Chamberlain's purpose for this declaration was to turn Poland against Germany, to replace one hostile state on the Reich's eastern frontier with another. The Führer told his architect, Hermann Giesler, that he believed that the coalition forming against Germany wanted war: "I must strive to prevent the encirclement of Germany or punch through it, regardless of what direction."

On August 9, 1939, Henderson had written Undersecretary Cadogan in London that both the Germans and the Italians believed that Poland would attempt to settle the dispute with the Reich by force that year, before British support becomes lukewarm. In Warsaw, army commanders and certain Polish politicians recommended challenging Germany soon, since the cost of indefinitely maintaining so many soldiers on active duty was too great a strain on the national budget. The general mobilization Poland announced on August 30 was another ominous sign for Hitler. Feeling threatened both to the east and to the west, he opted to strike first. One could perhaps judge his decision in the spirit of a maxim of Prussia's 18th Century monarch Friedrich the Great. He declared that in war,

the real aggressor is he who forces the enemy to fire the first shot.

11.9 Poland wants War

German Territories in Polish Hands

After the First World War, the “Right of Self-Determination of Nations” was to inaugurate an era of peace, as a new principle of international law. Accordingly, the U.S. American President W. Wilson tried to draw the borders in Eastern Europe along ethnographic settlement lines, respecting the principle of majority. Although wanting to secure access to the Baltic Sea for Poland, his understanding of the term, however, was to declare the Vistula (Weichsel) international and Danzig as a free port. But Poland was not going to wait for the outcome of the Versailles Peace conference that was stretching over many months and, instead, used the armistice of Germany to occupy the Posen region and parts of western Prussia. Wilson, who evidently had no understanding of the political and historical situation of Eastern Europe, would be hoodwinked, in the end, not only by the three leading Polish agitators Sosnowski, Dmowski and Paderewski, but also by the French, who were using falsified maps and faked statistics, as well as drawing attention to the Polish electoral votes in the U.S.A. The Versailles Peace conference accepted from Poland the *fait accompli*, with the stipulation, however, that the transfer of territory was made dependent on the Polish obligation of having to guarantee to the German and Jewish minorities far-reaching independence and the preservation of their national culture and traditional way of life. Irrespective of the Versailles border ruling, the Poles still occupied the eastern bank of the Vistula as well as other districts of West Prussia, thus denying all German access to this river.

France, that was to occupy a dominant position in European politics after the First World War and was to favour an eastern buffer against Germany “for security reasons”,⁴⁾ was lending her support to the Polish rebels’ campaigns of terror against the population in eastern Upper Silesia, as well as to the manipulations of constituencies taking place. Ultimately, this rich industrial area was made over to Poland, despite the German winning result of the plebiscite in 1921. In this way Poland acquired wrongfully a German territory of 46,150 square kilometres that was populated in the majority by Germans. That Versailles “peace treaty”, which was “another way of continuing the war”, “a potential declaration of war” that could “become an even greater evil for the whole world than the war itself”,⁶⁾ gave more to Poland than was deserved and much more than she should have claimed. Not only historians from abroad but statesmen of that period, yes, even Polish politicians, did not grow tired of pointing to the injustice hereby created and to the seedling of a new war hereby planted. Marshal Pilsudski’s famous remark:

“So you are lusting after Upper Silesia? But really Upper Silesia is an age-old Prussian colony!”

Indeed they were desirous of Upper Silesia. Many years of groundwork had been put in by Polish agitators in Britain and in the U.S.A. – here with more success. Thus Sosnowski, in a letter to President Wilson dated 7 April 1917, was demanding Upper Silesia on the grounds that it was especially the coal and coke industry that was mining that area, with all the related by-products, which had created the power base of Prussian militarism and that this threat needed to be eliminated. That there was the additional request in that programme for the destruction of Prussia, the dismemberment of Germany and the “restitution of the coastal territories stolen from Poland” (pronounced East Prussia), should be mentioned in passing. Underlying Dmowski’s agitating was the belief that “only a total remodelling of the European structure of states” could restore the balance “which has been destroyed by German expansionism”, and that Poland would have to become the focus of the non-German Central Europe. The prerequisite was for Poland to be economically and politically strong, and that reason made her possession of Upper Silesia, among other things, a necessity. Those same “statesmen”, who had described the partitioning of their country (by far the largest part went to Russia) as one of the biggest criminal acts in the history of the world, but who in turn were elevating just such dividing-up and destruction of their neighbour state (Germany) into one of the most important principles of their governing system, were now the new masters of Poland.

It goes without saying that they knew, as well as Pilsudski, who publicly stated it on 5 February 1919, that the “western borders of Poland were a gift of the coalition”, but this knowledge was never to be reflected in their policies. Lloyd George, the British Prime Minister, during the Paris negotiations:

“I tell you once more, we would never have thought of giving to Poland a province that had not been Polish for the last 900 years. . . The proposal of the Polish Commission that we should place 2,100,000 Germans under the control of a people which is of a different religion and which has never proved its capacity for stable self-government throughout its history, must, in my judgment, lead sooner or later to a new war in the East of Europe...”

They knew this... and did nothing. Woodrow Wilson’s words of 7 April 1919 also went unheeded:

“France’s only real interest in Poland was to weaken Germany by giving the Poles areas to which they had no claim.”

U.S. Secretary of State, Robert Lansing, remarked on 8 May 1919:

“Do examine the treaty and you will find that whole populations, against their will, were delivered into the power of those who hated them, while their economic resources were snatched away and handed over to others. The result of such directives has to be hatred and bitterness, if not despair. It may take years until these oppressed nations are able to shake off the yoke, but as sure as night follows day, the time will come when they will try to break free. We have a peace-treaty, but it will not bring lasting peace, as it was founded on the quicksand of selfishness.”

The former British Ambassador in Berlin, D'Abernon, on 23 January 1926:

“The Polish Corridor remains the great powder keg of Europe!”

Even the Soviet press supported at that time the German demands for a revision. The French Professor of Slavonic studies, René Martel, in 1929:

“Amongst the thorny questions that have troubled us since the war, none is as regrettable and terrible as that of the eastern borders of Germany. There is not one person nowadays that does not know this truth.”

It should also be noted here that no German politician accepted these borders from 1920 till 1933 and that they were always open for revision. Hitler himself was the only one who offered these borders to be finalized but his offers were always ignored.

Poland Demands Territories outside Poland

Even the acquisition of the “Corridor” and Eastern Upper Silesia did not satisfy Poland, and this attitude had the reproach of imperialism directed at Poland in 1919 already by the Chief Powers of Versailles.

The Polish concept of a state would consider territorial expansion to the west as vital, because it would increase the availability of raw materials and thus secure for Poland the status of a leading European power. The Polish claims after 1918 knew no bounds. They included East Prussia, Danzig, Upper Silesia, parts of Mid Silesia and the “Oder territories”. These highly imaginative ambitions had already assumed a political character in numerous statements of the political agitators Sosnowski, Dmowski and Paderewski, or rather in the statements of the Polish National Committee, founded in Paris in 1917, and in the writings of the Polish peace delegation in Versailles, whose main representatives were Dmowski and Paderewski.

While the followers of Dmowski's policies were already at the beginning of the First World War making demands, during a lecture talk in Moscow, that Poland take possession of East Prussia, of Posen-West Prussia, of Upper Silesia and two districts of the county of Breslau, so Dmowski was demanding, in a treatise from July 1917, the annexation of Upper Silesia*), a small part of Mid Silesia, the province of Posen*), West Prussia*) and the districts of Lauenburg and Bütow in the province of Pomerellen and East Prussia. In his memorandum he put a choice of two possibilities to the western politicians:

“On the one hand, the future of 2 million Germans in East Prussia shall be secured at the expense of 25-30 million Poles. Among those 2 million, a considerable number would be German by language only; many of them would still remember that they are of Polish or Lithuanian origin, and often they would have a hostile attitude towards the Germans. On the other hand, the second possibility would be for Poland to establish her State within the proposed borders. In that way the (above mentioned) Germanized strip of land will be cut off from Germany, will quickly be developed economically and,

at the same time, will be opened up to Polish influence and to Polish immigration. It is not difficult to decide which of the two solutions is the more humane and more in accord with justice'."

What in the name of this "justice" was to happen to the East Prussian population was clearly articulated in the Polish "specialists' memorandum" of March 1919, which was presented to the Peace conference:

"The territorial isolation of East Prussia, this seat of Prussian militarism, is necessary for a lasting peace, and this must result in a voluntary and continuous de-Germanization of this important strategic area, from whence the Prussian dynasty has set off to conquer the world."

Dmowski also found arguments for requesting the incorporation of Danzig into this new Poland, since he had falsified totally the history of this German city:

"The Danzig of today is German; but under normal conditions, that is, with the requirements of a natural economic development, it will inevitably become a Polish city."

Dmowski expressed himself still more clearly in the previously quoted memorandum of March 1919:

"The Germanization of Danzig is superficial and, as soon as the Poles have the right to settle there, the city will once again become Polish (*redeviendra polonaise*), just like Krakow and other cities in Poland which at a certain era have had a German majority..."

Up to the middle of 1918, the Polish ambitions were met everywhere only with resistance and shaking of the head. Dmowski himself wrote:

"In Western Europe, not only amongst politicians, but also among men of science, geographers, statisticians, was the idea that the coastline of the Baltic Sea up to the mouth of the Niemen was German and could only be German so entrenched that when I began to talk about our territorial claims to the Baltic coast, they started rubbing their eyes, looking at me as if I were half mad. This went on for about three years. It is difficult for people to get rid of deep-seated ways of thinking. Still in the spring of 1918, a high-ranking French diplomat, who had devoted much time to the Polish question, told me: 'But it would truly be a miracle, Sir, if things were to happen as you say and your state reached up to the Baltic!' 'Perhaps it would be a miracle,' I replied, 'but the miracle must happen, if both your country, as well as we Poles, want to exist as an independent nation...' We have obtained that piece of coastline only because the war lasted so long, allowing us time to create favourable conditions, and especially to spread precise information about the true state of affairs in Pomerania."

It was not clear to President Wilson – as indeed many arguments of the Poles were not clear to him – why Poland and France, within the framework of the League of Nations, should be the "acting executive body" with regard to Germany. Yet none of this stopped Dmowski's memorandum of 8 October 1918 not only from being presented to the US President as well as to the Versailles Peace conference, but also from being

seriously discussed – although according to these proposals, this new Poland could not even produce 50% of inhabitants of Polish origin. In this memorandum East Prussia was described as “conditions there being positively medieval”, where “the peasant masses were kept in near-slavery and were brought up in the spirit of servitude”. If “social and political progress” were to be introduced there, then, according to Dmowski – and this report of his was submitted in the name of the Polish National Committee! – East Prussia had to go to Poland.

“... Yet the Polish ruling class and Polish intellectuals had aimed at the restoration of a Poland bounded by the frontiers of 1772. These frontiers would not in any way correspond with ethnical boundaries, and a State contained within them would not be a National State. Historical Poland was not a National State, but a multinational Empire which arose in the course of centuries when the dogma of Nationalism, as understood in modern times, did not exist.”

The British Foreign Minister, Balfour, also energetically opposed the French with the explanation:

“I have listened to this recommendation with concern; the Poland of 1772 shall become that of 1918, according to your reports. We did not pledge ourselves to that. What we have committed ourselves to is the creation of a Poland comprising Poles (Polonais). The State of 1772 does not meet this objective.”

Again and again the demand for revising the Versailles Treaty resounded throughout Poland after 1919. This, however, was understood by the Polish politicians to mean merely the fulfilment of further claims, first and foremost the claim for East Prussia and Danzig. Roman Dmowski, the leading Polish agitator at Versailles, explained in 1923:

“I never fought for the return of Poland – since that was taken for granted – what I was fighting for was the creation of a Greater Poland. The presentday Poland is not small, but we must all keep in mind that it is only the first instalment for a truly Greater Poland. As yet Poland is not a totally complete empire, but she must expand until she has become one, if her continued existence is ever to be permanent.”

Roman Dmowski was not alone in this. President Wojciechowski was emphasizing the request for additional territories for the purpose of creating Greater Poland. In the same year of 1923, the Polish Minister of Education and the Arts, Stanislaw Grabski, in his work “Observation on the present historical Moment of Poland”, had elevated the Polish expansion northwards into the supreme principle for Poland’s foreign policy. The objective of this policy was to be

“reinforcing the elements of victory in the struggle with Germany that was not yet at an end... The Baltic coast will, sooner or later, be the object of a clash between Poland and Germany... The Polish people cannot accept the result of the plebiscite in the Masuren region as the final verdict in this affair... The existence of the republic can only ever be of a permanent nature once we are victorious in the unavoidable fight

against Germany.”

Here we have Polish officials already thinking of war with Germany when Adolf Hitler hadn't even written *Mein Kampf* yet. The right-wing parties in Poland, particularly the National-Democrats, were rejecting a border revision along ethnographical principles already for the reason that the Treaty of Versailles had not satisfied all of their territorial demands. But also the Centre and the Left were not prepared to go along with it.¹⁸) The National-Democratic party of Poland was keeping alive their pan-Slavic expansionism, which had already been agreed upon as a Russian-Polish war aim in mid August 1914 between the Russian Foreign Minister Sazonov and Dmowski and was condoned during the First World War by the Western Powers¹⁹) during the period 1919-1939. Dmowski's party colleague Giertych wrote on the subject of the Treaty of Versailles:

“Under the treaty, Poland obtained far more of the territories stripped from Germany than all the other states in Europe put together, including France... If any country can look upon the Versailles Treaty as a great political triumph, that country is Poland. ... We can say without exaggeration that, after the union with Lithuania in the year 1386, the Versailles Treaty constitutes the greatest achievement of Polish diplomacy in the course of our thousand-year history... Versailles is the only political victory in our history since the 17th century.” Roman Dmowski, in a speech in Posen 1923, took “the gifts from the coalition at the western borders, where Poland had not attained anything by her own efforts” merely for “a small down-payment for a truly Greater Poland”.

His National-Democratic doctrine did not simply intend to claim for Poland what was Polish, but rather

“that Poland demand as much as she could manage to Polonize.”

The Polish paper *Dzien Polski* stated in 1923:

“The taking possession of the Memelland was to be only the trial run for the eventual inevitable impending acquisition of East Prussia by Poland.”

Gazeta Gdansk on 9 October 1925:

“Poland must insist on the fact that she cannot exist without Königsberg and the whole of East Prussia. We must now demand at Locarno that the entire East Prussia be dissolved. It can have an autonomy with Polish sovereignty. Then there will no longer be a Corridor. Should this not come about in a peaceful way, then there will be a second Tannenberg (battle from 1410) and then, hopefully, would all domains return to the fold of their beloved motherland.”

A high-ranking Polish General Staff officer, H. Baginski, in a book published in Warsaw in 1927 and awarded the annual prize of the “Polish commission for international intellectual co-operation”, specified the main aims of Polish foreign policy: annexation of Danzig, East Prussia and most of Silesia.

“There can never be peace in Europe until all Polish territories are restored to Poland,

until the name Prussia, the name of a nation no longer in existence, is erased from the map of Europe, until the Germans have moved their capital westwards from Berlin, for example to the former capital of Magdeburg on the Elbe, or Merseburg on the Saale, until their state has again assumed its former name and until they have stopped dreaming about a 'revision of their border in the East'."

The French professor of Slavonic studies, René Martel, in the year 1929:

"All Polish ideas end up, basically, as plans for expansion. Far from wishing to resolve the question of the Corridor in a manner acceptable to Germany, they are dreaming in Poland of extending that territory by annexing Danzig and East Prussia in one way or another."

An article appearing in 1930 in the review *Mocarstwowiec* ("The great power league"), close to Pilsudski and, like all publications, subject to state censorship, read in part:

"We are aware that war between Poland and Germany cannot be avoided. We must systematically and energetically prepare ourselves for this war. The present generations will see that a new victory at Grunwald (allusion to the Battle of Tannenberg 1410) will be inscribed in the pages of history. But we shall fight this Grunwald in the suburbs of Berlin. Our ideal is to round Poland off with frontiers on the Oder in the West and the Neisse in Lausatia, and to incorporate Prussia, from the Pregel to the Spree. In this war no prisoners will be taken, there will be no room for humanitarian feelings. We shall surprise the whole world in our war with Germany."

During the year 1930-1931 there was published in the Sejm an official memorandum "Aims of Polish Foreign Policy" of the Foreign Ministry in Warsaw, in which Oder and Sudeten are described as the western-border-aspiration. The Polish nationalists were making additional demands for Memel and Lithuanian territory, as well as Czech and Slovakian assets.

"For the Polish press it was not enough that every request for a modification of the borders in favour of Germany had been rejected, but was propagating the need for 'the restoration of all Polish territories to Poland'. Thus we may read, for example, in the *Kalendarz Morski* (Gdingen) that the Polish people 'with all resoluteness' must demand 'the return of East Prussia' and, in the event of this not happening, 'the world would awake one day amid a thunderous roaring of war'. The result of the plebiscites in East and West Prussia of 1920 was fiercely attacked at every opportunity as a falsification of the true circumstances. Poland could not relinquish her 'ancient rights'..."

The Polish Foreign Minister, Colonel Beck, in 1932:

"Poland could not even be content with the status quo."

In the year 1939 also, members of the Polish government were repeatedly involved in increasing the warmongering and the propagating of these territorial demands – quite apart from the censored press that was keyed into this tune anyway. It is regrettable that in all this nobody thought of reproaching any of them for "being vengeful" and

“war-mongering”, and a law forbidding the “stirring-up of hatred amongst nations” and “racial mania” did not exist in Poland either.

On 3 June 1939, the Polish Vice Premier Kwiatkowski declared at the opening meeting of the Economic Council of Pommerellen:

“Pommerellen is, and ever will remain, Poland’s connection with the world.”

Equally, the Social Welfare Minister Koscialkowski stated on the 4 June 1939, on the occasion of the unveiling of the Pilsudski Memorial Tablet at Ciechocinek:

“The possession of Pommerellen is an indispensable condition for Poland’s economic and political prosperity. . . In the event of a struggle being forced upon Poland, to regain those ancient Polish regions which ought to have come to Poland long ago, is the aim of this fight.”

Apart from the innumerable press reports and statements that were made by leading spokesmen of the Polish public and delivered with the same aggressive zeal, there were five books in particular that would endorse this attitude of mind:

The first of these books:

Consulibus “Experiences and errors of our foreign policy with regard to the tasks of the present”, Warsaw 1926. Content: Demands partition of East Prussia between Poland and Lithuania and of Upper Silesia between Poland and Czecho-Slovakia.

The second:

Melchior Wankowicz “On the trail of the Smentek”, Warsaw 1936. Content: A journey through East Prussia, which will reveal the alleged oppression of the Mazurs, who, for their part, had become almost completely alienated from Poland.

The third:

J. Kilarski “Gdansk”, Posen 1937. Content: The city of Danzig is passed off as being formerly Polish; the population is allegedly only awaiting liberation from their ‘white-wash coating’ of Germanness.

The fourth:

Stanislaw Wasylewski “In the Opper Silesia”, Kattowitz 1937. Content: Aim and purpose of this book would be – according to the author – to acquaint the Polish public with a hardly noticed piece of ground, neglected and forgotten by Poland for centuries.

The fifth:

Jozef Kisielewski “The soil preserves the past”, Posen 1939. Content: “We were on the Elbe, we were pushed beyond the Oder... A favourable wind is filling our sails. After a long span of disfavour...”

The Polish demands for German land were not isolated occurrences. The official programme of the Polish West Marches Association, as defined in April 1926, demanded the drawing up of a Polish frontier from the Oder in the west (to include Stettin) up to the middle and lower Duna in the east (including Riga).

When in 1921 Poland was drawing up the frontier (treaty of Riga between Poland and

the Bolsheviks), incorporating seven million Ukrainians and two million White Russians into her state association, by no means did this signify that the dreams of a Great Polish Empire between the three seas – the North Sea, the Black Sea and the Adriatic – of the “geopolitical region of Poland” were now over. The Polish magazine *Nasza Przyszlosc* was proposing a Polish-Japanese border along the Urals in the summer of 1939. Polish maps depicting national frontiers reaching the Volga, along with corresponding publications and utterances by well-known Poles, were no isolated efforts.³⁹) The Greater Polish notions of incorporating the Ukraine up to and including Kiev and an overland connection to the Black Sea were as alive in 1939 in Polish government circles as they had been in 1919-1920.

“Mr. Beck ‘made no secret of the fact that Poland had aspirations directed towards the Soviet Ukraine’, when Ribbentrop visited Warsaw on 1 February [1939].”

For years the Polish governments have been tolerating these trends, have encouraged them, supported them and justified them. Not one of these demands have come about from any so-called need for having to offer resistance to the National Socialist form of rule in Germany or indeed to the foreign politics of the Third Reich. “The Piastian idea” of westward expansion was an equally purely Polish body of thought as was that of expansion northwards and eastwards. There is proof that the aim of the Polish general public before 1933 and after 1933 was exactly the same: to drive out and to displace the East German population.

From the time of her renewed founding in the year 1916, or rather 1918, up to 1939, Poland has been at war with every one of her neighbours (except Rumania) or was preparing to go to war. Of the 5,147 kilometres of Polish border almost 4,000 kilometres are disputed. In spite of her painful wounds Germany remained in these twenty years the only neighbouring country with whom Poland could enjoy temporary friendly relations – during the Hitler period!

In his memoirs, the Polish Ambassador in London, Raczynski, described that policy as follows:

“Pilsudski well knew how much Poland owed to the victorious Allies of the first war. He was not blind either to the strength of the Western Powers or to the fact that their own interest prompted them to help Poland to achieve a place in the sun, despite pressure from her neighbours to the East and West. But he was more inclined to rely on his own resources than on the goodwill of Allies whom he lacked either the means or the inclination to get to know more closely. Moreover, Pilsudski, and especially those of his disciples who came to power after him, suffered, perhaps unconsciously, from an inferiority complex. It was, in their eyes, vitally important to cure their fellow-countrymen of their supposedly submissive and deferential attitude towards foreigners, due to uncritical admiration of the latter material or cultural superiority. This frame of mind on the part of Pilsudski and his successors gave rise to the so-called ‘Great Power policy’. In the Marshal’s day this was no doubt justified by political calculation; but after his death it degenerated into a

noxious fiction which threatened the very existence of the Polish State.”

However, this recognition did not prevent Raczynski to subscribe to the very same expansionist and great-power-policy mentality with which he charged the leadership. This emerges powerfully from his open letter to Lloyd George of 25 September 1939: In this letter he accused Lloyd George to be essentially responsible for the Polish defeat, because in 1919 he had awarded to Poland a “strategically indefensible” frontier and because he had prevented “the demilitarization of East Prussia” and “the restoration of the historic union of Danzig with Poland”. That the Polish leadership in the spring of 1939 was making claims to colonies and was intending to discuss these with the British government, and that three weeks later Lord Halifax was giving the unconditional guarantee against Germany in the full knowledge of these expansionist endeavours on the part of Poland – or precisely because of that? – should just be mentioned in passing.

H. Seton-Watson writes:

“The fact that the true political aim of the Polish ruling class was not nationalist at all but imperialist, that it involved the domination of Poles over large numbers of people of origin other than Polish, has never been sufficiently understood in Western Europe.”

Another German historian notes:

“If you would have visited Poland before the war you would have thought to be in a huge mental facility.”

Poland's Policy on her Minorities Fundamental Position

In spite of the Treaty for the Protection of Minorities, as decreed by the League of Nations, Poland considered Posen-West Prussia and the misappropriated part of Upper Silesia, but also the German city of Danzig, the territories to be “Polonized” once and for all. These aims were openly declared, and the relevant measures were taken stage by stage without any consideration for the people affected. Poland was using every conceivable means in this struggle for the cultural, traditional and national element and identity (Volkstum). The yearly agrarian reforms and the reparcelling of the agricultural land (“Flurbereinigung”), as well as the border zone laws, all contributed to a bloodless dispossession of the German population. A referendum for the choice of a particular nationality (Option), which had been brought about without informing the general public beforehand of the consequences that a positive declaration for Germany would incur, led already in 1920-1921 to the expulsion of hundreds of thousands of Germans. The German language as official language was to be prohibited and severely constricted otherwise. Exorbitant taxes, confiscation of community buildings and newspaper offices, systematic boycotting of German firms and shops, biased prosecutions against the press, lawsuits and bureaucratic harassment all led to financial strain, then to economic ruin and, finally, to the German people being turned out from their homeground. Associations and organizations were banned, professional licences refused or revoked, businesses expropriated.

German workers were systematically laid off, then deprived of unemployment benefit and evicted from company accommodation. All jobs in the public sector were allotted to Polish immigrants. Trade and commerce of the German people were heading towards ruin, especially since young Germans were denied apprenticeships. German schools were closed, German teachers intimidated if not dismissed, and German students were expelled from universities and thereby prevented from professional training.

“Of the 657 public schools for the German minorities in the year 1925 (1927: 498), there remained, at the beginning of the school year 1938-39, only 185 (150 in Posen-West Prussia and 35 in Upper Silesia). Resistance to this policy was faced down with the most drastic measures... In 1924 alone, about a third of German holdings (510,000 hectares) went into liquidation.”

Insults and violence were also the order of the day, and the Polish police would refuse, in most cases, to give protection to the German victims. The cultural life of the German minority was thus paralysed by these measures. The “liquidation of German estates and the de-Germanization of the western provinces” was no accidental public utterance from the former Premier Sikorski in 1923; it was unconcealed government policy 2) – since the year 1919. In October of that year, the future Minister for Education and the Arts, Stanislaw Grabski, announced, at a delegates’ conference, the “Posen programme” with the following words:

“We want to base our relations on love, but there is a love for fellow countrymen and another love for foreigners. Their percentage amongst us is by far too high. Posen can show us how 14 per cent or even 20 per cent can be reduced to 1.50 per cent. That foreign element will need to decide whether it will be better off somewhere else. Poland is exclusively for the Poles!”

Following a few examples of the various means of displacement:

“Withholding or withdrawal of citizenship, followed by expulsion from the territory on the grounds of dealing with a “foreigner”, deportation of former civil servants, teachers and other public employees together with their families, one-sided administration of taxes – especially of the enforcement of the tax regulations and of the rules for the Agrarian Reform, withdrawal of the entitlement to practise one’s occupation (by revoking of licences, concessions, permits) with the effect of wrecking the basis of economic life, calls for boycott tolerated by the authorities. ‘The consequent feeling of insecurity with regards to justice and the awareness of being at the mercy of an alien Power gave rise to a state of panic amongst the Germans, leading to panic selling of property and emigration of such magnitude that it even exceeded the consequential result of any Polish force brought to bear.’ This policy forced the German element of West Prussia and Posen to emigrate en masse between 1919 and 1926.”

German documentation attests:

“The hatred for Germanism had spokesmen in every party. Next to the National-

Democrats stood the Christian-Democrat Korfanty and the Pilsudskifollower and Voivode of Silesia, Grazynski. But even stronger than the sway held by political parties over public opinion was the influence of a number of organizations and institutions, although most of all it was the press that considered the fight against everything German to be their sole duty. Foremost of these is to be mentioned the 'Western Marches Society', whose original purpose had been to secure a Polish national character in the new western territories by a possibly complete displacement of the German element, but which had soon extended its activities throughout Poland. These consisted in the regular organization of whole weeks of propaganda, and also in 'spontaneous demonstrations' which were unleashed, after due preparation, against German schools, newspapers, bookshops, as well as against the personal safety of individual Germans. The 'Western Marches Society' was responsible for the 'Black Palm Sunday' 1933 in Lodz, when on that day German cultural institutions (publishing house, school, bookshops etc. were wrecked. Furthermore, the Polish insurgent associations in Upper Silesia and Posen were to distinguish themselves by their radical, often brutal, anti-German attitudes. They saw to it that even in times, when an obvious easing of political tension was evident, the anti-German mood was kept alive."

Again, it must be emphasized, this policy was an official government programme. Whatever historical documents are consulted, everywhere is to be found depressing evidence which, on the part of Prussian or German policies vis-à-vis the Poles of such single-mindedness and degree of violence, had hitherto been unknown. Whatever Poland might say of the Prussian Kulturkampf of the 1870s, the Settlement Law of 1886 or the Expropriation Law of 19087), the fact remains that after a century of German rule (1815-1918), there were in the province of Posen 41.3 per cent and in West Prussia 24.1 per cent of the rural land holdings in the possession of Polish landowners.⁸) The generosity of Prussia even went so far as to make it possible, at the turn of the century, for Polish seasonal workers to acquire private land on a scale of 29,000 hectares in the purely German region of East Prussia, where there had never been a Polish settlement before. These seasonal workers were directed by the West Marches Association (Westmarkenverband), the "Landbank", founded in Posen in 1886, and a close network of Polish Cooperative banks and institutes engaged in the parcelling-out of land. In the notorious memorandum of 8 October 1918, which Roman Dmowski had presented to the American President Wilson, demanding considerable territorial expansion for Poland, this Polish agitator admitted – and thereby the following Polish agitation to this day is reduced to absurdity:

"All the endeavours of the German people and the German government could not break the national resistance of the Poles. The Polish population and the Polish ownership of property were growing steadily and the Polish businessman, as well as Polish industry, was rapidly gaining a foothold in the competition with German commerce and German industry. This is proof of the strength and the ability to survive of the Polish population in the entire territory, and is, at the same time, also the most striking example of a government acting against the will and the interest of the people, a government that will

retain its destructive character as long as the Polish provinces are part of Germany.”

Let history record the following: While under German rule, “Polish ownership of property was growing steadily”, and Polish commerce, as well as Polish industry, “was rapidly gaining a foothold amongst their competitors”! This Poland of the twentieth century looked upon co-existence with the German people in a completely different light:

“Weighty also were the economic and social measures put upon members of the [German] minority: expropriation of forest and farmland, dismissal of public and private employees, refusal to take on apprentices and other applicants for employment or to accept applicants for civil service posts, refusal to promote public servants on the grounds of nationality, cancellation of the entitlement to pensions and state-benefit income, refusal to consider German-owned businesses for municipal public orders. This in particular affected the Germans in both Poland and Czechoslovakia. The persons affected by these and similar restrictions of rights should have had recourse to the protection of the League of Nations. In retrospect it has to be acknowledged with deep regret that the way this duty was discharged by the League was quite inadequate. Already the procedural prerequisites, which had been designed for the complaints of minorities, were detrimental to a speedy and benevolent settlement of such cases; so it was that not even a twentieth part of the petitions, which had been sent to the League of Nations between 1920 and 1930, were given a decisive ruling. The other 95.5 per cent were either rejected or remained unfinished.”

In 1936 Marshal Smigly-Rydz’s paper, the Warsaw Kurjer Porany, commented on this subject:

“One cannot actually state that the Germans will succeed in stopping the continuing process of de-Germanization of the Western regions, but there is no doubt that they intend to put obstacles in the way of this process. Thus the Poles could be sure of getting ever closer to their goal of ejecting or absorbing the German element. The only thing they need fear from the activity of the Germans was a certain slowing of the pace.”

Of course, French and British politicians protested now and then in Warsaw, but without any vigour and without any effect. The Manchester Guardian reported from Poland on 14 December 1931:

“The minorities in Poland are to disappear. Polish policy makes sure that they do not disappear on paper only. This policy is recklessly pushed forward, without the least regard for world public opinion, international treaties or the League of Nations. Under Polish rule the Ukraine has become hell. The same can be said of White Russia with even more justification. The aim of the Polish policy is the disappearance of the national minorities, on paper and in reality.”

The same British newspaper had stated a year earlier, on 17 October 1930:

“The Polish terror in the Ukraine is today worse than anything else in Europe. The Ukraine has become a land of despair and destruction. The situation is all the more of

a provocation, considering that while the rights of the Ukrainians have been guaranteed under international law, the League of Nations remains deaf to all their appeals and requests and the rest of the world knows nothing of the facts, or else does not care..."

An indication of just how charged were the German-Polish relations before 1933 is the fact that up to 1923 over half-a-million Germans had to leave their homeland Posen-West Prussia and, according to Polish quarters, that number had risen to one million by 1931. That figure represented – even before Hitler came to power – almost half of the local German residents! By August 1939, about one and a-half million (1.5 m) out of a total of two million and two hundred thousand (2.2 m) Germans from the territory of the Corridor and East-Upper Silesia were forced to flee to the Reich. In the summer of 1939 alone, the number of refugees put up in German camps amounted, by the 21 August 1939, to seventy thousand (70,000), not counting those refugees who had found private shelter or those who were shot or captured during their flight.

A Dutchman, Louis de Jong, Executive Director of the Netherlands State Institute for War Documentation in Amsterdam, was given the task by UNESCO, after the Second World War, to examine the frequently quoted and secretive German "Fifth Column" in a historical-scientific way. His results:

"The Polish-German non-aggression pact, dating from 1934, was of no real moment. Both the government and public opinion in Poland increased their pressure on the "Volksdeutschen/German minority." "No German data, however, have been made known that conflict with the view that the large majority of the "Reichsdeutschen" and "Volksdeutschen" living in Poland played a passive part up to the arrival of the German troops." "But it is a remarkable fact that there is no proven or even clear connection with the German military operations for many of the reported observations." "During the Nuremberg trial of the principal German war criminals, an affidavit of Bohle's was read, in which he asserted that neither the Auslands- Organization nor its members had ever 'in any way received orders the execution of which might be considered as Fifth Column activity' – either from Rudolf Hess, whose immediate subordinate Bohle was, nor from himself. Nor had Hitler ever given any directives in that respect, Bohle said. He admitted that there had been Germans abroad who had been used for espionage purposes, but that sort of work had been carried out by the French and the British for their espionage services as well, and in any case the espionage work done by the Germans in question had had nothing whatsoever to do with their membership in the Auslands-Organization."

"The arguments used by Hess and Bohle were not printed by the world press."

Professor Hans Koch, an authority on the subject of German nationals abroad, stated:

"Kurt Lück, a leading expert on German-Slavic relations, has compiled a lexicon where in over fifty pages are recorded insulting and obscene Polish songs about the Germans; an enormous number of songs of almost pathological arrogance in which the Germans are usually compared to dogs. On the German side, songs of such profound repugnance are not in existence. On the other hand, it is well known that we have rather a whole

array of songs expressing sympathy for the Poles. . . Just as there is no well-known novel or poem about the march on Moscow, so there is not one German book which speaks about the march on Warsaw. However, there exists a two-volume Polish work, published in Thorn in 1927, about a march on Berlin. . .”

In 1937 Erwin Hassbach, senator and chairman of the Council of Germans in Poland, and Rudolf Wiesner, regional head of the German Youth Party (Jungdeutschen), once more lodged a complaint with the Sejm:

“The German element in Upper Silesia has become, after a period of fifteen years of the Geneva Convention, a starving, unemployed and desperate group of people. Everything has been taken away from us, over eighty per cent are without jobs and starving in Upper Silesia, our youth is growing up without any chance of being apprenticed; and against our businessman and trader a relentless campaign is waged. Must we also lose our land? The State and the Polish people need to clearly understand that poverty and starvation have limits which must not be crossed. There has been enough talk about equality and equal rights to jobs and bread for all. We Germans want finally to see action. From now on we intend to push through our national, cultural and economic rights by exercising the internal political channels. The precondition on the Polish side, though, is for them to abandon their intentions of annihilation.”

The informal discussions, proposed by Berlin, by experts from their respective Ministries of the Interior with a view to improving the conditions of the minorities in the Reich as also in Poland, were repeatedly rejected by the Polish government.

Intensified Action 1938-1939

There is no causal relationship between these Polish policies and the German negotiation proposals made to Poland on 24 October 1938 or, indeed, with the occupation of Prague on 15 March 1939; but they are directly interrelated, however, with the fundamental Polish attitude towards Germany in connection with the promise from London to Warsaw in August/September 1938 to support Poland “as much as possible” against Germany at Danzig. Already after the annexation of the Olsa territory, at the beginning of October 1938, Poland was implementing ruthless enforcing measures such as mass redundancies, abolition of German as official language, which even the Czechs had tolerated, the banning of the press, of holding assemblies, of organizing official events, while outrages and arrests were carried out on the German population, amongst others, but also on the Czech population. (In the parliamentary elections of 1935 in Teschen and Oderberg, the Germans had achieved respectively 46.8% and 40% of the votes, the Poles 10% and 20%.) 20% of the German population in the Teschen region – approximately 5,000 people – were forced to leave within the first month of Polish rule.⁹) The diplomatic contacts between Poland and Germany remained unaffected by these occurrences, owing to the restraint of the Reich government (Hitler’s orders, not to publish anything unfavourable to Poland).

In their biting attacks on Germany the Polish press did not even wait for the British guarantee; rather they were satisfied with secret assurances from London in August and September 1938, as well as the news from January to March 1939 received from London and Washington. Already one month before Hitler's entry into Prague, on 15 February 1939,

“Poland published, in spite of warnings from the Western Powers against doing so, the List of Names of properties which were soon to be requisitioned for parcelling in the course of the Agrarian Reform. The list contained an extraordinary large number of German names. On 24 and 25 February there occurred serious anti-German excesses by the student body.”

While the land reform robbed the minority Germans in 1938 of two thirds of their arable land, so the Frontier Zone Law and Agrarian Reform expropriated in February 1939 agricultural land, of which 72% belonged to German people (in previous years the proportion had averaged 66%). Within a 30 kilometres wide border strip Germans were no longer allowed to own land; this concerned in the 85-110 kilometres wide “Corridor” nearly all of the West Prussian region.¹³) In addition, there was the activity of the West Marches Society, “the only point on whose program[me] is extermination of the German element at the Polish western frontier”.¹³) The head of this West Marches Society, M. Zaleski, was claiming at the same time, in a speech made at Kattowitz that Poland had made the pact with Germany in 1934 only for tactical reasons, so as to prepare the ground for a future conflict; that it would be a comfortable screen for the Polish government to hide behind while they could rid themselves of the German minority.

Those with specialized knowledge of this development had already earlier realized these realities. Additionally to the Agrarian Reform, countless German enterprises, community buildings and associations were closed, confiscated or demolished, German children were tormented in school by their Polish school mates, who were taught to hate them, German farmhouses were set on fire, “demonstrations against the Germans” were organized, there were mass-arrests, expulsions initiated, fighting tolerated and fomented, workers were systematically dismissed, the defining of the state of emergency in the border zone was extended to over one third of the Polish sovereign territory,¹⁵) and wide-ranging lists of arrest warrants were prepared.

The British backing, hinted at since August/September 1938, then the official blank cheque of 31 March 1939, but also the goading tone of President Roosevelt, boosted Polish chauvinism into open persecution of the minority Germans. For several months British Ambassador Kennard had been warning his government about the dangerous consequences of these Polish activities. The German government also was repeatedly drawing London's attention during the decisive months of the year 1939 – April to August – to the exceedingly grave occurrences in Poland. Factually correct – and never refuted by historical research – the German White Book ascertained in the year 1939:

“German protests were of no avail (No. 360). At the beginning of April, a public

appeal proclaiming the general program[me] for de-Germanization of the country was circulated throughout Poland (No. 358). Towards the middle of April, the first German fugitives crossed the frontier (No. 359). It was practically impossible for the Consulates to report every individual case (No. 361). Anti-German agitation raged unchecked in Upper Silesia (No. 362). Reports from the German Consuls were full of terrorist acts (No. 363). The Polish Insurgents Society gave the orders for these actions (No. 364). On May 6, the Consul-General in Kattowitz reported two hundred acts of terror (No. 365) and on May 19, another hundred, all of which had occurred in Upper Silesia alone (No. 372). All Germans were in fear of their lives and property. Terrorism spread also to Congress Poland and was intensified by systematic acts of incendiarism (No. 366). The last strongholds of German culture were destroyed (No. 369, 373, 374, 377, 379, 383, 385, 390, 391, 399, etc.). In despair, the German minority appealed to the Polish President (No. 369). The British Government, although kept informed by the German Embassy in London of the nature of these developments which inevitably endangered peace (No. 368), remained inactive. Towards the middle of May, anti-German demonstrations developed into pogroms, in the course of which thousands of Germans were hunted "like unprotected game" (Nos. 370, 371). The number of fugitives increased (No. 374) as did Polish "sabre-rattling", the declaration of annexationist war aims (Nos. 367, 378) and public insults and affronts to the Fuehrer which led to renewed protests (No. 382). In the commercial world, German co-operative societies, dairies and pharmacies were systematically liquidated (Nos. 380, 395). On June 7 a report from Lodz stated: "The threat of death, torture etc., for German nationals, has become an everyday matter of course." Whole families, because of constant threats of murder, passed their nights in the shelter of the woods (No. 381). The only answer to protests lodged with the Polish Foreign Office was a shrug of the shoulders and the tacit avowal that nothing could be done against the military authorities and Polish chauvinism (Nos. 382, 385). . . . Polish bishops were requested by a colonel on the General Staff to pray "that the time of tribulation for our Polish brethren beyond the frontier might be shortened and that another Grunwald might release them from bondage" (No. 392). . . . Time and time again the authorities themselves proved to be responsible for this process of liquidation (No. 396). . . . Germans in Galicia were faced with annihilation; the outlook was hopeless, and they were threatened with arson and murder (No. 407). What was left undone by open terrorism was made up for by an insupportable burden of taxes and chicanery on the part of the authorities (No. 408)."

Independent historians were also confirming these facts after the war. S.L. Sharp writes:

"What happened to Poland in 1939 was by no means surprising. The outcome had, as a matter of fact, been predicted quite early in the twenties by thoughtful analysts and a handful of statesmen. Yet these early predictions were easily forgotten. The superficial stabilization of conditions in Poland, propaganda, wishful thinking, emotional judgment, and an erroneous evaluation of the real strength behind the sabre-rattling of the Pilsudskiite regime, combined to create, in the thirties, the false picture of a Poland which had

seemingly come to stay, even if under somewhat difficult conditions. The annihilation of the Polish state must have come as a shock to many who had been exposed to the optimistic picture (including the bulk of the Polish population, misled into interpreting its government's bluster as strength). To the well informed it was hardly a surprise; however, the pretence of being shocked by what was perfectly predictable is a standard form of behaviour in international relations."

L. de Jong writes:

"Months before the outbreak of hostilities the Polish government had given orders for drawing up lists of suspect Reichsdeutsche and Volksdeutsche. This was probably done in April and May, 1939, at about the time that Hitler denounced the German-Polish non-aggression pact. Some groups of Volksdeutsche, as we saw, were taken into custody before the outbreak of war and were conveyed to internment camps."

Note: I skip further quotes about the situation about the German minorities in Poland, the author of this excerpt (Walendy) quotes around 20 additional historians about this subject.

A British publicist, who had still been travelling in Poland during the summer of 1939, noted:

"One must ask whether it is in keeping with the rights of small nations or nationalities that they should thus be included in States where they are exposed to such treatment. Poland has tried to make the minorities relinquish their language and customs; she has failed, despite more than twenty years of activities such as I have described in this chapter. But the attempts are still going on. One begins to wonder whether the Ukrainians, White Russians and Germans should not also enjoy some protection from England, or must it only be the Poles?"

The first blood that was flowing before the start of the Second World War was the blood of minority Germans in Poland. In spite of the German-Soviet Non-Aggression Pact and the tension in Polish-Soviet relations, the Poles did not shy away from intensifying the persecution of the Germans and the anti-German campaign in the press. By mid-August, 76,535 Germans had already fled to the Reich though certainly not because Hitler had forced them. The Germans in Poland had 20,000 dead to mourn before and after the start of the clashes, of whom 12,500 could be identified by name. That would mean nearly double the death toll of Volksdeutsche through murder than German soldiers killed during the entire Poland campaign (10,572). These excesses could not be excused under the pretext that it was the case of the Polish government losing their grip on a "mass-movement" getting out of hand. The Polish leadership had been working systematically for months, yes, even years, towards this very end!

What is the official Polish attitude after the war? L. de Jong writes:

"The Poles were not sorry for what had been done."

From Munich to the Outbreak of War

The foreign policy of Poland 1938-1939 was the same as her conception of the State and her strategy. Towards the end part of the year 1938 Poland removed herself from the position of being "prepared to co-operate with the Hitler-Reich". A steadily worsening crisis, whose peaceable settlement through negotiations was refused by Poland, was the consequence. Given this basic position, the German negotiation suggestions, even the one of 29 August 1939, which in principle went no further than that of 24 October 1938), were really proposals for calling an armistice, for

"A state of half-war amounting to a kind of armistice had existed in Europe since March, and by July we were drifting rapidly towards war."

Foreign Minister Beck had shown himself willing, in October 1938, to negotiate with Hitler about Danzig and about improving the connection between Berlin and Königsberg.*) Nevertheless, he deliberately delayed the start of these unwelcome negotiations, for he wished to wait-and-see with regards to the British armament and wanted to thwart an international conference. The fact that as yet no alliance with Britain had been realized was not a reason for Beck to withdraw from negotiations with the Reich. Not only that, but he was challenging Germany with his threat of war, the partial mobilization, the plans for an offensive, the renewed intensified pressure on the German minority and the announcement that Germany in future would be held fully responsible for every action taken by the Danzig Senate (23, 26 and 28 March 1939), even before the conclusion of this unconditional guarantee, so that he could demonstrate his independent Great-Power-policy.

Of course, since August and also September 1938 did Beck have the assurance 'in the bag' that Great Britain would support Poland 'as much as possible' at Danzig. At the same time there was also in evidence, since the end of the year 1938/1939, an unrestricted sympathy for Poland from the American government, whose diplomats "also probably influenced" Poland. The rejection of the German negotiation proposal of 26 March 1939 was deliberately provocative, since there was no cause whatsoever for answering this with war-threats, mobilization, aggravated minority policies, with the "awakening of the anti-German mood among the Polish people of every social strata and circle" and, lastly, to underline it with the acceptance of a British *carte-blanche*. The assertion that Hitler's entry into Prague on 15 March 1939 was responsible for this response is demonstrably false. The Polish leadership, "the only one not to have issued a formal protest against the annexation of Czecho-Slovakia", did not consider the establishment of the protectorate – done with the approval of the Czech government! – as being a threat to Poland. Indeed, they were the ones who had never believed in the viability of Czecho-Slovakia and, in addition, it was they who were working towards the further partitioning of this State with their claims and ultimata after the Munich conference, and who were defending a common border with Hungary. Already on 27 October 1938 the German Ambassador in Warsaw, von Moltke, had informed the Foreign Minister of the Reich:

“As I have already stated in report PV 47 of October 14 1938, Poland is trying to induce Slovakia to break away from the political union in which she has been joined until now.”

Foreign Minister Beck expressed satisfaction with the eventual independence obtained by Slovakia and announced his recognition of this country under national law already on 15 March 1939. Therefore, when adopting her measures against Germany on 26 March 1939, Poland did not even refer to Germany's actions with regard to Prague; to do so would have meant a realistic assessment of German power, which was not in existence in Poland right up to the outbreak of war. The Polish leadership, on the contrary, was citing time and time again Hitler's desire for peace, Hitler's perception of the Bolshevik danger and Hitler's military weakness as so many reasons why their provocations bore no risk whatsoever. Beck, during a conversation with Rumanian Foreign Minister Gafencu in March 1939:

“Unlike all his predecessors, Hitler is aware of the reality of the Bolshevik danger. He has always been fighting it. I know that precisely this is for Hitler's new Germany the pivotal, the principal and the decisive problem, besides which all other problems pale into insignificance. How then does it follow from this for Germany to be interested in fighting against Poland? Once the Polish bastion falls, then the gateway of Europe will be open to Soviet expansion. Is this supposed to be what Hitler wants? I know that he does not! Of course he wants Danzig back, but he would not be prepared to pay such a price in order to gain the Free City.”

Beck's intention in the negotiations with Ribbentrop from October 1938 onwards were to hold out hopes for a review more along the lines of the German proposals and yet refrain absolutely from making any concessions. This stance, which eventually reached a temporary climax with the threat of war, the mobilization, the heightened pressure on the minorities and with the acceptance of the British blank cheque in March 1939, had just as little to do with the subject matter of the German proposals as it did with the German handling of the negotiations or indeed with German policy as such. Even the “Polish White Book” on the immediate pre-war period confirms this:

“The Polish government, like the Governments of the other States who, down till 1938 inclusive, were prepared to co-operate with the Hitler Reich, acted on the assumption that they must neglect nothing which might preserve Europe from war.”

This statement establishes unequivocally that Poland and England changed their attitude towards Germany at the end of 1938; they declined – to put it mildly, as in the words of this Polish statement – from this time on, any further collaboration with the German Reich and accepted “oversights and neglects” in the peace efforts, insofar as these “neglects”, anyway, were to have been their new foreign policy baseline! The result, in any case, was that “many foreign diplomats in Warsaw see that public opinion here at present is bellicose and believe that the Polish Government intends to force an issue with Germany”. Already on 16 March 1939 the French Ambassador in Warsaw, Noël, reported to his

Foreign Minister:

“On the other hand, nobody could fail to notice the increase of anti-German sentiment amongst Poles of the most diverse social classes and circles of society.”

Beck accepted the British blank cheque on 31 March 1939 and on 5 April 1939 made a reciprocal offer of help to Great Britain, irrespective of whatever action Great Britain – apart from an attack on the British Isles – was to regard as a threat to her vital interests and to which she would respond with military measures. What had induced the Polish Foreign Minister to go down this foolhardy road, when he, for his part, had rejected London's demands: the collaboration with the USSR, the accepting of Soviet arms for the eventuality of a war, the conclusion of a military alliance with Rumania against Germany and Hungary? Beck had come to realize

“that the method by which Britain had handled this matter had made it three times easier to get Poland to agree to almost anything Britain wanted.”

Beck knew that Hitler had not threatened him and “did not believe that Germany had any offensive intentions”. Beck assumed that Hitler was not going to threaten Poland in future either, as he

“basically was a timid Austrian who would not risk war against a determined and strong opponent.”

Beck stressed in his London talks from 4-6 April 1939 that there was “a kind of a lull at the moment”, since “after the recent events the German government was to have been taken back by the reaction that they had created in the world” (cf. establishment of the Bohemia and Moravia protectorate on 15 March 1939). Beck knew that his policy must “make Hitler and all his chiefs furious”. He was, nonetheless, counting on Hitler dispatching “with all the tokens of friendliness” his Foreign Minister to Warsaw, whom only recently Beck had chosen to portray as a “dangerous fool”. Given the prevailing situation, Beck was convinced that he himself could then decide “the limits of the negotiations” or when to trigger off the war that “would have Germany founder”. Beck was

“more than happy to have England's support given in the way that it was, i.e. that Poland is the one to determine when England is to come to her rescue.”

The fears already expressed by the British Ambassador in Warsaw on 5 October 1938

“that recent events will encourage him [Beck] still further to ignore any pressure or advice from us,”

were to become more and more realized. In Beck's view, the impetus behind the political development of Europe ought to be given to Poland, as befitting a European Great Power. Beck wanted to make the conditions, and he was not sparing in his threats of war already at the time before the British guarantee. This man with “the less statesmanlike aspects of his character, including his personal ambition and vanity”, who believed “that Poland had nothing to lose by the threat of direct action”, had found the partner who, without

any scruples, gave him free rein to pursue this course!

Plainly, this was incitement to war, which did not even have to use the arguments of an “aggressive” or “lusting-after-world-domination” or, in general, the “warwilling” Hitler. Quite the opposite. Beck started from the assumption that Hitler did not want war, that he could not even afford a war and, for this reason, would swallow provocations of the most evil kind from the “determined” and willing-to-fight Poland and still have to dispatch “with all the tokens of friendliness” his Foreign Minister to Warsaw! Britain, having full knowledge of the underlying motives and the balance of power, was lending a helping hand in this undertaking, already many months before the continually intensifying German-Polish tension reached the climax. It represents a singularly unparalleled cynicism to then speak, after the outbreak of war, of “protection of the smaller nations”, of Christianity and of the “obligation of the alliance in fighting the aggressor threatening Europe and the world”.

The unceasing British encouragement, already before the guarantee, was even recognized by Polish diplomats as a resolution for war:

“It is childishly naive, and at the same time unfair, to propose to a nation which is in such a position as Poland that she should compromise her relations with so powerful a neighbour as Germany and to expose the world to the catastrophe of a new war, only for the gratification of Mr. Chamberlain’s internal policies. It would be still more naive of them to presume that the Polish Government did not understand the real meaning of this manoeuvre and its consequences.”

This serious charge was made by the Polish Ambassador in Paris, Lukaszewicz, on 29 March 1939 in a report to his Minister for Foreign Affairs. This statement, which is not the only one,²²) is an unmistakable proof that Poland had been encouraged, already before Britain’s *carte blanche*, to compromise their relations with Germany and to unleash a war. The Polish government quickly became expert at this language. K. Zentner writes:

“Straight after the British guarantee-declaration, which was followed immediately by the French guarantee, there began in Poland a malicious anti-German rabble-rousing. . . Demands for the occupation of the city of Danzig appear in Polish newspapers. So it continues. The Polish army is to march into East Prussia and to annex this part of Germany. Other papers claim even more: the borders of Poland have to be pushed forward to the Oder. At public meetings, there are demands made which border on lunacy. Not the Oder but the Elbe is Poland’s Western border. Berlin is not a German city, but an ancient Slavic one, an ancient Polish settlement! Poland starts off with partial mobilization, large posters appear on the walls of houses: ‘Let’s go to Berlin!’”

Beck carried on compromising himself: In his note of 26 March 1939 to the Reich Foreign Minister he had described any further handling of the German matters of concern in Danzig as a reason for war, and at the beginning of April he communicated this to his interlocutors in London. Beck, who yet on 20 April 1939 had ascertained in his briefings to the Polish diplomats abroad that although by now the reciprocal British-Polish guarantee

had come into force “no sign of any haste on the part of Germany” was in evidence but, on the other hand, that a “new wave of rumours” had been noticed, was giving a speech on the 5 May 1939, thus only a few days later, in the Sejm which – as it was dishonest and was misrepresenting the actual state of affairs – was bound to appear like an outright declaration of war. With this talk he ultimately rejected any agreement, in whatever form. Beck’s utterance, “We in Poland do not recognize the conception of ‘peace at any price’”, could hardly have been more cynical and war-minded, given the recent German-Polish negotiations and the German readiness to reach an agreement. Apart from the untrue assertion that Germany was only making demands without giving anything in return, there is also the following characteristic portrayal of Beck’s aggressive posturing, albeit historically falsified:

“I insist on the term ‘province of Pomorze’. The word ‘Corridor’ is an artificial invention, for this is an ancient Polish territory with an insignificant percentage of German colonists.”

The unconditional guarantee given by Great Britain had “blinded the Polish leadership to the practical advantages of an understanding with Germany”. Hitler had never put any pressure on Poland, nor hinted at such, had not set any deadlines and did not make any unreasonable demands. Hitler’s policy at that time could be likened to a kind of “lull”, according to Beck’s own statement in London. Yet, the Polish Foreign Minister placed himself at the head of the anti-German and wareager Polish public, dispatched inflammatory and false rumours to other countries, and he did nothing to prevent or to restrict the excesses of his fellowcountrymen. G. Rhode writes:

“The outbreak of war on 1 September 1939 is now seen in Poland as a totally undeservedly endured attack by the powerful German neighbour, like a bolt out of the blue, as it were, falling on an unsuspecting land, forgetting completely, however, that since March of that year Poland had been in a state of a continually rising warlike atmosphere, that in the numerous articles and letters from readers appearing in newspapers war was strongly desired, that owing to certain actions, such as the volunteering for a commando unit of ‘human torpedoes’ (after a misunderstood Japanese model) and talks given by Polish officers praising the qualities of the Polish soldiers to the sky while defining the German equipment as inferior, the belief in an assured victory was created, with dreams of a quick march on Berlin.”

Nothing remotely similar would have been found in Germany in 1939! There was not one German politician, not one German diplomat, not one German general, not one German publicist, who considered the question of “war or peace” as unimportant. To the Polish Ambassador in Paris, Lukasiwicz, however – and to Polish diplomacy in general – this question was one of indifference. The French Foreign Minister, Bonnet, came to realize this when he was trying to explain to Lukasiwicz the significance of the British-French-Soviet military talks.

“We are not afraid of anything. Russia will not let Germany touch us; Germany will

prevent Russia from doing us any harm.”

At the conference of 24 March 1939, attended by the Foreign Minister, the outline of Polish foreign policy was established, whereby, if the “perimeter of our direct interests and our normal needs” was to be impaired – “we will fight”.*) This denial of any fear whatsoever, already apparent in early 1937 in remarks made by the Polish President, Ignacy Moscicki, was to acquire aggressive undertones in 1939 to such a point that the Polish leadership showed scant regard for “world opinion” while they demonstrated their intended goals, and even the few wellmeaning pieces of advice proffered from a friendly side were arrogantly rebuffed during the last days and hours before the outbreak of war. So not without reason was a telegram sent on 2 April 1939 (shortly before Beck’s visit to London) by the British Ambassador in Warsaw to his Foreign Minister:

“The chief difficulty is that the Polish Government has hitherto failed to educate public opinion on the lines that any concessions are necessary.”

Nevertheless, no conclusions were drawn from this in London for the preservation of peace. On 17 May 1939, the representatives of France and Poland concluded a military agreement by which the French General Staff committed themselves to break through the “Siegfried Line” on the fifteenth day after the outbreak of war. With this was the Polish aspiration “for a mobile campaign with the invasion of Germany and the advance on Berlin”,³⁴) brought closer to complete fulfilment. The French Foreign Minister, Bonnet, also came to realize the Polish intentions the day that the Polish Ambassador, Lukaszewicz, had urged him to incorporate the secret clause – that “Danzig is of vital importance to Poland” – into the agreement that was to be concluded. Bonnet wrote about this in his memoirs:

“It seemed to me that Beck’s subtle game was to exploit the French-British alliance by forcing from one of us, with the help of the other, ever more extensive and more precise obligations.”

The crisis was approaching a climax, and yet the Polish government refused to discuss a settlement. A.J.P. Taylor writes:

“The Poles faced the approaching crisis imperturbably, confident that Hitler would be exposed as an aggressor and that the justified grievances of Danzig would then be forgotten.”

The High Commissioner of the League of Nations in Danzig, Carl J. Burckhardt, wrote on the 26 July 1939 to the General Secretary of the League, Joseph Avenol:

“A dangerous mood is beginning to emerge among the Poles. Frequently it has been admitted or, even worse, openly stated that a general war would mean the only salvation for the Republic. What is particularly dangerous is that people have begun to get used to the idea that a catastrophe is inevitable; exaggerated statements are made, and the end result is a kind of emotional poisoning in this unfortunate city. There was arriving a stream of camp-followers as the bringers of bad tidings and an omen of foreboding who

frequently were only interested in intensifying the crisis, either by personal interventions in the localized quarrel or by fanciful reports.”

But England was already fully aware of this development! After the British Cabinet had drawn up a statement on the British policy with regard to Poland, which was to be announced by Mr. Chamberlain in the House of Commons,

“Beck asked Halifax [on 5 July] to omit the compromising phrase in which he said that the Polish Government ‘would approach such conversations (with Germany) objectively but with good will’. The phrase was omitted when Chamberlain spoke in the Commons on July 10.”

A travel report that was written by two British diplomats on 9 June 1939 to be presented to their then Foreign Minister, Lord Halifax, has now, after forty years, been made available to the public by the Foreign Office. The writers were Sir William Strang, at the time Head of department dealing with Germany-Eastern Europe at the Foreign Office in London and Gladwyn Jebb, private Secretary to the Permanent Under-Secretary of State, also at the British Foreign Office. Although the report was drawn up by the lower ranking Jebb and then approved by Strang, the observations recorded in it represented, nevertheless, a combined contribution. The title of the account is “Visit of Mr. Strang and Mr. Jebb to Poland” and is initialled with the date of 13 June 1939 by Kirkpatrick, the official in charge of such matters. Gladwyn Jebb wrote:

“What struck me most was the apparent calm and confidence of the Poles with whom I talked. I think some were over-confident, and ignorant of the very real dangers of an attack by the disciplined and mechanized German divisions. H.M. Vice-Consul at Kattowitz, for instance, told me that the local Polish officials had been ‘terribly uppish’ since our guarantee, and were talking of a quick defeat of Germany and an occupation of Breslau. Again, the peasants on an estate south of Thorn, where I spent a most refreshing week-end, were (I was assured by the son of the house) longing to have a go at the Germans. This was confirmed by the highly intelligent head of the Economics Department in the Ministry of Foreign Affairs, Mr. Wszelaki, who said that the bellicosity and anti-Germanism of the peasants were due partly to racial and partly to economic reasons (increase in population, and consequent hunger for the German farmers’ land). Wszelaki, indeed, went so far as to say that, if war broke out, he feared that a terrible massacre of the German-Polish peasants might be difficult to prevent. Further, it seems that the Polish peasants, while remaining anti-Russian, are now less conscious of the Russian danger. My friends were not disposed to say that this would result in any return of pan-Slavism, but they admitted that in the long run, and in the face of continued German pressure, something of the kind might result. ... I cannot, of course, profess to know what the Polish Military are thinking. All I can say is that the Colonel to whom I sat next at dinner – principal assistant to General Stachiewicz, the Chief of the General Staff – was an intelligent and reasonable man. He admitted freely that the Polish army was deficient in some respects, but was confident that, if necessary, they would acquit themselves very well. Partly from him and partly from other persons I gathered that the

idea was to attack East Prussia at the outset of war, since the Germans would find it very difficult to reinforce this province quickly and adequately. Moreover, it was capable of being attacked from many points simultaneously. The booster effect of an occupation of Königsberg might, it was hoped, counterbalance an inevitable retreat from the Western salient. In any case, Poland would not necessarily be defeated even if she withdrew to the line of the Vistula. And by the time the Polish armies were back there the Germans, as well as the Poles, might well be running short of certain essential supplies. Emphasis tended to be laid on the probability of a war in the East being an 'open' war with freedom of manoeuvre and that this might tend, in the early stages at least, to favour the Poles. In order to draw my Polish friends I usually at a certain stage, asked them what they proposed to do with the Germans when the fortune of war had – as they believed was probable – decided in their favour. No two persons gave the same answer to this awkward question. But the general line seemed to be that Germany ought to be carved up into two or more pieces and that the larger section should be composed of a Southern and Catholic bloc, perhaps under the Archduke Otto [von Habsburg]. In any case, there seemed to be a general idea that East Prussia should be annexed by Poland. The second-in-command of the Eastern section of the Foreign Office went indeed so far as to say definitely that this was the Polish plan. He justified it on the grounds that the population of East Prussia was declining; that much of it was really Polish anyhow; that in any case population transfers could be arranged; and that Poland as a young and rapidly increasing State ought to have a coast-line commensurate with her national importance. But there is, unless I am wrong, a still larger and more shadowy project in existence for Poland's future after 'a victorious war against Germany'. This is the conception of a federal Poland, including Lithuania, with some form of autonomy for the Ruthenians. Warsaw, in accordance with this dream, would be the centre of a huge agglomeration, the western frontiers of which might be extended almost to the Oder, and the southern march with a reconstituted Hungary. ... There are few Poles in authority, I think, who are unconscious of the very real dangers of a war with Germany, and many seem to realize that this might in fact mean a steady retreat into the interior of the country, which might quite well not be counterbalanced by the occupation of East Prussia, where the standing defences (apart from the present reinforcement difficulty) are very strong. Their belief, however, is that in the general war which they believe would follow a German attack on Poland, Germany would be defeated in the end, and that the Polish Army, even if badly mauled, would then re-emerge from the Pripet marshes or the 'Jungle' of Bialowieza and proceed to occupy Greater Poland in much the same circumstances as in 1919. Nor is this belief in any way pathetic or fantastic. Poles point out, I think with justice, that the German situation, whether military, internal or economic, is far less strong than the German propaganda machine would have us believe. They hold that some form of German collapse within a year of the outbreak of a general war is a very real possibility; and while they have no doubt that the Germans will fight extremely well in the initial stages, they are confident that the ring will hold and that the effect of a blockade will be noticeable far sooner than it was in 1914-18..."

The British government had accepted and was resigned to the situation of Poland not wanting to negotiate (why not take back their clean slate and force Poland to negotiate?). Result: more war cries in Poland. Chodacki, the Polish Commissioner General in Danzig, was the man, who was representing Polish policy at the centre of German-Polish relations, and who spoke repeatedly about war as, for instance, at the time when Danzig would not let its population be starved out of Danzig because the very livelihood of the Germans was threatened with ruin as a result of the pressure exerted by Poland and when, instead, Danzig wanted to open the border with East Prussia.

On 10 August, in the heavily censored *Kurier Polski*, it was written that

“Just as Carthage had to be destroyed 2,000 years ago, today more and more voices are heard calling to put an end, once and for all, to Germany’s craving for power over the other nations in Europe. ... Ever more widespread was the general opinion in the land that “Carthage” must be destroyed. The time is fast approaching, when it will be universally held that the removal of the festering sore in the centre of Europe is a necessity. All that will be left of Germany, then, will be only a heap of ruins.”

This demand was not an isolated occurrence in the Polish pre-war press, rather, it was the basic tenor of a strongly censured journalism. When, in addition to this, noted spokesmen of this State were whipping up the people with unceasing warmongering speeches and were openly proclaiming their annexationist goals, then this was considered as a policy of war! 41) The one to start the military advance by giving the order first is not the one that can be branded as guilty for the war, but rather it is the one who, over a long period, has so geared his whole policy as to force the opponent into military intervention, and who has already in the interior of the country turned the hostilities against the foreign minorities into a permanent state of affairs! Carl J. Burckhardt, the High Commissioner of the League of Nations in Danzig, had stated in a report of 20 December 1938:

“The Poles have a bit of a mad streak. At midnight they start smashing their glasses. They are the only unhappy people in Europe longing for the battlefield. They are thirsting for glory, and in that they know no bounds. There is Mr. Beck, but there is also the army and a public opinion ready to explode at any moment.”

Roger Makins, British delegate of the League in Basel, reported on 11 June 1939 about a conversation with Burckhardt:

“Mr. Burckhardt detected certain symptoms of Polish imperialism, and formed the impression that ultimate Polish aims were of wide scope.”

The French Ambassador in Berlin, Coulondre:

“Their only salvation [of Poland and of Rumania] lay in preserving the peace, but they made no move in the direction that would have been necessary for it.”

M. Freund, a historian well-known for their antagonism to Hitler:

“The history of Poland in the last few years before the Second World War is a history

of heroism and folly. Also, increasingly Poland succumbed to an anti-German fervour. But still, it can hardly be denied that in every clash the Poles were always adopting the fiercest reaction - apart from war - possible."

The Polish leadership would take the initiative for constantly aggravating the crisis in every conceivable sphere: in their foreign policy, with the mobilization, the military agreements with France, in the displacement of the minorities, in the communications sector including propaganda on radio and on billboards, in their literature, in the public appearance of leading speakers, in the actions taken against Danzig, in the diplomatic snubbing of the German neighbour, in the increasingly frequent border violations (the *Ilustrowany Kurjer* of 7 August 1939 even featured an article about a competition among Polish military units of destroying and seizing Wehrmacht equipment on the other side of the border),⁴⁸ in putting the troops on stand-by for attack, with official threats of war, in the order to Ambassador Lipski, issued at the height of the crisis, "not to let himself get involved in any pertinent talks", and in the general mobilization which had already been announced the day before. The firing on the undefended German town of Beuthen with artillery during the night from 31 August to 1 September was as characteristic in this chain of events as was the incident of the sudden attack on the transmitting station in Gleiwitz, although not a deciding factor. By the time of these lastly mentioned two incidents the die was already cast.

The Polish course of action against Danzig and their conduct in the last days of peace merit a separate account; yet this will merely complement and confirm the whole attitude of Polish foreign policy in the year 1939 against Germany.

The Polish Course of Action against Danzig

C. Höltje wrote:

"Poland's constant efforts of trying to extend her authority in the Free City of Danzig, with the ultimate aim of revoking its autonomy, led to continual conflicts."

These "constant efforts" go back to the year 1919, and they are a part of the territorial demands made by Poland. These were continuously intensified during the year 1939. According to a statement from the Polish Commissioner General in Danzig, Chodacki, "fifteen one thousand page volumes would be required to describe the Danzig-Polish disputes" in the year 1939.²) Danzig, a city undisputedly described as German also by the Polish government was, indeed, changed by the Versailles "treaty" into a "Free City" on the outside, but in reality little remained of this "freedom". These rights, which Poland had received ever since 1919 in Danzig, were so extensive that Warsaw exercised a decisive influence on the economy and thus on the political fate of the city: Poland represented Danzig abroad, consequently also in the League of Nations. Poland was represented in Danzig by an ambassador, Germany and other states by a consul at best. Poland controlled Danzig's border including the one with East Prussia and also determined the

customs tariffs according to her own discretion. Poland was maintaining twentythree authorities besides her own post office. Poland administered the Danzig railways and was responsible for the “national defence” of Danzig. Poland was keeping on the Westerplatte, within the “Free City”-terrain, a military contingent and a munitions store.

The League of Nations, “protector” of the “Free City” and its constitution, authorized a High Commissioner, elected for a three-year term, who was to prevent outside encroachments and internal unrest or rather, to have these settled. Since their endeavours at mediation between Poland and Danzig, more often than not, broke down, so it was left up to the Council of the League in Geneva, as the highest judicial authority, to deal with Danzig-matters at nearly all its sittings. But this Council of the League neither possessed an explicit authority nor did it have the necessary power to carry through a constructive solution. In the summer of 1936 it created a so-called “Committee of Three” whose members were the Foreign Ministers of England, France and Portugal (later of Sweden). Poland was, as “representative for the foreign affairs of the Free City”, also a member of this Committee. The attitude of the Polish representative led to a paradoxical situation already at that time: “The roles of the League of Nations and that of Poland appeared to be reversed.” 3) This Committee of Three was to take over from the Council of the League all of the Danzig issues. The reality was that with the formation of this committee England and France became more heavily involved in Danzig than they had been before. Henceforth, the official channels for the High Commissioner of the League ran directly to and fro between London and Paris.

This arrangement was unsatisfactory for all concerned. It is not surprising, therefore, that the High Commissioners of the League in Danzig, without exception, were arguing for a readjustment of the local situation. By this they understood the re-integration of Danzig into Germany, especially since the Polish pretext of needing a port had been rendered invalid with the building and extension of Gdingen, with the economical strangling of Danzig and, furthermore, with the securing of a free port area for Poland in Danzig. Count Manfredo Gravina, High Commissioner of the League from 1929 to 1932, had proposed during his term of office:

- to link East Prussia to the Reich by extending the Danzig territory to the west;
- to empower the League of Nations, as the protector of Danzig, with the necessary authority;
- to free Danzig from all restrictions imposed by Poland (railway, customs, economy, foreign policy, etc.);
- to transfer Gdingen and the surrounding region, as well as a free port area in Danzig, to Poland and to secure this arrangement with a guarantee from the League of Nations.

C. J. Burckhardt had also described in the year 1937 and later on the return of Danzig to Germany as imperative.4) But he too had to realize that he was powerless to change the situation, and he was to admit that it had even been put to him privately from a not unauthoritative party to dispense with his attempts of appeasement in Danzig, as these

were regarded as “harmful”. Since 1935, when the Under State Secretary at the Ministry for Foreign Affairs in Warsaw, Count Szembek, made this entry in his diary:

“It would be in the interest of many people to see a worsening in the Polish- Danzig relations, Polish nationalists as well as Danziger Germans hostile to Hitler, Jews and business men from the port of Gdingen...”,

the same groups have remained continuously active, in the sense as described by Szembek. The proposal by Hitler made to Poland on 24 October 1938 was considerably more modest than any of the previous Danzig demands from German and foreign politicians. It was conveyed – and this is confirmed by all the subsequently collected documents! – with the sincere intention of placing relations with the Eastern neighbour on a better and more secure footing. Hitler did neither threaten nor did he even faintly hint at coercion, as a means for achieving his goals. There was no question, either, of any deadline. On the contrary, right up to the outbreak of war, Hitler repeatedly urged moderation on the Danzig Senate, while, nevertheless, making it quite clear, that Danzig had the protective support of the Reich.

It is a provable fact that Hitler intervened in the Danzig happenings only after the Polish ultimatum of 4 August 1939. This he did by

- a) summoning Gauleiter Forster (the District head) to Berchtesgaden to make a report (10 August 1939), and he ordered to “avoid any fresh incident in Danzig so as not to aggravate matters there”;
- b) asking Carl Burckhardt, the League of Nations High Commissioner in Danzig, for mediation;
- c) advising Poland that Germany would not be tolerating to have Danzig subjected to starvation or military occupation – this reaction was declared in a Polish statement from 10 August 1939, should it be to the detriment of Polish interests, as an “act of aggression”.

D. Hoggan writes:

“Hitler was not opposed to any of Poland’s further economic aspirations at Danzig, but he was resolved never to permit the establishment of a Polish political regime at Danzig. The Sudeten Nazis, like the Austrians before them, built up the tension gradually without guidance from Hitler. In Danzig the tension was already complete; and Hitler, so far as he did anything, held the local Nazis back.”

The Polish Foreign Minister, Beck, on the other hand, was pursuing his policy in Danzig “not for Danzig as such, but out of principle – Danzig has become a kind of symbol”. But what did this “principle-policy” that Poland followed in Danzig look like? Such is the opinion of the German Ambassador in Paris, Otto Abetz:

“The proposition of a ‘spontaneous’ awakening of Polish nationalism after Munich does not bear close examination. The anti-German demonstrations demanding the Polish annexation of Danzig and East Prussia were taking place in by far too many and too thinly

spread places, the boycott of German-speaking businesses was too well synchronized, the stone throwing at windows of the German embassy in Warsaw and the German consulate general in Thorn was happening too close together in time for any spontaneity to have been likely.”

With the backing from Great Britain, Warsaw was forcefully driving forward her Polonizing campaign against Danzig. The initiative for aggravating matters lay, as so often since 1919, solely with Poland – and England was leading Poland “far up the garden path”. Foreign Minister Beck told a friend in his Rumanian exile, after the defeat of Poland in 1939:

“No one in his right mind can claim that Danzig was the cause of the war.”

At the end of 1938, Poland was issuing stamps which represented Danzig as if it were a Polish city.

C. Tansill writes:

“By May 2 1939 the Polish press had proceeded to the point where a demand was made that ‘Danzig become Polish’. With Warsaw expressing a rising sentiment of Polish nationalism there was little prospect for a German-Polish agreement.”

On 5 May 1939 the Polish Foreign Minister, Beck, declared in his speech to the Diet, the Polish Parliament:

“The population of Danzig is to-day predominantly German, but its livelihood and prosperity depend on the economic potentialities of Poland. What conclusions have we drawn from this fact? We have stood and stand firmly on the ground of the rights and interests of our sea-borne trade and our maritime policy in Danzig.”

On 11 June 1939, Warsaw again increased the number of its customs officials in Danzig. The financial burden thus incurred was carried by the Danzig community. This measure was all the more provocative as the number of Polish customs inspectors in Danzig had risen to four times the number compared with the level of 1929, while in the same period the trade in Danzig was cut down to one third of its turnover value.¹⁹) In the same month the Polish-Danzig border was closed down to Germans. According to official Polish figures, “10.9 per cent of Poland’s overseas export were carried by waterways in 1924”. 1937 the figure was 4 per cent, and in 1938 it was 2.3 per cent.²⁰) At the end of June 1939, the Polish minority leader in the Danzig Volkstag, Budzynski, assured his few fellow Danzig Poles in a speech delivered at the Polish “Festival of the Sea” that the union of Danzig with Poland would be achieved by the army.

On 11 July 1939 Lord Halifax informed his Ambassador in Warsaw about a talk held with the Polish Ambassador, Count Raczynski, who had recently returned to London:

“Colonel Beck is aware that the ‘Polish public opinion was too excited’, so that he felt obliged to state he ‘hoped that it might be possible to do something to tone it down’... Beck admits that nothing had ‘materially changed the situation, and Danzig

itself was still commanded by Poland'... But Beck had announced 'to increase their military preparations round Danzig. Nevertheless, Colonel Beck felt the situation could not continue indefinitely on its present lines, as there was the danger of being faced with a *fait accompli*'... 'Although he had not yet come to any definite decision, Colonel Beck thought that perhaps the best way in which to call a halt would be to select very carefully one perfectly clear breach of the Constitution by Danzig, which would not be of so grave a nature as to cause an immediate explosion. If a stand were made on this carefully chosen ground, the Danzigers might be compelled to beat a retreat. Colonel Beck had in view some joint tripartite action, not at Berlin but at Danzig. He thought this preferable, as it would not confront the German Chancellor directly with any possible loss of face, and it would be easier for him to effect a retreat through Danzig'... 'Colonel Beck was, however, opposed to sending strong notes without careful consideration, since they might only lead to unfortunate results'. Colonel Beck was not, in fact, taking into consideration any talks 'on the Danzig question. . . and thought that a tug of war would probably be necessary to re-establish the position, as there had been too many breaches of the Danzig Statute.'"

Although the British government had once again been made explicitly aware, by the middle of July 1939 at the latest,

a) that Poland was planning to become active in Danzig and, by contrived means, diminish the German influence there, with the ultimate aim of eliminating it altogether, and
b) that Hitler was in no hurry where the Danzig question was concerned, and that he was prepared to negotiate through the channels of the League of Nations ("We are having recourse to the High Commissioner and not to Geneva itself"),²²) they sent shortly after a military mission to Moscow together with the French, with the aim of enlisting the Bolshevik Power for the fight against the German Reich in Europe.

At the end of July, Poland's reaction to the suggestion made by the Danzig Gauleiter, Forster, to drop "all military measures now taken in Danzig" if there was a *détente* in the situation, was such that even Lord Halifax had the warning issued to Warsaw that the Polish government was to avoid any "provocative assertions that the German Government are weakening".²³) But this too was of no avail. On 1 August 1939, Warsaw terminated the export of duty-free herring and margarine from Danzig to Poland. This decision affected ten per cent of the trade in Danzig. No detailed explanation is required to understand how much this additional measure would further impair the already severely restricted basic necessities of life in Danzig. The French Consul in Danzig informed his Foreign Minister on 1 August:

"As the Senate has adopted a policy of silence with regard to the repeated Polish protests in matters of customs inspection, so the Polish government has now taken economic retaliatory measures which could have grave consequences."

All this was taking place at a time when it was well-known in Poland that "hitherto the Senate had never risked coming too far into the open. . . and that any threat of a customs union with Germany should [not] be taken too seriously". In the discussion of

2 August about these matters the Vice-Minister for Foreign Affairs, Arciszewski, gave British Ambassador Kennard to understand “that the general situation might become critical towards the end of this month...”

“He admitted that the situation might develop within a few hours from the political to the military phase.”

Incidentally, the economic severance of Danzig from Poland was in total contradiction to the Polish empty rhetoric that Poland was unable to survive without Danzig. This step of ceasing trading with Danzig – already since 1919 Poland had been continually cutting down her trade with Danzig – was, therefore, meant to serve militant goals.

On 4 August Poland delivered to the “Free City” an ultimatum, with a limitation of seventeen hours, threatening immediate retaliatory actions and reprisals in the event that an (alleged, but not issued) order from the Senate, regarding the field of activity of the Polish customs inspectors, was not withdrawn and attempts be made to interfere in the duties of the, henceforth, armed Polish customs inspectors or to impede them. The reason for this: a rumour. M. Freund writes:

“The French Ambassador in Warsaw is of the opinion that the Polish action was a tactical mistake. Also, the High Commissioner of the League of Nations in Danzig, Professor Burckhardt, maintains that the Polish ultimatum of 4 August has ruined all attempts at easing the tension. There is no doubt that Poland, in this instance, has brought to a head an altercation which might well have been evaded without losing any influence and without any material disadvantage.”

In the early hours of the morning of 5 August, the President of the Danzig Senate, Greiser, was informed that the import of all food products would be stopped, should Danzig defy the ultimatum of the previous day. Greiser, who considered that “the tenor of the ultimatum, the short deadline and the substance of the threat make any answer impossible”, turned to the High Commissioner and declared himself willing to speak on the telephone with the Polish Commissioner General in Danzig, Chodacki, so that he could rectify the trigger-cause of the facts of the case and thus prove the groundlessness of the accusation.²⁷) Although Chodacki agreed to try to get his government to accept the telephone explanations as a verbal note, he did, however, insist that the Danzig Senate confirm in writing the “compliance with the Polish demands”. In the meantime, Burckhardt had also been notified by Chodacki that the wives and children of the Polish civil servants were going to be evacuated. By delivering this threat to starve out Danzig, with no immediate cause, the Polish government was infringing upon the vital spheres of interest of Danzig and the Reich. Poland was carrying the crisis to further extremes in that she did not withdraw the ultimatum and the threat of embargo, but also in that she never revoked the arming of the Polish customs inspectors, although it had become evident that the pretext for this action was indefensible.

On 6 August, Marshal Smigly-Rydz announced to 150,000 legionnaires gathered in Krakow

“that Poland was determined to meet ‘force with force’ and would oppose emphatically every attempt at transgressing upon her interests, directly or indirectly. Danzig, bound to Poland for many centuries, he added, was the lung of the Polish economic organization, and the Warsaw government had defined their position on this issue clearly and unequivocally.”

The conservative Polish newspaper *Czas* commented on this speech the following day, to the effect

“that if the Danziger Nazis were trying to produce a *fait accompli*, the Polish cannons would roar. The guns which protect the honour of Poland are pointing at Danzig. Everybody must realize that these guns will be fired if the authorities of the Free City, contrary to the obvious interest of the Danzig population, are going to confront Poland with a *fait accompli*.”

The Polish Ambassador in Washington, Jerzy Potocki, thus drew the conclusion from his talks in Warsaw on this 7 August:

“Poland prefers Danzig to peace.”

On the 9 August the Reich government informed Foreign Minister Beck that a repetition of demands made in the form of an ultimatum to Danzig would lead to greater tension in the relationship between Germany and Poland and that an embargo would force Danzig, the “Free City”, to seek other possibilities for her imports and exports. Although Hitler had indicated here that he would stand by Danzig, he did not, however, threaten. This Polish note from the 10 August was additional confirmation that Poland intended to totally eliminate Germany’s influence on Danzig – also in the event of a blockade – and to act with aggressive force there. Once again, Poland had aggravated the situation to such a degree that even Lord Halifax, on 15 August, suggested, “. . . the Polish government [should]. . . from the point of view of world opinion. . . examine the possibility of negotiation over Danzig. . . and to give him [Hitler] no excuse for acting.” Ambassador Henderson had also realized the significance of this Polish note and could not “believe” that Hitler would have remained as calm as he, indeed, did when he learnt about this note.

The Polish government was not alone in this: On 13 August Foreign Minister Beck was able to show to the Ambassador of the USA in Warsaw, Biddle, a report from the Polish Ambassador in London, Raczynski, which contained the explicit approval of the British government for all recent Polish measures.⁴¹) That the Polish government should feel encouraged by this goes without saying. The consequences were to follow. On 18 August the Polish Commissioner General in Danzig, Chodacki, offered to remove the economic embargo if the – meanwhile armed and further reinforced – customs inspectors and frontier guards were granted the right of unrestricted operation in the Danzig territory. The acceptance of this demand would have meant military occupation and, with that, the Polonizing of Danzig. So now Danzig was virtually faced with a second ultimatum which allowed for only four alternatives:

- a) Political customs strangulation and thus the destruction of the economy or rather their livelihood, for the future too (since 1 August Polish measures along those lines were in force!);
- b) consenting to a military occupation by Poland;
- c) opening up the frontier to East Prussia to avoid starvation – thus accepting a likely state of war as had been threatened by Poland for such measure; d) seeking help from the German Reich, and thus also accepting a likely state of war as had been threatened by Poland for such measure.

The Danzig Senate accepted the economic strangulation and remained passive. The British Consul General, Shepherd, left the “Free City” on 24 August without taking leave of the Danzig Senate. He was not to return again. The reports of this expert were not utilized by Halifax for any peace resolution. The negotiations on the question of customs inspectors in Danzig were broken off by Poland on the same day, the 24 August. Even if the documentation as reprinted in the ADAP, according to which the Danzig Senate was “employing delaying” tactics in the negotiations with Poland, be genuine, it is surprising that Poland did not complain about the manner of negotiating and demand that the talks be put in concrete terms.⁴⁵⁾ With breaking off the talks, the refusal to even attempt finding a mediator (e.g. Burckhardt or the British government), and the outright rejection, right up to the outbreak of war, to hold any kind of negotiation whatsoever with either the Danzig Senate or the German government and, finally, with the unequivocally formulated annexationist demands, Poland has explicitly demonstrated her lack of interest in these discussions and revealed her true intentions. On the 26 August 1939, in the evening, Chodacki urgently recommended to the League of Nations High Commissioner in Danzig, Carl J. Burckhardt, to evacuate his family quickly, “since there might be clashes any day now, and the town could be bombed”. Polish Ambassador Lipski wrote

“that, in the event of war, unrest is going to break out in Germany and that the Polish troops would march successfully on Berlin.”

Since the end of March 1939, the Polish government had refused all talks with the Reich government under threat of war, had opposed every compromise and, even when crisis point was reached, was rejecting every gesture of goodwill for holding negotiations. Already on 27 May 1939, Foreign Minister Beck had given to Burckhardt the impression that “he was giving him instructions, instead of discussing with him ways of working together”.⁴⁸⁾ “Within the momentary tension”, so stated Beck in this discussion with Burckhardt, “no talks between Berlin and Warsaw are possible”.⁴⁸⁾ Such “explanations” are no excuse for the lack of any commitment to negotiations in those who have created the tension. As mentioned before, Danzig was not the only goal for Poland, not the only target for her provocations, but rather a means to an end. Poland, along with her English and French friends, was determined to deprive the “Free City” of the freedom to live according to her national and cultural ties, yes, they were even at pains to further

limit Danzig's economical basic necessities. This undertaking was ultimately justified on the ground that the "freedom" of the whole world was menaced by Hitler.

B. de Colonna, was for many years a special correspondent for British and New Zealand newspapers, wrote:

"Danzig is German. The elections alone prove this. I have quoted the opinions of famous men. No one can deny that the vast majority of the Danzigers are Germans, or that they wish to join Germany. But if the Poles believe to the contrary, why not hold a plebiscite under English control and abide by the decision? Warsaw would, as I was told there, refuse such a solution, knowing the result in advance. Poles told me that this was not a fair test since they had claims to the mouth of the Vistula. But I have dealt with those claims in an earlier chapter, and can only repeat that such arguments would be equivalent to giving the Dutch estuary of the Rhine to Germany, or the Portuguese area around the Tagus to Franco Spain. There is no sense in fighting to keep one group of Germans in Danzig from joining another group of Germans in the Reich. It would be tantamount to some other country going to war to prevent England and New Zealand from sharing a single government if they wanted to. Danzig, as a city, was founded by Germans. That Slavs may, many centuries ago, have opened a trading centre on the site of the present Free City is no reason for giving the area to Poland. The Serbs are also Slavs, and one might as well award it to them, for we have no proof that the Poles are the descendants of such Slavs. Indeed, historians declare they are not. But his point is not even of academic interest, and if we base claims on ancient days of occupation, we may as well begin by presenting the East coast of England to Denmark, for it belonged to the Danes long after the Slavs who may have founded a trading centre in the Danzig region had migrated. Imagine Germany – or for that matter France, Russia, or Italy – wishing to guarantee Denmark the East coast of England on historic grounds! The historical side of the argument could not be denied – but its utter absurdity would make all Europe laugh."

11.10 German-Polish Friction in 1938 & 1939

The Obstacles to a German-Polish Understanding

It was a tragedy for Europe that the Munich conference was limited to the Sudeten question and failed to include a settlement of German-Polish differences, although Mussolini was probably right in favoring a successful limited conference prior to any general conclave. It might have helped had Great Britain received a prize such as Helgoland at Munich. The acquisition of Cyprus at Berlin in 1878 had made palatable the statement of Disraeli that he returned bringing "peace with honour." The British were not accustomed to attend conferences involving transfers of territory without acquiring new territory themselves. There were four major obstacles to a German-Polish understanding after the Munich conference. The most important of these was the notion of Polish lead-

ers that the defeat of Germany in a new war would serve the interests of Poland. The prevalence of this attitude after the death of Pilsudski was implicit in the Polish attempt to foment a war against Germany during the Rhineland crisis of March 1936. There were two primary reasons for this Polish attitude. There was the idea that Poland could not really attain the status of a European Great Power if she was overshadowed by any of her immediate neighbors. There was the dissatisfaction with the territorial provisions of the Versailles Treaty, and the hope of Polish leaders that future territorial expansion at German expense would be possible. Neither of these reasons would have carried much weight after Munich had the British not reverted to a hostile policy toward Germany.

The second hindrance was the failure of Polish leaders to recognize the danger to Poland from the Soviet Union. Soviet Foreign Commissar Maxim Litvinov and the American diplomat, William Bullitt, once travelled together on the train to Moscow, when Bullitt was Ambassador to the Soviet Union. They arrived at the town of Bialystok in Central Poland, and Litvinov commented that this was his native city. Bullitt observed that he had not realized the Soviet diplomat was of Polish birth. Litvinov replied that he was not of Polish birth and that the city of Bialystok would not remain Polish. This incident occurred shortly after the admission of the Soviet Union to the League of Nations and at a time when Litvinov was the acknowledged leader of the League attempts to outlaw aggression. Bullitt repeated the incident to Polish Foreign Minister Beck. The Polish Foreign Minister had no illusions about the Soviet attitude toward the new Polish state, but he underestimated the industrial strength and military striking power of Russia. Georges Bonnet later said that he did not require a battle of Stalingrad to be convinced of Soviet strength, and this was doubtless true. The majority of European diplomats were prejudiced against Communism to the point of blindness, and they simply could not admit that the Communist system was capable of producing the most formidable military striking power in Europe until they were shown by irrevocable events. Anthony Eden declared after his visit to Moscow in March 1935 that the Soviet Union would be incapable of aggression for the next fifty years.

The Polish Foreign Office on March 9, 1938, circulated a complacent survey of the Soviet scene among its missions abroad. The current Terror in Russia was seen to be the dominant factor on the Russian internal front, and the 1936 democratic Soviet constitution was correctly described as a fraud. The balance of the report was preoccupied with the alleged decline of Soviet power, and with the current Popular Front tactics of Communist parties abroad, which were described as a protective front to veil the weakness of the Soviet Union. There was no suggestion that the Soviet Union might emerge more ruthlessly and efficiently united than ever before when the current purges were completed. A realistic Polish appraisal of the Soviet danger might have been an effective force in promoting German-Polish cooperation. The contemptuous dismissal of Russian power prevented the Poles from perceiving their common interests with Germany. It also caused them to suspect some sinister motive in the repeated German attempts to form a common front with Poland against Bolshevism.

The third problem resulted from feelings of German insecurity about two of the German communities in the East which were neither under German nor Polish rule. These communities were Danzig and Memel, with a total German population of more than 500,000. Many German communities in the East had been uprooted since 1918, and the thought was unbearable to many Germans that this might also happen to Danzig and Memel, after Germany was strong again. There could be no lasting confidence in German-Polish cooperation until these communities were restored to Germany. German concern about Memel was apparent during the March 1938 Polish-Lithuanian crisis. This occurred at the time of the Anschluss between Germany and Austria, when Beck was visiting in Italy. The Italian Foreign Minister, Count Galeazzo Ciano, who rarely seemed to have a good word about anyone, referred to Beck as not "particularly strong nor singularly intelligent." A Polish frontier guard was killed on Lithuanian territory on March 11, 1938. Polish Senator Kazimierz Fudakowski insisted, in a Senate interpellation on March 14th, that Lithuania should be forced to submit to extensive Polish demands. It was evident that the Polish leaders were in a mood to score some success at Lithuanian expense, to parallel Hitler's triumph in Austria. Beck returned to Poland on March 16, 1938, by way of Vienna, where he received a brief glimpse of the excitement in the former Austrian capital. Beck discovered that many Polish leaders advocated demands on Lithuania which he considered to be exorbitant under the circumstances. He believed that Lithuania would gradually come within the Polish orbit if too much was not attempted all at once. There were demonstrations in Warsaw and Wilna favoring the acquisition of Memel by Poland, and the creation of a new Polish port on the Baltic Sea.

The fourth obstacle to a German-Polish understanding was the ruthless Polish treatment of minorities. This concerned primarily the Polish mistreatment of the Germans, but the Polish attempt to strand more than 50,000 of their Jewish nationals in the Reich, in 1938, also had a bad effect on German-Polish relations. The Polish policy in this maneuver to rid Poland of a large number of Polish Jews was both cruel and audacious. The step itself is not comprehensible unless one takes account of the rising tide of anti-Jewish feeling in Poland early in 1938.

The Polish Passport Crisis

Considerable attention was given to the problem of encouraging Jewish emigration from Germany in the years from 1933 to 1938, but far more Jews departed from Poland than from Germany during these years. An average 100,000 Jews were emigrating from Poland each year compared to 25-28,000 Jews leaving Germany annually. From September 1933 to November 1938 a special economic agreement (Havarah agreement) enabled German Jews to transfer their assets to Palestine, and the German authorities were far more liberal in this respect than Poland. There were also special arrangements for wealthy Jews in Germany to contribute to the emigration of others by capital transfers to various places. 170,000 Jews had left Germany by November 9, 1938, compared to

approximately 575,000 who had departed from Poland during the same years. It was noted that thousands of Jews who left Germany in 1933 returned to the country after 1934, and that scarcely any of the Polish Jews returned to Poland during the same period.

Polish Ambassador Jerzy Potocki made it clear to American Under-Secretary of State Sumner Welles in March 1938 that Poland wished to increase the emigration of Polish Jews, and Welles agreed to aid the settlement of Polish Jews in Latin America, and especially in the rich country of Venezuela. A special Polish mission under Major Michal Lepecki was sent to Madagascar in 1937 to study the possibilities for Jewish settlement in that rich, but sparsely populated, French possession. It was clear that the Poles were seeking to encourage the emigration of the greatest possible number of Jews at the least possible cost. American Ambassador Biddle reported from Warsaw on March 28, 1938, that many Polish Jews would welcome a new European war. The destruction of the new Polish state might improve the status of the Jews, and many of them believed that the Soviet Union was a veritable paradise compared to Poland. Biddle added that conditions for the Jews in Poland were becoming constantly more unfavorable, and, of course, this trend increased Jewish disloyalty toward Poland. Biddle declared that both Jewish and Polish leaders favored maximum Jewish emigration, although they did so for different reasons. The Jews had been accused of creating a financial panic during the March 1938 Polish-Lithuanian crisis, when there was a noticeable run on the savings banks. Distrust and dislike of the Jews in Poland extended right to the top. Prime Minister Stawoj-Sktadkowski claimed, in a conversation with League High Commissioner Burckhardt at Warsaw in 1937, that 60% of all Polish Jews were Communists and that 90% of Communists were Jews.

Biddle announced on March 29, 1938, that the Polish Sejm was passing a large number of new anti-Jewish laws. He explained that 53% of Polish lawyers were Jews, whereas the Jews accounted for merely 8% of the total Polish population. The aim of the new legislation would be to limit Jewish lawyers to a quota based on their proportion of the population. This type of law was sponsored by the Government, but there was always the danger that the situation would get out of hand. A bill passed the Sejm in March 1938 which made the eating of kosher meat illegal, although 2.5 million Jews in Poland ate only kosher meat. The Government naturally feared the effect on the Polish meat industry of such a forced conversion to vegetarianism, and steps were taken to prevent the implementation of this law. The extremity of the legislative measure provided a good indication of Polish hatred of the Jews. A law also passed the Sejm in March 1938, which permitted the Polish Government arbitrarily to withdraw Polish citizenship from nationals abroad. The specific provisions stipulated that individuals could be declared stateless if they had been out of the country for five years. The implementation of the law was postponed until the Czech crisis had run its course. The law had been passed as part of the 1938 Polish anti-Jewish program, and its obvious purpose was to prevent the return to Poland of as many Jews as possible. Many of the Polish-Jewish citizens abroad were in Germany. Friction between Germany and Poland was inevitable when the Poles

published an ordinance on October 15, 1938, to implement the March 1938 citizenship law.

The Poles were well aware of the German attitude toward the Jewish question. Years had passed since Hitler had introduced his anti-Jewish policy in Germany, and his program had received legal sanction in the Nuremberg Reichstag laws of 1935. Hitler believed that the policy of granting full legal and political equality to the Jews, which had been adopted in Germany and Great Britain during the previous century, had been a great mistake for Germany. He believed that inter-marriage between Germans and Jews harmed the German people and should be discontinued. He shared the conviction of Roman Dmowski in Poland that the Jews were harmful in the economic and cultural spheres. He also believed that the Jewish influence on German politics had weakened Germany. Hitler worked for the day when there would be no more Jewish subjects in Germany, just as Abraham Lincoln in his last years had worked for an exodus of Negroes from America. Hitler's view on the Jewish question was intolerant, and this was perfectly clear to the Polish leaders when they implemented the law of March 1938.

The German Foreign Office made several efforts to persuade the Poles to cancel their decree, but these efforts met with no success. The German authorities took great pains to act without guilt or blame. They organized the transport of Polish Jews with great care, and they made certain that the travellers had good facilities, including plenty of space and ample good food. The story told years later by the American journalist. William Shirer, about "Jews deported to Poland in boxcars" under brutal conditions, was clearly fictitious. The first trains passed the border to Polish stations before the Poles were prepared to stop them. After that, the unbelievable happened. Although the last day for issuance of the stamps was not until October 29th, and the new exclusion policy was not scheduled to take effect until October 30th, and Polish border police attempted to prevent the Jews from entering Poland. The Germans had made no preparation for this development, and soon thousands of Polish Jews were pouring into a few small border towns in Upper Silesia and elsewhere. W.K. Best, the German police official in Charge of the operation, declared that "through the massing of thousands of Polish Jews in a few border towns on the German- Polish frontier, some very disagreeable conditions resulted." The German police decided to bring as many Jews as possible into Poland at night by means of the "green border," which meant by obscure paths in heavily wooded areas or across unguarded meadows. This was dangerous work. There was considerable small-arms fire from the Polish side, but no actual engagements occurred between the Germans and the Poles along the border.

The Poles retaliated immediately by driving across the border into Germany small numbers of Jews from Western Poland, who had retained German citizenship since World War I. The Polish Government issued a decree on the afternoon of October 29, 1938, for the expulsion of enough ethnic Germans from Posen and West Prussia to make up for the discrepancy in numbers between the two Jewish groups. This Polish act of defiance brought the German action to a halt. It was feared that the Poles, with deliberate

exaggeration, would organize vast transports of Germans, and exploit the occasion to empty the former Prussian provinces of their remaining German population. Furthermore, Hitler did not like the bitter nature of the affair, and he feared that German-Polish relations might be wrecked if the incident was not checked.

The German authorities had not rushed the Polish-Jews out of their homes under the impression that they would never be permitted to return. They were explicit in promising them that they could return, when their passports were validated in Poland, and when the Poles gave them re-entry permits. The parents and sisters of Herschel Grynszpan, a syphilitic degenerate living in Paris, had been on one of the German transports. Grynszpan received a post card from one of his sisters on November 3, 1938. This postcard described the journey to Poland, but it did not contain any special complaint. The German transports were carefully provided with comfortable facilities and adequate food. Grynszpan had been living with an uncle in Paris since 1936, but there was a French police order demanding his expulsion from France. Grynszpan had been thrown out of his uncle's house on the day before he assaulted the German diplomat, Ernst vom Rath. Grynszpan had decided to murder German Ambassador Welczeck, and he actually spoke to him without recognizing him in front of the German Embassy on the morning of November 7, 1938. Afterward he entered the German Embassy, and he fired his revolver at vom Rath after he discovered that Welczeck was absent. Grynszpan was still living in Paris after World War II, and the story of his trial and imprisonment by the French, and of his imprisonment by the Germans, is an interesting chapter in legal history. Dorothy Thompson in the United States sponsored the collection of large sums for the legal defense of the allegedly heroic young Jew, who actually belonged in an institution before the affair at the German Embassy. Ironically, Ernst vom Rath had been a resolute opponent of Hitler's anti-Jewish policy.

Kristallnacht

The murder of von Rath was the cause of the Kristallnacht, the "anti-Jewish pogroms" from November 9. and 10., 1938. (Note: The following text of this "Kristallnacht-Chapter" is from "Hitler's War" by David Irving)

That evening he was in his modestly furnished Munich apartment in Prinzregenten Strasse when word arrived that Counsellor vom Rath had now died of his gunshot injury. According to Goebbels, he told Hitler that there had been anti-Jewish demonstrations in two provinces. His diary records: 'The condition of the diplomat Rath shot by the Jew in Paris is still very grave,' and 'The German press opens up with a will.' Then he added that the Jews 'have a few things coming their way.' He received word of demonstrations in Kassel and Dessau, and of synagogues being set on fire. At five p.m. the official press agency announced that the diplomat Rath had died of his injuries. As Goebbels and Hitler left to attend the Nazi festivities in the old city hall, news arrived that the Munich police were cracking down on anti-Jewish demonstrations. Hitler ruled, said Goebbels later, that the

Party was not to organise any such demonstrations – but under the circumstances it was not to quell them if they should occur spontaneously. We have only Goebbels's word for this, quoted at a subsequent internal Party inquiry; in his diary he wrote, 'Colossal activity. I brief the Führer on the affair. He decides: Allow the demonstrations to continue. Hold back the police. The Jews must be given a taste of the public anger for a change.' Goebbels then left Hitler as he had to speak to an assembly of Party notables in Munich's old city hall. The minister instructed his listeners, according to one version, that further such demonstrations were to be organised although the Nazi party must not appear responsible. In his diary, he proudly recorded his own leading role in what was to prove one of the most shameful episodes of Hitler's rule: 'A few gau officials get cold feet. But I keep pulling everybody together. We must not allow this cowardly murder to go unpunished. Let things run their course. The Stosstrupp [shocktroop] "Hitler" sallies forth at once to deal with Munich. And things happen right away. A synagogue is smashed to smithereens. I try to save it from the flames, but fail.' He continued: 'Over to gau HQ with [Gauleiter Adolf] Wagner. I now issue a detailed circular setting out what may be done and what not. Wagner gets cold feet and trembles for his [Munich's] Jewish shops. But I won't be deterred. Meanwhile the Stosstrupp goes about its business. And with no half measures. I direct [Werner] Wächter [director of the propaganda bureau] in Berlin to see that the synagogue in Fasanen Strasse is smashed.' (Note: the Kristallnacht riots were also fuelled by international propaganda against the Third Reich and its citizens, which was something that was ramped up considerably from 1933- 1938. The straw that broke the camel's back for the Germans was the assassination of Ernst vom Rath by Herschel Grynszpan.)

The responsibilities thus seem clearly defined. A subsequent action report by the leader of the SA Group Nordmark would state:

At about ten p.m. on November 9. the need for the operation was put to a number of gauleiters assembled in the Munich Hotel Schottenhammel by an anonymous member of the Nazi Party's Reichsleitung (Reich directorate). I thereupon volunteered the services of my SA Group Nordmark to the gauleiter [of Schleswig-Holstein], Hinrich Lohse. At about 10:30 p.m. he telephoned his chief of staff in Kiel: 'A Jew has fired a shot. A German diplomat is dead. There are wholly superfluous places of congregation in Friedrichstadt, Kiel, and Lübeck; and these people are still trading in shops in our midst. We don't need either the one or the other. There's to be no plundering, nor any manhandling. Foreign Jews are not to be molested. If there's any resistance, use your firearms. The whole operation is to be in plain clothes, and is to be over by five a.m.'

Toward midnight Hitler prepared to leave his apartment for the spectacular SS swearing-in ceremony. Himmler of course was with him. Himmler's chief of staff Karl Wolff arrived with an indignant message from Heydrich at the Hotel Vier Jahreszeiten: the local Gestapo HQ had just phoned, reporting that Goebbels's district propaganda offices everywhere were whipping up anti-Jewish demonstrations and ordering the police – Himmler's police – not to intervene. Himmler turned to Hitler for guidance. Hitler replied

that the Gestapo were to protect Jewish property and lives. It was clear to Himmler that the whole affair had come out of the blue to the Führer. After the midnight ceremony, back at his apartment, Hitler was informed at one a.m. by one of his Wehrmacht adjutants that the Hotel Vier Jahreszeiten had now telephoned to ask them to come and retrieve their baggage as the synagogue next door was on fire. Julius Schaub, Hitler's personal aide-de-camp, wrote after the war a graphic account of the ensuing night of horror, but Goebbels's diary describes Schaub as being in top form, 'his old Stosstrupp past comes flooding back.' 'As I drive back to the hotel,' continues this entry, 'there is the sound of breaking glass. Bravo! Bravo! Like gigantic old kilns, the synagogues are blazing.'

Telephone calls began coming from private citizens reporting fresh outbreaks of arson and Jewish businesses being looted all over Munich. Perplexed, Hitler sent for SS Gruppenführer Friedrich Karl von Eberstein, the city's police chief, and ordered him to restore order at once. He telephoned Goebbels and demanded: 'What's going on?' He sent out Schaub and other members of his staff to stop the looting and arson. He ordered special protection for the famous antique dealers, Bernheimer's. At 2:56 a.m. a telex was issued by Rudolf Hess's staff as Deputy of the Führer – and was repeated to all gauleiters as Party Ordinance No. 174 – forbidding the arson: 'On express orders issued at the highest level of all there is to be no arson or the like, whatever, under any circumstances, against Jewish businesses.*' At 3:45 a.m. the Berlin Gestapo repeated this prohibition. Goebbels, now in no doubt where Hitler's real favour lay, also spent the night on the telephone trying to extinguish the conflagration that his mischievous tongue had ignited.

The damage had, however, been done, and Ribbentrop left Hitler in no doubt of this. Hitler responded that he could not get rid of Goebbels now – not when he was about to need him more than ever. He did send for Goebbels the next morning, November 10, to discuss 'what to do next' – the minister used the word *nunmehr*, which implied an element of apprehension. Göring protested to Hitler that German insurance firms would have to pay the Jews compensation; the cost in foreign currency would be huge, as the broken plate-glass would have to be replaced with imports from Belgium. Hitler refused to discipline Goebbels as the Reichsführer SS demanded. Nor, except in the most savage instances, were the humble Party members who had actually committed the outrages brought to book, although ninetyone Jews had been murdered that night. Goebbels successfully argued, over lunch with Hitler, that the pogrom had shown international Jewry that Germans abroad were not fair game for Jewish assassins. 'This is one dead man who is costing the Jews dear,' Goebbels gloated in his private diary. 'Our darling Jews will think twice in future before simply gunning down German diplomats.'

There was trenchant criticism of this Goebbels extravaganza from every other leading Nazi (except Hitler himself). 'The order was given by the Reich Propagandaleitung [Goebbels],' recorded Himmler, 'and I suspect that Goebbels, in his craving for power, which I noticed long ago, and also in his empty-headedness, started this action just at a time when the foreign political situation is very grave. . . . When I asked the Führer

about it, I had the impression that he did not know anything about these events.' Hitler post facto endorsed the excesses of his henchman. When Göring sent him a sharp letter of protest Hitler replied that he should drop the matter; but as a sop to him he appointed the field marshal to co-ordinate all further moves in the Jewish problem. A collective fine of one billion marks was imposed on the Jewish community for the murder. After Hitler returned to Berlin on November 15, Goebbels smugly entered in his diary: 'He's in fine fettle. Sharply against the Jews. Thoroughly endorses my,' a Freudian slip which at once expanded to, 'and our, policies.'

(Footnote by David Irving: Some writers now argue that the Nazis had fallen into a Zionist trap. The Haganah officials with whom Adolf Eichmann negotiated on his trip to Palestine in November 1937 had hinted that it would serve their interests if things were made hot for Germany's Jews, to accelerate Jewish emigration to Palestine. It deserves comment that Grynszpan, although a destitute youth, was able to reside in a hotel in 1938 and purchase a handgun for 250 francs, and that his defence counsel Moro Giafferi was the best that the money of the International League against Anti-Semitism ('lica') could buy; lica's Paris office was around the corner from Grynszpan's hotel.)

Continued as presented in "The Forced War" by Hoggins:

The tragedy in Paris was exploited by Goebbels in an obvious effort to increase the severity of the general German policy toward the unfortunate German-Jews. At the time of a previous murder of a prominent German abroad by a Jew, in 1936, Goebbels had warned that the next incident of this type would lead to severe measures against the Jews. When vom Rath died of his wounds on November 9, 1938, Goebbels did what he could to carry out this threat. He gave an anti-Jewish speech at Munich on November 9th which was seized upon by German S.A. leaders as an excuse to attack Jewish property. Some of the Jewish synagogues in Germany were destroyed by fires set by organized groups on November 10, 1938, and much business property was damaged. American reaction to the events in Germany was more vigorous than elsewhere, and for the first time it appeared that conditions for Jewish life were becoming worse in Germany than in any other country of Europe.

Hitler was persuaded by Goebbels, after the demonstrations, to levy a 1 billion Mark (250 million dollar) fine on the wealthy and moderately wealthy Jews of Germany. Goebbels had argued that otherwise the Jews would be able to pocket vast amounts of money from the German insurance companies, because the assets damaged or destroyed on November 10, 1938, had been heavily insured. The poorer Jews who had less than 5,000 Marks in immediate cash assets were exempted. The German insurance companies were ordered to pay the Jews promptly for all damages suffered to property on November 10th, and it was permissible to use part of this money in paying the fine. The fine was to be paid in four installments, on December 15, 1938, February 15, May 15, and August 15, 1939. The Jews complained that their total capital in Germany in November 1938 was only 8 billion Marks, and that the fine was tantamount to the confiscation of a large share of their assets. A German law was announced on November 26, 1938, that would eliminate

Jewish retail stores, and its provisions were to go into effect on January 1, 1939. At the same time it was promised that welfare care and other state relief measures on behalf of the Jews would be continued.

The Polish passport crisis and its repercussions had little effect on the official relations of Germany with foreign countries other than with the United States and Poland.

Persecution of the German Minority in Poland

The entire year of 1938 was a bad period for the German minority in Poland because of the intensification of the official Polish anti-German measures. It seemed as if the Poles were suddenly in a great hurry to eliminate the German minority. The Polish leaders rationalized their policy of persecuting Germans with the specious argument that conditions facing the Polish minority in Germany were worse than ever before. Polish complaints reached a staccato peak when the results of the May 15, 1938, census were announced, and a mere 15,000 individuals in Germany claimed to be ethnically Polish. This result had been anticipated by the Polish leaders. The Union of Poles in Germany began a campaign on orders from Warsaw to demonstrate that the situation of the Polish minority was deteriorating. The Polish organization claimed that the activities of Poles were being restricted in many spheres. The Germans realized that the grievances of a minority are never entirely imaginary, and they hoped to appease the Poles in the interest of the much larger German minority in Poland. The German Ministry of the Interior promised to deal with Polish complaints after calling a conference of experts. They were under strong pressure from the German Foreign Office to do this, and they were advised that the Polish press was "drawing ugly parallels with the oppression of the Polish minority in Czechoslovakia." It was noted that "the war-mongering Jewish New York Times" had taken up the theme.

The German Ministry of the Interior in a report on June 24, 1938, admitted that certain Polish grievances "correspond to some extent with the actual situation." Instances of discrimination against Polish students and of restrictions on the distribution of books by Polish cooperatives had been discovered. German Minister of the Interior Wilhelm Frick received the leaders of the Polish minority, and he promised them that Polish grievances would be remedied. The German Ministry of the Interior also insisted that "the position of the German minority in Poland offered far greater cause for complaint" The need for periodic conferences among representatives from the two nations was stressed, and the German Foreign Office was secretly informed that this was "the only effective means of alleviating the difficult position of the German minority in Poland." The Ministry of Interior realized that unilateral concessions to the Poles in Germany would not solve the problem of the Germans in Poland. Coordination of German and Polish policies was demanded, but it was precisely this coordination that the Germans were never able to attain.

Frick's reception of the Polish minority leaders on June 24, 1938, was publicized in the

Polish press. Nevertheless, the official *Gazeta Polska* argued in an editorial devoted to the question that coordination of policies by the two nations was unnecessary. The editors took the position that minority questions should be treated as a purely domestic concern by each Government. This declaration was tantamount to an abrogation of the November 1937 German-Polish minority pact, which stipulated official Polish interest in the Poles of Germany and official German interest in the Germans of Poland. The difficulty was that the German minority in Poland was more numerous and prominent than the Polish minority in Germany. It was easy for the Polish leaders to conclude that the elimination of the large German minority in Poland would more than compensate for any possible losses to the Poles in Germany were the Germans eventually goaded into retaliation. Indeed, a less tolerant German policy might have encouraged a revival of Polish nationalism among the Poles of Germany. Most of the Polish-speaking people of Germany were proud of German prosperity and efficiency, and they preferred to be considered German. The Polish leaders hoped that they would rediscover their Polish hearts if Germany adopted a less favorable policy or experienced another disaster as bad or worse than 1918. In the meantime they could take care of themselves. It was much as if Germany and Poland were nations at war. The Poles had a vast number of German hostages and the Germans had a considerably smaller number of Poles. The reciprocity which sometimes prompts belligerent nations to treat prisoners humanely, because many of their own People are in the hands of the enemy, was sadly lacking in this instance.

There were signs that the German Foreign Office would not desist forever from according to the Polish mistreatment of the German minority the major emphasis which it deserved. Lipski appeared at the German Foreign Office on June 13, 1938, to protest about obstacles to the completion of a new Polish school for girls at Ratibor in West Upper Silesia. The local German authorities were exasperated about this new school. They claimed that it was being erected on the wrong side of the frontier, because most of the girls studying there would be from Poland. The incident seemed a minor one to State Secretary Weizsäcker, and he admitted to his colleagues that he was sorely tempted to challenge Lipski about current Polish measures against the Germans in Poland, but he had desisted because of the Czech crisis. At last, on June 17, 1938, Foreign Minister Ribbentrop issued an order for German diplomats in Poland to assemble a list of grievances from the German minority in Poland. It was evident that the Poles were going too far and that the German Foreign Office was reluctantly contemplating recourse to diplomatic protests on behalf of the Germans in Poland.

Senator Hasbach, the leader of the Conservative German faction in Poland, was appalled by this situation. He argued that the German Government should confine itself to requests for the coordination of minority policies. He was terrified by the increasing tension between Germans and Poles in Western Poland. There were rumors that the German press was about to retaliate against the anti-German Polish press campaign and Hasbach was convinced that this would be a disaster. He pleaded with German diplomats in Poland that press retaliation would whip the provincial Poles into a frenzy. They had been told

by their local newspapers that the Germans never complained about conditions in another country unless they intended to conquer it. Hasbach predicted fearful consequences if the restrictions on the German press were removed. Moltke did not favor complete press silence about Polish treatment of the German minority, but he did agree with Hasbach that the question should be handled with great caution. Moltke was scornful about the complaints of the Polish minority in Germany, and he noted that they had admitted on June 2, 1938, that they had no complaint about discrimination in the economic sphere. Economic discrimination was the major issue for the Germans in Poland, although they also had to face much more cultural and educational discrimination than the Poles of Germany.

Moltke reported with great indignation on July 7, 1938, that the Poles had discovered that Germany was planning a press campaign to expose Polish mistreatment of the Germans. The German newspapers had discovered that the Foreign Office was collecting material about Polish outrages, and the editors proceeded to do likewise. They had sent instructions to several correspondents by public telephone, and in Poland where the wires were tapped this was equivalent to broadcasting the news. Moltke strongly advised that the Polish Government should be given some assurances about this situation. The warning from Moltke suggested to the German Foreign Office that Lipski might raise the question in Berlin. A special memorandum was prepared on July 8, 1938, for use in possible conversations. It contained a few of the major grievances about the mistreatment of the Germans in Poland. The Polish 1938 annual land reform law was heavily biased against German interests. Most of the larger agricultural holdings in Posen and West Prussia belonged to Poles, and only these larger holdings were subject to confiscation and redistribution under the law. Nevertheless, the Germans in these two provinces were compelled to supply more than two thirds of the acreage for confiscation in 1938. The new Polish program of establishing a thirty kilometer border zone, in which the Germans could own no land, included all of East Upper Silesia and broad strips of Posen and West Prussia.

The memorandum accused the Polish authorities of tolerating and encouraging a private boycott of all industrial firms which employed Germans. Eighty percent of the German labor force in East Upper Silesia was unemployed, and it was apparent that an increasing number of desperate young Germans were abandoning their homes in that area. The German youth were denied the apprenticeships which would have enabled them to find employment in the many craft professions. The Poles had intensified their program of closing German schools. The memorandum, which sketched the existing situation in general terms, concluded with the suggestion that future concessions to the Poles of Germany should be dependent on the improvement of conditions in Poland. Moltke was instructed to tell Beck, on the same day, that the complaint of the Polish minority and the extensive treatment of this complaint in the Polish press had done "extremely great damage in many respects." The response of Beck was characteristic. He agreed to inform the Polish Ministry of Interior of Moltke's complaint, but he added pointedly that the

question was not within his competence as Foreign Minister. This statement followed the line adopted by the *Gazeta Polska*, and it indicated that the Poles regarded the 1937 minority pact as a dead letter.

It was feared in the German Foreign Office that Hitler would not raise a finger to prevent the doom of the German minority in Poland. In August 1938 the Political Division of the German Foreign Office prepared a memorandum on the question for Werner Lorenz, the chief of the Central Agency for Germans Abroad. This organization had maintained strict neutrality toward the feuds and conflicts of the German political groups in Poland. Hitler did not wish the Agency to pursue an active policy in Poland and he intervened to prevent the memorandum from reaching Lorenz. The text of the memorandum was in conflict with Hitler's policy. It suggested that no considerations of higher policy could justify the abandonment of the German minority in Poland. The situation of the Germans in the former Prussian, Austrian, and Russian sections of Poland was described, and the lack of initiative and unity among the German minority communities was deplored. It was noted that the principal Polish effort was directed against the German community in former Prussian territory, and that the Poles had exploited the 1934 Pact with Germany to intensify their de-Germanization policies.

Polish Demonstrations Against Germany

Moltke attempted to explain the increasingly unfavorable situation of the German minority in a report on September 2, 1938. He blamed much of the trouble on the OZON (Camp of National Unity) which had been founded by Colonel Adam Koc. This vast officially-sponsored pressure group was seeking to secure a broad basis of popular support for the policies of the Polish Government. Moltke charged that the Government Departments in Poland were under OZON influence, and that they were seeking to increase their popularity by exploiting and encouraging the rising anti-German sentiment. The Government was trying to be more anti-German than the people, rather than opposing popular superstition and prejudice about the Germans. This policy was incompatible with the spirit of the 1934 Pact. The German Ambassador admitted that this development was stimulated by German successes. The Anschluss had produced a catastrophic effect, and the uneasiness and excitement had increased with the opening of the Sudeten crisis. The Poles knew that the militant Sudeten German minority in Czechoslovakia was the most powerful ally Hitler had in dealing with the Czechs, and they were determined that the Germans in Poland should remain intimidated. Moltke noted that an increasing number of Germans were being sentenced to prison by Polish courts for such alleged remarks as "the Führer would have to straighten things out here," or "it would soon be Poland's turn." There was no way of knowing how many of these unfortunate individuals were entirely innocent of the remarks attributed to them.

The flames were fanned by Poles who returned from Germany with the claim that they had encountered German propaganda directed against Poland. It was said that propagandists

were encouraging the Ukrainians to revolt against Poland, and that they were demanding the return of the Corridor to Germany. Moltke was especially annoyed by the apparent indifference of the Polish Government toward the increasing number of anti-German mass demonstrations. He was indignant that groups of Poles had recently appeared before German consulates, without official interference, to sing the provocative Rota, a popular anti-German song with many different versions. One central theme in 1938 was that God would reward Poles who hanged Germans. Moltke concluded his report with a list of prominent individuals in Poland who had recently adopted a more hostile attitude toward Germany. He remained completely deceived about Jozef Beck, whom he continued to regard as pro-German. It was unfortunate for Hitler that Moltke was unable to penetrate Beck's attitude to some extent. Hitler might have been able to avoid the trap that Halifax was preparing for him had he realized that Beck was one of his enemies.

The Outrages at Teschen

The situation at Teschen in October 1938 offered a vivid illustration of the problem created by Polish persecution of the Germans. Hitler had given Poland full support in her successful effort to acquire this district from the Czechs. The Poles, however, proceeded to treat the German and pro-German elements of the district as archenemies. De-Germanization measures began immediately after the Polish military occupation of the area. Every German school in the district was closed at once. The original staffs of German teachers had been dismissed. It was announced that Polish was the sole official language, and the doctors and lawyers of the area were told that they would not be allowed to practice unless they learned Polish within three months. Bank assets were frozen for a considerable period, and pensions and state salaries to Germans were reduced. The mayors of both Teschen and Oderberg were removed. Mayor Kozdon of Teschen was the leader of the local Slonzak community, which was a small West Slavic group similar to the Kassubians of West Prussia, or the Lusatian Sorbs of Saxony. When Kozdon was disgraced and sent to prison in Poland, the local Slonzak community replied with the scornful slogan that they would rather be inmates of a German concentration camp than so-called citizens of Poland.

On October 3, 1938, after the occupation of the city of Teschen, the Polish armed forces pushed on to Trynetz, Lazy, and Karwin in the Teschen district ahead of the schedule agreed upon with the Czechs. The Polish excuse for the rapid advance was the hostility of the local population. The *Gazeta Polska* explained that it was necessary to anticipate the formation of "German shock troops" at Oderberg. It was added that the German authorities were not permitting these forces to receive arms from Germany. In reality, the Poles were not fighting German shock troops, which did not exist, but a few desperate Slonzak workers and farmers. Polish placards posted during the day were torn down at night, and a pitched battle took place between the Polish soldiers and the Slonzaks at Trynetz. Governor Grazynski of East Upper Silesia, who was scheduled to administer the

new district for Poland, concluded that the Slonzaks needed considerable re-education before they could become useful Polish citizens. A first major step in the Polonization program was to drive out as many Germans and Czechs as possible, and to bring in Polish specialists and industrial workers from East Upper Silesia.

Approximately 20% of the total German population of the district fled within the first month of Polish occupation, and it was necessary to house 5,000 of the refugees in emergency camps in West Upper Silesia. Thousands of refugees received temporary quarters in private German homes. Governor Grazynski had raised feelings to a white heat among his followers with charges that the Teschen Germans were guilty of an insurrectionary conspiracy. A series of anti-German measures accompanied the national election to the Polish Sejm in November 1938. The German minority leaders urged their people to vote, although candidates of German extraction were no longer allowed to stand for election. Four of the remaining six German secondary schools in Posen province were deprived of their status as public schools at this time and they forfeited both the special state protection extended to public institutions and their tax privileges. Governor Grazynski of East Upper Silesia considered an election a favorable time to agitate publicly against the Germans. He presided at a meeting which had the temerity to resolve that the Polish minority in West Upper Silesia should place its allegiance in Poland, rather than in Germany. He also intensified his campaign to secure the discharge of the remaining German workers in East Upper Silesian mining and industry.

New Polish measures of school censorship were introduced in West Prussia. The index of forbidden Germanic books was expanded to include such works as the *Nibelungenlied* (the most highly prized early German heroic epic), Goethe's *Poetry and Truth*, Defoe's *Robinson Crusoe*, and Stanley's *Through Darkest Africa*. The leading German charity organization in the city of Grudziadz (Graudenz) was closed and its property was confiscated. The exclusively German private school in little Neustadt was told that it would be forbidden to hold its annual Christmas play in 1938. The anti-German and anti-Jewish pressure group, Association of Young Poland, planned a major boycott against all German firms in Polish West Prussia for January 1939, and at that time it was permitted to picket German firms without interference from Polish authorities. Indeed, the boycott would probably never have been attempted had the Polish authorities given the slightest indication that they would oppose it. The encouragement of anti-German measures was part of the formula with which the Polish leaders were seeking to promote the popularity of their regime. It is incredible under these circumstances to read in a widely-accepted Polish source, outside of the Communist orbit and more than twenty years later, that the persecution of the Germans in Poland was entirely "imaginary."

It was evident that Hitler was willing to close one eye to a great amount of Polish mistreatment of the German minority. It was not clear at the end of 1938 how far the Poles would push this policy in the immediate future, or whether or not Hitler would be willing to tolerate whatever the Poles might decide to do. It would have meant a great deal had the Poles indicated a positive attitude toward a comprehensive settlement along

the lines proposed by Germany on October 24, 1938. It is probable that Hitler in such circumstances and for reasons of higher policy would have ignored anything they chose to do to the Germans of Poland short of slaughtering them. The failure of the Poles to indicate a positive attitude contributed to the increasing German-Polish friction toward the end of 1938.

German Confusion about Polish Intentions

League High Commissioner Burckhardt was visiting Beck in Warsaw at the time of Lipski's conversation with Ribbentrop. He was pleased to discover that Beck seemed to be in a very friendly mood toward Germany. Beck told Burckhardt that he was willing to surrender the Polish right to represent Danzig diplomatically in foreign countries. He believed Danzig should receive permission to maintain her own diplomatic representatives in Germany, Poland, and elsewhere. He deprecated the role of the League at Danzig. Beck observed that Poland's interest in Danzig was mainly economic, and not political. Burckhardt was delighted with this remark, and he interpreted it as a confession that Poland was willing to have Germany acquire Danzig. He advised the Germans on November 21, 1938, that "only a German suggestion was necessary for discussions with Poland." The effect of this report on the Germans is easy to understand. They did not know where they stood with Poland. The discrepancy between the Burckhardt reports of November 9th and November 21st was obvious. They could not base their policy on the remarks which Beck made to a League representative. Burckhardt did not know that negotiations on Danzig had been in progress between Germany and Poland for four weeks. The adamant position which Lipski had taken on Danzig two days earlier did not permit the German diplomats to share the optimism of Burckhardt.

Hitler was considering every possible means of resolving the dilemma. He wondered if it might not be possible to gamble on Beck's willingness to accept a *fait accompli*. Negotiation of an agreement with Poland would be incomparably easier once Germany was established at Danzig. Hitler issued an order to the German armed forces on November 24, 1938, to prepare for the swift occupation of Danzig independently of an agreement with Poland. He placed special emphasis on the fact that he was not contemplating a war with Poland, but that he wished to be prepared for "a politically favorable situation." Hitler was considering a Danzig coup at the moment when relations with Poland were as cordial as possible and when Polish armed reprisals against Germany were least likely. This did not mean that he was willing to take such a gamble on the day that he issued the order. The risk was too great because he knew very little about the real Polish attitude. It was extremely significant that the German Foreign Office received permission on the same day to convey full information to the Danzig leaders about the current German-Polish negotiation. The Danzig leaders were to be kept abreast of all future developments. Hitler might not have taken this step had he believed that it would be a simple matter to reach a settlement with Poland at Danzig. He wished Forster and

Greiser to be fully informed so that he could coordinate steps with them on the shortest possible notice.

It was useful for the Danzig leaders to have accurate information directly from Hitler. Burckhardt had returned to Danzig on November 21, 1938, and his description of the Polish attitude in conversations with the Danzig leaders was entirely too favorable. He suggested that a Ruthenian solution favorable to Poland might be adequate compensation to Beck for the abandonment of Polish obstruction tactics at Danzig. Burckhardt had succeeded in creating the impression among his listeners that Poland was prepared to give way at Danzig. He seemed to think that Poland's improved diplomatic situation would prompt her to be generous. He observed that "Poland was no longer in the very difficult situation of four weeks ago, and that she could now again count much more on the support of England and France, particularly since Germany had injured herself politically, at least for the present, through her action against the Jews." Burckhardt told the Danzigers that he had accepted a hunting invitation from Göring, and that he planned to discuss the European situation with Goebbels before returning to Danzig. He obviously believed that an auspicious moment had arrived to settle the Danzig question.

Burckhardt was disgusted by the attitude of the American Ambassador to Poland, Anthony Biddle, who predicted on December 2, 1938, that the Poles would fight Germany in the near future. Biddle declared that he would welcome this development. He reminded Burckhardt of the great hatred of Germany in the most influential American quarters, and he also predicted that Great Britain and France would intervene in a German-Polish war. Burckhardt summarized his conversation with Biddle in pithy fashion: "Fine perspectives! Calvin against the descendants of Luther, and Lenin as Calvin's ally."

Secret Official Polish Hostility toward Germany

Lipski returned to Poland on November 22, 1938, to discuss the Danzig situation. His assurance to Ribbentrop about the superhighway and the railway had been a mere ruse designed to appease the Germans. The Polish leaders agreed that no concessions would be made to Germany either at Danzig or in the Corridor transit question. The affable manner of Ribbentrop, despite the adamant Polish stand on Danzig, impressed the Polish leaders. Beck speculated that Danzig might not be the issue after all which would produce a conflict between Germany and Poland. He suggested that Hitler might be allowing Ribbentrop unusual liberty in the Danzig question to see what he could accomplish. Lipski's attitude was similar to Beck's. His latest conversation with Ribbentrop had caused him to modify his earlier opinion that Germany would never retreat at Danzig. He suggested that the injury done to German relations with the United States by the anti-Jewish policy might affect German policy toward Poland. Lipski tended to exaggerate the effects on German foreign relations of the demonstrations against the Jews in Germany on November 10, 1938. He predicted that a Franco-German declaration of friendship, which had been discussed by Hitler and the French leaders since the preceding month, would

never be signed because of the negative reaction to the anti-Jewish demonstrations. This prediction proved to be false, and Ribbentrop signed the declaration at Paris on December 6, 1938.

Lipski and the other Polish diplomats were influenced in their judgment of this question at the moment by a report which had been telegraphed by Count Jerzy Potocki from Washington, D.C., on November 21, 1938. The Polish Ambassador was informed by William C. Bullitt, the American Ambassador to France who was visiting in the United States, that President Roosevelt was determined to bring America into the next European war. Bullitt explained to Potocki at great length that he enjoyed the special confidence of President Roosevelt. Bullitt predicted that a long war would soon break out in Europe, and "of Germany and her Chancellor, Adolf Hitler, he spoke with extreme vehemence and with bitter hatred." He suggested that the war might last six years, and he advocated that it should be fought to a point where Germany could never recover. Potocki did not share the enthusiasm of Bullitt and Roosevelt for war and destruction. He asked how such a war might arise, since it seemed exceedingly unlikely that Germany would attack Great Britain or France. Bullitt suggested that a war might break out between Germany and some other Power, and that the Western Powers would intervene in such a war. Bullitt considered an eventual Soviet-German war inevitable, and he predicted that Germany, after an enervating war in Russia, would capitulate to the Western Powers. He assured Potocki that the United States would participate in this war, if Great Britain and France made the first move. Bullitt inquired about Polish policy, and Potocki replied that Poland would fight rather than permit Germany to tamper with her western frontier. Bullitt, who was strongly pro-Polish, declared it was his conviction that it would be possible to rely on Poland to stand firmly against Germany.

Potocki incorrectly attributed the belligerent American attitude solely to Jewish influence. He failed to realize that President Roosevelt and his entourage considered World War I to have been a great adventure, and that they were bitter about those Americans who continued to adopt a cynical attitude toward American militarism after President Roosevelt's quarantine speech in 1937. President Roosevelt had been one of the few advocating permanent peacetime military conscription in the United States during the complacent 1920's. Such factors were more than sufficient to prompt Roosevelt to adopt an aggressive attitude toward Germany. He had no strong pro-Jewish feelings; he jokingly said at the 1945 Yalta Conference that he would like to give the Arabian leader, Ibn Saud, five million American Jews. The Jewish issue was mainly a convenient pretext to justify official American hostility toward Germany, and to exploit the typical American sympathy for the under-dog in any situation. Potocki overestimated the Jewish question because of his own intense prejudices against the Jews, which were shared by the entire Polish leadership. He was highly critical of the American Jews. He believed that Jewish influence on American culture and public opinion, which he regarded as unquestionably preponderant, was producing a rapid decline of intellectual standards in the United States. He reported to Warsaw again and again that American public

opinion was merely the product of Jewish machinations. The Poles themselves had a grievance against Germany because of the recent anti-Jewish demonstrations, but it was not prompted by any sympathy for the Jews. They resented the fact that recent German measures against the Jews placed Germany in a better position to compete with Poland in disposing of her Jews abroad. The majority of the remaining German Jews were at last ready to believe that emigration was better for them than life in Germany, and most of them were in a far better financial position to contemplate emigration than the Polish Jews.

Moltke reported from Warsaw on November 22, 1938, that the Polish press had maintained reserve in describing "the reprisal action carried out in Germany against Jewry." The *Dziennik Narodowy* (National Daily) had complained that Germany was right in seeking to get rid of her Jews, but wrong in her methods. Only a few of the leading newspapers had given their unreserved approval to the recent German measures. *Czas* (The Times) claimed that the Germans had gone too far in some instances. Moltke noted that the Polish Government feared a Ukrainian insurrection, and that this consideration was prompting them to slow down the campaign against the Jews within Poland. At the same time, they were stepping up their diplomatic offensive to find new goals for the Polish-Jewish exodus, and they were convinced that the recent events in Germany would handicap them in these efforts. Lipski claimed at the Polish Foreign Office conference on November 22, 1938, that there was a bright side to this picture. He asserted that German public opinion had been alienated by the recent anti-Jewish measures, and that this had shaken the position of the Hitler regime. He suggested that a strong Polish stand on Danzig might threaten Ribbentrop's position and convince Hitler that Ribbentrop was not an able diplomat. Polish High Commissioner Marjan Chodacki, who had come to Warsaw for the conference, was quick to agree with Lipski. He suggested that Poland might influence the situation by adopting a more stern policy in dealing with the Danzig authorities. Beck did not seem particularly concerned about the deterioration of German-Polish relations after the Munich conference. He told Jan Szembek on December 7, 1938, that relations with Germany had reached an impasse. This was a simple statement of the situation which Beck was not inclined to remedy. He still hoped that Germany would support him in Ruthenia, and he did not believe for one moment that Hitler intended to use Ruthenia as a base for Ukrainian irredentism. He knew that Hitler was sincerely pro-Polish, and he complained to Szembek that it might have been possible to obtain more concessions from him had it not been for the opposition of the anti-Polish Junker aristocracy, and the members of the German Cabinet who had belonged to the former conservative German National People's Party.

Beck indulged in some wishful thinking when he claimed to Szembek that Hitler and Ribbentrop were not in close agreement, and that it was Neurath, and not Ribbentrop, "who understood and executed perfectly the projects and instructions of Hitler." Neurath was actually one of the anti-Polish diplomats whom Beck had condemned, and he was far less tolerant toward Poland than was Ribbentrop. The similarity between Beck's career

and that of the German Foreign Minister stimulated Beck's dislike for his colleague in Berlin. Neither Beck nor Ribbentrop were actually career diplomats. Beck had pursued a military career for many years, and Ribbentrop had earned a fortune as a merchant after serving as a German army officer in World War I. It had been possible for both men to obtain top posts in the diplomatic services of their respective countries for the same reason. Beck had been intimate with Pilsudski for many years, and Ribbentrop had won the confidence of Hitler. The two men had established their supremacy over the career diplomats because they enjoyed the favor of their respective dictators. The Polish Foreign Minister decided that Lipski, for tactical reasons, should continue to take a positive attitude toward the German superhighway, but that he was not to involve Poland in any definite commitments, nor admit that there was any connection between the problems of Danzig and Corridor transit. Beck would continue to press for a bilateral treaty with the Germans to be based on a German renunciation of Danzig. Beck suspected that Hitler would insist on the annexation of Danzig, but he was not certain about it, and, above all, he did not know how long he could count on Hitler's patience.

Beck had decided to direct his main attention toward Anglo-Polish relations, and his entire policy was based on the assumption that he would obtain British support against Germany. Beck was clever in his relations with the British. He wished to impress them with his independence and to tantalize them by the reserve with which he approached important problems. He permitted Count Raczynski in London to tell Halifax, at the time of the German offer on October 24, 1938, that Poland would stand firmly against any German demands, but he denied Raczynski permission to come to Warsaw to discuss the situation. It was nearly two months before the Polish Ambassador was allowed to appear in Warsaw to discuss Beck's plan for an understanding with the British. Beck agreed in December 1938 to come to London within a few months to discuss the coordination of Polish and British policies, but he balanced his agreement by arranging on his own initiative for a meeting with Hitler in January 1939. He wished the British to know that he could make a deal with the Germans if he desired it, and he assumed correctly that this would increase Polish prestige in London. He did not wish the British to regard Poland as a mere puppet state in the style of Austria or Czechoslovakia. Beck had learned a great deal since his hurried visit to England in March 1936, and his vain plea for British military intervention against Germany.

A German-Polish Understanding Feared by Halifax

The British diplomat, Ogilvie-Forbes, reported from Berlin on November 9, 1938, that there were increasingly frequent rumors of an impending agreement between Germany and Poland. It seemed to him only a matter of time before "the ripe fruit" of Danzig fell into the German lap, but he predicted difficulties in the question of German transit through the Corridor. He speculated that the Germans might seek to offer Poland special compensation for a transit arrangement by supporting them against the Czechs, the

Lithuanians, and even the Russians. Ogilvie-Forbes had received the impression from Polish circles in Berlin that there was a genuine Polish desire to “compound with the Mammon of Iniquity.” He correctly assumed that this quaint reference to Hitler would amuse and please Halifax. He was also watching out for his own interest, because he was considered in London to be pro-Hitler. He did not believe that German acquisition of Danzig would solve the problem of German-Polish friction. He concluded that “a speedy settlement of all German-Polish questions in a manner permanently acceptable to the national pride and the political and economic interests of both parties would seem to be a miracle of which not even Hitler is capable.”

William Strang, the chief of the Central Division of the British Foreign Office, predicted to Ambassador Kennard in Warsaw on the following day that there would be trouble between Germany and Poland. He instructed Kennard, “you will no doubt be interested to know that we have received reliable information to the effect that Hitler now holds the view that Poland has not yet consolidated her position as an independent state, and that he has plans for dealing with the Polish question. He expects to be able to do this without a European war.” Strang invented this rumor in the hope that it would make Beck nervous when Kennard repeated it to him, and that it would discourage any temptation he might have to reach an agreement with Hitler. Kennard feared at this time that Beck would accept Hitler’s proposals about Danzig and Corridor transit. Nevertheless, he hoped that German-Polish friction in the minority question would spoil an agreement on the other points.

Kennard denied that the Poles were either nervous or in any hurry to settle their differences with Germany. He informed Halifax, at the time of the Burckhardt visit to Warsaw in November 1938, that the League High Commissioner shared his belief that the Poles would be willing to relinquish Danzig to Germany. Kennard reminded Halifax that nothing had been done since the Teschen crisis to secure for Poland the permanent seat on the League Security Council which Great Britain had advocated, and he warned him that Beck would remain critical of the League of Nations until this point was settled. Kennard had made no secret of his hatred for Germany when he discussed the situation with Burckhardt, and the Swiss diplomat in turn lost no time in supplying the Germans with full information about Kennard’s attitude toward them. Hitler was interested to learn that the British Ambassador in Warsaw, who enjoyed the confidence of Halifax, was an enemy of appeasement. Halifax did not like to contemplate the possibility that the League High Commissioner might identify himself with the German position at Danzig. He explained to Kennard that Burckhardt had been told in 1937 that the main object of his mission was “to prevent the establishment of a full National Socialist regime in the Free City.” It is interesting that Halifax emphasized this in December 1938, when one recalls that he told Burckhardt in May 1938 that he hoped Danzig would return to Germany by means of a negotiated settlement.

Halifax discussed the situation with Raczynski in London on December 14, 1938, in the hope of obtaining more information about the current Polish attitude toward a settlement

with Germany. Raczynski declared that the main problem for Poland at the moment was to obtain international aid to rid the country of its Jewish population. He assured Halifax that the Jews constituted "a really big problem" in Poland. Raczynski emphasized that Poland favored an active British policy in Eastern Europe, although "it was perhaps not possible for His Majesty's Government to intervene directly in practical fashion in the event of trouble in Eastern Europe." It was clear to both Halifax and Raczynski that British soldiers could not be landed on the Polish coast in the event of war, but Raczynski hoped that the British would not disinterest themselves in the area. Halifax promised that he was prepared to give the question of British support to Poland careful consideration. Halifax was annoyed that Beck had not allowed Raczynski to give him tangible information about current German-Polish negotiations. The certainty of a German-Polish conflict was an essential element in the formulation of his plans.

He instructed Kennard to use every means to discover Beck's real attitude. Kennard ingeniously suggested to Beck that it might be better to allow the Germans to take Danzig now, rather than permit them later to link Danzig with demands for the return of the entire Corridor. Beck "stated categorically that any question of concession in the Corridor would involve war." Kennard eagerly inquired if this would apply to a German request for transit facilities across the Corridor. Beck replied that any such German suggestion "could hardly be considered," although he had allowed Lipski to nourish the illusion among the Germans that Poland might accept this. Halifax was able to conclude that a German-Polish understanding was virtually impossible because of the chimera of British aid to Poland, and despite the fact that Beck was currently refusing to inform him about his negotiations with the Germans.

Poland Endangered by Beck's Diplomacy

The tortuous diplomacy of Beck during this period had a double purpose. The British were prevented from taking for granted Polish opposition to Germany at a time when appeasement was the official British policy. It was evident that the British leaders would have to educate their public to hate and fear Germany before a shift in British policy could take place which would permit a British commitment to Poland. The Polish diplomat knew that he would not be treated as an equal by Great Britain unless he maintained a similar reserve in the conduct of his own policy. The Germans were deceived about Polish policy in the interest of gaining time. Beck realized that Hitler would have more room to maneuver if he tipped his hand before the British leaders were ready to attack Germany. He knew that the patience of Hitler was his greatest asset, and he intended to challenge Germany when the time was ripe, rather than to receive an unexpected German challenge. This tortuous diplomacy would have been unnecessary had Beck perceived that the interests of Poland could best be served by joining Germany in a common front against Bolshevism. Hitler had offered reasonable and honorable terms which were highly advantageous to Poland. The friction caused by the minority question would have been

a minor issue within the context of a German-Polish understanding. The Germans of Poland were far too disunited and intimidated to cause trouble if Hitler gained a success at Danzig, and a German guarantee of the existing German-Polish frontier would have convinced the few chauvinists among them that there was no point in hoping for union with the Reich. Poland could have played an important role as a bulwark of European defense against Bolshevism, and, with German support, she would have stood a good chance of surviving an attack from the Soviet Union.

The British had nothing to offer Poland. Their policy of hostility toward Germany, which was thinly veiled by appeasement while they prepared for war, placed the Soviet Union in the enviable role of *tertius gaudens*. A suicidal internecine struggle among the capitalist powers of Europe was the answer to a Soviet Marxist prayer. The geographical position of Poland was such that she would be the first victim of ultimate Soviet expansion toward the West. The British leaders did not intend to send a large army to Europe, as they had done in World War I, and the British Navy and British Air Force could offer no protection to Poland. The dream of the Great Poland of 1750 was the fateful legacy which clouded the judgment of Beck. Pilsudski had shared this dream, but he was also a realist who would have been capable of making many major adjustments in Polish policy. It was the fate of Poland to find herself in the hands of the epigoni at the most crucial moment of her history. There was no sign that the Polish leaders were awake to the realities of the European situation when the year 1938 drew to a close.

The Polish Terror in East Upper Silesia

The Polish authorities in East Upper Silesia launched a campaign of mass arrests against the German minority on August 14, 1939, and they proceeded to close and confiscate the remaining German businesses, clubs, and welfare installations. The Poles were furious because Viktor Szwagiel, one of their police officials, was shot and wounded by a Young German Party member during the first phase of the arrests. The arrested Germans were not interned in the area, but were forced to march toward the interior of Poland in prisoner columns. Thousands of Germans were seeking to escape arrest by crossing the border into Germany. Their efforts were sometimes aided by so-called smugglers, who led them across the "green border" (away from main thoroughfares and control stations) for prices ranging from 10 to 600 Zloty. The refugees noted that in some cases the smugglers worked in connivance with the border control officials, who sympathized with the plight of the Germans. Senator Rudolf Wiesner, the leader of the Young German Party, was arrested by the Polish authorities at 11:50 p.m. on August 16, 1939. The German Foreign Office learned the same day that official Polish policy was not encouraging for any Danzig compromise plan. August Papde, the Polish representative to the Vatican, gave a negative reply to the suggestion of Cardinal Secretary of State Luigi Maglione on August 16th that Poland contribute to the preservation of peace by permitting Germany to recover Danzig. Papde replied that Poland would invade Germany with or without

British and French support if Hitler attempted to secure the return of the Danzig to the Reich.

The various German groups in Poland were frantic by this time, and they feared that the Poles might attempt the total extermination of the German minority in the event of war. German Chargé d'Affaires Baron Wühlisch at Warsaw received a desperate and highly compromising secret appeal from the German minority spokesmen on August 15th. The German Government was requested to command the German Air Force, in the event of war, to drop leaflets in Poland threatening reprisals against the Poles for further atrocities against the German minority. The German press denounced the Polish policy of mass arrests, and the Poles were warned not to regard the German minority as helpless hostages who could be butchered with impunity.

The Crisis at Danzig

Chodacki returned to Warsaw by airplane from Danzig on August 16, 1939, to discuss the situation with Beck. An unrewarding and lengthy conversation between Chodacki and Senate President Greiser that morning had failed to modify the deadlock between Danzig and Poland. Chodacki told Greiser that the Polish economic boycott against Danzig products would continue until Danzig recognized the unlimited right of the Polish inspectors to perform their functions anywhere on Danzig territory. The Polish diplomat claimed that Danzig would capitulate in this question were it not for her interest in secretly unloading German arms and ammunition in the Free City. League High Commissioner always told him that a meeting with Greiser had "gone right" when in fact nothing had "gone right." Burckhardt was also furious with the Danziger Vorposten (The Danzig Sentinel) for the indiscreet printing of news about his supposedly secret meeting with Hitler on August 11th. Burckhardt had intended that the meeting should be known to the German, British, French and Danzig leaders, but concealed from the Poles. He complained that his relations with the Poles were sufficiently unfavorable without the charge that he was conducting important European diplomatic missions for Hitler.

German Chargé d'Affaires Wühlisch at Warsaw warned the German Foreign Office on August 18, 1939, that the Poles were about to launch a campaign of mass arrests against the German minority in the areas of Posen, West Prussia, and Central Poland, in addition to East Upper Silesia. The Poles justified the mass arrests in Upper Silesia by charging that "the arrests in Upper Silesia are obviously to be attributed to the organization of diversionary groups which is done from various centers in the Reich." The Poles now charged that similar groups existed in the other districts. The events in Upper Silesia had been a prelude for a general campaign of terror throughout Poland. Polish High Commissioner Chodacki returned from Warsaw on August 18th with new instructions for conversations with Greiser at Danzig. He told the Senate President that he had a blank check to remove the Polish economic embargo of Danzig if the local authorities granted the right of unrestricted operation in the Free City for both custom inspectors and Polish

frontier guards. Greiser complained that this demand was equivalent to a total Polish military occupation of Danzig. Greiser promised to release two inspectors arrested on August 14th for illegal activities, but he refused to accede to the general Polish demand which had no foundation in the existing treaty relationship between Danzig and Poland. Chodacki turned the subject to the German-Polish crisis, and he observed with biting sarcasm that the basis for an agreement between the two countries had to be narrow, because Beck had assured him that Poland was not prepared to make any concessions. Chodacki declared that Poland would not launch military operations against Germany unless Germany attacked Polish interests, but he warned Greiser that the Polish nation would stand together as a nation of soldiers in any war.

National Socialist District Party Leader Forster concluded after this conversation that the Polish position prevented a solution of the embargo crisis. He advised Edmund Veesenmayer, an assistant of Ribbentrop visiting at Danzig, that the local authorities would be more successful with the Poles if they adopted a more vigorous position. Veesenmayer disagreed with this view, and he argued that the Danzig Government should continue to exercise restraint and to permit the Poles to shoulder the responsibility for whatever happened at Danzig. Forster was scornful to discover that three Germans were arrested in West Prussia as agents of the Danzig Government. The Poles were treating the so-called Free City as a separate hostile Power. A sensation was created at Danzig on August 21st when Senator Rudolf Wiesner arrived on the territory of the Free City after escaping from Poland. He had been arrested by the Poles on August 16th on suspicion of conducting espionage for Germany in Poland. Wiesner, who was the most prominent of the German minority leaders in Poland, discussed the current situation with representatives of the German Reich at Danzig on August 22nd. He complained that the German national group had sought to establish loyal relations with the Polish state, but that this effort had failed. He had vainly hoped that German ethnic consciousness would not be incompatible with loyal citizenship in Poland. Wiesner spoke of a disaster "of inconceivable magnitude" since the early months of 1939. He claimed that the last Germans had been dismissed from jobs without benefit of unemployment relief, and that hunger and privation were stamped on the faces of the Germans in Poland. German welfare agencies, cooperatives, and trade associations had been destroyed. The exceptional martial law conditions of the earlier frontier zone had been extended to include more than one third of the territory of the Polish state. The mass arrests, deportations, mutilations, and beatings of the past few weeks surpassed anything which had happened before. The tragedy was that this punishment was undeserved. Wiesner insisted that the German minority leaders continued to hope for a peaceful solution between Germany and Poland. They were not seeking a return to the German Reich. They merely desired the restoration of peace, the banishment of the specter of war, and the right to live and work in peace. The German diplomats and Danzig authorities discussed the possibility that the publication of the Wiesner statements might alleviate the wretched conditions of the German minority. Albert Forster, the local National Socialist Party chief, did not believe that this would be the case. He argued that such protestations of good faith, after the bestial persecutions

which had been endured, would debase the Germans without changing the attitude of the Poles. He was relieved to discover that Werner Lorenz, Chief of the Office for Ethnic Germans in the Reich, agreed with his analysis in a report on the Wiesner material on the evening of August 22, 1939.

The Wiesner episode aroused Forster to an unprecedented degree. The news of the approaching Russo-German pact was made public in Danzig at this time, and Forster urged that the time had come for Danzig to change her own policy to coincide with the implications of this treaty. He advocated a firm policy which would restrict the activities of Polish customs inspectors and frontier guards to the areas stipulated by the treaties. He proposed a policy of meeting force with force if the Poles reacted violently to this firm attitude. These discussions were relayed to Hitler, who supported Forster. The German Chancellor believed that the Danzig Government should make an effective gesture in support of the inauguration of this new policy. He advised the Danzig Senate leaders to proclaim the appointment of Forster as Chief-of-State in Danzig. This would make Forster the formal titular chief at Danzig, and Greiser would continue as de facto Premier in his capacity as President of the Danzig Senate. The suggestion of Hitler was approved by the Danzig leaders, and it was decided to proclaim Forster head of state at noon on August 23, 1939. The days of acquiescence in Polish encroachments at Danzig were nearly over, or at least until March 30, 1945, when the German forces at Danzig surrendered to the Red Army after the city itself had disappeared in rubble and ashes under the bombardment of Soviet artillery and aerial attacks. German Danzig by that time existed solely in the hearts of her surviving citizens. The ruined shell of the city was provisionally inherited by Poles who were the involuntary slaves of their tiny Communist minority, and of the powerful Soviet Union. The Polish refusal to permit the return of Danzig to Germany ended in indescribable tragedy for both Poland and Germany.

The Stiffening of Polish Anti-German Measures

The Poles responded to the announcement of the Russo-German pact by intensifying their propaganda campaign against Germany. Mistreatment of the German minority was encouraged by reckless charges that hundreds of acts of violence were occurring against the Polish minority in the Reich. A conflict of opinion between Forster and Greiser resulted at Danzig on August 24th when several Polish customs inspectors were arrested for disturbing the peace. Chodacki demanded that the men be released at once without preferment of charges. Greiser insisted to Forster that the Danzig Government capitulate. He had not favored action against the offending Poles in the first place, and he regarded any attempt to enforce the law in Danzig, when this was displeasing to the Poles, as completely futile. The major topic of discussion in Poland was the Russo-German pact. The more Beck considered this development, the greater his satisfaction became. He declared with amusement to Noël that "it is now Ribbentrop who is proving the bad faith of the Soviets." The official *Gazeta Polska* alleged on August 24th that the pact

was an unsuccessful bluff, because it had produced no effect on the nerves of Poles, Frenchmen, or Englishmen. The conservative *Czas* called the pact a bluff which had been produced by "the new comedy in Berlin." The *Ilustrowany Kurier* claimed that the Hungarian leaders had denounced Hitler's willingness to compromise with the Bolshevik peril. One Polish journalist assured the *New York Times* that the new pact was of no military value to Germany. The *Kurier Warszawski* announced triumphantly that the new agreement furnished conclusive proof of the weakness of both its partners.

The Poles took notice of the fact that the old restored German battleship and training ship, *Schleswig-Holstein*, was scheduled to visit Danzig on August 24th during a trip which had been announced much earlier. The Polish authorities had expressed no objection to the proposed visit, and it was concluded that the ship was too weak to present a military threat to Poland. The Danzig Government had selected Albert Forster to head the Free City administration, and the Poles were informed that he would take his oath of office on August 30, 1939. The Polish Government refused to approve this arrangement. Chodacki submitted an ominous protest note to Danzig on August 24th which declared that full responsibility for all ensuing measures taken by the Polish Government would fall on the Danzig Senate. Bonnet was alarmed by this development, and he instructed Noël to advise Beck to refrain from all military action in the event of a Danzig Senate proclamation on the return of the Free City to the Reich. Beck rejected this advice, and he declared that Poland would respond with military force to any German attempt to annex Danzig. He indicated that he was not opposed in principle to consultation with the French and British, but if action was initiated by the Danzig authorities, the Poles might be compelled by the pressure of circumstances to act unilaterally without consulting the Western Powers.

presented it to Noël. German Chargé d'Affaires Wühlisch reported from Warsaw that Polish confidence in assistance from Great Britain and France remained unshaken by the conclusion of the Russo-German pact. It was evident that the Pact had not prompted the Poles to adopt a more moderate policy toward Germany or the German minority in Poland. The German Foreign Office took stock of its huge file of specific reports of excesses against national and ethnic Germans in Poland. More than ten detailed reports were arriving each day, and more than 1500 documented reports had been received since March 1939. They presented a staggering picture of brutality and human misery. Albert Forster had discussed the fate of the Germans in West Prussia and Posen with Edmund Veesenmayer, the special representative of Ribbentrop, on the afternoon of August 23, 1939. It was difficult to decide what advice if any should be given to these unfortunate people in the event of war. It seemed to Forster that they should either be told to stay where they were and defend themselves when attacked, or they should be advised to conceal themselves. Neither prospect was promising, because they had no means by which to resist and little possibility of successful concealment. The German Government repeated its earlier pledge to the Slovak Government at Bratislava on August 23rd that the Slovak armed forces would not be required in the event of war or requested to operate

outside their own territory. Germany was prepared in case of war to facilitate the return of territories to Slovakia which had been seized by Poland in 1938. The German Government announced that it was willing to guarantee the 1938 Slovakian frontier against Hungary. The Polish Government on August 25th dealt with a German protest that three German civilian airplanes carrying passengers and flying over the Baltic Sea had been fired upon by Polish batteries on the Hela peninsula. The Poles admitted firing on only one German airplane on August 24th, and they claimed that it had been sighted flying over Polish territory prior to the Polish attack. The German press devoted increasing space to detailed accounts of incidents against the Germans in Poland. The *Völkischer Beobachter* announced that more than 80,000 German refugees had succeeded in reaching German territory by August 20, 1939, and that some of them had come from distant Volhynia near the Russian frontier. The Western diplomats in Berlin were aware that Poland was now making sweeping charges of German mistreatment of the Polish minority, but it was noted that specific individual incidents, which were common in the German press, were conspicuously lacking. The Polish diplomats in Berlin were asked confidentially why they did not make an effort to assemble exact and detailed information about alleged incidents in Germany. The Poles confided that such incidents were far and few between and hard to find. They claimed that this was not because of German magnanimity, but because Germany desired to preserve the Polish minority as a hostage for the German minority in Poland. This was a ridiculous charge, because the German authorities had concluded, and had made no secret of their opinion, that decent treatment of the Poles in Germany failed to produce the slightest effect on Polish mistreatment of the German minority.

11.11 US Involvement

The Secret Polish Documents

Much has already been written about Roosevelt's campaign of deception and outright lies in getting the United States to intervene in the Second World War prior to the Japanese attack on Pearl Harbor in December 1941. Roosevelt's aid to Britain and the Soviet Union in violation of American neutrality and international law, his acts of war against Germany in the Atlantic in an effort to provoke a German declaration of war against the United States, his authorization of a vast "dirty tricks" campaign against U.S. citizens by British intelligence agents in violation of the Constitution, and his provocations and ultimatums against Japan which brought on the attack against Pearl Harbor – all this is extensively documented and reasonably well known.

Not so well known is the story of Roosevelt's enormous responsibility for the outbreak of the Second World War itself. This essay focuses on Roosevelt's secret campaign to provoke war in Europe prior to the outbreak of hostilities in September 1939. It deals particularly with his efforts to pressure Britain, France and Poland into war against Germany in 1938 and 1939. Franklin Roosevelt not only criminally involved America in

a war which had already engulfed Europe. He bears a grave responsibility before history for the outbreak of the most destructive war of all time. This paper relies heavily on a little-known collection of secret Polish documents which fell into German hands when Warsaw was captured in September 1939. These documents clearly establish Roosevelt's crucial role in bringing on the Second World War. They also reveal the forces behind the President which pushed for war.

When the Germans took Warsaw in late September 1939, they seized a mass of documents from the Polish Ministry of Foreign Affairs. In a letter of 8 April 1983, Dr. Karl Otto Braun of Munich informed me that the documents were captured by an SS brigade led by Freiherr von Kuensberg, whom Braun knew personally. In a surprise attack, the brigade captured the center of Warsaw ahead of the regular German army. Von Kuensberg told Braun that his men took control of the Polish Foreign Ministry just as Ministry officials were in the process of burning incriminating documents. Dr. Braun was an official of the German Foreign Office between 1938 and 1945. The German Foreign Office chose Hans Adolf von Moltke, formerly the Reich's Ambassador in Warsaw, to head a special Archive Commission to examine the collection and sort out those documents which might be suitable for publication. At the end of March 1940, 16 of these were published in book form under the title *Polnische Dokumente zur Vorgeschichte des Krieges* ["Polish Documents on the Pre-History of the War"]. The Foreign Office edition was subtitled "German White Book No. 3." The book was immediately published in various foreign language editions in Berlin and some other European capitals. An American edition was published in New York by Howell, Soskin and Company as *The German White Paper*. Historian C. Hartley Grattan contributed a remarkably cautious and reserved foreword.

The translation of the documents for the U.S. White Paper edition was inexcusably bad. Whole sentences and parts of sentences were missing and portions were grossly mistranslated. H. Keith Thompson explained to me why this was so during a conversation on 22 March 1983 and in a letter of 13 May 1983. A poor first draft English-language translation had been prepared in Berlin and sent to America. It was given to George Sylvester Viereck, a prominent pro-German American publicist and literary advisor to the German Library of Information in New York City. Thompson knew Viereck intimately and served as his chief aide and re-writer. Viereck had hurriedly redrafted the translation from Berlin into more readable prose but without any opportunity of comparing it to the original Polish text (which he could not read in any case) or even the official German-language version. In making stylistic changes for the sake of readability, the meaning of the original documents was thereby inadvertently distorted.

The matter was also discussed at a small dinner for Lawrence Dennis hosted by Thompson at Viereck's apartment in the Hotel Belleclaire in New York City in 1956. Viereck explained that he had been a highly paid literary consultant to the German government, responsible for the propaganda effect of publications, and could not be concerned with the translation groundwork normally done by clerks. Even the most careful translation of complicated documents is apt to distort the original meaning, and literary editing is

certain to do so, Viereck said. Thompson agreed with that view.

Media Sensation

The German Foreign Office made the documents public on Friday, 29 March 1940. In Berlin, journalists from around the world, including the United States, were given facsimile copies of the original Polish documents and translations in German. Journalists were permitted to examine the original documents themselves, along with an enormous pile of other documents from the Polish Foreign Ministry. The release of the documents was an international media sensation. American newspapers gave the story large front page headline coverage and published lengthy excerpts from the documents. But the impact was much less than the German government had hoped for. Leading U.S. government officials wasted no time in vehemently denouncing the documents as not authentic. Secretary of State Cordell Hull stated: "I may say most emphatically that neither I nor any of my associates in the Department of State have ever heard of any such conversations as those alleged, nor do we give them the slightest credence.

The statements alleged have not represented in any way at any time the thought or the policy of the American government." William Bullitt, the U.S. Ambassador to Paris who was particularly incriminated by the documents, announced: "I have never made to anyone the statements attributed to me." And Count Jerzy Potocki, the Polish Ambassador in Washington whose confidential reports to Warsaw were the most revealing, declared: "I deny the allegations attributed to my reports. I never had any conversations with Ambassador Bullitt on America's participation in war."

These categorical public denials by the highest officials had the effect of almost completely undercutting the anticipated impact of the documents. It must be remembered that this was several decades before the experiences of the Vietnam war and Watergate had taught another generation of Americans to be highly skeptical of such official denials. In 1940, the vast majority of the American people trusted their political leaders to tell them the truth.

After all, if the documents made public to the world by the German government were in fact authentic and genuine, it would mean that the great leader of the American democracy was a man who lied to his own people and broke his own country's laws, while the German government told the truth. To accept that would be quite a lot to expect of any nation, but especially of the trusting American public. Comment from Capitol Hill generally echoed the official government view. Senator Key Pittman, the Democratic Chairman of the Foreign Relations Committee, called the documents "unmitigated falsehood designed to create dissension in the United States." Senator Claude Peper, Democrat of Florida, declared: "It's German propaganda and shouldn't affect our policies in the least." Only a few were not impressed with the official denials. Representative Hamilton Fish of New York, the ranking Republican member of the House Foreign Affairs Committee, called for a Congressional investigation and declared in a radio address: "If

these charges were true, it would constitute a treasonable act. If President Roosevelt has entered into secret understandings or commitments with foreign governments to involve us in war, he should be impeached."

American newspapers stressed the high-level denials in reporting the release of the documents. The New York Times headline read: U.S. BRANDS AS FALSE NAZI DOCUMENTS CHARGING WE FOSTERED WAR IN EUROPE AND PROMISED TO JOIN ALLIES IF NEEDED. The Baltimore Sun headlined: NAZI DOCUMENTS LAYING WAR BLAME ON U.S. ARE ASSAILED IN WASHINGTON.

Although the book of Polish documents was labeled "first series," no further volumes ever appeared. From time to time the German government would make public additional documents from the Polish archives. These were published in book form in 1943 along with numerous other documents captured by the Germans from the French Foreign Ministry and other European archives, under the title *Roosevelts Weg in den Krieg: Geheimdokumente zur Kriegspolitik des Praesidenten der Vereinigten Staaten* ["Roosevelt's Way Into War: Secret Documents on the War Policy of the President of the United States"].

An important unanswered question is: Where are the original Polish documents today? Unless they were destroyed in the conflagration of the war, they presumably fell into either American or Soviet hands in 1945. In view of recent U.S. government policy on secret archival material, it is very unlikely that they would still be secret today if they had been acquired by the United States. My guess is that if they were not destroyed, they are now either in Moscow or at the East German Central State Archives in Potsdam. (Note: The original author of this text wrote it in 1983, Mark Weber) It is particularly important to keep in mind that these secret reports were written by top level Polish ambassadors, that is, by men who though not at all friendly to Germany nonetheless understood the realities of European Politics far better than those who made policy in the United States. For example, the Polish ambassadors realized that behind all their rhetoric about democracy and human rights, and expressions of love for the United States, the Jews who agitated for war against Germany were actually doing nothing other than ruthlessly furthering their own purely sectarian interests. Many centuries of experience in living closely with the Jews had made the Poles far more aware than most nationalities of the special character of this people.

The Poles viewed the Munich Settlement of 1938 very differently than did Roosevelt and his circle. The President bitterly attacked the Munich agreement, which gave self-determination to the three and a half million Germans of Czechoslovakia and settled a major European crisis, as a shameful and humiliating capitulation to German blackmail. Although wary of German might, the Polish government supported the Munich agreement, in part because a small Polish territory which had been a part of Czechoslovakia against the wishes of its inhabitants was united with Poland as a result of the Settlement. It is beyond the scope of this paper to go into the complexities of German-Polish relations between 1933 and 1939 and the reasons for the German attack against Poland at dawn on the first day of September 1939. However, it should be noted that Poland had refused

to even negotiate over self-determination for the German city of Danzig and the ethnic German minority in the so-called Polish Corridor. Hitler felt compelled to resort to arms when he did in response to a growing Polish campaign of terror and dispossession against the one and a half million ethnic Germans under Polish rule. In my view, if ever a military action was justified, it was the German campaign against Poland in 1939.

After the war the Allied-appointed judges at the International Military Tribunal staged at Nuremberg refused to admit the Polish documents as evidence for the German defense. Had these pieces of evidence been admitted, the Nuremberg undertaking might have been less a victors' show trial and more a genuinely impartial court of international justice.

Authenticity Beyond Doubt

There is now absolutely no question that the documents from the Polish Foreign Ministry in Warsaw made public by the German government are genuine and authentic.

Charles C. Tansill, professor of American diplomatic history at Georgetown University, considered them genuine. "... I had a long conversation with M. Lipsky, the Polish ambassador in Berlin in the prewar years, and he assured me that the documents in the German White Paper are authentic," he wrote. [8] Historian and sociologist Harry Elmer Barnes confirmed this assessment: "Both Professor Tansill and myself have independently established the thorough authenticity of these documents." In America's Second Crusade, William H. Chamberlin reported: "I have been privately informed by an extremely reliable source that Potocki, now residing in South America, confirmed the accuracy of the documents, so far as he was concerned." More importantly, Edward Raczyński, the Polish Ambassador in London from 1934 to 1945, confirmed the authenticity of the documents in his diary, which was published in 1963 under the title *In Allied London*. In his entry for 20 June 1940, he wrote: The Germans published in April a White Book containing documents from the archives of our Ministry of Foreign Affairs, consisting of reports from Potocki in Washington, Lukaszewicz in Paris and myself. I do not know where they found them, since we were told that the archives had been destroyed. The documents are certainly genuine, and the facsimiles show that for the most part the Germans got hold of originals and not merely copies.

In this 'First Series' of documents I found three reports from this Embassy, two by myself and the third signed by me but written by Balinski. I read them with some apprehension, but they contained nothing liable to compromise myself or the Embassy or to impair relations with our British hosts.

In 1970 their authenticity was reconfirmed with the publication of *Diplomat in Paris 1936-1939*. This important work consists of the official papers and memoirs of Juliusz Lukaszewicz, the former Polish Ambassador to Paris who authored several of the secret diplomatic reports made public by the German government. The collection was edited by Waclaw Jedrzejewicz, a former Polish diplomat and cabinet member, and later Pro-

fessor Emeritus of Wellesley and Ripon colleges. Professor Jedrzejewicz considered the documents made public by the Germans absolutely genuine. He quoted extensively from several of them. Mr. Tyler G. Kent has also vouched for the authenticity of the documents. He states that while working at the U.S. embassy in London in 1939 and 1940, he saw copies of U.S. diplomatic messages in the files which corresponded to the Polish documents and which confirmed their accuracy.

Two Key Diplomats

Two American diplomats who played especially crucial roles in the European crisis of 1938-1939 are mentioned often in the Polish documents. The first of these was William C. Bullitt. Although his official position was U.S. Ambassador to France, he was in reality much more than that. He was Roosevelt's "super envoy" and personal deputy in Europe. Like Roosevelt, Bullitt "rose from the rich." He was born into an important Philadelphia banking family, one of the city's wealthiest. His mother's grandfather, Jonathan Horwitz, was a German Jew who had come to the United States from Berlin. In 1919 Bullitt was an assistant to President Wilson at the Versailles peace conference. That same year, Wilson and British Prime Minister Lloyd George sent him to Russia to meet with Lenin and determine if the new Bolshevik government deserved recognition by the Allies. Bullitt met with Lenin and other top Soviet leaders and upon his return urged recognition of the new regime. But he had a falling-out with Wilson and left diplomatic service. In 1923 he married Louise Bryant Reed, the widow of American Communist leader John Reed. In Europe Bullitt collaborated with Sigmund Freud on a psychoanalytical biography of Wilson. When Roosevelt became President in 1933, he brought Bullitt back into diplomatic life.

In France, the New York Times noted, Bullitt "was acclaimed there as 'the Champagne Ambassador' on account of the lavishness of his parties, but he was far more than the envoy to Paris: He was President Roosevelt's intimate adviser on European affairs, with telephone access to the President at any hour." Bullitt and Roosevelt were fond of each other and saw eye to eye on foreign policy issues. Both were aristocrats and thorough internationalists who shared definite views on how to remake the world and a conviction that they were destined to bring about that grand reorganization. The second most important American diplomat in Europe was Joseph P. Kennedy, Roosevelt's Ambassador at the Court of St. James. Like Bullitt he was a wealthy banker. But this Boston Catholic of Irish ancestry was otherwise a very different sort of man. Roosevelt sent Kennedy, an important Democratic party figure and father of a future President, to Britain for purely political reasons. Roosevelt disliked and distrusted Kennedy, and this sentiment grew as Kennedy opposed the President's war policies more and more vehemently. Moreover, Kennedy despised his counterpart in Paris. In a letter to his wife, he wrote: "I talk to Bullitt occasionally. He is more rattlebrained than ever. His judgment is pathetic and I am afraid of his influence on F.D.R. because they think alike on many things." (I wonder

if Kennedy told his son about the deceptions of the Allies which might have influenced his policies as President and ultimately led to his assassination).

The Documents

Here now are extensive excerpts from the Polish documents themselves. They are given in chronological order. They are remarkably lucid for diplomatic reports and speak eloquently for themselves.

On 9 February 1938, the Polish Ambassador in Washington, Count Jerzy Potocki, reported to the Foreign Minister in Warsaw on the Jewish role in making American foreign policy: The pressure of the Jews on President Roosevelt and on the State Department is becoming ever more powerful The Jews are right now the leaders in creating a war psychosis which would plunge the entire world into war and bring about general catastrophe. This mood is becoming more and more apparent. In their definition of democratic states, the Jews have also created real chaos: they have mixed together the idea of democracy and communism and have above all raised the banner of burning hatred against Nazism. This hatred has become a frenzy. It is propagated everywhere and by every means: in theaters, in the cinema, and in the press. The Germans are portrayed as a nation living under the arrogance of Hitler which wants to conquer the whole world and drown all of humanity in an ocean of blood. In conversations with Jewish press representatives I have repeatedly come up against the inexorable and convinced view that war is inevitable. This international Jewry exploits every means of propaganda to oppose any tendency towards any kind of consolidation and understanding between nations. In this way, the conviction is growing steadily but surely in public opinion here that the Germans and their satellites, in the form of fascism, are enemies who must be subdued by the 'democratic world.'

On 21 November 1938, Ambassador Potocki sent a report to Warsaw which discussed in some detail a conversation between himself and Bullitt, who happened to be back in Washington: The day before yesterday I had a long conversation with Ambassador Bullitt, who is here on vacation. He began by remarking that friendly relations existed between himself and [Polish] Ambassador Lukasiewicz in Paris, whose company he greatly enjoyed. Since Bullitt regularly informs President Roosevelt about the international situation in Europe, and particularly about Russia, great attention is given to his reports by President Roosevelt and the State Department. Bullitt speaks energetically and interestingly. Nonetheless, his reaction to events in Europe resembles the view of a journalist more than that of a politician ... About Germany and Chancellor Hitler he spoke with great vehemence and strong hatred. He said that only force, and ultimately a war would put an end to the insane future German expansionism. To my question asking how he visualized this coming war, he replied that above all the United States, France and England must rearm tremendously in order to be in a position to oppose German power. Only then, when the moment is ripe, declared Bullitt further, will one be ready for the final

decision. I asked him in what way a conflict could arise, since Germany would probably not attack England and France first. I simply could not see the connecting point in this whole combination.

Bullitt replied that the democratic countries absolutely needed another two years until they were fully armed. In the meantime, Germany would probably have advanced with its expansion in an easterly direction. It would be the wish of the democratic countries that armed conflict would break out there, in the East between the German Reich and Russia. As the Soviet Union's potential strength is not yet known, it might happen that Germany would have moved too far away from its base, and would be condemned to wage a long and weakening war. Only then would the democratic countries attack Germany, Bullitt declared, and force her to capitulate. In reply to my question whether the United States would take part in such a war, he said, 'Undoubtedly yes, but only after Great Britain and France had let loose first!' Feeling in the United States was no intense against Nazism and Hitlerism, that a psychosis already prevails today among Americans similar to that before America's declaration of war against Germany in 1917. Bullitt did not give the impression of being very well informed about the situation in Eastern Europe, and he conversed in a rather superficial way.

Ambassador Potocki's report from Washington of 9 January 1939 dealt in large part with President Roosevelt's annual address to Congress: President Roosevelt acts on the assumption that the dictatorial governments, above all Germany and Japan, only understand a policy of force. Therefore he has decided to react to any future blows by matching them. This has been demonstrated by the most recent measures of the United States.

The American public is subject to an ever more alarming propaganda which is under Jewish influence and continuously conjures up the specter of the danger of war. Because of this the Americans have strongly altered their views on foreign policy problems, in comparison with last year.

Of all the documents in this collection, the most revealing is probably the secret report by Ambassador Potocki of 12 January 1939 which dealt with the domestic situation in the United States. This report is given here in full:

The feeling now prevailing in the United States is marked by a growing hatred of Fascism and, above all, of Chancellor Hitler and everything connected with Nazism. Propaganda is mostly in the hands of the Jews who control almost 100 percent radio, film, daily and periodical press. Although this propaganda is extremely coarse and presents Germany as black as possible – above all religious persecution and concentration camps are exploited – this propaganda is nevertheless extremely effective since the public here is completely ignorant and knows nothing of the situation in Europe. Right now most Americans regard Chancellor Hitler and Nazism as the greatest evil and greatest danger threatening the world. The situation here provides an excellent platform for public speakers of all kinds, for emigrants from Germany and Czechoslovakia who don't spare any words to incite the

public here with every kind of slander. They praise American liberty which they contrast with the totalitarian states.

It is interesting to note that in this extremely well-planned campaign which is conducted above all against National Socialism, Soviet Russia is almost completely excluded. If mentioned at all, it is only in a friendly manner and things are presented in such a way as if Soviet Russia were working with the bloc of democratic states. Thanks to the clever propaganda the sympathy of the American public is completely on the side of Red Spain. Besides this propaganda, a war psychosis is being artificially created. The American people are told that peace in Europe is hanging only by a thread and that war is unavoidable. At the same time the American people are unequivocally told that in case of a world war, America must also take an active part in order to defend the slogans of freedom and democracy in the world.

President Roosevelt was the first to express hatred against Fascism. In doing so he was serving a double purpose: First, he wanted to divert the attention of the American people from domestic political problems, especially the problem of the struggle between capital and labor. Second, by creating a war psychosis and by spreading rumors about danger threatening Europe, he wanted to get the American people to accept an enormous armament program which exceeds the defense requirements of the United States. Regarding the first point, it must be said that the internal situation on the labor market is steadily growing worse. The unemployed today already number twelve million. Federal and state expenditures are increasing daily. Only the huge sums, running into billions, which the treasury expends for emergency labor projects, are keeping a certain amount of peace in the country. Thus far there have only been the usual strikes and local unrest. But how long this kind of government aid can be kept up cannot be predicted. The excitement and indignation of public opinion, and the serious conflict between private enterprises and enormous trusts on the one hand, and with labor on the other, have made many enemies for Roosevelt and are causing him many sleepless nights.

As to point two, I can only say that President Roosevelt, as a clever political player and an expert of the American mentality, speedily steered public attention away from the domestic situation to fasten it on foreign policy. The way to achieve this was simple. One needed, on the one hand, to conjure up a war menace hanging over the world because of Chancellor Hitler, and, on the other hand, to create a specter by babbling about an attack of the totalitarian states against the United States. The Munich pact came to President Roosevelt as a godsend. He portrayed it as a capitulation of France and England to bellicose German militarism. As people say here: Hitler compelled Chamberlain at pistol-point. Hence, France and England had no choice and had to conclude a shameful peace.

The prevalent hatred against everything which is in any way connected with German Nazism is further kindled by the brutal policy against the Jews in Germany and by the émigré problem. In this action, various Jewish intellectuals participated: for instance, Bernard Baruch; the Governor of New York State, Lehman; the newly appointed judge of the Supreme Court, Felix Frankfurter; Secretary of the Treasury Morgenthau; and others

who are personal friends of President Roosevelt. They want the President to become the champion of human rights, freedom of religion and speech, and the man who in the future will punish trouble-makers. These groups of people who occupy the highest positions in the American government and want to pose as representatives of 'true Americanism' and 'defenders of democracy' are, in the last analysis, connected by unbreakable ties with international Jewry.

For this Jewish international, which above all is concerned with the interests of its race, to portray the President of the United States as the 'idealist' champion on human rights was a very clever move. In this manner they have created a dangerous hotbed for hatred and hostility in this hemisphere and divided the world into two hostile camps. The entire issue is worked out in a masterly manner. Roosevelt has been given the foundation for activating American foreign policy, and simultaneously has been procuring enormous military stocks for the coming war, for which the Jews are striving very consciously. With regard to domestic policy, it is very convenient to divert public attention from anti-Semitism, which is constantly growing in the United States, by talking about the necessity of defending religion and individual liberty against the onslaught of Fascism.

On 16 January 1939, Polish Ambassador Potocki reported to the Warsaw Foreign Ministry on another lengthy conversation he had with Roosevelt's personal envoy, William Bullitt: The day before yesterday, I had a longer discussion with Ambassador Bullitt in the Embassy where he called on me. Bullitt leaves on the 21st of this month for Paris, from where he has been absent for almost three months. He is sailing with a whole 'trunk' full of instructions, conversations, and directives from President Roosevelt, the State Department and Senators who belong to the Committee on Foreign Affairs. In talking with Bullitt I had the impression that he had received from President Roosevelt a very precise definition of the attitude taken by the United States towards the present European crisis. He will present this material at the Quai d'Orsay [the French Foreign Ministry] and will make use of it in discussions with European statesmen. The contents of these directives, as Bullitt explained them to me in the course of a conversation lasting half an hour, were:

1. The vitalizing of foreign policy under the leadership of President Roosevelt, who severely and unambiguously condemns totalitarian countries.
2. United States preparations for war on sea, land and air will be carried out at an accelerated pace and will consume the colossal sum of 1.25 billion dollars.
3. It is the decided opinion of the President that France and Britain must put an end to any sort of compromise with the totalitarian countries. They must not get into any discussions aiming at any kind of territorial changes.
4. They have the moral assurance that the United States will abandon the policy of isolation and be prepared to intervene actively on the side of Britain and France in case of war. America is ready to place its whole wealth of money and raw materials at their disposal.

The Polish Ambassador to Paris, Juliusz (Jules) Lukasiewicz, sent a top secret report to the Foreign Ministry in Warsaw at the beginning of February 1939 which outlined U.S. policy towards Europe as explained to him by William Bullitt: A week ago, the Ambassador of the United States, William Bullitt returned to Paris after a three months' leave in America. Meanwhile, I have had two conversations with him which enable me to inform you of his views regarding the European situation and to give a survey of Washington's policy. The international situation is regarded by official circles as extremely serious and in constant danger of armed conflict. Those in authority are of the opinion that if war should break out between Britain and France on the one hand, and Germany and Italy on the other, and should Britain and France be defeated, the Germans would endanger the real interests of the United States on the American continent. For this reason, one can foresee right from the beginning the participation of the United States in the war on the side of France and Britain, naturally some time after the outbreak of the war. As Ambassador Bullitt expressed it: 'Should war break out we shall certainly not take part in it at the beginning, but we shall finish it.'

On 7 March 1939, Ambassador Potocki sent a remarkably lucid and perceptive report on Roosevelt's foreign policy to his government in Warsaw. This document was first made public when leading German newspapers published it in German translation, along with a facsimile reproduction of the first page of the Polish original, in their editions of 28 October 1940. The main National Socialist party newspaper, the *Voelkischer Beobachter*, published the Ambassador's report with this observation:

The document itself needs no commentary. We do not know, and it does not concern us, whether the internal American situation as reported by the Polish diplomat is correct in every detail. That must be decided by the American people alone. But in the interest of historical truth it is important for us to show that the warmongering activities of American diplomacy, especially in Europe, are once again revealed and proven by this document. It still remains a secret just who, and for what motives, have driven American diplomacy to this course. In any case, the results have been disastrous for both Europe and America. Europe was plunged into war and America has brought upon itself the hostility of great nations which normally have no differences with the American people and, indeed, have not been in conflict but have lived for generations as friends and want to remain so.

This report was not one of the Polish documents which was released in March 1940 and published as part of the "German White Book No. 3" (or the German White Paper). However, it was published in 1943 as part of the collection entitled "Roosevelt's Way Into War." As far as I can determine, this English translation is the first that has ever appeared. Ambassador Potocki's secret report of 7 March 1939 is here given in full:

The foreign policy of the United States right now concerns not only the government, but the entire American public as well. The most important elements are the public statements of President Roosevelt. In almost every public speech he refers more or less explicitly to the necessity of activating foreign policy against the chaos of views and ideologies in Europe. These statements are picked up by the press and then cleverly

filtered into the minds of average Americans in such a way as to strengthen their already formed opinions. The same theme is constantly repeated, namely, the danger of war in Europe and saving the democracies from inundation by enemy fascism. In all of these public statements there is normally only a single theme, that is, the danger from Nazism and Nazi Germany to world peace. As a result of these speeches, the public is called upon to support rearmament and the spending of enormous sums for the navy and the air force. The unmistakable idea behind this is that in case of an armed conflict the United States cannot stay out but must take an active part in the maneuvers. As a result of the effective speeches of President Roosevelt, which are supported by the press, the American public is today being conscientiously manipulated to hate everything that smacks of totalitarianism and fascism. But it is interesting that the USSR is not included in all this. The American public considers Russia more in the camp of the democratic states. This was also the case during the Spanish civil war when the so-called Loyalists were regarded as defenders of the democratic idea.

The State Department operates without attracting a great deal of attention, although it is known that Secretary of State [Cordell] Hull and President Roosevelt swear allegiance to the same ideas. However, Hull shows more reserve than Roosevelt, and he loves to make a distinction between Nazism and Chancellor Hitler on the one hand, and the German people on the other. He considers this form of dictatorial government a temporary "necessary evil." In contrast, the State Department is unbelievably interested in the USSR and its internal situation and openly worries itself over its weaknesses and decline. The main reason for United States interest in the Russians is the situation in the Far East. The current government would be glad to see the Red Army emerge as the victor in a conflict with Japan. That's why the sympathies of the government are clearly on the side of China, which recently received considerable financial aid amounting to 25 million dollars.

Eager attention is given to all information from the diplomatic posts as well as to the special emissaries of the President who serve as Ambassadors of the United States. The President frequently calls his representatives from abroad to Washington for personal exchanges of views and to give them special information and instructions. The arrival of the envoys and ambassadors is always shrouded in secrecy and very little surfaces in the press about the results of their visits. The State Department also takes care to avoid giving out any kind of information about the course of these interviews. The practical way in which the President makes foreign policy is most effective. He gives personal instructions to his representatives abroad, most of whom are his personal friends. In this way the United States is led down a dangerous path in world politics with the explicit intention of abandoning the comfortable policy of isolation. The President regards the foreign policy of his country as a means of satisfying his own personal ambition. He listens carefully and happily to his echo in the other capitals of the world. In domestic as well as in foreign policy, the Congress of the United States is the only object that stands in the way of the President and his government in carrying out his decisions quickly and

ambitiously. One hundred and fifty years ago, the Constitution of the United States gave the highest prerogatives to the American parliament which may criticize or reject the law of the White House.

The foreign policy of President Roosevelt has recently been the subject of intense discussion in the lower house and in the Senate, and this has caused excitement. The so-called Isolationists, of whom there are many in both houses, have come out strongly against the President. The representatives and senators were especially upset over the remarks by the President, which were published in the press, in which he said that the borders of the United States lie on the Rhine. But President Roosevelt is a superb political player and understands completely the power of the American parliament. He has his own people there, and he knows how to withdraw from an uncomfortable situation at the right moment. Very intelligently and cleverly he ties together the question of foreign policy with the issues of American rearmament. He particularly stresses the necessity of spending enormous sums in order to maintain a defensive peace. He says specifically that the United States is not arming in order to intervene or to go to the aid of England or France in case of war, but rather because of the need to show strength and military preparedness in case of an armed conflict in Europe. In his view this conflict is becoming ever more acute and is completely unavoidable.

Since the issue is presented this way, the houses of Congress have no cause to object. To the contrary, the houses accepted an armament program of more than one billion dollars. (The normal budget is 550 million, the emergency 552 million dollars.) However, under the cloak of a rearmament policy, President Roosevelt continues to push forward his foreign policy, which unofficially shows the world that in case of war the United States will come out on the side of the democratic states with all military and financial power.

In conclusion it can be said that the technical and moral preparation of the American people for participation in a war-if one should break out in Europe-is preceding rapidly. It appears that the United States will come to the aid of France and Great Britain with all its resources right from the beginning. However, I know the American public and the representatives and senators who all have the final word, and I am of the opinion that the possibility that America will enter war as in 1917 is not great. That's because the majority of states in the mid-West and West, where the rural element predominates, want to avoid involvement in European disputes at all costs. They remember the declaration of the Versailles Treaty and the well-known phrase that the war was to save the world for democracy. Neither the Versailles Treaty nor that slogan have reconciled the United States to that war. For millions there remains only a bitter aftertaste because of unpaid billions which the European states still owe America.

Juliusz Lukaszewicz, Poland's Ambassador to France, reported to Warsaw on 29 March 1939 about further conversations with U.S. envoy Bullitt in Paris. Lukaszewicz discussed Roosevelt's efforts to get both Poland and Britain to adopt a totally uncompromising policy towards Germany, even in the face of strong sentiment for peace. The report concludes with these words: ... I consider it my duty to inform you of all the aforesaid

because I believe that collaboration with Ambassador Bullitt in such difficult and complicated times may prove useful to us. In any case it is absolutely certain that he agrees entirely with our point of view and is prepared for the most extensive friendly collaboration possible. In order to strengthen the efforts of the American Ambassador in London [Joseph Kennedy], I called the attention of Ambassador Bullitt to the fact that it is not impossible that the British may treat the efforts of the United States with well-concealed contempt. He answered that I am probably right, but that nevertheless the United States has at its disposal the means to really bring pressure on England. He would be giving serious consideration to mobilizing these means.

The Polish Ambassador in London, Count Edward Raczyński, reported to Warsaw on 29 March 1939 on the continuing European crisis and on a conversation he had with Ambassador Joseph Kennedy, his American counterpart. Kennedy's remarks to Raczyński confirmed Bullitt's reputation in diplomatic circles as an indiscreet big mouth: I asked Mr. Kennedy point blank about the conference which he is supposed to have had recently with [British Prime Minister] Mr. Chamberlain concerning Poland. Kennedy was surprised and declared categorically that a conversation of such special significance never took place. At the same time, and thereby contradicting his own assertion to a certain extent, Kennedy expressed displeasure and surprise that his colleagues in Paris and Warsaw [William Bullitt and Anthony Biddle] 'who are not, as himself, in a position to get a clear picture of conditions in England' should talk so openly about this conversation. Mr. Kennedy—who made me understand that his views were based on a series of conversations with the most important authorities here—declared that he was convinced that should Poland decide in favor of armed resistance against Germany, especially with regard to Danzig, it would draw England in its wake.

This concludes the excerpts from the Polish reports.

The Path To War

The secret policy was confirmed after the war with the release of a confidential diplomatic report by the British Ambassador to Washington, Sir Ronald Lindsay. During his three years of service in Washington, the veteran diplomat had developed little regard for America's leaders. He considered Roosevelt an amiable and impressionable lightweight, and warned the British Foreign Office that it should not tell William Bullitt anything beyond what it wouldn't mind reading later in an American newspaper.

On 19 September 1938 – that is, a year before the outbreak of war in Europe – Roosevelt called Lindsay to a very secret meeting at the White House. At the beginning of their long conversation, according to Lindsay's confidential dispatch to London, Roosevelt "emphasized the necessity of absolute secrecy. Nobody must know I had seen him and he himself would tell nobody of the interview. I gathered not even the State Department." The two discussed some secondary matters before Roosevelt got to the main point of the conference. "This is the very secret part of his communication and it must not be known

to anyone that he has even breathed a suggestion." The President told the Ambassador that if news of the conversation was ever made public, it could mean his impeachment. And no wonder. What Roosevelt proposed was a cynically brazen but harebrained scheme to violate the U.S. Constitution and dupe the American people.

The President said that if Britain and France "would find themselves forced to war" against Germany, the United States would ultimately also join. But this would require some clever maneuvering. Britain and France should impose a total blockade against Germany without actually declaring war and force other states (including neutrals) to abide by it. This would certainly provoke some kind of German military response, but it would also free Britain and France from having to actually declare war. For propaganda purposes, the "blockade must be based on loftiest humanitarian grounds and on the desire to wage hostilities with minimum of suffering and the least possible loss of life and property, and yet bring the enemy to his knees." Roosevelt conceded that this would involve aerial bombardment, but "bombing from the air was not the method of hostilities which caused really great loss of life." The important point was to "call it defensive measures or anything plausible but avoid actual declaration of war." That way, Roosevelt believed he could talk the American people into supporting war against Germany, including shipments of weapons to Britain and France, by insisting that the United States was still technically neutral in a non-declared conflict. "This method of conducting war by blockade would in his [Roosevelt's] opinion meet with approval of the United States if its humanitarian purpose were strongly emphasized," Lindsay reported.

The American Ambassador to Italy, William Phillips, admitted in his postwar memoirs that the Roosevelt administration was already committed to going to war on the side of Britain and France in late 1938. "On this and many other occasions," Phillips wrote, "I would like to have told him [Count Ciano, the Italian Foreign Minister] frankly that in the event of a European war, the United States would undoubtedly be involved on the side of the Allies. But in view of my official position, I could not properly make such a statement." Carl J. Burckhardt, the League of Nations High Commissioner to Danzig, reported in his postwar memoirs on a remarkable conversation held at the end of 1938 with Anthony Drexel Biddle, the American Ambassador to Poland. Biddle was a rich banker with close ties to the Morgan financial empire. A thoroughgoing internationalist, he was an ideological colleague of President Roosevelt and a good friend of William Bullitt. Burckhardt, a Swiss professor, served as High Commissioner between 1937 and 1939. Nine months before the outbreak of armed conflict, on 2 December 1938, Biddle told Burckhardt with remarkable satisfaction that the Poles were ready to wage war over Danzig. They would counter the motorized strength of the German army with agile maneuverability. 'In April,' he [Biddle] declared, 'a new crisis would break out. Not since the torpedoing of the Lusitania [in 1915] had such a religious hatred against Germany reigned in America as today! Chamberlain and Daladier [the moderate British and French leaders] would be blown away by public opinion. This was a holy war! without instructions from Washington, and these I never received.'

The fateful British pledge to Poland of 31 March 1939 to go to war against Germany in case of a Polish-German conflict would not have been made without strong pressure from the White House. On 14 March 1939, Slovakia declared itself an independent republic, thereby dissolving the state known as Czechoslovakia. That same day, Czechoslovak President Emil Hacha signed a formal agreement with Hitler establishing a German protectorate over Bohemia and Moravia, the Czech portion of the federation. The British government initially accepted the new situation, but then Roosevelt intervened.

In their nationally syndicated column of 14 April 1939, the usually very well informed Washington journalists Drew Pearson and Robert S. Allen reported that on 16 March 1939 Roosevelt had "sent a virtual ultimatum to Chamberlain" demanding that henceforth the British government strongly oppose Germany. According to Pearson and Allen, who completely supported Roosevelt's move, "the President warned that Britain could expect no more support, moral or material through the sale of airplanes, if the Munich policy continued." Chamberlain gave in and the next day, 17 March, ended Britain's policy of cooperation with Germany in a speech at Birmingham bitterly denouncing Hitler. Two weeks later the British government formally pledged itself to war in case of German-Polish hostilities. Bullitt's response to the creation of the German protectorate over Bohemia and Moravia was to telephone Roosevelt and, in an "almost hysterical" voice, urge him to make a dramatic denunciation of Germany and immediately ask Congress to repeal the Neutrality Act.

In a confidential telegram to Washington dated 9 April 1939, Bullitt reported from Paris on another conversation with Ambassador Lukasiewicz. He had told the Polish envoy that although U.S. law prohibited direct financial aid to Poland, it might be possible to circumvent its provisions. The Roosevelt administration might be able to supply war planes to Poland indirectly through Britain. "The Polish Ambassador asked me if it might not be possible for Poland to obtain financial help and aeroplanes from the United States. I replied that I believed the Johnson Act would forbid any loans from the United States to Poland but added that it might be possible for England to purchase planes for cash in the United States and turn them over to Poland."

On 25 April 1939, four months before the outbreak of war, Bullitt called American newspaper columnist Karl von Wiegand, chief European correspondent of the International News Service, to the U.S. embassy in Paris and told him: "War in Europe has been decided upon. Poland has the assurance of the support of Britain and France, and will yield to no demands from Germany. America will be in the war soon after Britain and France enter it." In a lengthy secret conversation at Hyde Park on 28 May 1939, Roosevelt assured the former President of Czechoslovakia, Dr. Edvard Benes, that America would actively intervene on the side of Britain and France in the anticipated European war.

In June 1939, Roosevelt secretly proposed to the British that the United States should establish "a patrol over the waters of the Western Atlantic with a view to denying them to the German Navy in the event of war." The British Foreign Office record of this offer

noted that “although the proposal was vague and woolly and open to certain objections, we assented informally as the patrol was to be operated in our interests.” Many years after the war, Georges Bonnet, the French Foreign Minister in 1939, confirmed Bullitt’s role as Roosevelt’s deputy in pushing his country into war. In a letter to Hamilton Fish dated 26 March 1971, Bonnet wrote: “One thing is certain is that Bullitt in 1939 did everything he could to make France enter the war.” An important confirmation of the crucial role of Roosevelt and the Jews in pushing Britain into war comes from the diary of James V. Forrestal, the first U.S. Secretary of Defense. In his entry for 27 December 1945, he wrote: Played golf today with [former Ambassador] Joe Kennedy. I asked him about his conversations with Roosevelt and [British Prime Minister] Neville Chamberlain from 1938 on. He said Chamberlain’s position in 1938 was that England had nothing with which to fight and that she could not risk going to war with Hitler. Kennedy’s view: That Hitler would have fought Russia without any later conflict with England if it had not been for [William] Bullitt’s urging on Roosevelt in the summer of 1939 that the Germans must be faced down about Poland; neither the French nor the British would have made Poland a cause of war if it had not been for the constant needling from Washington. Bullitt, he said, kept telling Roosevelt that the Germans wouldn’t fight; Kennedy that they would, and that they would overrun Europe. Chamberlain, he says, stated that America and the world Jews had forced England into the war. In his telephone conversations with Roosevelt in the summer of 1939, the President kept telling him to put some iron up Chamberlain’s backside.

When Ambassador Potocki was back in Warsaw on leave from his post in Washington, he spoke with Count Jan Szembek, the Polish Foreign Ministry Under-Secretary, about the growing danger of war. In his diary entry of 6 July 1939, Szembek recorded Potocki’s astonishment at the calm mood in Poland. In comparison with the war psychosis that had gripped the West, Poland seemed like a rest home. “In the West,” the Ambassador told Szembek, “there are all kinds of elements openly pushing for war: the Jews, the super-capitalists, the arms dealers. Today they are all ready for a great business, because they have found a place which can be set on fire: Danzig; and a nation that is ready to fight: Poland. They want to do business on our backs. They are indifferent to the destruction of our country. Indeed, since everything will have to be rebuilt later on, they can profit from that as well.”

On 24 August 1939, just a week before the outbreak of hostilities, Chamberlain’s closest advisor, Sir Horace Wilson, went to Ambassador Kennedy with an urgent appeal from the British Prime Minister for President Roosevelt. Regretting that Britain had unequivocally obligated itself in March to Poland in case of war, Chamberlain now turned in despair to Roosevelt as a last hope for peace. He wanted the American President to “put pressure on the Poles” to change course at this late hour and open negotiations with Germany. By telephone Kennedy told the State Department that the British “felt that they could not, given their obligations, do anything of this sort but that we could.” Presented with this extraordinary opportunity to possibly save the peace of Europe, Roosevelt rejected

Chamberlain's desperate plea out of hand. At that, Kennedy reported, the Prime Minister lost all hope. "The futility of it all," Chamberlain had told Kennedy, "is the thing that is frightful. After all, we cannot save the Poles. We can merely carry on a war of revenge that will mean the destruction of all Europe."

Roosevelt liked to present himself to the American people and the world as a man of peace. To a considerable degree, that is still his image today. But Roosevelt cynically rejected genuine opportunities to act for peace when they were presented. In 1938 he refused even to answer requests by French Foreign Minister Bonnet on 8 and 12 September to consider arbitrating the Czech-German dispute. And a year later, after the outbreak of war, a melancholy Ambassador Kennedy beseeched Roosevelt to act boldly for peace. "It seems to me that this situation may crystallize to a point where the President can be the savior of the world," Kennedy cabled on 11 September from London. "The British government as such certainly cannot accept any agreement with Hitler, but there may be a point when the President himself may work out plans for world peace. Now this opportunity may never arise, but as a fairly practical fellow all my life, I believe that it is entirely conceivable that the President can get himself in a spot where he can save the world ..."

But Roosevelt rejected out of hand this chance to save the peace of Europe. To a close political crony, he called Kennedy's plea "the silliest message to me that I have ever received." He complained to Henry Morgenthau that his London Ambassador was nothing but a pain in the neck: "Joe has been an appeaser and will always be an appeaser ... If Germany and Italy made a good peace offer tomorrow, Joe would start working on the King and his friend the Queen and from there on down to get everybody to accept it."

Infuriated at Kennedy's stubborn efforts to restore peace in Europe or at least limit the conflict that had broken out, Roosevelt instructed his Ambassador with a "personal" and "strictly confidential" telegram on 11 September 1939 that any American peace effort was totally out of the question. The Roosevelt government, it declared, "sees no opportunity nor occasion for any peace move to be initiated by the President of the United States. The people [sic] of the United States would not support any move for peace initiated by this Government that would consolidate or make possible a survival of a regime of force and aggression."

Hamilton Fish Warns The Nation

In the months before armed conflict broke out in Europe, perhaps the most vigorous and prophetic American voice of warning against President Roosevelt's campaign to incite war was that of Hamilton Fish, a leading Republican congressman from New York. In a series of hard-hitting radio speeches, Fish rallied considerable public opinion against Roosevelt's deceptive war policy. Here are only a few excerpts from some of those addresses.

On 6 January 1939, Fish told a nationwide radio audience: The inflammatory and provocative message of the President to Congress and the world [given two days before] has unnecessarily alarmed the American people and created, together with a barrage of propaganda emanating from high New Deal officials, a war hysteria, dangerous to the peace of America and the world. The only logical conclusion to such speeches is another war fought overseas by American soldiers. All the totalitarian nations referred to by President Roosevelt ... haven't the faintest thought of making war on us or invading Latin America. I do not propose to mince words on such an issue, affecting the life, liberty and happiness of our people. The time has come to call a halt to the warmongers of the New Deal, backed by war profiteers, Communists, and hysterical internationalists, who want us to quarantine the world with American blood and money. He [Roosevelt] evidently desires to whip up a frenzy of hate and war psychosis as a red herring to take the minds of our people off their own unsolved domestic problems. He visualizes hobgoblins and creates in the public mind a fear of foreign invasions that exists only in his own imagination.

On 5 March, Fish spoke to the country over the Columbia radio network: The people of France and Great Britain want peace but our warmongers are constantly inciting them to disregard the Munich Pact and resort to the arbitrament of arms. If only we would stop meddling in foreign lands the old nations of Europe would compose their own quarrels by arbitration and the processes of peace, but apparently we won't let them. Fish addressed the listeners of the National Broadcasting Company network on 5 April with these words:

The youth of America are again being prepared for another blood bath in Europe in order to make the world safe for democracy. If Hitler and the Nazi government regain Memel or Danzig, taken away from Germany by the Versailles Treaty, and where the population is 90 percent German, why is it necessary to issue threats and denunciations and incite our people to war? I would not sacrifice the life of one American soldier for a half dozen Memels or Danzigs. We repudiated the Versailles Treaty because it was based on greed and hatred, and as long as its inequalities and injustices exist there are bound to be wars of liberation. The sooner certain provisions of the Versailles Treaty are scrapped the better for the peace of the world. I believe that if the areas that are distinctly German in population are restored to Germany, except Alsace-Lorraine and the Tyrol, there will be no war in western Europe. There may be a war between the Nazis and the Communists, but if there is that is not our war or that of Great Britain or France or any of the democracies. New Deal spokesmen have stirred up war hysteria into a veritable frenzy. The New Deal propaganda machine is working overtime to prepare the minds of our people for war, who are already suffering from a bad case of war jitters. President Roosevelt is the number one warmonger in America, and is largely responsible for the fear that pervades the Nation which has given the stock market and the American people a bad case of the jitters. I accuse the administration of instigating war propaganda and hysteria to cover up the failure and collapse of the New Deal policies, with 12 million unemployed and business confidence destroyed. I believe we have far more to fear from

our enemies from within than we have from without. All the Communists are united in urging us to go to war against Germany and Japan for the benefit of Soviet Russia.

Great Britain still expects every American to do her duty, by preserving the British Empire and her colonies. The war profiteers, munitions makers and international bankers are all set up for our participation in a new world war. On 21 April, Fish again spoke to the country over nationwide radio: It is the duty of all those Americans who desire to keep out of foreign entanglements and the rotten mess and war madness of Europe and Asia to openly expose the war hysteria and propaganda that is impelling us to armed conflict. What we need in America is a stop war crusade, before we are forced into a foreign war by internationalists and interventionists at Washington, who seem to be more interested in solving world problems rather than our own. In his radio address of 26 May, Fish stated: He [Roosevelt] should remember that the Congress has the sole power to declare war and formulate the foreign policies of the United States. The President has no such constitutional power. He is merely the official organ to carry out the policies determined by the Congress. Without knowing even who the combatants will be, we are informed almost daily by the internationalists and interventionists in America that we must participate in the next world war.

On 8 July 1939, Fish declared over the National Broadcasting Company radio network: If we must go to war, let it be in defense of America, but not in defense of the munitions makers, war profiteers, Communists, to cover up the failures of the New Deal, or to provide an alibi for a third term. It is well for all nations to know that we do not propose to go to war over Danzig, power politics, foreign colonies, or the imperialistic wars of Europe or anywhere in the world.

Powers Behind The President

President Roosevelt could have done little to incite war in Europe without help from powerful allies. Behind him stood the self-serving international financial and Jewish interests bent on the destruction of Germany. The principal organization which drummed up public support for U.S. involvement in the European war prior to the Pearl Harbor attack was the cleverly named "Committee to Defend America by Aiding the Allies." President Roosevelt himself initiated its founding, and top administration officials consulted frequently with Committee leaders. Although headed for a time by an elderly small-town Kansas newspaper publisher, William Allen White, the Committee was actually organized by powerful financial interests which stood to profit tremendously from loans to embattled Britain and from shrewd investments in giant war industries in the United States.

At the end of 1940, West Virginia Senator Rush D. Holt issued a detailed examination of the Committee which exposed the base interests behind the idealistic-sounding slogans: The Committee has powerful connections with banks, insurance companies, financial investing firms, and industrial concerns. These in turn exert influence on college presidents and professors, as well as on newspapers, radio and other means of communication. One

of the powerful influences used by the group is the '400' and social set. The story is a sordid picture of betrayal of public interest. The powerful J.P. Morgan interest with its holdings in the British Empire helped plan the organization and donated its first expense money.

Some of the important figures active in the Committee were revealed by Holt: Frederic R. Coudert, a paid war propagandist for the British government in the U.S. during the First World War; Robert S. Allen of the Pearson and Allen syndicated column; Henry R. Luce, the influential publisher of Time, Life, and Fortune magazines; Fiorella LaGuardia, the fiery half-Jewish Mayor of New York City; Herbert Lehman, the Jewish Governor of New York with important financial holdings in war industries; and Frank Altschul, an officer in the Jewish investment firm of Lazard Freres with extensive holdings in munitions and military supply companies. If the Committee succeeded in getting the U.S. into war, Holt warned, "American boys will spill their blood for profiteers, politicians and 'paytriots.' If war comes, on the hands of the sponsors of the White Committee will be blood-the blood of Americans killed in a needless war."

In March 1941 a list of most of the Committee's financial backers was made public. It revealed the nature of the forces eager to bring America into the European war. Powerful international banking interests were well represented. J.P. Morgan, John W. Morgan, Thomas W. Lamont and others of the great Morgan banking house were listed. Other important names from the New York financial world included Mr. and Mrs. Paul Mellon, Felix M. and James F. Warburg, and J. Malcolm Forbes. Chicago department store owner and publisher Marshall Field was a contributor, as was William Averill Harriman, the railroad and investment millionaire who later served as Roosevelt's ambassador in Moscow. Of course, Jewish names made up a substantial portion of the long list. Hollywood film czar Samuel Goldwyn of Goldwyn Studios was there, along with David Dubinsky, the head of the International Ladies Garment Workers Union. The William S. Paley Foundation, which had been set up by the head of the giant Columbia Broadcasting System, contributed to the Committee. The name of Mrs. Herbert H. Lehman, wife of the New York Governor, was also on the list.

Without an understanding of his intimate ties to organized Jewry, Roosevelt's policies make little sense. As Jewish historian Lucy Dawidowicz noted: "Roosevelt himself brought into his immediate circle more Jews than any other President before or after him. Felix Frankfurter, Bernard M. Baruch and Henry Morgenthau were his close advisers. Benjamin V. Cohen, Samuel Rosenman and David K. Niles were his friends and trusted aides." This is perhaps not so remarkable in light of Roosevelt's reportedly one-eighth Jewish ancestry. In his diary entry of 1 May 1941, Charles A. Lindbergh, the American aviator hero and peace leader, nailed the coalition that was pushing the United States into war: The pressure for war is high and mounting. The people are opposed to it, but the Administration seems to have 'the bit in its teeth' and [is] hell-bent on its way to war. Most of the Jewish interests in the country are behind war, and they control a huge part of our press and radio and most of our motion pictures. There are also the 'intellectuals,'

and the 'Anglophiles,' and the British agents who are allowed free rein, the international financial interests, and many others.

Joseph Kennedy shared Lindbergh's apprehensions about Jewish power. Before the outbreak of war he privately expressed concerns about "the Jews who dominate our press" and world Jewry in general, which he considered a threat to peace and prosperity. Shortly after the beginning of hostilities, Kennedy lamented "the growing Jewish influence in the press and in Washington demanding continuance of the war."

Betrayal, Failure, Delusion

Roosevelt's efforts to get Poland, Britain and France into war against Germany succeeded all too well. The result was untold death and misery and destruction. When the fighting began, as Roosevelt had intended and planned, the Polish and French leaders expected the American president to at least make good on his assurances of backing in case of war. But Roosevelt had not reckoned on the depth of peace sentiment of the vast majority of Americans. So, in addition to deceiving his own people, Roosevelt also let down those in Europe to whom he had promised support. Seldom in American history were the people as united in their views as they were in late 1939 about staying out of war in Europe. When hostilities began in September 1939, the Gallup poll showed 94 percent of the American people against involvement in war. That figure rose to 96.5 percent in December before it began to decline slowly to about 80 percent in the Fall of 1941.

Roosevelt was, of course, quite aware of the intensity of popular feeling on this issue. That is why he lied repeatedly to the American people about his love of peace and his determination to keep the U.S. out of war, while simultaneously doing everything in his power to plunge Europe and America into war. In a major 1940 re-election campaign speech, Roosevelt responded to the growing fears of millions of Americans who suspected that their President had secretly pledged United States support to Britain in its war against Germany. These well-founded suspicions were based in part on the publication in March of the captured Polish documents. The speech of 23 October 1940 was broadcast from Philadelphia to the nation on network radio. In the most emphatic language possible, Roosevelt categorically denied that he had ledged in some way the participation of the United States in some foreign war. I give to you and to the people of this country this most solemn assurance: There is no secret Treaty, no secret understanding in any shape or form, direct or indirect, with any Government or any other nation in any part of the world, to involve this nation in any war or for any other purpose.

We now know, of course, that this pious declaration was just another one of Roosevelt's many brazen, bald-faced lies to the American people. Roosevelt's policies were more than just dishonest-they were criminal. The Constitution of the United States grants authority only to the Congress to make war and peace. And Congress had passed several major laws to specifically insure U.S. neutrality in case of war in Europe. Roosevelt continually violated his oath as President to uphold the Constitution. If his secret policies had

been known, the public demand for his impeachment would very probably have been unstoppable. The Watergate episode has made many Americans deeply conscious of the fact that their presidents can act criminally. That affair forced Richard Nixon to resign his presidency, and he is still widely regarded as a criminal. No schools are named after him and his name will never receive the respect that normally goes to every American president. But Nixon's crimes pale into insignificance when compared to those of Franklin Roosevelt. What were Nixon's lies compared to those of Roosevelt? What is a burglary cover-up compared to an illegal and secret campaign to bring about a major war?

Those who defend Roosevelt's record argue that he lied to the American people for their own good – that he broke the law for lofty principles. His deceit is considered permissible because the cause was noble, while similar deception by presidents Johnson and Nixon, to name two, is not. This is, of course, a hypocritical double standard. And the argument doesn't speak very well for the democratic system. It implies that the people are too dumb to understand their own best interests. It further suggests that the best form of government is a kind of benevolent liberal-democratic dictatorship.

Roosevelt's hatred for Hitler was deep, vehement, passionate – almost personal. This was due in no small part to an abiding envy and jealousy rooted in the great contrast between the two men, not only in their personal characters but also in their records as national leaders. Superficially, the public faces of Roosevelt and Hitler were astonishingly similar. Both assumed the leadership of their respective countries at the beginning of 1933. They both faced the enormous challenge of mass unemployment during a catastrophic worldwide economic depression. Each became a powerful leader in a vast military alliance during the most destructive war in history. Both men died while still in office within a few weeks of each other in April 1945, just before the end of the Second World War in Europe. But the enormous contrasts in the lives of these two men are even more remarkable. Roosevelt was born into one of the wealthiest families in America. His was a life utterly free of material worry. He took part in the First World War from an office in Washington as UnderSecretary of the Navy. Hitler, on the other hand, was born into a modest provincial family. As a young man he worked as an impoverished manual laborer. He served in the First World War as a front line soldier in the hell of the Western battleground. He was wounded many times and decorated for bravery.

In spite of his charming manner and soothing rhetoric, Roosevelt proved unable to master the great challenges facing America. Even after four years of his presidency, millions remained unemployed, undernourished and poorly housed in a vast land richly endowed with all the resources for incomparable prosperity. The New Deal was plagued with bitter strikes and bloody clashes between labor and capital. Roosevelt did nothing to solve the country's deep, festering racial problems which erupted repeatedly in riots and armed conflict. The story was very different in Germany. Hitler rallied his people behind a radical program that transformed Germany within a few years from an economically ruined land on the edge of civil war into Europe's powerhouse. Germany underwent a social, cultural and economic rebirth without parallel in history. The contrast between the personalities

of Roosevelt and Hitler was simultaneously a contrast between two diametrically different social-political systems and ideologies. And yet, it would be incorrect to characterize Roosevelt as merely a cynical politician and front man for powerful alien interests. Certainly he did not regard himself as an evil man. He sincerely believed that he was doing the right and noble thing in pressuring Britain and France into war against Germany. Like Wilson before him, and others since, Roosevelt felt himself uniquely qualified and called upon by destiny to reshape the world according to his vision of an egalitarian, universalist democracy. He was convinced, as so many American leaders have been, that the world could be saved from itself by remodeling it after the United States.

Presidents like Wilson and Roosevelt view the world not as a complex of different nations, races and cultures which must mutually respect each others' separate collective identities in order to live together in peace, but rather according to a selfrighteous missionary perspective that divides the globe into morally good and evil countries. In that scheme of things, America is the providentially permanent leader of the forces of righteousness. Luckily, this view just happens to correspond to the economic and political interests of those who wield power in the United States. In April 1941, Senator Gerald Nye of North Dakota prophetically predicted that one day the Second World War would be remembered as Roosevelt's war. "If we are ever involved in this war, it will be called by future historians by only one title, 'the President's War,' because every step of his since his Chicago quarantine speech [of 5 October 1937] has been toward war. The great American historian, Harry Elmer Barnes, believed that war could probably have been prevented in 1939 if it had not been for Roosevelt's meddling. "Indeed, there is fairly conclusive evidence that, but for Mr. Roosevelt's pressure on Britain, France and Poland, and his commitments to them before September 1939, especially to Britain, and the irresponsible antics of his agent provocateur, William C. Bullitt, there would probably have been no world war in 1939, or, perhaps, for many years thereafter." [46] In *Revisionism: A Key to Peace*, Barnes wrote:

President Roosevelt had a major responsibility, both direct and indirect, for the outbreak of war in Europe. He began to exert pressure on France to stand up to Hitler as early as the German reoccupation of the Rhineland in March 1936, months before he was making his strongly isolationist speeches in the campaign of 1936. This pressure on France, and also England, continued right down to the coming of the war in September 1939. It gained volume and momentum after the quarantine speech of October 1937. As the crisis approached between Munich and the outbreak of war, Roosevelt pressed the Poles to stand firm against any demands by Germany, and urged the English and French to back up the Poles unflinchingly.

There is grave doubt that England would have gone to war in September 1939 had it not been for Roosevelt's encouragement and his assurances that, in the event of war, the United States would enter on the side of Britain just as soon as he could swing American public opinion around to support intervention. Roosevelt had abandoned all semblance of neutrality, even before war broke out in 1939, and moved as speedily as was safe and

feasible in the face of anti-interventionist American public opinion to involve this country in the European conflict. One of the most perceptive verdicts on Franklin Roosevelt's place in history came from the pen of the great Swedish explorer and author, Sven Hedin. During the war he wrote:

The question of the way it came to a new world war is not only to be explained because of the foundation laid by the peace treaties of 1919, or in the suppression of Germany and her allies after the First World War, or in the continuation of the ancient policies of Great Britain and France. The decisive push came from the other side of the Atlantic Ocean. Roosevelt speaks of democracy and destroys it incessantly. He slanders as undemocratic and un-American those who admonish him in the name of peace and the preservation of the American way of life. He has made democracy into a caricature rather than a model. He talks about freedom of speech and silences those who don't hold his opinion. He talks about freedom of religion and makes an alliance with Bolshevism. He talks about freedom from want, but cannot provide ten million of his own people with work, bread or shelter. He talks about freedom from the fear of war while working for war, not only for his own people but for the world, by inciting his country against the Axis powers when it might have united with them, and he thereby drove millions to their deaths. This war will go down in history as the war of President Roosevelt.

11.12 What the World Rejected

by Mark Weber

Even many people who consider themselves well-informed about Adolf Hitler and the Third Reich are ignorant of the German leader's numerous efforts for peace in Europe, including serious proposals for armaments reductions, and limits on weapons deployment, which were spurned by the leaders of France, Britain and other powers. Hitler's first major speech on foreign policy after taking office as Chancellor, delivered to the Reichstag on May 17, 1933, was a plea for peace, equal rights and mutual understanding among nations. So reasonable and persuasively argued was his appeal that it was endorsed even by representatives of the opposition Social Democratic Party. Two years later, in his Reichstag address of May 21, 1935, the German leader again stressed the need for peace on the basis of mutual respect and equal rights. Even the London Times regarded this speech as "reasonable, straightforward and comprehensive." Such appeals were not mere rhetoric. On March 31, 1936, for example, Hitler's government announced a comprehensive plan for strengthening peace in Europe. The detailed paper included numerous specific proposals, including demilitarization of the entire Rhineland region, a western Europe security agreement, and categorical prohibition of incendiary bombs, poison gas, heavy tanks and heavy artillery.

Although this wide-ranging offer, and others like it, were rejected by leaders in London, Paris, Warsaw and Prague, Hitler's initiatives were not entirely fruitless. In January

1934, for example, his government concluded a ten-year non-aggression pact with Poland. (Unfortunately, the spirit of this treaty was later broken by the men who took power in Warsaw after the death of Poland's Marshal Pilsudski in 1935.) One of Hitler's most important foreign policy successes was a comprehensive naval agreement with Britain, signed in June 1935. (This agreement, incidentally, abrogated the Treaty of Versailles, thereby showing that neither London nor Berlin still regarded it as valid.) For years Hitler sought an alliance with Britain, or least a cordial relationship based on mutual respect. In that effort, he took care not to offend British pride or sensibilities, or to make any proposal that might impair or threaten British interests. Hitler also worked for cordial relations with France, likewise taking care not to say or do anything that might offend French pride or infringe on French national interests. The sincerity of Hitler's proposals to France, and the validity of his fear of possible French military aggression against Germany is underscored by the immense manpower and funding resources he devoted to construction of the vast Westwall ("Siegfried Line") defensive fortifications on his nation's western border.

Over the years, historians have tended either to ignore Hitler's initiatives for reducing tensions and promoting peace, or to dismiss them as deceitful posturing. But if the responsible leaders in Britain and France during the 1930s had really regarded these proposals as bluff or insincere pretense, they could easily have exposed them as such by giving them serious consideration. Their unresponsive attitude suggests that they understood that Hitler's proposals were sincere, but rejected them anyway because to accept them might jeopardize British-French political- military predominance in Europe.

In the following essay, a German scholar reviews proposals by Hitler and his government – especially in the years before the outbreak of war in 1939 – to promote peace and equal rights in Europe, reduce tensions, and greatly limit production and deployment of armaments. The author, Friedrich Stieve (1884-1966), was a German historian and diplomat. During the First World War he served as press attaché with the German embassy in Stockholm. He represented Germany's democratic government as his nation's ambassador in Latvia, 1928- 1932. He then moved to Berlin where he headed the cultural- political affairs bureau of the German Foreign Office, 1932- 1939. He held a doctorate from the University of Heidelberg, and was a member of the Prussian Academy of Sciences. Books by Stieve include *Geschichte des deutschen Volkes* (1939), *Wendepunkte europäischer Geschichte vom Dreißigjährigen Krieg bis zur Gegenwart* (1941), and a collection of poems.

Here, below, is a translation of the lengthy essay by Dr. Stieve, *Was die Welt nicht wollte: Hitlers Friedensangebote 1933-1939*, issued by the "German Information Center" and published as a 16-page booklet in Berlin in 1940. Along with editions that were soon issued in French and Spanish, an Englishlanguage edition was published as a booklet, apparently in 1940, by the *Washington Journal of Washington, DC*. Hitler did not want war in 1939 – and certainly not a general or global conflict. He earnestly sought a peaceful resolution of the dispute with Poland over the status of the ethnically German

city-state of Danzig and the “Corridor” region, which was the immediate cause of conflict. The sincerity of his desire for peace in 1939, and his fear of another world war, has been affirmed by a number of scholars, including the eminent British historian A. J. P. Taylor. It was, of course, the declarations of war against Germany by Britain and France on Sept. 3, 1939, made with secret encouragement by US President Roosevelt, that transformed the limited German-Polish clash into a larger, continentwide war.

To justify its declaration of war, Britain protested that Germany had violated Polish sovereignty, and threatened Poland’s independence. The emptiness and insincerity of these stated reasons is shown by the fact that the British leaders did not declare war against Soviet Russia two weeks later when Soviet forces attacked the Polish Republic from the East. Britain’s betrayal of Poland, and the hypocrisy of its claimed reasons for going to war against Germany in 1939, became even more obvious in 1944-45 when Britain’s leaders permitted the complete Soviet takeover and subjugation of Poland. Germany’s six-week military campaign of May-June 1940 ended with a stunning victory over numerically superior French and British forces, and the rout of British troops from the European mainland. In the aftermath of this historic triumph, Hitler and his government made yet another important effort to end the war. (Because it was made in 1940, after Dr. Stieve’s essay was written and published, it is not included in the text, below.) In a speech delivered to the Reichstag on July 19, 1940, which was broadcast on radio stations around the world, the German leader said:

“... From London I now hear a cry – it’s not the cry of the mass of people, but rather of politicians – that the war must now, all the more, be continued ... Believe me, my deputies, I feel an inner disgust at this kind of unscrupulous parliamentarian destroyers of peoples and countries ... It never has been my intention to wage wars, but rather to build a new social state of the highest cultural level. Every year of this war keeps me from this work ... Mr. Churchill has now once again declared that he wants war ... I am fully aware that with our response, which one day will come, will also come nameless suffering and misfortune for many people ... “... In this hour I feel compelled, standing before my conscience, to direct yet another appeal to reason in England. I believe I can do this as I am not pleading for something as the vanquished, but rather, as the victor speaking in the name of reason. I see no compelling reason for this war to continue. I am grieved to think of the sacrifices it will claim ... Possibly Mr. Churchill again will brush aside this statement of mine by saying that it is merely an expression of fear and of doubt in our final victory. In that case I shall have relieved my conscience in regard to the things to come.”

Following up on this appeal, German officials reached out to Britain through diplomatic channels. But Winston Churchill and his government rejected this initiative, and instead insisted on continuing the war. – with, of course, horrific consequences for Europe and the world.

Hitler's Peace Offers, 1933 – 1939

By Friedrich Stieve, 1940

Germany's enemies maintain today that Adolf Hitler is the greatest disturber of peace known to history, that he threatens every nation with sudden attack and oppression, that he has created a terrible war machine in order to bring misery and devastation everywhere. At the same time they intentionally conceal an all-important fact: they themselves drove the leader of the German people finally to draw the sword. They themselves compelled him to seek to obtain at last by the use of force that which he had been striving to gain by persuasion from the beginning: the security of his country. They did this not only by declaring war on him on September 3, 1939, but also by blocking step by step for seven years the path to any peaceful discussion.

The attempts repeatedly made by Adolf Hitler to induce the governments of other states to join with him in a collaborative restoration of Europe are part of an ever-recurring pattern in his conduct since the commencement of his labors for the German Reich. But these attempts were wrecked every time due to the fact that nowhere was there any willingness to give them due consideration, because the evil spirit of the [first] World War still prevailed everywhere, because in London and Paris and in the capitals of the western powers' vassal states there was only one fixed intention: to perpetuate the power of [the imposed] Versailles [settlement of 1919]. When Adolf Hitler came to the fore, Germany was as gagged and as helpless as the victors of 1918 intended her to be. Completely disarmed, with an army of only 100,000 men meant solely for police duties within the country, she found herself within a tightly closed ring of neighbors all armed to the teeth and allied together. To the old enemies in the West – Britain, Belgium and France – new ones were artificially created and added in the East and the South: above all Poland and Czechoslovakia. A quarter of the population of Germany was forcibly torn away from their mother country and handed over to foreign powers. The German Reich, mutilated on all sides and robbed of every means of defense, at any moment could become the helpless victim of a rapacious neighbor.

It was then that Adolf Hitler for the first time made his appeal to the common sense of the other powers. On May 17, 1933, a few months after his appointment to the post of Reich Chancellor, he delivered a speech in the German Reichstag that included the following passages: "Germany will be perfectly ready to disband her entire military establishment and destroy the small amount of arms remaining to her, if the neighboring countries will do the same thing with equal thoroughness. "... Germany is also entirely ready to renounce aggressive weapons of every sort if the armed nations, on their part, will destroy their aggressive weapons within a specified period, and if their use is forbidden by an international convention. "... Germany is ready at any time to renounce aggressive weapons if the rest of the world does the same. Germany is prepared to agree to any solemn pact of non-aggression because she does not think of attacking anybody, but only of acquiring security." No answer was received.

The other powers heedlessly continued to fill their arsenals with weapons, to pile up their stores of explosives, to increase the numbers of their troops. At the same time the League of Nations, the instrument of the victorious powers, declared that Germany must first undergo a period of "probation" before it would be possible to discuss with her the question of the disarmament of the other countries. On October 14, 1933, Hitler withdrew from the League of Nations, with which it was impossible to reach an understanding. Shortly afterwards, however, on December 18, 1933, he came forward with a new proposal for the improvement of international relations. This proposal included the following six points:

1. Germany receives full equality of rights.
2. The fully armed states undertake among themselves not to increase their armaments beyond their present level.
3. Germany adheres to this agreement, freely undertaking to make only so much actual moderate use of the equality of rights granted to her as will not represent a threat to the security of any other European power.
4. All states recognize certain obligations in regard to conducting war on humane principles, or not to use certain weapons against the civilian population.
5. All states accept a uniform general supervision that will monitor and ensure the observance of these obligations.
6. The European nations guarantee one another the unconditional maintenance of peace by the conclusion of non-aggression pacts, to be renewed after ten years."

Following up on this, a proposal was made to increase the strength of the German army to 300,000 men, corresponding to the strength "required by Germany taking into account the length of her frontiers and the size of the armies of her neighbors," in order to protect her threatened territory against attacks. The defender of the principle of peaceable agreement was thus trying to accommodate himself to the unwillingness of the others to disarm by expressing a desire for a limited increase of armaments for his own country. An exchange of notes, which began with this and continued for years, finally came to a sudden end with an unequivocal "no" from France. This "no" was moreover accompanied by tremendous increases in the armed forces of France, Britain, and Russia. In this way Germany's position became even worse than before. The danger to the Reich was so great that Adolf Hitler felt himself compelled to act. On March 16, 1935, he reintroduced conscription. But in direct connection with this measure he once more announced an offer of wide-ranging agreements, the purpose of which was to ensure that any future war would be conducted on humane principles, in fact to make any such war practically impossible by eliminating destructive armaments. In his speech of May 21, 1935, he declared:

The German government is ready to take an active part in all efforts which may lead to a practical limitation of armaments. It regards a return to the principles of the Geneva

Red Cross Convention as the only possible way to achieve this. It believes that at first there will be only the possibility of a step-by-step abolition and outlawing of weapons and methods of warfare that are essentially contrary to the still-valid Geneva Red Cross Convention."

Just as the use of dum-dum [expanding] bullets was once forbidden and, on the whole, thereby prevented in practice, so the use of other specific weapons can be forbidden and their use, in practice, can be eliminated. Here the German government has in mind all those armaments that bring death and destruction not so much to the fighting soldiers as to non-combatant women and children. "The German government considers as erroneous and ineffective the idea of doing away with airplanes while leaving open the question of bombing. But it believes it possible to ban the use of certain weapons as contrary to international law, and to ostracize those nations which still use them from the community of humankind, and from its rights and laws. "It also believes that gradual progress is the best way to success. For example, there might be prohibition of the use of gas, incendiary and explosive bombs outside the actual battle zone. This limitation could then be extended to complete international outlawing of all bombing. But so long as bombing as such is permitted, any limitation of the number of aerial bombers is dubious in view of the possibility of rapid replacement.

"Should bombing as such be branded as barbaric and contrary to international law, the construction of aerial bombing planes will soon be abandoned as superfluous and pointless. If, through the Geneva Red Cross Convention, it proved possible to prevent the killing of defenseless wounded men or of prisoners, it ought to be equally possible, through an analogous convention, to forbid and ultimately to bring to an end the bombing of similarly defenseless civilian populations. "In such a fundamental way of dealing with the problem, Germany sees a greater reassurance and security for the nations than in all the pacts of assistance and military agreements. "The German government is ready to agree to any limitation that leads to abolition of the heaviest arms, especially suited for aggression. Such weapons are, first, the heaviest artillery, and secondly, the heaviest tanks. In view of the enormous fortifications on the French frontier, such an international abolition of the heaviest weapons of attack would automatically give France nearly one hundred percent security. "Germany declares herself ready to agree to any limitation whatsoever of the caliber-size of artillery, as well as battleships, cruisers, and torpedo boats. In like manner the German government is ready to accept any international limitation of the size of warships. And finally it is ready to agree to limitation of tonnage for submarines, or to their complete abolition through an international agreement. "And it gives further assurance that it will agree to any international limitations or abolition of arms whatsoever for a uniform period of time."

Once again Hitler's declarations did not receive the slightest response. On the contrary, France made an alliance with Russia in order to further increase her predominance on the continent, and to enormously increase the pressure on Germany from the East.

In view of the evident destructive intentions of his adversaries, Adolf Hitler was there-

fore obliged to take new measures for the security of the German Reich. On March 3, 1936, he occupied the Rhineland, which had been without military protection since [the] Versailles [settlement of 1919], and thus shut the wide gate through which the Western neighbor could carry out an invasion. Once again he followed the defensive step which he had been obliged to take with a generous appeal for general reconciliation and for the settlement of all differences. On March 31, 1936, he formulated the following peace plan:

1. In order to give to future agreements securing the peace of Europe the character of inviolable treaties, those nations participating in the negotiations do so only on an entirely equal footing and as equally esteemed members. The sole compelling reason for signing these treaties can only lie in the generally recognized and obvious usefulness of these agreements for the peace of Europe, and thus for the social happiness and economic prosperity of the nations.
2. In order to shorten, in the economic interest of the European nations, the period of uncertainty, the German government proposes a limit of four months for the first period up to the signing of the pacts of nonaggression guaranteeing the peace of Europe.
3. The German government gives the assurance not to add any reinforcements whatsoever to the troops in the Rhineland during this period, always provided that the Belgian and French governments act in the same way.
4. The German government gives the assurance not to move during this period closer to the Belgian and French frontiers the troops at present stationed in the Rhineland.
5. The German government proposes the setting up of a commission composed of the two guarantor Powers, Britain and Italy, and a disinterested third neutral power, to guarantee this assurance to be given by both parties.
6. Germany, Belgium, and France are each entitled to send a representative to this Commission. If Germany, France, or Belgium think that for any particular reason they can point to a change in the military situation having taken place within this period of four months, they have the right to inform the Guarantee Commission of their observations.
7. Germany, Belgium, and France declare their willingness in such a case to permit this Commission to make the necessary investigations through the British and Italian military attaches, and to report thereon to the participating powers.
8. Germany, Belgium and France give the assurance that they will give the fullest consideration to the objections arising therefrom.
9. Moreover the German government is willing on a basis of complete reciprocity with Germany's two western neighbors to agree to any military limitations on the German western frontier.
10. Germany, Belgium, and France and the two guarantor powers agree to enter into negotiations under the leadership of the British government at once or, at the latest,

after the French elections, for the conclusion of a 25-year non-aggression or security pact between France and Belgium on the one hand, and Germany on the other.

11 . Germany agrees that Britain and Italy shall sign this security pact as guarantor powers once more.

12. Should special engagements to render military assistance arise as a result of these security agreements, Germany on her part declares her willingness to enter into such engagements.

13. The German government hereby repeats its proposal for the conclusion of an air-pact to supplement and strengthen these security agreements.

14. The German government repeats that should the Netherlands so desire, it is willing to also include that country in this West European security agreement.

15. In order to give this peace-pact, voluntarily entered into between Germany and France, the character of a conciliatory agreement ending a centuries-old quarrel, Germany and France pledge themselves to take steps to see that in the education of the young, as well as in the press and publications of both nations, everything shall be avoided that might be calculated to poison relations between the two peoples, whether it be a derogatory or contemptuous attitude, or improper interference in the internal affairs of the other country. They agree to set up at the headquarters of the League of Nations at Geneva, a joint commission whose function it shall be to lay before the two governments all complaints received, for information and investigation.

16. In keeping with their intention to give this agreement the character of a sacred pledge, Germany and France undertake to ratify it through a plebiscite of the two nations.

17. Germany expresses her willingness, on her part, to contact the states on her south-eastern and north-eastern frontiers, to invite them directly to the final formal signing of the proposed non-aggression pacts.

18. Germany expresses her willingness to re-enter the League of Nations, either at once, or after the conclusion of these agreements. At the same time, the German government once again expresses as its expectation that, after a reasonable time and through friendly negotiations, the issue of colonial equality of rights, as well as the issue of the separation of the Covenant of the League of Nations from its foundation in the Versailles Treaty, will be cleared up.

19. Germany proposes the setting up of an International Court of Arbitration, which shall be responsible for the observance of the various agreements and whose decisions shall be binding on all parties.

After the conclusion of this great work of securing European peace, the German government considers it urgently necessary to endeavor by practical measures to put a stop to the unlimited competition in armaments. In her opinion this would mean not merely an improvement in the financial and economic conditions of the nations, but above all

a lessening of psychological tension. The German government, however, has no faith in the attempt to bring about universal settlements, as this would be doomed to failure from the outset, and can therefore be proposed only by those who have no interest in achieving practical results. On the other hand it is of the opinion that the negotiations held and the results achieved in limiting naval armaments should have an instructive and stimulating effect. The German government therefore recommends future conferences, each of which shall have a single, clearly defined objective.

For the present, it believes the most important task is to bring aerial warfare into the moral and humane atmosphere of the protection afforded to non-combatants or the wounded by the Geneva Convention. Just as the killing of defenseless wounded, or of prisoners, or the use of dum-dum bullets, or the waging of submarine warfare without warning, have been either forbidden or regulated by international conventions, so it must be possible for civilized humanity to prevent the senseless abuse of any new type of weapon, without running counter to the object of warfare. The German government therefore proposes that the practical tasks of these conferences shall be:

1. Prohibition of the use of gas, poison, or incendiary bombs.
2. Prohibition of the use of bombs of any kind whatsoever on towns or places outside the range of the medium-heavy artillery of the fighting fronts.
3. Prohibition of the bombardment with long-range guns of towns or places more than 20 kilometers distant from the battle zone.
4. Abolition and prohibition of the construction of tanks of the heaviest type.
5. Abolition and prohibition of artillery of the heaviest caliber.

As soon as possibilities for further limitation of armaments emerge from such discussions and agreements, they should be utilized. The German government hereby declares itself prepared to join in every such settlement, in so far as it is valid internationally. The German government believes that if even a first step is made on the road to disarmament, this will be of enormous importance in relations between the nations, and thereby in reestablishing confidence, which is a precondition for the development of trade and prosperity. In accordance with the general desire for the restoration of favorable economic conditions, the German government is prepared immediately after the conclusion of the political treaties to enter into an exchange of opinions on economic issues with the other nations concerned, in the spirit of the proposals made, and to do all that lies in its power to improve the economic situation in Europe, and of the world economic situation which is closely bound up with it.

The German government believes that with the peace plan proposed above it has made its contribution to the building of a new Europe on the basis of reciprocal respect and confidence between sovereign states. Various opportunities for such a pacification of Europe, for which Germany has so often in the last few years made proposals, have been neglected. May this attempt to achieve European understanding succeed at last. The

German government confidently believes that it has opened the way in this direction by submitting the above peace plan." Anyone who today reads this comprehensive peace plan will realize in what direction the development of Europe, according to the wishes of Adolf Hitler, should really have proceeded. Here was the possibility of truly constructive work. This could have been a real turning-point for the benefit of all nations. But once more he who alone called for peace was not heard. Only Britain replied with a rather scornful questionnaire that avoided any serious consideration of the essential points involved. Incidentally, however, Britain revealed her actual intentions by setting herself up as the protector of France and by instituting and commencing regular general staff military consultations with the French Republic just as in the period before the [first] World War.

There could no longer be any doubt now that the western powers were following the old path toward an armed conflict, and were steadily preparing a new blow against Germany, even though Adolf Hitler's thoughts and endeavors were entirely directed towards proving to them that he wanted to remain on the best possible terms with them. Over the years he had undertaken numerous steps in this direction, of which a few more will be mentioned here. With Britain he negotiated the Naval Agreement of June 18, 1935, which provided that the German Navy could have a strength of 35 percent of that of the British Navy. By this he wanted to demonstrate that the German Reich, to use his own words, had "neither the intention, the means, nor the necessity" to enter into any rivalry as regards naval power, which, as is well known, had had such a fateful impact on its relations with Britain in the years before the [first] World War.

On every appropriate occasion he assured France of his desire to live at peace with her. He repeatedly renounced in plain terms any claim to [the region of] Alsace-Lorraine. On the occasion of the return to the German Reich of the Saar territory as a result of plebiscite by its people, he declared on March 1, 1935: "It is our hope that through this act of just compensation, in which we see a return to natural reason, relations between Germany and France have permanently improved. Therefore, just as we desire peace, we must hope that our great neighbor is ready and willing to seek peace with us. It must be possible for two great peoples to join together and collaborate in opposing the difficulties that threaten to overwhelm Europe."

He even endeavored to arrive at a better understanding with Poland, the eastern ally of the western powers, although that country in 1919 had unlawfully incorporated millions of Germans, and had ever since subjected them to the worst oppression. On January 26, 1934, he concluded a nonaggression pact with her in which the two governments agreed "to settle directly all questions of whatever sort that concern their mutual relations." Thus on all sides he countered the enemy plans with his determination to preserve peace, and in this way strove to protect Germany. When however he saw that London and Paris were arming for an attack, he was once more obliged to undertake fresh measures of defense. The enemy camp, as we have seen above, had been enormously extended through the alliance between France and Russia. In addition to this the two powers

had secured an alliance line to the south of the German Reich through Czechoslovakia, which, already allied with France, then concluded a treaty with Russia, thereby making her a bridge between east and west. Moreover, Czechoslovakia controlled the high-lying region of Bohemia and Moravia, which Bismarck had called the citadel of Europe, and this citadel projected far into German territory. The threat to Germany thus assumed truly overwhelming form.

Adolf Hitler found an ingenious way of countering this danger. The conditions in German Austria, which under the terror of the Schuschnigg government were tending towards civil war, offered him the opportunity of stepping in to save the situation, and to lead back into the Reich the sister nation to the south-east that had been sentenced by the victorious powers to lead the life of a hopelessly decaying "Free State." After he had thus established himself near the line of connection between France and Russia mentioned above, a process of dissolution began in the ethnically mixed state of Czechoslovakia, which had been artificially put together from the most diverse national elements. Then, after the liberation of the [ethnically German] Sudetenland [region] and the secession of Slovakia, the Czechs themselves asked for the protection of the German Reich. With this the enemy's "bridge" came into Hitler's hand, while at the same time direct land connection was made established with Italy, whose friendship had been secured some time previously. While he was gaining this strategic success for the security of his country, Adolf Hitler was again endeavoring with great eagerness to reach a peaceable understanding with the western powers. In Munich immediately after liberation of the Sudeten Germans, which was approved by Britain, France, and Italy, he made an agreement with the British Prime Minister, Neville Chamberlain, the text of which was as follows:

"We have had a further meeting today and are agreed in recognizing that the question of Anglo-German relations is of the first importance for the two countries and for Europe. We regard the agreement signed last night and the Anglo-German Naval Agreement [of 1935] as symbolic of the desire of our two peoples never to go to war with one another again. We are resolved that the method of consultation shall be the method adopted to deal with any other questions that may concern our two countries, and we are determined to continue our efforts to remove possible sources of difference and thus to contribute to assure the peace of Europe. September 30, 1938. Adolf Hitler, Neville Chamberlain."

Two months later, on Hitler's instructions, the German Foreign Minister, von Ribbentrop, made the following agreement with France:

"Herr Joachim von Ribbentrop, Reich Minister for Foreign Affairs, and M. Georges Bonnet, French Minister of Foreign Affairs, acting in the name and by order of their governments, have at their meeting in Paris, on December 6, 1938, agreed as follows:

1. The German government and the French government fully share the conviction that peaceful and good-neighborly relations between Germany and France constitute one of the most essential elements for the consolidation of the situation in Europe and the maintenance of general peace. The two governments will in consequence use all their

efforts to ensure the development in this direction of the relations between their countries.

2. The two governments recognize that between the two countries there is no territorial question outstanding, and they solemnly recognize as final the frontiers between their countries as they now exist.

3. The two governments are resolved, while leaving unaffected their particular relations with other powers, to remain in contact with regard to all questions concerning their two countries, and mutually to consult should the later evolution of those questions lead to international difficulties.

In token whereof the representatives of the two governments have signed the present Declaration, which comes into immediate effect. Done in duplicate in the French and German languages at Paris, December 6, 1938. Joachim von Ribbentrop, Foreign Minister Georges Bonnet, Foreign Minister”

It should have been entirely reasonable to expect that the way was clear for collaborative reconstruction in which all leading powers would participate, and that the Fuehrer's endeavors to secure peace would at last meet with success. But the contrary was true. Scarcely had Chamberlain reached home when he called for rearmament on a considerable scale and laid plans for a new and tremendous encirclement of Germany. Britain now took over from France the leadership of this further encirclement of the Reich, to more than make up for the loss of Czechoslovakia. She opened negotiations with Russia, and concluded guarantee treaties with Poland, Romania, Greece and Turkey. These were alarm signals of the greatest urgency.

Just at this time Adolf Hitler was occupied with the task of finally eliminating sources of friction with Poland. For this purpose he made an uncommonly generous proposal by which the purely German Free City of Danzig would return to the Reich, and a narrow passage through the Polish Corridor, which since 1919 had torn asunder the north-eastern part of Germany to an unbearable extent, would be connected with the separated area. This proposal, which moreover afforded Poland the prospect of a 25-year non-aggression pact and other advantages, was nevertheless rejected in Warsaw, because there it was believed, conscious as the authorities were of forming one of the principal members of the common front set up by London against Germany, that any concession, however minor, could be refused. And that wasn't all. With this same attitude, Poland took an aggressive stance, threatened Danzig, and prepared to take up arms against Germany.

Thus the moment was close at hand for an attack against Germany by the countries that had aligned together for that purpose. Adolf Hitler, making a final extreme effort in the interests of peace, saved what he could. On August 23rd, Ribbentrop succeeded in reaching an agreement in Moscow for a nonaggression pact with Russia. Two days later the German Fuehrer himself made a final and truly remarkable offer to Britain, declaring himself ready “to enter into agreements with Britain that ... would not only, on the German side, safeguard the existence of the British Empire come what may, but if necessary would pledge German assistance for the British realm, regardless of where such

assistance might be required." At the same time he was prepared to accept a reasonable limitation of armaments, "in accordance with the new political situation and which are economically sustainable." And finally he assured once again that he had no interest in the issues in the west, and that "a revision of the borders in the west are out of any consideration."

The reply to this was a pact of mutual assistance signed that same day between Britain and Poland, which made the outbreak of war inevitable. Then a decision was made in Warsaw to mobilize at once against Germany, and the Poles began with violent attacks not only against Germans in Poland, who for some time had been the victims of frightful massacres, but against Reich German territory. But even after Britain and France declared war, as they had intended, and Germany had overcome the Polish danger in the east by a glorious campaign without a parallel, even then Adolf Hitler raised his voice once more in the name of peace. He did this even though his hands were now free to act against the enemy in the west. He also did this even though in London and Paris the fight had been proclaimed against him personally, in boundless hate, as a crusade. At this moment he possessed the supreme self-control to present, in his speech of October 6, 1939, to public opinion throughout the world, a new plan for the pacification of Europe. This plan was as follows:

"By far the most important task, in my opinion, is the creation of not only a belief in, but also a feeling for European security.

1. For this it is necessary that the aims of the foreign policy of each European state should be made perfectly clear. As far as Germany is concerned, the Reich government is ready to give a thorough and exhaustive exposition of the aims of its foreign policy. In so doing, it begins by stating, first of all, that it regards the Treaty of Versailles as no longer valid – in other words, that the German Reich government, and with it the entire German nation, no longer see cause or reason for any further revision of the Treaty, apart from the demand for adequate colonial possessions justly due to the Reich, involving in the first place a return of the German colonies. This demand for colonies is based not only on Germany's historical claim to her colonies, but above all on her elementary right to a share of the world's raw material resources. This demand does not take the form of an ultimatum, nor is it a demand that is backed by force, but rather a demand based on political justice and common sense economic principles.

2. The demand for a real revival of international economic life coupled with an extension of trade and commerce presupposes a reorganization of the international economic system, in other words, of production in the individual states. In order to facilitate the exchange of the goods thus produced, however, a new system of markets must be found, and a conclusive settlement of relations of the world currencies must be reached, so that the obstacles in the way of unrestricted trade can be gradually removed.

3. The most important condition, however, for a real revival of economic life in and outside of Europe is the establishment of an unconditionally guaranteed peace, and of

a sense of security on the part of the various nations. This security will not only be rendered possible by the final sanctioning of the European status, but above all by the reduction of armaments to a reasonable and economically tolerable level. An essential part of this necessary sense of security, however, is a clear definition of the legitimate use and application of certain modern armaments which could, at any given moment, strike straight at the heart of every nation, which therefore create a permanent sense of insecurity. In my previous speeches in the Reichstag I made proposals with this end in view. At that time they were rejected – presumably for the simple reason that they were made by me.

I believe that a sense of national security will not return to Europe until clear and binding international agreements have provided a comprehensive definition of the extent to which the use of certain weapons is permitted or forbidden. The Geneva Convention once succeeded in prohibiting, in civilized countries at least, the killing of wounded, the mistreatment of prisoners, war against non-combatants, and so forth. Just as it was possible gradually to achieve the universal observance of this prohibition, a way ought surely to be found to regulate aerial warfare, the use of poison gas, of submarines, and so forth, and likewise clearly to define contraband, so that war will lose its terrible character of a conflict waged against women and children and against non-combatants in general. The growing horror of certain methods of modern warfare will of its own accord lead to their abolition, and thus they will become obsolete.

In the war with Poland, I endeavored to restrict aerial warfare to objectives of military importance, or only to employ it to deal with resistance at a given point. But it must surely be possible to emulate the Red Cross in drawing up some universally valid international regulation. It is only when this is achieved that peace can reign, particularly on our densely populated continent a peace which, free of suspicion and fear, will provide the conditions for real growth and economic prosperity. I do not believe that there is any responsible statesman in Europe who does not in his heart desire prosperity for his people. But such a desire can only be realized if all the nations inhabiting this continent work together. To help bring about this collaboration must be the goal of everyone who is sincerely striving for the future of his own people.

To achieve this great goal, the leading nations on this continent will one day have to come together in order to draw up, accept and guarantee a statute on a comprehensive basis that will ensure for them a feeling of security and calm – in short, of peace. Such a conference could not possibly be held without the most thorough preparation, that is, without clearly specifying every point at issue. It is equally impossible that such a conference, which would determine the fate of this continent for many years to come, could carry on its deliberations while cannons are thundering, or when mobilized armies are bringing pressure to bear upon it. Since, however, these problems must be solved sooner or later, it would surely be more sensible to tackle the solution before millions of men are first pointlessly sent to their death, and billions of dollars' worth of property are destroyed.

The continuation of the present state of affairs in the west is unthinkable. Each day will soon demand increasing sacrifices. Perhaps the day will come when France will begin to bombard and demolish [the city of] Saarbrücken. The German artillery will in turn lay [the French city of] Mulhouse in ruins. France will retaliate by bombarding Karlsruhe, and Germany in her turn shell Strasbourg. Then the French artillery will fire at Freiburg, and the Germans at Colmar or Sélestat. Long-range artillery will then be set up, and from both sides destruction will strike deeper and deeper, and whatever cannot be reached by the long-range artillery will be destroyed from the air. And while all that will be very interesting for certain international journalists, and very profitable for airplane, weapons and munitions manufacturers, and so forth, it will be appalling for the victims. And this battle of destruction will not be confined to the land. No, it will reach far out over the sea. Today there are no longer any islands. And the national wealth of Europe will be shattered by shells, and the vigor of every nation will be sapped on the battlefields. And one day there will again be a frontier between Germany and France, but instead of flourishing towns there will be ruins and endless graveyards.”

The fate of this appeal was the same as that of all the previous ones made by Adolf Hitler in the name of reason, in the interests of a true renaissance of Europe. His enemies paid him no heed. On this occasion as well no response was forthcoming from them. They rigidly adhered to the attitude they had taken up in the beginning. In the face of this series of historical facts is there any need for further details as to the question of why they did so? They had created the Versailles system, and when it threatened to collapse they wanted war, in order to follow it with an even worse Versailles. The reproaches they make today against Adolf Hitler and Germany, recoil one and all on those who make them, and characterize their actions. They are the disturbers of peace. They are the ones who contemplate the forcible oppression of other peoples, and who seek to plunge Europe into devastation and disaster. If that were not so, they would long ago have taken the hand that was stretched out to them, or at least they would have made a gesture of honestly wishing to cooperate in making a new order, and thus spare the nations an excess of “blood, tears and sweat.” World history is the world court; and in this case as always when it reaches its decision it will pronounce a just verdict.

11.13 The Views of Four Diplomats Close to Events

by Jason Collett

Joseph P. Kennedy, U.S. Ambassador to Britain during the years immediately preceding WW2 was the father of the famous American Kennedy dynasty. James Forrestal the first US Secretary of Defense (1947-1949) quotes him as saying “Chamberlain (the British Prime Minister) stated that America and the world Jews had forced England into the war”.

Count Jerzy Potocki, the Polish Ambassador in Washington, in a report to the Polish

Foreign Office in January 1939, is quoted approvingly by the highly respected British military historian Major-General JFC Fuller. Concerning public opinion in America he says "Above all, propaganda here is entirely in Jewish hands. . . when bearing public ignorance in mind, their propaganda is so effective that people have no real knowledge of the true state of affairs in Europe... It is interesting to observe that in this carefully thought-out campaign... no reference at all is made to Soviet Russia. If that country is mentioned, it is referred to in a friendly manner and people are given the impression that Soviet Russia is part of the democratic group of countries... Jewry was able not only to establish a dangerous centre in the New World for the dissemination of hatred and enmity, but it also succeeded in dividing the world into two warlike camps. . . President Roosevelt has been given the power. . . to create huge reserves in armaments for a future war which the Jews are deliberately heading for."

Hugh Wilson, the American Ambassador in Berlin until 1938, the year before the war broke out, found anti-Semitism in Germany "understandable". This was because before the advent of the Nazis, "the stage, the press, medicine and law [were] crowded with Jews... among the few with money to splurge, a high proportion [were] Jews... the leaders of the Bolshevist movement in Russia, a movement desperately feared in Germany, were Jews. One could feel the spreading resentment and hatred."

Sir Neville Henderson, British Ambassador in Berlin 'said further that the hostile attitude in Great Britain was the work of Jews and enemies of the Nazis, which was what Hitler thought himself'.

11.14 Who Broke the Disarmament Treaty of Versailles?

Declaration of the Government of the German Reich March 16, 1935

In November of 1918, when the German people - trusting in the assurances given in Wilson's Fourteen Points - surrendered after 4 and a half years of heroic resistance in a war whose outbreak they had never desired, they believed that in doing so they had done a service not only to tormented humanity but also to a great Idea per se. While they themselves were suffering the most under the consequences of this insane struggle, the millions of Germans trustingly reached out to the idea of a reconfiguration of international relations which was to be ennobled by the elimination of secret diplomacy as well as of the terrible means of war. Perhaps no other nation has welcomed the idea of a League of Nations as eagerly as the German one, deserted by all earthly happiness.

Only in this context is it understandable that the at times downright senseless conditions of destruction of each and every means of defense was not only accepted but also carried out by the German people. The German people and particularly their government at that time were convinced that meeting the disarmament stipulations set out by the Treaty of Versailles would initiate and guarantee the beginning of international, general disarmament, as promised by the Treaty. For only such a bilateral fulfillment of this

obligation imposed by the Treaty could justify a demand which, if imposed and carried out one-sidedly, could not but have turned into an eternal disparagement and thus a declaration of inferiority of a great nation. In light of this, however, such a peace treaty could never be the prerequisite for a true inner reconciliation of nations and thus a herald of global peace; it could only be the prerequisite for an eternally festering hatred.

According to the assessment of the inter-Allied Control Commission, Germany has met the disarmament obligations imposed on her. The following are the works of destruction of the German defense forces and their means, as confirmed by this Commission:

A. Army weapons that were destroyed: 59,897 artillery guns and barrels, 130,558 machine guns, 31,470 mortars and barrels, 6,007,000 rifles and carbines, 243,937 machine gun barrels, 28,001 gun carriages, 4,390 mortar carriages, 38,750,000 larger caliber shells, 16,550,000 hand and rifle grenades, 60,400,000 live fuses, 491,000,000 hand weapon munitions, 335,000 tons of cartridges, 23,515 tons of cartridge cases, 37,600 tons of gunpowder, 79,500 ammunitions dismantlers, 212,000 telephones, 1,072 flame throwers, 31 armored trains, 59 tanks, 1,762 surveillance vehicles, 8,982 wireless stations, 1,240 field bakeries, 2,199 pontoons, 981.7 tons of equipment for soldiers, 8,230,350 sets of equipment for soldiers, 7,300 pistols and revolvers, 180 machine gun sleds, 21 mobile workshops, 12 anti-aircraft gun carriers, 11 heavy-duty gun carriers, 64,000 steel helmets, 174,000 gas masks, 2,500 machines of the former war industry, 8,000 rifle barrels. B. Air force weapons that were destroyed: 15,714 fighter and bomber planes, 27,757 airplane engines. C. Naval weapons that were destroyed: 26 capital ships, 4 armored coastal patrol boats, 4 armored cruisers, 19 small cruisers, 21 training and special ships, 83 torpedo boats, 315 submarines.

Further, the following had to be destroyed: Vehicles of all kinds, means for gas warfare and some for protection from gas, propellants and explosives, floodlights, sighting devices, distance and sound range finders, optical instruments of all kinds, horse harnesses, narrow gauge railway equipment, field printing presses, field kitchens, workshops, cutting and stabbing weapons, steel helmets, materials for the transport of ammunition, standard and special machines of the war industry, as well as jigs, blueprints of the same, ship and airplane hangars, etc.

While Germany had fulfilled her obligations, the other parties to the contract neglected to fulfil their own. That is, the high contracting officials of the former victor nations unilaterally broke away from the obligations of the Treaty of Versailles. It was not enough, however, that any disarmament comparable in any way to the German destruction of arms was dispensed with; no: the arming process was not even halted. Quite the contrary, further escalation became evident in a whole number of nations. In terms of new machinery of destruction, what had been invented during wartime was now being perfected with methodical, scientific work during peacetime. Continual improvements were being made in the creation of powerful land tanks as well as new fighting and bombing machines. New and gigantic artillery was being built, new explosive, incendiary and gas bombs were being manufactured. In the midst of these nations heavily armed for

war and availing themselves increasingly of the newest motorized forces, Germany was a defenseless power void and at the mercy of any threat. The German people remember the misfortune and tragedy of 15 years of economic impoverishment and political humiliation. It was thus understandable that Germany began to urge that the other nations should keep their own promise of disarmament. For this much is clear: A hundred years' peace would have to be an immeasurable blessing for the world. A hundred years' split into victors and vanquished, however, is something the world cannot bear.

The urging of the people resulted in attempts to achieve, through conferences, a general decrease in the level of armament. In this way, the first proposals for international armament agreements developed, of which the Macdonald Plan was most significant. Germany was prepared to accept this plan and to make it the foundation for agreements. The Macdonald Plan failed because it was rejected by other nations. Since the equality that had been solemnly guaranteed the German people in the declaration of December 1932 did not come about under these circumstances, the new German government, in its role as the guardian of the German people's honor and natural rights, saw itself no longer able to participate in such conferences or to remain in the League of Nations. But even after leaving Geneva, the German government was still willing to not only consider proposals by other nations, but also to advance suggestions of its own. In doing so, it espoused the view coined by the other nations themselves, that the creation of short-term armies is unsuitable for attack purposes and is thus to be recommended for peaceful defense. Therefore the German government was prepared to change the long-term Reichswehr into a short-term army in accordance with the other nations' wishes. Its proposals of winter 1933/34 were feasible. However, their rejection, and the rejection of similar Italian and British outlines, showed that there was no longer any inclination among the other parties to the Treaty of Versailles towards even a belated fulfilment of the spirit of the disarmament stipulations of Versailles.

Under these circumstances, the German government saw itself compelled to take the initiative towards those necessary measures that could ensure an end to the no less degrading than dangerous condition of a great people's and nation's impotent defenselessness. It based this action on the same consideration that Minister Baldwin had expressed so aptly: "A nation that is not willing to take the necessary precautionary measures for its own defense will never have any power in the world, neither of the moral nor of the material kind." But the government of today's German Reich desires only one moral and material power, namely to be able to safeguard the peace for the Reich and thereby probably also for all of Europe. Thus, the German government has continued to do whatever was in its power and could serve to promote peace.

1. A long time ago already, the German government offered to conclude non-aggression pacts with its neighboring countries.
2. With its eastern neighbor, Poland, the German government has sought and reached a contractual settlement which, thanks to great accommodation and understanding, will hopefully have defused the menacing situation which the government was faced with

at the time it took power, and which it hopes will lead to a lasting understanding and friendship between the two peoples.

3. Finally, the German government has given France the solemn assurance that after the question of the Saarland has been settled, it will make no further territorial demands or requests of France. The government believes that through this great political and material sacrifice of a historically uncommon kind, it has created the prerequisite for ending a centuries-old quarrel between two great nations.

To its regret, however, the German government has seen that a continued escalation of the arms process is taking place in the rest of the world. In the creation of a Soviet-Russian army of 101 divisions, i.e. an admitted peacetime strength of 960,000 men, it discerns a danger that could not be anticipated at the time the Treaty of Versailles was drawn up. In the heightening of similar measures by the other nations, the German government sees further proof that these nations have rejected the once solemnly proclaimed disarmament contract. The German government does not wish to bring accusations against any one nation; but it must point out that by deciding to introduce a two-year period of military service, France has given up on the principle of short-term armies in favor of a long-term army. This principle, however, was one of the reasons for the earlier demand that Germany should relinquish her army.

Under these circumstances, the German government feels that it is impossible to continue to suspend the measures necessary for the security of the Reich, much less to keep the rest of the world from knowing of these measures. If, therefore, it complies with the British Minister Baldwin's wish and clarifies German intentions, this is done

1. in order to give the German people the conviction, and the other nations the understanding, that the preservation of the German Reich's honor and security is now again entrusted to the German nation's own power;
2. in order to refute, by declaring the extent of these measures, those assertions with which the German people are accused of striving for military supremacy in Europe.

The German government as guardian of the honor and interests of the German nation desires to secure the necessary extent of those instruments of power that are required to preserve the intactness of the German Reich and to ensure the international regard for and consideration of Germany as fellow guarantor of general peace. At this time the German government reaffirms, both to the German people and to the world, its determination that its rearming shall not be for military aggression, but a pledge for its defense and thus for the preservation of peace. The German government hereby expresses the confident hope that as the German people find their way back to their honor, they will - in the spirit of independent equality - be granted the chance to make their contribution to the pacification of the world in free and open co-operation with the other nations and their governments.

11.15 Molotov-Ribbentrop Pact

The Russian Invitation of August 12, 1939

From "The Forced War":

The policy of Stalin and Molotov toward Germany in August 1939 was consistent with the foreign program outlined by the Soviet leaders at the 18th Congress of the Communist Party in March 1939, before the German occupation of Prague. The Russian leaders at that time had predicted that the Soviet Union would succeed in remaining neutral during the early phase of the conflict which they expected to occur in the near future between Germany and the Western Powers. The French believed that an alliance between the Western Powers and the Soviet Union might be a useful prelude to a policy of conciliation toward Germany which would prevent the outbreak of World War II. The British leaders hoped for Soviet assistance in the war against Germany which they considered inevitable. It is unlikely that the French leaders could have influenced the British to adopt a moderate policy even after an agreement with the Soviet Union had been achieved. It is extremely doubtful that a military pact with the Soviet Union would have been useful in preventing the outbreak of World War II. It has been argued that Russian neutrality was the real cause of the outbreak of World War II, but this paradoxical viewpoint has never been presented in a convincing manner. The contention has been made that the adherence of the Soviet Union to the coalition of Halifax would have created preponderant power sufficient to guarantee the peace. This does not take account of the fact that Halifax, unlike the French leaders, desired not peace but war, and that the British diplomats themselves did not believe that an alliance with the Soviet Union would preserve the peace.

The German leaders received a definite indication on August 12, 1939, that the Soviet Union had decided to arrive at an understanding with Germany and to reject the Anglo-French alliance offer. Russian Chargé d'Affaires Georgi Astakhov called at the German Foreign Office and announced that Stalin wished to reach an understanding with Germany about Poland and about Russo-German political relations. Astakhov suggested that negotiations could be advanced "by degrees," and that Moscow would be a suitable place for final talks. He had no suggestion to make about the selection of negotiators by Germany. His démarche did not mean that a Russo-German pact had become a certainty, but it was evident that successful negotiations were probable if desired by Germany. The Russians were not offering to conclude a pact which would ban the danger of war. They were hoping that Halifax would succeed in launching a major European war, without Russian participation. The Russians considered it worthwhile to gamble on this eventuality, because it would create the most favorable conditions for the expansion of Bolshevism in Europe. Hitler hoped that a Russo-German pact would be a decisive factor in preventing the outbreak of a new European war. He thought there was good reason to believe that the Western Powers would change their minds about war with Germany

after the defection of the Soviet Union. It seemed less likely that there would be a new European war if the Soviet Union signed a neutrality pact with Germany instead of an alliance with the Western Powers. This was true despite the fact that many irresponsible Western journalists favoring war claimed that this step by Russia, which they disliked, made war more probable. They knew that arguing in this manner would increase the chances for war.

Italian Ambassador Bernardo Attolico, who had been stationed at Danzig by the League of Nations in the 1920's, revealed at the German Foreign Office on August 14, 1939, a compromise plan from private Polish sources friendly to Germany. Germany would receive the city of Danzig and slightly more than half of its territory, with the Mottlau tributary of the Vistula as the dividing line. The territory assigned to Germany would connect Danzig with East Prussia, whereas the Poles would receive territory in the direction of Gdynia, and the "sort of island," actually a peninsula, on which was situated the Polish Westerplatte arsenal in Danzig harbor. These private Polish circles were hopeful that Hitler would accept this solution, which would at least bring 300,000 Germans back to the Reich. They were less confident about the official Polish attitude, but they thought that it would be worthwhile to try a plan which offered a considerable German retreat from the October 24, 1939, offer, but which stopped short of a total capitulation to Poland. The plan was gratefully received by the German Foreign Office, and it was filed for future reference. More might have been heard about it later had Poland agreed to resume negotiations with Germany.

Ciano's Mission to Germany

The German Government agreed to invite Italian Foreign Minister Count Galeazzo Ciano to Germany for conversations with Hitler and Ribbentrop. Ciano was received in Salzburg by Ribbentrop, Mackensen, and Attolico on August 11, 1939. He was scheduled to confer with Hitler at the nearby Obersalzberg on the afternoon of the following day. The German leader was conferring with League High Commissioner Burckhardt when Ciano arrived, and it was decided that Ciano and Ribbentrop should engage in preliminary talks on the morning of August 12th. Hitler took the same line in his conversation with Burckhardt on August 11th that he intended to employ with Ciano on the following day. Hitler told Burckhardt that further patience with the Poles was becoming an impossibility, and that grave danger existed of a German-Polish war. He predicted that Germany would defeat Poland in about three weeks if war came. He requested Burckhardt to inform the French and British of this situation, and to remind them that Germany did not desire a conflict with the Western Powers under any circumstances. Burckhardt agreed to undertake this mission. Beck was nervous about this meeting, because he feared that Burckhardt would make a formidable effort to persuade the British and French not to attack Germany. He told Szembek that he was furious with Burckhardt for accepting an interview with Hitler at this juncture. The Burckhardt mission made an impression on Bonnet, but none

whatever on Halifax. The British Foreign Secretary, who sent Roger Makins to Basel as his personal representative to ascertain Hitler's views, received some plain language from Burckhardt about the atrocious mistreatment of the German minority by the Poles. Halifax responded by instructing Kennard that the Poles would have to improve their tactics if they hoped to avoid giving any impression that they were guilty of provoking the approaching war.

Halifax also advised the Poles to cease their provocations at Danzig and to restrain their press. Kennard responded with a purely formal *démarche* which could not possibly worry Beck. The Polish Foreign Minister was relieved to note that the Burckhardt mission had failed to modify British policy. He claimed to Kennard that there was no point in discussing the situation of the German minority with the British, and he also made the astonishing claim that the Germans, and not the Poles, had started the so-called press war. He added that it was always the Germans, and not the Poles, who provoked incidents at Danzig. It was evident that Beck was not inclined to engage Kennard in a serious discussion of these problems.

Ribbentrop discussed the Polish situation with Ciano at great length on the morning of August 12th. He described some of the worst recent atrocities against the German minority in Poland, including the mutilation of several Germans. Ciano later reported to Mussolini that Ribbentrop was very grave, and that he feared war between Germany and Poland might soon be inevitable. Ribbentrop admitted that Great Britain and France might attack Germany, despite the fact that they could offer no effective help to the Poles. The German Foreign Minister continued to hope that it would be possible to localize a German-Polish conflict by diplomatic action. Ciano had been instructed by Mussolini to convince the Germans that any risk whatever of a major war should be avoided, because such a conflict would be catastrophic for both Germany and Italy. Ciano accordingly took a strong stand against Ribbentrop's analysis of the European situation. He did not deny that Germany had ample justification under the existing provisions of international law to chastise the Poles. He argued instead that action by Germany against Poland would be inexpedient, because, in the opinion of both Mussolini and Ciano, the British and French would seize this as a pretext for military operations against Germany. Ribbentrop was surprised by Ciano's tenacity in arguing for this interpretation, and he was startled to note that his own analysis of Russian policy did not modify this opinion. The two diplomats debated the issue at great length, but nothing was said about the role of Italy in the event of war.

Ciano and Ribbentrop met with Hitler on the Obersalzberg in the afternoon for an intensive conference of more than three hours. Ciano insisted that a war with Poland should be avoided at any price, and he suggested that the Axis should issue an appeal for an international conference. The Italian Foreign Minister presented his arguments with energy and single-mindedness throughout this conference, and he succeeded in making a great impression on Hitler. The Chancellor agreed to consider the Italian viewpoint at length before discussing the matter again on the following day. The German Foreign

Office was impressed by the ability of Ciano to present his views and to counter the arguments offered by Hitler. Weizsäcker was convinced that Ciano would repeat this performance with still greater effect on the following day. He failed to realize that Ciano had also been influenced by Hitler during this lengthy discussion. He was astonished to note on August 13th that Ciano reversed his position, and declared that Hitler was probably correct in calculating that Great Britain and France would not attack Germany if the German-Polish crisis culminated in a local war. Hitler's reply to Ciano's arguments on August 12th is important because it reveals the thoughts which were deciding the course of German policy at this point. Hitler claimed that a few fanatics in Warsaw and Krakow were responsible for the tragedy in Poland because they had succeeded in stirring an otherwise indifferent Polish population into a frenzy of hatred against Germany. He stressed the obvious weaknesses of the Polish state with its large Ukrainian, Jewish, and German minorities.

Ciano reported to Mussolini that Hitler had recognized the validity of each point in support of the Italian position, provided one could assume that a general war would ensue. The doubtful policy of the Western Powers was the crux of the problem. Hitler insisted again and again that Great Britain and France would not attack Germany. Mussolini was also informed that Ciano told Ribbentrop, after the conference with Hitler on August 12th, that Italy would not enter the war if Germany was attacked by Great Britain and France. Ciano did not wish his disagreement with the German leaders to receive publicity. He had no objection on August 12th to a German protocol drawn up in French, which announced publicly that complete harmony was resulting from the Italo-German exchange of views. The German Chancellor was pleased to discover on August 13th that no elaborate statements were required to gain Ciano's support. Hitler stated his position very briefly, but he received no arguments whatever from Ciano. The Italian Foreign Minister assured Hitler instead that the German leader had often been right in his analysis of difficult situations in the past, and that his evaluation on this occasion was probably more accurate than the Italian one. A German observer later explained that Ciano folded up like a pocket knife. Ciano promised Hitler that Italy would maintain a common front with Germany. Italy had little to lose if Great Britain and France did not attack Germany. Everything was settled quickly, and the second conference between Hitler and Ciano, which terminated a basic disagreement of several weeks duration between Germany and Italy, was over in thirty minutes.

The Reversal of Italian Policy

Ciano had given Hitler his personal word that Italo-German solidarity would be maintained, but Italian Ambassador Attolico refused to accept this situation. He believed that Italy should separate from Germany if the Germans refused to retreat before Polish pretensions. He was irritated by the reports in the German press on August 15, 1939, which confirmed the Italo-German solidarity pledged by Ciano. He wished that Ciano had

not made this pledge, and he decided to do everything possible to reverse the course of Italian policy. Attolico requested and received permission to come to Rome on August 15, 1939, to present his case. He had prepared a careful report at Berlin on the Salzburg and Obersalzberg meetings. He criticized the foreign policy decisions of Hitler, Ribbentrop, and Ciano, and he argued that Italy should not come to the support of Germany in the event of a general European war. He turned over his Embassy at Berlin to Count Massimo Magistrati, the Italian Chargé d'Affaires, with whom he enjoyed relations of close confidence. Magistrati reported to Rome, immediately after the departure of Attolico, that the Germans had informed him of the likelihood of a pact with Russia in the very near future. The purpose of this report was to convince Mussolini that the final crisis was close at hand, and that he had a last opportunity to reconsider the Italian commitment.

Attolico was delighted to discover at Rome on August 16th that Ciano regretted the commitment he had made to Hitler. Mussolini and Ciano agreed with Attolico that Italian support to Germany in a major war would be inadvisable. Mussolini expressed his hope that a negotiated settlement of the German-Polish dispute would relieve Italy of the distasteful prospect of canceling the pledge Ciano had made to Hitler. The Germans were alarmed by the mission of Attolico to Italy immediately after the conversations between Hitler and Ciano at Berchtesgaden. The negative attitude of Attolico toward the Italo-German alliance was well known at Berlin, and it was easy to deduce the purpose of his mission. He would not have left Germany had he been satisfied with the Ciano pledge at Berchtesgaden. Weizsäcker telephoned German Ambassador Mackensen on August 17th to inquire if he had seen Attolico, and if the Italian diplomat had departed again for Germany. Mackensen replied that Attolico had left Rome for Salzburg on the afternoon train the same day. He had failed to see the Italian diplomat, who was "detained at the Ministry" in seemingly continuous conferences. Weizsäcker replied with great concern that he would take the morning train to Salzburg to confer with Ribbentrop and possibly with Attolico.

A crucial telegram from Mackensen arrived in Berlin at 2:30 a.m. on August 18th before Weizsäcker departed for Salzburg. Ciano had informed the German Ambassador shortly before midnight on August 17th that Mussolini rejected the Berchtesgaden analysis of Hitler, Ribbentrop, and Ciano that a German-Polish war could remain localized. Mussolini insisted that a local war in Poland would be followed by an Anglo-French attack against Germany. He repeated the statement, agreed to by Hitler, that such a struggle would be exceedingly unfavorable for the Axis. Mussolini expressed his keen disappointment at the failure of Germany to respond favorably to the proposed Brenner meeting of the previous month, and to the Italian plan for a general diplomatic conference. He complained that such treatment from Germany deprived him of further inspiration for new creative suggestions. Ciano claimed that Mussolini was insisting that the decision for further steps "now lay solely with Berlin." Mackensen noted suspiciously that Ciano had a still later appointment the same night with the British Ambassador. The German diplomat was curious to know how much Ciano would choose to divulge to Sir Percy Loraine about the

Italian position.

The German leaders were exceedingly disturbed by the revelation of Mussolini's attitude. Weizsäcker knew that Attolico had gone to Rome with the express purpose of converting Mussolini to a different interpretation of the crisis from the one which had been agreed upon between Hitler and Ciano at the Obersalzberg. Mackensen did not deny the obvious purpose of Attolico's mission, but he argued that the Italian Ambassador had insufficient influence at Rome to accomplish this. It seemed to Weizsäcker that Ciano was revealing excessive weakness in this dispute, and the German State Secretary concluded that Ciano had failed to speak with *franchise brutale* on August 13th, although he had sought to convey this impression. Weizsäcker concluded that Mackensen was wrong about Attolico's influence. The Italian Ambassador had adopted a strong and consistent position, which contrasted with the vacillation of Ciano. Weizsäcker guessed correctly that this factor was decisive in influencing Mussolini.

Italy's Secret Pledge to Halifax

Ciano received Sir Percy Loraine a few minutes after midnight on August 18, 1939. He offered to discuss the conversations with Ribbentrop and Hitler on August 12th and 13th. Ciano reminded Loraine that the Poles were violating the German frontier with great recklessness, and that he was receiving extensive information about this situation from exclusively Italian sources in Poland. Ciano explained that the German attitude in the Polish question was naturally very stiff under these circumstances. The Italian Foreign Minister pleaded with Loraine that peace could not be preserved indefinitely unless at least the Danzig problem was solved in the German sense. Loraine replied that it was a fixed British policy to apply no pressure on Poland to settle her differences with Germany. Ciano conducted himself correctly throughout this conversation, and Loraine hastily reported to Halifax that Italy had decided to stand solidly with Germany. It was unfortunate that Italian fear of a possible British military attack prompted Ciano and Mussolini to abandon their attitude of loyalty toward Germany. Loraine joyfully reported later on August 18th that a new discussion with Ciano permitted him to draw the opposite conclusion about Italian policy. Ciano had claimed that Italy "has not agreed" to support Germany in the event of war, and he intimated to Loraine that she had no intention of doing so. Ciano also confided that he was in serious disagreement with Ribbentrop about the Polish crisis. Loraine reported irresponsible rumors that Hungarian Foreign Minister Istvan Csacy was in Rome on a pro-Polish and anti-German mission. Loraine hoped that this was true, because it would magnify the great differences which separated the Axis allies. The rumor about the Csacy visit originated from a Russian source, and it apparently did not occur to Loraine that the Russians were encouraging the British to persist in their disastrous policy of challenging Germany.

Ciano's indiscretion produced an electric effect in London, and it greatly weakened the impact Hitler desired to produce with his surprise Russian agreement. The influence

on France was still more decisive. Indeed, it is reasonably certain that France, and consequently Great Britain, would not have attacked Germany had it not been for the disloyal indiscretion of Ciano to Lorraine on August 18, 1939. The French military leaders asserted later that they would never have advised the French Government to gamble on a Franco-German war had it not been for the advance pledge of Italian neutrality in such a conflict. It would have been a simple matter for Bonnet to continue his peace policy had the French military men declared that a war with Germany was not feasible. A firm Italian stand in support of Germany, as advised by Hitler, and accepted by Ciano on August 13, 1939, would have done much more for European peace and for the interests of Italy than the prostration of Italy on August 18, 1939, before the British military threat. The Germans at this time had no idea whether or not Italy would support them. They were suspicious about the conferences between Ciano and Lorraine, but they did not know that the British Government was receiving a promise that Italy would remain neutral if Great Britain attacked Germany. The message from Mussolini which Attolico presented to Ribbentrop at Salzburg on August 18, 1939, offered no indication of the true Italian position. Mussolini observed that a conflict between Germany and Poland would be difficult to localize, but he did not say that, in his opinion, this would be impossible. He mentioned that conditions did not appear favorable for Italian participation in a war of long duration, but he did not indicate that Italy would refuse to support Germany. It was natural for the Germans under these circumstances to conclude that Ciano had exaggerated the negative attitude of Mussolini in his conversation with Mackensen on August 17, 1939.

Ribbentrop explained to Attolico that the localization of a German-Polish war would probably depend upon the maintenance of a solid Italo-German front. The German Foreign Minister did not realize that this common front had been smashed by Ciano as the result of the initiative of the Italian diplomat to whom he was addressing his remarks. Ribbentrop explained that no prolonged war under modern conditions could be a "successful war" for any European Power, and he pointed out that Great Britain and France, after the conclusion of a Russo-German pact, could not hope for a quick success in a war against Germany. He had given much thought to Ciano's point about the re-election of President Roosevelt in the event of war. He and Hitler hoped that opposition to Roosevelt in the United States was sufficiently strong to hold the American President in check. Attolico declared that he was less optimistic about all these points, and he complained that the shortage of raw materials in Italy was a serious problem. Ribbentrop suggested that Attolico's analysis was not sufficiently imaginative. Russian raw materials would be available to Italy after the conclusion of a Russo-German trade agreement. Polish ore products from former German East Upper Silesia would be helpful to Italy in the event of war with Poland. Ribbentrop was satisfied with the outcome of this conference, because he received the delusive impression from Attolico that his remarks had allayed Italian fears.

Mussolini was encouraged on August 18th by a misleading report from Italian Amba-

sador Arone at Warsaw. The Italian diplomat was informed by the American journalist, John Gunther, that Beck was perfectly willing to negotiate with Germany for a peaceful settlement. The false report of Gunther was widely circulated, and it contributed to serious misunderstandings about Polish policy at a time when Beck was resolutely opposed to further negotiation with Germany.

The Personal Intervention of Hitler

Hitler personally took charge of the German negotiation efforts on August 20th. Schulenburg was instructed to present himself to Molotov at once and to hand him a telegram from Hitler to Stalin. Schulenburg managed to contact Molotov at 3:00 p.m. on August 21st to present the telegram. Hitler informed Stalin that Germany accepted the Russian draft for a non-aggression pact, and that "the tension between Germany and Poland had become intolerable. Polish demeanor toward a Great Power is such that a crisis may arise any day. In the face of this presumption, Germany is determined in any case from now on to look after the interests of the Reich with all the means at its disposal." Hitler proposed that Ribbentrop fly to Moscow on August 22nd, but he added that the 23rd would be acceptable. He informed Stalin that the tense international situation would prevent Ribbentrop from remaining in Russia more than one or two days. He concluded, "I should be glad to receive your early answer."

Stalin did not consider it worthwhile to protract the suspense by evading Hitler's direct proposition. The Soviet leader responded cordially to Hitler on August 21st. He invited Ribbentrop to come to Moscow on August 23, 1939, and he requested that a special communiqué be issued on August 22nd to announce the approaching pact. The Russian press on the evening of August 21st announced the conclusion of the trade pact with Germany, and the Soviet decision to conclude a political agreement with the Germans. Molotov informed Schulenburg that the Russians favored a formal joint communiqué announcing the pact for the morning of August 22, 1939. The die had been cast, and Ribbentrop organized an impressive staff of thirty advisers to accompany him to Moscow. The assault on German interests by Halifax had prompted Hitler, in the interest of preventing war and defending Germany, to deprive a number of the smaller states of Eastern Europe, including Poland, of German protection against Bolshevist expansion. It was obvious that Great Britain and France would do nothing to protect Eastern Europe against Bolshevism.

The Complacency of Beck

Beck (Minister of Foreign Affairs of Poland) was not worried by the prospect that Great Britain and France might desert Poland until several days after the announcement of the approaching Russo-German treaty. Kennard was amazed to discover at 1:30 a.m. on August 22nd that Beck was utterly complacent about the situation. Beck explained

that the pact made no difference to Poland, because, in contrast to Great Britain and France, she had not been counting on Soviet aid. He added that the understandable disappointment in Great Britain and France was the price these countries paid for having placed false hopes in the Soviet Union. Beck warned his subordinates at the Polish Foreign Office on August 23, 1939, that war with Germany would break out at any time, and he claimed without any foundation that the Germans were assigning nine-tenths of their military forces to ultimate operations in Poland. He confided that he would advise the Polish military leaders on the same day to mobilize the final twenty-one divisions of Polish reserve troops. This decision would be justified by his analysis that war in the immediate future was inevitable. It was decided at the Polish Foreign Office to inform Polish missions abroad that the approaching non-aggression pact exerted no effect on the fundamental situation other than to bring the inevitable war one step closer.

It was soon evident that the approaching pact exerted a greater influence on France than on Italy, Poland, or Great Britain. This is not surprising when it is recalled that the Russian move effectively undermined the existing Franco-Russian alliance. Paul-Emile Naggiar, the French Ambassador to Russia, complained bitterly to American Ambassador Lawrence Steinhardt on August 23rd that the Poles were exclusively to blame for the failure of Western negotiations with Russia. It was obvious to Steinhardt that Naggiar favored French abandonment of the Poles. American Ambassador Kennedy at London obtained an entirely different reaction from the British Foreign Secretary. Kennedy suggested that it would be logical to respond to the situation in Russia by seeking a peaceful settlement with Germany, but Halifax replied stiffly that "my reason shows me no way out but war." This was because Halifax favored war with Germany at any price, and it was evident to Kennedy that he was impervious to reasonable proposals for peaceful negotiations.

Kennedy discussed the situation on the same day with Chamberlain, who had returned to London from his vacation. It was evident that Chamberlain was fatalistic and unprepared to exert a moderating influence on Halifax. Chamberlain admitted that Poland would not be encouraged to make any concessions to Germany. Kennedy personally hoped that Poland would finally agree to resume negotiations with Germany, and he was disappointed to discover that neither Halifax nor Chamberlain was prepared to urge the Poles to adopt this course. He was convinced that Warsaw rather than Berlin constituted the chief menace to peace. He suggested to the American State Department that if President Roosevelt "is contemplating any action for peace, it seems to me the place to work is on Beck in Poland and to make this effective it must happen quickly. I see no other possibility."

Ribbentrop's Mission to Moscow

Ribbentrop flew to Moscow on August 23rd in a large German Condor transport airplane with a staff of thirtytwo experts. He had received plenipotentiary powers from Hitler before departing for Moscow. The German team was received at Moscow with great

cordiality, and their Russian hosts proved to be extraordinarily communicative. Various important European issues, such as intimate Turkish diplomatic relations with the British, or the intrinsic value of French military power, were discussed with apparent frankness. The hospitable Russians did everything possible to encourage the Germans to feel comfortable and at ease. The Russians placed a request early in the evening of August 23rd for German toleration of their plans to establish military bases in Estonia and Latvia. The Russians insisted on a free hand in Finland, and on German neutrality in the conflict Russia intended to provoke with Rumania to recover Bessarabia. Ribbentrop, despite his plenipotentiary powers, telephoned Berlin to receive the consent of Hitler for German acquiescence in these aggressive Russian plans. He knew that the attitude toward Russia of the peoples of the former Russian Baltic provinces contrasted with the desire for union with Germany of the Germans of Austria, Sudetenland, Memel, and Danzig. The Baltic peoples did not desire the revisionist program implied by the Russian demand for bases in their countries. They were the tragic victims of the situation produced by the Anglo-German conflict of interests.

Ribbentrop had contacted Berlin at 8:05 p.m. on August 23rd, and the affirmative response of Hitler was received in Moscow at 11:00 p.m. Ribbentrop was sincere when he informed the Russians on August 23rd that Germany had made no irrevocable decision to respond to Polish provocations with a military campaign in Poland. Hitler's first secret announcement that there definitely would be war with Poland came on August 25, 1939, and even this was subsequently contradicted by a new order from the German Chancellor. Nevertheless, both the German and Russian negotiators were reckoning with the likelihood of immediate war between Germany and Poland. Ribbentrop also issued a statement on August 24th, after the signing of the pact, that Germany would take concrete steps to encourage a relaxation of tension between the Soviet Union and Japan.

Ribbentrop devoted August 24th in Moscow to the establishment of personal contacts with the Russian leaders. He told Stalin that the proverbial wit of the Berliners was quick to respond to any given situation. He had heard a story before he left for Moscow which carried the theme of Stalin's imaginary decision to join the anti-Comintern pact. Ribbentrop personally hoped for lasting peace between Germany and the Soviet Union, and he knew that the chances for peace would be improved if some means were found to modify the existing anti-Comintern pact, which was directed against international Communism. He hoped in vain that it might be possible eventually to persuade Stalin to abandon his plans for world revolution, and to concentrate on the realization of strictly national Russian interests. His joke about the anti-Comintern pact was an obvious but futile move to prepare the ground in this direction.

Hitler received the German military leaders at the Obersalzberg on August 22, 1939. He discussed the situation with them in morning and afternoon conferences, and he ordered the plans for possible military operations against Poland to be completed by August 26th. He refrained from issuing a final attack order. Hitler described German negotiations with Russia at great length, and he expressed the opinion that the Russo-German pact would

discourage Great Britain and France from intervening against Germany in the event of a German-Polish war.

One version of these conferences was presented by Louis P. Lochner of the American Associated Press to British diplomats at Berlin on August 25, 1939. This material was later cited by a number of historians as a valid record of the conferences, and it consciously or unconsciously influenced the thinking of British diplomats at the time. Otherwise, it would have been dismissed as something too ridiculous to receive serious consideration. The crass propaganda in the material would have been immediately discarded had people been permitted to think normally about important issues. Unfortunately, a furious and uninterrupted war propaganda campaign had been carried on in the West for more than five months, and nearly everyone, regardless of his mental caliber, had been seriously affected. Why would anyone believe that Marshal Göring danced on the table and shrieked like a savage before a group of austere German Generals? Why would Hitler blandly announce to his Generals that "Göring had demonstrated to us that his Four-Year Plan is a failure and that we are at the end of our strength, if we do not achieve victory in a coming war?" This sounded more like a leaf from the book of President Roosevelt, who, unlike Hitler, was still facing a catastrophic depression. The statement would be sheer nonsense when applied to war with poverty-stricken Poland. Every informed person, including Lord Halifax, knew that Göring was the last person in Germany who would deliver arguments in favor of a general war at this time.

The memorandum stated that Hitler told his Generals he planned to kill the Polish women and children. This would have been proper material for an American "comic book," and also for Hitler, if his purpose had been to goad his Generals into an immediate revolt against the German regime. The memorandum claimed that Germany could not hold out in a long war (Note: At least this is true), but added in the same paragraph that "Poland will be depopulated and settled with Germans." The memorandum also claimed that Stalin was very sick, and that Germany would dismember Russia after his death. Succinct and reliable references to the meetings of August 22, 1939, are available from the actual participants. The traditions of popular journalism cannot excuse people, from any country, who seek to precipitate wars by spreading lies when feeling is running high.

Hitler's Desire for a Negotiated Settlement

Hitler hoped to recover the diplomatic initiative through his Kremlin pact of August 23, 1939. The effort launched by Halifax on March 17, 1939, to build a formidable British alliance front in Eastern Europe had failed. Hitler also hoped that Great Britain and France would react to this situation by withdrawing their support from Poland. He knew that his pact with Russia placed him in a strong position to resume negotiations with the Western Powers. His recent success was too sensational to permit new negotiation efforts to be readily confused with weakness. The British Government gave Hitler an excellent opening for his new diplomatic campaign by commissioning Chamberlain to write to him.

The British leaders, of course, did not intend to embark on major negotiations, but Hitler had other plans. The presentation of the Chamberlain letter by Henderson on August 23, 1939, was the signal for a major German diplomatic offensive in Great Britain.

The situation would have been relatively simple for Hitler by August 23, 1939, had it not been for the unpardonable indiscretion of Ciano and the incredible conduct of General Gamelin (from France). The statement of Ciano on August 18th that Italy would not support Germany cushioned Halifax from the impact of the German treaty with Russia, and it gave General Gamelin an excuse to rationalize the unfavorable French military situation, which had been created by the Russian agreement with Germany. The action of Ciano was especially unwarranted because the Italian Foreign Minister knew that Hitler hoped to create the maximum effect of surprise with his Russian pact. Ciano knew that his own pledge to the British would greatly reduce the impact of Hitler's diplomacy. It was easy to argue in London that the position of Hitler would be insecure if the Italians refused to be loyal to their engagements with him. Italian loyalty to Hitler and a clear decision from France against war on behalf of the Poles would surely have pulled the teeth from the Halifax campaign to launch a preventive war against Germany. The absence of these contingencies made it exceedingly difficult for Hitler to capitalize on his Russian success in negotiations with the British leaders. He was not fully aware of this situation on August 23rd. He knew nothing of the Italian pledge to the British on August 18th, or of the crucial debate in the meeting of the French Defense Council. He failed to appreciate the adamant determination of Halifax for war. He knew that British Ambassador Henderson was opposed to war, and he hoped that the views of the British diplomat at Berlin were shared to some extent by his master at London. Hitler was more optimistic than the facts warranted, but this was mainly because he was not fully aware of the existing situation.

The Russians too were unduly optimistic about their prospects on August 23, 1939. They overestimated the military power of France, and they expected a hopeless military stalemate on the Franco-German front reminiscent of World War I. Stalin hoped to expand his position in Eastern Europe, and to intervene militarily against Germany in the latter phase of a European war, when both Germany and the Western Powers were exhausted. There was one notably great difference in the attitudes of Stalin and Hitler. The Soviet Dictator, like Halifax and Roosevelt, was hoping for the outbreak of a general European war. Hitler considered that a European war would be a great evil, and he was anxious to prevent it. It is ironical to anticipate that the leaders of the Soviet Union, Great Britain, and the United States ultimately joined together in true Orwellian fashion, at Nuremberg in 1945-1946, to condemn the German leaders for deliberately seeking, as "aggressors," to destroy the peace of the world.

From "Truth for Germany":

It comes as a shock to discover that the French Foreign Minister, Bonnet, on 23 August avails himself of the lie of alleging to London the Polish consent to Russian troops marching through Polish territory, and that Halifax recognizes this lie and, nevertheless,

forwards a note to the Head of the British delegation in Moscow, Admiral Drax, that he should endorse the statements of the French General Doumenc. (In July 1940, after resuming these contacts, the British Ambassador in Moscow, Cripps, at the suggestion of his government, was recommending to Stalin to also take possession of the Balkans and of some reservations in the Dardanelles). The British guarantee to Poland, which merely concerned the German-Polish border, was thereby exposed, in the light of the thus contrived state of affairs, as a wicked hypocrisy that camouflaged war-minded intentions. The British Ambassador in Berlin, Henderson, admitted to Lord Halifax in a letter of 22 August 1939 that Hitler had been forced by Britain into taking this step in Moscow:

“But I cannot say that I was surprised as I have always felt that our policy with Poland would only end by driving Germany and Russia together. At least one cannot blame Germany.”

Taking cognizance of these facts, Hitler cannot be blamed that the Non-Aggression Pact which he concluded with Moscow likewise made provisions for modifications, which in the secret additional protocol were expressed in the delimiting of the spheres of interest as “in the event of territorial changes”. Nevertheless, the Non-Aggression Pact with Stalin, unlike the allied venture, was not a military alliance. Furthermore, Hitler had not concluded it with the idea of unleashing a war. Hitler’s striving and the striving of the Reich Foreign Minister, von Ribbentrop, but also that of Field Marshal Göring in the unofficial diplomatic course of action taken from 23 August to 1 September 1939, continued to be focussed, taking advantage of Moscow’s change of course, on attaining amicable relations with Britain and a settlement with Poland, as the Reich government had informed Stalin as well as Mr. Chamberlain.⁷) Even the fact that Ribbentrop had asked the Soviets to mass troops along the Polish frontier is merely to be understood in that this display was to induce Poland into yielding and thus to an amicable settlement. Before the beginning of war, there were neither any plans for combined action against Poland, nor did the Reich government endeavour, until Britain’s and France’s declaration of war against Germany, to persuade the USSR into joining the German side in a conflict with Poland. These facts refute the hypothesis that the Non-Aggression Pact had as its aim, on Germany’s part, the destruction of Poland or the unleashing of a war in general. Zentner writes:

“For the sake of historical truth, one must clearly bear in mind that Stalin’s first attempt to chum-up on 10 March [1939], was well taken note of in Germany and, besides, was correctly understood, but that there was no reciprocal response from the German side. Only after the Anglo-French guarantee declaration to Poland and after the Polish excesses against everything German does Hitler come to regard Stalin as a possible ally.”

Former State Secretary Meissner explains Hitler’s motives as follows:

“At the conclusion of the Moscow Pact, Hitler was convinced, in so far as one can infer from his own demeanour and his own comments, of the necessity and of a long continuance of German-Russian co-operation, and he was ready to subordinate the ideological

differences between National Socialism and Bolshevism to reasons of political realism. I was witness to various discussions during which Hitler tried most insistently to convince leading party members of the soundness of his decision.”

The Pact from Stalins View

From “The Chief Culprit“:

Meanwhile, the tensions in Europe rose. Hitler demanded a review of the Versailles Treaty. In accordance with this treaty, Eastern Prussia was separated from the main part of Germany, and the city of Danzig was declared a free city. Hitler demanded to be given a corridor through Polish territory to build a highway and a railroad between Eastern Prussia and mainland Germany. Additionally, the city of Danzig was to become a part of Germany. The Polish government refused to satisfy Hitler’s demands. Great Britain guaranteed Poland’s safety. Treaties guaranteeing mutual aid were signed between Great Britain, France, and Poland. The governments of Great Britain and France decided to attract the Soviet Union to their side. This was a monstrous and fatal mistake. If the USSR had been interested in safeguarding peace in Europe, it would not have needed agreements with Great Britain and France. Stalin could have solved the problems of Europe’s safety on his own. He only had to make his position clear to Hitler: If Hitler were to begin a war against Poland, then he would not receive Soviet oil, grain, cotton, iron ore, magnesium, chrome, zinc, nickel, and tin. Without these things, Hitler could not have fought. It was possible to give an even harsher ultimatum: to declare independently of Britain, France, and Poland that the Soviet Union would defend Polish territory from German aggression as if it was its own, as it defended Mongolian territory from Japanese aggression. It would not matter that the Polish government might not wish to have Soviet troops on Polish territory. When Germany crushed the Polish army and dismantled the Polish government, the Red Army would step into Poland and fight Germany. An invasion of Poland by the Germans would be a signal for the Red Army to get ready for action. After the fall of the Polish state, the Polish people would continue resistance, and would accept any help which the Soviet Union would be willing to give in unlimited quantities.

In the summer of 1939 Hitler should have been reminded that Soviet pilots, sappers, tankers, artillerists, and saboteurs fought in Spain against German military specialists. There the war lasted almost three years. Sending soldiers and arms to Spain was difficult. Poland was not Spain. Poland was much nearer. The Soviet Union could send any number of “volunteers” to Poland, 5 or 10 million, plus any number of tanks, airplanes, and artillery. Hitler should have been told that in the event of aggression against Poland, the Soviet Union would give asylum to Polish refugees, would take in any number of Polish children, would offer training to Polish partisans and supply them with necessary equipment. In this case, war against Poland could not be a lightning war. It would be a war of attrition, and Germany did not have the resources for such a war. That is how Stalin should have behaved. But he, for some reason, insisted on having talks with Great

Britain and France. If a novice player sits down to play cards with a pro, he usually makes only one mistake: he picks up his cards. . . . On August 11, 1939, British and French delegations arrived in Moscow for talks about joint action against Germany. The governments of Great Britain and France repeated the mistake of novice card-players. They sat down at the table with Stalin's pros, and lost the talks. Neither the British nor the French envoys understood Stalin's intentions. Stalin's plan, in fact, was very simple: force France and Britain to declare war on Germany, or push Hitler to actions that would prompt France and Britain to declare war on Germany.

Having received approval from the British and French governments for talks, Stalin immediately found himself in a situation in which he could not lose. For Stalin, two options were open: either the Soviet delegation would set new demands and force Britain and France to start a war against Germany; or Britain and France would refuse to invade Germany, the talks would fail, and it would be possible to accuse Britain and France of being too lax on the aggressor, while Stalin himself could sign a pact with Hitler. The Soviet delegation set forth insatiable demands: We have no common border with Germany, so our troops need corridors through Poland! This demand was unacceptable for Poland, and unnecessary for the Soviet Union. It was unacceptable because the Polish government and people knew the nature of the Red Army and the Soviet secret police. In 1920, the Polish people saw the Red Army on their land, and understood that a new arrival of "liberators" would turn into occupation, mass shootings, and terror against all layers of society. Several months after these talks, Estonia, Latvia, and Lithuania allowed the placing of Soviet garrisons on their territories—and fell into Communist slavery, which lasted half a century. If Stalin wanted peace, why did he need corridors in Poland? K. E. Voroshilov, then a member of the Politburo, the People's Commissar for Defense, and a Marshal of the Soviet Union, declared at the talks: "Since the Soviet Union has no common border with Germany . . . there are no roads for engaging the aggressor."

The absence of common borders with Hitler's Germany was a great asset for the Soviet Union. If the Soviet Union was thinking in terms of defense or neutrality in case of war, the Red Army needed no corridors to pass through Polish territory. But Stalin was not planning on defense, and certainly not planning on staying out of the war. He needed corridors through Polish territory on one hand in order to establish a Communist regime in Poland, and on the other hand because the corridors enabled him to deliver a surprise attack to Germany from the rear, in case it became engaged in a war against France and Britain. No other use for passages through Poland can be thought of. There were other proposals from the Soviet side: Let France and Britain start a war against Germany not only in the case of direct German aggression, but in case of "indirect aggression." What "indirect aggression" meant only Stalin and his diplomats knew. If the proposals of the Soviet delegation had been accepted, Stalin (justifiably) could have demanded that France and Britain start a war against Germany in response to any action by the German government. The wording was very loose, and anything can be labeled "indirect aggression." The scenario of war in this case was simplified: in answer to an action by

Germany, France and Britain, according to Stalin's demands, were forced to act against her. The Soviet Union would act against her as well, but on Polish territory not on its own—very convenient and safe.

In any event, the main theater of operations would unfold between France and Germany, and then fresh Soviet troops would carry out decisive strikes into the rear of German forces through the Polish territories. During the course of the talks, the French and British delegations, wishing to prove the seriousness of their intents, gave the Soviet side very important information that should not have come into Stalin's possession. Stalin knew that Great Britain and France had given their guarantees to Poland. But how serious was their word? The French and British delegations let him know that it was serious! If Hitler started a war against Poland, Great Britain and France would declare war against Germany. This was exactly the information Stalin was waiting for. Hitler thought that his invasion of Poland would go unpunished, like the entrance of German troops into the Rhineland demilitarized zone, like the Anschluss (union) of Austria and Germany, like the taking of Czechoslovakia. Stalin now knew that Hitler would be punished for invading Poland. The key to the ignition of World War II fell into Stalin's hands. It remained for Stalin only to give Hitler the green light: Attack Poland, I will not act against you (but France and England will declare war on you).

Half a century later, Soviet generals slowly started to admit that Stalin and the Red Army opened the way for Hitler to invade Poland. Army General A. Mayorov: "In planning the invasion of Poland, Germany feared most of all the Soviet Union, not England and not France. It is precisely why fascist leaders hurried to conclude a pact about [the] invasion with the USSR." The head of the GRU, Army General P. I. Ivashutin, expressed this sentiment more clearly: "With this pact, Hitler untied his hands for aggression."⁶ Simply stated, if Stalin had not signed a pact with Hitler, there would have been no invasion of Poland, and there would have been no World War II.

If Stalin had wanted peace, in August 1939 he had many opportunities to avert war. One of them was to follow the example of Britain and France and give a guarantee of safety to Poland. Or, he could simply have drawn out his talks with Britain and France, which would have served as a warning to Hitler: Invade Poland, but keep in mind that all of Europe is against you, we are gathered here in Moscow talking about something, and all we have to do is blockade Germany. But Stalin chose his own way. On August 12, 1939, the military delegations of the USSR, Great Britain, and France began talks in Moscow. Stalin's Marshal Voroshilov openly conducted with France and Britain the talks on "containing Hitler's aggression in Europe." Behind the scenes, however, things happened very differently: On August 11, even before the talks got started—Stalin made a decision to start negotiating with Germany for the partition of Poland.⁷ Stalin showed the world his willingness to stop Hitler's aggression, but simultaneously (and even beforehand) offered the German dictator a friendly and helping hand. Thus, Stalin safeguarded himself from failure, no matter what happened. Britain, France, and Germany were clearly about to engage in a massive struggle. Stalin kept up, openly or secretly, friendly relations with

all the participants in this struggle and at the same time incited them to act more and more aggressively.

On August 19, 1939, Stalin made a series of extremely important decisions, which had consequences for the course of world history. On that day, Stalin decided to stop the talks with Britain and France. On that same day, the German ambassador to Moscow, Friedrich von der Schulenburg, received Stalin's draft of the impending mutual agreement with the directions that "the agreement will be in force only given the simultaneous signing of the special protocol on points of interest to the Agreeing Parties, regarding foreign policy."⁸ Hitler didn't know that signing this agreement signified the start of World War II. Stalin did. On that same day, August 19, according to Stalin's orders the Soviet Union began a mobilization of the Red Army. Earlier, Stalin had given firm approval of conducting a sudden crushing operation to defeat the Japanese Sixth Army in Mongolia. On August 19, 1939, a coded cable from Zhukov informed Stalin that the main goal had been reached, that is, that the Japanese did not suspect the impending attack. Stalin gave his final approval, and Zhukov crushed the Japanese Sixth Army. Zhukov conducted a brilliantly sudden, quick, and audacious operation. The lightning-speed defeat of the Japanese Sixth Army was a prelude to World War II.

On that same day, August 19, 1939, a secret meeting of the Politburo took place, at which Stalin gave a speech. This meeting of the Politburo has never been reported. On the contrary, a lot of efforts were made to convince the whole world that such a meeting never took place. Stalin himself told the newspaper Pravda on November 30, 1939, that any report of a meeting of the Politburo on August 19, 1939, "is a sheer invention and lie." Years went by. The Soviet Union rotted and fell apart. Archives opened slightly. An advisor to the Russian president, Colonel General D. A. Volkogonov, published an article in the newspaper Izvestia on January 16, 1993: "There was a meeting of the Politburo on August 19, 1939. The general had [the] protocols in his hands. General Volkogonov says that only secondary questions that were discussed at that meeting are preserved in the archives. But even this revelation meant an end to public lies. With one line in a newspaper article, general Volkogonov disclosed the lies of all Soviet leaders, including Stalin. In the meantime, more brave and more truthful scientists continued the search. And the document was found. It was kept in the Special Archives of the USSR, fund 7, index 1, document 1223. Tatyana Semenovna Bushueva, a talented Russian historian, found it. The document was first published in the December 1994 issue of Novyi Mir. This document finally proved that there was a meeting of the Politburo on that date. It turned out that Stalin did indeed speak on that date, and not about secondary problems, but about most vital ones. The document reveals that Stalin spoke of matters of primary, not secondary, importance.

The Russian historical community still denies the validity of this document, claiming it is unclear how and when the document was made. On the other hand, many recently declassified documents support the validity of this account. Let's look at, for instance, a record in the diary of the general secretary of the Comintern, Georgi Dimitrov, made on

September 7, 1939. In the company of Molotov and Zhdanov, Stalin explained his new line of foreign policy to the leader of the Comintern: “the war is between two groups of capitalist nations . . . but we are not against it, if they fight a bit and weaken each other. It would be good if Germany could destabilize the positions of the wealthiest capitalist nations (of England especially). Hitler, without knowing it, is weakening the foundations of the capitalist system. . . . We, in the meantime, are able to maneuver, to nudge one country on against the other, so that the fight will be more intense.”

Below, as a source of comparison, are several excerpts from Stalin’s speech at the Politburo session from August 19, 1939: “If we accept Germany’s proposal about the conclusion of a pact regarding invasion, she will of course attack Poland, and France and England’s involvement in this war will be inevitable. Western Europe will be subjected to serious disorders and disturbances. Under these conditions, we will have many chances to stay on the sidelines of the conflict, and we will be able to count on our advantageous entrance into the war. . . . It is in the interest of the USSR—the motherland of workers—that the war unfolds between the Reich and the capitalist Anglo-French block. It is necessary to do everything within our powers to make this war last as long as possible, in order to exhaust the two sides. It is precisely for this reason that we must agree to signing the pact, proposed by Germany, and work on making this war, once declared, last a maximum amount of time.”

On August 23, 1939, Germany and the Soviet Union signed an agreement in Moscow about the destruction of the Polish state and the division of the Polish territories. Poland had mutual assistance agreements with France and the United Kingdom and, therefore, the attack by the Soviet Union and Germany automatically led to a European—and hence world—war. Indeed, in eight days, on September 1, 1939, World War II broke out. It was a direct and unavoidable result of the agreement reached in Moscow. The USSR-Germany agreement is traditionally called the Molotov-Ribbentrop Pact. Its moniker misleads and does not truly reflect the essence of what happened. The pact that was signed in Moscow was a plot between Hitler and Stalin to conduct an aggressive war in Europe together. Therefore, that agreement in effect was a Stalin-Hitler pact. Furthermore, in international practice it is much more common to use not the names of the statesmen that concluded the agreement, but the place where the documents were signed: the Munich Agreement, the Warsaw Pact, the Baghdad Pact, and the Geneva Agreement. Therefore, in accordance with common diplomatic practice, the more precise name of the pact would be the 1939 Moscow Agreement on the Start of World War II. Both parties received approximately equivalent shares—part of Poland went to Hitler, the other part went to Stalin. However, just eight days after signing the Moscow pact, Stalin violated it. Hitler started a war of aggression against Poland with hope that his ally Stalin would do the same. But Stalin cheated Hitler. On September 1 and in the subsequent two weeks the Soviet troops stood next to the Polish borders without conducting warfare and crossing the borders. The explanation of the Soviet government to the German counterpart was: the time has not come yet for action by the Red Army. As a result, the entire fault for the beginning

of the war fell upon Germany, upon Hitler and his entourage. They entered world history as the chief and only cause of World War II. Poland was divided not in the Imperial Chancellery, but in the Kremlin. Hitler was not present, Stalin was. But Hitler is at fault for the starting of the war, while Stalin is not. Stalin entered history as an innocent victim and the liberator of Europe.

The invasion of the German troops into Poland had other consequences too: on September 3, 1939, Great Britain and France declared war on Germany. Already on the third day Germany was involved in a two-front war; that is, it wound up in an unwinnable situation. Since Germany practically lacked strategic raw materials, the two-front war was fatal for Germany. Lack of raw materials not only prohibited Germany from conducting a two-front war, but also a prolonged single-front war. The only hope was for blitzkrieg—instant defeat of the opponent. France could be defeated in a lightning war, but Great Britain is an island nation. To defeat Britain, long and serious preparation is needed, as well as a powerful navy that is equal to or exceeds the British navy, and air dominance is needed too. The German navy lagged significantly behind the British navy. German air power was insufficient to crush British industry and achieve air superiority. Therefore, on the third day the war already looked long and unpromising for Germany.

Furthermore, Britain had a special relationship with the United States. The United States could side with Britain at any moment that was convenient. Germany did not have such allies. Only while he was in a position of power could Hitler rely on Stalin's friendship. In a prolonged war against Britain and her allies, Hitler would inevitably exhaust his resources. In September 1939, the German government repeatedly reminded the government of the USSR about their obligation and demanded the Red Army's invasion of Poland according to the agreement. The Soviet government would refuse—not right away, but with a two-to three-day delay. For example, in response to the German demarche of September 3, the head of the Soviet government and its foreign minister, Vyacheslav Molotov, responded on September 5: "We agree with you that concrete action has to be taken at an appropriate time. However, we consider that such [a] time has not come yet. It is possible that we are mistaken, but it appears to us that excessive haste could cause us harm and facilitate unification among our enemies."

The German government kept repeating its demands and kept getting refused. Red Army units started military action in Poland only after two and a half weeks—September 17. Stalin's troops committed similar, or maybe even worse, atrocities in Poland, but Great Britain and France did not declare war on the Soviet Union. Great Britain, France, and their allies were interested in preventing Germany from using Soviet strategic resources. To do so, it was necessary to keep Stalin at their side at any cost and, in case of war between Germany and the Soviet Union, to keep the Red Army from being defeated. As a result of the pact signed in Moscow in 1939 Stalin achieved a war, one which he desired and for which he had planned and prepared for a long time: The nations of Western Europe were mired in a destructive war, but the Soviet Union remained neutral. Now Stalin could wait for the total exhaustion and self-destruction of Central and Western

Europe. Hitler guessed Stalin's intentions and in 1941 suddenly and almost fatally struck the Soviet Union. In this critical situation, Stalin received free aid from the United States and Great Britain, which in volume and quality did not have a historical precedent. At the same time, the Soviet role in unleashing World War II was quickly and thoroughly forgotten. In the final count, Poland, for whose freedom the Western European states had entered World War II, did not gain its freedom, but was given, along with all of Central Europe and part of Germany, into Stalin's control.

It is customary to consider Britain and France among the victors. However, this is clearly a mistake. The purpose for which Great Britain and France entered World War II was ensuring Poland's independence. This aim was not achieved as a result of the war; therefore, there is no cause to celebrate victory. As a final result of the Moscow pact, Hitler committed suicide and Stalin became the unbound Red ruler of a huge anti-Western empire, created with the West's help. At the same time, Stalin managed to keep his reputation of a naïve, trustful simpleton, and Hitler entered history as a duplicitous villain. It is accepted that Stalin was not ready for war, but Hitler was ready. But the one who wins the war is the one who prepares for war by dividing his enemies and making them fight each other, not the one who makes loud pronouncements.

Contents of the Pact

The Government of the German Reich and The Government of the Union of Soviet Socialist Republics desirous of strengthening the cause of peace between Germany and the U.S.S.R., and proceeding from the fundamental provisions of the Neutrality Agreement concluded in April, 1926 between Germany and the U.S.S.R., have reached the following Agreement:

Article I. Both High Contracting Parties obligate themselves to desist from any act of violence, any aggressive action, and any attack on each other, either individually or jointly with other Powers.

Article II. Should one of the High Contracting Parties become the object of belligerent action by a third Power, the other High Contracting Party shall in no manner lend its support to this third Power.

Article III. The Governments of the two High Contracting Parties shall in the future maintain continual contact with one another for the purpose of consultation in order to exchange information on problems affecting their common interests.

Article IV. Should disputes or conflicts arise between the High Contracting Parties shall participate in any grouping of Powers whatsoever that is directly or indirectly aimed at the other party.

Article V. Should disputes or conflicts arise between the High Contracting Parties over problems of one kind or another, both parties shall settle these disputes or conflicts ex-

clusively through friendly exchange of opinion or, if necessary, through the establishment of arbitration commissions.

Article VI. The present Treaty is concluded for a period of ten years, with the proviso that, in so far as one of the High Contracting Parties does not advance it one year prior to the expiration of this period, the validity of this Treaty shall automatically be extended for another five years.

Article VII. The present treaty shall be ratified within the shortest possible time. The ratifications shall be exchanged in Berlin. The Agreement shall enter into force as soon as it is signed.

Secret Additional Protocol.

Article I. In the event of a territorial and political rearrangement in the areas belonging to the Baltic States (Finland, Estonia, Latvia, Lithuania), the northern boundary of Lithuania shall represent the boundary of the spheres of influence of Germany and U.S.S.R. In this connection the interest of Lithuania in the Vilna area is recognized by each party.

Article II. In the event of a territorial and political rearrangement of the areas belonging to the Polish state, the spheres of influence of Germany and the U.S.S.R. shall be bounded approximately by the line of the rivers Narev, Vistula and San.

The question of whether the interests of both parties make desirable the maintenance of an independent Polish States and how such a state should be bounded can only be definitely determined in the course of further political developments.

In any event both Governments will resolve this question by means of a friendly agreement.

Article III. With regard to Southeastern Europe attention is called by the Soviet side to its interest in Bessarabia. The German side declares its complete political disinterestedness in these areas.

Article IV. This protocol shall be treated by both parties as strictly secret.

Moscow, August 23, 1939.

For the Government of the German Reich v. Ribbentrop

Plenipotentiary of the Government of the U.S.S.R. V. Molotov

The not so secret Protocol

While the public was immediately informed about the official non-aggression part of the pact, the Secret Additional Protocol was also not as secret as some might believe. Charles Bohlen, who was the US Diplomat to the USSR in Moscow before and during World War 2, presented in his book "Witness to History: 1929-1969" the information that on the morning of August 24, 1939, he visited Hans von Herwarth (German Diplomat who was opposed to the Nazis) and received the full content of the secret protocol to

the Molotov-Ribbentrop Pact, signed only the day before. From the Memories of Hans von Herwarth, from the Book "German-Soviet relations 1939-1941 by Slawomir Debski" and from the book "Caught Between Roosevelt & Stalin: America's Ambassadors to Moscow by Dennis J. Dunn", one also learns that the secret protocol was known to the US government as early as 24 August 1939. It was passed to US diplomat Charles Bohlen by Hans von Herwarth, a German diplomat. The US ambassador in Moscow Laurence Steinhardt passed that information to US secretary of state Cordell Hull on the same day. Hull immediately informed British minister of foreign affairs Edward Halifax, who in turn informed the French. But the French already learned about the secret protocol from another source on 25 August 1939 through the contacts of their embassy in Berlin. There is also evidence that the news was immediately known to Italians, Estonians and Latvians.

The Poles didn't know about the secret protocol and so they didn't expect the Soviet invasion of 17 September 1939. The fact that the British didn't pass that information to their Polish allies is a direct betrayal of Article 5 of the British-Polish alliance agreement from 25 August 1939:

"Contracting Parties ... will exchange complete and speedy information concerning any development which might threaten their independence and, in particular, concerning any development which threatened to call the said undertakings into operation."

Would have Poland known the secret pact, they would have been forced into negotiations with Germany, which were the hopes of Hitler and which would have prevented the war. The information about the secret pact were leaked to the Allies through various channels on purpose but could not be relayed to Poland directly because they refused to talk at this point with the German government. German-Polish relations had to be mediated through British officials.

If one considers the information already presented in this book so far, how the US and Britain gave massive assurances of support to Poland, and how Poland was not informed about the secret pact (they had 1 week to deliver the information), one might get to the conclusion that Poland was led to the slaughterhouse on purpose.

11.16 The Foreign Policy of the Great Powers on the Eve of War

Great Britain

Winston Churchill describes to us in his memoirs with rare frankness the basic principles of British foreign policy before the Second World War. According to these, from the outset one thing is for certain for any Englishman and that is that any European Great Power – no matter at what moment in time or under what circumstances or in what system of government – was going to be "aggressive" and ruled over by "tyrants" as soon as it had

attained a certain degree of strength and internal stability. Upon these premises a “policy rule” is constructed, and Britain’s foreign policy is always conducted in conformity with it, thereby not only “guaranteeing” perpetual disagreement within Europe, but she has also been using it for administering justice among the nations. Yes indeed, Churchill even admitted that for him – and thus for British policy – there was no difference between the “Hitler regime” and the various other forms of government encountered in European history. This leading Englishman thus acknowledges that his own “crusader” role was devoid of any legal foundation and not bound to any ethical values. Over and above that he admits that the British foreign policy had, for the past 400 years, not been orientated towards rights and justice, nor humanitarian sentiments or international understanding, but was rather geared to an autocratic “principle”, whereby all other states would be declared, according to demand, tyrannical, aggressive and criminal. Churchill writes:

“For four hundred years the foreign policy of England has been to oppose the strongest, most aggressive, most dominating Power on the Continent... Faced by Philip II of Spain, against Louis XIV under William III and Marlborough, against Napoleon, against William II of Germany, we joined with the less strong Powers, made a combination among them, and thus defeated and frustrated the continental military tyrant whoever he was, whatever nation he led... Observe that the policy of England takes no account of which nation it is that seeks the overlordship of Europe. The question is not whether it is Spain, or the French Monarchy, or the French Empire, or the German Empire, or the Hitler regime. It has nothing to do with rulers or nations, it is concerned solely with whoever is the strongest or the potentially dominating tyrant. Therefore we should not be afraid of being accused of being pro-French or anti-German. If the circumstances were reversed, we could equally be pro-German and anti- French...”

No British historian, no British government has ever denied these observations made by Churchill. On the contrary! Lord Halifax, in his speech on 30 June 1939 at the Royal Institute of International Affairs expressed himself in a similar sense.²⁾ Exactly the same is said in the memorandum that the US State Department presented to President Truman before the start of the Potsdam conference (July 1945) in order to inform him about the British tradition of the “policy of balance”. Lord Vansittart, for many years the highest civil servant in the Foreign Office and later Chief Diplomatic Advisor to the government, also confirms:

“If such a domination [of a continental power] were established we should be confronted with a position which we have for centuries endeavoured to prevent with the instinctive knowledge that any lasting hegemony in Europe must of necessity reduce this country [Britain] to a second-class power.”

Churchill’s statement demonstrates to the world that also in the Second World War ethical principles such as “protection of the small nations”, “international justice”, the “struggle for freedom and democracy”, “safeguards against tyrants” were nothing but propaganda slogans for Britain. It is grotesque for a country such as Britain that in 1939 still had at her disposal 40 million square kilometres, was ruling over a large number of foreign nations

and, moreover, was claiming the ocean for herself, that she should pose as “defender of the rights of small nations” and of the “free world”. It is no less grotesque that these British politicians should accuse a nation that had only 600,000 square kilometres to call her own, that is to say 1.5 per cent of that of the British landholding, of “striving for world domination” – and, furthermore, that they were believed!

Even on the occasion, when Churchill becomes still more explicit and calls the Second World War a “British war” (with this line of reasoning, as used on the BBC, London, he refused the peace negotiation proposals from the Belgian King and from the Queen of the Netherlands made after the campaign of Poland in 1939) and declares as its aim the “annihilation of Germany”.

Even a diplomat from Churchill’s own Conservative Party admitted:

“To the world at large, Churchill appeared to be the very embodiment of a policy of war. To have brought him into the Government when the balance between peace and war was still quivering, might have definitively tilted the scales on the side of war.”

A pretext for justifying their antagonistic attitude has always been found in British politics. The Versailles diktat had put a noose around the neck of the Weimar Republic and had plunged the German nation into strife and economic chaos, although they had willingly made the democratic form of government their own. The liberal constitution did not offer even the smallest hint of clemency and consideration. But when this gave way to dictatorship, that change served as the pretext for a new war. In the words of the Englishman, William H. Dawson:

“The fact that there was in 1933 a completely different Germany from what her enemies had planned, can be explained in that the Allies had done their utmost to weaken and destroy Germany – physically by dismembering her, financially with the reparations, in her reputation with misrepresentations and defamation, in her spirit with a heap of insults and humiliations of every conceivable means. . . . Therefore, in view of the misery that the Weimar Republic had to suffer from 1919 to 1932, researchers arrived at the conclusion that it was a miracle to have survived those years of distress and disgrace.”

When the Germans could see a way out of this chaos, National Socialism simply had to be made into the “villain”, from this time onward, so that again the treatment of the Germans as inferior beings and outcasts could be justified. Once again British, French and American politicians and newspaper publishers, in conjunction with the Soviets, got worked up over the “eternal trouble-maker”. They put the responsibility for the looming war unto the German government “should they continue rearming”, even at a time when Germany, in contrast to her neighbours, was totally defenceless.⁷) They were the ones who, with an enormous outpouring of propaganda, got to work on classifying the nations into good ones and bad ones, into peace-loving and aggressive systems of government and, by means of alleged secret information, were feigning an “imminent danger” that was threatening different countries. The British Foreign Secretary Eden was already quite blunt during a talk with the Polish Marshal Pilsudski in the year 1935 by asking him:

“Do you think, Monsieur le Maréchal, we should remain on our little island?”

Similarly the highest civil servant in the Foreign Office, Vansittart, in the year 1933:

“If Hitler fails, his successor will be Bolshevism [power-political depreciation of the German area]; if he succeeds, he will have a European War in five years.”

At the same time, that is to say in the year 1933, this same Vansittart had already drawn up a memorandum that had but one purpose: Germaniam esse delendam (Germany must be destroyed).

This man had for years held the highest civil servant position in the Foreign Office, and also in the Chamberlain government he continued exercising his influence, in spite of the fact that Chamberlain removed him from his post in 1938 and tried to put him on ice with the appointment of Chief Diplomatic Advisor of the British government. While the German unity was objectionable to these people anyway, so the power that was becoming more and more noticeable in the regeneration of Germany, eventually had to serve once again as the pretext for interfering on the grounds that it was disturbing the “balance of power”. This, despite the fact the Reich at this time – in contrast to the period before the First World War – had not participated in the armament race, and Germany’s foreign trade was not about to create havoc on the world market. Yet Germany had become too powerful for their liking, although they had managed to create an armaments lead of several years and to put a cordon of alliances, formed by the victorious nations, around the vanquished one. The British Defence Committee – and this is characteristic – had already decided as early as the spring of 1934, at a time when it was a verifiable fact that Germany did not have the military might on a par with Great Britain and was not making any territorial demands, that the “ultimate potential enemy” in a general war would be Germany. Countless prominent personalities in Britain, France and the United States explained their anti-German attitude with the mere fact of a Germany having become too powerful.

Foreign Secretary Eden declared in 1943, at a farewell breakfast for Soviet Ambassador Maisky, who was leaving London to take up the post as Deputy Commissioner for Foreign Affairs in Moscow:

“During the last century and a half England and Russia have always been in the same camp when any serious crisis arose in Europe. That is what happened in the time of Napoleon, it was the same in the years of the First World War and it has happened now in the days of the Second World War. What is the explanation? It is that Britain and Russia are two great and powerful States at opposite ends of Europe who cannot reconcile themselves to the creation in Europe of the unquestioned domination of any third power. Such an excessively powerful third State becomes a menace both to Britain and to Russia – and as a result they unite against it and ultimately bring about its downfall.”

Even when among his friends, Mr. Eden was not in the habit of dwelling on the particularly abysmal depravity of National Socialism in comparison with other forms of government

and different epochs in Europe. He too held the view of his Prime Minister that there was “no difference between Philip II of Spain, Napoleon, Kaiser Wilhelm II and Hitler”. What alone was crucial was the “Balance of Power in Europe”! Winston Churchill, who “after a brilliant political career had been exchanging a long list of ministerial seats up to the highest that the British governmental hierarchy has to allocate, that of Chancellor of the Exchequer (1924-1929)”, told the Soviet Ambassador in London, Maisky, at the end of July 1934:

“‘The British Empire’, said Churchill, ‘is my be-all and end-all. What is good for the British Empire is good for me too; what is bad for the British Empire is bad for me. . . . In 1919 I considered that the greatest danger to the British Empire was your country, and therefore I was an enemy of your country. Now I consider that the greatest danger for the British Empire is Germany, and therefore now I am an enemy of Germany. At the same time I consider that Hitler is making ready to expand not only against us but also to the east, against you. Why should we not join forces to combat our common enemy? I have been an adversary of Communism, and remain its adversary, but for the sake of the integrity of the British Empire I am ready to co-operate with the Soviets.’”

This distrust of Germany did not only apply to German might as a political factor, but equally to her economic potential and to her intellectual prowess. Already in the year 1919 “The Times” had written:

“If Germany were to start trading within the next 50 years, then we would have fought this war [First World War] for nothing... It is in the envies, greeds and fears of men that the roots of war are to be found.”

The British historian and General, J.F.C. Fuller, said in retrospect that it was not Hitler’s political teachings that provoked the war; the cause, this time, was his successful endeavour to construct a changed economy. On 18 January 1945 and again in Fulton after the war, in March 1946, in the presence of President Truman, Churchill said:

“It was [the Second World War] also about the acquisition of the German markets.”

The simple fact that a great and competent people had found themselves again was to be used as an exaggerated propaganda slogan of “excessive encroachments” (at the beginning of 1937!) by utilizing the rumours that the selfsame London central office was circulating throughout the world. The aim was obvious: the forming of an alliance system for smashing Germany to pieces. American General Robert E. Wood stated at a Senate committee that Churchill had said to him in November 1936:

“Germany is getting too strong, and we must smash her.”

Duff Cooper, First Lord of the Admiralty, opened the Commons debate on the outcome of the Munich conference on 3 October 1938:

“He insisted that she [Great Britain] would have been fighting for the balance of power, which was precious to some British hearts. He believed that it was his mission and that of his country to prevent Germany from achieving a dominant position on the continent.”

The following day, Halifax was meeting his Prime Minister returning from Munich at London Airport. While accompanying him back to the City, Halifax recommended that he should take this man – Churchill – back into the Cabinet, along with some particularly belligerent officials from the Labour Party, as well as Eden, the former Foreign Secretary, who had resigned in February 1938 because of the course of appeasement.³¹) The manner in which Churchill intended to solve the “German problem” was well known in London. If this man could state to the press adviser at the German embassy, Fritz Hesse,

“If a mad dog is about to attack me, I shall shoot it down before it can bite me,”

– he would have expressed himself in an even blunter way to his colleagues. One of these, Lord Vansittart, did not consider it any the less moral to be saying:

“But my dear Hesse, you will not be able to prevent a war between Germany and Britain. You see, Mr. Hitler wants to make Germany the supreme power in Europe (what it was before WW1, not world conquest), and I believe that my information about this is correct. You understand that we cannot allow this to happen.”

Winston Churchill never did agree with German “equality of armaments” and – as he was to admit, at least later, in all openness – had been recommending to permanently “prevent the re-armament of Germany” . When he was travelling all over in 1936, trying to get all the countries of the League of Nations into “ganging up” against Germany, these travels were, at that time, not as successful as he would have wished. Although of similar mind, most of the Versailles politicians, moreover, did not want to grant Germany after 1933 the principles of equal rights and the right to self-determination, just as it had also been refused when it was the Weimar Republic. It had to be made clear to the German nation that the fighting of the Allies – ostensibly against the German Monarchy – was directed against the German Nation as such, despite initial assurances to the contrary. The victors of Versailles wanted to uphold by force – irrespective of the historical research findings to the contrary – the theory of it being exclusively a German war guilt, in order to support their systems of reorganization from 1919. Winston Churchill was announcing still in 1933 that Germany alone had been responsible for the war and that the Versailles Treaty was just. He never renounced this fundamental basis of his agitation throughout his life; rather he went beyond his thesis in hysterical fashion as the later War Premier, in that he spoke in February 1944 of a “Thirty-Years’ War fighting German aggression starting in 1914”. Churchill waged war – with weaponry or with words – on the German Empire, the Weimar Republic and the Third Reich. But at the same time he was speaking of peace, justice and equality amongst the nations and of an unselfish and peaceloving Britain that would protect the small nations.

Important party followers of the Churchillian “European politics” had positions in the Foreign Office, the Civil Service and were at the helm in the media. They too belonged to that “minority” in Britain who, from 1935,

“were determined to crush Germany by means of another war, and considered it not only morally justified but also the only correct policy! I was especially astonished at the

time that even some Americans – whose names I have forgotten, but among them was also the Ambassador – supported this view fervently.”

So it is hardly surprising to find that Lord Halifax was already early on working along lines exactly in accordance with this “Politics of the Balance of Power”. Already in August/September 1938 he was interfering in the German-Polish relations with his promise to Foreign Minister Beck that Great Britain would support Poland at Danzig “as much as possible” – at a time, then, when Hitler had not as yet taken into consideration talks with Poland about that matter. Halifax made that pledge to the Poles, although he himself liked to describe the Danzig solution, produced at Versailles, as “an absurdity” , and despite the fact of being informed by his Ambassador in Warsaw to the effect that

“It is fairly clear that it is only a question of time before Danzig becomes wholly German and that M. Beck would have great difficulty in inducing the Polish people to swallow this without some quid pro quo.”

A Czech historian put these matters into the following words:

“The German documents reveal that Hitler derived special encouragement from Lord Halifax’s visit in November 1937. Lord Halifax was then Lord President of the Council, ranking second in the Cabinet to the Prime Minister. According to the document recording the interview, he gave Hitler to understand that Britain would allow him a free hand in Eastern Europe. Halifax may not have meant as much, but that was the impression he conveyed – and it proved of crucial importance. Then, in February 1938, Mr. Eden was driven to resign as Foreign Minister after repeated disagreements with Chamberlain, and Halifax was appointed to succeed him at the Foreign Office. A few days later, the British Ambassador in Berlin, Sir Nevile Henderson, called on Hitler for a confidential talk – in continuation of Halifax’s November conversation – and conveyed to him that the British government was much in sympathy with his desire for ‘changes in Europe’ to Germany’s benefit. As the documents show, these events precipitated Hitler’s action.”

An Englishman:

“At the Munich conference Chamberlain was fully aware that his Foreign Secretary, Halifax, and Duff Cooper, First Lord of the Admiralty and Member of Parliament, had encouraged the Poles in the summer of 1938 to adopt in Danzig a confrontational attitude towards Germany, in spite of the fact that Halifax had convinced the German leadership during his visit to Germany in 1937 that Great Britain considered the return of Danzig to the Reich as right and proper. The British Prime Minister knew perfectly that this deceitful policy, practised by his own ministers, would very quickly lead Europe into another war, but he lacked the courage to discuss this situation with Hitler.”

During the period following the Anschluss of Austria, Hitler was again encouraged by Great Britain. This time he was “to make demands” on Czecho-Slovakia, which “took him by surprise”.⁴⁶⁾ The same course of events was repeated during the Sudeten crisis, which was not even of Hitler’s making. From then on Hitler was portrayed by the Anglo-

American world press as the “culprit”, the “aggressor” and “imperialist”, and a coalition of powers was subsequently formed against him.

It was in this fashion that the “Policy of the Balance of Power” was pursued; an approach against which Henderson was to caution his Foreign Minister on 18 July 1939 most urgently, albeit without success. Neville Chamberlain, the British Prime Minister at the time, had originally wanted peace, even if it was only for the reason of gaining more time to facilitate a more extensive rearmament programme. But the peace and friendship declaration on 30 September 1938 in Munich was his last independent foreign policy act. Any subsequent important decisions, whilst they all bear his signature, were taken against his will, prompted by the urgings of the Foreign Secretary, Lord Halifax, some highly-placed senior officials at the Foreign Office, a considerable number of Members of Parliament from the Conservative Party, but, above all, also from the Labour Party, from the influential shapers of public opinion – and President Roosevelt. After the Munich conference, there gained acceptance in Britain the demand “to restore the European equilibrium, unbalanced by Munich”.⁴⁸) That the starting point of meddling in foreign affairs on the basis of a “complete about-turn to a readiness for war” was not solely to be found in London became evident, after Chamberlain had made his outrageous claim that “America and the world Jews had forced England into the war.”

Anybody who is familiar with this earlier history cannot fail but reach the conclusion that the British decision in the spring of 1939 to refuse the people of Danzig – to say nothing of West Prussia – the right to self-determination and then do everything that was bound to aggravate German-Polish tensions, was neither based on ethical principles nor on a preference for the status quo. Great Britain tolerated, yes, even supported, unreservedly in 1939 the activities of Polish chauvinism, designed to change the status quo, the Great Power aspirations at the expense of Germany, but also the Soviet expansion at the expense of Poland and the Baltic States. Naturally, no legal maxims were required when it came to the “westwardly moving of the Polish frontier”. One did not even try to keep up the pretence that all this was done for the sake of the dear Poles. Winston Churchill at the Yalta conference in February 1945:

“As for the river Neisse ... in previous talks I had always qualified the moving of the Polish frontier westwards by saying that the Poles should be free to take territory in the west, but not more than they wished or could properly manage. It would be a great pity to stuff the Polish goose so full of German food that it died of indigestion.”

Britain’s Policy on Germany from “Munich” to 15 March 1939

British politics after the Munich conference was determined to devalue the declaration of peace and friendship signed by Chamberlain and Hitler on 30 September 1938 and – to say the very least – to form anew those alliance agreements of France (and thus of Britain) in Eastern Europe that had been created by the Versailles settlement, though having become rather uncertain since then. The means, as used by London for this,

were extremely questionable. The domestic and foreign policies, the mass media and the economy were now geared to a warlike development instead of being orientated towards peace and friendship. "The City is itching for war" – that is how a French historian in the year 1958 defined the situation at that time in London. Churchill admitted that from October 1938 onwards he had been determined "to come to blows with Hitler", and he was most definitely not only speaking for himself.

The parliamentary debates from the 3 to the 5 October 1938 on the Munich conference, in their lengthy and extensive polemics, highlighted the following developments:

- a) The Cabinet that in mid-September had decided that the Sudetenland be returned to Germany, no longer stood by its decision unequivocally;
- b) these debates confirmed the press in their conviction that it was open season on Germany;
- c) Chamberlain did not confront the agitators, who were unrestrained in their attacks on the Munich agreement and – as, for example, Churchill – would describe the Chancellor of the Reich as "highwayman" and "gangster" and the Munich agreement as "German extortion". But, little by little, he went along the same line, and he strengthened the position of his Foreign Secretary, Lord Halifax, who had also suddenly threatened with his resignation with reference to the Munich settlement, in a way so that gradually sole responsibility for British foreign policy was passed to Halifax.
- d) Chamberlain announced – under the pretext of the "German danger" – the hitherto biggest rearmament programme;
- e) the policy of the "inevitability of war" was launched energetically by means of every media outlet widely spreading fictitious alarming reports, by coalition arrangements with other powers, by encouraging an uncompromising stance towards Germany, by repeating inflammatory slogans (Germany = "aggressor nation") and by the deliberate withholding from the general public the German endeavours for peace;
- f) the pressure on France to set the French defences in order became stronger, whereby "pressure" is to be understood to mean, at the very least, the unremitting zeal of the British government in suggesting to the French ally the need for a greatly increased rearmament;
- g) the preparation for a national auxiliary service and the public promotion of the preliminary groundwork, making ready for the introduction of universal conscription, was vastly speeded up.

"Chamberlain's policy was also attacked by leading Conservatives in Parliament, such as Eden and Churchill, with phrases which clearly revealed that they also would have preferred war to the Munich Declaration. But it was the leaders of the Labour Party that formed the most united pro-war group. . . Chamberlain received a vote of confidence, albeit with a relatively small majority. The Liberal and Labour members all voted against Chamberlain, and at least half of the more prominent Conservatives pointedly refrained

from voting for Chamberlain and his policy.”

On 17 November 1938, Winston Churchill made a long speech recommending the setting up of a Ministry of Supply. On 30 November 1938, the Secretary of the Department of Overseas Trade, R.S. Hudson, was emphasizing in the House of Commons, for no apparent reason, the threat of commercial competition from Germany and the supposed need for economic and political countermeasures. On 4 December 1938, the British Minister of Education stated that in Britain the opinion was growing that a conclusive agreement with Germany could no longer be reached.

On 7 December 1938, the British Secretary of State for the Colonies, M. McDonald, gave a brusque rebuff to Germany in his speech on the question of colonies, without this having been raised by Berlin. On 16 December 1938, the Polish Ambassador in London, Raczynski, reported to his Minister for Foreign Affairs on the “phraseology with which public opinion is regularly fed here”:

“The situation after Munich is described here as one which is neither peace nor war. Prime Minister Chamberlain’s statement that a new era has begun which will ensure ‘peace in our time’ is seen by all as an illusion which will quickly vanish when confronted with reality.”

On 11 January 1939, Chamberlain and Halifax with an advisory staff of six civil servants flew to Rome, in order to intimidate Italy and to make known the discord between Germany and Poland, but also with the USSR. During the months of December 1938 and January 1939, Lord Halifax and other British public figures reinforced President Roosevelt’s stance with a number of false alarmist reports and a flood of corresponding articles in the press: Hitler was planning to establish an independent Ukraine (“this information came from Western Europe”); he intended to destroy the Western Powers in a surprise attack, before turning to the East; he might seek to push Italy into war in the Mediterranean to find an excuse to fight; he was amassing German troops near the Czecho-Slovak border; Germany was facing an economic and financial crisis, which forced Hitler to use aggressive measures; “Hitler’s mental condition, his insensate rage against Great Britain (this is the most obvious of the lies, Hitler always expressed he wished peaceful coexistence with Britain) and his megalomania” are seen as a direct hazard. London, in the meantime, also felt encouraged by the much increased, since autumn 1938, contact-seeking endeavours of the secret German Opposition, who were nurturing hopes that a British show of strength or, rather, a “preventative war”, would trigger off a military putsch in the German Reich.

Another British initiative to be mentioned is the puzzling diplomatic game directed against Germany, arising from the “fear, Poland might choose the German side” and, thereby, break the ring of encirclement. By discussing British “fears” about an agreement or even an alliance between Poland and Germany, the historians hereby admit themselves, albeit unintentionally, that Germany had not been threatening her Eastern neighbour but, on the contrary, was seeking co-operation with Poland. Lord Halifax admitted to

his Ambassador in Paris on 1 November 1938:

“... Poland ... can presumably only fall more and more into the German orbit.”

On 6 February 1939, Chamberlain stated in the House of Commons that Great Britain, in the event of “the vital interests” of France being threatened, would unconditionally back France militarily, and that French Foreign Minister Bonnet had already given an identical assurance to London. This reciprocal promise referred specifically to the “eventuality of a war” and not to “an attack by Germany”. Already in this alliance – as indeed later in the guarantee to Poland – “the question of the aggressor was ignored”! Great Britain entered this far-reaching and unconditional commitment despite the fact that France, because of her many alliance obligations (for example towards Poland, the USSR, Czecho-Slovakia), was likely to be dragged into every conceivable European trouble spot.

After Neville Chamberlain had already attended a reception at the Soviet embassy on 1 March 1939, the Prime Minister again paid the Soviet Ambassador a visit on 9 March 1939 – for a Prime Minister a most unusual attitude! – and with that was expressing, according to Churchill’s statement,

“... the new interest which Great Britain is taking in the possibilities of increased trade and co-operation with Russia.”

In the Documents on British Foreign Policy there is the evidence that, besides Chamberlain, the Secretary of the Overseas Trade Department, Mr. Hudson, had also on the same 9 March tried to press a British credit on the Soviet Union in a way that Maisky had become very concerned and worried at this and could only explain this move from some hidden, political motives. Britain’s effort to enlist the Soviet Union against Germany is thereby already established at a time, when there was not even a pretext available. The occupation of Bohemia and Moravia was six days later! Chamberlain wrote in October 1939, looking back over his time in office, he did not believe

“that it was possible for me to do more than I did to prepare the country for war after Munich.”

Even if this later vindictory remark from Chamberlain might have been perhaps exaggerated, it really bears witness to the pressure that was exerted on the Prime Minister from his own ranks during those months. All these measures reflect the British drive after the Declaration, signed by Hitler, of Peace and Friendship – at a time, when Hitler was indisputably abiding by this declaration. The British government could not rightfully seek to justify itself by claiming that this course had become necessary within the context of European peace and of European security, as it signified really an obvious break with the principles of peaceable conduct as agreed on with Germany. It had to be obvious to any reasonable person that with the British action the fires of war were being fanned. Winston Churchill declared on 10 March 1939 to Bernard Baruch, Roosevelt’s chief advisor, who was not without knowledge of the internal situation within the British leadership:

“War is coming very soon. We will be in it and you [the United States] will be in it.”

The British government was aware that Germany was not looking for a fight with Britain, and that she was also making efforts towards peace and friendship with regard to other countries.

Clean Slate to Poland on 31 March 1939

Mid-March 1939 onwards, the British government had begun to clearly outline their policy of intervention on the Continent and to increase, without any regard to the legal position, the likelihood of an outbreak of war, if not making war altogether unavoidable. Lord Halifax put Poland into a state of alarm, and he suggested to change the Polish-Rumanian Alliance, which was directed against the Soviet Union, into an anti-German pact. Actually, neither Poland nor Rumania was prepared for such a change,¹) yet, all the same, Warsaw was again being instructed herewith that Britain was resolved to do battle against Germany, and that Poland could be certain of the unconditional assistance from London. Identical assurance had already come in from the United States, anyway. The British and French "fears", which had surfaced on the occasion of Ribbentrop's amicable meeting in Warsaw at the end of January 1939, but previously in evidence in November 1938 with regard to a possible German-Polish arrangement over Danzig³), were finally checked with the perception that had already been indicated on 15 November 1938 by Kennard:

"Such a policy (that Poland would have eventually come in on the German side [wrote Kennard]), would have been so unpopular in Poland that I do not think it could have been carried out so long as there were a good chance of the Western Powers' defeating Germany. I believe that Poland would have remained neutral as long as possible but that, when it became clear that Germany was losing, public opinion would have forced the Government to join the Western Powers unless some previous action of Soviet Russia had compelled Poland to commit herself to repelling the advance of Bolshevik troops through Polish territory."

At a time, when the French Foreign Minister "had gained the impression that in the view of the Polish government, there was no imminent danger of an attack by Germany upon Rumania, by Hungary upon Rumania or by Germany upon Hungary,"

Chamberlain, Lord Halifax and Bonnet tried on 22 March 1939 "to secure her [Poland's] participation in the organization which we were trying to build up for the defence of Rumania." Chamberlain stated at this London conference:

"The object in view was to prevent the expansion of Germanism. In order to do this, Germany must be made to feel that she would meet with resistance in the east. If Poland and Rumania gave the impression that they were not favourable to any scheme for the organization of defence against Germany, it would be impossible to produce such an impression on Germany."

The Soviet Union was to be integrated into this system afterwards. Both Chamberlain and

Bonnet agreed that neither Rumania nor Poland felt themselves threatened, that these two countries did not see any indications of an "expanding Germanism", and that both countries (apart from the tiresome minority question in Poland) were living in perfectly peaceable relations with Germany. But at the same time Chamberlain and Bonnet were also in full agreement that one only needed to make these countries aware of this "threat" with enough persistence, over and over, to have them eventually do what Paris and, principally, London, wanted. As neither the Tielea lie nor the many rumours had made any impression up to now, when even the establishment of the Protectorate over Bohemia-Moravia by Hitler failed to produce the slightest change in the Polish and Rumanian policies, London now felt obliged to state things somewhat more plainly.

"M. Bonnet agreed with this conclusion, and thought that something might be done on these lines. He had gained the impression that the Poles did not like vague obligations, but, if something precise could be put before them, they would probably accept."

On the same day that this discussion in London was taking place, with Chamberlain and Bonnet agreeing to "try this new tactic", the British Ambassador in Warsaw, Kennard, sent a telegram to the Foreign Secretary:

"Mr Beck would clearly not achieve one of our objects, namely to give public warning to Herr Hitler. But publication with Poland's consent might be possible after Poland had been assured in secret discussion that effective and immediate steps to resist German aggression were contemplated by Western Powers. Difficulty about Danzig is that it is not in itself a good *casus belli* and while Mr Beck would be glad to know (though he could not admit it) that he was not without backing in the event of negotiations with Germany taking a nasty turn, yet he is naturally thinking more of what he can get than what he can give in the way of collective security; the occupation of Memel has brought him a step nearer to our ideas and his offer of secret discussions should not, I feel, be rejected out of hand but used to complete his conversion."

Still on that same 22 March, there arrived information in London, parallel to the Kennard dispatch, that Beck felt himself obliged "to lean more towards Germany" and would not "greatly care for a British declaration of aid" against the Reich.⁶) Yet even this did not induce the British government to abandon their plan. In the meantime, the American Ambassador extraordinary in Paris was particularly busy. On 23 March 1939, Bullit urged President Roosevelt "that 'some nations in Europe' should stand up to Germany quickly"

On 24 March 1939, the British government was informed by the Prince Regent of Yugoslavia, Prince Paul,

"that the Polish Government will in no circumstances commit themselves in advance to fight against Germany in hypothetical circumstances."

Not only did the Polish, British and French governments have no grounds whatsoever for claiming that Germany was threatening Poland, but the secret dispatches of British military experts suggested, on the contrary,

“that purely from the military aspect the present moment was the best to go to war.”

In these actual words, the British Air Attaché, J.L. Vachell, informed the Foreign Office via the British embassy in Berlin on 6 April 1939:

“As you know I returned last evening from a brief visit to Poland, during which I had an opportunity to discuss the situation with a number of different people in Warsaw, and on my way back paid a visit to Danzig, where, owing to the kindness of Mr Sheppard, our Consul-General, I was able to get an insight into the local situation. During my stay in Warsaw the Ambassador showed me a dispatch which he had received from Berlin which expressed the opinion that, from the army point of view, the present was a most favourable opportunity for a preventive war to be undertaken against further German ambitions, and that it would even be to our advantage to provoke such a war.”

That strategic points of views such as these were not just a consequence, but rather the basis, of the British guarantee to Poland is revealed conclusively in the British documents.

Thus did Neville Chamberlain hand over, on the 31 March 1939, unconditionally, without having been beseeched or pushed, without any need, the decision making for the deployment of the might of the British Empire, with all the consequences, to the Polish government, indeed, even to subordinate Polish representatives. This fullness of power was conferred in a manner that “ignored the question of the aggressor”. Chamberlain gave this clean slate to a country, which

- a) had clearly demonstrated, by their partial mobilization of only a few days previously and by the lack of restraint shown by their populace towards the German Reich and the German Minority groups, their lust for war;
- b) by no means could be ranked among the close allies of Britain, but was formerly and still in the year of 1938 regarded by the British government with much scepticism and had been judged as unreliable (Sudeten crisis);
- c) had since 1918 continually and absolutely, in the Minorities question as in her foreign policy attitude, disregarded the principles of the League of Nations and who had, during the years of 1938/1939 as well, never given any indication to the world at large of a new direction for reconciliation with her Minority groups and her neighbours;
- d) had, ever since 1919, been proclaiming her expansionist aims and had been striving for them;
- e) had a dictatorial government;
- f) could not be at all protected by Britain;
- g) was not threatened by Germany.

“This binding by Britain to every Polish action, of whatever nature, represents a unique event in the annals of diplomacy.”

The British government extended the blank cheque in a unilateral commitment against Germany, while ignoring the dangers for Poland looming from the USSR,

which were known to every Western politician, as the many diplomatic communications of the pre-war period verify. The awareness of these dangers was fundamental knowledge for every European politician. However, the British guarantee was not in respect to the Polish-German national frontier, but was taken up rather for the permanent fixing of the territories in West Prussia and Eastern Upper Silesia that had been stolen by Poland in 1918 from Germany, as well as for retaining the unacceptable special status of Danzig. That no rights were guaranteed here, and that subsequently it was a working against peace, is plainly evident. This "spontaneous act" even surprised the Polish Ambassador in London, Raczynski:

"It is not certain who was responsible, but probably it was Halifax. In particular, I do not know how the British government learnt that the situation was ripe for such a guarantee. At all events it was not we who told them."

The British guarantee statement was not even made known beforehand to the Polish Ambassador, despite the fact that on 30 March 1939 he had been in extensive talks with Lord Halifax. Possibly this is to be attributed to the fact that Raczynski was refusing to acknowledge that Poland was threatened by Germany, since Raczynski had affirmed again during these talks that such a danger was non-existent. But this was not exactly news for Lord Halifax; he had sufficient proof to hand of Hitler's desire for an understanding with Poland. The French government, as well, did not, "apprehend any imminent coup against Poland". On the day of the guarantee announcement, Chamberlain emphasized what Lord Halifax on 3 April, shortly before the arrival in London of the Polish Minister for Foreign Affairs, Beck, was reiterating in the House of Lords:

"His Majesty's Government have no official confirmation of the rumours of any projected attack and they must not, therefore, be taken as accepting them as true."

These plain facts did not, however, prevent Lord Halifax from informing, with deceitful intent, the world at large – as in the following case telling the Rumanian government

". . . that we [the British government] have been led to take this interim action regarding Poland alone in view of the information in our possession, which seems to indicate the possibility of immediate action against that country."

The motives that were underlying the guarantee when conferred by the British government can both be derived from the verifiable fact that London was not worried about any German aggressive intentions and also from the fact that Halifax, despite the available reassuring news, informed the world of "German aggressive intentions". After all, the motives can also be deduced from the text of the guarantee itself. Prime Minister Chamberlain said in the already mentioned speech of 31 March 1939:

"Any change in the legal facts of the case between Poland and Germany, or rather Danzig, will unleash a war from Britain against Germany, if, according to the views of the Poles, a restriction of their rights should be present."

Great Britain "spontaneously" placed herself under the obligation to give military as-

sistance for war, should Poland describe an action as a “threat to her independence”, requiring a military “response”. Not facts, therefore, were the decisive factor for determining the likelihood of war, but rather random “grounds” that Poland might choose as pretext for a resolve for war. These included – as was to be demonstrated – also German negotiation proposals, even German offers of a compromise, though these were always rejected by the Polish side as being a “veil to cover our capitulation”.

In this connection it is to be emphasized that Ambassador Kennard, to whom a draft of the British guarantee had been forwarded for his observations, had expressly asked the British Foreign Secretary, with reference to the Polish war psychosis at that time, that the word “unprovoked” (in the event that “unprovoked” action were taken) be inserted into the intended guarantee.²⁵) Equally expressly, Lord Halifax refused this, as

“the German technique of aggression is so varied and so insidious that it might well be that Poland might in certain circumstances be driven in selfdefence to commit a technical act of provocation.”

Winston Churchill was the one who called the British guarantee to Poland in March 1939 a “milestone to disaster”, yet who, nevertheless, approved of this decision, was indeed “glad” about it, as he expressed himself at the Teheran conference in 1943 – without giving a thought to the foaming Polish chauvinism in the spring and summer of 1939. In particular, this is what the British wartime Premier wrote about the guarantee to Poland:

“History... may be scoured and ransacked to find a parallel to this sudden and complete reversal of five or six year’s policy of easy-going placatory appeasement, and its transformation almost overnight into a readiness to accept an obviously imminent war on far worse conditions and on the greatest scale. Our guarantee to Poland [was]... milestones to disaster... Here was a decision at last, taken at the worst possible moment and on the least satisfactory ground, which must surely lead to the slaughter of tens of millions of people.”

Winston Churchill admits further that not only he himself, but also “every politician who understood the situation”, had been or should have been aware, at the time when the agreement was concluded, of the warlike explosive force of the guarantee to Poland:

“But no one who understood the situation could doubt that it [giving the British guarantee to Poland] meant in all human probability a major war in which we should be involved...”

This same Winston Churchill declared on 3 April 1939 in the House of Commons:

“Having begun this new policy there can be no turning back... To stop here with a guarantee to Poland would be to halt in No-man’s Land under fire of both trench lines and without the shelter of either... We must go forward now until a conclusion is reached. Having begun to create a Grand Alliance against aggression, we cannot afford to fail. We shall be in mortal danger if we fail ... It has become a matter of life or death.”

From this time on, Winston Churchill applied himself vigorously along these lines, that is

to say, along the lines of a hardening of positions and of finalizing an unconditional pact of alliance with the Soviet Union. The State Secretary and member of the resistance in the German Foreign Office, E. von Weizsäcker, writes:

“In a normal pact of alliance the partners agree to mutual military assistance in the event of an unprovoked attack by a third party. Whether such a case exists is naturally determined by the partner, who is asked to help. But here it was the opposite. Warsaw had it in their hands to drag the British Empire into war.”

Duff Cooper, the British Minister for Economic Warfare:

“Never before in history have we ever given the decision, on whether Great Britain was to interfere in a war or not, to another power. Now the decision rests with a handful of men, whose names – possibly with the exception of Colonel Beck – are completely unknown to our nation [as were their deeds which they were to commit in the year 1939 – author’s note]. Therefore these strangers can by tomorrow demand the outbreak of a European war.”

A Frenchman, Professor Henri Lebre, gives his opinion in 1958:

“History teaches that Poland and her leading personalities, whose megalomania was well known and whose courage or rather foolish boldness left no room for common sense, would be the last people that could be entrusted with such a responsibility, unless one wanted to hurtle towards a catastrophe.”

The British blank cheque – apart from the fact that it legalized the mistreatment of the German minority in Poland – also violated the wishes of the people of the German city of Danzig which, as is well known, was not under Polish sovereignty. Every attempt from the population of Danzig to free themselves from the bonds that were put on by Versailles and that were, in the years following, constantly pulled tighter by Poland (economic pressure, expanding the Polish sphere of authority), was now seen as the trigger for Britain’s decision for war. Every independent country is allowed to conclude alliances with whomever it wishes and for whatever issue; it is allowed to join any military, economic and political union it may consider necessary. But when, on the other hand, a “free” German city wants to reunite with Germany, not wishing any longer to be economically ruined by a foreign power and to let herself be conquered step by step, this then is seen as resulting in a British declaration of war against Germany!

A few days after the announcement of the guarantee, the Polish Foreign Minister travelled to London. After the talks held there from 4 to 6 April 1939, even Colonel Beck “was much surprised” about the way he was “worked on” and was made into the hero of the resistance against Germany. Beck disappointed the hopes of the British “with his usual great-power arrogance, . . . he was not likely to be moved by gentle promptings from Chamberlain and Halifax.” The British hopes, which Beck disappointed, and the promptings, which he resisted, were – just like the unfounded rumours of German troop movements towards the Polish frontier, which had been, similar to the “rumours of German movements”

from the "21 May 1938", on schedule and intentionspecific, circulated throughout the world – solely aimed at one thing: to leave Poland holding the baby. Beck had well noted these Foreign Office endeavours; he regarded the negotiations, according to the view of Joseph Potocki, Head of the Western Department at the Polish Foreign Ministry, as a means of intimidating the Germans "and was not interested in the precise terms of [the] agreement." To put it more aptly: He was not interested in the preconditions from London, which were considerably more extensive.

"He [Beck] 'had not noticed any signs of dangerous military action on the part of Germany'; 'no negotiations were proceeding' over Danzig; 'the German Government had never contested Polish rights in Danzig, and had recently confirmed them'; 'if he were to go by what the Germans themselves said, he would say that the gravest question was the colonial question'."

Neville Chamberlain acknowledged on 3 April 1939 in the House of Commons that he was trying to encircle Germany, albeit with defensive intentions. Just how "defensive" was this encirclement is revealed by casting a glance at the two countries invited by Britain for this purpose: Poland had been offering repeatedly since 1919 to strike at Germany from the East. In spite of that – or just because of that, Poland became an important piece in the British game. The Soviet Union had openly threatened all non-Communist states with destruction. In spite of that – or just because of that, Britain was trying to secure their military assistance against Germany.

The Extension of the Blank Cheque on 25 August 1939

After the failure of the British-French-Soviet military talks and the startling conclusion of the German-Soviet Non-Aggression Pact – it was not an "alliance", such as the one the Western Powers had hoped to conclude! – an accumulation of circumstances happened in Europe, which none of the parties had foreseen. How did the leading British politicians, Neville Chamberlain and Lord Halifax, view this new situation, and how did they react? The American Ambassador in London, Kennedy, reported to his Secretary of State, Hull, on 23 August 1939, on his recent talk with the British Prime Minister, in which Chamberlain had said that there was nothing he could do in getting the Poles to make any concessions, and Kennedy had added these words:

"If the President [of the USA] is contemplating any action for peace it seems to me the place to work is on Beck in Poland, and to make this effective it must happen quickly. I see no other possibility."

Kennedy a few days later:

"Frankly he [Chamberlain] is more worried about getting the Poles to be reasonable than the Germans. He feels there is a great body of public opinion in England, headed probably by Eden and Churchill, who will suggest to the Poles that they give up nothing and that they have Hitler on the run. This, of course, will mean war, but in the meantime

he is urging Henderson to keep telling Hitler that, after all, the Danzig situation is a small item and that what really needs to be done is to work out the whole European economic political problem.”

On 24 August Neville Chamberlain admitted in the House of Commons that he had not as yet tried to get a factual assessment of the German grievances about Poland's treatment of the minority Germans [Volksdeutschen].³) Having put herself in this position, it would have been vital for Great Britain to have made intensive efforts at objective mediation of disagreements and to curb all threats (mobilization, malicious press campaigns and suchlike). None of that happened. Neither did Chamberlain restrain the British press, having acknowledged that their course of action “of course, will mean war”, nor even made the attempt to restrain. On the contrary! On this memorable 24 August 1939, Chamberlain, for his part, did also deliberately give false information to the Members of Parliament in the House of Commons and, therefore, has once again leaked to the press inflammatory slogans, which “of course, will mean war”. He said in his speech:

“The international position has steadily deteriorated until today we find ourselves confronted with the imminent peril of war... The German press declared that Danzig could not be the subject of any conference or any compromise and that it must come back to the Reich at once and unconditionally... They [the German press] published circumstantial accounts of the alleged ill-treatment of Germans living in Poland. Now we have no means of checking the accuracy of those stories, but we cannot help being struck by the fact that they bear a strong resemblance to similar allegations that were made last year in respect of the Sudeten Germans in Czechoslovakia... But I think it will be agreed that, in face of this campaign [of the German press?] declarations by Polish statesmen have shown great calm and selfrestraint. The Polish leaders, while they have been firm in their determination to resist an attack upon their independence, have been unprovocative. They have always been ready, as I am sure they would be ready now, to discuss differences with the German Government, if they could be sure that those discussions would be carried on without threats of force or violence, and with some confidence that, if agreement were reached, its terms would be respected afterwards permanently, both in the letter and in the spirit... In Berlin the announcement [of a German-Soviet Non-Aggression Pact] was hailed, with extraordinary cynicism, as a great diplomatic victory which removed any danger of war since we and France would no longer be likely to fulfill our obligations to Poland. We felt it our first duty to remove any such dangerous illusion.”

“The steady deterioration of the international situation” during the past few months did not, however, induce Chamberlain to readjust British policy, rather he warned against such “dangerous illusions”. While Chamberlain was exclusively quoting the “German press” and equating it with “Berlin”, he concealed from the Members of Parliament the fact that up to this date Hitler had made no demand for an immediate “unconditional return of Danzig to the Reich” and, altogether, had shown “considerable calm and restraint”. Whereas Lord Halifax on 24 August 1939 in the House of Lords still made a crucial distinction between

the “aggressive Polish press” and the “attitude of the Polish government”, Chamberlain no longer recognized the difference between the German government and the German press, despite the fact that Poland had an equally authoritarian government and that the Polish press – even though from a different basic position than that in Germany – was strictly censored. Chamberlain was continuing along the same path when he informed the Members of Parliament in the House of Commons about military preparations in Germany but not, on the other hand, about those in Poland. It was untruthful to maintain that the Polish leaders had been unprovocative and had always been ready, “as they would be ready now”, “to discuss differences with the German government”. Certainly! Poland had been willing up to January 1939 to hold such discussions – that is, until the British government intervened, when they “feared that Poland might draw closer to Germany”.⁴) The obvious consequence of the unconditional guarantee, pushed upon the Poles and originally not even requested, was that from this time on Poland was no longer prepared “to discuss differences with the German government”! This connection was so obvious that Chamberlain, having had five months to study it thoroughly, must have been aware of it on 24 August. That Poland, by the end of March 1939, was refusing under threat of war all talks with the Reich government, must have been equally known to Chamberlain, as well as the fact that the German press reports from September 1938 about the ill-treatment of the Sudeten Germans were factually correct; this had long since been confirmed by Ambassador extraordinary Runciman.

Falsehoods were bound to lead to further aggravation of the international situation. This all the more, as in his speech Chamberlain had not even considered how one could, with the help of political or diplomatic efforts, “patch matters up” again. On the contrary, he claimed,

“...that the time had come when they [the government] must seek the approval of Parliament for further measures of defence.”

What did his Foreign Secretary do on this memorable 24 August 1939? Lord Halifax had given the Polish Ambassador to understand his clear determination for war in such a way that Raczynski, at that time, “was still terrified of such an attempt”. Halifax,

“did not doubt for a moment that any attempt to patch matters up had been out of the question since the conclusion of the German-Soviet agreement.”

His Prime Minister had conceded only just previously – without, however, taking up the opportunity – that in Berlin the German-Soviet agreement was hailed as a pact removing the danger of war, and that Britain had been asked to do her part for the avoidance of war. However, Halifax believed, according to the motto:

“My reason shows me no way out but war...”,

“that the Poles are not inclined to do this”, although “it was absolutely essential for the Poles to get in touch with the Germans... even if they were not ready to discuss Danzig, to start a discussion on minorities or some other subject”. In the same communication,

the American Ambassador stated more precisely:

“that England will definitely go to war if Poland starts to fight,”

but not, therefore, when Poland is being attacked!

By 25 August 1939, already months of steadily accumulating tension resulting from the attitude of the Poles had passed, and President Roosevelt had by now addressed an official note to Warsaw in these words:

“The President expresses the belief that, in the interest of public opinion in the United States, as well as public opinion in other parts of the world, it is in the highest degree important that history should not record, in the event that any military crisis results from the Danzig issue, that the first act of aggression of a military character was brought about by Poland.”

On 23 August Lord Halifax had learnt from the Polish Ambassador in London, Raczynski, that Poland was not going to negotiate, that is to say, he [the Ambassador] “was very sceptical of the value of such action”, as long as “we were still engaged in the technique of the nerve war”, which might well continue for some little time yet.¹⁸) One day later he heard from Warsaw that the Polish government had taken “very serious military measures involving mobilization of practically two-thirds of the Polish army”.¹⁸) In spite of this alarming news, the British government extended on 25 August, on their own initiative, the guarantee to Poland to cases of “any action which threatened indirectly the independence” and “threatened the neutrality” of the countries of Belgium, the Netherlands, Lithuania, Estonia and Latvia – naturally only by Germany. A few days before, they had still been prepared to sell Poland, or rather Eastern Poland and, consequently, also the Baltic States, to the USSR; thus, it was not at all a genuine British concern to secure the independence or neutrality of these states. Therefore, also this passage in the extended Poland guarantee must be serving another purpose than the one professed. Furthermore, the Treaty carried the obligation not to conclude a separate armistice or peace – a clause that until now was only customary in treaties between warring parties.

Novel in this agreement of 25 August was the fact that Chamberlain and Halifax were promising Britain’s unconditional support also in the case of an “indirect threat” without, however, clarifying in the published text the precise meaning of this. In the supplementary Secret Protocol, however, Poland had it confirmed that this was directed at the “Free City” of Danzig.

“Hitler could not know of it, and assumed that Britain would not oppose the return of Danzig to Germany. Beck knew of it, and was able to refuse to discuss the future of Danzig with Germany, knowing that a German move to seize the Free City would be followed by British action in support of Poland. Beck knew that the Secret Protocol was precise and final: ‘The case contemplated by Article Two of the Agreement is that of the Free City of Danzig.’ Even an indirect threat to Danzig would bring the Treaty into operation.”

What has decisively contributed to this British desire for war were the suggestive hints from members of the German Resistance. Through the secret contacts, already established in the year 1934-35, among members from German Ministries (Goerdeler, Erich and Theo Kordt, State Secretary von Weizsäcker and others), who, for their part, had already been arranging conspiracy plans with officers from the Armed Forces and figures from the German Economy and Administration sphere and British politicians (Churchill, Vansittart, Halifax), was the British leadership reinforced in their belief that “firm language”, a determination for war and, at any rate, war itself would bring down the “Hitler-Regime” by a revolution from within Germany. It is also a contributory factor, in that Chamberlain, attacked by many circles in Britain and in the USA, believing himself to be facing the downfall of his premiership, considered the now opening possibility of an easy victory over Germany and went along with war. Only when looking at it from these viewpoints, could the Poles, too, become entrapped by the delusion that within a few days of the outbreak of war they would be marching into Berlin, and that the Soviet forces, because of the expected rapid German collapse, would not have enough time to cross the East Polish frontier. But, on the other hand, these illusions prove that one was aware in London, Washington and Warsaw, just how much the decision “war or peace” was in one’s own hands.

The Annihilation of Germany as a War Aim

Britain, the “protector of small nations”, had been trying, already from spring 1939 onwards, to coordinate with guarantees, false reports spreading alarm, probings and encouragements the resolve of the small nations, in a manner that was bound to increase the insecurity and dangers. Why did Paris and London, for the sake of joining in with Moscow, virtually offer the Baltic and East Poland as a prize to Stalin? Halifax did “fully appreciate the disadvantages and risks of allowing Soviet troops on Polish soil”.¹⁾ The unilateral declaration of war on Germany in the course of the Poland campaign, which had already been decided on in a secret supplementary clause of the Anglo-Polish Agreement [of Mutual Assistance] showed that it was not about ethical principles. The later stance of the British government, in particular their joining forces, militarily, with the Soviet Union and the refusal to face up to Stalin at the conferences of Moscow, Teheran, Yalta and Potsdam, amplified further the extent of this moral uprooting. One only needs to compare the scale of the unopposed transference to the Soviets by the Western Allies (absolute sole domination over all of Eastern Europe and the Balkans, participation in controlling the Mediterranean and the Near East) with that of Danzig’s desire of returning to the German Reich, which was used by these same Powers as an opportunity to a Second World War!

Despite this background, Lord Halifax professed to be fighting for human rights, for peace, for ideal principles, and he stated on the BBC-London on 7 November 1939:

“The new world that Britain is trying to make come true would bring about cooperation

among all nations, based on equality, on self-respect and on tolerance of the human race. Britain would have to try everything within her means to combine the necessary revisions in a continuously changing world with safeguarding against upsetting the general peace by use of force.”

It is exactly the application of these principles that he refused to Germany. “Justice”, “equality”, “self-respect” was called in London that which served the “European balance”, ergo, British power interests. A comparison between the war aims, as proclaimed later, and the facts comes automatically to mind. No sooner had it been openly stated that going to war against Germany was precisely because of her style of government, than it was laid down in the Atlantic Charter that “all peoples” could choose the form of government under which they would live. Every postulate drawn up during the Allied War Conferences was disregarded when matters concerned Germany, but also Poland and the other nations of Eastern Europe. Vansittart, the Chief Diplomatic Advisor to the Foreign Secretary, declared to a member of the German resistance on 31 August 1939, thus the day before the start of the Poland campaign, “trembling with excitement”:

“Britain will be fighting this war to the outmost, and like Samson in the Bible, we will tear down the pillars of the palace and bury all underneath that... A timely ending of the war [this is likely to be an intended misprint – it reads in German ‘Kriegsabbruch’ instead of ‘Kriegsausbruch’ – which, however, does not make any sense either in this played-down form, and which has to be: ‘Kriegsausbruch’ = outbreak of the war], though it might mean, it is true, the death of thousands, it would not mean the death of millions.”

Winston Churchill admitted in November 1939, a few days after Belgium and the Netherlands had made mediation proposals, on the British radio:

“This war is a British war and its aim is the destruction of Germany.”

If Hitler had set himself as the target of his policy to liberate “the whole world” from the “pestilence of British tyranny” and the “defence of all that is most sacred to man”, what kind of accusations would have been levelled at him? The British Field Marshal, Lord Milne, warned a few weeks after the beginning of the war

“against the dangerous theory that we are not fighting the German people. The war in Poland is typical of the inborn brutality of the German Nation on the whole. War is war... I do hope that our striking is tough, manifold and absolutely merciless.”

As a “peace-loving politician”, Prime Minister Chamberlain made a rather curious admission in a letter of October 1939: “In 3 days last week I had 2,450 letters, and 1,860 of them were ‘stop the war’ in one form or another... I was, I confess, anxious when I read Hitler’s clever speech [Hitler’s peace offer after the Poland campaign], and especially when the first American reaction was reported that he had made a very attractive series of proposals...”

Just how much the British government was at pains to sabotage every possibility for peace, in pursuit of their war aims, is also clearly shown, among other things, by the

reaction to the trip to Europe made by the American Under- Secretary of State, Sumner Welles, in February-March 1940. The American Secretary of State Cordell Hull wrote about this:

“The rumors [about the mission of Sumner Welles in Europe] filled the Allies and small neutrals with dismay lest the President, on Welles’ return, should make a move for peace. Accordingly, on March 16 [1940] , Mr. Roosevelt broadcast from the White House to dispel these fears. [Along the same lines,] I had made it clear to the press. Before leaving Rome, Welles issued a press statement that he had not received or conveyed any peace proposals. British Ambassador Lothian came on March 22 [1940] to thank the President and me for what he called the prompt way in which our Government had acted to check and dispel the spread of the ‘peace at any price’ sentiment based on all sorts of rumors about what Welles might do in Europe to bring about a negotiated peace, which would be the equivalent of a German victory. He said that efforts directed towards bringing about a negotiated peace might injure the British and French war situation.”

Duff Cooper, First Lord of the Admiralty and Minister for Economic Warfare, stated at the St. George’s celebration on 25 April 1940, when toasting England:

“The coming peace-treaty must be much harsher and more merciless than Versailles. We can make no distinction between Hitler and the German Nation. After victory we must not allow ourselves to be moved by the claims of the Germans that only a few, only the members of the Hitler regime, committed the crimes. We must take Hitler at his word that he is the German Nation.”

Lord Vansittart, Chief Diplomatic Advisor to the Foreign Office, 1941:

“Hitler is no accident. He is the natural and continuous product of a breed which from the dawn of history has been predatory and bellicose... By the grace of God and for the salvation of man, we shall rescue the earth from Germany and Germany from herself.”

Winston Churchill in the House of Commons on 15 February 1942:

“This [bringing of the United States into the war] is what I dreamed of, aimed at and worked for, and now it has come to pass.”

Russell Grenfell wrote on Churchill’s war aims and thereby about those of Great Britain:

“What was left as a war object for Mr. Churchill? There [They] were our previous friends, the extirpation of Nazi tyranny and Prussian militarism... The tyranny, as such, was not oppressing the British people. That being so, what business was it of theirs if the Germans liked to live under a tyrannical form of Government? Did not the Atlantic Charter declare that the British ‘respected the right of all peoples to choose the form of Government under which they will live’? Therefore, if the Germans did not choose to throw off their Nazi tyranny for themselves, why should a lot of Englishmen have to die in throwing it off for them? Assuming, however, that the forcible suppression of tyrannies in foreign countries was a British duty, how came it that another tyranny was made a partner of the British in that process? The Communist tyranny in Russia was

worse than the Nazi tyranny in Germany; the general condition of the Russian people was far inferior to that of the Germans; slave labour in Russia was on a gigantic scale compared to anything of the sort in Germany... Yet Mr. Churchill hailed Russia as a most welcome ally when she was brought into the war. One tyrant to help beat another. Clearly, tyranny of itself was no aim of Mr. Churchill's to destroy. He did not even show much interest in the overthrow of Nazi tyranny itself when a prospect of achieving it was brought to his notice [with the help of the German resistance] . . . Mr. Churchill's threat to extirpate Nazi tyranny [did not] convince the Germans that such tyranny was bad for them. On the contrary, they would regard it as so successful that Germany's foes were determined to destroy it."

What was it that Winston Churchill said in his memoirs, after the war had ended, about his own and his Allies' blind-rage objectives?

"My principal reason for opposing, as I always did, an alternative statement on peace terms, which was so often urged, was that a statement of the actual conditions on which the three great Allies would have insisted, and would have been forced by public opinion to insist, would have been far more repulsive to any German peace movement than the general expression 'unconditional surrender'. I remember several attempts being made to draft peace conditions which would satisfy the wrath of the conquerors against Germany. They looked so terrible when set forth on paper, and so far exceeded what was in fact done, that their publication would only have stimulated German resistance. They had in fact only to be written out to be withdrawn."

It was from England that for the first time the annihilation of a people was announced as a war object. At that time in Germany there was no programme for the "final solution of the Jewish question" and no programme "for the annihilation of the Polish people". Furthermore, no German speakers or Statesmen have ever put forward the destruction of Britain or any other nation as a war aim, or even hinted that this would be their wish. For a state of affairs, not directly affecting British interests, Great Britain declared war on Germany, demanded her annihilation and did everything possible for widening and brutalizing the war. Any historian, dealing with the background to the dividing-up of Germany, would have to admit that the plans for the partition of Germany had been already "discussed in politics and in the media long before the diplomatic considerations attended to these plans". The resulting notions were supporting and recommending a "permanent weakening of German principal power in Central Europe".¹⁶⁾ Mr. Eduard Benes, immediately after his resignation as President of Czecho-Slovakia in October 1938, went so far as to suggest that a minimum of 800,000 to 1 million Sudeten Germans, mainly the intellectual classes and the bourgeoisie, should be driven from their homeland.

Germany was no longer to be allowed to lay claims to any legal title of international law. Churchill interpreted this goal thus:

"By 'unconditional surrender' I mean that the Germans have no rights to any particular form of treatment. For instance, the Atlantic Charter would not apply to them as a

matter of right. There will be, for instance, no question of the Atlantic Charter applying to Germany as a matter of right and barring territorial transferences or adjustments in enemy countries.”

Three post-war media items from Britain are given as an example of how this policy from that time is smugly upheld and to this day [1965] is still found praiseworthy:

Lord Beaverbrook’s Sunday Express from 23 March 1958: “One has to remember that the last war was aimed at destroying Germany.”

British historian A.J.P. Taylor, also in the Sunday Express, in October 1957: “The Germans certainly would not like the partition [of their country], but it is ‘great’ for all the others. Britain has waged two wars against Germany, triggered off by different motives. Fundamentally it was always about the same: there are too many Germans and Germany is too strong. If one allows all Germans to unite, they will overshadow Europe. Now a solution is handed to us on a plate, for which we should be grateful; instead of that we declare that Germany must be reunified.”

The same historian, A.J.P. Taylor, “who is one of the most violent Germanhaters” (Frankfurter Allgemeine Zeitung), 21) gave in the spring of 1965 a series of lectures on BBC television, in the course of which he conducted “a general attack against lending any British support for the reunification of Germany” 21) and stated:

“The British people are not interested in reunifying Germany. On the contrary. The large majority is delighted about the happy chance that has divided Germany and has deprived her of all her power... Wilson’s [Prime Minister 1965 and Leader of the Labour Party] strongest supporters are also those most opposed to German reunification.”

11.17 Psychological Preparations for War

What form did the anti-German propaganda take? Winston Churchill would begin his agitating, by making false statements against his better judgment, as soon as he touched upon his favourite theme of “German rearmament”. Then these assertions of his, proven to be falsified, were not only taken up by world-wide propaganda – “a free press” – but also by governments, that used them for their own ends: principally Britain, France, the United States and the USSR. So, for example, in a speech to his constituent on 27 August 1938:

“But the danger to peace will not be removed until the vast German armies which have been called from their homes into the ranks have been dispersed. For a country which is itself not menaced by anyone, in no fear of anyone, to place over fifteen hundred thousand soldiers upon a war footing is a very grave step ... It seems to me, and I must tell it to you plainly, that these great forces have not been placed upon a war footing without an intention to reach a conclusion within a very limited space of time...”

For those weak with figures, fifteen hundred thousand is 1.5 million. Several pages further Churchill informs us that the Czechs alone in May 1938 had called 1.5 million men to the colours; however, this fact is not embellished with a similarly tinted commentary. When the Czecho-Slovakian multinational state with a population of 15 million (of these, only 7 million are Czechs) mobilizes 1.5 million men, then this, apparently, is considered to be quite all right. When Poland with her population of 35 million (of these, 15 million are foreign minorities) likewise mobilizes 1.5 million men, then this, too, is considered to be quite right. But for Germany and her 80 million people to have, in the face of an intensifying crisis, just a self same size army of 1.5 million, which is in proportion to the population only a fifth part of the Czech contingent – this then is seen by Churchill and the people who share his views as a peace-threatening crime and a proof of her striving for world-domination. Churchill in a speech in 1936:

“Germany, on the other hand, fears no one. She is arming in a manner which has never been seen in German history. She is led by a handful of triumphant desperados. Money is running short, discontents are arising beneath these despotic rulers. Very soon they will have to choose on the one hand between economic and financial collapse or internal upheaval, and on the other a war which could have no other object and which, if successful, can have no other result than a Germanized Europe under Nazi control. Therefore it seems to me that all the old conditions present themselves again [the striving for hegemony of a Continental Power that must be eradicated] and that our national salvation depends upon our gathering once again all the forces of Europe to contain, to restrain, and if necessary to frustrate German domination.”

“In 1938-39”, Churchill frankly states in his memoirs,

“British military expenditure of all kinds reached £304 millions, and [the] German was at least £1,500 millions. It is probable that in this last year before the outbreak, Germany manufactured at least double, and possibly treble, the munitions of Britain and France put together, and also that her great plants for tank production reached full capacity. They were therefore getting weapons at a far higher rate than we.” “The French forty-hour week could not rival the output of a Germany working harsh hours under wartime conditions. ... The German munitions plants were working at high pressure. The wheels revolved and the hammers descended day and night in Germany, making its whole industry an arsenal, and welding all its population into one disciplined war machine.”

What Churchill was proposing to arrange with the help of his agitating about the German rearmament, he explained in the House of Commons debate on 16 March 1939 quite openly:

“It must be remembered that Germany, like all countries, is now at full extension in armament production, groaning and straining in that tremendous effort. Already she is spending 26 per cent of her national income on warlike preparations. All labour, skilled and unskilled, is employed to the utmost. The park railings and even iron crosses in the graveyards are being melted down as scrap.... Therefore, I was very glad to hear Lord

Chatfield yesterday lay down the sound doctrine that it is the duty of the Royal Navy to 'seek out and destroy the enemy's fleet'. That is the true note to strike."

To be any more prejudiced and provocative is all but impossible! But even the fact that this man, in one and the same book, was contradicting himself with such frequency, even when discussing the matter of German armament and that here, too, "Winston could produce this sort of schoolboy rhetoric by the yard," did not seem to bother anyone:

"The German war machine had lumbered falteringly over the frontier [German-Austrian frontier, March 1938] and come to a standstill near Linz. In spite of perfect weather and road conditions the majority of the tanks broke down. Defects appeared in the motorized heavy artillery. The road from Linz to Vienna was blocked with heavy vehicles at a standstill. General von Reichenau ... was deemed responsible for a breakdown which exposed the unripe conditions of the German Army at this stage in its reconstruction."

On the occasion of a meeting at the War Ministry, the leading German generals drew up a memorandum, which was presented to the Reich Chancellery on 27 September 1938. Churchill confirms:

"Emphasis is laid on the shortage of officers. No fewer than forty-eight thousand officers and a hundred thousand N.C.O.s were necessary to bring the [German] army up to war strength, and in the event of a general mobilization, no fewer than eighteen divisions would find themselves devoid of trained subordinate commanders."

Also "anti-Fascist historians" need to be tied down to the question of the German rearmament, so that they must discuss their assertions in some detail. Thus, a book published under US-licence in the year 1947 contains the following brief reference:

"The vast majority of the population knew nothing of secret meetings and secret orders."

Here too, not a single word is to be found about the subject matter or about questions relating to work and to personnel matters of the alleged secret meetings and orders in connection with the German rearmament. But such empty pronouncements are historically worthless. The author continues:

"The number of firms that was working on certain armament projects was a limited one before 1939, the work itself was 'screened off'."

Here, likewise, no amount, no locality and no product is mentioned. Important, however, is the admission that the number of German firms engaged in rearmaments was until 1939 a limited number, a statement contradicting all of the inflammatory theories of propaganda. Continuing (one needs to pay close attention to the line of reasoning):

"There are grounds for the supposition that the stated economic programme of the party was designed according to the demands of rearmament and war; in this the 'autarky' of the German economy was to be all-important. . . . New industrial plants of vast dimensions emerged, which were to produce BUNA as a substitute for rubber, make

petrol from coal and, allegedly, manufacture the Volkswagen, so as to free the German economy from dependency on foreign countries. . . The financing [of the thought-out plan for these large-scale measures], which was assuming gigantic proportions, was a job in itself that was solved by increasing the volume of currency in circulation and by increasing the deficit spending of the Reich.”

So when these measures that any country in the world would catalogue under national economy and not under political armament and that were “devouring sums of gigantic proportions needed for the financing”, then, by all accounts, there should not have been much space and financial strength left over for the actual rearming. What in fact was the reality?

“The expansion of the ‘four-year plan factories’ which were to reduce the dependency on imports had been planned to be fully developed only in 1943. Their present capacity in output [1939] was of no consequence.”

No matter which historical research we look at, everywhere we find the very low German armaments level confirmed – just as we find the systematic inciting of other nations with lies about the “feverish rearming of the Third Reich from 1933 onwards”, and that the “ending of the economic crisis in Germany (1933) was accomplished by a fully developed armament programme, thereby threatening the peace of the nations”. In the opinion of these moralists, what might a sovereign state be allowed at all? Should it be permitted to rearm for self-defence? As we can see, all the others “may” do so – but not the Germans. Germany was encircled by hostile nations that were expertly equipped and better armed, bound to each other by military alliances. During the whole period that the Reich government was in office, “not one single new munitions factory was built”. Nonetheless, those self same powers that were exploiting empires, were accusing Germany of aspiring to world domination, of conspiring against peace and of being guilty of criminal planning. Any of the facts that stand in contradiction to the thesis of a “conspiracy against world peace” are, without further ado – one is never at a loss for “reasons” and slogans – clarified as the “amateurism” of the conspiracy. Perhaps Hitler could have avoided being reproached of “amateurism”, if he had been – emulating the United States after the Second World War – stockpiling 75% of all strategical material reserves for 3 to 5 years, and if he had taken up position in 69 countries of the globe or rather in over 2,200 individual bases throughout the world – never mind the even more awe-inspiring example of the Soviet Union.

The powers surrounding Germany were not, incidentally, filled with dread because of a “Third Reich armed to the teeth”, but instead were cherishing the illusion to be standing in Berlin within a matter of days after the outbreak of war, aided by their “friends” as well as the power of resistance from within the Reich. Had the Poles, the French, the British or the Soviets been in fear of German armaments or the German determination for attack, then in the year 1939 the Polish public and the Polish authorities would not have behaved with such unconcealed aggression, recklessness, prejudice and hatred towards the German minorities at their mercy and towards the Reich. Likewise, the French, the British, the

US-American and the Soviet press organs would not have dared any such provocations. Whoever fears the other side because of greater strength would not deliberately trample upon the other's legitimate rights, but would carefully weigh them in the balance, because then, within the bounds of all human probability, the threat of arms-use has vanished.

In the British Cabinet one was fully aware of the true level of the German armament; after all, reliable sources of information were at London's disposal. That is why it is all the more unforgivable, when influential men in Britain – to say nothing of the “free press” and the BBC – during the thirties should have employed inflammatory agitation about “German rearmament fever”, but who would in private assess the German armament and military forces potential as realistically as did, for example, Robert Hudson, Secretary of the Department for Overseas Trade, on 9 March 1939 during lunch with the Polish Ambassador in London, Raczynski:

“As for the Germans, they were bound to come to terms since they were on the verge of bankruptcy, having no gold or foreign currency and being increasingly short of raw materials.”

The Swedish mediator Birger Dahlerus, certainly above suspicion, was writing with regard to the assessment of the German Wehrmacht made by the Polish propaganda during midsummer 1939:

“The German Panzers [tanks] were said to be only cardboard dummies. The German soldiers were said to be deserting in their hundreds. Their uniforms were only barely said to be held together with cords.”

There is not a single document to verify that Poland in 1939 believed in a supposed armaments fever or in a striving for world-domination in Germany! Polish diplomats even used to regard the signing of the German-Soviet Non- Aggression Pact of 23 August 1939 as clear evidence of “the desperate situation in which the Reich found itself”.

“Adding to this (the unleashing of anti-German feelings because of measures taken by the Polish authorities) was the ever worsening war-mongering in the Polish press and on the radio, where one could not publicize the reports fast enough about the alleged manifestations of the German condition of exhaustion to be observed within the Reich, in the sphere of foodstuffs, in the inadequately equipped Wehrmacht and suchlike. The Poles, however, were portrayed as ‘the best soldiers in the world’, thereby arousing in them a feeling of infinite superiority compared with the Reich. It was believed that the structure of the Polish army, their fighting spirit and their technical equipment, to be ‘immeasurably better’ whereas the situation of the Reich, in contrast, was hopeless since the encirclement was complete. Poland considered herself a Great Power. . . .”

These words were not written in the period from 1933 to 1945. It is the result of a historical research by an expert who, in his book on the German minority in Poland published in 1954, entitled the relevant chapter “Warmongering in Poland” (“Die Kriegshetze in Polen”). Paul Reynaud, the former French Finance Minister (Prime Minister from March

to June 1940), said in the Chamber of Deputies on 26 February 1938:

“Is it not common knowledge that the Germans do not have half the officers required for the formation of their divisions?”

Likewise, in the year 1938 (November), a manifesto of the Comintern was published, stating:

“Hitler-Germany is neither in the military nor in the economic sense ready for war. She is short of raw materials, foodstuffs, money. . . Her army does not have enough trained units. . .”

These are statements made by influential and well informed politicians – one year before the allegedly since 1933 “planned war to win world domination”! The Soviet Ambassador in London recalled the diplomatic talks between the representatives of the Soviet Union, Britain and France in the months before the outbreak of war, and he drew the conclusion that was equally familiar to all the participants of the talks:

“It will be seen that the armed forces of the anticipated signatories of the triple pact were very impressive, and far surpassed the then forces of Germany and Italy.”

How did the French Foreign Minister assess the situation?

“We were expecting an easy and quick victory. It must be admitted that much information from abroad led us to believe that our adversary was quite badly off indeed. I received such bits of news either directly or from our ambassador, who, as was his duty, sent them to us with due reservation. Apart from the usual old tales of striking German workers and soldiers who refused to fight, we were periodically provided with the hope of an imminent assassination, already prepared, which would bring about the downfall of National Socialism.”

And the British Foreign Minister?

“It became more and more apparent to one as Halifax talked ... that what Britain depends on more than anything else to end the war before the world collapses, is the internal collapse inside of Germany. They had definite confidence in their secret service reports that the oil and gasoline supply is definitely not over four months and that there is a definite feeling in Germany against war and if it got too tough economically, Hitler would be out.”

The former Foreign Minister of the Reich, Joachim von Ribbentrop, in his closing remarks to the IMT in Nuremberg, pertinently outlined the situation of the Reich:

“If I deny that this German foreign policy planned and prepared for a war of aggression, that is not an excuse on my part. The truth of this is proved by the strength that we developed in the course of the Second World War and the fact how weak we were at the beginning of this war. History will believe us when I [Ribbentrop] say that we would have prepared a war of aggression immeasurably better... What we intended was to look after our elementary necessities of life, in the same way that England looked after her

own interests in order to make one-fifth of the world subject to her, and in the same way that the United States brought an entire continent and Russia brought the largest inland territory of the world under their hegemony. The only difference between the policies of these countries as compared with ours is that we demanded parcels of land such as Danzig and the Corridor which were taken from us against all rights, whereas the other powers are accustomed to thinking only in terms of continents.”

11.18 The Armament Level in the Year 1939

Great Britain

Great Britain in 1939 was by no means as scantily provided with armaments or, indeed, orientated to a defensive policy, as one is always led to believe. This is established by the fact alone that “British production of airplanes and tanks equalled or exceeded that of National Socialist Germany” – not to mention the navy, unsurpassed in strength and capacity. Before 1914, as well as before 1939, the British Admiralty had to hand plans of attack devised for the destruction of the German fleet and for invasion across the Channel. Already at the close of 1937 Churchill stated,

“that the navy was strong and that ‘even during the years of disarmament at least £50,000,000 sterling was spent every year upon keeping in order the plant and organization already stabilized on the largest scale’.”

On 3 October 1938, three days after signing the German-British declaration of peace and friendship, N. Chamberlain was unexpectedly announcing rearmament at all costs. “For a long period now we have been engaged in this country in a great rearmament programme, which is daily increasing in pace and volume.”

On 22 February 1939, one month before “Prague”, in Blackburn:

“The figures (of our rearmament) are indeed staggering. Perhaps they have got so big that people have ceased to be able to take them in.”

Even assuming that he was exaggerating, one has to take into consideration that such statements, coming from the mouth of a Prime Minister, would make a lasting impact on the nations “affected”. Indeed, they were intended to goad the French ally into an intensified arms built-up. Their effect was to spread the armament fever and a war psychosis to all sides and push towards a crisis. I.M. Maisky writes:

“Britain had ready six divisions, could, ‘in the shortest possible time’ transfer another 10 to the Continent, and ‘in the second echelon’ add another sixteen divisions – in all, therefore, thirty-two divisions. The air forces of Great Britain comprised more than 3,000 first-line aircraft.”

With her many Dominions and England-friendly nations in all parts of the world, ocean-ruling Albion was able to procure raw materials and armaments even in time of war. In

1939, the volume of armament of the British Isles was already roughly on a par with that of the level of Germany. Proportionate to the population (Germany = 80 million, England = 50 million people), it was even twice as much. In addition, in the case of war, Germany was left at the mercy of an effectual blockade. Britannia, on the other hand, ruled the waves. If one wants to assess the armament potential of Britain, France and Germany in the year 1939, one has to take these political, strategical and geographical factors into account. Likewise, one has to bear in mind that the British War Cabinet had based their strategy on a lengthy war. England was using a minimum of her own forces, at least at the beginning of the war, while she was proposing to enter into the fray the armies of her allies instead. Furthermore, this is not inconsistent with Chamberlain's initial notion that Hitler could be defeated easily and quickly with the support of the resistance within his own ranks: in this case also, Britain would not require an overpoweringly large army contingent on the continent. D.M. Projektor writes:

“At the beginning of September 1939, the British War Cabinet stated that the war would go on for three years, and prepared a plan of mobilization for the reserves, based on this time scale. This plan proposed an increase of the fleet, the creation of 55 divisions by the autumn of 1941, as well as the expansion of the fleet of aircraft to 12,000 planes by spring 1940. Germany's situation with regard to the essential kinds of strategical raw materials was considered to be extremely serious: According to British plans there were stocks for only 6 months. . . . The principal method of economic warfare against Germany, for which plans had been drawn up since spring of 1939, was the naval-blockade. It was to be translated into action by the Home Fleet in the North Sea, in the Mediterranean and in parts of the Baltic.”

Already several years before the war, “an advisory committee for trade enquiries in wartime” was set up in Britain. These so-called “blockade-planners” had, in 1937 already, worked out plans for a blockade against three hypothetical opponents: Germany, Italy and Japan.⁸¹) The world-wide scale of these measures bears an impressive testimony to the balance of power at a time, when the real concern in Germany was how to achieve good housekeeping of raw materials (as there was much too little of it, not too much), and other countries had already begun cancelling trade agreements with Germany, particularly those covering nonferrous metals. In 1937, the Association of German Heavy Industries had written a memorandum, the contents of which were secretly passed on to the British government by Dr. Goerdeler, estimating that Germany fell short of her requirements for raw materials by 40-60%, had a shortage of 25-30% in food stuffs and animal feeds, and her exports had shrunk by one-third.

France

In August 1939 France's mobilization was practically completed. Winston Churchill spoke of 5 million trained French soldiers.⁸²) On 28 August, the British Ambassador in Paris, Phipps, reported to London a conversation with French Foreign Minister Bonnet:

“M. Bonnet was calm and seemed not altogether unhopeful of the possibility of maintaining peace. He thinks it curious that Hitler should have allowed the mobilization of about 2,700,000 French combatants without striking beforehand. Of the total of about 5,500,000 men that general mobilization would produce, there would be little more than half a million more combatants, the remainder being composed of persons fulfilling war services in the rear, etc.”

The Soviet Ambassador in London was well informed of the French fighting strength:

“France [in 1939] had at her disposal 110 divisions without reckoning its anti-aircraft forces, its coastal defence forces and its troops in Africa. In addition there were about 200,000 soldiers of Republican Spain, who had taken refuge in France after the victory of Franco and had asked to be incorporated in the French forces. The French Army possessed 4,000 modern tanks and 3,000 large-calibre guns of 150 mm and higher (without reckoning divisional artillery). The French Air Force consisted of 2,000 first-line aircraft, of which about two-thirds were modern as then understood – namely, aircraft with a speed of 450-500 km. per hour in the case of fighters and 400-450 km. in the case of bombers.”

France had at her disposal in June 1940 – not counting Britain, Holland and Belgium – a much stronger tank force than Germany had.⁸⁴) Before their entry into the war, England and France had spent – each country individually – as much or more on rearmaments than had Germany. P.H. Nicoll writes:

“The total war expenditure for Britain and France, having been standardized along military points, in accord with the existing agreements and obligations, were in the year 1939 much above those of Germany. At the outbreak of war in September 1939, France had a considerably bigger army than Germany, well equipped and securely entrenched behind the famous, imposing and, as was believed, impregnable Maginot Line.”

Czecho-Slovakia (1938)

W. Churchill writes:

“Between thirty and forty Czech divisions were deploying upon Germany’s eastern frontier, and the weight of the French Army, at odds of nearly eight to one, began to lie heavy on the Western Wall. A hostile Russia might operate from Czech airfields and Soviet armies might wend their way forward through Poland or Rumania.”

The Czech army, whose peacetime footing amounted to 120,000 men, had in midsummer 1938 a million and a half men under arms in the thirty to forty divisions (twenty-one regular divisions, fifteen or sixteen second-line divisions already mobilized), equipped “by a highly organized and powerful industrial machine”, standing “behind the strongest fortress line in Europe”.

“To break the Czech Army and pierce or turn the Bohemian fortress line would require

practically the whole of thirty-five divisions – the main strength of the mobile and fully-trained German Army... Thus at the moment of attacking the Czechs only five effective and eight Reserve divisions would be available to protect the whole of Germany's western frontier against the French army, which could mobilize a hundred divisions."

A.J.P. Taylor writes:

"The Czechoslovak army was a formidable force, its well-equipped 34 divisions probably a match in themselves for the half-trained German army of 1938."

Poland

The strength of the Polish army at the beginning of war was estimated, as is generally acknowledged, at about 55 infantry divisions, 12 cavalry brigades and two motorized units. In autumn 1939 Poland had at her disposal 1.5 million soldiers. Having reached the already quite sizeable number of 200,000 (211,000 men) in the Polish peacetime army, a comparison of the figures clearly demonstrates the aggressive intentions of the Polish army, whose gradual mobilization had been underway since spring 1939; especially when considering that this mobilization was undertaken without having been threatened or, indeed, having been made to feel threatened by Germany. In spring, on 25 March 1939, the British Ambassador in Warsaw, Kennard, told his Foreign Minister that according to confidential information from competent persons, 750,000 men had already been called up. The Polish air force had more than 1,200 planes at its disposal in autumn 1939.

Without a doubt, the Polish military was still set fast in outdated strategical and technical ideas: they were attaching too much importance to the cavalry, underestimated the enemy's capabilities, had at their disposal insufficient tanks, anti-tank guns, artillery, aircraft and anti-aircraft units. Furthermore, their strategical immovability, the absence of any defensive strategy whatsoever, the poor fighting spirit of the many foreign-nationality members of the minorities in the Polish army (only 52.7% of the population of the State of 'Poland' were Polish) and, not least, the illusion being entertained by Warsaw regarding their "friends" France, Britain and the United States, have all contributed considerably to the catastrophe of September 1939. All the same, the fact remains that in an evaluation of Poland's military potential before the outbreak of war the German leadership could not have taken all of these deficiencies into account while, on the other hand, the Polish leadership had not been aware of these shortcomings. The Polish leadership had geared their policy towards the deployment of a strong military force – and expressed in figures it was considerable for this state! – and any German Chancellor would have had to respond bearing this policy in mind – and not any perchance weaknesses of the Polish army.

The Soviet Union

While the German Reich in 1939 had 75 divisions, 1,000 operational aircraft (tactical air force) and 3,000 tanks at her disposal, the Soviet Union alone could boast, in the summer of 1939, that she could deploy at a moment's notice, for the fight against Germany on her western front, 136 divisions, 5,000 medium and heavy guns, 9,000 to 10,000 tanks and more than 5,000 (according to some sources 5,500) aeroplanes.

This was no mere showing-off: The Soviet Union had formally volunteered these forces during the British-French-Russian military convention in July/August 1939 to the Western Powers for immediate fighting against Germany – which also reveals a lot about the attitude of mind of the Soviets, who were undertaking the completion of the German-Soviet Non-Aggression Pact at the same time, on 23 August 1939. Not because of the refusal by Britain or France, but mainly because of the Polish and the Rumanian refusal to allow passage of the Red Army across their territory, did these negotiations founder, so that the enormous might of the Red Army did not go into action in Europe in the year 1939. That this offer of deployment of arms was proposed in earnest is also confirmed by Soviet historians. They affirm that the Soviet government “during the whole course of the pre-war period was prepared to use armed force against Germany (the ‘aggressor’).” D. Hoggan writes:

“The Red Army had been vastly increased in recent months... The incorporation of reserve units in the Red Army in late 1938 had increased the Russian peacetime army to two million men, which was nearly triple the number of peacetime German soldiers.”

During the years from 1934 to 1938 the Red Army had doubled their manpower and their fighting strength, according to a statement made by the former Soviet Defence Commissar, Voroshilov, on 13 March 1939. The vast USSR, the most militant country in the world, had for years been shifting the main emphasis of the industrial output onto the heavy and armaments industries, and already since the year 1937 was spending about 25% of the total Soviet national income on military purposes (Germany 1937 = 10%, 1938/39 = 15%).

Germany

In the assessment of the military potential of the European powers, many historians nowadays “overlook”, when debating the German rearmament, the strategic plans of the Polish, the French but also of the Soviet Armed Forces. However, leaving aside these plans, the actually existing war potential of the individual European powers will attest to whether or not there could have been the intention present in a nation for an “intensive and criminal rearming aiming at a world conspiracy”. What are the results of the six years of rearming in the Third Reich from 1933-1939? Professor Michael Freund, the much quoted historian after 1945, wrote in factual plain language in the year 1944:

“Germany’s struggle to get back on her feet and the German armament took place against the backdrop, and as a consequence, of a feverishly pursued world-wide arms race and of a revolution in military policies on a global scale.

30-07-1934: The reason for the British air-armament programme was given by the Lord President of the Council in the British House of Commons, Stanley Baldwin, with these sensational words: ‘Britain’s frontier is on the Rhine!’

24-09-1934: Introduction of the auxiliary service in Poland.

28-11-1934: Escalation of the British air-armament.

06-12-1934: Military service is to be extended in Switzerland.

01-01-1935: Military service of two year duration in force in Czecho- Slovakia.

30-01-1935: Announcement that the strength of the Red Army had already reached one million men under arms.

January-March 1935: The announcement of the Franco-Russian Entente resulted in quite considerable armament measures on France’s part, in particular the restructuring of the French Air Force.

When in the British White Paper of 1 March 1935 the British armament measures are justified on the grounds of Germany’s rearming, The Times declared that the argument given for the British armament measures ‘could have been presented more objectively’.”

Not only did Germany have to take account of the armament measures of the other powers, but she also had to take note of the threatening posturing – especially Poland’s – aiming at military invasion. H. Roos writes:

“Furthermore, the Field Marshal [Hindenburg] retained discretionary powers over the German army and foreign politics when Hitler came to power, and this was respected by Hitler until the death of Hindenburg. For the moment, all obvious violations of Versailles – for example to exceed the 100,000 men-limit – would be avoided; Hitler kept strictly to the armament negotiations. However, the constant threat of a preventive war eventually became a very effective argument for the German armament demands.”

In the opinion of the Chief of the German General Staff, General Adam, there was done “during the whole of the year 1933 practically nothing to increase the army”. This was at the time when, for example, it was pointed out by the Chief of the French General Staff, Gamelin, that, compared with Germany, France had an armament’s lead of 20 billion francs. Furthermore, this came at a moment when France was rejecting the German proposals for disarmament with the kept hidden opinion:

“You are wasting your time! The convention which you favour will never be concluded for we shall never be a party to it! Hitler won’t last much longer, his fate is sealed! Any convention with him would consolidate his power. Should war break out, not a week would elapse before he would be deposed and replaced by the Crown Prince.”

The highest official in the [British] Foreign Office, Lord Vansittart, was then also enter-

taining similar ideas, that is, to keep Germany down through economic pressure. "We can ill afford to let Hitlerite Germany prosper. The Trade Union Congress is also of this opinion, though for different motives – see their recently announced boycott of German goods."

In his view one should aim for the destruction of 'Hitlerism' and make every effort to keep Germany in such an enfeebled and miserable condition that not even the Communists would want to become involved there.⁵) How persistently these and similar views were influencing the development of an informed opinion in the British military and the British government is demonstrated by the example of a report from March 1934 by the Defence Requirements Committee assigned to the government: This report takes it naturally for granted that the potential foe was Germany. Of course, this report, too, goes back to prior events and into a time when Hitler had not yet assumed power and Germany was as yet without an air force and without National Socialism. Already in November 1932 British statesmen were discussing plans which envisaged air deterrence that would enable Britain to have 'some military influence in Europe' without having to maintain a large army on the Continent.

" 'The only defence is in offence,' said Baldwin then, considering the role of bomber aircraft, 'which means that you have to kill more women and children more quickly than the enemy if you want to save yourselves.' "

So what efforts did this German opponent make? In the fiscal years 1933-34 and 1934-35 no increase in the armament expenditure was recorded. An expenditure representing 4% of the national income has to be regarded as positively moderate compared to the neighbouring countries (Great Britain 3%, France – 1932 – 8.1%, Soviet Russia 9%). The armament expenditure was only increased in the financial year 1935-36, in view of the changes taking place in foreign affairs politics (the collapse of the disarmament negotiations, the French-Soviet Mutual Assistance Pact). For two years foreign politicians and the foreign media had been accusing Hitler of sabre-rattling to get into a "criminal war of aggression" and thereby destabilizing peace by spreading terror and instability around the world. In the end, he saw no other alternative but to strengthen the German Armed Forces as a protection against the tendencies displayed by the other powers of forming various blocs against the Reich. Spreading lies about the German rearmament became a necessary requirement in order to find a justification for the refusal to disarm, for continuing the arms build-up, for the forming of military alliances, for the building of fortifications, for the General Staff meetings and, also, to continue lending some semblance of right and necessity to the policies of Versailles. The foreign military attachés as well as the foreign secret services in Germany had precise information of the quite moderate level of the German armament. There is an abundance of documents confirming that the foreign governments (Poland, Great Britain, France and USA) felt emboldened into taking tough actions against Germany when they realized the inadequately developed state of the German military defence. This reality, however, did not stop those governments from inflaming their population by feeding them false data and fake arguments through

the media. The British historian A.J.P. Taylor stated:

“The French had fired the starting-pistol for the arms race... Germany, for instance, was little more prepared for a great war between 1933 and 1936 than she had been before Hitler came to power. The difference was that he had strong nerves and his predecessors had not... Many of the early alarms about German rearmament were false alarms... Even in 1939 the German army was not equipped for a prolonged war; and in 1940 the German land forces were inferior to the French in everything except leadership... The Nazi secret was not armaments production; it was freedom from the then orthodox principles of economics... Under Hitler's direction, Germany was equipped to win the war of nerves – the only war he understood and liked; she was not equipped to conquer Europe.... In considering German armament we escape from the mystic regions of Hitler's psychology and find an answer in the realm of fact. The answer is clear. The state of German armament in 1939 gives the decisive proof that Hitler was not contemplating general war, and probably not intending war at all.”

The German level of armament was compared their level in 1944 during the war: 1937 = 9%, 1938 = 16%, 1939 = 18%. Another source gives, compared to the armament level of 1943 (when total war was declared):

1933 = 2%

1934 = 2%

1935 = 4%

1936 = 6%

1937 = 9%

1938 = 20%

1939 = 25%

1940 = 44%

General Jodl stated at the IMT in Nuremberg on 4 June 1946:

“In 1935, when we set up 36 divisions, France, Poland, and Czechoslovakia possessed 90 divisions for times of peace, and 190 divisions for war. We had hardly any heavy artillery, and tank construction was in its earliest stages... Real rearmament was only begun after the war had already started. We entered into this world war with some 75 divisions. Sixty per cent of our total able-bodied population had not been trained. The peacetime army amounted to perhaps 400,000 men, as against 800,000 men in 1914. Our supplies of ammunition and bombs were ridiculously low. We had ammunition for 10 to 15 days of combat... And if we did not collapse already in the year 1939 that was due only to the fact that during the Polish campaign, the approximately 110 French and British divisions in the West were held completely inactive against the 23 German divisions.”

Moreover, these divisions were “ equipped with very little artillery and almost no means at their disposal of any anti-tank defence”; furthermore, they were immobile. Even if

the territorial and the reserve divisions of the third and fourth "wave" are also added to the count, the American military historian T. Taylor arrives at only 106 German divisions in the year 1939, while the French army alone, including trained reserves and colonial troops, comprised an equal number of divisions at the outbreak of war, but due to the level of training was stronger than the German army. Moreover, to this have to be added the British, the Belgian (23 divisions = 550,000 men) and the Dutch divisions which, combined with the French divisions on the German front, came to 156, or rather, 142 divisions.

The German leadership had to consider that these troops, in case of conflict with Poland, would be deployed for an advance on the Reich. Besides the approximately 2.6 million German soldiers (including reserves) 20), grouped into "102 divisions"19), there were in the autumn of 1939 a further 500,000 men in para-military organizations.21) Nonetheless, only 52 divisions "could be considered fully fit for action".19) In the year 1914 there were almost one million more men under arms in Germany than there were in 1939.

"In contrast to 1914, when the German Reich had at her disposal 25 agegroups of trained reservists, in 1939 she could only call to arms 5 age-groups."19) "In 1935, France, unaided by her previous allies, could have invaded and reoccupied Germany almost without serious fighting. In 1936 there could still be no doubt of her overwhelmingly superior strength. We now know, from the German revelations, that this continued in 1938... In the year after Munich, [1939], which we are now examining, the German army, though still weaker in trained reserves than the French, approached its full efficiency. The German army was not capable of defeating the French in 1938 or 1939. ... when the German Army could scarcely put half a dozen trained divisions on the Western Front, the French with nearly sixty or seventy divisions could most certainly have rolled forward across the Rhine or into the Ruhr."

In this connection, one ought to compare the size of population of the two countries: Germany had 80 million people, France 42 million people. Burton Klein, an American scientist (Harvard University), supplements in his thorough study on the German economical war preparations the previous data with the following words:

"Up to the time of the German reoccupation of the Rhineland in the spring of 1936, rearmament was largely a myth. ... The armed forces did not even have a central economic agency which could review the various demands for materials and formulate some sort of a reasonable requirements picture. It was a cardinal policy of Hitler that war strategy was not a concern of economic planners... Supplies of important items like copper, iron ore, gasoline, and rubber were, in August 1939, in sufficient supply for only 3 to 6 months of contemplated war needs. ...in 1939 Germany's steel economy was dependent on foreign sources for 65 per cent of the ore supplies and practically all of the ferroalloys. In the expansion of imports in 1937 and 1938, however, food imports increased faster than raw material imports, with the result that the composition of imports was almost the same in 1938 as it had been in 1929... It can be said that German manpower was fully mobilized in 1939 only in the sense that there was no unemployment... The distribution

of the labour force over this fourteen year period was surprisingly stable. Pronounced shifts occurred in only two of the occupational groups – agriculture and public employment... There were large sectors of the economy in which manpower was unaffected by war mobilization... In 1939 the civilian economy still possessed large reserves of labour... There was no pronounced concentration of investment in those activities associated with economic preparations for war. In the pre-war period, the German economy produced both ‘butter’ and ‘guns’ – much more of the former and much less of the latter than has been commonly assumed. By 1937, civilian consumption, investment in consumer goods industries, and government non-war expenditures equalled or exceeded previous peak levels. There is no question, therefore, of a rearmament program so large that it prevented a substantial recovery of civilian production. The volume of munitions production and the number of divisions which Germany mobilized were, by comparison with published appraisal, small. Investment in those industries comprising the war potential was not much larger than the volume reached in the prosperous years of the previous decade and was small in relation to total investment.” “The government’s disinclination to ask for civilian sacrifices was demonstrated in a number of instances. One of these was its refusal to consider higher taxes as an alternative to deficit spending; another was its unwillingness in 1937 to cut food imports in favour of increased raw material imports; still another was its failure to transfer workers out of unessential occupations; another example [was] inefficient economic administration... When Schacht [President of the Reichsbank] attempted to cut expenditures for municipal improvements, he was invariably opposed by some prominent party members. When, on numerous occasions, he tried to reduce the budget of the German Labour Front, the issue was taken to Hitler, who invariably decided in favour of the latter. Because it was contradictory to its ideology, the party also opposed measures to force a larger number of women into the labour force. Public nonwar expenditures in 1937 and 1938 were much above any previous peak... The factors which prevented the Nazis from having a larger rearmament were:

- a) the fear of larger deficits;
- b) the government’s unwillingness to ask for civilian sacrifices;
- c) Hitler’s inability to subordinate various private interests to his aims;
- d) a lack of efficiency in the direction of the programme.”

In another statement it is confirmed by W. Hofer:

“It was shown that the precision mechanism of National Socialist militarism was working neither according to a planned overall strategy nor according to a long-term planning of an armament programme.”

On 5 May 1938, General Ludwig Beck, Chief of the Army General Staff, had diagnosed the military-political situation, and he also cited this as one of the reasons for his opposition to Hitler:

“... Germany’s military situation, when considered in its entirety, bears no comparison to the impotence of former years. However, when viewed in relative terms, it cannot be

regarded as strong as in 1914, because for years all of the powers that would possibly be against Germany have also been rearming to a substantial degree, sometimes to the fullest extent. Furthermore, as is generally known, Germany will have, for years to come, only a deficient armed forces."

In the period after the Poland campaign, Platanova (Soviet author) writes:

"the German government started the switch-over of the country's industry onto the tracks of war and began to expand hurriedly production for war."

Hereby even the Communists concede that Germany's industry, at least in its essential components, at the outbreak of war had not been "switched-over onto the tracks of war and war production had not yet been expanded"

He further states:

"The main reason forcing the German High Command to postpone the date of the offensive [against France] several times was the fact that the Germans were not able to accomplish the formation of the essential army units in time."

If the Reich had been building-up armaments for an offensive purpose for years and had been drilling and training, then it should have been in a position, at least several months after the outbreak of the war, "to form its army units in time"! Soviet sources also confirm that the German campaign in France was carried out not with superior, but rather with numerically inferior forces:

"The armed forces of Britain, France, Belgium and the Netherlands, taken altogether, totalled 142 divisions (according to other sources, even 156 divisions); they were confronted by 136 German-fascist divisions... Given this power balance and the resources available, there is no basis for asserting the vulnerability of the Allies or their being ill-prepared for war in the technological field and to be talking about the decisive superiority of the fascist aggressor. It became evident already during the campaign of Poland that the German artillery was not equal to the task of returning fire under the conditions of the rapid tempo of the fighting, not only qualitatively but also quantitatively. The German High Command was compelled to re-enforce the effectiveness of the artillery fire with the assistance of the air force... The miscalculation of Hitler's generals in regard to the artillery were to bear grave consequences for the German-fascist army in the course of the Second World War."

"American military experts have revealed the fact that Churchill's criticisms of alleged British and French lag in armament and his allegations about overwhelming German superiority and activity in armament were utterly without foundation... An official report submitted to the Secretary of the Army of the United States in October, 1947, entitled 'Foreign Logistical Organizations and Methods', exposed the gross inaccuracy of Churchill's figures and charges."

This report can be found in a publication of the Soviet Academy of Sciences. It had been transferred there, without any protest, from an official survey of the American War

Department. We are dealing here with an admission from the western opponent that was validated as correct by the eastern opponent³¹):

“In 1938 Germany produced only 3,350 combat planes or 5,235 military aircraft of all types – very few indeed with which to wage a long war. In 1939, on the eve of the war, Germany produced 4,733 combat planes or 8,295 military aircraft of all types, England – 8,000 military planes of all types... In the last four months of 1939 (that is, in the first four months after the war had started), Germany produced only 247 tanks and self-propelled guns, while the British produced 314 tanks.”

“In September 1939, the sum total of all tanks produced in Germany amounted to about 3,000, of which only 300 were medium-heavy. Until 1939 not a single new armament factory had been built in Germany... When Germany invaded Poland, the Hitler-army was equipped for only six weeks of combat! The German air force could count on only 1,000 aircraft for tactical aerial fighting (the first line), also the supply of bombs was sufficient for only 3 months of war (calculated according to the quota used in the Poland campaign); the ground forces had in total only three Panzer divisions, while the reserve of Panzers numbered 600; the navy had 53 submarines at its disposal. Therefore, Hitler-Germany could only wage a short war and, in fact, concurrently against only a single opponent.”

One would do well to read this quotation more than once and to pay attention to the source (US War Department in 1947). One page further on it is stated that Germany was only able to increase her output of aircraft, tanks and all the other remaining armaments many times over, because she had managed to crush France and to drive off the British Army from the Continent and, thereupon, help herself to the rich sources of occupied Europe. Accordingly, Germany in 1939 had at her disposal in aircraft, tanks and munition, proportionate to her population (80 million), only slightly more than half of the armaments compared to what Britain had, just one of Germany's main opponents (50 million). What is not taken into account here is the Canadian industry that was working to supply British armaments, as well as the facts that the American President Roosevelt had promised wide-ranging assistance to England and France already months before the outbreak of war and, furthermore, England was militarily protected owing to her island position. E. Hughes writes:

“In their pro-Ally and anti-revisionist volume *The Challenge to Isolation* [concerning the treaties dictated by the victors after the First World War], the American professors William L. Langer and S. Everett Gleason offer the final refutation of Churchill's absurd charges of overwhelming German armament in 1939: ‘There can now be little doubt that the Germans in 1939 were far from being prepared for a long war on a large scale. Their current war production was inferior to that of the combined British and French and they had remarkably little in the way of reserves. Of the hundred divisions they put into the field against Poland only three were mechanized and none completely motorized. In a word, the Germans were equipped for a two-month Blitzkrieg, such as they waged in Poland. They were by no means equipped for the type of war in which they became

involved.’”

A further admission from a Soviet source by D.M. Projektor:

“One of the weak spots of the Hitlerite war organization is, above all, the totally inadequate preparation of the technological-material foundation of the Reich, which was not geared in its economy for a war of global proportions against the coalition of the great powers. This was mainly caused by insufficient supplies and stocks of several of the most essential types of strategical raw materials, the dependence of the armed forces on the importing of these raw materials from abroad, and the continual restrictions involved that were placed upon this import. The general cuts in exports and Germany’s enormous national debt caused many economic problems which had a direct bearing on war production output and the condition of the armed forces. It is also necessary to point out that when measured against the demands of a world war the Wehrmacht had at its disposal a limited arsenal with regard to armoured vehicles and, especially, to war stock piles. The lack of an essential fleet of medium and heavy tanks, the predominance of light tanks, which, as practice was soon to show, did not fulfil the protection requirements because of their date of construction, imposed a limit to the size of the tank units and made it necessary to improvise their formation ... The Hitlerite State could not withstand the burden of a long war against the coalition of European states.”

In the last year of peace (from 1 January to 5 September 1939), Germany had obtained war materials to the value of 23, 000 (23 thousand) dollars, France to the value of 16, 000, 000 (16 million) dollars and Great Britain to the value of 21, 000, 000 (21 million) dollars, from the USA.⁴⁶) It can be proved that Germany ranked in a decidedly bottom position by far with regards to purchasing armaments from abroad. This fact too demonstrates that Hitler had not been drafting any hastily prepared plans or, indeed, armament programmes geared to 1939, as he was dissuading his generals from any arms escalation even in the summer 1939. He was not anticipating the likelihood of a decisive crisis before 1943-1945, so that the construction of roads and the urban development still occupied the central position of his economic policy.

There was no German plan of operation at the outbreak of the war, neither against the western neighbour France, nor against the sea power Great Britain⁴⁷⁾⁺⁴⁸); until the spring of 1939 there was merely a plan for the protection of the eastern border. The drafting of an operational plan against Poland (Operation “White”) was only ordered on 3 April 1939 ⁴⁹) and, in fact, with the explicit explanation, “in case of need, to eliminate any threat from this direction”. This was done at the time when an armed conflict was becoming plainly evident, brought about by the announcement of the British letter of licence, in conjunction with the chauvinistic and warlike posturing of the Poles, “when their own excessively overestimated strength apparently blinded them to the deadly peril”. Even immediately after the campaign of Poland, no plans for an offensive against the West had been drawn up in Germany.

On the German Air Force: Britain’s and France’s combat-ready airfleets alone com-

prised 7,300 aircraft. In 1939, Britain had 2,327 aircraft of first line capabilities at her disposal of which 1,715 were based at home ports (comprising 855 bombers, 560 fighters, 300 reconnaissance planes), 222 were with the navy and 354 were overseas. Up to the beginning of the war the German Reich had not even been developing any long-range strategic assault bomber-aircraft, whereas Britain had done so since 1934 and the United States since 1935. Thus it was discovered [by British and American economists] that her [Germany's] aircraft production in the autumn of 1939 had been 675 a month, no more than that of Great Britain; her tank production was less; she had started the war with only three months' supply of aviation petrol." E. Spetzler writes:

"It was Britain placing the strongest emphasis on strategic aerial warfare, having already on 1 April 1918 created the RAF as an independent part of the armed forces, their command clearly separated from that of the army and the navy. Britain had already at that time formed several bomber units into an 'Independent Air Force' for a strategic air war and had been continuing this development since 1925. The aircraft best suited to this purpose was considered to be the heavy, strongly armed long-range bomber, which it had been developing since 1934 and which had been in series production since 1936, so that by 1941 it was available, at long last, in sufficient number for aerial warfare. Long before 1939, Britain's purposeful groundwork was geared to this task, and it incorporated in its plan for an aerial war against Germany a fixed sequence for striking targets and which, from its inception, allowed for a considerable time outlay to ensure success."

A.J.P. Taylor writes: "The Germans had never planned for independent [of the front line troops] bombing. Their bomber-force was an auxiliary for the army on the ground, and they had to improvise the air-attack on Great Britain in the summer of 1940."

The following statement also deserves attention (US Navy, August 1956, Lieutenant Commander Richard G. Alexander):

"Britain was making studies of German industry with a view to strategic aerial attacks for the first time in the mid-twenties. The United States had prepared for entering the European air war with a list which contained 124 targets from the field of electrical power stations, transport systems and the fuel industry, as well as 30 targets from the aviation and light metals industries! Details for the particular bomber units appointed to carrying out the attacks were already set down in 1932 in the United States and Britain."

About the German Navy: The German fleet was significantly decreased compared to 1914 and thus was inferior to the French and, faced with the "overwhelming Anglo-French superiority... could not venture on the high seas..." There were no aircraft carriers; there were 57 U-boats of which only 42 were "of any real military value". If one takes into account that less than a third of the total number of U-boats [submarines] can be "on mission" [enemy engagement], while the remaining ones are either outward-bound or on their return journey or at the shipyard for overhauling or are assigned to training purposes, then the small number of German U-boats in 1939 diminishes even further. However, not more than half were large enough and sufficiently broken in for action in the Atlantic.

In fact, eighteen [U-boats] were sent into action against England at the start of war, and three others put to sea in the Baltic to support the operations against Poland.

Compared with the 57 very much smaller German U-boats, Britain and France had 135 submarines at the beginning of the war.⁶⁷) Admiral of the Fleet Raeder had this to add:

“Our two battleships and 3 armoured cruisers were facing a total of 22 British and French battleships. We had no aircraft carriers. The enemy, on the other hand, had seven aircraft carriers. We had two heavy cruisers as compared to 22 of the other side. The ratio for the light cruisers was 6:61 and for the destroyers and torpedo boats 34:255.”

Winston Churchill stated on 16 March 1939 in the House of Commons:

“The German Navy in the next few years will not be able to form a line of battle for a general engagement.”

Winston Churchill in his memoirs:

“Now [1939] the Germans had only begun rebuilding their navy and had no ability even to form a line of battle. . . Thus there was no challenge in surface craft to our command of the seas. There was no doubt that the British Navy was overwhelmingly superior to the German in strength and in numbers, and no reason to assume that its science, training or skill was in any way defective. . . It had to face enormous and innumerable duties, rather than an antagonist.”

A Soviet source (Platanova):

“The German Fleet Air-Arm was totally inadequate in 1939 in Germany.”

Admiral Erich Raeder declared before the Nuremberg tribunal on 17 May 1946:

“There is manifold proof to show that I was not expecting a war in the autumn [1939] at all, and in view of the small extent of rearmament of the German Navy this was quite natural. I have stated quite clearly in my speech before the U-boat officers in Swinemünde that we could not count on it.”

Author's note: This was the state of the military of the nation you are usually told wanted to conquer the world... while the US and Britain already looked for strategic targets in 1932 within Germany, France tried to have a small entente of encirclement against Germany, the direct neighbor Poland had imperialistic desires and the USSR was on their way for further revolution in Europe (and then the World).

11.19 Did Hitler Want War?

On Sept. 1, 1939, 70 years ago, the German Army crossed the Polish frontier.

On Sept. 3, Britain declared war.

Six years later, 50 million Christians and Jews had perished. Britain was broken and

bankrupt, Germany a smoldering ruin. Europe had served as the site of the most murderous combat known to man, and civilians had suffered worse horrors than the soldiers.

By May 1945, Red Army hordes occupied all the great capitals of Central Europe: Vienna, Prague, Budapest, Berlin. A hundred million Christians were under the heel of the most barbarous tyranny in history: the Bolshevik regime of the greatest terrorist of them all, Joseph Stalin.

What cause could justify such sacrifices?

The German-Polish war had come out of a quarrel over a town the size of Ocean City, Md., in summer. Danzig, 95 percent German, had been severed from Germany at Versailles in violation of Woodrow Wilson's principle of selfdetermination. Even British leaders thought Danzig should be returned.

Why did Warsaw not negotiate with Berlin, which was hinting at an offer of compensatory territory in Slovakia? Because the Poles had a war guarantee from Britain that, should Germany attack, Britain and her empire would come to Poland's rescue.

But why would Britain hand an unsolicited war guarantee to a junta of Polish colonels, giving them the power to drag Britain into a second war with the most powerful nation in Europe?

Was Danzig worth a war? Unlike the 7 million Hong Kongese whom the British surrendered to Beijing, who didn't want to go, the Danzigers were clamoring to return to Germany.

Comes the response: The war guarantee was not about Danzig, or even about Poland. It was about the moral and strategic imperative "to stop Hitler" after he showed, by tearing up the Munich pact and Czechoslovakia with it, that he was out to conquer the world. And this Nazi beast could not be allowed to do that.

If true, a fair point. Americans, after all, were prepared to use atom bombs to keep the Red Army from the Channel. But where is the evidence that Adolf Hitler, whose victims as of March 1939 were a fraction of Gen. Pinochet's, or Fidel Castro's, was out to conquer the world?

After Munich in 1938, Czechoslovakia did indeed crumble and come apart. Yet consider what became of its parts. The Sudeten Germans were returned to German rule, as they wished. Poland had annexed the tiny disputed region of Teschen, where thousands of Poles lived. Hungary's ancestral lands in the south of Slovakia had been returned to her. The Slovaks had their full independence guaranteed by Germany. As for the Czechs, they came to Berlin for the same deal as the Slovaks, but Hitler insisted they accept a protectorate. Now one may despise what was done, but how did this partition of Czechoslovakia manifest a Hitlerian drive for world conquest? Comes the reply: If Britain had not given the war guarantee and gone to war, after Czechoslovakia would have come Poland's turn, then Russia's, then France's, then Britain's, then the United States. We would all be speaking German now.

But if Hitler was out to conquer the world — Britain, Africa, the Middle East, the United States, Canada, South America, India, Asia, Australia - why did he spend three years building that hugely expensive Siegfried Line to protect Germany from France? Why did he start the war with no surface fleet, no troop transports and only 29 oceangoing submarines? How do you conquer the world with a navy that can't get out of the Baltic Sea?

Contrary to the mythology created by those who had an opposing ethnic agenda, he had no plans or desire for a larger war of conquest. Professor AJP Taylor showed this in his book, *The Origins of the Second World War*, to the disappointment of the professional western political establishment. Taylor says, "The state of German armament in 1939 gives the decisive proof that Hitler was not contemplating general war, and probably not intending war at all" (p.267), and "Even in 1939 the German army was not equipped for a prolonged war; and in 1940 the German land forces were inferior to the French in everything except leadership".

If Hitler wanted the world, why did he not build strategic bombers, instead of two-engine Dorniers and Heinkels that could not even reach Britain from Germany?

Why did he offer the British peace, twice, after Poland fell, and again after France fell?

Why, when Paris fell, did Hitler not demand the French fleet, as the Allies demanded and got the Kaiser's fleet? Why did he not demand bases in French-controlled Syria to attack Suez? Why did he beg Benito Mussolini not to attack Greece?

Because Hitler wanted to end the war in 1940, almost two years before the trains began to roll to the camps. Hitler had never wanted war with Poland, but an alliance with Poland such as he had with Francisco Franco's Spain, Mussolini's Italy, Miklos Horthy's Hungary and Father Jozef Tiso's Slovakia.

Indeed, why would he want war when, by 1939, he was surrounded by allied, friendly or neutral neighbors, save France. And he had written off Alsace, because reconquering Alsace meant war with France, and that meant war with Britain, whose empire he admired and whom he had always sought as an ally.

As of March 1939, Hitler did not even have a border with Russia. How then could he invade Russia?

Winston Churchill was right when he called it "The Unnecessary War" — the war that may yet prove the mortal blow to our civilization.

11.20 The Last Days of Peace

The Activities of the British Government from 25-28 August

The reaction from the British government to the German-Soviet Non- Aggression Pact and the news that Italy would stay away in case of a conflict was such that it could only lead to an intensification. Instead of trying for negotiations on the conflictual matters needing to be dealt with – which most certainly would have prompted Hitler to withdraw the marching orders immediately, since “Hitler did not want war with Poland” – London hardened positions by extending the guarantee to Poland, inclusive of vast contingencies, and failed to initiate mediation. The British government judged the German-Soviet Non-Aggression Pact incorrectly as a war pact and got “ into position”, i.e. prepared for an armed conflict. On the 23 August 1939, the Chief Political Advisor to the Foreign Secretary, Lord Vansittart, “referring to the statement about the Cabinet meeting”, told the Hungarian Minister in London:

“Britain would not yield in any event. Even if violence were not offered to the sovereignty and territorial integrity of Poland, Britain would immediately mobilize and go into action.”

Winston Churchill writes impressively in his memoirs about these military measures, which were taken both by the British leadership and the Dominion governments and the Colonies at the news of the German-Soviet Non-Aggression Pact. It was a question of a world-wide mobilization – against Germany, not for instance (also) against the Soviet Union. Therefore, not morals and humanitarianism could have been London’s motives. London failed to take into account that it was only the British-Soviet military negotiations which moved Hitler to come to an arrangement with the Soviet Union. One may accept extenuating circumstances for the British reaction to the 23 August – from the blame of having provoked the Stalin-Hitler Pact really in the first place, London cannot be acquitted. The British reaction made the situation even more hopeless and emboldened those powers that had an interest in a military conflict against Germany. Peaceful means of reconciliation were not at all considered.

On 26 August, on Hitler’s advice, Ambassador Henderson took the German alliance offer of 25 August to London. There he was detained until 5.00 p.m. of the 28 August, a time span, which led to a “stagnation” of the talks.³⁰) When on that 28 August Henderson presented to Hitler at 10.30 p.m. the British reply to his alliance offer to Britain and to his request for assisting him in settling the German-Polish differences (from the 25 August), Hitler was bound to believe that the British government had utilized the three days for intensive talks with Warsaw and had influenced Poland to negotiate now, under the patronage of Great Britain and France. Emphasizing that the situation was “extremely urgent”, Hitler was informed that the British government would be ready, “to proceed as soon as practicable to such discussions... His Majesty’s Government have already received a definite assurance from the Polish Government that they are prepared to enter

into discussions on this basis.”

In expectation of this mediation, thus confirmed, and of the now existing Polish readiness for negotiations, Hitler would now draw up his negotiation proposal, which he handed to Ambassador Henderson on 29 August. Hitler, however, had no knowledge of what had really taken place during those three days (26-28 August) in London. He was unaware that Lord Halifax had not taken advantage of these three days for making an effort at mediation, and that he had this, the most important *démarche* before the outbreak of war that was forwarded to Hitler on 28 August, falsified with intent to defraud. The Polish readiness for negotiations, as asserted, did not at all exist and, furthermore, the British government was not willing to mediate, as there was now, according to the statement made by the British Foreign Secretary to the Polish Ambassador on the 25 August “any attempt to patch matters up... out of the question.” 32) This deception by Halifax, hitherto veiled in various ways, had also not been realized for a long time by historians, since they too had been fooled by several falsified documents, or rather, documents based on false reports (one of them in the Documents on British Foreign Policy, the others in the “Polish White Book”, the “British Blue Book”, and the “French Yellow Book”).

On 28 August Halifax fabricated an alleged telephone message coming from Kennard at 4.00 p.m., the subject matter being the Polish readiness to negotiate, and smuggled it into the British documents. For the historian today, it makes its appearance as doc. 420 in the Documents on British Foreign Policy. This “document” cannot be genuine and it is thanks to the historical contribution of a German man to have discovered this, twenty years after the end of the war, and to have drawn the historian's attention to it.

Step by step proof:

1. The “British Blue Book”, published immediately after the start of the war, contains no evidence for this Polish assent for negotiations, although Prime Minister Chamberlain asserted to the House of Commons on 1 September 1939 that the “British Blue Book” (which, strangely enough, had been almost fully completed already before the outbreak of the German-Polish conflict) 34) included all the important documents.
2. The “Polish White Book”, put together by the Polish government in exile at the beginning of 1940 in Britain, has under No. 96 a notification from Beck to his Ambassadors in London and Paris of 28 August 1939:

“The British Ambassador has consulted me on the question of an answer to M. Hitler. I agreed to inform the German government that Poland was ready to negotiate, and asked him to define what the British government understood by the conception ‘international guarantee’. Please treat the entire question of the consultation as strictly confidential.”

This “document”, too has evidently been fabricated subsequently, “in consultation” with the British government: Beck could never have chosen, on 28 August, this kind of formulation for the British government, because a “consultation” about the note to Hitler simply does not correspond to the facts. But to mention this misleading basis in this “note”, moreover, not only once but twice, makes the falsification even more obvious. —

Halifax had the British note presented in Berlin, without having notified Poland beforehand, never mind asking for requests to be conveyed to Hitler.

3. On 27 August, Lord Halifax was sent this message at 10.46 p.m. from Warsaw:

“Mr Beck has just informed me (Kennard) that in view of the nature of Herr Hitler’s language regarding Poland in his conversation with Sir N. Henderson (25 August) the Polish government have decided on full mobilization which is to take place at once.”

Only on the 28 August (one day later) at 7.00 p.m. – three hours after the ostensible Polish assent for negotiation! (doc. 420 – 4.00 p.m.) – and only after the arrival of a further communiqué on mobilization measures from Warsaw (doc. 424) did he check back,

“I am at a loss to know what precisely in Hitler’s language to Sir N. Henderson led the Polish Government last night to take these measures of mobilization.”

Halifax did not endeavour to check, how the Polish government was to reconcile these measures with the assent for negotiations, given (allegedly) meantime.

4. The manifold evidence in the British documents, showing the intensive efforts made by the British Foreign Secretary for gaining a favourable “world opinion” with regard to the Polish attitude, sheds light on the drastic remedy that was used eventually – the deliberate false report – by a man, who had described, since the conclusion of the German-Soviet Non-Aggression Pact, “any attempt to patch matters up” as being “out of the question”.

“Colonel Beck was apprehensive of negotiations, not because they seemed hopeless, but for fear lest Hitler really consented to a compromise, and also lest Britain perhaps show an inclination to impose the compromise on Poland.”

“There was no chance of extracting concessions from the Poles once the danger of war was removed, and the British knew it.”

5. Halifax arranged the facts according to his objective:

a) Although Henderson, as already mentioned, was staying in London for three days, Halifax asked Poland for their consent for negotiations only then (28 August – 2.00 p.m.), when it was quite certain that Poland would not be able to reply before Henderson’s return flight to Berlin. It was not possible, within two hours, that Kennard could have been informed, could have had an audience with Beck and to have already forwarded his answer to the Foreign Office. The (alleged) answer, however, is already back again in London in two hours – at 4.00 p.m. (doc. 420). Kennard’s task stated clearly (doc. 411) to “endeavour to see” M. Beck, which was in accordance with diplomatic practice – though this could never have facilitated such a speedy reply. The actual answer from Beck to this British step was then only made on the 31 August. This delaying, on the other hand, would appear inexplicable, if Beck had answered immediately – already on 28 August – as the “Polish White Book” doc. 96 and the British doc. 420 claim.

b) The German government was to be given the impression that the Polish consent for negotiations was available unconditionally. For this it required an ambassador, who himself believed this to be so. Now, Henderson was critical, having urgently demanded, still on 24 August, the immediate dispatch of a Polish plenipotentiary. He now was sent to Berlin at 5.00 p.m. on the 28 August, convinced that the British government had been sounding things out in Warsaw and was expecting, any minute, the Polish consent for negotiations. This was the reason why Halifax did not give him the British note to take to Hitler, but sent it to him in a telegram one hour later. Once he was back in Berlin, he could neither question nor check his Foreign Secretary's assertion that the Polish consent for negotiations had arrived in the meantime.

c) The general disposition within the three days (26-28 August) was absolutely strange during that critical time and has never been explained.

6. Ambassador Kennard was received by Beck in the evening of the 28 August. Only in the early morning of the 29 August was the British leadership to learn of the outcome of the talks.⁴³) Thus, they could not have been in possession of this answer already on the 28 August at 4.00 p.m. For the rest, Kennard did not have any comment on the Polish consent for negotiations, nor could he intimate a "new course" in Warsaw, and he could neither give an indication that one was now awaiting Hitler's diplomatic reaction. But on the contrary, it was Beck to advise Kennard that for tonight a *fait accompli* was to be expected in Danzig, "in the event of not receiving a satisfactory reply" from the Danzig Senate. Thereupon Kennard felt himself obligated to warn Beck.

7. On the 28 August at 2.00 p.m.,⁴⁴) Halifax had asked Kennard in Warsaw to convey the outcome of his talk with Beck not only to London, but also, simultaneously, to Berlin, Paris and Rome. In the reply, (allegedly) transmitted two hours later, Kennard "confirms" (allegedly) the implementation of this task. The subsequent smuggling in of this telegram⁴⁵) is also proved in that in reality neither Henderson (Berlin) nor Phipps (Paris) nor Loraine (Rome) learnt about it. Also, none of the Polish Ambassadors in these cities ever received this piece of news from Warsaw. All of Henderson's urging upon Lipski, the Polish Ambassador in Berlin, right into the last hours of peace, turned into the realization, or rather proof, that the latter was so tightly restrained by instructions from Warsaw to the point that he was not to display any interest in any note whatsoever from the Reich government and was not authorized to enter any definite negotiations. So that this fraudulent manoeuvre should not be noticed by the nations of the world at the start of the war, the concluding part of the task was not printed in the "British Blue Book" (doc. 73).

8. On the 28 August at 6.00 p.m., Lord Halifax telegraphed Kennard that he has informed the Polish Ambassador in London, Raczynski, of the substance of the British note sent at 2.00 p.m. to Warsaw, with the request for the Polish consent for negotiations. Continuing, Halifax mentions: "If a favourable answer to this is received in time..." Halifax could really only put this passage into this telegram at 6.00 p.m., if the Polish consent for negotiations was not in hand at this stage. So, this doc. 420, according to which this

consent had already come in two hours earlier, can therefore not be genuine. Halifax, in his deceitful conduct, had made a slip – just two hours after smuggling in the false note. This has likewise occurred to the editors of the Documents on British Foreign Policy, because they provided doc. 430 with a footnote (5) that “this telegram was evidently drafted before the receipt of No. 420”, yet, an explanation for this they did not give.

9. Halifax informed his Ambassador in Warsaw on the 29 August retrospectively on the kind of talk with Raczynski (28 August). Halifax stated that Raczynski “appeared to be somewhat out of touch with his government [and] did not have any comment to make”. No mentioning that perchance he had announced or confirmed the Polish consent for negotiations. Neither was he interested to know what Britain meant by an “international guarantee”. On the other hand, Raczynski did inquire about the British reply to Hitler and

“whether His Majesty’s Government would make any demand for a truce. I replied that there was nothing in the reply to this effect, but that His Majesty’s Ambassador in Berlin might be asked to impress on Herr Hitler the necessity for the cessation of provocation if discussions were to commence. Count Raczynski thought that this would be helpful, as it was important to avoid any impression of weakness.”

Halifax had made no demands of Poland for a truce, but he did, on the other hand, name Berlin as the address which had to be influenced for provocation to end. Neither in his conversation with Raczynski nor in his note to Warsaw did Halifax enjoin the Poles to talks with Germany, but instead he underlined:

“Failure to secure a just settlement of German-Polish differences would ruin hopes of Anglo-German understanding, and might lead to war, with untold suffering and loss to many countries.”

In view of this and similar statements from the British Foreign Secretary at this stage, the following sentence could only have been written for the files:

“His Majesty’s Government have made representations to the Polish Government that they should express willingness to enter into discussions on this basis.”

Truth is: Poland’s conduct was once again sanctioned unreservedly for the past, the present and the future.

10. For an explanation, what the British government understands by an “international guarantee”, Minister for Foreign Affairs Beck only asked on the 31 August, which he would not have done, if

- a) he had already (according to doc. 420) asked about it on the 28 August,
- b) Halifax had answered this question, which the Poles (according to doc. 420) apparently considered to be urgent, and which Beck called on the 31 August, “this fundamental question [of] the Polish government”, in the meantime.

Halifax should have answered this question post haste, having, at the same time, made

Hitler aware of the “matter of the utmost urgency”. If one imputes doc. 420 (28 August – 4.00 p.m. – Polish consent for negotiations, plus the question about the “international guarantee”) to be genuine, one must then conclude that Halifax was working towards war, because he refused to give the Polish partner an answer to this pressing question. Either way, this doc. 420 proves Halifax’s policy for war. It is most strange to find that precisely those places in the doc. 609 (Beck’s reply of the 31 August), which could give information about whether Beck’s enquiry (“international guarantee”) concerns a question asked for the first time or whether it was just being reiterated, are not printed, since, according to the editors of the Documents on British Foreign Policy, “the text is here uncertain”.

11. On the 28 August, Halifax transmits, likewise at 6.00 p.m., the gist of the British note to Hitler (doc. 431) to the Ambassadors in Washington, Warsaw, Paris and Rome. He did state, it is true, that His Majesty’s government had made endeavours for the Polish consent for negotiations (which factually is correct, but the Ambassadors had the extremely late stage of this attempt kept from them). The telegrams, however, contain no comment about the (ostensibly received two hours before) Polish consent, which should have been announced, after all the incidents and the months of refusal to negotiate from Warsaw, as a sensation precisely in this telegram. Only a day later, on the 29 August at 10.50 a.m.,⁵¹) did Halifax inform his Ambassadors in Washington and Rome – of all people only these! – that in view of the Polish consent for negotiations having arrived in the meantime, the British note to Hitler was altered. This communication was a lie, since

- a) the Polish consent for negotiations, as has been shown, was not at all in hand,
- b) the note to Hitler was not at all altered, but instead of giving it to Henderson to take with him to Berlin, as everyone must have expected, it was forwarded to him by telegram,
- c) it is not comprehensible why – with Beck supposedly having agreed to negotiate at 4.00 p.m. – Halifax should not have added this important communication to the already outgoing dispatches at 6.00 p.m.

Lord Halifax undertook a further step towards war on this 28 August: Early at 9.30 a.m., he was informed by the Chargé d’Affaires of the British embassy in Berlin, Ogilvie-Forbes, of the outcome of a talk between Field Marshal Göring and the Swedish industrialist, Birger Dahlerus, whose good offices for mediation between Germany and Britain had been called upon by Göring already since July 1939. Point 5 of this report to the Foreign Office reads:

“Field-Marshal Göring, after consultation with Herr Hitler, requests that the British reply should neither be published nor communicated to Parliament until Herr Hitler has had time to comment on it and possibly suggest modifications.”

In the afternoon of this self-same day – Henderson was on his flight back to Germany – Halifax conveyed to his Ambassadors in Washington, Warsaw, Paris and Rome the gist

of the British reply to Hitler – without the additional remark that the Polish consent for negotiations was in hand. However, Kennard in Warsaw received a separate advance notice telling him, among other things, that the Polish Ambassador in London, Raczynski, had already been apprised of the substance of the reply made to Hitler – but was asked not to transmit it to Warsaw in cypher. While it was already unusual to steer this British reply along two different routes to Warsaw (it would have sufficed for Raczynski to have received just a copy for his own information), so it had to be even more unusual to induce the Polish Ambassador into an action that was quite uncommon – and not only could cause a public sensation, but was bound to do so. For the recipient of this information (Raczynski) did thereby not consider himself obliged to maintain secrecy; the receivers of his information, on the other hand (the journalists), naturally took up this piece of news immediately and made a big splash of this “sensation”. These journalists (“the press”) could hardly fail to notice the sphere of responsibility, the Prime Minister, who was carrying the responsibility of the government, on the other hand, knew nothing of the arrangement. Inquiries into the source of the information would have led, in fact, to Raczynski but, as a result of the now rapid succession of events, no further.

Again, Halifax had outplayed the “appeasement politicians” in Britain, as far as they would still have been in leading positions, but also those abroad. How this manipulation even outraged Mr. Chamberlain – shown clearly in letters to his sister – though without recognizing the initiator and, by that time, no longer being one of the “appeasement politicians”, is attested by his speech in the House of Commons on the 29 August 1939:

“There is one thing that I would like to say at this moment with regard to the press. I think it is necessary once more to urge the press to exercise the utmost restraint at a time when it is quite possible for a few thoughtless words in a paper, perhaps not of particular importance, to wreck the whole of the efforts which are being made by the Government to obtain a satisfactory solution. I have heard that an account purporting to be a verbatim description of the communication of the British government to Herr Hitler was telegraphed to another country last night or this morning. Such an account could only be an invention from beginning to end. It is, I think, very unfortunate that journalists in the exercise of their profession should take such responsibilities upon themselves, responsibilities which affect not only themselves, but the inhabitants, perhaps, of all the countries in the world... I should be glad if I could disclose to the House the fullest information as to the contents of the communications exchanged with Herr Hitler, but hon. members will understand that in a situation of such extreme delicacy, and when issues so grave hang precariously in the balance, it is not in the public interest to publish these confidential communications or to comment on them in detail at this stage.”

The French government, too, did not keep, on the 27-28 August, to their promise to Hitler of maintaining secrecy on the exchange of letters between the Chancellor of the Reich and Daladier, but gave the press fresh ammunition to play with in the form of possible distortions and aggravations. Thereupon Hitler felt compelled to publish his exchange of letters with the French Prime Minister.

The Polish government knew, though, what this “guide line” 57) indicated, and in what direction the leading forces in Britain and France were heading. Furthermore, since the version that was sent on to Raczynski and subsequently published by the British press did not contain the passage that the Polish consent for negotiations was in hand, whereas, on the other hand, it was precisely on the basis of this passage Hitler was persuaded to agree to negotiations at the earliest possible moment, Poland was bound to regard it as a cause for intensifying their provocations. Just how dishonestly Halifax was pursuing this game can also be seen by the fact that he had not informed Warsaw of having asserted to Hitler Poland’s readiness for negotiations and that on Germany’s part negotiations would be welcomed. This was all the more serious, since, at the same time, Halifax was passing on to Poland further alarming military news, apparently gleaned from German resistance people (28 August) 58), and he stated on the 29 August that he

“could not take the responsibility of advising the Polish Government against any action which they consider necessary for their security.”

The result was the Polish general mobilization, for which London made no reproach to the Polish partner, not even subsequently. Count Szembek apprised on the 29 August at 4.00 p.m. the British and French Ambassadors of the just then decided Polish general mobilization, which, “however, only completed the military measures already taken at an earlier stage”. The Polish government referred specifically, as pertaining to this step, to the warning, forwarded from London the day before, about German troop movements and about Germany’s intention “to make a surprise attack on Poland”. The general mobilization was to have been announced early in the morning on the following day. Because of the diplomatic exchanges between London and Warsaw it was postponed for several hours, until the afternoon on the 30 August (2.30 p.m.).

The Meeting between Hitler and Henderson on 29 August

Hitler, meanwhile, had learnt through the intelligence service about the further Polish mobilization on the 28 August and about the concentration of Polish units at the border, but also, in addition, about the internal decree for a general mobilization taken in the afternoon of the 29 August. Hitler did not even try to hide from British Ambassador Henderson the fact that he had such far-reaching secret sources to Warsaw. Cognizant of these military and political happenings behind the scenes in Warsaw that required immediate German counter-measures, Hitler, two and three quarters of an hour later, at 6.45 p.m. asked for, in his reply to the British government, “in consideration of the urgency of the fact that two fully mobilized armies were standing face to face and the Germans living in Poland were being subjected to atrocious and barbarous ill-treatment” *), a Polish representative invested with plenipotentiary powers to arrive for the 30 August. Hitler stated specifically in this communication that Germany had no intention of attacking vital Polish interests or of questioning the existence of an independent Polish State. At the same time, Hitler gave to understand that proposals for a solution would

be drawn up immediately.

But what was the attitude and behaviour of the British Ambassador at this audience on the 29 August? Had he been inspired by the resistance faction from the German Foreign Office, who were trying hard, during this “August crisis”, to prevent “another Munich or Prague”? State Secretary von Weizsäcker had often influenced him in this way. Henderson was well aware of the gravity of the situation and of the importance of this meeting with Hitler, i.e. of Hitler’s response to the delayed British note. He himself admitted, in view of his meeting with Hitler the day before, that he was not “without hope” that Hitler would let reason prevail. Nevertheless, before these talks on the 29 August, that is without knowing how Hitler was going to react at all, and how the German reply to the British note of the 28 August would turn out, he “had decided after careful prior consideration”, to let himself “go with Hitler” and to shout at the German Chancellor, since “Hitler is an abnormality [and it] might do good [to] be given a dose of his own medicine”. Henderson elaborated on these talks in a private letter to Lord Halifax:

“So when he gave me the opportunity on a minor point, namely our utter disregard for Germans murdered in Poland, I did fairly let him have it... He [Hitler] did not react in any noticeable way, but I have no doubt that it was a disagreeable and unusual surprise... I must add that after the worst of it I started to get up to go, but he would not budge.”

In another letter about these talks Henderson adds:

“I therefore proceeded to out-shout Herr Hitler. I told him that I would not listen to such language [reference: the murdering of Minority Germans in Poland] from him or anybody. Such a state [sic: ‘statement’?] was intolerable and an example of all his exaggeration... He made no response and I continued to use the same forcible language throughout the interview...”

Ribbentrop recorded that Henderson had even banged the table.⁶⁷) With regard to the conduct of the British Ambassador, three different points need to be established:

1. The assertion made by Hitler – this “minor point”! – “that I or His Majesty’s Government did not care a row of pins whether Germans were slaughtered in Poland or not” was factually correct. After all, Britain really was not concerned about that but had instead, already in spring of 1939, given Poland expressly to understand that, regarding the guarantee, they would ignore the question of the aggressor. During these decisive days, too, the British government had not even made any enquiries into the German grievances, let alone induce the Poles to yield, although, undoubtedly, they were fully informed by their secret service sources about the prevailing conditions. Anyone who takes – “after careful prior consideration”! – factually correct statements as an opportunity to “shout” henceforth during a politically important discussion, puts himself in the wrong and pronounces himself guilty.

2. The persecution of the Volksdeutschen [Minority Germans] in Poland, which Henderson now trivialized as a “minor point”, had been commented on by him in telegrams

during previous days as follows: On the 21 August to Halifax:

"... fact remains that there are now probably at least 10,000 refugees in Germany, that German institutions are systematically being closed, German workmen dismissed, etc., etc. It must be realized that the conflict has now gone beyond Danzig. Patience can be urged on Hitler in respect of the Free City but it would serve the opposite purpose to preach it in respect of the persecution of the German minority. I am not attempting to apportion blame but to state facts. For a settlement of the minority question direct and immediate contact between Warsaw and Berlin seems to me essential."

Also on 21 August to Halifax:

"I had tea with a friend of mine yesterday (X or if you like W) [meant was resistance-adherent E. von Weizsäcker] and he earnestly harped on immediate action. While he admitted press exaggeration he assured me that what was taking place was a form of enforced German migration from Poland, where no Germans were being allowed to find a living. That is the urgent question. I spoke of patience and he said at once the very mention of that word would send Hitler into a frenzy. The crux of the question today is not Danzig but the minorities...The Times correspondent here has just told me that he telephoned yesterday to his opposite number in Warsaw who told him that the Poles were being 'incredibly foolish'."

On the 24 August to Halifax:

"Herr Hitler's reply clearly indicates that the immediate question is not so much Danzig and the Corridor, which by implication can wait for a later solution, as the persecution of the German minority. . . . there is no doubt that there is much ground for German complaints in this respect. The expropriation law referred to in the Warsaw telegram no. 271 is to me, I submit, the basic indication of a very understandable but equally inopportune effort to get [rid of] the German population in Poland under cover of guarantees of the Western Powers."

On the 28 August, Henderson receives a circular dispatch from Halifax, which was sent simultaneously to Washington, Warsaw, Paris and Rome:

"His Majesty's Government agree that one of the principal dangers in the German-Polish situation is reports of the treatment of minorities."

Thus Henderson had been put in the picture about the state of affairs by quite dissimilar and trusted informants of his. That he should then choose to trivialize as a "minor point" precisely this of all subject matters and to take it as an opportunity for provoking the Head of the German government, makes the intended purpose of his provocation even more obvious and irresponsible.

3. To illuminate even more thoroughly the previously given explanations for Henderson's conduct during his talk with Hitler on the 29 August, one should call to mind the atmosphere in which the talk between Hitler and Henderson had taken place the day before, on the 28 August late in the evening. Henderson himself wrote of it as follows:

“At 10.30, fortified by half a bottle of Champagne, I drove down the Wilhelmstrasse to the main entrance of the Reichskanzlei. A good many people were waiting outside the Embassy and a considerable crowd outside the Chancery. No hostility so far as I could see, absolute silence, possibly uneasiness. I was received by a guard of honour in full state as if I had been presenting my letters of credence. I was ushered in at once, Ribbentrop being in attendance and the inevitable Dr Schmidt. The Chancellor looked well, was absolutely calm and normal. No fireworks or tirades of any kind... Hitler registered no emotion on reading the German text [of the British note]... I am not unhopeful that Hitler’s answer may not be too unreasonable... The general atmosphere was quite friendly even on Ribbentrop’s part... Another point in my conversation was Hitler’s insistence on the value to Britain of German friendship.”

In the face of Hitler’s composure, Henderson’s behaviour on the evening of the 29 August can only be described as irresponsible provocation, and it is irrelevant as to whether the British Ambassador was acting on his own accord, on the orders of his government, on the advice of the war-mongers in London or whether he was lending his ear to the whisperings of the German resistance adherents in the Foreign Office. It is worth observing that Henderson had no success with this, because Hitler “made no response” and “would not budge”.

Collaboration between London and Warsaw from 29 to 31 August 1939

Whether it was Henderson, as is claimed in the “French Yellow Book” under No. 285 and No. 287, or another British or French diplomat, who passed on to Paris false information concerning Hitler’s demands (all of the Corridor, East Upper Silesia) made during the talks with Hitler on the 28 August, is an open question. All the same, this example also shows clearly, how foreign forces, just in the last days of peace, had been adding high-handedly, but with the encouragement and safeguarding from their government, to the powder-keg for war.

Even more decisive, however, was to be the conduct of the British government. It fully backed their Ambassador Henderson in his talks with Hitler on the 29 August. On top of this: The Foreign Office informed the French Ambassador in London, Corbin, on 29 August, in an equally inflammatory way, about the meeting between Hitler and Henderson on 28 August. The reason why this is not excusable is precisely because during this discussion Hitler never did give, and never could have given, a reply to the British note, since he had only just received it. There is also another reason making this inexcusable: In this communication to Corbin references were included, which were deliberately war-mongering:

“After adding Silesia to his former claims, the Chancellor gave clearly to understand that what remained of Poland could not count upon an independent future... He let it be understood that he would negotiate with Poland only if he were sure in advance that the Polish Government would accede to all his wishes.”

It is to be gathered from the Documents on British Foreign Policy that it was Henderson who sent the false information to London. Whether this is true, must remain an open question; it is possible that Henderson had received secret instructions to act in such a way that the German-British talks, and consequently Germany's efforts about Poland, were bound to fail. All the same, Henderson did not report anything about these alleged demands from Hitler to his French counterpart in Berlin, Coulondre. In the German documents of the Foreign Ministry is, in any case, not one single reference to these alleged demands from Hitler. These documents, in this instance, would merit all the more trust considering they were published by the victors. Yet, notwithstanding whose brainchild was Hitler's alleged demands ("all of the Corridor and East Upper Silesia"): Halifax was the one who went beyond this, spreading information with ever more aggravating emphasis, without any documentary proof whatsoever. Moreover, he knew that the Polish Foreign Minister was

"...most anxious to know the upshot of Herr Hitler's remarks by midday [of the 28 August]."

Besides, he knew that Beck had already taken "Hitler's language" as grounds for the Polish mobilization (did the phrase "Mobilization means War" from World War 1 still hold true?). Chamberlain, likewise, spiced the communication to Paris with the purposeful reasoning:

"The Führer cannot fail to realize the 'disgust' which has been provoked in the whole civilized world by the conclusion by Germany of an agreement with a Power, which, on the very day before this agreement, was regarded by Germany as her worst enemy."

Chamberlain did not ask to consider how much "disgust in the civilized world" the British and French political efforts over many months, which were to effect an expansionist military alliance with the USSR directed against Central Europe, had aroused. Such pangs of conscience the British leadership at the time did not suffer. The attempt by Lord Halifax to play through to the end the deceitful manoeuvre with the British note to Hitler on 28 August and, for his part, to build in additional provocations, is demonstrated anew by this communication to Corbin, but also in his subsequent conduct: Notwithstanding the, in the meantime, confidentially to London transmitted information about the already decreed Polish general mobilization and, notwithstanding that Hitler's reply of 29 August was in accordance with London's expectations from Berlin, i.e. the request for "immediate talks" – "the British government refused to be in a hurry". Not once did they – not even at this stage – make the Polish consent for negotiations a condition for British assistance. Henderson outlined correctly the state of affairs, when he wrote to his Secretary of State on 29 August:

"It is not without interest that whereas every other diplomat has asked to see me I have so far no sign of any interest whatsoever from the Polish Ambassador, though my relations with him personally are excellent." "If we allow the latter [Poland] to talk all the time of their 'amour propre', prestige and signs of weakening, we shall not be guiltless of some of the responsibility for disaster."

The British Ambassador in Warsaw, Kennard, on the other hand, was of the opinion:

“... that it would be impossible to induce the Polish Government to send Colonel Beck or any other representative immediately to Berlin to discuss a settlement on the basis proposed by Herr Hitler. They would certainly sooner fight and perish rather than submit to such humiliation, especially after the examples of Czecho-Slovakia, Lithuania and Austria.”

This point of view from Kennard did not at all refer to the short notice of the German proposal or its contents, had he, after all, already on the 26 August, told his Under-Secretary of State, Cadogan:

“I am sorry that I cannot agree with Henderson’s proposal that Lipski should seek an interview with Hitler... Had Lipski been able to see Weizsäcker something might have been done but for Lipski or Beck to seek an interview with Hitler or Ribbentrop would be too much like Canossa.”

Kennard did not keep this opinion a secret from the Polish government officials. Furthermore, all throughout this decisive month, he never even once gave a strong warning to his government about Poland’s mulish attitude. Yet he was as much aware as his American colleague Biddle of the Polish fondness for war. It is true, Kennard did occasionally convey Lord Halifax’s repeated reminders that Poland was to conduct herself in such a way that she would not take up the position of an aggressor, as this could have a negative effect in world opinion, yet he thought it quite appropriate to try to convince his Foreign Secretary that Poland’s action was right. Kennard also knew quite well that it was useful for Poland, who “saw her vital interests in Danzig threatened”, to negotiate about an international guarantee protecting those interests, but with his stance he was reinforcing Beck’s determination that if officially invited to go “to Berlin, he would of course not go.” Kennard was further aware how anxiously Minister for Foreign Affairs Beck was awaiting information on steps taken by London, as Polish policies would be governed in line with them, yet he spared every effort to exert pressure in the direction of a peaceable settlement. True, Kennard did point out, after the announcement of the Polish general mobilization on the 29 August at 4.00 p.m.,

“that the word ‘mobilization’ would create the impression all over the world that we are embarking on war.”

Yet in spite of this, he, as well as his French colleague, Noel, gave this piece of advice to the Polish Under-Secretary of State, Count Szembek:

“...Poland should take all military measures to meet any surprise attack, but we suggested, above all, that no publicity should be given to any extreme measures that they might feel it necessary to take.”

One and a half hour later, Beck confirmed this ‘wink’ by telephone. Lord Halifax limited his further activities on the 29 August to recommending, without pressurizing, a postponement of the Polish general mobilization and was satisfied straight away with

Colonel Beck's promise to delay the posting of mobilization notices for "a few hours". For the rest, Halifax was supplying the Polish government constantly with "secret information from Germany", according to which German troops were well on the way to attack Poland from all sides. At 11.55 p.m. Halifax ordered his Ambassador in Warsaw to clarify that, although the German reply "does not appear to close every door", he could not "take the responsibility of advising the Polish Government against any action which they consider necessary for their security". With that statement, he thus condoned, already on the very same day, the Polish general mobilization and was clearly contributing to furthering a warlike development.

The Minister for Foreign Affairs, Beck, complained on the evening of the 29 August – that is, at a time when Warsaw, because of the British delaying tactics, neither knew the contents of the German basis for negotiations nor the deadline limitation – to Kennard not about the urgency behind the German readiness for talks, but merely that Hitler would not renounce Danzig. Beck adhered to the viewpoint that the resumption of talks with Germany on the basis of the proposals made in March still meant war. Should Hitler within the next few hours of this night [29-30 August] not give a "reply [that] was positively favourable" (that is, a definite disclaimer both of Danzig and of improving the transit regulations through the Corridor), then it would be necessary, so Beck warned the British and French Ambassadors, "to proceed with the general mobilization". As this general mobilization – especially in view of Poland's strategic aims – constituted a decisive step in the advancement to war, Beck's demand clearly clarifies the question of culpability. Considering that the Polish Ambassador in Berlin, Lipski, two days later called the German proposal "a sign of weakness", how then would a German renunciation of Danzig have been evaluated on the Polish assessment scale?

Every sign of "German weakness" was seen by the Polish government as a "victory", while making sure, at the same time, that their own actions could not be regarded as a "sign of weakness". In the process, they would go to such lengths that many times they would even incur the displeasure of prudent British diplomats. In fact, the visit to Moscow by "the author of the anti-Comintern Pact", Reich Foreign Minister von Ribbentrop, and the signing of the German-Soviet Non-Aggression Pact were described in the Polish press as "a sign of weakness" and showed, "how the ground burnt under Germany's feet". The Polish Ambassador in Moscow, too, is optimistic:

"He is of the opinion that the German proposal and Ribbentrop's visit are evidence of the desperate situation in which the Reich presently finds itself."

For the 29 August, there is another occurrence, slightly more removed, to be mentioned: While already previously the president of the World Jewish Congress, Goldmann, had told the League of Nations High Commissioner, Carl J. Buckhardt:

"Your appeasement-manoeuvres in Danzig are damaging. Public demonstrations against conditions in Danzig are necessary for the good of the whole, because of the general situation of the Jewish people,"

so the Zionist leader and later president of Israel, Dr. Chaim Weizmann, wrote to the British Prime Minister, Chamberlain, on the 29 August:

“I wish to confirm, in the most explicit manner, the declarations which I and my colleagues have made, that the Jews stand by Great Britain and will fight on the side of the democracies. We therefore would place ourselves, in matters big and small, under the coordinating direction of His Majesty’s Government. The Jewish Agency is ready to enter into immediate arrangements for utilizing Jewish manpower, technical ability, resources, etc.”

Hereby did a force, whose immense power certainly cannot be measured in divisions, announce their readiness to fight before the outbreak of war and, in fact, did so likewise without any reservations, that is, ignoring “the question of the aggressor” (This note from Weizmann was not made public until the 5 September 1939).

complete agreement of the Polish general mobilization, the British Foreign Secretary did not – and this was bound to have a fateful effect! – inform the Polish government on the 29 August about Germany’s willingness for negotiations, but had this notification only passed on very late in the evening of the 30 August. While Halifax was transmitting information to Warsaw about a German plan for advance, even as late as the evening of the 29 August, so for the 30 August, too, the motto remained the same: not to advise Poland “against any action which they consider necessary for their security”. Having already delayed the forwarding of the German proposal for negotiation until 7.00 p.m. of the 30 August, Halifax then ordered Kennard to place this information into Beck’s hands only around midnight, i.e. to delay it again. In the course of this, he was to indicate that Great Britain considered the German presentation [of the case] as “indefensible and misleading”, and “have made an express reservation in regard to statement of the particular demands put forward in the German note” (telegram from Halifax of 30 August, 7.00 p.m.; implemented around midnight).

The British government never did press for the Polish government to negotiate, not until the evening of the 30 August, after the Polish general mobilization had already been announced since 2.30 p.m. Thus Poland could not send a plenipotentiary to Berlin on the 30 August, at any rate not as a result of a British mediation effort. However, it has to be said in this connection, that the British Ambassador, Henderson, even as late as the night from the 29 August to the 30 August (shortly before midnight on the 29 August), after the discussion with Ribbentrop, had called on the Polish Ambassador, Lipski, and had told him that Poland should send a plenipotentiary for the 30 August. In this way the Polish government, therefore, had already been informed of Hitler’s reply to Britain by midday on the 30 August. But here, too, the British Ambassador was to encounter the increased hardening in Lipski’s attitude:

“The French, Americans and Italians have been on my doorstep since I got back, but not a sign from the Polish Ambassador, in spite of the fact that I am on quite good terms with him! Poland also has got to make her contribution to world peace and it is

in her interests more than anyone else's to remove as thoroughly as she can any possible causes for friction in the future between herself and her powerful neighbour."

The British government has suppressed in the "British Blue Book" this supplementary communication of the 29 August from Henderson; not without reason! Likewise, in the "British Blue Book", they have deleted points 5, 6 and 7 from Henderson's report of the 29 August to London:

"5) I have communicated substance of German reply to French Ambassador and urged him strongly to recommend to French Government that they advise Polish Government to propose immediate visit of Mr Beck as constituting in my opinion sole chance now of preventing war. Herr Hitler is not bluffing and at any moment clash may occur. I expressed opinion that Polish Government by so doing would not only convince the world that they had done their utmost but that, since others would suffer hardly less than themselves, it was their duty as well as in their interests to make this last attempt.

6) Italian Ambassador who saw Hitler immediately after me also came to see me. Herr Hitler was, he said, quite calm and gave him substance of German reply to His Majesty's Government. Italian Ambassador also undertook to suggest to Italian Government that they should make representations to Polish Government in similar sense.

7) I trust that His Majesty's Government will see their way to do likewise. Repeated to Paris, Rome and Warsaw." (cf "British Blue Book" No. 80)

These suggestions, apparently, did not fulfil the British purpose, since London took no such step and even tried to hide the fact that her Ambassador was recommending taking just such a step. This should be proof, too, that the British government had neither done "the utmost" nor had they been guiding their partner towards doing "the utmost", in order for the world to be convinced of their desire for peace. Likewise did the British government suppress the fact that Hitler had answered in the affirmative Henderson's question of whether he was ready to discuss with Poland "an exchange of populations", which was to have been exclusively to Germany's disadvantage. This dishonest game was continued with regard to the British people and, yes indeed, the entire world:

In the early hours of the 30 August, at 2.00 a.m., Henderson received the instruction from Halifax to notify the Reich government that it was unreasonable to expect Great Britain to "produce a Polish representative in Berlin today and the German Government must not expect this."

Initiatives of the German Government

A few hours later, Henderson sent a telegram to London, announcing that Birger Dahlerus – a Swedish industrialist, who, on German initiative, had been active as a German-British mediator already since July 1939 – was ready to fly to London, bypassing Ribbentrop, to discuss further possibilities for negotiation. Dahlerus, who had still been conferring with Göring during the night, was received by Chamberlain and Lord Halifax on the 30

August in the morning. Dahlerus expounded, leaving aside the renewed frontier incidents and other Polish provocations, already the essence of the German proposals. A telephone conversation with Göring during this talk confirmed the accuracy of the statements made by Dahlerus.

“He [Göring] affirmed at once that the note was ready and that it offered Poland conditions still more favourable than those of which he had told me during the night.”

Hitler’s proposal was to be “in the form of a ‘Diskussionsgrundlage’ (basis for discussion)”, but it was an absolute condition that a Polish negotiator vested with plenary powers was to receive them. The German documents confirm that Hitler did not wish to present Poland with an ultimatum but rather that he was considering for the negotiations to take place over a more extended period, since their most urgent point is named as being the cessation of the persecution of the Germans in Poland.

At 3.15 a.m. on the 30 August, thus even before Dahlerus had arrived in London, Lord Halifax already knew that “the 30 August is not an absolutely unconditional date”. As a result of the discussion with Dahlerus, Lord Halifax advised the Polish government in the evening of the 30 August (5.30 p.m.):

- “a) not to fire on fugitives or members of the German minority who cause trouble, but to arrest them;
- b) to abstain themselves from personal violence to members of German minority;
- c) to allow members of the German minority wishing to leave Poland to pass freely;
- d) to stop inflammatory radio propaganda.”

The reason given for this advice was the intention to deprive Hitler of the “pretext... to justify immoderate action”. Since Britain’s written guarantee covered without reservation any Polish action of whatever nature, and since Halifax had stated on the previous day his essential approval of the Polish general mobilization, one could hardly expect a change for the better to come from such a lukewarm recommendation as given on the evening of the 30 August. The reaction from Beck was to be expected (30 August, 7.15 p.m.):

“The Polish Foreign Minister... enjoins the British government to refrain from pronouncing its views and positions on purely Polish matters unless expressly empowered to do so by the Polish government. It is the most rude sovereign-great power standpoint. The evaluation of Polish questions is the sole and exclusive decision of the Polish government.”

Poland’s position now was much more rigid than in March 1939, before the British guarantee. If, over the five months from October 1938 to March 1939, she had shown readiness to negotiate, now she no longer need “fear negotiations”, even less so, since the Polish military leadership was convinced of their forces’ superiority over the Wehrmacht. Even with his allies, Beck kept his cards close to his chest.

“The Polish government... , cold, haughty, rigid and fatalistic... , had been... tight-

lipped for four months, only answering all urging from the Western Allies with empty promises. To them – fools of mad-cap heroism – the others are fools of faint-heartedness. Even on the eve of war, the British government is still not clear, whether the Polish government's support for their negotiation effort is only somewhat feigned."

On 30 August the British government had further aggravated the situation by not informing the Polish government of the German readiness for negotiations until the late hour of around 12 o'clock midnight. Poland, for her part, used the 30 August for worsening the situation by announcing in the afternoon general mobilization, which had been decreed the day before, and by stopping rail services to East Prussia at first in parts, then on the 31 August stopping it completely by blowing up the bridge at Dirschau.

On the 30 August at approximately 12 o'clock midnight – 10 hours after the public announcement and 34 hours after the secretly decreed general mobilization by Poland – Henderson presented to the Reich Foreign Minister a memorandum from the British government, which stated that while the German government "must obviously... with all urgency" endeavour direct talks with Warsaw "it would be impracticable to establish contact so early as today". By this move it was indicated to Hitler that the British government, contrary to their assurance, was not at all making any attempt at mediation, had not even impelled Poland to the negotiation table and was not able to suggest avenues of how the German government might move Poland to initiate a discussion, for their part, having since March 1939 concluded negotiations with a threat of war. Lord Halifax even rejected the German suggestion that he might advise Poland to send a representative for immediate German-Polish negotiations. With emphasis, but without an explanation, Halifax had instructed Henderson to schedule the meeting only for this late hour, although the details of the intended move had already been with the embassy in Berlin since 7.40 p.m.

In his reply, Ribbentrop read aloud to the British Ambassador the German negotiation proposals intended for Poland. He was later criticized for not having handed over the proposals in written form, having only conveyed them "at top speed" and unintelligibly. One cannot fabricate a case of wrongdoing from this oral presentation. The Minister Plenipotentiary and chief interpreter, Dr. Paul Schmidt, disputed the claim that Ribbentrop had been reading too fast and indistinctly. For the rest, there is the memorandum of Minister Plenipotentiary

Schmidt in the German documents; it is stated therein that Ribbentrop "had read... slowly and clearly, and had even given explanations on the main points". The proposals were ready. Their content matter had been known to the British government since the morning of the 30 August (cf. Dahlerus's talks in London). Hitler, though, had declined handing over these proposals in writing, since he wished to present them first to the Polish government as the actual negotiations partner; as Great Britain had up to now not been making any attempts at mediation, she could hardly expect to be given them beforehand. For the rest, had not Great Britain just this moment given to understand, London is not prepared to mediate, even at this stage? The Foreign Office was displaying

no sign of urgency during these last days. Just then, Henderson had conveyed during the same discussion his government's view as set down in a memorandum that "it would be impracticable to establish contact as early as today" between Germany and Poland. It was known everywhere, just how sensitive was Poland's reaction, particularly in regards to the question of her sovereignty. For this reason alone, Hitler could hardly have passed over the German proposals to British hands. Reich Foreign Minister von Ribbentrop later wrote about this:

"The British government, it is true, had undertaken to use its good offices to effect such negotiations, not, however, to take the place of a Polish plenipotentiary. . . . that an official handing over of a document that was meant for a Polish negotiator – yet before having been received by the government addressed herewith – could have provided the pretext for not sending a Polish emissary and to cover the sequence of events for the Polish general mobilization, with regard to time, 'in the undergrowth of delaying tactics'."

The proposal for negotiations to be discussed, as drafted on the 30 August by the Reich government, contained the following points:

- a) the return of Danzig to the Reich ("Nobody in Poland denies that Danzig is a German city from a national standpoint").
- b) a plebiscite on the affiliation of the Corridor territory (West Prussia), under international control, not before a period of twelve months. If, as a result of this vote, the Corridor were to return to the Reich, then Poland would receive the harbour of Gdingen and an extra-territorial road through West Prussia. If, on the other hand, the population of the Corridor voted in favour of Poland, then the Reich would claim the right to an extra-territorial road to East Prussia.
- c) a guarantee of non-aggression extended to a period of 25 years, indeed, a guarantee of the Polish state and thus of Poland's frontiers in general. The proposal, or rather claim, thus put by Hitler did neither contain the reintegration of the province of Posen nor the valuable industrial areas of Eastern Upper Silesia, arbitrarily and unlawfully detached from the Reich in 1921, nor any other rectification.

Furthermore, such rectification demands have never been brought into any talks held by the German leadership, but this did not stop French or British diplomats or other forces, remaining anonymous, from including such false reports as "authentic documents" in the "French Yellow Book", or to spread the rumours from London. The German proposal, a "veritable League of Nations proposal", was based on the people's right of self-determination and, in respect to these two areas, it even relinquished the application of this principle. The extent of the area involved in Hitler's proposal amounted to only one-tenth of the region that was appropriated unlawfully by Poland in 1919. That this eleventh-hour proposal had been an extremely generous one was realized by each and every expert, in 1939, too. It did not really require historians first to discover this and to make a comparison with the claims advanced by the Weimar democrats. In no way could this proposal be regarded, from a Polish point of view, as inferior to the plan which initially had even been discussed by Colonel Beck for five months, since Poland

was expecting a plebiscite victory in the disputed territory, or rather, was propagating this belief in victory.

Shortly before his conversation with Ribbentrop, Henderson wrote to his Foreign Secretary, warning him:

“If there is to be any genuine peace in future between Poland and her powerful neighbour grievances of latter which are not of Herr Hitler’s making but national must be eliminated. In my opinion in order to achieve this end City of Danzig as distinct from port must revert to Germany; there must be direct and extra-territorial communication between Reich and East Prussia; and German minority in Poland must be got rid of by means of some exchange of population. On no other basis can there ever be genuine and lasting peace between the two countries. No diplomatic compromise has a hope of surviving indefinitely. If we are ever to get German army and nation to revolt against the intolerable government of Herr Hitler it can only be so far as Poland is concerned on some such basis, since whole of nation itself and even most of moderate sections of it would not regard any other basis as fair to Germany... In the meantime I can only urge once more importance of Poland accepting at once proposal for direct negotiations and thereby putting herself right in the eyes of the world.”

Having only just written that Hitler “would refuse such a basis”, so Henderson must have been rather surprised in his talk with Ribbentrop that the German proposal contained precisely that which he himself had outlined as being the German minimum demands. Hitler, after all, did accept this “basis”, and Henderson even described, straight after the meeting with the Reich Foreign Minister, the German offer as “not unreasonable”.

On August 28. 1939, Hitler issues an open peace letter to the president of France. He writes:

“My dear Minister President:

I understand the misgiving to which you give expression. I, too, have never overlooked the grave responsibilities which are imposed upon those who are in charge of the fate of nations. As an old front line fighter, I, like you, know the horrors of war. Guided by this attitude and experience, I have tried to remove all matters that might cause conflict between our two peoples.

As you could judge for yourself during your last visit here, the German people, in the knowledge of its own behavior held and holds no ill feelings, much less hatred, for its one-time brave opponent. On the contrary, the pacification of our western frontier led to an increasing sympathy.

I am deeply convinced that if, especially, England at that time had, instead of starting a wild campaign against Germany in the press and instead of launching rumors of a German mobilization, somehow talked the Poles into being reasonable, Europe today and for twenty-five years could enjoy a condition of deepest peace.

As things were, Polish public opinion was excited by a lie about German aggression.

The Polish government declined the proposals. Polish public opinion, convinced that England and France would now fight for Poland, began to make demands one might possibly stigmatize as laughable insanity were they not so tremendously dangerous. At that point an unbearable terror, a physical and economic persecution of the Germans although they numbered more than a million and a half began in the regions ceded by the Reich.

May I now take the liberty of putting a question to you, Herr Daladier: How would you act as a Frenchman if, through some unhappy issue of a brave struggle, one of your provinces severed by a corridor occupied by a foreign power? And if a big city - let us say Marseilles - were hindered from belonging to France and if Frenchmen living in this area were persecuted, beaten and maltreated, yes, murdered, in a bestial manner?

I see no way of persuading Poland, which feels herself as unassailable, now that she enjoys the protection of her guarantees, to accept a peaceful solution. If our two countries on that account should be destined to meet again on the field of battle, there would nevertheless be a difference in the motives. I, Herr Daladier, shall be leading my people in a fight to rectify a wrong, whereas the others would be fighting to preserve that wrong."

Even the New York Times agreed in their headline from August 28. that "Berlin thinks door is left open to peaceful solution".

The Lethargic Polish Ambassador

That Henderson had understood and had also retained the gist of the contents follows from the fact that in the early hours of the 31 August, at 2.00 a.m., he informed his Polish counterpart, Lipski, of the basic outlines of the German proposal and recommended, "in the very strongest terms", a discussion between Smigly-Rydz and Göring, but also direct contact with Ribbentrop: Lipski, for his part, should at least make an attempt for the preservation of peace and to sound out the Reich Foreign Minister on the possibilities for negotiations. But in vain! In a note to London he gave vent to his exasperation:

"The German proposals certainly do not endanger the independence of Poland...The German acceptance of a plebiscite in the Corridor is curious... The Poles must put themselves in the right by making a gesture of some kind, or else we must all fight."

Henderson reported on the talk with Lipski:

"I then gave him following advice in very strongest terms. He should at once ring up Minister for Foreign Affairs and say he had heard from me that detailed proposals had been individually elaborated and that he would like to call on Herr von Ribbentrop with a view to learning and communicating them immediately to Polish Government. I suggested he should do this tonight on his own responsibility."

Lipski, however, did nothing at all, as Henderson reports:

“Polish Ambassador promised to telephone at once to his Government but he is so inert or so handicapped by instructions of his Government that I cannot rely on his action being an effective palliative.”

At 5.15 a.m. on 31 August, Henderson sent a telegram with the main points of the German proposal to London (received at 9.30 a.m.). In the meantime the Swedish intermediary, Dahlerus had, in the early hours of the 31 August, at between 1.00-2.00 a.m., passed on by telephone the contents of the German proposal to the Counsellor of the British embassy, Ogilvie-Forbes. At 8.00 a.m. Henderson gave Polish Legation Secretary Malhomme the complete text of the German proposal. Warsaw received it at 10.55 a.m. on 31 August. By 9.05 a.m. Henderson knew with certainty that the time period had been extended from the 30 August to the 31 August, as he was now informing his French colleague Coulondre of this news. But in the meantime he had learned from Göring via an intermediary that it would even be enough if Lipski could declare, within this extension, “that a negotiator will be sent shortly”. At 11.00 a.m. in the morning of 31 August, Birger Dahlerus, accompanied by the Counsellor of the British embassy, Ogilvie-Forbes, went to see the Polish Ambassador, Lipski. Dahlerus wrote of this meeting:

“Upon arrival one already sensed very strongly the gravity of the situation. Boxes were lined up in the hall and everywhere the personnel was busy preparing for departure. Lipski received us in his office, from which part of the furnishings had already been removed... Forbes... asked me to read the German note addressed to Poland, and I did so. But Lipski soon said that he was unable to understand the contents. Forbes then put down the main points himself and handed the note to Lipski, who took the paper, hands shaking, and looked at it for a moment – but then stated that he could not understand what was written, whereupon I offered to dictate the note immediately to his secretary... While I was dictating to the secretary, Lipski had told Forbes that he had no reason to interest himself in any notes or offers from the Germans. He had had many years experience of Germany... he stated his conviction that unrest would break out in this country in the event of war and that the Polish army would march triumphantly on Berlin.”

Lipski described the German proposals offhandedly as “a sign of weakness”. Polish leading circles were ridiculing the German readiness for negotiations, and it was not only Warsaw radio that expressed such an attitude. Lukaszewicz in Paris:

“They [the German proposals] are so immoderate that the German government must have gone mad, or else is now pursuing an out-and-out provocation to goad the Polish government.”

Such a misinterpretation of Germany's willingness to negotiate embodied the very opposite of a peaceable attitude. Even Lord Halifax voiced his irritation – albeit too late – on 1 September:

“On the other hand, I do not see why the Polish Government should feel difficulty about authorizing Polish Ambassador to accept a document from the German Govern-

ment, and I earnestly hope that they may be able to modify their instructions to him in this respect. There was no mention of any ultimatum in the report on the German proposals which has been furnished to us, and the suggestion that the demand for the presence of a Polish plenipotentiary at Berlin on August 30 amounted to an ultimatum was vigorously repudiated by Herr von Ribbentrop in conversation with His Majesty's Ambassador. If the document did contain an ultimatum, the Polish Government would naturally refuse to discuss it until the ultimatum was withdrawn. On the other hand, a refusal by them to receive proposals would be gravely misunderstood by outside opinion. I should have thought that the Polish Ambassador could surely be instructed to receive and transmit a document and to say

(a) if it contained anything like an ultimatum, that he anticipated that the Polish Government would certainly be unable to discuss on such a basis and

(b) that, in any case, in the view of the Polish Government, questions as to the venue of the negotiations, the basis on which they should be held, and the persons to take part in them, must be discussed and decided between the two Governments."

The "Line" of Lord Halifax

Of course, it seems reasonable to suspect that Halifax did not mean what he had said there, because 24 hours earlier he had passed on to the Polish government Hitler's basis for negotiations from the 29 August in the evening only in the early hours of the 31 August, subject to numerous provisos, by which he practically invited Poland's refusal. In this telegram to his Ambassador in Warsaw (30 August – 7.00 p.m., implemented in the early hours of the 31 August) Halifax admitted "the line we have taken", regarding it as important that Minister for Foreign Affairs, Beck, "will see the line". This is to be understood in the light of the delay in the passing on of the German proposal and London's provisos regarding the contents, but no less in the deceitful conduct of the British Foreign Secretary since the 25 or rather the 28 August, with the unreserved approval of the Polish general mobilization included. To make his purpose still clearer for the Polish Foreign Minister, he added that he recommended discussions in view of "the internal situation in Germany and of world opinion". From the Documents on British Foreign Policy 1919-1939:

"So long as the German Government profess themselves ready to negotiate, no opportunity should be given them for placing the blame for a conflict on Poland."

After the delay mentioned, i.e. from the evening of the 29 August to the early hours on 31 August, Halifax told the Poles that the German proposals did not constitute "an ultimatum", although having just previously for precisely those reasons refused to advise the Polish government in good time (24 hours after the Polish general mobilization!) that she should send an emissary with full powers to Berlin. Colonel Beck confirmed right away, early in the morning of the 31 August, that he had taken cognizance of "the line" taken by London. He seemed "greatly relieved", as Ambassador Kennard reported:

“... and he [Beck] fully realized the main importance which His Majesty's Government attaches to the necessity of not giving the German Government any opportunity for placing the blame on Poland in any refusal to enter into direct negotiations.”

At 11.00 a.m. on the 31 August, the Italian Ambassador in Berlin, Attolico, and the head of the Italian government, Mussolini, were taking action independently of one another. Both of them advised London

- a) that Lord Halifax must press the Polish government, for war to be avoided, to authorize Ambassador Lipski to hold negotiations with the German government;
- b) that an international conference should be convened for the 5 September

“with the object of examining the clauses of the Treaty of Versailles which are the cause of present disturbance in the life of Europe.”

Mussolini decided to put this suggestion to Hitler only after obtaining the British and French assent to this. No light has been shed upon the reason why State Secretary von Weizsäcker, who was informed of it by Attolico, did not pass on this proposal. In this way, as well as for the reason that the French Prime Minister Daladier called for

“convening the conference only after direct talks between Germany and Poland had failed”,

neither Hitler nor Ribbentrop heard about these suggestions on the 31 August, but only on the 2 September in the morning. On the 2 September, in the afternoon, Hitler accepted the plan of a general conference and the suspension of German military operations in Poland and agreed to have proposals for it completed within 24 hours. Hitler's willingness to use the mediator Dahlerus to the last and to send even on the 3 September, i.e. within the running-time of the British ultimatum to Germany, Göring with full powers to London, is proof that he must have accepted Mussolini's suggestion for a ceasefire-conference for the 5 September.

At 12.50 p.m. on the 31 August, Chamberlain's first reaction was already (hardly two hours after Mussolini's suggestion) to refuse, “under the threat of mobilized armies”, to agree to such a conference. In the afternoon of the 31 August, Chamberlain “now was much less in a hurry.” 142) He was not to change his mind again. Britain, while not accepting Mussolini's proposal, stipulated, after the outbreak of war, the unrealistic precondition of immediately withdrawing the German forces from Poland, before a conference could be contemplated. This was tantamount to a refusal, particularly, since even in the event of this happening, no improved likelihood for negotiations, compared to the conditions on 31 August, was proffered. The Polish Minister for Foreign Affairs has, on the 2 September at 2.47 a.m., likewise rejected the plan for a conference.

When passing judgment on these series of events it should be remembered that British politics in the year 1939 had been focussed on actually creating, in the first place, a “threat of mobilized armies” – courtesy of President Roosevelt's “methods short of war,” having been advocated and adopted by him since January 1939. A conference, even

with these preconditions not evoked by Hitler – since spring 1939 Poland had begun this unfounded mobilization! – would have been a far greater act of peace than to refuse all negotiations and consequently accept a military conflict. Hitler, for his part, had not refused to negotiate, even with the already months-long “threat of mobilized armies”, namely of the Polish as well as the French!

But back to the events in Berlin, London and Warsaw on 31 August. Both the British and Polish government were, in the morning of the 31 August, in possession of the German proposals (London had received them 24 hours earlier than Warsaw), and had knowledge, or rather, should have had knowledge, of the extension for the negotiations. The two governments, however, did nothing to ease the tension, making no effort for talks or a further extension of the deadline. The British government neither reproached Warsaw for provocations against the Minority Germans, nor for actions against Danzig, nor for the demands made for East Prussia and the Oder regions as voiced by Polish public opinion, nor for rejecting all negotiations, nor for the general mobilization, and, therefore, did indeed “ignore the question of the aggressor”. In addition, British government members were, in their policy regarding the press, adopting a deliberately warpromoting stance, particularly on this 31 August, spreading news they knew to be lies. Thus, The Daily Telegraph of the 31 August carried – how else but on official instruction? – the false report that

- a) Poland’s general mobilization was only a consequence of “demands from Hitler for territorial claims” or rather “of the newly put forward demands from Hitler”;
- b) the British government had immediately passed on to Warsaw Hitler’s reply of the 29 August;
- c) Great Britain had sent to Hitler, with all possible speed on the 30 August, a note by “a special courier by plane”;
- d) the German Army commanders in the border regions had been given special powers. Not one of these accounts was true, but they were all calculated so as to provoke agitation and to demonstrate anew, especially to the Poles, the position of the British leadership.

“When the British government realized the inherent dangers of this publication, they arranged for this issue to be withdrawn. In the revised edition, the statements on German military measures take up three quarters of the article, the reports on how Henderson had been received and the Cabinet debates are missing, and the following untrue news item is repeated: ‘After receiving a communication from London that indicated the kind of newly put forward demands from Hitler, the Polish government announced extraordinary defence measures.’”

At the same time (31 August, midday), Sir Horace Wilson at the Foreign Office was refusing to give Dahlerus the opportunity – as had been approved by Henderson – to get in touch with London on the embassy line of the British embassy in Berlin. When Dahlerus was relating Lipski’s refusal to take cognizance of the German willingness for negotiations or the German proposals, and he was stressing the direct consequences this mulish stubbornness would have on the peace in Europe and suggesting that London

influence Poland, Wilson put down the receiver with the words “shut up!”. The pretext that German intelligence might be listening in was without any foundation, given the topic of the conversation and the neutral position of Dahlerus as mediator. For Lipski’s stance was bound to become known to the Reich government via a different route anyway. On the other hand, to break off a conversation so abruptly – especially in the case of German security services listening in – was apt to confirm the leadership of the Reich in the conviction that in reality London does not want talks. But even given the case of no Germans listening in, the putting down of the receiver on this neutral mediator while talking was bound to give the clear signal that Britain did not want mediation.

The mediator Dahlerus had not been impeded by Hitler or Göring or doomed to failure in his mission, but rather by the British government that – reiterating the words of Halifax – “since the conclusion of the German-Soviet agreement” of 23 August was no longer willing “to patch matters up”. August the 31 was the day when Lord Halifax sanctioned Beck’s “standing firm” and his decision, not to expose Lipski to “extreme pressure and blackmail” in Berlin, but, at the same time, was reprimanding Henderson for having taken matters into his own hands, when he, once again, had been putting Lipski under pressure through Dahlerus. August the 31 was the day when the Polish government, as Beck told French Ambassador Noel, arrived at the decision that as

“we are in the thick of war, it was time not to talk of conferences but of mutual aid in resistance to aggression.”

This was the basic position in Warsaw, to label Germany that had not acted aggressively towards Poland as the “aggressor”, so as to use this pretext to become militarily active while banking on foreign support. Göring’s Research Department picked up at 12.40 p.m. an enciphered telegram from Warsaw to Lipski in Berlin, the gist of which was that the Ambassador was to seek an interview with Ribbentrop, but under no circumstances was to get involved in pertinent talks. That this telegraphic directive, which is withheld from the “Polish White Book”, is authentic, should be shown by the following:

1. Lipski’s subsequent talk with Ribbentrop at 6.30 p.m., 150) when Lipski’s attitude was in conformity with the telegram, and he had not been provided with plenary powers;
2. Beck told Kennard in Warsaw on the 31 August that Lipski would not be authorized to negotiate in Berlin;
3. Poland has never rejected this account in the “German White Book” and neither has Lipski himself.
4. In direct correlation with this note stood the arrival in Warsaw of Prince Lubomirski, sent by Lipski as a kind of special courier. This Counsellor of embassy arrived in Warsaw before noon on the 31 August. Apparently, basing it on this initiative, Lipski was still too active for the liking of his Minister for Foreign Affairs.
5. For a man such as Beck, for whom already “we are in the thick of war”, was this telegram, which practically revoked the ambassadorial powers of his representative in Berlin, merely logically consistent. Field Marshal Göring showed the text of the Polish telegram to Dahlerus and asked him to convey the information immediately to the British Ambassador, Henderson, which meant

that he was voluntarily divulging that the Polish secret code was known to Germany.

A.J.P. Taylor writes:

“Göring wanted to avoid war if this were at all possible. . . He liked to act as the mouthpiece of the German generals, themselves fearful of war; and maybe, as the supposed director of German economics, he grasped that Germany was not prepared to face a general war. The German approaches to both Soviet Russia and Great Britain came from economic experts – striking proof that the second World war did not have economic causes.”

While London let also pass by the afternoon of the 31 August unexploited, the Polish Ambassador, Lipski, in accordance with the instruction sent from Warsaw at 12.40 p.m., asked to be received for talks with Ribbentrop. The Reich Foreign Minister did check back, first of all, whether Lipski wanted to see him “as a special plenipotentiary or in some other capacity”.

“This was a clear sign and offered a new chance to the Polish government: now they did not have to send a negotiator but merely give ‘special authority’ to Lipski so as to yet bring about direct talks at the eleventh hour. Lipski understood the significance of this query, because at 3.15 p.m. he had the Polish Minister for Foreign Affairs informed by telegram and communicated to him that he personally had replied ‘that he was asking for an interview in his capacity of Ambassador to remit a communication from his government’. So now it was up to Beck to extend this ‘communication’ in the sense that Lipski could act as special plenipotentiary! Ribbentrop took advantage of this opportunity also. So as to allow time for the Polish government to make suchlike arrangements, he set the appointment for the Polish Ambassador to come to the Foreign Ministry not before 6.30 p.m.”

Beck, however, did not respond. Thus, the Polish Ambassador presented himself at 6.30 p.m. – as mentioned before – without plenary powers. He also refused, in accordance with his instructions from Warsaw, to engage in pertinent talks, stating that he “had no direct information on the subject”, and that he could not accept any proposals. Beck considered himself, even yet on the evening of the 31 August, “apparently neither asked nor requested”. Even for the British government the Poles were going too far this time; they regarded the position of the Reich government – at least to a certain degree – as justified, as is clearly shown in the already mentioned telegram sent during the night by Halifax to Kennard.

At 6.40 p.m., after the talks between Ribbentrop and Lipski had come to nothing – not, as in many cases historians have been copying from one another without giving any references, at 12.40 p.m. or 4.20 p.m. – Hitler issued the attack order to begin operations on 1 September 1939 at 4.45 a.m. For him it was a question of making use of the few hours that were possibly still left him – after more than 48 hours since the Polish general mobilization! – to forestall an evidently impending Polish attack that – as must be suspected in Berlin – could well be aligned with a French advance, and to guard

against the military disadvantages arising from this. At 9.15 p.m. of the 31 August, the German radio broadcast to the world Hitler's offer. Hereby was the Polish government given once more the opportunity by Berlin to reconsider.

But at 11.00 p.m., the Polish Broadcasting Service at Warsaw called it instead an "impudent proposal", rejected each and every negotiation, found words of derision to describe the waiting in vain of the "new Huns" and declared that Poland's reply could only be in military terms and, anyway, Poland's answer upon the German willingness to negotiate from the days before had already been "given" with "the military orders". This broadcast was done at a time, when the Polish government did not yet know of Hitler's attack order, but did have information, however, already for days as admitted, about the German willingness to negotiate and about the extremely tense situation. The Polish decision for war is, therefore, proven also with this declaration of war via the radio. Poland decided on war at a time, when Hitler was attempting to resolve the biggest territorial violation of the law of the Versailles diktat without bloodshed, with a fair compromise and, in fact, with renunciation of a kind no government of the Weimar Republic had ever been willing to make. Hitler had not attached any deadline or any ultimatum to Poland to the claim upheld for Danzig and an extra-territorial transit way into East Prussia. It is true that the Reich Chancellor had, since April 1939, set the date of completion to be the 1 September at the latest for "Operation White", the military planning against Poland, but he did not link this plan to any definite offensive purpose or to an aggressive order against Poland. This plan had been worked out, in accordance with orders, on the presupposition that Poland might "adopt a threatening attitude towards the Reich" and with the objective, "in case of need, to eliminate any threat from this direction." Whereas Hitler – as already described – during the summer months in 1939 was making numerous minor "diplomatic retreats", the wave of oppression of the German Minority welled up to such a degree – as, in fact, the resistance adherent Weizsäcker stated – that it submerged the original problem: Danzig and the passage through the Corridor. The ever-worsening crisis leading up to this date – 1 September 1939 – did not stem from Hitler's initiative, as can be proved, but rather from the initiatives on the part of Poland and Britain. It was these two countries that in August 1939 left the leadership of the Reich with the only alternative of either choosing between humiliation beyond all reasonable demand – also in the form of relinquishment of Danzig for all times and the expulsion of the rest of the Minority Germans from German territory in Poland – or the struggle for Germany's rights to existence. The Polish General Kazimierz Sosnkowski, Minister without portfolio in the Cabinet in exile, revealed on 31 August 1943 to allied representatives of the press:

"Poland's decision on 30 August 1939, which was based on the decree for general mobilization, marks a turning point in the history of Europe. Hitler was now confronted with the inevitability to wage war at a time when he was hoping to achieve further victories without bloodshed."

It is not a punishable crime attempting to win bloodless victories in the political sphere – to say nothing when it concerns the re-establishment of the law according to the

principle of self-determination! – and neither can it be a question, in this specific case, of it being Hitler's irrevocable determination to a bloodless "victory" in the height of summer in 1939; after all, the Polish question has not been intensified by him: "Hitler contributed little to the course of diplomacy between April and August 1939." (AJP Taylor) General Sosnkowski, as well as the Polish government, were fully aware that Hitler did not wish to go to war over the Polish question. Therefore, the creation of "necessities" was undertaken, which would force him into war. That it was not the "fear of a strongly armed Germany", but, on the contrary, rather a misplaced belief in a rapid internal collapse of Germany, which was the guiding notion – principally in Warsaw, London and Washington – requires no detailed proof, since all documents testify to this. The British Ambassador in Berlin was also aware of these facts:

"It is a horrible thought to think that Polish readiness to negotiate may save the [National Socialist] régime. If one considered only oneself, one would say 'Don't lift a finger but just see the whole thing through'. But it is a terrible responsibility."

When Hitler issued the attack order against Poland at 6.40 p.m. on 31 August, to be carried out 4.45 a.m. on the 1 September, he still wanted to keep open the channel of a British mediation:

"In the statement about the 16-point proposal that was broadcast over the [German] radio, it did not say that the German proposals had lapsed owing to the non-arrival of the Polish negotiator within the time-limit set for the day before, but it says that 'under these circumstances', meaning all those as described in the statement, as well as the negating attitude of the Polish Ambassador in the afternoon, the German government cannot but regard their proposals as having been virtually rejected, which was then, of course, confirmed by the Polish reply at 11.00 p.m."

The German press was instructed not to talk of "war", but rather about "shooting back". What is more, everything was being done to confine the conflict, once broken out, to Poland. On the 1 September at 9.50 a.m., or rather at 10.45 a.m., the British government was again informed by the Swedish mediator, Dahlerus, that

- a) Field Marshal Göring had received orders, in view of the Dirschau bridge having been blown up, resulting in an unavoidable suspension of the transit route through Poland into East Prussia, and in view of the fighting having taken place in the Danzig area the day before (31 August), to drive back the Polish army from the border region and to destroy the Polish Air Force along the frontier;
- b) Poland's refusal to negotiate with Germany was seen by the government of the Reich as proof that single-handedly nothing else could be done on their part; c) he, Dahlerus, had

"arranged with permission of the Führer a very friendly discussion with the British Ambassador and the Polish Ambassador."

Even the Documents on British Foreign Policy 1919-1939 state:

"These pieces of information were opening up once more possibilities to intervene."

Notably absent here was any mentioning of the "destruction of Poland", but instead mention is made only of the border area, of the hopeless situation, as it was regarded in Germany, and of the intention to bring about negotiations. While, for this reason, no steps were taken on the German side that would cause the Polish Ambassador, Lipski, to leave Berlin, so that, indeed, he remained in the capital of the Reich for several more days after the 1 September, Halifax replied to the mediation and discussion proposals, which had just been put forward by Dahlerus, five hours later (1 September at 4.45 p.m.) with a "warning" to Hitler. The next stage would be, if the German reply was unsatisfactory, and if the German troops were not promptly withdrawn from Polish territory, an ultimatum with a time limit or an immediate declaration of war. In this communication the British government made no mention of openings for negotiations in case of German compliance.

Hitler had never taken any action, during his entire period in office, that were directed against British vital interests – unless, of course, the unification and strengthening of Germany was interpreted in London as a "violation of British vital interests" (Note: and also a "violation of US interests"). Great Britain, on the other hand, had done everything to meddle in affairs, which did not at all affect her interests. They went so far as to announce Germany's annihilation, when Germany was no longer going to be humiliated by Poland, when Germany was no longer going to put up with Danzig being starved out, and when the Reich government was not going to wait until the first Polish military blow was struck, which was to be expected at any moment, with the sights on Berlin, Danzig and East Prussia, and one would have to presume that it would be synchronized with the advance of the French army.

Neville Chamberlain did, once again, deliberately misinform the House of Commons on the 1 September, when he stated:

"We never got a copy of those proposals [Hitler's from the 30 August] and the first time we heard them – we heard them – was on the broadcast last night."

It was just as misleading, when he asserted that Ribbentrop had read these proposals to the British Ambassador "at top speed" – meaning unintelligibly – and had "proved" with this that they were not at all meant to be taken seriously. This speech by Chamberlain, which once again contained thus (compare his speech of 25 August) deliberate distortions, did not only expose the power structures within British democracy, according to which the people were not consulted on matters of vital importance to their existence, were not even given correct information, but it also exposed London's anti-peace orientated policy. Because – as stated – honesty is a precondition for a policy of peace! But the British government was not honest in the last days of peace:

1. They did, without having been unconditionally authorized by Poland, dupe Hitler about Polish willingness to negotiate and the British desire to mediate, asking the Reich Chancellor to draw up his basis for discussions. But Halifax, in fact, was not taking any action commensurate with an intermediary; indeed, he was fully cognizant, "...that Polish

Government have not looked with favour on the possibility of mediation" [this referred to the Roosevelt message of 25 August 1939] 169), yet, nevertheless, he extended on this 25 August the unconditional guarantee to this Poland in a war-mood, in accordance with his determination that "any attempt to patch matters up had been out of the question since the conclusion of the German-Soviet agreement."

2. As can now be proved, Halifax fabricated on the 28 August a Polish assurance of readiness to negotiate, he deceived his Ambassador, Henderson, and he added to his subterfuge manoeuvre concerning the Note to Hitler of 28 August so much explosive matter by way of giving false news accounts to diplomats and the press that he had made it impossible thereby to reach a peaceable settlement.

3. At the same time, Halifax was sending alarming messages to the Polish government, without, however, informing them in good time of the steps they had taken in Berlin and of Hitler's reaction. He thought it important that they should perceive in Warsaw his guiding principle, i.e. his "line".

4. London did not protest about the Polish general mobilization, which had to be attributed in part to the Halifaxian alarmist news from the day before. 5. Lord Halifax violated his own preconditions, which he had conveyed to Hitler two days before (28 August), when he did not, for one single moment, take any action whatsoever as intermediary, not even at this point or beyond.

6. The British government thwarted Hitler's expectation of a Polish plenipotentiary by delaying, from the evening of the 29 August to the early hours of the morning on the 31 August, and they made so many provisos in the communication that was eventually transmitted to Warsaw that they were thereby provoking a rejection from Poland. They frustrated, thereby, a direct German-Polish contact that they themselves had recommended from becoming realized, and they made the – blown out of all proportions – "question of procedure", i.e. how should the German proposals be imparted to the Polish government, insoluble. The British government, therefore, was using these three days from 28-31 August for advancing the war, while simultaneously keeping Hitler in the belief that they were continuing with intensive mediation efforts.

7. Lord Halifax also made use, during the last discussions between Hitler and Henderson, of unproved rumours according to which Germans in Poland were committing acts of sabotage. In this way he deliberately set out to also aggravate these last talks.

8. Chamberlain and Halifax – to mention just the men responsible – did mislead and did incite the House of Commons and world opinion on many particulars.¹⁷¹) This stance cannot be explained by saying that London took their bearings from Italy's secret affirmation to stay out of a war (18 August and 1 September 1939), as well as from the information supplied by German resistance adherents, according to whom the majority of the German people was against Hitler and requiring only a display of firm language from the British government to bring about a putsch within the Reich.*) The pushing by the conductors of "public opinion" in Britain and the USA, as well as that of the advisers in the Foreign Office, but also the position and ultimate objective of the British government, had been decided before these pieces of information were known. Concerning

the atmosphere in London during the last days of peace, there is a range of documents produced for the historian to see. Here are just a few:

Chamberlain in a private letter to his sister of 10 September 1939:

“The final long-drawn-out agonies that preceded the actual declaration of war were as nearly unendurable as could be. We were anxious to bring things to a head, but there were three complications – the secret communications that were going on with Göring and Hitler through a neutral intermediary, the conference proposal of Mussolini, and the French anxiety to postpone the actual declaration as long as possible, until they could evacuate their women and children, and mobilize their armies. There was very little of this that we could say in public.”

The Polish Ambassador, Raczynski, wrote:

“Later that evening [2 September 1939] Duncan Sandys came to see me at the Embassy. He told me that he, Churchill and their friends would not give way and that they could count not only on moral support from the Labour Party, but on a large section of the Conservatives. All were resolved not to capitulate, and if Chamberlain were to weaken once again, he would be overthrown.”

Sir Horace Wilson, Chamberlain's closest collaborator, on 2 September 1939 to the press Counsellor of the German embassy in London, Dr. Fritz Hesse:

“England is resolved upon war, and is no longer keen on a compromise.”

That was the reply to a compromise request, which the Reich Foreign Minister von Ribbentrop had transmitted by telephone on the 2 September to the press Counsellor of the German embassy in London:

“The Führer is prepared to withdraw from Poland and to offer compensation for damage done thus far, on the condition that we get Danzig and the road through the Corridor, provided Britain takes on the role of mediator in the German-Polish conflict. You are authorized by the Führer to submit this proposal to the British Cabinet and to take up negotiations on this immediately.”

The British historian, A.J.P. Taylor:

“Ministers, led by Halifax, warned Chamberlain that the government would fall unless it sent an ultimatum to Hitler before the House met again...In this curious way the French, who had preached resistance to Germany for twenty years, appeared to be dragged into war by the British, who had for twenty years preached conciliation. Both countries went to war for that part of the peace settlement which they had long regarded as least defensible... Such were the origins of the second World war, or rather of the war between the three Western Powers over the settlement of Versailles; a war which had been implicit since the moment when the first war ended.”

The British Foreign Secretary, shortly after the ultimatum to Germany:

“We have now forced Hitler into war, so that he can no longer cancel one part after the other of the Versailles Treaty by peaceful means.”

The diplomat, Sir Ivone Kirkpatrick, being in the immediate vicinity of Lord Halifax, could add his own witty remark:

“Lord Halifax seemed relieved that we had taken our decision [of the 3 September]. He called for beer, which was brought down by a sleepy Resident Clerk in pyjamas. We laughed and joked. . .”

BBC - London shortly after the outbreak of war:

“Hitler has started the war but he cannot bring it to an end.”

Or to put it another way: One would not allow it that he should bring it to an end, no matter what the existing state of affairs! Had not Lloyd George been expounding, already on the 19 May 1939 in the House of Commons, the strategy of a lengthy and ever widening war? He was not alone amongst the British parliamentarians in holding this view:

“‘The main military purpose and scheme of the dictators is to produce quick results, to avoid a prolonged war. A prolonged war never suits dictators’. And in order not to permit a quick victory of the dictators Lloyd George thought it extremely necessary to bring into being as quickly as possible a triple agreement against them.”

In conformity with this strategy, Chamberlain and Halifax showed a complete disregard, both before and after the start of the war, for the Baltic States, for Poland, for Italy – to say nothing of Germany – but also treated France, willing for peace, in the same manner, when they

- a) caught France unaware at the end of March 1939 with the guarantee to Poland;
- b) rejected immediately and with finality the mediation attempts on Mussolini’s part from the 31 August and the 2 September – for the convening of a conference for the 5 September – and, thereby, rendered ineffective the approval for this plan from Paris;
- c) on the 3 September, high-handedly, without consulting the ally, sent a twohour ultimatum to Germany and were urging Paris shortly after that to follow suit.

Ten minutes before this ultimatum from London expired, at 10.50 a.m. (3 September), Dahlerus in Berlin announced to the British Foreign Office that Göring had received formal permission from Hitler to fly to London in order to reach a rational resolution (suspension of all hostilities on the condition that the troops remain at their current fronts for the duration of the talks).

“Mr Dahlerus telephoned to the Foreign Office at 10.50 a.m. to say that the German Government had drafted their reply, which was on its way to us. It should reach us by 11, though he could not guarantee that. As a last resort, might he suggest that Field-Marshal Göring should fly over to London to discuss matters? The Secretary of State sent a reply to the effect that our position had been known to the German Government for some time, and we could not now delay our procedure.”

This telephone conversation took place half an hour after a previous telephone call, in which Dahlerus had told an official of the Foreign Office, Mr. Roberts, that the German side were most anxious to give satisfactory assurances to the British government not to violate the independence of Poland. "However, never in world history had an army withdrawn before negotiations".¹ Shortly after that Great Britain declared war on Germany, and at 5.00 p.m. France did likewise. Hereby was the Poland conflict turned into a European war. The same coterie, but also Stalin, the world-revolutionary, would see to it that there would be a war of world-wide dimensions, that there would be an all-out war and that there would be an unbelievable brutalizing in the conduct of the war. On this 3 September 1939, however, Winston Churchill announced to his country and to the world:

"In this solemn hour it is a consolation to recall and to dwell upon our repeated efforts for peace. All have been ill-starred, but all have been faithful and sincere... This moral conviction alone affords that ever-fresh resilience which renews the strength and energy of people in long, doubtful and dark days. Outside, the storms of war may blow and the lands may be lashed with the fury of its gales, but in our own hearts this Sunday morning there is peace. Our hands may be active, but our consciences are at rest."

As far as Lord Halifax is concerned, who, already on the 21 July had rejected Henderson's suggestion of stopping or, rather, restricting press polemics, there exists a further incriminating quotation from the last day of peace:

"There was disquiet in the British House of Commons. A Member of Parliament from the Labour Party met the British Foreign Secretary, Lord Halifax, in the lobby on 2 September. 'Are you still hopeful?' he asked. 'If you mean hopeful for war,' answered Halifax, 'then your hope will be fulfilled tomorrow'. 'Thank God!' replied the representative of the Labour Party."

12. World War 2

On September the 1st at midnight the Polish radio broadcasting proclaimed that their troops were on a triumphant advance towards Berlin and that they'll reach it by the end of the week. Hitler spoke nervously in front of the Reichstag without a prepared speech. He presented the events of the last months and emphasized that Germany has no interest in the west. He uttered the words: "As recently in a single night there happened 21 border raids, there happened another 14 in the current night with 3 serious ones. This night for the first time Polish regular soldiers fired on our own territory. We have now been returning the fire since 5 : 45 a.m." His speech also included: "Our goals: I am determined to resolve 1. the question of Danzig and 2. the question of the Corridor, and to see to it that 3. a change of tone comes about in German-Polish relations, so as to warrant peaceful coexistence."

On one side it was Germany with 75 divisions with 1.1 million soldiers and "three weeks worth of ammunition" and on the other side the Polish army with 1.7 million soldiers, which was defeated after 18 days by the Wehrmacht. The German soldiers came across many graves and dead bodies within Polish territory, known as the Bromberg Massacre of September the 3rd, where over 5000 Germans were killed. British historian A.J.P. Taylor writes: "The state of the German armament at the beginning of the war shows without doubt that Hitler did not desire general war, but most likely no war at all." The British military-historian Sir Lidell Hart ascertains: "Hitler did not want world war ... We acquired the relevant German archives after the war and we can draw a precise picture of the extraordinary degree of fear of a coming war within German leading circles."

Also on September the 3rd Britain and France declared war on Germany. British foreign minister Halifax proclaimed in the lower chamber: "Now we have forced Hitler into war, so that he can no longer neutralise one part of the Versailles Treaty after another by peaceful means." Shortly after Churchill proclaimed via radio broadcast: "This war is an English war and its goal is the destruction of Germany." Marshall Rydz-Śmigły abandoned his military on the second day of war and hid in the Warsaw underground, where he died in 1941. Polish foreign minister Beck died a little bit later as an alcoholic in Rumania. The Soviet offensive against Poland started on September the 17th and was not answered by Britain and France with a declaration of war.

Australia, India, South-Africa and Canada also declared war on Germany in September 1939 while Yugoslavia allowed France to use their territory for war shipments. A British-Turkish alliance was created on October the 3rd. Greece, which was highly agitated

thanks to Allied propaganda, requested immediate support from Britain and France with airforce units. In return, Britain demanded and received half of Greece's merchant fleet.

By November 1939 Adolf Hitler had faced up to the fact that the war would go on. When Alfred Rosenberg came to him with nebulous reports of fresh peace moves within the British air ministry, the Führer belittled the prospects: while he himself would still favour a German-British rapprochement, he said, London was in the grip of a Jewish-controlled, lunatic minority. Hitler said he failed to see what the British really wanted. "Even if the British won, the real victors would be the United States, Japan, and Russia."

12.1 Introduction

From 1966:

The history of the Second World War is a very complex one. Even now, after hundreds of volumes and thousands of documents have been published, many points are not clear, and interpretations of numerous events are hotly disputed. The magnitude of the war itself would contribute to such disputes. It lasted exactly six years, from the German invasion of Poland on September 1, 1939 to the Japanese surrender on September 2, 1945. During that period it was fought on every continent and on every sea, in the heights of the atmosphere and beneath the surface of the ocean, and fought with such destruction of property and lives as had never been witnessed before. The total nature of the Second World War can be seen from the fact that deaths of civilians exceeded deaths of combatants and that many of both were killed without any military justification, as victims of sheer sadism and brutality, largely through coldblooded savagery by Germans, and, to a lesser extent, by Japanese and Russians, although British and American attacks from the air on civilian populations and on nonmilitary targets contributed to the total. The distinctions between civilians and military personnel and between neutrals and combatants, which had been blurred in the First World War, were almost completely lost in the second. This is clear from a few figures. The number of civilians killed reached 17 millions, of which 5,400,000 were Polish; while Poland had less than 100,000 soldiers killed or missing in the Battle of Poland in 1939, Polish civilians to the number of 3,900,000 were executed, or murdered in the ghetto, subsequently.

The armies which began to move in September 1939 had no new weapons which had not been possessed by the armies of 1918. They still used infiltration tactics, with columns of tanks, strafing airplanes, and infantrymen moving in trucks, but the proportions of these and the ways in which they cooperated with one another had been greatly modified. Weapons for defense were also much as they had been at the end of the previous war, but, as we shall see, they were not prepared in proper amounts nor were they used in proper fashions. These defensive weapons included antitank guns, antiaircraft guns with controlled fire, minefields, mobile artillery on caterpillar tracks, trenches, and defense in depth. Germany used the offensive weapons we have mentioned in the new fashion, while

Poland in 1939, Norway, the Low Countries, and France in 1940, the Balkan countries and the Soviet Union in 1941 did not use the available defensive tactics properly. As a result, Hitler advanced from one astounding victory to another. In the course of 1942 and 1943, new weapons created by democratic science and new tactics learned in Russia, in North Africa, and on the oceans of the world made it possible to stop the authoritarian advance and to reverse the direction of the tide. In 1944 and 1945 the returning tide of Anglo-American and Soviet power overwhelmed Italy, Germany, and Japan with the superior quality and the superior quantities of their equipment and men. Thus the war divides itself, quite naturally, into three parts: (1) the Axis advance covering 1939, 1940, and 1941; (2) the balance of forces in 1942; and (3) the Axis retreat in 1943, 1944, and 1945.

The Germans were able to advance in the period 1939-1941 because they had sufficient military resources, and used them in an effective way. The chief reason they had sufficient military resources was not based, as is so often believed, on the fact that Germany was highly mobilized for war, but on other factors. In the first place, Hitler's economic revolution in Germany had reduced financial considerations to a point where they played no role in economic or political decisions. When decisions were made, on other grounds, money was provided, through completely unorthodox methods of finance, to carry them out. In France and England, on the other hand, orthodox financial principles, especially balanced budgets and stable exchange rates, played a major role in all decisions and was one of the chief reasons why these countries did not mobilize in March 1936 or in September 1938 or why, having mobilized in 1939 and 1940, they had totally inadequate numbers of airplanes, tanks, antitank guns, and motorized transportation.. There was another reason for the military inadequacy of the Western Powers in 1939. This, of even greater significance than the influence of orthodox finance, arose from conflicts of military theories in the period 1919-1939. Several violently conflicting theories held the stage during the twenty years of armistice, and paralyzed the minds of military men to the point where they were unable to provide consistent advice on which politicians could base their decisions. In Germany, on the other hand, decisions (not necessarily correct ones) were made, and action could go on.

One theoretical dispute raged around the role of tanks in combat. The tank had been invented to protect advancing infantry against machine-gun fire by its ability to put machine guns out of action. Accordingly, tanks were originally scattered among the infantry, to advance with it, both moving at a rate of speed no greater than that of a man on foot, consolidating the ground, yard by yard, as both moved forward. This view of the tactical function of tanks continued to be held in high military circles in France and England until too late in 1940. It was sharply challenged, even a decade earlier, by those who insisted that tanks should be organized in distinct units (armored brigades or divisions) and should be used, without close infantry support, moving as perpendicular columns rather than in parallel lines against the defensive formations, and should seek to penetrate through these formations at high speed and without consolidating the ground

covered, in order to fan out on the rear of the defensive formations to disrupt their supplies, communications, and reserves. According to these new ideas, the breakthrough made by such an armored column could be exploited and the ground consolidated by motorized infantry, following the armored division in trucks and dismounting to occupy areas where this would be most useful. In France, the new theory of armored warfare was advocated most vigorously by Colonel Charles de Gaulle. It was generally rejected by his superior officers, so that De Gaulle was still a colonel in 1940. This theory was, however, accepted in the German Army, notably by Heinz Guderian in 1934, and was used very effectively against the Poles in and against the Western Front in 1940.

At full strength a German panzer (armored) division had two regiments of tanks and two regiments of motorized infantry plus various specialized companies. This gave it a total of 14,000 men with 250 tanks and about 3,000 motorized vehicles. In September 1939, Germany had six of these panzer divisions with a total of 1,650 tanks of which one-third were 18-ton models with a 37-mm. gun (Mark III), while two-thirds were 10-ton models (Mark II). By May 1940, when the attack was made in the west, there were 10 armored divisions with a total of 2,000 tanks, some of which were the new Mark IV model, a 23-ton conveyance carrying a 75-mm. gun. No major increase occurred in the next year, but the number of armored divisions was doubled by splitting the ten which existed in May 1940. Thus in June 1941, when Germany attacked Russia, it had 20 armored divisions with a total of 3,000 tanks, of which several hundred were Mark IV but 1,000 were still Mark II. In opposition to these, Poland had only a handful of tanks in 1939, France had over 3,000 in May 1940, and the Soviet Union had, in June 1941, about 15,000 scattered tanks, almost all light or obsolescent models. (Note: As seen in a later Chapter with post-1990 sources, it was closer to 22000-24000 tanks which were far from obsolete, on the contrary. Even in 2016, the use of this Soviet post-war propaganda about an "obsolete" military is widely spread.)

A second theory which paralyzed the Western Powers in the years before World War II was concerned with the superiority of defensive over offensive tactics. This defensive theory, of which the Englishman Basil Liddell Hart was the most voluble proponent, assumed that attack would be made in lines, as the Western Powers themselves were trained to attack, and that such an attack would be very unlikely to succeed because of the great increase in firepower of modern weapons. It was argued, on the basis of the experience of World War I, that machine guns could hold up advancing infantry indefinitely and that artillery fire, carefully placed and ranged so that it could cover the field, could prevent tanks from silencing the defensive machine guns to allow infantry to advance. The Maginot Line was based on these theories. As such, it was not a defense in depth (which would seek to break up offensive columns by allowing them to penetrate to varying depths, thus separating tanks, infantry, and artillery so that each could be dealt with by proper weapons as impetus was dispersed), but was a rigid line (which sought to stop the offensive lines in front of it, as a whole). The theory of defensive superiority left the military forces of the Western states with inadequate offensive training, poor offensive morale, and unable to

come to the help of distant allies (like Poland); it put a premium on a passive, indecisive, inactive military outlook (such as shown by Pétain or Gamelin in the years leading up to 1940) and left them unable to handle any real offensive when it came against them. The theory of continuous defensive lines, which must be kept intact or instantly reestablished whenever they are breached, created a psychology which was incapable of dealing with an assault which came at it in columns and inevitably must breach any defensive line at the point of impact. When this occurred in 1940, French military units threw down their arms or tried to make a precipitous retreat to some point where a new continuous line could be established. As a consequence, the Poles in 1939 and, to a greater extent, the French in 1940, were constantly abandoning positions from which they had not been driven, until units were too broken up to allow hope of reestablishing any continuous line, and France proved to be too small to permit continued retreat. The only alternative seemed to be surrender. As we shall see later, another, highly effective, alternative was discovered, mostly in Russia, by 1942.

In the inter-war period there was a third theory, violently disputed, about the effectiveness of air power. In its most extreme form, this theory held that the chief cities of Europe could be destroyed almost completely in the first twenty-four hours of a war, devastated by high-explosive bombs and rendered uninhabitable by gas attacks from the air. This theory, frequently associated with the name of the Italian General Giulio Douhet, was much more prevalent in civilian circles than in military ones, and played an important role in persuading the British and French peoples to accept the Munich Agreement. Like most farfetched ideas, it was supported more frequently by slogans than by logic or by facts, in this case by mottoes like, "The bombers will always get through." The chief facts to support the theory were to be found in the Spanish Civil War, notably in the German destruction of Guernica in 1937 and the ruthless Italian bombardment of Barcelona in 1938. No one paid much attention to the fact that, in both of these cases, the targets were totally undefended. The military advocates of such air bombardment, most of them considerably more moderate than General Douhet, concentrated their attention on what was called "strategic bombing," that is, on the construction of long-range bombing planes for use against industrial targets and other civilian objectives and on very fast fighter planes for defense against such bombers. They generally belittled the effectiveness of anti-aircraft artillery and were generally warm advocates of an air force separately organized and commanded and thus not under the direct control of army or naval commanders. These advocates were very influential in Britain and in the United States.

The military advocates of such air bombardment, most of them considerably more moderate than General Douhet, concentrated their attention on what was called "strategic bombing," that is, on the construction of long-range bombing planes for use against industrial targets and other civilian objectives and on very fast fighter planes for defense against such bombers. They generally belittled the effectiveness of anti-aircraft artillery and were generally warm advocates of an air force separately organized and commanded and thus not under the direct control of army or naval commanders. These advocates

were very influential in Britain and in the United States. The upholders of strategic bombing received little encouragement in Germany, in Russia, or even in France, because of the dominant position held by traditional army officers in all three of these countries. In France, all kinds of air power were generally neglected, while in the other two countries strategic bombing against civilian objectives was completely subordinated in favor of tactical bombing of military objectives immediately on the fighting front. Such tactical bombing demanded planes of a more flexible character, with shorter range than strategic bombers and less speed than defensive fighters, and under the closest control by the local commanders of ground forces so that their bombing efforts could be directed, like a kind of mobile and longrange artillery, at those points of resistance, of supply, or of reserves which would help the ground offensive most effectively. Such "dive-bombers," or Stukas, played a major role in the early German victories of 1939-1941. Here, again, this superiority was based on quality and method of usage and not on numbers. In the three major campaigns of 1939-1941 Germany had a first-line air force of about 2,000 planes, of which half were fighters and half were tactical bombers. On the other side, Poland had 377 military aircraft in 1939; France and Britain had about 3,000 in 1940; while the Soviet Union had at least 8,000 of very varying quality in 1941.

12.2 The Battle of Poland
