The German invasion of Poland began with powerful air attacks at 4:40 A. M. on September 1. These attacks, aimed at airfields, assembly points, and railroads, wiped out the Polish air force of 377 planes, mostly on the ground, and, in combination with the rapidly advancing German armored spearheads of tank divisions, made it impossible for Poland to mobilize completely, crippled Polish reconnaissance, destroyed any centralized system of communications, and reduced Polish resistance to numerous fragments of uncoordinated fighting units. The Poles had 30 infantry divisions, a motorized brigade, 38 companies of tanks, and large masses of cavalry, but could bring only a portion of these into action. Germany struck at Poland with 2,000 planes (of which 400 were dive-bombers) supporting 44 divisions (of which 6 were armored or panzer divisions and 6 were motorized). These forces were organized into 5 armies. The Fourth Army drove down from Pomerania in the northwest while the Eighth and Tenth armies drove upward from Saxony, the three converging in a pincers movement at a point west of Warsaw. At the same time, a much larger pincer converging on the Bug River, a hundred miles east of Warsaw, was formed by the German Third Army, advancing from the Polish Corridor and East Prussia, and the German Fourteenth Army driving northeastward from Galicia and Slovakia. The armored divisions, supported by dive-bombers, raced ahead of their supporting infantry and disrupted all Polish plans, communications, and supplies. The Polish forces, caught in too advanced positions, vainly tried to fight their way eastward to the Vistula and the Bug rivers but were broken up, isolated, and destroyed. Violent but hopeless fighting continued in the pockets, but by September 15th, when Guderian's tanks entered

Brest-Litovsk in eastern Poland, the country had been destroyed.

Although Britain and France declared war on Germany on September 3rd, it cannot be said that they made war during the next two weeks in which fighting raged in Poland. British airplanes roamed over Germany, dropping leaflets for propaganda purposes, and French patrols ventured into the space between the Maginot Line and the German West-wall, but no support was given to Poland. Although France had three million men under arms and Hitler had left only eight regular divisions on his western border, no attack was made by France. Strict orders were issued to the British Air Force not to bomb any German land forces, and these orders were not modified until April 1940; similar orders by Hitler to the Luftwaffe were maintained for part of this same period. When some British Members of Parliament, led by Amery, put pressure on the government to drop bombs on German munition stores in the Black Forest, the air minister, Sir H. Kingsley Wood, rejected the suggestion with asperity, declaring: "Are you aware it is private property? Why, you will be asking me to bomb Essen next; Essen was the home of the Krupp munitions factories.

Similar efforts to force the French to take some action against Germany were rejected on the ground that this might irritate the Germans so that they would strike back at the Western Powers. To quiet the English parliamentary group which was demanding action, its leading figure, Winston Churchill, was made first lord of the Admiralty, but the British Navy went into action so slowly that the German "pocket" battleships were able to escape from their ports and from the North Sea out on to the high seas where they could become commerce raiders. Blockade of Germany was established in such a perfunctory fashion that large quantities of French iron ore, as well as other commodities, continued to go to Germany through the neutral Low Countries in return for German coal coming by the same route. These exchanges continued for weeks. On his part Hitler issued orders to his air force not to cross the Western frontier except for reconnaissance, to his navy not to fight the French, and to his submarines nor to molest passenger vessels and to treat unarmed merchant ships according to the established rules of international prize law. In open disobedience to these orders, a German submarine sank the liner *Athenia*, westward bound in the Atlantic, without warning and with a loss of 112 lives, on September 3rd.

As Poland was collapsing without a hand being raised to help it, the Soviet Union was invited by Hitler to invade Poland from the east and occupy the areas which had been granted to it in the Soviet-German agreement of August 23rd. The Russians were eager to move, in order to ensure that the Germans stop as far as possible from the Soviet frontiers, but they were desperately afraid that if they did enter Poland the Western Powers might declare war on Russia in support of their guarantee to Poland and would then wage war against the Soviet Union while not fighting Germany or even while allowing economic and military aid to go to Germany. Accordingly, the Kremlin held up its invasion of Poland until September 17th. On that day the Polish government petitioned Romania to be allowed to seek refuge in that state. The Soviet Union felt that it could not be accused of aggression against Poland if no Polish government still existed on Polish soil.

The Soviet leaders sought to justify their advance into Polish territory with the excuse that they must restore order and provide protection for the Ruthenian and White Russian peoples of eastern Poland. The Soviet and Nazi armies met without incidents. On September 28th a new agreement was made between Molotov and Ribbentrop, dividing Poland. Accordingly, Lithuania was shifted into the Soviet sphere, while in Poland itself the German sphere was extended eastward from the Vistula to the Bug River along the old Curzon Line because Russia wanted to follow the nationality boundary.

12.3 The Fall of France

The German forces which attacked on May 10th were inferior in manpower to the forces which faced them but were much more unified, used their equipment in an effective fashion, and had a single plan which they proceeded to carry out. Amounting to about 136 divisions, they were opposed by 156 divisions, but the defenders were divided into four different national armies, were arranged improperly, were given tasks too difficult for their size and equipment and, in general, were so managed that their weakest points coincided completely with the most powerful German attacks. The French plan of campaign was dominated by two factors: the Maginot Line and Plan D. The Maginot Line, an elaborate and expensive system of permanent fortifications, ran from Switzerland to Montmédy. Behind this line, where they could not be used in the great battle drawing near, were stationed 62 of 102 French divisions on this frontier. From Montmédy to the sea, France had 40 divisions, plus the British Expeditionary Force of 10 divisions.

Originally the German plans were, as the French anticipated, a modified version of the Schlieffen Plan of 1905, involving a wide sweep through the Low Countries. The false alarms of a German attack in the winter of 1939-1940 revealed to the Germans, however, that the Allies would meet this attack by a rapid advance into Belgium. Accordingly, at the suggestion of General Erich von Manstein, the Germans modified their plans to encourage the Allied advance into Belgium while the Germans planned to strike with their greatest strength at Sedan, the pivot of the Allied turning movement. Such an assault at Sedan made it necessary for the German forces to pass over the narrow, winding roads of the Ardennes Forest, then to cross the deep and swift Meuse River, and to break between Corap's and Huntziger's forces, but, if this could be done and Sedan taken, excellent roads and a railroad ran from Sedan westward across France to the sea.

Under the "Manstein Plan" the German attack from the North Sea to Sedan was organized in four armies. In the north, the Netherlands was attacked by the German Eighteenth Army (one panzer and four infantry divisions); in the middle, Belgium was attacked by the German Sixth Army (two panzer and 15 infantry divisions) and the German Fourth Army (two panzer and 12 infantry divisions); farther south, in the Ardennes area, France was attacked by the German Twelfth Army (five panzer and four other divisions); from Sedan to Switzerland, although Germany had about 30 divisions, all were infantry formations

and no major offensive was made. The "Manstein Plan" was a total surprise to the French. They were so convinced that the Ardennes were impassable for large forces, especially for tanks, that everything was done to make the German task easier: Corap and Huntziger placed their poorest forces (six Series B divisions, undermanned, with little training) on either side of Sedan and their best forces on their fronts most remote from the Ardennes (that is, from Sedan). In Huntziger's case these better divisions were behind the Maginot Line itself. Because of the Ardennes, Corap gave his four poor divisions near Sedan no antitank guns, no anti-aircraft guns, and no air support.

The German attack began at 5:35 on May 10th. Two days later the panzer division with the German Eighteenth Army broke through the Dutch defenses and began to join up with parachute and airborne forces which had been dropped behind these; the Netherlands collapsed. The Dutch field forces surrendered on May 14th, after much of the center of Rotterdam had been destroyed in a twenty-minute air attack. The Netherlands royal family and the government moved to England to continue the war. The great mass of the German attack fell on Belgium, and was greatly aided by the failure of many ordinary defensive precautions. Vital bridges over the Meuse and the Albert Canal were destroyed only partly or not at all. The defenders on the Albert Canal were attacked from the rear by parachutists and glider forces which had been landed behind them. The powerful fort of Eben Emael, covering the canal bridges, was captured by airborne volunteers who landed on its roof and destroyed its gun apertures with explosives. Belgium's forces fell backward toward the Dyle as the French and British units, according to Plan D, wheeled northeastward, on Sedan as a pivot, to meet them. As the Belgian forces withdrew northwest, while the German attack swung southwest, the main burden of the German assault now fell on the French First Army, to pin it down and thus prevent it from reinforcing Corap farther south. In this the Germans were successful.

The attack through the Ardennes on Corap's Ninth Army was made by a special German force of five panzer and three motorized divisions under General Paul von Kleist. These passed through the forest and crossed the Meuse to fling themselves on the right side of Corap's inexperienced divisions. By the evening of May 15th, Corap's army had been "volatilized," and the German spearhead was racing forward thirty-five miles west of Sedan. The misplaced French Sixth Army, in reserve 300 miles south near Lyon, began to move toward the breach, while General Giraud, with three divisions from the Seventh Army, was ordered from the extreme northwest, and seven other divisions were taken from the forces behind the Maginot Line. All these arrived too late, because von Kleist's advance units crossed France and reached the sea at Abbeville on May 20th, having covered 220 miles in eleven days. No coordinated attack was ever made on this thin extended line, although orders were issued for it to be attacked both from the north and the south.

The Allied forces retreating southward from Belgium were greatly hampered by masses of refugees clogging the roads, were constantly harassed by Stukas, and had lost communication between units. There was almost no contact or cooperation between the

French, British, and Belgians in the north, or between these and the French forces south of Kleist's breakthrough. Panic swept Paris. On May 17th Reynaud replaced Daladier as minister of national defense and generally shook up the government, replacing many weak men by defeatists, appeasers, and Fascist sympathizers. The chief new face was that of Marshal Pétain, eighty-three years old, the man chiefly responsible for the inadequacy of French military planning in the inter-war period. On May 27th, King Leopold of Belgium made an unconditional surrender of his armies to the Germans, over the objections of the Belgian civil government and without making certain that the Allied Command had been informed. The British Expeditionary Force at once began to evacuate the Continent through Dunkerque. In seven days, using 887 water craft of all types and sizes, 337,131 men were taken off the beaches at Dunkerque under relentless air bombardment (May 28th-June 4th). By Hitler's direct order, no intensive ground attack was made on the Allied forces within the Dunkerque perimeter, as Hitler was convinced that Britain would make peace as soon as France was defeated, and wished to save his dwindling armored forces and munitions for the attack on the rest of France.

The Battle of France began on June 5th with German attacks on the western and eastern ends of the "Weygand Line." By June 8th the western end had been broken, and German forces began to move to the rear of the Somme defenses. As the line collapsed and the military forces fell back, they disintegrated among packed masses of civilian refugees, hurried onward by German dive-bombers. Paris and later all cities of France were declared open cities, not to be defended. Just as in Kleist's original breakthrough, no effort was made to hold up the Germans by road obstacles, civilian resistance, house-to-house fighting, destruction of supplies, or (above all) destruction of abandoned gasoline. The German armored units roamed at will on captured fuel. On June 12th Weygand requested the French government to seek an armistice; Reynaud refused to permit any civilian surrender, since this was forbidden by an Anglo-French agreement of March 12, 1940. Instead, he gave permission for a military capitulation, if the civil government continued the war.

There was also considerable pressure behind the scenes from anti-democratic French industrialists in monopolistic lines such as chemicals, light metals, synthetic fibers, and electrical utilities. These industrialists, together with politicians like Laval and private or commercial banks, like the Banque Worms, or the Banque de l'Indochine, had been negotiating cartel and other agreements with Germany for ten years, and felt an armistice would offer a splendid opportunity to complete and enforce these agreements.

As the military collapse continued, piteous appeals for help were sent to London and to Washington. Reynaud sent eighteen messages to Churchill asking for more air support, but could obtain none, as the British War Cabinet wished to save all the planes it still had for the defense of Britain after the French collapse. Appeals to Roosevelt were no more successful.

The chief concern in London and Washington was over the fate of the French fleet and of French North and West Africa, especially Dakar. If Hitler obtained the French fleet or

any considerable portion of it, British and American security would be in acute jeopardy. The French fleet was of high quality and included two new battleships (Richelieu and Jean Bart) which had just been built but were not yet in service. Such a navy, in combination with the German and Italian navies, might destroy Britain's sea defenses and force a British surrender. This would place America in great danger, as American security in the Atlantic had been preserved by the British fleet since 1818 and, by 1940, the whole American battle fleet had to be kept in the Pacific to face Japan. Only less immediate than these dangers was the threat to both British and American security from a German occupation of French North and West Africa. This would close the British route through the Mediterranean immediately and allow the Italian forces in Libya to invade Egypt with relative impunity. The possession of Dakar by German forces would provide a base from which submarines could attack the British route to the East by way of South Africa and might permit an attack on Brazil, only 1,700 miles west of Dakar.

With these considerations in mind, Washington and London did all they could to dissuade Mussolini from attacking France and to persuade the French to avoid any armistice which might yield either French Africa or the French fleet to Hitler. Eventually Britain gave permission to France to seek an armistice if the fleet sailed to British ports. This was rejected by the French military and naval authorities. As a final effort, Churchill, on June 16th, offered France a political union with Britain, involving joint Anglo-French citizenship and a joint Cabinet. This was never considered by the French. Before France could officially surrender, Churchill tried to convince his War Cabinet to attack the French Fleet. The War Cabinet refused. There were several concerns on the table. For one, the attack would surely result in the loss of British troops and ships. Second, although getting beaten by Germany and showing eagerness to throw in the towel, France was still an ally. On June 24, France and Germany signed an armistice. Part of that agreement was the French could keep their ships, but Germany would gain control over items such as passports and tickets. Hitler treaded lightly concerning the ships and did not push for full ownership. He feared such aggression would inspire the French to keep fighting. Hitler's concerns were not known to England. However, on July 1, Churchill was finally able to get the backing of the War Cabinet to sink the ships if they would not be surrendered. On July 3, the British surrounded the French Fleet at the port of Mers-el-Kebir right outside Oran, Algeria. Churchill's message was clear: sail to Britain, sail to the USA, or scuttle your ships in the next six hours. At first, the French refused to speak to negotiators. Two hours later, the French showed the British an order they had received from Admiral Darlan instructing them to sail the ships to the USA if the Germans broke the armistice and demanded the ships. Meanwhile, the British intercepted a message from the Vichy Government ordering French reinforcements to move urgently to Oran. Churchill was done playing games and ordered the attack to his commanders, "Settle everything before dark or you will have reinforcements to deal with." An hour and a half later, the British Fleet attacked. In less than ten minutes, 1,297 French soldiers were dead and three battleships were sunk. One battleship and five destroyers managed to escape.

The armistice negotiations were conducted in the same railway carriage at Compiègne in the forest of Rethondes where Germany had surrendered in 1918; they took three days, and went into effect on June 25th. Hitler was so convinced that Britain would also make peace that he gave surprisingly lenient terms to France. In spite of Mussolini's demands, France did not have to give up any overseas territory or any ports on the Mediterranean, no naval vessels or any airplanes or armaments to be used against England. Northern France and all the western coast to the Pyrenees came under occupation, but the rest was left unoccupied, ruled by a government free from direct German control and policed by French armed forces.

12.4 US at the Start of the War

On September 1, President Roosevelt issued an appeal to Britain, France, Germany, and Poland to refrain from bombing civilian populations in unfortified cities. Unless such a procedure were followed, thousands of innocent human beings "who have no responsibility for the hostilities which have broken out will lose their lives." Hitler immediately replied that he "unconditionally endorsed" the President's plea, and this action was followed by Poland on the same day. On September 2 the British and French governments issued a declaration stating that they were "entirely in sympathy with the humanitarian sentiments" which inspired the President's appeal.

The American military attache in Berlin was equally optimistic with regard to checking the progress of the German military machine. The Poles were following a preconceived plan that envisaged "delaying the German advance with covering forces and stubbornly holding fortified areas. . . . They are making the Germans pay dearly for every kilometer gained and are exhausting the best German divisions." The Polish defense was "being carried out as planned by the Poles and the French and British missions, and appears to be succeeding." These dispatches from Berlin read like chapters from Alice in Wonderland, and in 1939 it appeared as though Neville Chamberlain was assuming the role of the Mad Hatter when he could not send even token assistance to the hard-pressed Poles. Nowadays it seems evident that the real Mad Hatter was Franklin D. Roosevelt who pressed Chamberlain to give promises to the Poles when there was no possibility of fulfilling them. According to some reports, it was William C. Bullitt who cast Roosevelt in this grotesque role.

I recently received from Mr. Verne Marshall, former editor of the Cedar Rapids Gazette, a letter in which he made the following significant statements:

"President Roosevelt wrote a note to William Bullitt [in the summer of 1939], then Ambassador to France, directing him to advise the French Government that if, in the event of a Nazi attack upon Poland, France and England did not go to Poland's aid, those countries could expect no help from America if a general war developed. On the other hand, if France and England immediately declared war on Germany [in the

event of a Nazi attack upon Poland], they could expect "all aid" from the United States. F.D.R.'s instructions to Bullitt were to send this word along to "Joe" and "Tony," meaning Ambassadors Kennedy, in London, and Biddle, in Warsaw, respectively. F.D.R. wanted Daladier, Chamberlain and Josef Beck to know of these instructions to Bullitt. Bullitt merely sent his note from F.D.R. to Kennedy in the diplomatic pouch from Paris. Kennedy followed Bullitt's idea and forwarded it to Biddle. When the Nazis grabbed Warsaw and Beck disappeared, they must have come into possession of the F.D.R. note. The man who wrote the report I sent you, saw it in Berlin in October, 1939."

After receiving this letter from Mr. Marshall I wrote at once to Mr. Bullitt and inquired about this alleged instruction from the President. He replied as follows: "I have no memory of any instruction from President Roosevelt of the nature quoted in your letter to me and feel quite certain that no such instruction was ever sent to me by the President." Mr. Joseph Kennedy sent to me a similar negative answer with reference to this alleged instruction from the President, but the Forrestal Diaries would indicate that Bullitt did strongly urge President Roosevelt to exert pressure upon Prime Minister Chamberlain and that Roosevelt responded to this pressure. The following excerpt has far-reaching implications:

"27 December 1945: Played golf today with Joe Kennedy (Joseph P. Kennedy, who was Roosevelt's Ambassador to Great Britain in the years immediately before the war). I asked him about his conversations with Roosevelt and Neville Chamberlain from 1938 on. He said Chamberlain's position in 1938 was that England had nothing with which to fight and that she could not risk going to war with Hitler. Kennedy's view: That Hitler would have fought Russia without any later conflict with England if it had not been for Bullitt's (William C. Bullitt, then Ambassador to France) urging on Roosevelt in the summer of 1939 that the Germans must be faced down about Poland; neither the French nor the British would have made Poland a cause of war if it had not been for the constant needling from Washington. Bullitt, he said, kept telling Roosevelt that the Germans wouldn't fight; Kennedy that they would, and that they would overrun Europe. Chamberlain, he says, stated that America and the world Jews had forced England into the war. In his telephone conversations with Roosevelt in the summer of 1939 the President kept telling him to put some iron up Chamberlain's backside. Kennedy's response always was that putting iron up his backside did no good unless the British had some iron with which to fight, and they did not. . . . What Kennedy told me in this conversation jibes substantially with the remarks Clarence Dillon had made to me already, to the general effect that Roosevelt had asked him in some manner to communicate privately with the British to the end that Chamberlain should have greater firmness in his dealings with Germany. Dillon told me that at Roosevelt's request he had talked with Lord Lothian in the same general sense as Kennedy reported Roosevelt having urged him to do with Chamberlain. Lothian presumably was to communicate to Chamberlain the gist of his conversation with Dillon. Looking backward there is undoubtedly foundation for Kennedy's belief that Hitler's attack could have been deflected to Russia."

Mr. Kennedy is known to have a good memory and it is highly improbable that his statements to Secretary Forrester were entirely untrustworthy. Ambassador Bullitt was doing a lot of talking in 1939 and he was regarded as the mouthpiece of the President. In January 1939 he had a long conversation with Count Jerzy Potocki, the Polish Ambassador in Washington, and left him with the impression that "he [Bullitt] had received from President Roosevelt a very detailed definition of the attitude taken by the United States towards the present European crisis. He will present this material at the Quai d'Orsay. . . . The contents of these directions . . . were: (1) The vitalizing foreign policy, under the leadership of President Roosevelt, severely and unambiguously condemns totalitarian countries; . . . (2) it is the decided opinion of the President that France and Britain must put [an] end to any sort of compromise with the totalitarian countries."

In February 1939, Bullitt had a conversation with Jules Lukasiewicz, the Polish Ambassador in Paris, and once again he seemed to speak with authority. He confided to Lukasiewicz that Washington official circles were greatly concerned about the outbreak of war in Europe. If Britain and France were defeated, Germany "would become dangerous to the realistic interests of the United States on the American continent. For this reason, one can foresee right from the beginning the participation of the United States in the war on the side of France and Britain. . . . One thing . . . seems certain to me, namely, that the policy of President Roosevelt will henceforth take the course of supporting France's resistance . . . and to weaken British compromise tendencies."

These excerpts from the dispatches of the Polish ambassadors in Washington and in Paris afford a clear indication of the fact that President Roosevelt, through Bullitt, was exerting steady pressure upon Britain and France to stand up boldly to Nazi Germany. When this policy led to a war in which Nazi armed forces easily crushed French resistance, it is easy now to understand the poignancy of Premier Reynaud's pleas to Roosevelt for prompt assistance. He and Daladier had taken the assurances of Bullitt seriously and the hysterical tone of Reynaud's repeated wires to the White House indicates a feeling of betrayal. From the battered walls of Warsaw there were loud murmurs about broken British promises. When their muted echoes reached London, Neville Chamberlain must have remembered the constant "needling from Washington" in favor of a more resolute stand against Hitler, and Joseph Kennedy must have had reluctant recollections of the many occasions when the President "kept telling him to put some iron up Chamberlain's backside." Germany had been baited into a war with Britain and France when she would have preferred a conflict with Russia over the Ukraine. Chamberlain got plenty of iron up his backside, but it was Nazi hot metal that seared him and all Britain and helped to break into bits a proud empire that all the King's horses and all the King's men can never put together again.

The President Promises Peace for the U.S.

IMMEDIATELY after the outbreak of World War II, President Roosevelt made a radio address in which he reminded the American people that they should master “at the outset a simple but unalterable fact in modern foreign relations. When peace has been broken anywhere, peace of all countries everywhere is in danger.” This theme of a “one world” he emphasized again and again: “Passionately though we may desire detachment, we are forced to realize that every word that comes through the air, every ship that sails the sea, every battle that is fought does affect the American future.” In order to relieve the apprehensions that millions of Americans must have felt as a result of this stress upon the one-world concept, he then glibly gave the following assurance: “Let no man or woman thoughtlessly or falsely talk of America sending its armies to European fields. At this moment there is being prepared a proclamation of American neutrality.” This assurance was followed by a reference to the “historic precedent that goes back to the days of the administration of President George Washington.” America would remain “a neutral nation.” But he closed his address with a curtain line that had an ominous implication: “As long as it remains within my power to prevent, there will be no blackout of peace in the United States.”

The Mission of William Rhodes Davis to Berlin

One way to prevent a blackout of peace in the United States was to bring the war in Europe to a close. This might be effected through American mediation. In the early part of September 1939, William Rhodes Davis, an independent oil operator of large wealth, decided to ask President Roosevelt to approve a mission to Berlin and Rome for the purpose of arranging American mediation. Davis was a close friend of John L. Lewis who had bought Roosevelt’s good will by a half million dollar contribution to the campaign fund of 1936. Davis himself had made a modest contribution of \$300,000 to the same fund. Through his intimate connections with Dr. Hertslet, representing German banking and industrial interests, and with President Cardenas of Mexico, Davis had arranged large sales of oil to Germany. Inasmuch as a European war would put an end to these sales, Davis was extremely anxious to promote peace. After the outbreak of the war he hurried to Washington where, with the assistance of John L. Lewis, he arranged for a conference with President Roosevelt. On September 15 a meeting was held in the White House with the President, “Steve” Early, John L. Lewis, Adolf Berle, Cordell Hull, and Mr. Davis in attendance. It was decided to send Davis to Rome and Berlin in order to see if there was any possibility of arranging terms for American mediation in the war that had just broken out.

After some difficulty at Bermuda which required State Department intervention to permit him to continue on his trip, Davis finally arrived in Berlin for some important conferences with General Goring. At the first conference he made the following statement to Goring.

"It is my opinion that immediate settlement would return to Germany . . . Danzig, the Corridor and the former provinces in Poland which were taken away from Germany by the Treaty of Versailles, and that the question of the colonies formerly owned by Germany, prior to 1914 . . . could be compromised. If Mr. Hitler would set forth a reasonable basis of settlement and the assistance of Mr. Roosevelt requested as mediator, he would give it serious consideration. The President, I am sure, believes that a new economic arrangement should be arrived at by the contesting nations which would provide each nation with raw materials, goods and commodities essential to maintain its economic integrity and well-being. The Field Marshal replied: "These statements are very surprising as the impression in Germany is that Mr. Roosevelt's feelings are now against Germany and that he is sympathetic to England and France." . . . Regarding the question of peace, the Field Marshal stated: "Germany is and always has been ready to work for peace in Europe on sound equitable lines. The views . . . which you have conveyed to me correspond substantially to the views of Mr. Hitler and his Government. A world conference appears under the circumstances to be the only practical medium through which these mutual hopes for peace can be achieved. Germany will welcome the aid of Mr. Roosevelt in bringing about such a conference. . . . The fundamental and motivating purpose of such a conference must be to establish a new order in the world designed to secure an enduring peace. A pre-requisite to that aim is the complete liquidation of the Versailles system. . . . Germany is prepared to accept any method and to welcome any suggestion, consistent with its inalienable right as a nation to live on a basis of equality with other nations, which will guarantee enduring peace for itself and the smaller European nations."

On October 3, Davis had another meeting with Goring who remarked:

"You may assure Mr. Roosevelt that if he will undertake mediation, Germany will agree to an adjustment whereby a new Polish State and a new Czechoslovakian independent government would come into being. However, this information is for him alone and to be used by him only if necessary to bring about a peace conference. . . . As for myself and my Government, I would be glad to attend and in the event of such a conference I would represent Germany. I agree that the conference should be in Washington."

In conclusion, Goring informed Mr. Davis that Hitler would speak on October 6 and his remarks would, in spirit and content, "be of a nature which impartial analysis must accept as a basis for negotiation."² After these conferences with Mr. Davis, Goring talked with Chancellor Hitler concerning this proposed American mediation. The Chancellor apparently took the matter very seriously and on October 6 he made a speech which he thought would lay the basis for a world conference. He emphasized the importance of an early calling of a conference of the "leading nations" on the European continent. It should be held "before millions of men are . . . uselessly sent to their death and billions of dollars' worth of property destroyed. The continuation of the present state of affairs in the West is unthinkable. Each day will soon demand increasing sacrifices."

After this introduction Hitler indicated the bases of an enduring peace: (1) th« foreign

policies of European states should frankly recognize the liquidation of the Treaty of Versailles; Germany's colonial possessions before 1914 should be returned to her; (2) there should be a reorganization of the international economic system which would include a new system of markets and a final settlement of currencies; (3) **the most important item in a program for the abolition of future wars was "the establishment of an unconditionally guaranteed peace and of a sense of security on the part of individual nations. . . . An essential part of this necessary sense of security, however, is a clear definition of the legitimate use and application of certain modern armaments which can at any given moment strike straight at the heart of every nation and hence create a permanent sense of insecurity."**

While Hitler was presenting to the world this sane and moderate program, Davis was flying back to Washington with a record of the conciliatory conversations with Goring. At this same time Roosevelt commenced his momentous correspondence with Winston Churchill.⁴ Its influence cannot be judged until it has been carefully read and all the implications given extended consideration. But at any rate, something did change Roosevelt's mind in October 1939. When Mr. Davis returned to Washington he phoned to Miss LeHand and indicated his readiness to report to the President on his Berlin trip. After a brief pause she informed him that "the Chief" was "in conference" and could not be disturbed. When this conference continued indefinitely, Davis wrote a long letter to the President (October 11) and told him in detail of his conferences with Goring and the fact that Hitler's address on October 6 had been conciliatory in tone and an indirect assurance that the Fiihrer would support the idea of American mediation. He received no answer to this letter and there was no invitation to the White House. A mission that seemed so bright with promise had suddenly ended in a dismal failure. Did one of the famous "sealed letters" from Winston Churchill to Franklin Roosevelt cause a rejection of this Hitler "feeler" for American mediation? Did American foreign policy thereafter follow British suggestions?

The Barriers Preserving Neutrality Are Broken Down

Two days after Britain and France declared war against Germany, the President (September 5) issued two proclamations. The first closely followed the language of the neutrality proclamation issued by President Wilson after the outbreak of World War I. It emphasized the role America would play as a neutral, reminded American citizens of their duties under international law, and warned the belligerents against infringing upon American rights. The second proclamation implemented the Neutrality Act of 1937 and imposed an embargo upon the export of arms, ammunition, and implements of war to belligerent powers. This embargo checked the shipment to Britain and France of some \$79,000,000 worth of war materials for which export licenses had already been issued. Allied victory, as in World War I, depended upon an uninterrupted flow of munitions to British and French ports. Would the President be able to secure amendments to the Neutrality Law

that would permit these shipments?

His first step in this direction was to issue on September 13 a summons to Congress to meet in special session on the twenty-first. When they met they listened to a Presidential message that was filled with inaccuracies designed to justify some radical changes in neutrality legislation. He contended that existing legislation altered the foreign policy of the nation in such a way as to impair peaceful relations with other nations. Our policy with respect to belligerent countries had, with one notable exception, been "based upon international law." The exception had been the non-intercourse and embargo laws of the Napoleonic period and their effect upon the economy of the nation had been disastrous. These economic limitations had been the prelude to war. The Neutrality Act of 1935 had been another lamentable exception because some of its provisions had been "wholly inconsistent with ancient precepts of the law of nations." He regarded the ban on arms shipments as "most vitally dangerous to American neutrality, American security and American peace." In the proposed new legislation he wished provisions that would (1) forbid war credits to belligerents; (2) prohibit travel by American citizens on belligerent vessels; (3) provide for a license system for the import and export of munitions of war; (4) restore the cash-and-carry provision which had expired on May 1; (5) authorize the exclusion of American shipping from combat areas.

The President's message aroused a tremendous debate in the press, over the radio, and in Congress. According to a poll conducted by the Christian Science Monitor, editorial opinion in the country was strongly in favor of the repeal of existing neutrality legislation.⁷ But letters and telegrams soon began to pour into the offices of senators and representatives in a veritable deluge. In these communications the ratio against repeal was reported to be five to one.⁸ Under the impact of this pressure a bill was reported on September 30 from the Senate Committee on Foreign Relations. Its provisions reflected much isolationist sentiment: (1) when the President or Congress found a state of war existing between foreign countries, the President was required to name the belligerents and apply the act; (2) no United States vessel could lawfully carry passengers or goods to any port of the belligerent nations; (3) the cash-and-carry system was restored and made mandatory for all goods. They could be shipped only after the title and interest of American citizens had been extinguished; (4) a ban was placed upon the arming of merchant vessels of the United States; (5) the prohibition of travel by American citizens on belligerent ships was continued; (6) the President was authorized to forbid the entry of American ships into combat areas; (7) the President might bar the entry of foreign submarines or armed merchantmen into American ports; (8) belligerents were limited to ninety-day credit transactions with reference to the purchase of American goods.

On November 4th 1939, the President signed the bill and at once issued two proclamations to implement the neutrality law. One delimited the waters off the British Isles and the coasts of Western Europe as a combat area which no American vessel could enter "except under such rules and regulations as may be prescribed." Under the law they could not carry cargo or passengers to any of the belligerent ports in Europe and Africa as far south

as the Canary Islands, and under the proclamation they were prohibited from entering the neutral ports of Ireland, Sweden, Denmark, Belgium, the Netherlands, and Norway south of Bergen. On September 5 an embargo was applied to the shipment of munitions of war and military equipment to belligerents except on a cash-and-carry basis. This restriction did not seriously affect the exports of war materiel to the Allies. In September 1939 the shipments of arms, ammunition, and implements of war to France amounted to \$4,429,323; in December the value of these shipments rose to \$17,857,281. The value of shipments to Britain did not rise so abruptly. In September 1939 they amounted to \$1,422,800; in December they rose to \$4,184,377.²³ It should be remembered that the title, right, and interest in this war materiel had to be extinguished before it could be exported. During the period from 1914-1917 there were no restrictions on belligerent borrowing. Loans to the Allied governments had financed huge shipments of munitions of war to their ports. Under the Neutrality Act of November 4 belligerent borrowing was prohibited.

Hitler Adopts a Conciliatory Policy towards the U.S.

The outbreak of World War II came as an unpleasant surprise to the German Admiralty which had hoped the conflict might be postponed until 1944. Admiral Raeder promptly advised an all-out war against Britain in the form of unrestricted submarine warfare, but Hitler immediately rejected this counsel. He was deeply shocked at the news of the sinking of the *Athenia*, and upon the advice of the Naval Staff he denied German responsibility. Later when it was learned that the U-30 had torpedoed the liner, the commander, Lieutenant Lemp, was severely reprimanded. On September 7, during a conference with Admiral Raeder, Hitler insisted that "in order not to provoke neutral countries, the United States in particular, it is forbidden to torpedo passenger steamers, even when sailing in convoy. Warfare against French merchant ships, attacks on French warships and mine laying off French ports is prohibited."³⁹ These orders were partially modified on September 10 so that mixed British-French convoys, if escorted by French or French and British forces, might be attacked north of Brest. On October 16 there was a further modification: "All merchant ships definitely recognized as enemy ones (British or French) can be torpedoed without warning. Passenger steamers in convoy can be torpedoed a short while after notice has been given of the intention to do so." Passenger ships were already being torpedoed when "proceeding without lights."

Hitler now made a conciliatory gesture towards the United States. On October 9, the American freight steamer, *City of Flint*, bound for a British port, was captured by the German pocket battleship, *Deutschland*. After a brief visit to the Norwegian port of Tromsø and the Russian port of Murmansk, the *City of Flint* with a German prize crew put into another Norwegian port where the authorities interned the German crew and returned the vessel to its American commander. On November 10, Admiral Raeder submitted a report to which Hitler agreed: "The *City of Flint* case has been mismanaged. . . . It

appears advisable to allow the City of Flint to return to the United States unmolested. The Fuehrer agrees with the Commander in Chief, Navy; no further action is to be taken against the City of Flint." At the end of December 1939 the rules controlling submarine activity were formulated as follows: "The following ships are subject to submarine attack without warning: (1) All merchant ships recognized as enemy; (exceptions are passenger ships sailing alone which are definitely unarmed); (2) all neutral ships sailing in enemy convoy; (3) all ships sailing without lights; (4) all ships refusing to stop or making use of radiotelegraph; (5) American crews are [to be] treated with the greatest consideration."

Thus, at the close of four months of warfare on the high seas, German anxiety to conciliate America had resulted in exceptional treatment of United States vessels. Ninety ships carrying neutral flags had been sunk but not one of the ninety had flown American colors. Only four American ships had been stopped at sea by German naval vessels; none had been compelled to enter a German port for search and none had been attacked by commerce raiders. Thanks to pressure from the Fuhrer the German Navy was on its good behavior.

The Mission of Sumner Welles

In the early days of January 1940, President Roosevelt sent for Sumner Welles and discussed with him the advisability of sending a representative to Europe to canvass the "possibilities of concluding a just and permanent peace." The President had no interest in a "temporary or tentative armed truce." Something more fundamental would have to be achieved. Perhaps Welles himself would be the man of the hour who could open the portals of peace. At any rate, in February 1940 the President decided to send him to Rome and Berlin, and from there to Paris and London. Conversations with Mussolini and Hitler might offer some hint as to peaceful procedures that would prevent the dreaded spring offensive. From Germany there had come certain whispers of a desire for peace. Under the proper encouragement these whispers might gain significant volume.

Welles arrived in Rome on February 25 and had an interview with Ciano on the following day. He found Ciano "always cordial and entirely unaffected," with an evident desire to be helpful.⁶⁰ In the Ciano Diaries, Welles is described as "distinguished in appearance and manner," and the tone of the conference was "very cordial."⁶¹ Ciano made no attempt to conceal his detestation of von Ribbentrop and his "underlying antagonism toward Hitler." When Welles brought up the matter of a "just and permanent peace," Ciano outlined the terms that Hitler would have accepted in October 1939, but he was uncertain about the Fuhrer's present viewpoint.

The interview with Mussolini was quite a different affair and Ciano regretted its "icy atmosphere." The Duce appeared to Welles as a man laboring "under a tremendous strain." He was "ponderous and static rather than vital," and during the interview sat most of the time with his eyes closed. As soon as the formalities of introduction were completed, Welles handed to Mussolini a letter from President Roosevelt. It was an interesting mis-

sive which emphasized the "satisfaction which the United States government would derive from a continuation of Italian neutrality," and which indicated the President's strong desire "to meet personally with the chief of the Italian government." In the event of such a meeting the President believed he could "persuade Mussolini that the best interests of Italy could be served only if he refused to prostitute the Italian people to the greater glory of Hitler." The Duce seemed pleased with the suggestion of a meeting with Roosevelt. He had hoped for a long time that "this meeting . . . would really take place." When he remarked that there were so many miles of ocean between Italy and America that it would be difficult to arrange for a conference, Sumner Welles quickly interjected with the statement: "There are halfway points which would halve that distance." The Duce responded: "Yes, and there are ships to take us both there."⁶³ But no plans were actually made for this meeting which might have changed the history of the world. Instead, Welles and the Duce merely talked of the importance of breaking down economic barriers between countries and the necessity for a program of real disarmament. The conversation then shifted to the terms of peace Germany might accept and concluded with a direct question from Welles: "Do you consider it possible at this moment for any successful negotiations to be undertaken between Germany and the Allies for a lasting peace?" "Yes," answered the Duce with emphasis, and Welles was now ready for his journey to Berlin.

Welles indicated to von Ribbentrop that he had been sent to Europe to canvass the possibility of establishing a permanent peace, Ribbentrop took his cue and commenced a turgid oration that lasted over two hours. In conclusion, he insisted that Germany wanted peace but only on condition that "the will on the part of England to destroy Germany is obliterated once and for all." The only way that objective could be accomplished was "through complete and total Germany victory."

The interview with Hitler on March 2 was less of an ordeal. He greeted Welles "pleasantly" and was "dignified, both in speech and in movement." When Welles remarked that his conversation with Mussolini had instilled the hope that the "foundations of a durable peace might still be laid," Hitler began to discuss the basic importance of some general agreement upon a program of disarmament. He had long been in favor of disarmament but had received no encouragement from Britain or France. He agreed with Welles that "a liberal, unconditional most-favored-nation international trade relationship" was an ideal "toward which the nations of the world should strive." Under "more normal conditions Germany would gladly co-operate toward that end." He then outlined Germany's objectives. They were historical, political, and economic. Germany had no aim other than the return of the "German people to the territorial position which historically was rightly theirs." Germany's political aims emphasized national security. There was no real desire to dominate non-German peoples. If such peoples adjacent to her boundaries did not constitute a threat to German security, there was no intention to interfere with their independence. From the economic standpoint Germany claimed the right to profit through trade with the nations close to her in central and southeastern Europe. She would no longer permit the Western powers of Europe to infringe or impair her preferential position

in that respect. Germany would also insist that "the colonies stolen from her at Versailles be returned to her." In conclusion, he repeated the words of Ribbentrop: "I can see no hope for the establishment of any lasting peace until the will of England and France to destroy Germany is itself destroyed. I feel that there is no way by which the will to destroy Germany can itself be destroyed except through a complete German victory."

Welles now clearly realized that his mission to Germany was in vain, but he felt obliged to have a frank talk with General Goring at Karinhall. Goring's manner was "simple, unaffected and exceedingly cordial." He quickly assured Welles that Germany had "no ambitions of any kind . . . which could affect the Western Hemisphere," and he challenged the assertion that a war in Europe would profoundly affect America. Welles then shifted the conversation to the topic of German discriminations against the Jews. This evoked the reply that racial discriminations were in effect in a large portion of the United States with regard to Negroes. In conclusion, Goring repeated the comments of Ribbentrop and Hitler with special reference to the desire of Britain and France to destroy Germany. If they succeeded in that objective they would create a community of "Bolsheviks and Communists." From Berlin, Welles went at once to Paris for conversations with important French officials. He regretted that President Lebrun did not have the driving force of Poincare who had guided French destinies during World War I. While talking with Senator Jeanneney, President of the French Senate, he was reminded of a trenchant saying of Clemenceau anent the Germans: "There is only one way in which to deal with a mad dog. Either kill him or chain him with steel chains which cannot be broken." But France lacked both the will and the ability to forge those chains.

In England he found the will to forge chains that would keep Germany in subjection for a long period. This will was vehemently expressed by Winston Churchill. He was certain that no solution of the European crisis would be found "other than outright and complete defeat of Germany, the destruction of National Socialism, and the inclusion, in the new peace treaties, of provisions which would control Germany's course in the future in such a way as to give Europe and the world peace and security in the days to come, at least for a hundred years." He still adhered to the pattern of Versailles. It is significant that Churchill had no words of criticism of Russia even though it was apparent that Hitler could not have gone to war in 1939 without some assurance of Soviet support. The menace of bolshevism gave Churchill little concern in 1940. In the following year when Hitler attacked Russia, Churchill worked feverishly to send her armed assistance. A real statesman would have recognized the dual threat of both nazism and communism and would have welcomed them with bloody hands to hospitable graves.

Sumner Welles apparently agreed with this British viewpoint. The "pencil with two ears"⁶⁸ made no adverse comment upon such dangerous blindness. To him, as well as to Churchill, the only real enemy was Nazi Germany. This made it all the more necessary for him to hurry back to Rome and try to separate Mussolini from Hitler. But Ribbentrop had preceded him with a long letter from Hitler. Ribbentrop was not as successful as he had hoped he would be in his conversations with Mussolini. The Duce was still opposed

to a German spring offensive against Britain and France, and it would take a personal conference between the two dictators to change Mussolini's mind. This should be held, according to Ribbentrop, at Brenner Pass on the morning of March 18. While Ribbentrop was making these preparations for the meeting at Brenner Pass, Welles arrived in Rome on March 16 and had conferences with both Ciano and Mussolini. There he was informed about alleged German military plan and that "Germany was determined to undertake an all-out military offensive in the near future." She was "not considering any peace solution short of a military victory." This it was believed could be accomplished "within five months. . . . France would crumble first and England shortly after." Ciano himself was by no means convinced of a German victory. After other conversations equally fatuous, Welles returned to Washington with a full budget of misinformation for the President.

12.5 Norway

The German ship *Altmark* had taken refuge in a Norwegian fiord with several hundred British sailors on board as prisoners. A search by Norwegian gunboats had failed to disclose the presence of these sailors, but the British Admiralty had information concerning their detention on the *Altmark*. On February 16, Winston Churchill, as First Lord of the Admiralty, ordered Captain Vian to proceed in H.M.S. *Cossack* to Norwegian waters and liberate the prisoners. In effecting this rescue Captain Vian deliberately violated the neutrality of Norwegian coastal waters and the Norwegian Government sent a prompt protest to London. The Prime Minister excused this violation on the ground that previous German infractions of international law had compelled the British to take similar action.

This *Altmark* incident was merely one expression of the intention of the British Government repeatedly to violate the neutrality of Norwegian waters for the purpose of adversely affecting the German war effort. As early as September 19, 1939, Winston Churchill, after consulting the British War Cabinet, brought to the notice of the First Sea Lord and others the importance of stopping the transportation of Swedish iron ore from Narvik to Germany. Inasmuch as the German ore ships kept within the Norwegian three-mile limit the only way they could be stopped would be by mining those marginal waters. In 1918 this had been done and Churchill suggested that Britain "should repeat this process very shortly." The first German memorandum with reference to action in Norwegian waters was written on October 3, 1939. Thus, as Lord Hankey clearly shows, "the British Government began to plan their major offensive in Norway a fortnight before the Germans." It is significant that the Nuremberg Tribunal purposely overlooked the memorandum of Winston Churchill and contended that the idea of attacking Norway "originated with Raeder and Rosenberg. . . . The omission to mention this part of the story in the Judgement is the more inexplicable because the whole story was told to the House of Commons by Mr. Churchill in April 1940, and it was a matter of public knowledge."

On December 16, 1939, Mr. Churchill prepared another memorandum which he presented

to the Cabinet six days later. The subject was once more the stoppage of iron ore from Narvik to Germany. He regarded such a stoppage as "a major offensive operation of war," and it could be accomplished by laying "a series of small minefields in Norwegian territorial waters at the two or three suitable points on the coast, which will force the ships carrying ore to Germany to quit territorial waters and come onto the high seas." This action would compel Germany to "undergo a severe deprivation, tending to crisis before the summer." This mining of Norwegian waters was a mere technical infringement of international law. No evil effect would be produced in the United States by such an infringement where it would be looked upon "in the way most calculated to help us."

As Lord Hankey points out, the judgment at the end of the Nuremberg Trial made much of German plans against Norway in mid-December 1939, but it did "not contain a word of Mr. Churchill's Memorandum to the War Cabinet dated December 16. . . . Any detached person would think this is a supremely important piece of evidence for the Tribunal, for it places the British plan on the same level of importance as the German plan, which is so severely condemned as a crime in law in the Judgement." Although the War Cabinet refused to accept the reasoning of this Churchill memorandum, it did permit "the preparation of plans for landing a force at Narvik for the sake of Finland. . . . These proceedings also show the pressure the War Cabinet was under from their most powerful colleague . . . to persuade them to a technical act of aggression liable to set all Scandinavia ablaze—a 'crime,' to use Nuremberg's extravagant language, for which the Germans were destined to be so severely condemned by the Tribunal. Not a single word of it appears in the Nuremberg Judgment."

The judgment is completely silent on the action of the Supreme War Council of the Allies when (on February 5, 1940) it "approved plans for the preparation of three or four allied divisions for service in Finland, and for persuading Norway and Sweden to permit the passage of supplies and reinforcements to the Finns and 'incidentally to get hold of the Gallivare ore field.' From then on the preparations for despatch of allied troops to Norway were intensified." By the beginning of April 1940 the preparations "for the major offensive in Norway had been completed by both camps. . . . The actual landing, that is to say the German major offensive did not take place until April 9. Twenty-four hours before that, namely between 4:30 and 5 A.M. on April 8, the British minefields had been laid in the West Fjord near Narvik." Needless to say, these facts were not given any place in the Nuremberg Judgement. While the Norwegian Foreign Office was drafting a note of protest to London, word came that German warships were approaching Oslo. On the following day Norwegian batteries sank the German heavy cruiser Blucher and seriously damaged the cruiser Emden. This spirited defense merely postponed the fall of Oslo.

A German attack upon the iron ore port of Narvik was successful in spite of heroic resistance by Norwegian warships, and Hitler's plans for the occupation of Norway proceeded according to schedule. British plans for the stoppage of ore shipments to Germany were completely defeated. At the same time (April 9), German troops crossed the Danish frontier and thus another northern neutral came under Nazi control.

12.6 Rossevelt double-crossing Britain

At the beginning of October an influential American oil tycoon arrived in Berlin on a peace mission for which he had apparently received a ninety-minute personal briefing from Roosevelt. He was William Rhodes Davis, whose own personal interest lay in preventing any disruption of his oil business with Germany. He had been brought into contact with Roosevelt by John L. Lewis, leader of the CIO, the United States labor federation whose fourteen million members represented a political force no president could afford to ignore. Lewis was originally both anti-Fascist and anti-Communist, but he had, said Davis, been impressed by the significant rise in the living standards of the German worker under National Socialism. Anxious about the effects of a long war on American export markets, Lewis had obliged Roosevelt to entrust this unofficial peace mission to Davis. In Berlin the oilman met Göring, and a seven-page summary of the discussion of the alleged Roosevelt proposals survives. It was evidently given wide confidential circulation in Berlin, for sardonic references to Roosevelt's sudden emergence as an "angel of peace" bent on securing a third term figure in several diaries of the day.

President Roosevelt is prepared to put pressure on the western powers to start peace talks if Germany will provide the stimulus. President Roosevelt asks to be advised of the various points Germany wants to settle, for example, Poland and the colonies. In this connection President Roosevelt also mentioned the question of the purely Czech areas, on which however a settlement need not come into effect until later. This point was touched on by President Roosevelt with regard to public opinion in the United States, as he must placate the Czech voters and the circles sympathizing with them if he is to exercise pressure on Britain to end the war.

Davis assured Göring that Roosevelt's main strategic concern was to exploit the present situation to destroy Britain's monopoly of the world markets. "In his conversation with Davis, Roosevelt explained that he was flatly opposed to the British declaration of war. He was not consulted by Britain in advance." Roosevelt suspected that Britain's motives were far more dangerous and that they had nothing to do with Poland ; he himself recognized that the real reason for the war lay in the one-sided Diktat of Versailles which made it impossible for the German people to acquire a living standard comparable with that of their neighbors in Europe. Roosevelt's proposal, according to the unpublished summary, was that Hitler be allowed to keep Danzig and all the now Polish provinces taken from Germany by the treaty of Versailles, that all Germany's former African colonies be restored to her forthwith, and that the rest of the world give Germany financial assistance in establishing a high standard of living.

This was not all. If Daladier and Chamberlain refused to comply, then President Roosevelt would support Germany — Davis reported — in her search for a just, tolerable, and lasting peace : he would supply Germany with goods and war supplies "convoyed to Germany under the protection of the American armed forces" if need be. John L. Lewis had privately promised Davis that if some such agreement could be reached between Germany and the

United States his unions would prevent the manufacture of war supplies for Britain and France.

Göring outlined Davis's message in detail to the Führer immediately after the meeting, and on October 3 the field marshal announced to the American that in his important speech to the Reichstag on the sixth Hitler would make a number of peace proposals closely embodying the points Davis had brought from Washington. (Hitler's more detailed proposals as described by Göring indeed went so far that their sincerity is open to question.) Göring told Davis : "If in his [Roosevelt's] opinion the suggestions afford a reasonable basis for a peace conference, he will then have the opportunity to bring about this settlement.... You may assure Mr. Roosevelt that if he will undertake this mediation, Germany will agree to an adjustment whereby a new Polish state and an independent Czechoslovak government would come into being. However this information is for him [Roosevelt] alone and to be used only if necessary to bring about a peace conference." Göring was willing to attend such a conference in Washington. When Davis went back to the United States with the five detailed points Hitler proposed, he was accompanied by a German official, a "special ambassador" appointed to settle any details. Hitler hoped for an interim reply from Roosevelt by the fifth. (As Rosenberg wrote : "It would be a cruel blow for London to be urgently "advised" by Washington to sue for peace!") But something had gone wrong with the mission : when Davis reached Washington he was not readmitted to the President, and they did not meet again.

A different aspect of Roosevelt's policy was revealed by the Polish documents ransacked by the Nazis from the archives of the ruined foreign ministry building in Warsaw. The dispatches of the Polish ambassadors in Washington and Paris laid bare Roosevelt's efforts to goad France and Britain into war with Germany while he rearmed the United States and psychologically prepared the American public for war. In November 1938, William C. Bullitt, his personal friend and ambassador in Paris, had indicated to the Poles that the President's desire was that "Germany and Russia should come to blows," whereupon the democratic nations would attack Germany and force her into submission ; in the spring of 1939, Bullitt quoted Roosevelt as being determined "not to participate in the war from the start, but to be in at the finish" — the United States without doubt would fight, but "only if France and Britain kick off first." Bullitt was said by the Poles to have carried with him to Paris a "suitcase full of instructions" outlining the pressure he was to put on the Quai d'Orsay not to compromise with the totalitarian powers ; at the same time Washington was applying "various exceptionally significant screws" to the British. Washington, Bullitt had told the Polish diplomats, was being guided not by ideological considerations but solely by the material interests of the United States. The Warsaw documents left little doubt as to what had stiffened Polish resistance to German demands during the August 1939 crisis. On Friday October 6, Hitler spoke to the Reichstag. His "appeal for peace" was addressed to the British in more truculent and recriminatory language than many of his more moderate followers would have wished. He singled out Churchill — who was then First Lord of the Admiralty — as a representative of the

Jewish capitalist and journalistic circles whose sole interest in life lay in the furtherance of arson on an international scale.

On the ninth, he issued to his commanders in chief a formal directive to prepare for "Yellow" with all haste, in the event that "Britain and, under her command, France as well" were not disposed to end the war. His soldiers were, however, full of optimism. General Rommel wrote from Berlin on the seventh: "The reaction of the neutrals [to the Führer's speech] seems very good. The others will be able to think it over during the weekend. There is not much going on here otherwise. If the war ends soon, I hope I will soon be able to go home..."

Hitler had sent Dahlerus to London for talks with Chamberlain. Late on October 9 the Swede reported to him the conditions Britain was attaching to peace negotiations: in addition to insisting on a new Polish state, Britain wanted all weapons of aggression destroyed forthwith; and there must be a plebiscite in Germany on certain aspects of her foreign policy. These were hard terms to swallow, for in public Hitler was still claiming that the future of Poland was a matter for Germany and Russia alone to decide, and Britain was blithely ignoring the growing armed strength of the Soviet Union and her expansionist policies. Nevertheless, on the tenth, Dahlerus was instructed to advise London that Hitler would accept these terms on principle. The Swedish negotiator saw Hitler twice that day before he departed for a promised rendezvous with a British emissary at The Hague. He took with him a formal letter from Göring and a list of Hitler's proposals — which included a new Polish state; the right for Germany to fortify her new frontier with Russia; guarantees backed by national plebiscite; nonaggression pacts between Germany, France, Britain, Italy, and the Soviet Union; disarmament; and the return of Germany's former colonies or suitable substitute territories.⁽⁵⁾ Dahlerus noted to one German officer after meeting Hitler that "Germany for her part was able to swallow even tough conditions, provided they were put in a palatable form." He said he was taking with him to Holland more than enough to dispel Britain's smoldering mistrust of Hitler.

In Holland, however, Dahlerus waited in vain for the promised British emissary. The British foreign office asked him to describe Hitler's proposals to their local envoy and to remain at The Hague until he heard from London. Berlin optimistically viewed this request as a positive token of British interest and agreed that he should wait there. But Chamberlain's eagerly awaited speech to the House of Commons the next day, October 12, exploded Hitler's confident expectation that peace was about to descend on Europe after five weeks of war. Chamberlain dismissed Hitler's public offer (of the sixth) as "vague and uncertain" — he had made no suggestion for righting the wrongs done to Czechoslovakia and Poland. If Hitler wanted peace, said Chamberlain, "acts — not words alone — must be forthcoming." That same evening Hitler sent for Göring, Milch, and Udet of the Luftwaffe and instructed them to resume bomb production at the earliest possible moment. "The war will go on!" Dahlerus was asked to return from The Hague to Berlin forthwith. Edouard Daladier's reply to Hitler was no less abrupt. "Before these answers came," Weizsäcker wrote two days later, "the Führer himself had indulged in

great hopes of seeing his dream of working with Britain fulfilled. He had set his heart on peace. Herr von Ribbentrop seemed less predisposed toward it. He sent the Führer his own word picture of a future Europe like the empire of Charlemagne.”

To the Swedish explorer Sven Hedin a few days later Hitler voiced his puzzlement at Britain’s intransigence. He felt he had repeatedly extended the hand of peace and friendship to the British, and each time they had blacked his eye in reply. “The survival of the British Empire is in Germany’s interests too,” Hitler noted, “because if Britain loses India, we gain nothing thereby.” Of course he was going to restore a Polish state — he did not want to gorge himself with Poles ; as for the rest of Chamberlain’s outbursts, he, Hitler, might as well demand that Britain “right the wrongs” done to India, Egypt, and Palestine. Britain could have peace any time she wanted, but they — and that included that “brilliant moron” Eden and the equally incompetent Churchill — must learn to keep their noses out of Europe. And in a fit of anger Hitler complained to Dahlerus about “the unbelievable behavior of Mr. Chamberlain”; from now on Germany would fight Britain tooth and nail — he did not propose to bargain with her any longer. Dahlerus left the Chancellery in a huff at the failure of his peace effort, but was later soothed by Göring, who sent an important German decoration around to him that same evening.

12.7 How Britain Pioneered City Bombing

The Blitz on London in 1940 came in response to the initiation of city bombing by Britain some months earlier. Few now accept this rudimentary fact, central to Britain’s role in initiating World War II. Britons nowadays – or, all of them that I ever talk to – just see the Blitz as proof of Hitler’s wickedness and do not acknowledge the cause-and-effect connection. Winston Churchill and the War Department set up a situation where London would be blitzed, without telling the people that Britain had started the process several months earlier. This had the effect of getting Britons into a mood for total war, without the traditional restraints of civilised ‘laws’ or conventions, restraints which had hitherto established that civilians would not as such be targeted:

‘The exclusion of non-combatants from the scope of hostilities is the fundamental distinction between civilised and barbarous warfare.

Britons should take a more responsible attitude, and understand that it was their country and no other which pioneered the bombing of cities in a way that was not mere ‘collateral damage’ but was the deliberate targeting of workingclass homes. Lies are always created by those who wish to wage war and the worst one here ought surely to have become clear to the British people sixty years after the event. But no! One finds today as historian A.J.P. Taylor remarked,

‘... the almost universal belief that Hitler started the indiscriminate bombing of civilians, whereas it was started by the directors of British strategy, as some of the more honest among them have boasted.’ One thing the British people do really, really enjoy is their

hate-and-fear enemy image. Britain is one of the most militaristic nations which has ever existed and for its 'moral' well-being it always has to demonise whoever it is making war upon.

One thing the British people do really, really enjoy is their hate-and-fear enemy image. Britain is one of the most militaristic nations which has ever existed and for its 'moral' well-being it always has to demonise whoever it is making war upon. I here wish to argue that, if civilised life existed on earth, then the Nuremberg trials from 1946 onwards would have focussed primarily upon Britain's role in initiating city bombing – town-and-village eradication with over one million tons of bombs dropped on Germany – as well of course as the US nuclear incineration of two Japanese towns, which were a kind of logical development of what Britain had pioneered. Mortality of those two A-bombs was of a far smaller magnitude than what Britain had inflicted upon German cities. existed and for its 'moral' well-being it always has to demonise whoever it is making war upon.

I here wish to argue that, if civilised life existed on earth, then the Nuremberg trials from 1946 onwards would have focussed primarily upon Britain's role in initiating city bombing – town-and-village eradication with over one million tons of bombs dropped on Germany – as well of course as the US nuclear incineration of two Japanese towns, which were a kind of logical development of what Britain had pioneered. Mortality of those two A-bombs was of a far smaller magnitude than what Britain had inflicted upon German cities. 1936: 'Bomber Command' comes into existence, and long-range bomber planes start to be constructed. Its purpose was candidly described by J.M.Spaight of the Air Ministry: 'The whole raison d'etre of Bomber Command was to bomb Germany should she be our enemy.' So, those who wanted war started planning for it. Germany and France had nothing resembling these bomber-planes. In 1918, the highly punitive Treaty of Versailles had forbidden war-shattered Germany from ever developing an 'active defence,' alluding to such things as searchlights, flak guns etc.

Hitler repeatedly sought to secure a truce in city bombing, and that in any future conflicts bombing should be confined to the narrow zone of military operation. Existing conventions and laws of war did not specifically allude to air bombardment, and therefore he repeatedly made offers to restrict the conduct of war by 'confining the action of war to the battle zones.' The war of 1939 was 'less wanted by nearly everybody than almost any other war in history,' wrote A.J.P. Taylor. In September 1939 a state of war had been declared, but not much was happening, because Germany in no way desired war against Britain. On 15th February, 1940, PM Neville Chamberlain in the House of commons affirmed, 'Whatever the length to which others may go, H.M.Government will never resort to deliberate attack on women and children, and other civilians, for the purpose of mere terrorism,' in a reply to Captain Ramsey This reaffirmed his position given on 14th September. City bombing, he emphasised, 'was absolutely contrary to international law'.

1940: Churchill ousts Chamberlain as Prime Minister on May 10th, and on May 11th city-bombing begins. On that night, the day after Churchill's election, Bomber Command was first permitted to fulfil the purpose for which it was built. Newspapers merely

reported that, that night, 'eighteen Whitley bombers attacked railway installations in Western Germany.' Winston Churchill and his advisors extended the definition of 'military objectives', which had been accepted for two and a half centuries to include factories, oil plants and public buildings – as, would include any town or village. They rendered the definition meaningless. 'This raid on the night of May 11th, 1940, although in itself trivial, was an epoch-marking event since it was the first deliberate breach of the fundamental rule of civilised warfare that hostilities must only be waged against enemy combatant forces.'

For 12th May, the War Cabinet minutes noted on 'Bombing Policy,' that the Prime Minister was 'no longer bound by our previously-held scruples as to initiating "unrestricted" air warfare.

On 25 August, 81 bombers made their night raids over Berlin, then on 6th September the Luftwaffe replied. Only after six surprise attacks upon Berlin in the previous fortnight did the Blitz begin, and thus Germany justifiably called it a reprisal. 'The British people were not permitted to find out that the Government could have stopped the German raids at any time merely by stopping the raids on Germany,' to quote professor Arthur Butz. They still have not found this out. Winston Churchill never gets the credit he deserves for establishing The Blitz. . . The German bombs took some one-tenth of the lives of civilians as compared to the British offensive, and Britons do not seem very aware of this ten-to-one ratio.

The testimony of J.M. Spaight, who was principal Assistant Secretary to the Ministry of Air during the war, is here crucial. His 1944 book *Bombing Vindicated* proudly defended city-incineration as pioneered by the RAF (Royal Air Force):

'Because we were doubtful about the psychological effect of the distortion of the truth that it was we who started the strategic bombing offensive, we have shrunk from giving our great decision of May 11th 1940 the publicity which it deserved. That surely was a mistake. It was a splendid decision.'

He emphasised that Hitler would have been willing at any time to have stopped the slaughter should the Brits agree: 'Hitler assuredly did not want the mutual bombing to go on. . . . Again and again the German official reports applauded the reprisal element in the actions of the Luftwaffe. . . . 'If you stop bombing us, we'll stop bombing you.'

On 16th December 1940 a moonlight raid by 134 planes took out the defenceless city of Mannheim, focussing on its charming town centre. Flying high enough to be safe from the anti-aircraft flak, the night-time bomber pilot releasing his cargo never hears the mother's scream, nor sees the child's burning flesh. That was the real Holocaust, a word meaning, death by fire. RAF pilots would return home announcing the destruction of assigned 'military' targets. This charade continued until August 1941 when a shocked British Cabinet was shown aerial photographs of the undamaged targets. 'Of all the aircraft credited with having bombed their targets only one-third had in fact bombed within five miles of them'.

Air Marshall Arthur Harris took over Bomber Command at High Wycombe on 22nd February 1942, a week after its primary focus had been defined as 'the morale of the civilian population, and in particular industrial workers' by an Air Staff directive. Harris was wont to boast, "I kill thousands of people every night." The Blitz 'failed', on his view, due to the 'short-sightedness of the Luftwaffe chiefs in not providing themselves in peacetime with long-distance bomber planes designed for attacks on an enemy civilian population', as had Britain, an omission which, he declared, 'lost Germany the war.' Thus in September 1940 the Germans found themselves with "almost unarmed bombers." Germany lost the war because it had not planned for city bombing!

In March 1942 Churchill's War Cabinet adopted the 'Lindemann plan', whereby civilian targeting became official. Working-class homes were preferred to upper-class because they were closer together, and so a greater flesh-incineration-per-bomb could be achieved. The Jewish German émigré Professor Frederick Lindemann, Churchill's friend and scientific advisor had by then become Lord Cherwell. He submitted a plan to the War Cabinet on March 30th urging that German working-class houses be targeted in preference to military objectives, the latter being harder to hit. Middle-class homes had too much space around them, he explained. He was not prosecuted for a ghastly new war-crime, hitherto undreamt-of. Thereby all cities and towns over 50,000 inhabitants could be destroyed, or at least brought to ruin. The War Cabinet realised that no inkling of this must reach the public.

The Lindemann plan swung into action on 28th March 1942 when the old port of Lubeck was attacked by 234 aircraft of Bomber Command. It had no military or industrial importance but was chosen because, as Air Marshall 'bomber' Harris remarked, the city was 'built more like a firelighter than a human habitation.' Its old mediaeval houses and narrow streets and its cathedral were erased, by 'a first class success' of the RAF. On 30 May 1942 a thousand aircraft dropped high explosive and incendiaries on the medieval town of Cologne burning it from end to end. The devastation was total. Other 'first class-successes' followed, culminating in the incinerations of Hamburg and the beautiful, baroque city of Dresden.

On July 27, 1943, 'that night when the most densely populated parts of Hamburg became a roaring furnace in which thousands of men, women and children were throwing themselves into the canals in order to escape the frightful heat.'

Seven hundred Allied bombers arrived over the city at one o'clock in the morning, and dropped ten thousand tons of high explosives and incendiary bombs on several districts of the city. That night in this one raid alone, more than 45,000 men, women, and children were killed. It was bombed round the clock for four days, American planes by day and British by night. A firestorm of an intensity that no one had ever before thought possible arose. More than a million Germans fled into the surrounding countryside. These were people who had never voted for Hitler, nor had any means of removing him. Spaight writing in 1944 enthused about how 'today great four-engine bombers are tearing the heart out of industrial Germany' and added, 'Germany had nothing approaching them'

France and Germany had not prepared for city-bombing as had Britain. After Spaight's perhaps unduly candid book,

'... it was impossible for anyone, however credulous, to accept the repeated and solemn assertions of His Majesty's Ministers in Parliament that the bombing of Germany was being carried out with strict regard to the dictates of humanity in accordance with the rules of civilised warfare'.

Ministers had been lying through their teeth to Parliament, but this was no ordinary lie. It was the betrayal of the core principal on which civilised life depends – that civilians and civilian buildings shall not be as such subject to attack. Instead, terror was now coming from the sky, terror beside which the deeds of ordinary killers paled into insignificance. A thousand-year-old urban culture was annihilated, as great cities, famed in the annals of science and art, were reduced to heaps of smouldering ruins.

In the year 1940, British bombers 'only' unloaded five thousand tons of bombs onto German cities, whereas by 1944 they were sometimes exceeding that total in a single day. In the spring of '44 German cities were being pounded with over one hundred thousand tons a month. German civilian deaths from British and American bombing of German cities have been estimated to have been around 600,000, and some 61 cities were turned to virtual rubble, while some 60,000 civilians were killed in the UK. Those cities had an estimated population of 25 million' Germany was thereby reduced to a worse state than that produced by the 30 years' war. In return the centres of London, Coventry and Portsmouth were attacked by German planes. While this was going on, it was imperative to stifle public discussion, the Secretary for Air explained, lest public outrage undermined the morale of the bomber pilots. But, despite official denials, anti-war protesters were gleaning some idea of what was happening. Vera Brittain declared in a wartime booklet that Britain's present policy would 'appear to future civilisation as an extreme form of criminal lunacy.' Thus, one person managed to find adequate words for Britain's war-policy.

What was the purpose of city-bombing? Its primary purpose was to goad the German people into reprisals – or, so an official HMSO document of 1953 averred:

If the Royal Air Force raided the Ruhr, destroying oil plants with its most accurately placed bombs and urban property with those that went astray, the outcry for retaliation against Britain might prove too strong for the German generals to resist. Indeed, Hitler himself would probably head the clamour. The attack on the Ruhr, in other words, was an informal invitation to the Luftwaffe to bomb London.' The purpose was get their war on, which neither the German people nor the British wanted. Germany never wanted war against Britain and Hitler always professed his great admiration for Britain and the British Empire. Germany sought and was refused peace-negotiations in July 1940. The British view 'surviving the Blitz' as their finest hour, and have imagined that it was part of a plan to invade and occupy Britain. It would be better to say that the cause of the Blitz lay in the British ardour for war, whereby they set out to generate the conditions that

produced it. After the war, terror-bombing was not a recognised term, it had officially never happened, still less had anyone heard of the Lindemann plan. The truth was suppressed for two decades, even though there was no legal machinery of censorship, and only emerged when it was mere 'past history,' in 1961. This posed a serious problem for the 'trials' held at Nuremberg: If the most obvious of Hitler's crimes was his initiation of indiscriminate bombing in the Blitz, why was there no mention of this at Nuremberg? The truth, that this was a mere tiny fraction of what had been visited on Germany, and only came months later as a legitimate 'reprisal,' clearly could not be told to the British people.

Not until 1961 did C.P.Snow reveal in his Harvard Lectures on Science and Government the existence of the Lindemann plan, and that it was 'put into action with every effort the country could make:' C.P.Snow's explanation, about a diabolical plan which concentrated on working-class homes, 'caused a sensation throughout the civilised world', becoming immediately translated into every language on earth. Later that year, the official account of how the UK had developed terror-bombing in accord with the Lindemann plan revealed the shocking death total of 60,000 RAF lives so lost. These disclosures induced widespread horror. In 1961 Labour MP Richard Crossman remarked upon the 'screen of lies' behind which the 'terror bombing was carried out' such that the War cabinet 'felt it necessary to repudiate publicly' the policy of their order to bomb. Ministers had proclaimed with absolute mendacity 'We were not bombing women and children wantonly for the sake of so doing' (Under-Secretary of Air), when that is precisely what they were doing – hundreds of thousands of women and children.

'The stock apology then put forward was that it [British policy] was only a reprisal for the German bombing of Warsaw and Rotterdam. Mr Spaight dismisses this argument with the contempt it reserves. "When Warsaw and Rotterdam were bombed," he points out, "German armies were at the gates. The air bombardment was an operation of the tactical offensive." Captain Liddell Hart accepts the same view. "Bombing did not take place, he writes, until the German troops were fighting their way into these cities and thus conformed to the old rules of siege bombardment.'" 'Bombardment' was not illegal under the terms of Article 25 of the 1907 Hague convention. Nine hundred died with the tragically mistaken air raid on Rotterdam. Citizens of Warsaw were given time to evacuate their city before any general bombardment. To quote Dr Wesserle, who was in Prague when the US and UK bombed it,

"There can be no comparison between the brutality of the Anglo- American bomber offensive, on one hand, and the minimality of the German-Italian efforts, on the other."

The Hague Convention of 1923 (Articles 22, 23) proposed to outlaw indiscriminate urban bombing ('aerial bombardment for the purpose of terrorising the civilian population') but alas, the five organising powers (Britain, France, Italy, Japan and the US) never signed it[49]. Britain's Prime Minister affirmed to the House of Commons in 1938 that any such bombing would be an "undoubted violation of international law," then a resolution passed by the League of nations in September 1938, 'The intentional bombing of civilian

populations is illegal' had been proposed by the British government and passed without dissent – who could object to such a self-evident truth? '... we have no intention of attacking the civil population as such' said the British representative during an Anglo-French staff conversation on August 14, 1939, just before war broke out. Shortly after, the League of Nations unanimously passed a resolution affirming that such bombing was illegal. And yet, by 1943 Britain with America signed the Treaty of Casablanca, which encouraged the stepping up of city bombing – 'morale bombing' as it was called.

The dilemma, the schizophrenia, the failure of Nuremberg is summarised by three dates, dates engraved rather unforgettably in the memory of mankind: August 6th, August 8th and the 9th, 1945. The Nuremberg Charter, defining norms of international law relevant to warfare ('planning and preparing a war of aggression'), was signed as the London Agreement on August 8th, 1945. They blow up one city, they blow up another city, and in between they sign the Nuremberg Charter!

In a radio broadcast of 1st September 1939, two days before war broke out, Roosevelt called upon the European powers to make a promise, that 'armed forces shall in no event, and under no circumstances, undertake the bombardment from the air of civilian populations or of undefended cities. Alas the Americans were unable to take their own advice: the fire-bombing of Japan of March 9-10, 1944 killed near 100,000 Japanese civilians, more than died the next year at Hiroshima. In the war overall, the bombing of Japanese cities might have killed about 337,000.

When, after the war, Churchill suggested to Stalin that they find 'some unshattered town in Germany' at which to meet, for the Potsdam conference in July 1945, that was not easy. Then, rather swiftly in March, 1946, Churchill discerned a newly-looming threat, at his Iron Curtain speech at Fulton, Missouri, and this he affirmed warranted the stockpiling of America's newlydeveloped nuclear weapons. One might have thought that the British War Ministry would have felt some shame over initiating the most frightful crime in the annals of recorded history, but apparently not: in 1946 a report on 'Future Developments in weapons and Methods of Warfare' was handed to the British Chiefs of Staff. 'The most profitable objects of attack by the new weapons will normally be concentrations of population' it recommended, including a blueprint of 58 large Soviet cities having populations of over 100,000. Henceforth it was to be a normal, bureaucratic activity to discuss and refine methods of cityextermination. In the next year, 1947, the first US Strategic Air Command forces came to Britain. Thus Britain contributed to the encirclement of Russia with nuclear bombers when the latter was still a smouldering wreck from WWII, having suffered a mortality of somewhere around twenty million, years before Russia was in a position to threaten anyone in return.

Of the Korean war 1950-53, the former U.S. Air Force Chief of Staff Curtis LeMay recalled that he asked if the Pentagon would let him 'burn down' five of the biggest cities in North Korea, claiming that it could be done in a few days. 'Its too horrible,' he was told. 'Yet over a period of three years or so...we burned down every town in North Korea.' Three million Koreans died, to protect the world against an alleged 'Yellow peril.' Thus did the

legacy of British city-bombing pass over to America.

Thus it was not without reason that notable Romans denounced the Jews — among these Seneca (“an accursed race”), Quintilian (“a race which is a curse to others”), and Tacitus (a “disease,” a “pernicious superstition,” and “the basest of peoples”). Prominent German historian Theodor Mommsen reaffirmed this view, noting that the Jews of Rome were indeed agents of social disruption and decay: “Also in the ancient world, Judaism was an effective ferment of cosmopolitanism and of national decomposition.”

Throughout the Middle Ages and into the Renaissance, their negative reputation persisted. John Chrysostom, Thomas Aquinas, and Martin Luther all condemned Jewish usury — a lending practice often trading on distress, and a frequent cause of social unrest. In the 1770s, Baron d’Holbach declared that “the Jewish people distinguished themselves only by massacres, unjust wars, cruelties, usurpations, and infamies.” He added that they “lived continually in the midst of calamities, and were, more than all other nations, the sport of frightful revolutions.” Voltaire was struck by the danger posed to humanity by the Hebrew tribe; “I would not be in the least bit surprised if these people would not some day become deadly to the human race.” Kant called them a “nation of deceivers,” and Hegel remarked that “the only act Moses reserved for the Israelites was. . . to borrow with deceit and repay confidence with theft.”

Thus both empirical evidence and learned opinion suggest that Jews have, for centuries, had a hand in war, social strife, and economic distress, and have managed to profit thereby. Being a small and formally disempowered minority everywhere, it is striking that they should merit even a mention in such events — or if they did, it should have been as the exploited, and not the exploiters. And yet they seem to have demonstrated a consistent ability to turn social unrest to their advantage. Thus it is not an unreasonable claim that they might even instigate such unrest, anticipating that they could achieve desired ends.

12.8 The warmongering Drunkard

In September 1939, Britain went to war with Germany, pursuant to the guarantee which Chamberlain had been panicked into extending to Poland in March. Lloyd George had termed the guarantee “hare-brained,” while Churchill had supported it. Nonetheless, in his history of the war Churchill wrote: “Here was decision at last, taken at the worst possible moment and on the least satisfactory ground which must surely lead to the slaughter of tens of millions of people.” With the war on, Winston was recalled to his old job as First Lord of the Admiralty. Then, in the first month of the war, an astonishing thing happened: the president of the United States initiated a personal correspondence not with the Prime Minister, but with the head of the British Admiralty, by-passing all the ordinary diplomatic channels.

The messages that passed between the president and the First Lord were surrounded by

a frantic secrecy, culminating in the affair of Tyler Kent, the American cipher clerk at the US London embassy who was tried and imprisoned by the British authorities. The problem was that some of the messages contained allusions to Roosevelt's agreement — even before the war began — to a blatantly unneutral cooperation with a belligerent Britain. On June 10, 1939, George VI and his wife, Queen Mary, visited the Roosevelts at Hyde Park. In private conversations with the King, Roosevelt promised full support for Britain in case of war. He intended to set up a zone in the Atlantic to be patrolled by the US Navy, and, according to the King's notes, the president stated that "if he saw a U boat he would sink her at once & wait for the consequences." The biographer of George VI, Wheeler-Bennett, considered that these conversations "contained the germ of the future Bases-for- Destroyers deal, and also of the Lend-Lease Agreement itself." In communicating with the First Lord of the Admiralty, Roosevelt was aware that he was in touch with the one member of Chamberlain's cabinet whose belligerence matched his own.

In 1940, Churchill at last became Prime Minister, ironically enough when the Chamberlain government resigned because of the Norwegian fiasco — which Churchill, more than anyone else, had helped to bring about. As he had fought against a negotiated peace after the fall of Poland, so he continued to resist any suggestion of negotiations with Hitler. Many of the relevant documents are still sealed — after all these years — but it is clear that a strong peace party existed in the country and the government. It included Lloyd George in the House of Commons, and Halifax, the Foreign Secretary, in the Cabinet. Even after the fall of France, Churchill rejected Hitler's renewed peace overtures. This, more than anything else, is supposed to be the foundation of his greatness. The British historian John Charmley raised a storm of outraged protest when he suggested that a negotiated peace in 1940 might have been to the advantage of Britain and Europe. A Yale historian, writing in the *New York Times Book Review*, referred to Charmley's thesis as "morally sickening." Yet Charmley's scholarly and detailed work makes the crucial point that Churchill's adamant refusal even to listen to peace terms in 1940 doomed what he claimed was dearest to him — the Empire and a Britain that was non-socialist and independent in world affairs. One may add that it probably also doomed European Jewry. It is amazing that seventy-five years after the fact, there are critical theses concerning World War II that are offlimits to historical debate.

Lloyd George, Halifax, and the others were open to a compromise peace because they understood that Britain and the Dominions alone could not defeat Germany. After the fall of France, Churchill's aim of total victory could be realized only under one condition: that the United States become embroiled in another world war. No wonder that Churchill put his heart and soul into ensuring precisely that.

After a talk with Churchill, Joseph Kennedy, American ambassador to Britain, noted: "Every hour will be spent by the British in trying to figure out how we can be gotten in." When he left from Lisbon on a ship to New York, Kennedy pleaded with the State Department to announce that if the ship should happen to blow up mysteriously in the

mid-Atlantic, the United States would not consider it a cause for war with Germany. In his unpublished memoirs, Kennedy wrote: "I thought that would give me some protection against Churchill's placing a bomb on the ship."

Kennedy's fears were perhaps not exaggerated. For, while it had been important for British policy in World War I, involving America was the *sine qua non* of Churchill's policy in World War II. In Franklin Roosevelt, he found a ready accomplice. That Roosevelt, through his actions and private words, evinced a clear design for war before December 7, 1941, has never really been in dispute. Arguments have raged over such questions as his possible foreknowledge of the Pearl Harbor attack. In 1948, Thomas A. Bailey, diplomatic historian at Stanford, already put the real pro-Roosevelt case: Franklin Roosevelt repeatedly deceived the American people during the period before Pearl Harbor. . . . He was like a physician who must tell the patient lies for the patient's own good. . . . The country was overwhelmingly noninterventionist to the very day of Pearl Harbor, and an overt attempt to lead the people into war would have resulted in certain failure and an almost certain ousting of Roosevelt in 1940, with a complete defeat of his ultimate aims.

Churchill himself never bothered to conceal Roosevelt's role as co-conspirator. In January, 1941, Harry Hopkins visited London. Churchill described him as "the most faithful and perfect channel of communication between the President and me . . . the main prop and animator of Roosevelt himself": I soon comprehended [Hopkins's] personal dynamism and the outstanding importance of his mission . . . here was an envoy from the President of supreme importance to our life. With gleaming eye and quiet, constrained passion he said: "The President is determined that we shall win the war together. Make no mistake about it. He has sent me here to tell you that at all costs and by all means he will carry you through, no matter what happens to him — there is nothing that he will not do so far as he has human power." There he sat, slim, frail, ill, but absolutely glowing with refined comprehension of the Cause. It was to be the defeat, ruin, and slaughter of Hitler, to the exclusion of all other purposes, loyalties and aims.

In 1976, the public finally learned the story of William Stephenson, the British agent code named "Intrepid," sent by Churchill to the United States in 1940. Stephenson set up headquarters in Rockefeller Center, with orders to use any means necessary to help bring the United States into the war. With the full knowledge and cooperation of Roosevelt and the collaboration of federal agencies, Stephenson and his 300 or so agents "intercepted mail, tapped wires, cracked safes, kidnapped, . . . rumor mongered" and incessantly smeared their favorite targets, the "isolationists." Through Stephenson, Churchill was virtually in control of William Donovan's organization, the embryonic US intelligence service.

Churchill even had a hand in the barrage of pro-British, anti-German propaganda that issued from Hollywood in the years before the United States entered the war. Gore Vidal, in *Screening History*, perceptively notes that starting around 1937, Americans were subjected to one film after another glorifying England and the warrior heroes who built the Empire. As spectators of these productions, Vidal says: "We served neither

Lincoln nor Jefferson Davis; we served the Crown." A key Hollywood figure in generating the movies that "were making us all weirdly English" was the Hungarian émigré and friend of Churchill, Alexander Korda. Vidal very aptly writes:

"For those who find disagreeable today's Zionist propaganda, I can only say that gallant little Israel of today must have learned a great deal from the gallant little Englanders of the 1930s. The English kept up a propaganda barrage that was to permeate our entire culture ... Hollywood was subtly and not so subtly infiltrated by British propagandists."

While the Americans were being worked on, the two confederates consulted on how to arrange for direct hostilities between the United States and Germany. In August 1941, Roosevelt and Churchill met at the Atlantic conference. Here they produced the Atlantic Charter, with its "four freedoms," including "the freedom from want" — a blank-check to spread Anglo- American Sozialpolitik around the globe. When Churchill returned to London, he informed the Cabinet of what had been agreed to. Thirty years later, the British documents were released. Here is how the New York Times reported the revelations:

"Formerly top secret British Government papers made public today said that President Franklin D. Roosevelt told Prime Minister Winston Churchill in August, 1941, that he was looking for an incident to justify opening hostilities against Nazi Germany. . . . On August 19 Churchill reported to the War Cabinet in London on other aspects of the Newfoundland [Atlantic Charter] meeting that were not made public. . . . "He [Roosevelt] obviously was determined that they should come in. If he were to put the issue of peace and war to Congress, they would debate it for months," the Cabinet minutes added. "The President had said he would wage war but not declare it and that he would become more and more provocative. If the Germans did not like it, they could attack American forces. . . . Everything was to be done to force an incident.""

On July 15, 1941, Admiral Little, of the British naval delegation in Washington, wrote to Admiral Pound, the First Sea Lord: "the brightest hope for getting America into the war lies in the escorting arrangements to Iceland, and let us hope the Germans will not be slow in attacking them." Little added, perhaps jokingly: "Otherwise I think it would be best for us to organize an attack by our own submarines and preferably on the escorti' A few weeks earlier, Churchill, looking for a chance to bring America into the war, wrote to Pound regarding the German warship Prinz Eugen: "It would be better for instance that she should be located by a US ship as this might tempt her to fire on that ship, thus providing the incident for which the US government would be so grateful." Incidents in the North Atlantic did occur, increasingly, as the United States approached war with Germany.

But Churchill did not neglect the "back door to war" — embroiling the United States with Japan — as a way of bringing America into the conflict with Hitler. Sir Robert Craigie, the British ambassador to Tokyo, like the American ambassador Joseph Grew, was working feverishly to avoid war. Churchill directed his foreign secretary, Anthony

Eden, to whip Craigie into line: He should surely be told forthwith that the entry of the United States into war either with Germany and Italy or with Japan, is fully conformable with British interests. Nothing in the munitions sphere can compare with the importance of the British Empire and the United States being co-belligerent.

Churchill threw his influence into the balance to harden American policy towards Japan, especially in the last days before the Pearl Harbor attack. A sympathetic critic of Churchill, Richard Lamb, has recently written:

“Was [Churchill] justified in trying to provoke Japan to attack the United States? . . . in 1941 Britain had no prospect of defeating Germany without the aid of the USA as an active ally. Churchill believed Congress would never authorize Roosevelt to declare war on Germany. In war, decisions by national leaders must be made according to their effect on the war effort. There is truth in the old adage: “All’s fair in love and war.”

But what of the American Republic? What does it mean for us that a president collaborated with a foreign head of government to entangle us in a world war? The question would have mattered little to Churchill. He had no concern with the United States as a sovereign, independent nation, with its own character and place in the scheme of things. For him, Americans were one of “the English-speaking peoples.” He looked forward to a common citizenship for Britons and Americans, a “mixing together,” on the road to Anglo-American world hegemony.

But the Churchill-Roosevelt intrigue should, one might think, matter to Americans. Here, however, criticism is halted before it starts. A moral postulate of our time is that in pursuit of the destruction of Hitler, all things were permissible. Yet why is it self-evident that morality required a crusade against Hitler in 1939 and 1940, and not against Stalin? At that point, Hitler had slain his thousands, but Stalin had already slain his millions. In fact, up to June, 1941, the Soviets behaved far more murderously toward the Poles in their zone of occupation than the Nazis did in theirs. Around 1,500,000 Poles were deported to the Gulag, with about half of them dying within the first two years. As Norman Davies writes: “Stalin was outpacing Hitler in his desire to reduce the Poles to the condition of a slave nation.” Of course, there were balance-of-power considerations that created distinctions between the two dictators. But it has yet to be explained why there should exist a double standard ordaining that compromise with one dictator would have been “morally sickening,” while collaboration with the other was morally irreproachable.

Early in the war, Churchill, declared: “I have only one aim in life, the defeat of Hitler, and this makes things very simple for me.” “Victory — victory at all costs,” understood literally, was his policy practically to the end. This points to Churchill’s fundamental and fatal mistake in World War II: his separation of operational from political strategy. To the first — the planning and direction of military campaigns — he devoted all of his time and energy; after all, he did so enjoy it. To the second, the fitting of military operations to the larger and much more significant political aims they were supposed to serve, he devoted no effort at all. Stalin, on the other hand, understood perfectly that the entire

purpose of war is to enforce certain political claims. This is the meaning of Clausewitz's famous dictum that war is the continuation of policy by other means. On Eden's visit to Moscow in December 1941, with the Wehrmacht in the Moscow suburbs, Stalin was ready with his demands: British recognition of Soviet rule over the Baltic states and the territories he had just seized from Finland, Poland, and Romania. (They were eventually granted.) Throughout the war he never lost sight of these and other crucial political goals. But Churchill, despite frequent prodding from Eden, never gave a thought to his, whatever they might be. His approach was: "First beat Hitler, then start thinking of the future of Britain and Europe." Churchill put in so many words: "the defeat, ruin, and slaughter of Hitler, to the exclusion of all other purposes, loyalties and aims."

Churchill's policy of all-out support of Stalin foreclosed other, potentially more favorable approaches. The military expert Hanson Baldwin, for instance, stated:

"There is no doubt whatsoever that it would have been in the interest of Britain, the United States, and the world to have allowed — and indeed, to have encouraged — the world's two great dictatorships to fight each other to a frazzle. Such a struggle, with its resultant weakening of both Communism and Nazism, could not but have aided in the establishment of a more stable peace. Instead of adopting this approach, or, for example, promoting the overthrow of Hitler by anti-Nazi Germans — instead of even considering such alternatives — Churchill from the start threw all of his support to Soviet Russia."

Franklin Roosevelt's fatuousness towards Joseph Stalin is well-known. He looked on Stalin as a fellow "progressive" and an invaluable collaborator in creating the future New World Order. Roosevelt's nauseating flattery of Stalin is easily matched by Churchill's. Just like Roosevelt, Churchill heaped fulsome praise on the Communist murderer, and was anxious for Stalin's personal friendship. Moreover, his adulation of Stalin and his version of Communism — so different from the repellent "Trotskyite" kind — was no different in private than in public. In January 1944, he was still speaking to Eden of the "deep-seated changes which have taken place in the character of the Russian state and government, the new confidence which has grown in our hearts towards Stalin." In a letter to his wife, Clementine, Churchill wrote, following the October 1944 conference in Moscow: "I have had very nice talks with the old Bear. I like him the more I see him. Now they respect us & I am sure they wish to work with us." Writers like Isaiah Berlin, who try to give the impression that Churchill hated or despised all dictators, including Stalin, are either ignorant or dishonest.

Churchill's benign view of Stalin and Russia contrasts sharply with his view of Germany. Behind Hitler, Churchill discerned the old specter of Prussianism, which had caused, allegedly, not only the two world wars, but the Franco Prussian War as well. What he was battling now was "Nazi tyranny and Prussian militarism," the "two main elements in German life which must be absolutely destroyed." In October 1944, Churchill was still explaining to Stalin that: "The problem was how to prevent Germany getting on her feet in the lifetime of our grandchildren." Churchill harbored a "confusion of mind on the subject of the Prussian aristocracy, Nazism, and the sources of German militarist

expansionism . . . [his view] was remarkably similar to that entertained by Sir Robert Vansittart and Sir Warren Fisher; that is to say, it arose from a combination of almost racist antipathy and balance of power calculations." Churchill's aim was not simply to save world civilization from the Nazis, but, in his words, the "indefinite prevention of their [the Germans'] rising again as an Armed Power."

Little wonder, then, that Churchill refused even to listen to the pleas of the anti-Hitler German opposition, which tried repeatedly to establish liaison with the British government. Instead of making every effort to encourage and assist an anti-Nazi coup in Germany, Churchill responded to the feelers sent out by the German resistance with cold silence. Reiterated warnings from Adam von Trott and other resistance leaders of the impending "bolshevization" of Europe made no impression at all on Churchill. A recent historian has written, "by his intransigence and refusal to countenance talks with dissident Germans, Churchill threw away an opportunity to end the war in July 1944." To add infamy to stupidity, Churchill and his crowd had only words of scorn for the valiant German officers even as they were being slaughtered by the Gestapo.

In place of help, all Churchill offered Germans looking for a way to end the war before the Red Army flooded into central Europe was the slogan of unconditional surrender. Afterwards, Churchill lied in the House of Commons about his role at Casablanca in connection with Roosevelt's announcement of the policy of unconditional surrender, and was forced to retract his statements. Eisenhower, among others, strenuously and persistently objected to the unconditional surrender formula as hampering the war effort by raising the morale of the Wehrmacht. In fact, the slogan was seized on by Goebbels, and contributed to the Germans' holding out to the bitter end. The pernicious effect of the policy was immeasurably bolstered by the Morgenthau Plan, which gave the Germans a terrifying picture of what "unconditional surrender" would mean. This plan, initialed by Roosevelt and Churchill at Quebec, called for turning Germany into an agricultural and pastoral country; even the coal mines of the Ruhr were to be wrecked. The fact that it would have led to the deaths of tens of millions of Germans made it a perfect analog to Hitler's schemes for dealing with Russia and the Ukraine.

Churchill was initially averse to the plan. However, he was won over by Professor Lindemann, as maniacal a German-hater as Morgenthau himself. Lindemann stated to Lord Moran, Churchill's personal physician: "I explained to Winston that the plan would save Britain from bankruptcy by eliminating a dangerous competitor. . . . Winston had not thought of it in that way, and he said no more about a cruel threat to the German people." According to Morgenthau, the wording of the scheme was drafted entirely by Churchill. When Roosevelt returned to Washington, Hull and Stimson expressed their horror, and quickly disabused the president. Churchill, on the other hand, was unrepentant. When it came time to mention the Morgenthau Plan in his history of the war, he distorted its provisions and, by implication, lied about his role in supporting it.

War Crimes Discreetly Veiled

There are a number of episodes during the war revealing of Churchill's character that deserve to be mentioned. A relatively minor incident was the British attack on the French fleet, at Mers-el-Kebir (Oran), off the coast of Algeria. After the fall of France, Churchill demanded that the French surrender their fleet to Britain. The French declined, promising that they would scuttle the ships before allowing them to fall into German hands. Against the advice of his naval officers, Churchill ordered British ships off the Algerian coast to open fire. About 1500 French sailors were killed. This was obviously a war crime, by anyone's definition: an unprovoked attack on the forces of an ally without a declaration of war. At Nuremberg, German officers were sentenced to prison for less. Realizing this, Churchill lied about Mers-el- Kebir in his history, and suppressed evidence concerning it in the official British histories of the war.

But the great war crime which will be forever linked to Churchill's name is the terror-bombing of the cities of Germany that in the end cost the lives of around 600,000 civilians and left some 800,000 seriously injured. (Compare this to the roughly 70,000 British lives lost to German air attacks. In fact, there were nearly as many Frenchmen killed by Allied air attacks as there were Englishmen killed by Germans).

The plan was conceived mainly by Churchill's friend and scientific advisor, Professor Lindemann, and carried out by the head of Bomber Command, Arthur Harris ("Bomber Harris"). Harris stated: "In Bomber Command we have always worked on the assumption that bombing anything in Germany is better than bombing nothing." Harris and other British airforce leaders boasted that Britain had been the pioneer in the massive use of strategic bombing. J.M. Spaight, former Principal Assistant Secretary of the Air Ministry, noted that while the Germans (and the French) looked on air power as largely an extension of artillery, a support to the armies in the field, the British understood its capacity to destroy the enemy's home-base. They built their bombers and established Bomber Command accordingly.

Brazenly lying to the House of Commons and the public, Churchill claimed that only military and industrial installations were targeted. In fact, the aim was to kill as many civilians as possible — thus, "area" bombing, or "carpet" bombing — and in this way to break the morale of the Germans and terrorize them into surrendering. Harris at least had the courage of his convictions. He urged that the government openly announce that:

"...the aim of the Combined Bomber Offensive ... should be unambiguously stated [as] the destruction of German cities, the killing of German workers, and the disruption of civilized life throughout Germany."

The campaign of murder from the air leveled Germany. A thousand-year-old urban culture was annihilated, as great cities, famed in the annals of science and art, were reduced to heaps of smoldering ruins. There were high points: the bombing of Lübeck, when that ancient Hanseatic town "burned like kindling"; the 1000-bomber raid over Cologne, and

the following raids that somehow, miraculously, mostly spared the great Cathedral but destroyed the rest of the city, including thirteen Romanesque churches; the firestorm that consumed Hamburg and killed some 42,000 people. No wonder that, learning of this, a civilized European man like Joseph Schumpeter, at Harvard, was driven to telling “anyone who would listen” that Churchill and Roosevelt were destroying more than Genghis Khan.

The most infamous act was the destruction of Dresden, in February 1945. According to the official history of the Royal Air Force: “The destruction of Germany was by then on a scale which might have appalled Attila or Genghis Khan.” Dresden, which was the capital of the old kingdom of Saxony, was an indispensable stop on the Grand Tour, the baroque gem of Europe. The war was practically over, the city filled with masses of helpless refugees escaping the advancing Red Army. Still, for three days and nights, from February 13 to 15, Dresden was pounded with bombs. At least 30,000 people were killed, perhaps as many as 135,000 or more. The Zwinger Palace; Our Lady’s Church (die Frauenkirche); the Bruhl Terrace, overlooking the Elbe where, in Turgenev’s *Fathers and Sons*, Uncle Pavel went to spend his last years; the Semper Opera House, where Richard Strauss conducted the premiere of *Rosenkavalier*; and practically everything else was incinerated. Churchill had fomented it. But he was shaken by the outcry that followed. While in Georgetown and Hollywood, few had ever heard of Dresden, the city meant something in Stockholm, Zurich, and the Vatican, and even in London. What did our hero do? He sent a memorandum to the Chiefs of Staff:

“It seems to me that the moment has come when the question of bombing of German cities simply for the sake of increasing the terror, though under other pretexts, should be reviewed. Otherwise, we shall come into control of an utterly ruined land. . . . The destruction of Dresden remains a serious query against the conduct of Allied bombing. I feel the need for more precise concentration upon military objectives . . . rather than on mere acts of terror and wanton destruction, however impressive.”

The military chiefs saw through Churchill’s contemptible ploy: realizing that they were being set up, they refused to accept the memorandum. After the war, Churchill casually disclaimed any knowledge of the Dresden bombing, saying: “I thought the Americans did it.”

And still the bombing continued. On March 16, in a period of 20 minutes, Würzburg was razed to the ground. As late as the middle of April, Berlin and Potsdam were bombed yet again, killing another 5,000 civilians. Finally, it stopped; as Bomber Harris noted, there were essentially no more targets to be bombed in Germany. It need hardly be recorded that Churchill supported the atom-bombing of Hiroshima and Nagasaki, which resulted in the deaths of another 100,000 or more civilians. When Truman fabricated the myth of the “500,000 U.S. lives saved” by avoiding an invasion of the Home Islands — the highest military estimate had been 46,000 — Churchill topped his lie: the atom-bombings had saved 1,200,000 lives, including 1,000,000 Americans, he fantasized.

The eagerness with which Churchill directed or applauded the destruction of cities from

the air should raise questions for those who still consider him the great “conservative” of his — or perhaps of all — time. They would do well to consider the judgment of an authentic conservative like Erik von Kuehnelt-Leddihn, who wrote: “Non-Britishers did not matter to Mr. Churchill, who sacrificed human beings — their lives, their welfare, their liberty — with the same elegant disdain as his colleague in the White House.”

By 1946, Churchill was complaining in a voice of outrage of the happenings in eastern Europe: “From Stettin on the Baltic to Trieste on the Adriatic, an iron curtain has descended over Europe.” Goebbels had popularized the phrase “iron curtain,” but it was accurate enough. The European continent now contained a single, hegemonic power. “As the blinkers of war were removed,” John Charmley writes, “Churchill began to perceive the magnitude of the mistake which had been made.” In fact, Churchill’s own expressions of profound self-doubt comport oddly with his admirers’ retrospective triumphalism. After the war, he told Robert Boothby:

“Historians are apt to judge war ministers less by the victories achieved under their direction than by the political results which flowed from them. Judged by that standard, I am not sure that I shall be held to have done very well.” In the preface to the first volume of his history of World War II, Churchill explained why he was so troubled:

“The human tragedy reaches its climax in the fact that after all the exertions and sacrifices of hundreds of millions of people and of the victories of the Righteous Cause, we have still not found Peace or Security, and that we lie in the grip of even worse perils than those we have surmounted.”

With the balance of power in Europe wrecked by his own policy, there was only one recourse open to Churchill: to bring America into Europe permanently. Thus, his anxious expostulations to the Americans, including his Fulton, Missouri “Iron Curtain” speech. Having destroyed Germany as the natural balance to Russia on the continent, he was now forced to try to embroil the United States in yet another war — this time a Cold War, that would last 45 years, and change America fundamentally, and perhaps irrevocably.

Why won't you come?

From “Churchill’s War”:

“War is a game to be played with a smiling face”, Churchill had once declared. The new prime minister (he became Prime Minister on May 10th 1940, the same day when the German offensive started in France) smiled as he blamed the defeat in Norway on traitors like Vidkun Quisling and on his compatriots who had failed to destroy tunnels and viaducts to prevent German reinforcements reaching Trondheim. As Hitler opened his western offensive, Winston smiled again, blamed the overrunning of the Low Countries once more on traitors, and relied on his friend General Georges and his indomitable Army of the North-East for victory in France. For the time being he remained at Admiralty House as an act of charity to Mr Chamberlain, but also because he knew how fragile

were the buildings in Downing-street. The staff at No. 10 feared it was the end of an era all the same. Chamberlain's secretary dourly hoped that his old master would soon be back in office. Overseas reactions to Winston's assumption of power were equally mixed. Canada's Mackenzie King cabled support, but Roosevelt did not: when the news irrupted into his own cabinet he remarked that, though Churchill was the best man that England had, he was drunk half of the time. Winston was, he could not forget, one of the few public men who had ever been rude to him. After being elected, Churchill was busy filling his cabinet of ministers.

Having learned in Norway belated lessons about air power, Churchill created a ministry of aircraft production and gave it to this potent Canadian one of the more inspired appointments in his cabinet. This process of cabinet-making distracted him until three A.M. on the thirteenth, when he grew bored with the process. My government, he told Macmillan, is the most broad based that Britain has ever known. He summoned them to the admiralty that afternoon. I have nothing to offer, he told them, but blood, toil, tears and sweat. He rather liked the sound of that. Glancing up as though the skies might fill with Hitler's bombers at any moment, he commented to Dalton afterwards, not without pleasurable anticipation, 'I expect all these buildings will look a bit different in two or three weeks time'.

Why would Churchill expect to see German bombers over London? Just because he has become Prime Minister a few days prior?

Irving pointed out that Churchill rejected Hitler's peace offers in 1939, 1940, and 1941. (Irving supports the thesis that Rudolf Hess's flight to Scotland was ordered by the Führer). Irving pinpointed one critical moment, and supplied the background:

"The crucial moment when he managed to kill this peace offensive in England was July 1940. If we look at the one date, July the 20th, this I think was something of a watershed between the old era of peace, the greatness of the British Empire and the new era, the new era of nuclear deterrent and the holocaust, the nuclear holocaust. July 20, 1940: Mr. Churchill is lying in bed that Sunday out in Chequers, when he gets a strange message. It's an intercept of a German ambassador's telegram in Washington to Berlin. It's only just been revealed, of course, that we were reading all of the German codes – not only the German Army, Air Force and Navy Codes, but also the German embassy codes. And if you're silly enough to believe everything that's written in the official history of British Intelligence, you will understand that the only reason that they released half of the stories is to prevent us from trying to find out the other half. And what matters is that we are reading the German diplomatic codes as well. On July 20th, the German ambassador in Washington sent a message to Berlin saying that the British ambassador in Washington had asked him very quietly, very confidentially, just what the German peace terms were. This, of course, was the one thing that Churchill could never allow to happen, that the British find out what Hitler's peace terms are. He sends an immediate message to the foreign office, to Lord Halifax, saying, "Your ambassador in Washington is strictly forbidden to have any further contacts with the German ambassador, even

indirectly." They were communicating through a Quaker intermediary.

Now, on the same day, Churchill sent a telegram to Washington ordering Lord Lothian, the British ambassador in Washington, to have nothing to do with the German ambassador. And the same day, he takes a third move to ensure that the peace moves in Britain are finally strangled at birth. He orders Sir Charles Portal to visit him at Chequers, the country residence of British prime ministers. Sir Charles Portal was Commander in Chief of Bomber Command. Now what is the significance? Well, the significance is this. Up to July 1940, not one single German bomb has fallen on British towns. Hitler had given orders that no British towns are to be bombed and, above all, bombing of London is completely forbidden and embargoed. Churchill knows this, because he's reading the German code. He's reading the German Air Force signals, which I can now read in the German files. Churchill is reading the signals, and he knows that Hitler is not doing him the favor.

Hitler is still hoping that this madman in England will see reason or that he will be outvoted by his cabinet colleagues. So he's not doing Churchill the favor of bombing any English towns. Churchill is frantic because he thinks he's being outsmarted by Hitler. On July the 20th he sends for Sir Charles Portal, the Chief of Bomber Command, and he says to Sir Charles Portal, as we know from records from Command to the Air Ministry, "When is the earliest that you could launch a vicious air attack on Berlin?" Sir Charles Portal replies to Winston, "I'm afraid we can't do it now, not until September because the nights aren't long enough to fly from England to Berlin and back in the hours of darkness. September, perhaps, and in September we will have the first hundred of the new Sterling bombers ..." But he also says, "I warn you, if you do that, the Germans will retaliate. At present they're not bombing English targets, they're not bombing civilian targets at all and you know why. And if you bomb Berlin, then Hitler will retaliate against English civilian targets." And Churchill just twinkles when he gets this reply, because he knows what he wants.

We know what he wants because he's told Joe Kennedy, the American Ambassador - Joseph P. Kennedy, father of the late President - "I want the Germans to start bombing London as early as possible because this will bring the Americans into the war when they see the Nazis' frightfulness, and above all it will put an end to this awkward and inconvenient peace movement that's afoot in my own Cabinet and among the British population." I've opened Kennedy's diary. I've also read Kennedy's telegrams back to the State Department in Washington. They're buried among the files. You can't find them easily, but they are worth reading, and you see in detail what Churchill was telling him. What cynicism. Churchill deliberately provoking the bombing of his own capital in order to kill the peace movement. He's been warned this would be the consequence, but he needs it. And still Hitler doesn't do him the favor."

Hitler not retaliating at first made Churchill angry. From the memories of Charles de Gaulle we know that when Charles de Gaulle visited him 2 weeks later, on August 4th 1940, Churchill stands in the middle of his lawn, striking his fist angry into the sky shouting

'WHY WON'T YOU COME?' and de Gaulle did not understand what this scheme was all about. On August 24th however, Churchill finally gets his chance: A single German plane flying in from the West along the Themse flying one loop too far on the Themse and drops his bombs not on Rotherhithe (where the Oil refineries were) but on the east end of London, just in sight of greater London, killing large numbers of Chickens and damaging some buildings. Churchill gets the news on the following day, on the morning on August 25th 9:10 A.M.. He then personally telephones the Headquarters of Bomber-Command and he speaks with the Deputy-Commander in Chief telling him "I want a minimum of 100 bombers attacking Berlin tonight in retaliation for this savage raid on London". This is Mr. Churchill, using a direct telephone link to Bomber-Command, bypassing Cabinet, bypassing Parliament, and bypassing the Air-Ministry. This air raid is continued 6 or 7 times during the following 10 days and Hitler still refuses to respond and on Sept. 4th 1940, Hitler sends a lawyer to the Stockholm embassy of the British and tell the British Ambassador there what the German peace offer is. The lawyer is told by the Ambassador that his order are to not accept any information given to him by a German Emissary or listen to any German offers, "Mr. Churchill's personal orders". At this point, the mission of Rudolf Hess for peace with Britain is being planned, because Hess had contacts in Scotland and he shall make personal contact to deliver German desires for peace.

In a speech on Sept. 4th 1940, Hitler declares to finally retaliate and thus, making Churchill's "dreams" come true:

"It is a wonderful thing to see our nation at war, in its fully disciplined state. This is exactly what we are now experiencing at this time, as Mr Churchill is demonstrating to us the aerial night attacks which he has concocted. He is not doing this because these air raids might be particularly effective, but because his Air Force cannot fly over German territory in daylight. Whereas German aviators and German planes fly over English soil daily, there is hardly a single Englishman who comes across the North Sea in daytime. They therefore come during the night — and as you know, release their bombs indiscriminately and without any plan on to residential areas, farmhouses and villages. Wherever they see a sign of light, a bomb is dropped on it. For three months past, I have not ordered any answer to be given, thinking that they would stop this nonsensical behaviour. Mr Churchill has taken this to be a sign of our weakness. You will understand that we shall now give a reply, night for night, and with increasing force. And if the British Air Force drops two, three or four thousand kilos of bombs, then we will now drop 150,000, 180,000, 230,000, 300,000 or 400,000 kilos, or more, in one night. If they declare that they will attack our cities on a large scale, we will erase theirs! We will put a stop to the game of these night-pirates, as God is our witness. The hour will come when one or the other of us will crumble, and that one will not be National Socialist Germany. I have already carried through such a struggle once in my life, up to the final consequences, and this then led to the collapse of the enemy who is now still sitting there in England on Europe's last island."

And thus, Germany retaliated against Britain bombing civilians.

The corrupt Drunkard

Churchill however, had for years been barracking Parliament, calling for a war on Hitler, earning himself the reputation as a “war monger”. Why?

Winston Churchill enjoyed a lavish lifestyle, for example, smoking expensive cigars, and drinking a bottle of champagne for breakfast every morning (even during the war when the British people were struggling with rationing). During his “wilderness years”, he had become bankrupt, and as well as struggling to finance his luxury lifestyle, he was about to lose Chartwell, his family stately home. Between 1930 and 1939 he was financed by a slush fund emanating from a secret pressure group known as the Focus. British historian David Irving has investigated, and in his book on Churchill, “Churchill’s War” details who the Focus group were and their arrangement with Churchill. Irving on the Focus Group:

“The Focus was financed by a slush fund set up by some of London’s wealthiest businessmen — principally, businessmen organized by the Board of Jewish Deputies in England, whose chairman was a man called Sir Bernard Waley Cohen. Sir Bernard Waley Cohen held a private dinner party at his apartment on July 29, 1936. This is in Waley Cohen’s memoirs . . . The 29th of July, 1936, Waley Cohen set up a slush fund of 50,000 pounds for The Focus, the Churchill pressure group. Now, 50,000 pounds in 1936, multiply that by ten, at least, to get today’s figures. By another three or four to multiply that into Canadian dollars. So, 40 times 50,000 pounds — about \$2 million in Canadian terms — was given by Bernard Waley Cohen to this secret pressure group of Churchill in July 1936. The purpose was — the tune that Churchill had to play was — fight Germany. Start warning the world about Germany, about Nazi Germany. Churchill, of course, one of our most brilliant orators, a magnificent writer, did precisely that. For two years, The Focus continued to militate, in fact, right through until 1939. And I managed to find the secret files of The Focus, I know the names of all the members. I know all their secrets. I know how much money they were getting, not just from The Focus, but from other governments. I use the word “other governments” advisedly because one of my sources of information for my Churchill biography is, in fact, the Chaim Weizmann Papers in the State of Israel. Israel has made available to me all Churchill’s secret correspondence with Chaim Weizmann, all his secret conferences. It is an astonishing thing, but I, despite my reputation, in a kind of negative sense with these people, am given access to files like that, just the same as the Russian Government has given me complete access to all of the Soviet records of Churchill’s dealings with Ivan Maisky, Joseph Stalin, Molotov and the rest of them. I am the only historian who has been given access to these Russian records. It is a kind of horse trading method that I use when I want access to these files, because it is in these foreign archives we find the truth about Winston Churchill. When you want the evidence about his tax dodging in 1949 and thereabouts, you are not going to look in his own tax files, you’re going to look in the files of those who employed him, like the Time/Life Corporation of America. That’s where you look. And when you’re looking for evidence about who was putting money up for Churchill when he was in the

wilderness and who was funding this secret group of his, The Focus, you're not going to look in his files. Again, you're going to look in the secret files, for example, of the Czech government in Prague, because that is where much of the money was coming from."

Irving then revealed further details of Churchill's financing by the Czechs, as well as the facts of Churchill's financial rescue by a wealthy banker of Austro-Jewish origins, Sir Henry Strakosch, who, in Irving's words, emerged "out of the woodwork of the City of London, that great pure international financial institution." When Churchill was bankrupted overnight in the American stock market crash of 1937-1938, it was Strakosch who was instrumental in setting up the central banks of South Africa and India, who bought up all Churchill's debts. When Strakosch died in 1943, the details of his will, published in the London Times, included a bequest of £20,000 to the then Prime Minister, eliminating the entire debt. Irving dealt with Churchill's performance as a wartime leader, first as Britain's First Lord of the Admiralty and then as Prime Minister. The British historian adverted to Churchill's "great military defeat in Norway, which he himself engineered and pioneered," and mentioned the suspicion of Captain Ralph Edwards, who was on Churchill's staff at the time, that Churchill had deliberately caused the fiasco to bring down Neville Chamberlain and replace him as prime minister, which subsequently happened.

From Irving we also learn about his alcoholism:

"His alcoholism was a family heirloom. His father had been an alcoholic; there was the same problem in Clementine's family, and it was an affliction inherited in turn by their offspring. It would lead to Sarah's arrest for disorderly conduct in California and to her remand in a women's prison in London. It plagued Randolph all his life. An F.B.I. agent informed J. Edgar Hoover in July 1942 that Randolph Churchill was in El Morocco until four A.M. today [and] . . . was tight. A pretty picture. Randolph stormed out of a New York television interview when questioned about his drinking. When Winston's grandson was only three so Beaverbrook tut-tutted to the little boy's mother he ran down the hall to ask me to have a cocktail with him. Churchill settled his substantial London liquor bills with Hatch Mansfield, his wine merchants, on the morning he became prime minister. One bill he would never pay, however, recalled Ralph Mansfield to the Daily Telegraph, was his wife's gin bill. Clementine always had to settle that herself. The family made light of this curse. Writing to her mother about a raging toothache, Sarah would add humorously, so far, the only relief has been obtained by an old-fashioned treatment of which Papa will approve! Holding neat whisky in my mouth. Oh delicious anæsthesia! Local, then total!! Winston would quaff 28 and 34 Pol Roger champagne throughout a meal rather than any wine, and he made light of that as well. Several times he called upon the Prof. to compute his total consumption assuming he had drunk half a bottle a day for the last half century. The Prof. made the slide-rule calculation once on the way over for the Atlantic meeting with Roosevelt in 1941 and gave him the result in liquid tons of champagne. Churchill was disgruntled to find that it would not even half fill the dining saloon. Ten years later Churchill was still inquiring the total."

Churchill also was in permanent correspondence with high ranking Zionist Jews, such as Chaim Weizmann (Zionist leader and Israeli statesman who served as President of the Zionist Organization and later as the first President of Israel). The letters exchanged between these two individuals can be easily found with a quick online search, but they are too long to be presented in full here. Some excerpts:

Transcript of Sept. 10, 1941 Letter from Chaim Weizmann to Winston Churchill that asserts that "The Jews" helped to put the U.S. into World War 1 (Balfourt Declaration) against Germany, and would be keen to do it again:

"I have spent months in America, traveling up and down the country, and clearly searching the American scene. Forces over there are finely balanced; the position is uncertain. There is only one big ethnic group which is willing to stand, to a man, for Great Britain, and a policy of "all-out-aid" for her: the five million American Jews. From Secretary Morgenthau, Governor Lehman, Justice Frankfurter, down to the simplest Jewish workman or trader, they are conscious of all that this struggle against Hitler implies. It has been repeatedly acknowledged by British Statesmen that it was the Jews who, in the last war, effectively helped to tip the scales in America in favour of Great Britain. They are keen to do it - and may do it - again . But you are dealing with human beings, with flesh and blood, and the most elementary feeling of self respect sets limits to service, however willing, if the response is nothing but rebuffs and humiliations. American Jewry waits for a word - a call - from His Majesty's Government. The formation of a Jewish fighting force would be that signal. Equipment cannot be the determining factor; there will always be some alternative use for whatever equipment is available; and fresh recruits are all the time being called up in the British Commonwealth by their hundreds of thousands, while we are being told to wait for one single division because of lack of equipment. If the spirit of American Jewry is roused, the influence which this will exercise on America's rather sluggish production will return to you that equipment with manifold gains."

Weizmann also said in a Speech on December 3, 1942, in New York:

"We are not denying and are not afraid to confess that this war is our war and that it is waged for the liberation of Jewry... Stronger than all fronts together is our front, that of Jewry. We are not only giving this war our financial support on which the entire war production is based, we are not only providing our full propaganda power which is the moral energy that keeps this war going. The guarantee of victory is predominantly based on weakening the enemy forces, on destroying them in their own country, within the resistance. **And we are the Trojan horses in the enemy's fortress.** Thousands of Jews living in Europe constitute the principal factor in the destruction of our enemy. There, our front is a fact and the most valuable aid for victory."

12.9 Stalins War

Note: There might be many grammar errors in this chapter due to the copy-paste function not recognizing “Th” correctly.

Stalin and the Destruction of Soviet Strategic Aviation

Stalin could have averted World War II with one stroke of his pen. He had many such opportunities. Here is one of them: In 1936, the Soviet Union developed the heavy high-speed, high-altitude bomber TB-7. Air Force Major General V. Shumikhin: “At altitudes above 10,000 meters the TB-7 could not be reached by the majority of existing fighters at that time, and the ceiling of 12,000 meters made it untouchable even by anti-aircraft artillery.” cannons and 12.7-mm heavy machine guns. Bombs of the largest caliber could fit in the large bomb compartment. . . . [It was] unreachable at maximum altitude of its flight by anti-aircraft cannons and fighters of that time. The TB-7 was the most powerful bomber in the world.”⁴ “A record-setting plane. . . . Now, we have every reason to assert that the TB-7 was more powerful than the American flying fortress B-17.”

Molotov flew on a TB-7 from Moscow to Britain over occupied Europe. One must remember who ruled the skies above Europe in the spring of 1942, in order to appraise the level of trust of Soviet leadership in this airplane. Molotov did not fear landing on the defendant’s bench in Nazi court, and Stalin did not fear letting Molotov fly. The TB-7 proved itself. It flew over all of Europe, stopped in Britain, flew to America, and returned by the same route, once again flying over German holdings undisturbed. After the war, a commission of the Soviet government conducted an analysis of the German anti-aircraft defenses at the time of Molotov’s flight. It turned out that, along the flight path, German fighters did not go up to intercept the enemy aircraft, there was no alert sounded at the anti-aircraft batteries, the observation posts did not register the flight of the TB-7 at all. Simply put, the German anti-aircraft defenses not only could not take down the TB-7, they could not detect its presence in their air territory. So, long before the war the Soviet Union had created an untouchable bomber, and a government order was prepared to produce a thousand TB-7s by November 1940. What remained to be done? All that was left to do was to sign the order with seven letters: J. STALIN.

With a thousand untouchable TB-7s, any invasion could have been averted. All that had to be done was to invite delegations of certain countries and in their presence somewhere in a remote steppe drop at least one thousand tons of bombs from astounding altitudes. Then follow up with an explanation: it has nothing to do with you, this is a surprise we hold for the capital city of that country which ventures to attack ours. Precision? There is no precision. Why would there be? We drop the bombs from incredible heights. The lack of precision will be corrected through repeated drops. Every day several hundred tons will rain on the capital of the aggressor, until we reach the desired outcome, and then other cities will get a taste of this hailstorm as well. Do you understand what

will happen to the opponent before he has a chance to reach Moscow? The TB-7 is untouchable when in the air, and cannot be attacked by the opponent on land: our bases are hidden far from the borders, and our probable enemies have no strategic aviation to speak of. . . . And now, gentlemen, let us drink to eternal peace. Such a speech could have been given by Stalin's diplomats, if the Soviet Union had several hundred or even a thousand TB-7s. But Stalin decided not to build a thousand TB-7s. Is it possible to understand Stalin's motives? Yes, it is possible. If we compare a thousand TB-7s to a game of chess, this situation is the equivalent of being able to declare checkmate to the opponent's king before the start of the game, and if the partner still ventures to play, one can call checkmate after his first move. If one thousand tons of bombs, which several hundred TB-7s could deliver in one trip, are to be translated into contemporary strategic terms, it is equivalent to one kiloton. This is the language of the nuclear age. If one kiloton is insufficient, in two sorties twice this amount can be delivered. Twenty kilotons equals what (without much precision) was dropped on Hiroshima. A thousand TB-7s is like a nuclear missile, aimed at the enemy's capital. The power is such that, for a potential aggressor, war loses all sense.

In the late 1930s Stalin had the capacity to create an instrument that would serve as a severe warning to Hitler. With one stroke of Stalin's pen on an order to produce a series of TB-7s, the German invasion of Soviet territory could have been averted. Of course, in August 1939 Stalin could not have had a thousand TB-7s. But he could have had two, three, four, or maybe even five hundred. If only Stalin had in due time signed an order for the serial production of the TB-7. To do him justice, it must be noted that Stalin did sign such an order—but then he canceled it. And signed it again! And repealed it again, and again. Four times the production of TB-7s started, and four times it was canceled.¹² After each order, the industry had time to put out three or four TB-7s, and then the order was reversed. Everything started anew, and once again was interrupted. By June 22, 1941, the TB-7 series was not in production.

A question arises: If Stalin had issued the order to produce a thousand TB-7s and did not cancel it, could the Soviet industry have fulfilled such an order? Could it have put out, by the end of 1940, a thousand such airplanes? The creator of the TB-7, Vladimir Petliakov (after Petliakov's tragic death the TB-7 was renamed Pe-8), did not doubt this for a minute. Alexander Mikulin, creator of the engines for the TB-7, was completely certain that Soviet industry could meet such a demand. Professor L. Kerber, the deputy to the airplane designer A. Tupolev, and experts in the air industry S. Eger, S. Leshchenko, E. Stoman, chief engineer of the factory that produced the TB-7s I. Nezval, head technologist of the factory E. Shekunov, and many others on whom production of the TB-7 depended—all thought the task could be accomplished by the designated deadline. Airplane designers V. Shavrov and A. Tupolev held that one thousand TB-7s could be ready by November 1940.

But starting in 1930, they produced a massive amount of other aircrafts. Soviet industry broke its own records—in a short period it put out 819 TB-3s. Air regiments and brigades

were no longer enough. On March 23, 1932, the Soviet Union became the first country in the world to create a heavy bomber corps. In January 1936, the first aviation army was created, a second army in March, and a third aviation army a bit later. No other nation at the time had either an aviation army or even a corps of strategic aviation. A fleet of a thousand heavy bombers is a strategist's dream, and this dream materialized first in the Soviet Union. But that is not all: the plans were for rearming three aviation armies with the newest bombers and additionally deploying three more armies in the Byelorussia, Kiev, and Leningrad military districts.

By the time the TB-7 appeared, production of heavy bombers was as perfected in the Soviet Union as Henry Ford's production of automobiles had become in the United States. The question is not whether or not there would have been enough time to build a thousand TB-7s before the beginning of the war. The question is: why did they not try? By the time the TB-7 came onto the scene, the Soviet Union had created design bureaus capable of creating airplanes that were ahead of their time, and an industry capable of a mass output that surpassed the demand of peacetime. Air academies, pilot schools, and technical schools were opened, the theory of military use was developed, and combat experience was obtained in local conflicts and grandiose training exercises. Air bases, learning centers, and test sites were built; personnel from command staff to machine-gun operators, from navigation officers to engineers to photo-decipherers were trained. Pilots, meteorologists, aviation medics, and others were all ready. Collectives formed, traditions were born, theorists and practitioners were raised. After all this, the country that was the leader in the field of strategic aviation entered World War II without strategic aviation. On Stalin's orders, in November 1940, the Soviet air armies were disbanded. On June 22, 1941, Soviet strategic aviation did not have any armies in its ranks. Only five corps and three separate divisions remained. they were mostly equipped with the DB-3f, which is a magnificent bomber, but not a strategic bomber. they also still had TB-3s, which could be used to transport cargo, but as bombers they were obsolete. As we already know, there were only eleven TB-7s, not even enough to outfit one squadron.

Since it was not Stalin's goal to prevent war, but to destroy the enemy army, he focused on the production of other types of aircraft (with more precision) which would not destroy bridges and roads which would hinder ground forces from taking over enemy territory quickly.

Stalin's Preparations for War: Tanks

Stalin's goal was to develop and mass-produce the best tanks in the world. Tanks were to be the spearhead for the Soviet offensive against Western Europe, and Stalin set about developing them as he built Soviet industry. In 1933, the Red Army adopted the T-28 tank. A variation of this model was designed in 1937—the T-28 PKh (Podvodny Khod—"underwater traversing" tank). Tests showed that if necessary, all series of T-28s could be converted to cross water barriers underwater, at a depth of up to 4.5 meters and

width of up to one kilometer with a stream speed up to one m/s (meter per second).¹ Not a single German, British, American, French, or Japanese tank from the 1930s could compete with the T-28 in terms of weapons, armor, or engine power.

At the end of 1937, the Germans started producing the Pz-IVA, the most powerful German tank of the first half of World War II. It had 15-mm armor.³ The T-28's armor was of higher quality and twice as thick—30 mm. The most powerful German tank had a 250-horsepower engine. The T-28's was twice as powerful: 500 horsepower. The German tank had two machine guns, while the T-28 had four or five. The gun on the German tank was approximately equal to the Soviet one. The T-28 had a 76-mm KT-28 gun, while the German tank had a gun of slightly smaller caliber—75 mm; therefore, the shells were slightly lighter. The T-28 fired shells with an initial speed of 381 m/s. The German Pz-IVA had a slightly longer barrel (16.5 caliber); therefore the speed of the shells was slightly higher—385 m/s. As the muzzle energy of both guns was practically the same, Soviet designers could not reconcile themselves to the fact that the Germans had caught up with them at least in one parameter. In response, starting in 1938, the Soviet T-28 tanks were produced with a new L-10 gun. Its barrel length was 26 calibers. The muzzle velocity of its shells was 555 m/s. The Germans did not catch up with this innovation until 1942. The L-10 Soviet tank gun in 1941 was unrivaled in Germany or anywhere else in the world. "In terms of arms, the T-28 absolutely surpassed all German tanks. The L-10 gun (as well as the KT-28, by the way) could effectively destroy the tanks of the Wehrmacht Heer at distances out of range for their weapons."⁴ The Germans installed the HL-120TR 300-horsepower engine on the later models of their most powerful tank, the Pz-IV. But they still did not catch up with the Soviet 500-horsepower engines. The Germans enhanced the armor to 30 mm. The Soviet response was the T-28 E, with a maximum thickness of 80 mm. The T-28 had sufficient allowances in its design to permit the installation of the 85-mm F-39 gun with a 52-caliber length.⁵ The tank successfully passed all tests with that gun model. However, at that time, the Soviet tank industry made another breakthrough: it created the T-34. Its classic design became the sire of the future development of tanks worldwide. Further modernization of the T-28 was unnecessary. After the war, Soviet generals and historians called the T-28 obsolete. But the T-28 was obsolete only by Soviet standards, only compared to the T-34. In comparison with all foreign tanks, the T-28 was still outstanding. If in the summer of 1941 a foreign tank had had a 76-mm gun with muzzle velocity of 555 m/s and four or five machine guns, it would have been the national pride of that country. But nobody had such a tank. If a foreign tank had had a frontal armor of 80 mm, it would have been considered an outstanding design achievement.⁶ If anyone in the world in 1941 had had a 500-horsepower tank engine, this would have been a world record. The "obsolete" Soviet T-28 was a combination of three world records, each of which even taken independently would have been the national pride in any other country.

After the war, the Soviet historians excluded all T-28 tanks (and many others) from the statistics, and put them in the "obsolete and worn-out" category. However, the

“obsolete” T-28 tanks captured by Finland in 1939 and 1941 were used by the Finnish army, served until the very end of the war, and were successfully used against the Red Army. On December 19, 1939, the Red Army enlisted in its ranks the T-34. Following are German reviews of its performance. General Field Marshal von Kleist said: “The T-34 was the best in the world.” Major General von Mellentin agreed: “We had nothing equal to the T-34.” General Field Marshal von Rundstedt also thought that the T-34 was the best tank in the world. Colonel General Guderian remembered: “A large number of T-34 tanks were used in battle [Guderian is referring to the hostilities in October 1941 near Mtsensk, northeast of Orel], causing significant losses among our tanks. Previously existing hardware superiority of our tank forces was now lost and shifted to the opponent. Therefore, a prospect for rapid and continuous success disappeared.”⁷ “Our 50-mm and 37-mm anti-tank guns were completely useless against the T-34.”

I could endlessly quote German soldiers, officers, generals, and even field marshals; entire volumes of rave reviews of the T-34 have been published. Its debut caused a sensation at the beginning of the war. Sixty years after the T-34 first appeared, British professor Richard Ogarkovets, world famous as the leading authority in the field of designing armored technology, believes that the world tank-building industry still remains fully under the influence of ideas incorporated into the design of this remarkable tank. The T-34 was the only tank in the world created before the beginning of World War II that was not obsolete by its end. The T-34 fought for decades after World War II. Not a single other tank in the world had such a long lifespan. In June 1941, the Red Army suffered a crushing defeat, which had to be explained. Communist historians acknowledged the remarkable qualities of the T-34, but added that these tanks were very few in number; there were only 967 of them. Many educated and honest historians repeated that on June 21, 1941, Stalin only had 967 T-34s. Even if this had been true, the word “only” was disputable—the rest of the world had none. In the five western border military districts, which constituted the first strategic echelon of the Red Army, there really were 967 T-34 tanks. But the forces of the second strategic echelon were being secretly transferred to the western regions of the country. They also had T-34 tanks. In total, the Red Army had 1,225 of them on May 31, 1941. By June 21, the factories shipped out and unloaded another 138 T-34s. On top of this, another 37 T-34s were produced, tested, but not yet shipped. Overall, at the time of the invasion, the Soviet Union had exactly 1,400 T-34s. However, even this was not all. The T-34 was produced in series. Meanwhile, the attempts to create an equal or superior tank in Germany began only on November 25, 1941. In June, July, August, September, and October 1941, Germany had not yet begun attempts to create an analogous tank, while the Soviet factories continued producing the T-34. During the second half of 1941, Soviet industry put out another 1,789 T-34s in addition to the 1,400 that existed on June 22. In 1942, the production of T-34s went at a rate of thirty-five a day. In 1942, 12,520 T-34 tanks were produced. Very few, I agree. But in Germany, the production of an analogous tank had not yet begun. The German equal of the T-34 was the Panther, which first appeared in the summer of 1943 during the great tank battle at Kursk. The Panther was a magnificent tank. Some experts

considered it the best tank of World War II, and claimed that the Panther surpassed the T-34 in all aspects. Oddly enough, after the war, practically all designers in the world copied the best aspects of the T-34, while nobody copied the Panther. Its tank did not leave any descendants behind.

The Germans were unable to design a good tank for mass production. Therefore, until almost the very end of the war Germany had to produce obsolete models to supplement the Tigers and Panthers and compensate for the losses incurred in battle. The American tank expert Steven Zaloga went so far as to consider the production of Panthers a mistake: "The decision to enlist among weapons such a large, heavy, and complex tank as the Panther in the category of medium tanks was one of the factors that limited the German tank production to a level much lower than the Soviet."

In 1941, only two armies in the world recognized the necessity of heavy tanks. Obviously, they were the German and the Soviet armies. The order to begin project development of the first German heavy tank was given on May 26, 1941. The project was called MK4501: 45 tons, model one. The project resulted in the Tiger. In contrast, work on creating a heavy tank in the Soviet Union began in 1930. In 1933, the first Soviet heavy tank, the T-35, was produced in series and entered the ranks of the troops. It was a five-turret giant, weighed 45 tons. The last series of T-35 joined the troops in 1939. But the tank was improved even after the production was completed: after the war in Finland, all T-35s were returned to the factories and their armor was reinforced to 80 mm. The weight of the tanks reached 50 tons. Germany and the USSR shared the two first places in heavy tank production. There was nobody in third place. Elsewhere around the world, generals and designers did not even think of drafting a heavy tank on paper. The situation was such that while Germany had a heavy tank just on paper, other countries did not have heavy tanks even on their minds, while the Soviet Union was the only country in the world that in 1941 had heavy tanks both in experimental stages and in series production. The Red Army was the only army in the world that had heavy tanks among its units.

Nonetheless, Western and Soviet historians claim that Germany was ready for war, and the Soviet Union was not (when in reality, it was the complete opposite). They pronounced the T-35 tank obsolete and didn't mention it in statistics, even though the rest of the world had nothing comparable to the T-35 tank. The T-35 surpassed everything other countries had in terms of weapons, armor, and engine power—all the main characteristics. Moreover, the T-35, despite its size and weight, exerted less pressure on the ground than the German tanks, which meant it had much greater mobility, did not sink in snow, mud, and soft ground, where twice- and three-times-lighter tanks of other armies sank. If the T-35 were declared obsolete, all other tanks around the world had to be declared obsolete as well, and excluded from statistics. This was true for many other Soviet tank models (like the KV) and thus, removing all these tanks from the statistics was used as propaganda to portray Hitler as the only person who wanted war.

When Hitler came to power in Germany in 1933, the German armed forces had zero

tanks, while the Red Army had 4,000 tanks. In the whole of 1933, not a single tank was produced in Germany; in contrast, 3,819 tanks of all types and modifications were produced in the Soviet Union.¹ The production of tanks in Germany began in 1934: in the next five years, German factories produced 2,683 tanks.² Soviet factories in the same time period produced 14,283 tanks.³ On January 1, 1939, the Red Army was equipped with 21,100 battle-ready tanks.⁴ In 1939, Hitler started World War II with 3,195 tanks, the same number that Soviet factories produced per year in peacetime.

In 1941, the German army, by a crushing blow, defeated gigantic gatherings of Soviet troops in the border regions. Thousands of Soviet tanks were destroyed or simply abandoned by the troops. This catastrophe had to be explained somehow. Communist historians explained what happened very simply: the tanks were obsolete, and therefore useless. The whole world laughed at Stalin and at his “obsolete” tanks. But how many of them were there?

Many tanks of the Soviets were of the “BT” design, —the BT-2, BT-5, BT-7, BT-7A, and BT-7M. BT stood for *bystrokhodnyi* (high-speed) tank. The shape of the BT was simple and rational. Not a single tank in the world during the prewar period and the early period of World War II had an armor of such a shape. The best tank of World War II, the T-34, was a direct descendant of the BT. The shape of its body was a development of the idea of the great American designer. After the T-34, the principle of a sloped location of the frontal armor sheets was used on the German Panther, and later on tanks around the world. In the 1930s, practically all tanks around the world were produced according to one design: the engine in the rear, the transmission in the front part. The BT was an exception: its engine and transmission were both in the rear. Twenty-five years later, the entire world understood the advantages of the BT design. The BT tanks were heavily armed for their time. The 45-mm cannon could penetrate the armor of any foreign tank. Great Britain and the United States began installing such cannons on their tanks only a decade later, in 1942 and 1943. In addition to thousands of BT tanks, armed with 45-mm cannons, 154 BT-7As were manufactured and armed with 76-mm KT-26 cannons.⁵ At the beginning of World War II, no tank in the world outside the borders of the Soviet Union had weaponry of comparable caliber. What about the armor? The BT had just bullet-proof armor. At that time, most of the world had tanks with the same kind of bullet-proof armor. The engine is the heart of the tank. The BT-2, which was made operational in the Red Army in 1932, had a 400-horsepower M-5 engine. German tanks began having engines of equal power only by the end of 1942. The specific power of the BT was 36.4 horsepower per ton of mass.⁶ Not a single tank in the world had such a high specific power, which allowed the tank to do unbelievable things: “BT units could jump over obstacles to a distance of 15 to 20 meters; a few could do it to a distance of 40 meters.”

In April 1941, Germany began producing in series the T-IIIJ tank. In the German army it had the highest specific power—13.9 horsepower per ton of mass. How could the BT-2 be obsolete, if its specific power was almost three times higher than that of the best

German tank? The first BTs had a speed of 69 mph, that is, over 110 km/h.⁸ Seventy years later any tank would still be envious of such high speed. The main advantage of the BT tank was its speed. This quality dominated all its other qualities to such an extent that it even had a bearing on the tank's name—high-speed tank. The BT tank was a weapon of aggression. All of its characteristics make the BT resemble a small, but extremely mobile, horseback warrior from the undefeatable hordes of Genghis Khan, the great world conqueror who vanquished all his enemies through a sudden attack of colossal masses of extremely mobile warriors. He destroyed his enemies mainly not by powerful weapons, but through decisive maneuvers. He did not need heavy, clumsy knights, only light, quick, mobile troops, capable of traversing vast territories, crossing rivers, and going deep into the enemy's rear. The BT tanks were exactly the same. At the beginning of World War II, the Red Army had 6,456 BT tanks—that's as many as all operational tanks of all types in the rest of the world.

Soviet commanders clearly understood that BT tanks were not good for conventional warfare, but they were great in situations when the Red Army suddenly broke into enemy territory. "High speed tanks [by] their nature are a weapon of sudden attack. Their full effect (and success in general) can be obtained only if their use is sudden." In other words, if we suddenly attack the enemy, we will have success, but if the element of surprise is not on our side, we will not. The BT tanks could only be used in aggressive warfare, only in the enemy's rear, and only in a decisive aggressive operation, when hordes of tanks suddenly broke through onto enemy territory and bypassed points of opposition, thrusting deep behind enemy lines, where there were no enemy troops, but where all cities, bridges, factories, airports, ports, storage facilities, command posts, and communication units were located. The amazing aggressive characteristics of the BT were achieved by using a unique landing gear. On field roads, the BT moved using caterpillar tracks, but when it found itself on good roads, it shed the heavy tracks and sped forward on wheels like a racecar. It is well known that speed and cross-country ability are a trade-off: either we have a racecar that only rides on good roads, or a slow tractor that can ride anywhere. The Soviet marshals chose in favor of the racecar, so the BT tanks were not good for the bad roads of Soviet territory. In the battles fought on Soviet territory, thousands of BT tanks were abandoned. Off the roads, even with the caterpillar tracks they were difficult to use.

Seventy years ago, there were no highways on Soviet territory. And in 1939, not a single immediate Soviet neighbor had an autobahn either. But in the following year, through the Molotov-Ribbentrop Pact, Stalin divided Poland and established common borders with a nation that had autobahns. This nation was Germany. They say that Stalin's tanks were not ready for war. This is not true. They were not ready for a defensive war on their own territory. They simply were prepared to fight on different territories. Here is another family of Soviet tanks: T-37A, T-38, and T-40. The T-37A was received by the Red Army on August 11, 1933. It weighed 3.2 tons, its crew consisted of two men, and it had bullet-proof armor. It was armed with one DT machine gun, had a 40-horsepower

engine and a maximum speed of 36 to 40 km/h on paved roads and 6 km/h in the water. The T-37A was a light tank—but light does not mean bad and obsolete. The T-37A was the first amphibious tank in the world to be regularly used by troops.¹⁴ Even if the T-37A really was a bad tank, its inclusion in the armed forces still meant a technological breakthrough of historical importance, because there was nothing comparable or close in the armies of other countries at the time. The Japanese actively pursued amphibious tank warfare in the 1920s and 1930s. they even tested a few prototype models. But not one of the models was massproduced as a part of the Japanese armed forces before 1941. The German Pz-I was accepted by the army a year later—in 1934. It had almost the same weight—3.5 tons, the same crew—two men, the same bulletproof armor, and the same caliber machine gun. Only it could not float. When the high-minded scholars laugh at the T-37A that could float, I offer to compare the characteristics of the oldest, lightest Soviet amphibious tank with the characteristics of the best, most powerful German amphibious tank. Here, the laughter stops.

France did not have amphibious tanks at that time. Britain also had none before or during the war. The birthday of American tank forces is July 10, 1940. When the Wehrmacht Heer crushed with its tanks Poland, Belgium, Holland, France, and the British army on the continent, the Red Army tanks were crushing the Japanese Sixth Army at Khalkhin-Gol and were “liberating” Finland, Estonia, Lithuania, Latvia, Bessarabia, and Bukovina. America at that time had no tank troops at all. After the defeat of French and British troops on the continent, American generals realized that it was time to get off horses and to think of creating tank troops. A year later, in June 1941, the United States had less than four hundred tanks.

The number of Soviet amphibious tanks was kept secret for half a century. Later, it slowly began to become clearer. So, how many of them were there? The answer is: there were 2,627 T-37A tanks produced.¹⁷ In local conflicts the T-37A was rarely used, and they were rarely sent abroad. So in 1941, they were almost all fully functioning. In 1936, production of a perfected T-38 amphibious tank began. is tank continued to be produced in series until 1939. Overall, 1,375 tanks of this type were produced.¹⁸ The Kremlin historians called this December 19, 1939, is the brightest and the most remarkable day in the history of world tank design. On this day the Red Army received and enlisted an entire spectrum of new armor-tank weaponry—the three newest tanks: the light amphibious T-40, the medium T-34, and the heavy breakthrough KV tank. The T-34 is the best tank of all time. The KV was the most powerful tank in the world during the first half of World War II, right up until the Battle of Stalingrad. But the T-40 was no worse than these. In its class, it was also the best in the world and also had no equal. It is interesting that the Kremlin historians remember the T-34 and the KV, but forget about the T-40. Meanwhile, the T-40 had a new, never-before-seen body shape, weighed 5.5 tons, and was armed with two machine guns: the large-caliber DShK and the regular DT. A variant of this model, the T-40S, was armed with 20-mm automatic cannon instead of the DShK. By June 21, 1941, a total of 277 T-40 tanks were built.¹⁹ By June 22, 1941,

Hitler had on the eastern front 180 tanks in the under-six-ton category. 20 Not one of them was amphibious and not one of them could compete with the Soviet light tanks. Stalin, on the other hand, had more than 4,000 tanks in this weight category. All of them were amphibious. Among them were 277 T-40s, which not only were amphibious, but also were capable of using their large-caliber DShK machine guns (and of course the 20-mm cannons) to pierce the armor of the German Pz-I tanks. Moreover, German Pz-I production was stopped in 1938, and these tanks not only were obsolete but also heavily worn-out, while the T-40 tanks were still in production, the paint not yet dried on many of them.

By overcoming stormy Lake Ilmen, even the oldest of Soviet amphibious tanks proved the possibility of crossing the English Channel. But these tanks were designed for action on lakes and rivers. For crossing the English Channel, Stalin had other designs in the works for the future—the amphibious tank PT-1 and its variants. It weighed 14 tons, had a 500-horsepower engine, a speed of 6 km/h in the water and could reach 62 km/h on land, and 90 km/h when it shed its caterpillar tracks.²¹ It was a hybrid of a highway and an amphibious tank, a cross between a reconnaissance and a lightning battle tank. It was armed with a 45-mm cannon and four machine guns. It had a crew of four men. The PT-1 had a large body and impeccable floatability. This tank was designed and tested, but was not launched into series, for now sailing across the channels was not in the plans. When it would become needed, it could be launched into series.

The fate of Soviet amphibious tanks is a sad one: they were of no use in defensive war. Where would they sail? Upon orders from the People's Commissar for Defense, Marshal of the Soviet Union Timoshenko, and the chief of the general staff, General of the Army Zhukov, tens of thousands of tons of spare parts for the tanks, hundreds of thousands of tons of ammunition and fuel, were brought out to the very borders of the country. In the first hours of the war, all this fell under fire or in the hands of the enemy. Soviet tanks were left without fuel, ammunition, or spare parts. Four thousand light amphibious tanks demanded a large amount of fuel and had little use in defensive war. Therefore, commanders easily parted with them: they ordered what was left of the fuel to be pumped into the medium and heavy tanks. The light ones were blown up, burned, broken, sunk, or just abandoned. The best (and only) in the world, Soviet amphibious tanks in 1941 became unnecessary and played no role in the war. But why does nobody ask the question: why then were they developed and built? What were they prepared for? Why did Stalin need four thousand amphibious tanks, which he could not use in defensive war? Where was comrade Stalin planning to sail?

In December 1927 Tukhachevski, on top of everything else, suggested to Stalin to produce during the course of 1928 alone 50,000 to 100,000 tanks. In 1928, Hitler was not in power in Germany. Nobody could even imagine that he would ever come to power. Germany at that time did not have one single tank. The entire German army consisted of 100,000 soldiers, officers, and generals—all of them infantry and cavalry. Tukhachevski proposed to have one Soviet tank for every German general, officer, and infantry soldier

in the ranks, as well as for every German messenger and cook in the field kitchen. On September 1, 1939, Hitler entered World War II with 2,980 tanks, among which there were no amphibious tanks and no medium or heavy tanks. We are told that it is clear: if Hitler had such a huge number of tanks, it must have meant they were not for defense.

What did Tukhachevski plan to do with armadas of 50,000 to 100,000 tanks? The 2,980 German tanks were built not during one year, but during all the prewar years. Tukhachevski, on the other hand, proposed to build 50,000 to 100,000 tanks in just one year. It is interesting to compare Tukhachevski's plans for 1928 with real production of tanks (not including self-propelled guns—see below) in Germany during the course of World War II:

YEAR TANKS

1939 743

1940 1,515

1941 3,113

1942 4,276

1943 5,663

1944 7,975

1945 956

In total, during the prewar months of 1939 and all the subsequent years of the war, Germany produced 24,241 tanks. Japan built 5,085 tanks, most of them light. We have been taught a formulaic phrase: "the German fascists and Japanese militarists." Indeed, if they produced such a large number of tanks, 24,241 and 5,085 respectively, it is clear to everybody that this is fascism and militarism. But the question arises: Who was Tukhachevski, in the context of these fascists and militarists striving for world domination? After the war the Soviet Union, already a much more powerful industrial giant, had 50,000 tanks, or even slightly more. But these tanks were not produced in one year; they had accumulated for decades. Why did Tukhachevski need so many weapons in 1927? Hundreds of times more than all potential aggressors put together. Who threatened us then? Who could attack us in 1928? Romania? Finland? Estonia in alliance with Latvia, and egged on by Lithuania? Disarmed Germany? Perhaps Japan? But Japan is an island nation, and to fight her, in order to avert the landing and supplying of Japanese troops on the continent, we would have needed to build a strong fleet in the Far East. But Tukhachevski was opposed to the idea of building a strong fleet and spoke against it publicly. And so, what were the 100,000 tanks for? Tukhachevski's defenders say that everything in his proposals is correct, only the numbers had to be clarified. But if numbers are clarified nothing remains of Tukhachevski's proposals at all. Aside from insane numbers, they contained nothing. Meanwhile, Tukhachevski advanced more and more new projects. "The USSR's industry had to reach by the year 1938 a production capacity that would be capable during the course of one year to put out 53,000 guns, 90,000 tanks, and 60,000 airplanes. The views about the production possibilities

were formed under the influence of M. Tukhachevski." is is quoted in a Soviet military textbook!

Winged Genghis Khan

In the summer of 1941, the Red Army suddenly employed completely unusual weapons: the multiple-launcher rocket weapons BM-8 and BM-13. they entered history under the name "Stalin's Pipe Organs" or "Katyusha." Many German soldiers, officers, and generals remember that this was a terrible weapon. General Field Marshal Albrecht von Kesselring: "The terrible psychological effect of 'Stalin's Pipe Organs' is a highly unpleasant memory for any German soldier who was on the Eastern front."

The statistics are as follows: on June 1, 1941, the Red Army had seven BM-13 rocket launcher vehicles. One month later, there were seventeen such vehicles. Some were destroyed in battle, but others were produced, and by September 1 there were forty-nine of them. Production of the BM-8 began at the same time. By October 1, 1941, the Red Army, despite its losses, had 406 BM-8s and BM-13s. Later on, the count would mount into the thousands, and soon this weapon became a mass weapon. Despite losses of industrial and raw material bases, the Soviet Union managed to quickly supply its army with a principally new system of weapons. In 1940 the Red Army's Air Force received into their inventory the newest airplane, the "Ivanov" Su-2. "The codename 'Ivanov' was given according to Stalin's order. It was his telegraph address."³ There was no airplane yet, the designers had not even picked up their pencils, but Stalin had already given his name to the plane. The eventual production was planned for about 100,000 to 150,000 planes of this type. The Su-2 had many uses: it could be a light bomber, a tactical reconnaissance plane, and an attack plane. Its design was extremely simple and rational. The Su-2 was better suited for mass production than any other airplane in the world. It possessed great firepower.

On June 22, 1941, the German army delivered a sudden crushing blow to the Red Army. is happened at the point of time when the Su-2s were just beginning to be delivered to the troops en masse. By June 22, 1941, about six hundred Su-2s were produced and delivered to eight air regiments located in the western border military districts. However, many aircraft were still parked at the plant airports and on their way to the places of deployment. On November 19, 1941, a decision was made to stop Su-2 production.⁴ An output of 100,000 to 150,000 was planned, but only about eleven hundred were produced. After the war, historians explained this by saying that the Su-2 was obsolete, so production was stopped. is explanation is surprising. How could it be that the outstanding designer Sukhoy created an airplane that became obsolete in the following year? How could a plane become obsolete if there is no other plane in the world that can compare to it in terms of firepower?

If Stalin was preparing for a truly defensive war to protect the Motherland, then he should have ordered his designers to create the best fighter in the world, capable of defending the

skies over the Soviet Union. But this did not interest Stalin either. Nikolay Polikarpov was among those present at Stalin's dacha. He was a great designer of fighters: he had already created the I-15 and I-16 fighters. The I-15 was unequalled in its horizontal maneuverability. It was this aircraft that pilot Vladimir Kokkinaki used to set a world altitude record of 14,575 meters on November 21, 1935. And the I-16 opened a new page in the world development of aviation: it was the first mass-produced high-speed monoplane in the world. In 1936 Polikarpov was already working on even more powerful machines: he had the lead in the world race for the best fighter. Stalin should have left Polikarpov alone, not bothered him and not distracted him. Polikarpov knew how to make fighters; his pace should not have been interrupted. There was a race on, and every hour, every minute was worth its weight in blood. But no: Stalin ordered Polikarpov to drop all his work on creation of a fighter and start developing a light bomber, the Ivanov. Stalin was not very interested in fighter planes for a defensive war.

So, what was the ideal combat plane that Stalin had in mind, for the development of which he engaged all his best designers, all the creators of fighters as well as bombers? Stalin himself explained the demand thus: "samolyot chistogo neba [a clean sky aircraft]"—a light bomber designed to operate free of enemy resistance. From the creators of the Ivanov plane Stalin demanded neither record speed, nor record altitude, nor record range. Stalin was satisfied with the speed of 375 km/h near ground and 460 km/h up in the sky. Record-breaking characteristics were not required. Stalin demanded only simplicity, durability, and firepower. Stalin's plan was to create a plane that could be produced in numbers surpassing all warplanes of all types in all countries of the world combined. The name of the plane, Ivanov, had one more significant feature. Ivanov was not only Stalin's secret nickname, but also the most common Russian name. "Stalin formulated the task in the following way: the plane must be very simple to produce, so that there could be as many planes as there are people in our country with the name Ivanov."⁶ So, Stalin planned to produce the largest series of planes in human history. But this was not a plane for defensive war. It was an aggressor airplane. Stalin planned, literally, to build as many light bombers as there were small but mobile horsemen in the hordes of Genghis Khan.

A question arises: If on Stalin's orders 100,000 to 150,000 light bombers had been built, would not all the neighbors have been frightened? Stalin foresaw such a danger. Therefore, he did not plan the mass production of the Ivanov in peacetime. During the secret mobilization of 1940 through the first half of 1941, a small (in Soviet terms) series was produced—only several hundred of these planes. The objective of this series was to open the production line, gain experience, fly the planes, and test them in small conflicts. These first several hundred were meant to be used in the first strike, especially in secondary locations or combined with other aircraft that had higher speed. After the first sudden strike, it was planned to begin a mass production of the Ivanov, by the thousands. The Ivanov was almost an exact copy of the Japanese air aggressor. In the summer of 1936, nobody could have predicted what would happen at Pearl Harbor five years later. In the summer of 1936, the Nakajima B-5N did not yet exist. There were only plans, which the

Japanese did not announce. Therefore, it was impossible to suppose that Soviet designers were copying the Japanese. In the summer of 1936 the Nakajima B-5N had not yet flown once, and there was little information known about it. There was nothing record-breaking about the design of the new Japanese airplane, nothing that could have attracted Stalin's attention. But in 1936 Stalin was already thinking in the same terms as the Japanese admirals. In 1936, Stalin ordered his designers to create the same type of airplane that one beautiful morning would suddenly appear above the enemy, at a moment when the enemy does not anticipate an attack. This was the exact same scenario Stalin planned to use to enter World War II.

The planes for sudden attack did not need record-breaking characteristics. Stalin's logic is clear and simple: if a sudden attack can take care of the enemy's air bases and clear the sky of enemy planes, we will need a simple airplane with powerful weapons that can be mass produced; the most important of its designated uses is to give support to our advancing waves of tanks and paratroops, creating an air terror above defenseless territories. This was exactly the sort of airplane Stalin ordered from his designers. The Su-2 had a tragic fate. In terms of firepower and speed it surpassed both the German Ju-87 and the Japanese Nakajima. But both the Ju-87 and the Nakajima B-5N got a chance to prove themselves in sudden attacks and gain fame. Hitler did not permit the Ivanov to do the work it was primarily designed to do. Hitler carried out a preemptive strike on Soviet air bases, so the Su-2 was left without the work for which it was created. The Su-2 was not needed in a defensive war. Some factories that were preparing the mass output of Su-2s (for example the Kharkov aviation factory) fell into enemy hands. Although some of the production equipment was evacuated, the production pace was lost. The Su-2s produced earlier suffered great casualties: they had little speed and could not escape the enemy when chased. They had weak defense weapons and could not fight off the fighters. Also, there were no Soviet fighters to give the Su-2 cover.

The same propaganda of "obsolete planes" was used after the war to make it look like the USSR was not ready for war, when in reality, they had the largest war industry in the world working towards an aggressive war trying to conquer Europe and more if possible. Nazi Germany attacking the USSR in 1941 prevented these hordes of war from sweeping over European mainland.

Blitzkrieg in Poland and Mongolia

In August 1939, on the river Khalkhin-Gol in Mongolia, aside from a crushing blow there were other possible choices for action. Soviet troops could have, for example, taken defensive positions and postponed the prepared attack. Aggression is always risky. In the event of Soviet success, Japan would receive a lesson to last for years to come. In the event of failure, the entire world would talk of Stalin's army purges and accuse him of making the army unfit for fighting. In the event of failure, Zhukov could be executed, but his blood would not wash away the military's disgrace. Khalkhin-Gol was the first

lightning war of the twentieth century; it was blitzkrieg in the purest form. It was the first time in history that large masses of tanks were used correctly: to strike in depth. It was the prime example of unseen concentration of artillery in tight areas of the front. It was an example of absolute surprise attacks—during the first hour and a half of battle, the Japanese artillery did not fire a single shot and not a single Japanese plane rose into the air.

At the time that the Soviet army was conducting its operation at Khalkhin-Gol, the German army had no experience of conducting lightning-speed offensive operations and was not even conducting any large-scale training operations using tank masses for sudden breakthrough into the depth of the enemy's defenses. The German command planned to conduct the first of such training exercises in the fall of 1939.² Due to Germany's invasion of Poland and the beginning of World War II, these training exercises were never conducted. On August 29, 1939, Stalin gave Zhukov the title of Hero of the Soviet Union for his lightning defeat of the Japanese Sixth Army. On September 1, Germany attacked Poland. It is interesting to compare the two lightning operations: the Soviet one in Mongolia, and the German in Poland. The difference lay in the fact that the whole world witnessed the German actions in Poland. Embassies from all over the world were located in Warsaw; there were many foreigners in Warsaw and other Polish cities, many journalists in particular. They all witnessed the war and described it in their newspapers and magazines. Hitler's propaganda demonstrated to the entire world the amazing successes of German troops. The whole world saw the menacing footage on their screens: dive-bombers roaring wildly as they flew toward the ground, dropping their deadly loads, and soaring back into the clouds, tanks breaking Polish barricades, letting through hordes of cheerful motorcyclists. The Red Army's operation in Mongolia, on the other hand, was carried out on hot desert steppes, where there were no international observers and journalists. Few people knew about the operation at the time. For obvious reasons, the Japanese government did not rush to tell the world about the defeat of the Sixth Army in Mongolia. Surprisingly, the Soviet propaganda also did not rush to announce its victory.

All Soviet propaganda was extremely and severely centralized. Stalin's empire ran the most powerful and perfected system of censorship. In Stalin's empire, any printed product could be published only after a censor gave permission. Without the permission, even bus tickets could not be printed. The principle of selection of information was extremely simple: hide any defects, catastrophes, and mistakes and praise any accomplishments. The farms produced slightly more milk, dug slightly more potatoes, a new factory was built—those were the reported news. But here we have a true accomplishment: the defeat of an entire Japanese army. It was an unprecedented historical event. Nobody had ever beaten the Japanese. During the Russo-Japanese war of 1904–5 Russians had especially suffered from the hands of the Japanese. Here came a remarkable revenge, huge trophies! The Red Army opened a new chapter in the art of war. The defeat was achieved by a new, previously unseen method. Yet, Stalin ordered silence. Why? Because

he was preparing the same sort of defeat, only on a much grander scale, for all of Europe. Stalin's interest lay in concealing the might of the Red Army, keeping silent its capability for delivering crushing surprise attacks. Stalin's interest lay in letting the whole world believe in the backwardness of the Red Army and its inability to conduct modern warfare. Stalin's interest lay in catching Hitler off-guard, in not scaring him.

At first glance, the Red Army's lightning operation in Mongolia and the German blitzkrieg in Poland are not comparable in scale. the German troops participating in the invasion of Poland numbered 1.6 million soldiers and officers. the Soviet group in Mongolia numbered only 57,000 men. In numbers of people, the German operation surpassed the Soviet one twenty-eight times. However, if one looks at the number of tanks and airplanes, the numbers are comparable. the German operation against Poland had the participation of four times more airplanes, and six times more tanks, than the Soviet operation in Mongolia. The numbers are quite on the same scale. An analysis of the quality of weapons is even more interesting. the Red Army used long-range bombers in Mongolia; Germany had no such planes. If one examines the quality of tanks, the picture also favors the Red Army.

In 1939, the same arms gap could be seen between the Red Army and the Wehrmacht in terms of artillery. Germany entered World War II with field artillery developed in the time of World War I, while the Red Army had the best cannons, howitzers, and mortars in the world, developed right on the eve of World War II. For every thousand German soldiers during the blitzkrieg in Poland there were less than two tanks. For every thousand Soviet soldiers in Mongolia there were almost nine much more powerful tanks. In other words, Soviet troops at Khalkhin-Gol formed a relatively small army, but were equipped to the limit with the most modern and sophisticated weapons. ere was also a big difference in the conditions under which the operations were conducted. In September 1939, the conditions for conducting a lightning war in Poland were superb. A continuous defense by the Polish army along the perimeter of the country was impossible. Poland, to its misfortune, was an ideal location for the demonstration of tank capabilities. Western Poland formed a wide protrusion, surrounded on three sides by German territory. Its border with Germany stretched two thousand kilometers; after German occupation of Czechoslovakia, the German-Polish border increased by another eight hundred kilometers.

The German army did not have to break through defenses. Ahead of it lay flat terrain, ideal for advance and totally unfit for defense. the river Vistula flows through Poland, but there was no need to cross it. Hitler's troops were located on both sides of the Vistula. ere were no other serious water barriers. An attack on Warsaw could be carried out from any direction. the distance from mainland Germany to Warsaw was 230 kilometers, and from the border of Eastern Prussia to Warsaw was 110 kilometers. is meant that there was no need to relocate supply bases—troops could be supplied from stationary bases built during peacetime. There was no need to transfer thousands of tons of ammunition, fuel, and other equipment. In theory, a thrust on Warsaw could be carried out without refueling tanks. Fill up the tanks in Germany, and go! There were no defenses ahead, since they

were impossible. There was no need to set up field hospitals, because the wounded could be taken to stationary. However, not everything in Poland went as smoothly as shown in Goebbels's propaganda and as described by some modern followers of Hitler. For some reason it is not popular to speak of this, but the German blitzkrieg in Poland failed. On September 15, 1939, two weeks after the start of World War II, the activity of the German air force substantially dropped; the German army was almost completely out of fuel. This was the level of Hitler's and his generals' understanding of modern warfare.

Forget all the tales by Soviet marshals and academics that the Red Army entered Poland in 1939 out of fear that the Germans might go straight for Moscow. Hitler did not have such strength. Even if he headed for Moscow in October 1939, the same exact thing would have happened to his valiant army that happened in October 1941: it would have sunk in the mud. The Wehrmacht lacked the fuel, bombs, and ammunition necessary to wage war against the Soviet Union. In 1939 the Red Army entered Poland for different reasons. Most importantly, there was the fear that Hitler's blitzkrieg would stop. It was already slowing down. Stalin's offensive in Poland allowed Hitler to transfer his forces from the eastern to the western front with maximum efficiency. Imagine the situation: all German tanks and cars are stopped, airplanes do not fly. The German army has many horses, though they are load-bearing horses, not cavalry. In this situation, the Polish cavalry could have shown what it means to have superiority in strategic mobility . . . but once again, Stalin saved Hitler. From the standpoint of grand strategy the operation in Poland was a total failure for Hitler and his generals. It was the first suicidal act of Hitler's Germany: they entered a war having one enemy—Poland, and in two months brilliantly ended that war having Britain, France, India, Australia, New Zealand, Canada, and potentially the United States as enemies. A blitzkrieg cannot be used to win a war against all these nations, and Hitler had no other options. As a result of the blitzkrieg in Poland, Hitler obtained a common border with the "neutral" Soviet Union. Being at war with everyone, Hitler would have been better off having a border with Poland than with the Soviet Union—anything could be expected of comrade Stalin.

One more thing: Poland was not at all crushed by the blitzkrieg. Immediately after the fall of the government in Warsaw, the Polish government in London was created, and it was acknowledged by most nations of the world and by the League of Nations. According to Polish tradition, underground local governments and an underground state formed on occupied territory. Armed forces were revived. Using the most cautious methods, the Polish Army counted 350,000 soldiers and officers, well trained, organized, and armed. Moreover, Poles fought against Hitler on all fronts: in Britain, France, Italy, Africa, Holland, and the Soviet Union. Starting in 1939, the number of Polish formations fighting Hitler constantly was around one million people. The blitzkrieg started in 1939 in Poland, and ended in 1945 with the storming of Berlin, in which the Polish First and Second armies took part.

The Red Army command not only understood the extreme importance of supplying troops, but had the unique experience of doing it in the extreme conditions at Khalkhin-

Gol. The Soviet troops counted 57,000 soldiers, 498 tanks, 500 guns, 385 armored cars, 515 airplanes, artillery transport, automobiles, etc. If everything necessary for life and battle was to be brought to Mongolia from the supply bases in the Baikal military district, the distance to be covered was roughly 1,500 kilometers. But not everything was in storage in the Baikal region. If supplies were to be brought from factories and central storages the distance to be covered was seven to eight thousand kilometers. the last stretch of railroad had very limited load-bearing capacity and ended in a deserted steppe. For the next 650 to 700 kilometers trucks were needed. the most common truck of that period could cover the round-trip of 1,300 to 1,400 kilometers, in good conditions, in roughly five days. the conditions were: heat, dust, no water. People might get by in these conditions, but automobile radiators need water. the troops needed to be supplied with everything. For example, wood to burn in field kitchens. Technology wear and tear was tremendous, as was fuel expenditure. Cars needed to be refueled several times along the way. Once the car had dropped off its cargo at Khalkhin- Gol, it needed to make its way back—and once again, it had to be refueled, so it turned out that the cars had to take away what they had just brought. To this desert location the Soviets needed to supply by truck 25,000 tons of ammunition, 15,000 tons of fuel and lubricants, 4,000 tons of foodstuffs, 7,000 tons of fuel, and a lot of other cargo. All this was supplied in such a fashion that the enemy did not even suspect preparations for a sudden crushing attack. After such an operation, Soviet command quite clearly understood the meaning of supplies in war.

Nevertheless, Khalkhin-Gol played a mean joke on Stalin and the entire Red Army. In May 1940, Stalin introduced the titles of “general” and “admiral” into the Red Army. Approximately one thousand top Red Army commanders became generals. But only three of them received at that moment the top general rank—General of the Army. At that time, this meant five-star lapels. the first of these men was Zhukov. Zhukov became the first of all Soviet generals. Upon Zhukov’s return from Mongolia, Stalin entrusted Zhukov with the most powerful of his military districts—the Kiev district. In February 1941 he appointed Zhukov to the position of Chief of General Staff. In this position Zhukov prepared for the war against Germany. On the German border (only on a much grander scale) he was to repeat everything he had implemented against the Japanese army. Zhukov created two mighty mobile flank attack groups at the L’vov and Belostok bulges, and one group for an attack in Romania.

Zhukov moved air bases to the very borders, with one hundred—sometimes two hundred— planes in each location. Zhukov moved hospitals, supply bases, command posts to the borders. Zhukov moved to the border thousands of tons of ammunition, fuel, and spare parts for tanks and planes. Zhukov forbade almost all use of radio communication. Zhukov kept his plans in complete secrecy, and very few people in the Red Army knew what was to be done. Upon the surprise enemy attack, all this had catastrophic consequences. All of Zhukov’s activity in 1941 has been attributed to a series of mistakes and miscalculations. But these were not mistakes. In 1941, he was preparing against

Germany exactly what he had prepared in August 1939 against the Japanese army at Khalkhin-Gol.

Mobilization

From time to time we find a lot of interesting materials in the archives, but we will not find what is most important. Here is why: “How many times have I told you—do whatever you want, but do not leave behind any documents, do not leave any traces.” These are the words of Stalin himself. He uttered them publicly at the Sixteenth Congress of the Communist Party. The records here note the “Homeric laughter of the entire audience.” The congress laughed heartily—comrade Stalin had made a joke. Understandably, Stalin was not talking of himself, but of his opponents, who apparently were guided by the principle of leaving behind no traces or documents. But the congress laughed in vain. Stalin always ascribed his own intentions, principles, and methods to his enemies. Soon after, Stalin executed all his enemies, as well as almost all the delegates present at the Sixteenth Congress who had laughed so heartily. He left a very minimal number of documents about these executions. Not a single dictator can match Stalin in his ability to cover up the traces of his personal involvement in crimes. Anastas Mikoyan, who beat all records of political survival, tells us how well Stalin kept secrets. Mikoyan was a member of the Central Committee of the Communist Party from 1923 until 1976—that is, for fifty-three years, for forty years of which he was a candidate or member of the Politburo, the most important power organ of the country, which governed the entire Soviet Union and its satellites. Mikoyan describes a meeting held by Stalin: “Most often there were five people. We met late in the evening or at night, rarely in the afternoon, usually without preliminary notice. There were no protocols or records kept during the course of such meetings.”

Air Force Colonel General A. S. Yakovlev: “During the meetings of Stalin’s inner circle there were no stenographers, no secretaries present, no records or protocols were kept.” Marshal of the Soviet Union D. F. Ustinov was the People’s Commissar of Arms during the course of the war: “During the meetings and conferences conducted by Stalin, discussions of problems and the making of decisions frequently occurred without records, and often without the corresponding paperwork marking the decision made.” In other words, decisions were made but were not fixed on paper, just like in the Mafia. Marshal of the Soviet Union G. K. Zhukov during the course of the war was deputy to the Commander in Chief, that is, to Stalin: “Many political, military, and general government questions were discussed and solved not only at the official meetings of the Politburo and in the Central Committee Secretariat, but also in the evening at dinner in Stalin’s apartment or at his dacha, where the Politburo members closest to him were usually present.”⁴ Colonel General B. Vannikov was the People’s Commissar of Ammunition: “At the meetings and conferences Stalin had a habit of discussing questions and making decisions without protocols or records. . . . From this it is clear that the understanding of many events just

based on documents is incomplete and unclear, and in many cases incorrect.”

Hitler’s meetings were known for being held in the presence of large crowds. Everything said by Hitler was fixed for history by three stenographers and a personal historian. Stalin’s meetings on the other hand were simply secret gatherings of plotters and conspirators, in spirit and in essence. No documents and no traces were left of these meetings. Therefore, as Stalin taught us, we will look not at the words, which are hidden from us, but at the actions, which are in the open. It is possible that World War II could have not occurred. The choice was up to Stalin. He himself told this to his colleagues at the Politburo meeting on August 19, 1939: “If we make a pact of mutual aid with Great Britain and France, Germany will give up Poland and . . . the War will be averted.” Stalin did not make a pact with Great Britain and France; thereby he did not try to avert a war. This day—August 19, 1939—was a long, difficult day. It was a day filled with hopes and worries. It was the day when Stalin cast his fishing rod into the brown swamp that was Hitler’s Germany. His hook had bait for Hitler: Danzig and half of Poland. Take it! And as a free gift Germany got war against Great Britain and France. It was the day when doubts crawled into the hearts of Stalin’s colleagues. Stalin had decided to trick Hitler. Would Hitler believe him? Stalin could not possibly always win. Vyacheslav Molotov worked on the scene as the head of the Soviet government and the People’s Commissar of Foreign Affairs. When Molotov received the German ambassador von der Schulenburg in his cabinet in the Kremlin, Stalin, Shaposhnikov, Beria, and Malenkov did not show themselves—they were behind the curtains, in Stalin’s cabinet. Molotov’s conversation with the German ambassador was transmitted to Stalin’s office. Molotov worked brilliantly. The most important thing was not to let the ambassador see Stalin’s interest in the issue of German-Polish relations. Molotov did not reveal this interest; his attitude to the ambassador was: “All right, let Ribbentrop come, perhaps we will agree on something, perhaps we will find a solution to the question of Danzig and Poland.”

At dawn on September 1, 1939, the German army began war against Poland. But in the twentieth century, a war in Europe automatically meant a world war. The war quickly engulfed all of Europe and practically the entire world. A strange coincidence of events, it was precisely on this day—September 1, 1939—that the fourth emergency session of the Supreme Soviet of the USSR ratified the universal military draft. There had been no such law in the history of the USSR. A surprising thing: while children and adults were taught to fear Hitler, while Hitler was considered to be a tyrant and monster, the country could do without a draft. But as soon as a non-aggression pact was signed, a universal mandatory draft all of a sudden became necessary. Why did the Soviet Union need it? Soviet historians stated that the USSR took measures of precaution. Marshal of the Soviet Union K. A. Meretskov is one of the many of those who assert that the law had a huge significance and was adopted “in the conditions when World War II had already begun.” Let us imagine the Polish-German border on that tragic morning: darkness, fog, fire, motors roaring. Very few people in Poland understood what was happening, whether this was a provocation or an unsanctioned border conflict that arose on its own. But the

representatives at the USSR Supreme Soviet already knew that this was no provocation, no conflict, and no German-Polish or even European war—this was the beginning of a world war. they knew that they, the representatives, must meet in Moscow and take the corresponding measures. Why did these representatives not act so efficiently when a similar thing happened on the Soviet-German border in 1941?

On the morning of September 1, 1939, it was not only the Polish government and the governments of the Western countries that did not know that World War II had started. Hitler himself did not know it either. He started the war against Poland hoping that it would be a local fight, like the taking of Czechoslovakia. As Colonel General of the Air Force A. S. Yakovlev (at that time an aircraft designer, deputy people's commissar of aviation industry, and personal advisor to Stalin) concluded: "Hitler was sure that England and France [would] not fight for Poland." When, on September 3, Great Britain and France declared war on Germany, this was an extremely shocking and unpleasant surprise for Hitler. He had not anticipated this. For him, a "strange" war against Great Britain and France began on September 3. In the same month, an equally strange peace began in the East.

Any attempt to establish the exact date of the beginning of World War II and the time that the USSR entered into it brings us to the date of August 19, 1939: Stalin stretched a hand of friendship out to Hitler and signed the non-aggression pact, while on the same day he issued an order to gather the representatives of the Supreme Soviet, so that at the time World War II began they were already sitting in the Kremlin and unanimously voting in favor of everything put before them. What a strange coincidence: the road to Moscow is long—for some it takes ten to twelve days. In order to adopt the law on September 1, 1939, the order to gather the representatives was issued on August 19, meaning that on August 19, 1939, someone in Moscow already knew that in a couple of weeks World War II would begin and a new draft law would be needed. Chief of General Staff and Marshal of the Soviet Union B. M. Shaposhnikov created the theory of mobilization. He authored the book *Brain of the Army*. the third and final volume was published in 1929, and while the Soviet Army existed, this book served as a manual for every Soviet officer and general. On Lenin's desk, a copy of the book *Mob Psychology* by Gustav le Bon had always been present, and on Stalin's desk it was Shaposhnikov's *Brain of the Army*. the key to the success of Shaposhnikov's book was in the simplicity with which the material was presented, in the crystal-clear argumentation, and in the ability to explain the most complex problems in terms understandable by anybody. the third, concluding part of the book is the most powerful. In the third volume Shaposhnikov examines the questions of mobilization.

The theory was simple, understandable, logical, and unquestionably correct. Stalin understood it, appraised its worth, and added it to the base of his own strategy. it is why reading Shaposhnikov's works (as well as those of his supporters and opponents) and understanding the course of their thought helps us understand Stalin's actions, which at first glance seem illogical and unexplainable. the theory of mobilization, condensed and

explained in layman's terms, consists of the following:

1. To achieve victory in a war, not only efforts of the entire army but full efforts by the entire nation, the people, industry, transport, agriculture, etc., are necessary.
2. the nation cannot exist in a constant state of preparedness for war, just as a man cannot constantly hold a gun in each hand. If he is always holding two guns, he cannot do anything else. Similarly a nation cannot constantly expend all its resources on preparations for war. Constant concentration of forces and expenditure of social resources on war preparations ruin the nation. Therefore, during peacetime the army and the military industry must operate at a minimal level. However, the nation, its people, government apparatus, industry, transport, agriculture, communication channels, ideological apparatus, and so forth must be prepared for a maximally quick and full transition from a peacetime to a wartime regime.
3. Mobilization is the transition of the entire country from a peacetime to a wartime regime. Mobilization cannot be curbed or turned back. Metaphorically speaking, mobilization is similar to thrusting one's arm down, unlatching a holster, and aiming the gun at the enemy with one's finger already on the trigger.
4. Mobilization and war are inseparable. If you take out a gun and aim it at the enemy with your finger on the trigger, you have to shoot. As soon as you begin to mobilize, the enemy will mobilize as well. You take aim, and the enemy does the same, trying to be faster than you by at least a fraction of a second. If you are a tiny bit of a second late, he will kill you.
5. You cannot play games with mobilization: if you often brandish guns and aim them at your neighbors with your fingers on the trigger, the outcome will not be a good one for you.
6. Once the path of mobilization has been chosen, you have to follow it up to the end—start a war.
7. Mobilization cannot be partial. Mobilization is a process similar to pregnancy. A woman cannot be a little bit pregnant—the answer is always “yes” or “no.” the same is true for mobilization in a country: either the entire government apparatus, industry, transport, armed forces, population, and all the national resources are mobilized toward war, or not.

In modern conditions, a mobilizing country must make a firm decision ahead of time to conduct war. . . . In a general mobilization, it is understood that there can be no more return to peacetime positions. . . . We maintain that only a general mobilization has value, the concentration of all resources and forces necessary for achieving victory.” the book ends with a decisive declaration: “Mobilization is war, and we cannot understand it in any other way.”

Stalin not only shared Shaposhnikov's views, but he had the same beliefs. Stalin did not make any distinctions between the process of taking power in his country or in the neighboring ones. He knew how to take power in his own country, and he planned to do

the same in the neighboring ones. Stalin did not keep his art a secret. On the contrary, he made it into a display for the masses. In his book *On the Foundations of Leninism*, Stalin proved that games are not permissible in the quest for power. We either take control or we do not. Once the task is attempted, it must be carried out to the end. It goes along with the teachings of Niccolò Machiavelli: either you deliver a lethal blow or you do not attack at all; no in-between decisions can exist in politics or in strategy. It also goes along with Shaposhnikov's ideas: we can either not mobilize at all or we can conduct a full mobilization and enter the war—no partial, in-between positions can be adopted. There was another problem: mobilization had to be concealed. Long before World War II, Stalin and Shaposhnikov worked out a way to conceal mobilization. For this reason, there was no universal military draft in the Soviet Union until 1939. The army was very selective and did not take in just anybody. It was to show what a peace-loving people we were. The age requirement for entering the armed services was twenty-one. It is strange. Why not draft at eighteen or nineteen, right out of school—let the boy serve his term and be free? By age twenty-one a man could have found a job and started a family, while his future remained uncertain: would they draft him or not? Nobody could really explain why the army had to take men at age twenty-one and not younger.

There was, however, a lot of thought put into this system. It was like a dam on a river: not everyone was let through (that is, drafted), only some, while the rest amassed on the other side. At the necessary moment a universal draft could be instituted (only the pretext had to be invented), and all those who did not earlier serve in the army could be called in. During the intervening years, there were many of them saved up. The moment came—September 1, 1939. On this day, a universal military draft was instituted, and all those who had not served earlier began to be taken in. In every separate case the calling of a mature man to the army did not raise suspicion that a big war was looming: every man must serve his country, so this or that Ivan had to do now what his friends did before.

Stalin had another tactic in reserve: according to the new law, the draft age was reduced from twenty-one to nineteen, and in some categories to eighteen. My own father was among this group—he had just turned eighteen at the time. The simultaneous draft of three age groups (never seen before), and the draft of all those who had not served earlier, placed a double burden on the shoulders of the nation. On the one hand, the economy was deprived of all these workers; on the other hand, they all had to be clothed, fed, equipped, and housed somewhere (try to find a place for at least one million new soldiers!). It was an explosive development of military might. After 173,000 reservists were drafted in the second half of July 1939 to support the troops of the Trans-Baikal military district and the 1st Army Group in Mongolia, the Red Army adopted on September 1, 1939, allowed for an increase in the ranks of the Red Army from 1.5 million men in the spring of 1939 to 5.7 million in the spring of 1941 without declaring mobilization and alarming the neighbors. Additionally, this law allowed for the preparation of 18 million reservists, so that at any moment they could fill the ranks with the desired number of soldiers. It

army development had a time limit, because Stalin called several age groups into the Red Army at the same time—in essence, all the young men in the country. the duration of army service for the majority of the population—privates in ground forces and NKVD (Political Police) forces—was two years, so the country had to enter a major war before September 1, 1941. If not, all the young people would go home on September 1, 1941, and then there would be almost nobody left to draft. All these new armies—assault and mechanized corps, tanks, air force, and all other divisions—would have to be disbanded. It is impossible to maintain an armed force of this size without a war: it does not produce anything and it consumes everything produced by the country. the creation of such an army could only lead to war. the modern Russian ministry of defense acknowledges this. “No nation can maintain a mobilized army with any intent other than war: the economy cannot stand the strain, and the mobilized but unused army begins to decay.” is was said about the mobilization conducted by Stalin starting on August 19, 1939.

When he made the decision to launch a secret mobilization, Stalin firmly knew that in two years, in the summer of 1941, the Soviet Union must enter into a large war. Without war, no terror could suffice to keep five million soldiers, who have already served their two required years, in their barracks. It would be impossible to retain them in the army after their terms in the army expired. To put it more simply, the decision to enter a large war was made in the Kremlin in August 1939 and the deadline for entering the war was set—the summer of 1941.

Mobilization of the Economy

For many years, the People’s Commissariat of Defense Industry was in charge of arms production in the USSR. On January 11, 1939, it was dismantled, and four new People’s Commissariats were created instead: one for the shipbuilding industry, one for weapons, one for the aviation industry, and one for ammunition. The Shipbuilding Commissariat was unofficially called the Submarines Narkomat (short for People’s Commissariat). In theory, this commissariat produced both civilian and military ships. But in practice, the facts were such that “by 1935 all major shipyards were redesigned for production of military ships.”¹ In 1939, Germany entered into World War II with fiftyseven submarines. We are assured that the Soviet Union had no intentions of entering into the war, but in September 1939 it possessed 165 submarines. the submarines matched up to the best world standards.² Some of the submarine designs were developed in Nazi Germany on Soviet orders by the company Deschimag AG Wesser. they say that Stalin trusted Hitler. theyshould look more carefully into who trusted whom.

In the Soviet Union, the most modern American technology and renowned American engineers were used in the process of submarine production. they say that Stalin was too trustful, but I think Roosevelt possessed more of that particular quality. Aside from American, German, British, Italian, and French accomplishments, the Soviet shipbuilding industry also made its own technological advances. We also had some talented engineers.

From the moment of its founding, the Shipbuilding Narkomat undertook strictly military projects. Moreover, many ships that had earlier been built for civilian needs were now armed and given over to the navy. With just one directive by the Soviet government, on May 25, 1940, the following numbers of civilian ships were handed over to the military: 74 to the Baltic fleet, 76 to the Black Sea fleet, 65 to the North fleet, and 101 to the Pacific fleet. At the same time, the shipyards of the Narkomat all began to operate on two extended shifts, which practically meant a regime of wartime production. the result of this was that by June 22, 1941, the Soviet Union possessed 218 submarines in its ranks and 91 more in shipyards. Surface warships were also being built, as well as bought from abroad.

Italy was not the only country that sold warships to Stalin. On May 31, 1940, the unfinished German cruiser *Lutzow*, renamed the *Petropavlovsk*, arrived in Leningrad and was delivered to the shipyard of shipbuilding plant #189. A cruiser is a huge and complex structure, the building of which would have taken several years to complete, and there was not enough time to introduce changes into its design and to equip it with Soviet weapons. It was decided to build it completely according to German designs and equip it with German weapons, and Germany supplied the weapons. All this seems unbelievable: May 1940, the heat of the German blitzkrieg in Western Europe, the British fleet blockading the German navy. Hitler had only two options left— either to fight against Britain, for which he needed a powerful fleet, or to seek peace with Britain, for which he also needed a powerful fleet: an enraged Britain would obviously not negotiate with a weak Germany, but instead would demand its immediate withdrawal from all occupied territories. Hitler lagged far behind Britain in the number of above-water ships, and in this critical time he was selling his unfinished, most modern ship to Stalin! Stalin's behavior is also surprising: he declared neutrality, but continued to build a gigantic fleet and, moreover, bought warships from countries already at war. the answer to this riddle is simple: in 1940 Germany was already suffering from a terrible deficit of raw materials because her naval routes were blockaded, so Hitler could only buy large enough quantities and assortments of materials from Stalin. In exchange for this, Hitler was forced to sell his technology and weaponry, including his newest planes, cannon, ships, communications devices, firearms, and so forth.

Stalin knew that the German economy was facing a crisis, and he could have chosen not to sell raw materials to Hitler. In that case, the war in Europe would have quickly died down. But Stalin wanted the war to gain strength, so that France, Britain, Germany, and all the other countries would expend themselves. Stalin planned to use their weakened position and establish his own regime in Europe. For this Stalin was building up his fleet, buying military technology from everywhere possible, and feeding Hitler the raw materials he needed.

Some might ask why Stalin's two hundred submarines and the rest of his navy could not give the kind of resistance that was to be expected from the most powerful underwater fleet in the world. the answer is simple—this was an attack fleet. It was an instrument

created for aggressive warfare. It was very difficult, nearly impossible, to use it in defensive war. "During the course of the war the fleet had to solve problems that were completely unforeseen during its construction. Instead of coordinating their actions with the deep offensive operations of the ground forces, acting near the shores, as the military doctrine dictated, the fleet was forced to secure the naval bases under enemy attack from land and sea and to evacuate troops, population, and property from shoreline cities."

In March 1939, at the Seventeenth Congress of the Communist Party, the commander of the Pacific fleet, 2nd Rank Flagman N. G. Kuznetsov declared: "The fleet must transform itself, and it will, just like the entire Worker-Peasant Red Army, into the most powerful attack fleet." Stalin rewarded him for such words by promoting him to People's Commissar of the Navy. Kuznetsov kept his word—he did his best in order to prepare the Soviet fleet to launch surprise attacks. But entirely different ships with entirely different characteristics are needed for defense: submarine hunters, picket boats, minesweepers, and net-layers. According to Kuznetsov's orders, all reserves of shells, mines, torpedoes, and ship fuel were transported to the German borders in Liepaja and to the Romanian borders in the river ports of the Danube. Here, these reserves were quickly seized by the Germans. The port of Liepaja was located so close to the German border that the battles for the city had already begun on June 23, 1941.

Nobody had prepared to defend Liepaja from a land attack. Aside from everything else, in Liepaja were concentrated (and lost) three quarters of the Baltic fleet's fuel reserves. Not only was the basing system of the Soviet navy geared toward aggressive warfare, and its personnel trained to attack, but the armament of the ships was designed exclusively for participation in a war of aggression. Soviet ships, while armed with powerful artillery, mine, and torpedo equipment, had quite weak anti-aircraft armament. The Soviet ships did not have powerful anti-aircraft defenses because Soviet generals had planned to begin the war with a crushing surprise air attack against the enemy's air bases and the annihilation of his aviation. Contrary to the plans, the war turned out to be of a defensive character, and the Soviet armies and fleets were not the ones to carry out the first attacks. The enemy had air superiority, and the Soviet troops and ships had very weak anti-aircraft defenses. The Shipbuilding Narkomat had been building ships with maximal attacking power and minimal defenses, in order to make the Soviet navy the most aggressive in the world.

If Stalin had planned to carry out a sacred defensive war, if he planned to hold down his borders, the new ammunition factories should have been built behind the Volga River. Here they would have been fully secure—the enemy tanks and airplanes could not reach so far inland. If Stalin was not sure of his strength, if, as we have been told, Stalin was afraid of Hitler and had reservations about the Red Army's ability to hold the borders, if there had been a belief that it might be forced to retreat—in that case the new factories should have been built not behind the Volga but even farther inland, in the Ural Mountains, where there are raw materials, a sufficient industry and energy base, and where the factories would have been completely secure. Let the enemy take huge territories, but our industrial

base would remain whole—then Hitler would have a taste of what a wounded bear is like. But neither the first nor the second option was even briefly discussed; there was no need for them. the Red Army had no plans to retreat, just as it had no plans of holding down the borders of its country. According to Stalin's plans, the Red Army had to advance forward into a war-devastated and weakened Europe. If the Red Army crossed the borders and advanced, the ammunition factories along with all the other ones (tank, artillery, etc.) would be left behind farther and farther in the rear. Let us imagine that the Red Army needs to be supplied with a small quantity of ammunition, for example 100,000 tons, or 200,000 tons. How could they be transported from the Urals to the western borders? A standard military train could carry nine hundred tons. Imagine how many trains would be needed, how many railroad cars, how many locomotives. Estimate how many workdays would be spent by all the railroad personnel, how much coal would be burned, how many train guards would be needed for how many days. the ammunition factories put out more and more production, while the voracious Ammunition Narkomat consumed the nation's metal resources, including copper, nickel, chromium, lead, tin, and mercury. the more nonferrous metals went to producing ammunition, the less there was left for all the other areas of industry. the question arose as to how long this could be expected to last.

There was another question: what to do with all the ammunition that was produced? The holding capacity of the artillery storages was known, as was the amount of ammunition used by the army. rough a simple arithmetic calculation it would be easy to determine when there would be no more space to hold all that was produced. What could be done then? Should new storage facilities be created? at is not quite so simple. Imagine that you have been given the task to build storage facilities that are to hold one million tons of ammunition. If the humidity levels at the facility rise above the norm, the metals will be corroded and the gunpowder will become wet. What would comrade Stalin and his loyal disciple comrade Beria do to you in that case? And if the temperature rises slightly above the norm or if the air is slightly too dry the storages cannot be close together or close to cities and factories—they must be far away from everything that could be harmed by their explosion. To make it short, additional storage facilities are not a valid solution. No matter how many are built, they will become too full if more ammunition pours in than pours out—and more and more was pouring in every day. In the border regions of the Soviet Union the Red Army lost an unthinkable amount of artillery shells that were laid out on the ground. An equally unthinkable amount of shells was lost in railroad trains. In Byelorussia alone 4,216 railroad cars full of artillery shells were left at the border stations.⁷ Why were shells kept in railroad cars? Where were they going to be taken? If defense was being prepared, the shells should have been issued to the troops. If retreat was prepared, there would have been no need to concentrate the shells in the border regions.

But this is not what is most important. the most important is the fact that at the very beginning of the war almost all industry capable of producing new ammunition was lost.

“From August to November 1941, the German troops took 303 Soviet gunpowder, shell, and missile factories, which had a production capability of supplying 101 million artillery shells, 32 million mines, 24 million air bombs, [and] 3,600 tons of TNT. is constituted 85 percent of all output from the Ammunition Narkomat.”⁸ In addition to all this, the mobilization reserves of the most valuable raw materials were concentrated in those factories, including lead, forged steel, and tin. All this went to Germany and was used against the Red Army. But Stalin’s prewar potential was so great that he was able to rebuild his industries during the course of the war behind the Volga River and in the Urals, and produce all that later was used to defeat the German army.

The Soviet General Staff, the government, and Stalin himself were not very afraid of German aggression in early 1939. There was no common border with Germany back then, so Germany could not attack suddenly. the creation of the Ammunition Narkomat in January 1939 could not be a response to German war preparations. Soviet intelligence knew that at that moment German industry was operating on a peacetime regime. In June 1939 the chief of the GRU, Ivan Proskurov, reported to Stalin that Germany was unprepared for a largescale war: if Germany invaded Poland, it would use up its air-bomb supplies within ten days. Germany had no reserves. After the war, the book *Results of World War II* came out in Germany. Field Marshal K. Kesselring, Colonel General H. Guderian, Colonel General L. Rendulic, Lieutenant General E. Schneider, Admiral E. Godt, and others were among the authors of the book. When comparing the analysis made by Soviet intelligence and the actual events, we must acknowledge that Soviet military intelligence was mistaken. the German supply of bombs ran out not after ten days of war, but on the fourteenth day after the attack against Poland. Apparently the best studies of the development of the German army during the reign of the ird Reich were done by Major General B. Muller-Gillebrand.⁹ the general said that in 1939 the German High Command of the land troops demanded that a reserve of ammunition be created that could last for four months of war. However, such reserves were never created. If a four-month supply is taken as 100 percent, then there was in actuality only 30 percent of pistol cartridge reserves, enough for 36 days of war; 15 percent of ammunition for mountain guns; 12 percent of mortar shells for light mortars, and 10 percent for heavy ones. The best supplies were for the heavy field howitzers—there were enough shells to last for two months of war. the worst case was with the tank shells. In September 1939 the main tank of the German Wehrmacht was the Pz-II, equipped with 20-mm cannon. There was only 5 percent of the needed supply of shells required for four months of war, meaning only enough for six days of combat.

Despite all this, Hitler was not eager to mobilize the country’s industry toward war. The German army waged a war, which began as a European conflict and turned global, but German industry remained operating on a peacetime regime. For fifty years the Soviet government has been persuading us that in 1939 war was unavoidable, the world was headed for war, and Stalin could do nothing but sign a nonaggression pact with Germany. An analysis of the conditions of German industry in general, and in the area of ammunition

production in particular, allows us to assert that the situation was not at all so critical. the world was not headed for inevitable war, and a war could have been averted, if Stalin had wanted to avert it. And what is more, if in September 1939 the Red Army had intervened on the side of Poland, Stalin would not have lost anything, while Hitler could have suffered a devastating defeat simply because he did not have enough ammunition. But Stalin did not capitalize on the German weakness. When the war began, the German situation regarding ammunition did not improve, but in May 1940 Hitler delivered a fatal blow to France. There were enough shells and missiles to carry out the attack, but if Stalin had attacked Germany in 1940, there would have been nothing left for Germany to use in fending off his attack, because her industries had still not been mobilized. After this followed the Battle of Britain, and once again the German air force was engaged in a war but German industry was not. When Hitler invaded the Soviet Union. Here, he had tremendous luck—at the very border he was able to take huge quantities of Soviet supplies. Without these supplies he would not have been able to reach Moscow.

The seizure of Stalin's supplies was a tremendous achievement for Hitler, but he had to also think of shifting his own industry to a wartime regime. Hitler, however, was in no hurry to do this. the war in Russia was serious business, and the German army had to spend more shells than ever before. the production of ammunition did not in any way correspond to the expenditures required by the army. Major General B. Muller-Hillebrand cites entire pages of clear-cut statistics. Here are some figures randomly chosen from many thousands like them. In October 1941, the German army engaged in ferocious battles with the Red Army and used 561,000 75-mm shells, while the industry during that period produced only 75,000 of those shells. In December, 494,000 were used and 18,000 received from the factories. In December 1941, Stalin carried out powerful attacks against the German army near Moscow. In December, Hitler declared war on the United States of America. It would seem to be the perfect time to shift industry from a peacetime to a wartime regime. But Hitler still waited. Only in January 1942 did he make the decision to gradually begin the shift of German industry to fulfill wartime needs. the difference between Stalin and Hitler was that Hitler first waged a war against the entire world, fought for over two years—and only then began to mobilize his industries. Stalin, on the other hand, acted in the exact opposite manner. Stalin tried with all his powers to delay the moment when the Soviet Union would have to enter into the war, but he began mobilizing the industries and setting them on a wartime regime back in January 1939.

During the course of World War II, the Red Army had the most powerful artillery in the world. the artillery was used correctly, meaning that it was secretly concentrated in masses on narrow strips of territory and used in sudden, intense strikes. In the Stalingrad operation, the Don front under Lieutenant General K. K. Rokossovsky broke through defenses on a narrow strip of land—only twelve kilometers. Here, besides the tanks, twenty-four rifle regiments supported by thirty-six artillery regiments led the breakthrough. Rokossovsky concentrated 135 guns on every kilometer, and 167 weapons per kilometer

in the primary locations. During the course of the war, the concentration of artillery, tanks, infantry, and aviation constantly increased. By the end of the war, the Soviet staffs began to use kilotons as units of measurement for calculating the power of artillery attacks. Soviet artillery began to speak the language of the atomic age.

In the Vistula-Oder operation, the Soviet command used 34,500 guns and mortars. they were not evenly distributed throughout the force, but rather concentrated on the strips where the breakthrough was to occur. In the strip covered by the 3rd Guards Army, the concentration reached 420 weapons per kilometer. Even more artillery was used in the Berlin operation—over 42,000 guns and mortars. Along the breakthrough areas, huge quantities of ammunition were concentrated, as well as huge quantities of weapons. Marshal Ivan Konev broke through thirty-six kilometers of front line, and used 8,626 weapons to do it. the record was set in the area occupied by the 381st Rifle Division of the 2nd Shock Army, during the course of the East Prussian operation: 468 guns and mortars on one kilometer of front line, not counting the Katyusha salvo-fire installations. During the course of the war the Red Army used 427 million shells and artillery mines and 17 billion cartridges. Just divide this by the number of German soldiers and determine how many shells that makes per soldier. To this you can add the number of hand grenades, land mines, and air bombs. Who could resist such a mighty army?

Here we must also remember that in the war the Soviet Union used only 15 percent of the prewar potential of the Ammunition Narkomat; all the rest was lost during the early periods of the war. Hitler's surprise attack not only annihilated tens of divisions of the Red Army and destroyed the strategic reserves; he also occupied the territories where the newest ammunition factories were located. the Red Army destroyed its own factories or simply abandoned them as it retreated. Some machines were evacuated, but try to move at least one furnace for thousands of kilometers. . . . Try to transport even one thousand tons of ammunition from the border forests to the railroad stations, load them into trains, and evacuate them under enemy fire.

Hitler delivered a surprise blow to Stalin. Stalin lost almost all his ammunition factories. He had to fight back using only 15 percent of the might of the Ammunition Narkomat.¹³ The results of the war are well known. Try to imagine what could have happened if Hitler had stalled with his attack and would have, instead, himself been attacked by Stalin. In that case, Stalin would have been using not 15 percent of his ammunition, but the full 100 percent. What would the outcome of World War II have been then?

The Winter War: Finland

In October of 1939, immediately after the division of Poland between Germany and the Soviet Union, Stalin's diplomats addressed the government of Finland, demanding the cession of the Karelian Isthmus.¹ In exchange, they offered the Finns a piece of territory twice the size of the isthmus. Upon first glance, the proposition seems alluring—Finland sacrifices 2,761 square kilometers, and receives 5,528 square kilometers in return. How-

ever, the proposition was not alluring, but rather contemptuous. the Karelian Isthmus is a direct gateway to the capital of Finland, the largest ports and most populated regions. the geographical disposition of Finland is such that any aggression could come only from the Soviet Union, and only through the Karelian Isthmus. Precisely for this reason, the Finnish army, starting in 1918 (after winning its independence fighting against Russian and local Bolshevik troops during the Russian civil war), began an extensive buildup of defenses on the Karelian Isthmus. Starting in 1929, the scope of the buildup expanded significantly. On the Karelian Isthmus emerged a solid strip of fortifications and obstructions, which became known as the Mannerheim Line, named for the country's commander-in-chief, who had won the war of independence in 1918. Finland spent practically all of her military budget for the ten years preceding the war on the creation of this line of fortifications. Military experts from all countries of the world unanimously agreed that no army, taking any amount of time, could break through the Mannerheim Line. Nevertheless, Stalin's envoys demanded from Finland the cession of her main and only defense structure, meaning they wanted the Finns to put down their arms and hand over to the Red Army, without a fight, the road to their country's unprotected internal regions

The "exchange" of territories was the first step in the plan. Stalin had prepared a second step as well—a revolution in Finland and takeover by the Communists. Already in October 1939 the 106th Rifle Division of the Red Army was supplemented with Finnish Communists who lived in the Soviet Union.² When necessary, this division could be declared the "national army of Finland" and used as a weapon against the legal government. Stalin had prepared a new Communist "government" as well, which was strengthened with officers from the NKVD and the military intelligence. is "government" could at any moment, in accordance with "the will of the Finnish people," be sent to Helsinki. Stalin had started the formation of this "government" already in June 1939.

Three months before the start of the war in Finland, in August of 1939, the Red Army in a surprise attack obliterated the Japanese Sixth Army in Mongolia. Logic would lead us to the conclusion that if the Red Army had the capacity to destroy an entire Japanese field army, Finland could not possibly present any difficulties. Stalin knew the strength of the Red Army, and was certain that Finland would accede without a fight to all his demands. For this reason he did not conduct any serious preparations for war. However, the people and the government of Finland turned out to be unwilling to bend to Stalin's requests.

Stalin issued an order to crush Finland. For an attack, the Soviets needed a pretext. As if on demand, on November 26, 1939, seven artillery shells allegedly flew in from the Finnish side and exploded on the Soviet side, killing three privates and one junior officer.⁴ Finland's government declared that no shell could have come from Finnish territory, because Finland had no artillery near the border. Finland furthermore declared immediate willingness to invite experts from neutral countries or to create a joint committee of Finnish and Soviet experts for further investigation of the incident. But Stalin did not

need any investigation. Since Finland “attacked” the Soviet Union, the Red Army must “strike in retaliation.”

On November 30, 1939, after a brief but intense artillery softening-up, the Red Army crossed the Finnish border, having as its objective taking Helsinki by December 21, 1939—Stalin’s sixtieth birthday. the main strike was carried out on the Karelian Isthmus; secondary strikes were carried out along the entire Finnish-Soviet border, from the Baltic Sea to the Barents Sea. Radio Moscow declared that the Finnish people rose up against capitalists and the Red Army was heading forward to assist the uprising. Units of the Red Army occupied the small village of Terioki. Immediately, Kuusinen’s “government” arrived from Moscow to this village and went to work. All the “ministers” of the new Communist Finland for some reason spoke Russian. Kuusinen’s son kept the records and protocols, also in Russian. the “government” established diplomatic ties with the USSR on December 1, and on December 2 it signed an “agreement on mutual help and friendship between the Soviet Union and the Finnish Democratic Republic.” the agreement was signed by comrades Molotov and Kuusinen and printed in two copies, but in only one language—Russian. Comrade Kuusinen also signed in Russian, using the Cyrillic alphabet.

However, a victory march on Helsinki did not happen. the Mannerheim Line was not located on the immediate border, but deeper in the territory behind the “security pale.” is pale was a strip of land that started at the border and stretched from twenty-five to sixty-five kilometers deep into Finnish territory.⁵ the security pale was a strip of land full of traps, barricades, obstacles, and minefields. the entire space was filled with granite boulders and concrete blocks, forest blockages, scarps and counterscarps, and anti-tank trenches. In this strip for many years, on purpose, there had been no industrial or transportation buildup. Finland did not keep any large military formations or any large amounts of supplies here. All existing bridges on this strip were wired with explosives and ready to be blown up or burned, along with everything else in sight, by the Finnish border patrol in the event of retreat.

As a result of these actions, it took the Red Army two weeks to reach the main line of defense, having already suffered heavy losses, with a broken morale and without ammunition, fuel, or supplies. their maneuvering capability was strictly limited: any step off the main path could become the last step. the rear had lagged behind and was constantly under threat of repeated attack by the light squads of Finnish soldiers, who had flawlessly memorized the area and knew secret safe passages through all the minefields. Having overcome the security pale, the Red Army found itself halted by the fortifications of the Mannerheim Line. the line was in fact a brilliantly camouflaged defense structure, well integrated into the surroundings, and stretching 135 km in width and up to 30 km in depth. Its right flank met the shore of the Baltic Sea; its left flank bordered Lake Ladoga. All in all, the Mannerheim Line counted 2,311 concrete, ironclad, and wooden defense structures. The fighting on the Mannerheim Line was especially tenacious. the Red Army succeeded in breaking through the Mannerheim Line only on March 12, 1940,

in the process sustaining colossal casualties, in both men and arms: 126,875 soldiers and officers were either killed in action, or disappeared without a trace, or died from wounds and disease. Additionally, the army counted 188,671 wounded, 58,370 ill, and 17,867 frostbitten.

On March 13, 1940, the war between Finland and the Soviet Union was ended. The war lasted 105 days and became known as the Winter War. the Soviet Union received the Karelian Isthmus, but Finland kept her independence. The whole world was shocked by the unbelievable weakness of the Red Army. the giant Soviet Union could not take care of Finland, whose population was only slightly more than 3.5 million. All around the world, newspapers were filled with caricatures and reports of the Soviet Union's utter lack of readiness for any war, no matter how small.

A conviction arose among military men, writers, historians, and politicians that the Red Army had demonstrated in Finland complete and utter lack of capacity to wage war. For many decades this idea has been taught in military academies, schools, and universities. However, the actions of the Red Army during the Winter War do not demonstrate weakness. they exhibit tremendous strength. First of all, it is necessary to keep in mind that the Red Army acted in conditions that no army had previously faced. It was conducting an attack in an average temperature of 21 to 24 degrees Celsius below zero. Sometimes it was warmer, but frequently it was colder. On the very first night of the war, the temperature was registered at minus 39 degrees Celsius. Some nights had been even colder. Action was taking place not only on the Karelian Isthmus, but also a thousand kilometers to the north, up to the Arctic Circle and even farther. the cold there was even more severe. Not a single army in the world had conducted an offensive operation, even a failed one, under a temperature of minus 20 degrees Celsius. In such temperatures, no one had even attempted to conduct massive attacks, because it is impossible. Nevertheless, the Red Army conducted successful offensive operations in temperatures of minus 30 degrees Celsius and colder. Stalin ordered the army to act in impossible conditions, and the Red Army did the impossible.

The military experts of the West should have recognized the amazing warfare capabilities of the Red Army and the fallacy of their assumptions. From the actions in Finland, there could be only one logical conclusion: nothing is impossible for the Red Army. If it was capable of advancing in such conditions, then it was capable of advancing in any other conditions—there could be no worse conditions than those in Finland in the winter. If the Red Army had broken through the Mannerheim Line, then it was ready to crush Europe and whoever got in the way. In Finland the Red Army proved that it could accomplish any task, even an “impossible” one. the victorious Red Army accomplished what the strategists of the West had deemed unfeasible. But the strategists did not accept the fallacy of their predictions. Instead they declared the Red Army to be unfit and unprepared for war.

However, all who had followed the developments of the Winter War did not pay attention to certain inconsistencies. the first strange thing happened on March 12, 1940, after

the Red Army broke through the Mannerheim Line. After this, a completely defenseless Finland spread out before it. Finland could now be taken by bare hands, like a turtle whose shell has been ruptured. But the Red Army, having broken through the impenetrable defense system of the Finns, stopped its advance. Why? In December 1939, already having premonitions of the strength of the Mannerheim Line, the Red Army should have stopped its advance and not gone to storm it. But if the Red Army did storm the line and, at the cost of unimaginable casualties, managed to break through it, it should have used what it gained. Stalin broke into the safe, but then did not take anything from it. Where was Stalin's logic? The second inconsistency: all leading military experts before the Winter War declared that breaking through the Mannerheim Line could not be done by any army. the Red Army did the impossible. Furthermore, it broke through the line impromptu, for it had not prepared for such limiting conditions. the Red Army broke through the line in only three months, when all the military experts of the West had maintained that it could not be done in any time frame. And now, all of a sudden these same experts began talking of the Red Army being completely unfit for war. The third inconsistency: the first and loudest reports of the Red Army's poor performance in Finland came in newspapers funded by Stalin. Stalin's court poet, Alexander Tvardovsky, suddenly began speaking of the "infamous war." For some reason he was not executed. For some reason, he was awarded Stalin's praises. Stalin was wise enough to end his "liberation crusade" after the Mannerheim Line was broken and Finland was deprived of her security barrier.

Military operations in Finland were ended on March 13, 1940, and only three months later the three Baltic states, Estonia, Lithuania, and Latvia, surrendered to Stalin without a fight and became republics of the Soviet Union. the governments and military leadership of these countries had carefully watched the war in Finland and drew from their observations a frightening, but correct conclusion: the Red Army was capable of carrying out impossible orders, and it would not be stopped by any number of casualties. If Stalin commanded the Red Army to annihilate somebody, it would sustain whatever losses it took to accomplish the order. Therefore, the three states surrendered without firing a single shot. they understood that resistance was futile. Meanwhile, Stalin issued an ultimatum to the leadership of Romania: give up Bessarabia. Remembering the experience of Finland, the Romanian government did not even organize lengthy talks: it handed over Bessarabia, and on top of it Northern Bukovina.

The Red Army conducted in Finland a unique and unparalleled operation. the Red Army performed in a fashion unrivaled and unrepeated by any army in history, but for some reason Hitler concluded that it had performed poorly. German generals were watching wonders unfold before their eyes, but did not understand the significance of what they were seeing. German generals were unable to appreciate what they observed. us, the people surrounding and counseling Hitler made strange deductions concerning Stalin's readiness for war. Goebbels's diary from those days is full of remarks of this sort: "November 11, 1939: The Russian army presents no value. the army is poorly commanded, and it is

even more poorly armed. . . . December 4, 1939: the Russian Army is of little value. . . . January 23, 1940: The military strength of Moscow is almost insignificant.”¹³ Goebbels wrote down not only his own opinion, but also Hitler’s: “He once again notes the catastrophic state of the Russian army. It can hardly be used for military action.”

For the Red Army, the war in Finland was a vaccine against hubris, boastful dispositions, and underestimating the enemy. the war in Finland taught the Red Army a lot: in 1941 near Moscow and in 1942 near Stalingrad, German troops met the Red Army, which by then knew how to fight in the winter. the German army, however, was not at all taught by the war in Finland. is war played a dirty trick on Hitler. He did not understand this war, did not correctly assess its hardships, and therefore made disastrous miscalculations. He suddenly decided that the Red Army was not ready for war and was unfit for any kind of action. Hitler turned out to be wrong. No conclusion about the strength of the Soviets follows out of the fact that the Red Army did not reach Helsinki. On the contrary, it follows that the Red Army was capable of reaching Berlin. Many German generals realized that the Red Army, according to the results of the fighting in Finland, was assessed incorrectly. During the Battle of Stalingrad, Goering had publicly declared that the war the Soviet Union had launched against Finland was “perhaps one of the biggest cover-ups in world history.” Goering believed that Stalin deliberately “sent to Finland a few divisions, equipped with obsolete weaponry, in order to hide the creation by the Soviet Union of an unprecedented war machine.”¹⁵ In closed circles, Hitler himself admitted the mistake. is occurred on April 12, 1942. Hitler said the following: “The entire war with Finland in 1940, just as the Russian advance into Poland with obsolete tanks and weapons and poorly clothed soldiers, was nothing other than a grandiose disinformation campaign, because Russia at that time controlled arms which made it, in comparison with Germany and Japan, a world power.” He also said, on June 22, 1942: “Back home in Russia, they created an extremely powerful military industry . . . and the more we find out what goes on in Russia, the more we rejoice that we delivered the decisive blow in time. the Red Army’s weaponry is the best proof that they succeeded in reaching extremely high achievements.”

Germany’s Strategic Resources and Stalin’s Plans

Germany, France, Belgium—all have powerful steel-casting industries, but they do not have much iron ore. Too many things on the front and in the rear, from the soles of soldiers’ boots to battleships, are made of steel. Due to steel shortages, German leaders—as high-ranking as Goering—seriously considered the possibility of building locomotives of concrete instead of steel.¹ Due to steel shortages, damaged bridges were repaired using wooden logs instead of steel beams. Due to steel shortages, railroad rails from spare tracks were used to repair the damaged sectors of primary tracks. Railroad tracks with two-way traffic were transformed into one-track roads. is slowed the entire rhythm of production in Germany and in the countries Germany occupied.

In any case, Hitler could not have counted on a quick victory—he had too many enemies. A long war was a path to suicide for Hitler, in the most literal sense of the word. In order to maintain for just a few years what he wanted to establish, he needed to gain iron ore supply. the richest ore mines in Europe, with high iron readings of up to 60 to 65 percent, were located in the area of Kiruna-Ellivare in the very north of Sweden, and arrived at German ports through the Baltic Sea. One of the weakest links of the German economy was the loading of iron ore in the Swedish port of Lulea, followed by the long trip along Finland's coast through the Gulf of Bothnia, past the Åland Islands, past the islands Gotland, Oland, Bornholm, and then the unloading in the German ports. the iron ore was loaded almost at the Arctic Circle and was transported across the entire Baltic Sea from the northernmost to the southernmost ports. Neither the British, nor the French, nor any other fleets posed any threat to the transport of iron ore across the Baltic. For a foreign fleet, breaking into the Baltic Sea was like breaking into a mousetrap and staying trapped there. But the Soviet Navy did not need to break into anything. It was already there, in its bases, peacefully awaiting the right opportunity.

For defending the Soviet Union a fleet in the Baltic Sea is not needed at all. Prior to 1940, the Soviet Union held a very small piece of seashore there. For more than two hundred years St. Petersburg (known as Leningrad in the Soviet era) was the capital of the empire, and for that reason along this stretch of shoreline all the Russian tsars, beginning with Peter the Great, had erected fortifications. Aside from coastline batteries and forts, the Leningrad region had a rather impressive concentration of naval cannons on railroad platforms. Three naval fortified regions protected the direct gateways to Leningrad: the Kronstadt, Izhorsk, and Luzhsk, so the routes to the city could be shelled by powerful crossfire from all directions. Each battery, each fort, each fortified region, and each naval base had ammunition and supplies enough to last them for the entire four years of the war.

If the Soviet Union meant to defend itself, it did not need battleships in the Baltic Sea. In case of need, even without battleships, it was possible to quickly unload barges full of mines at the mouth of the Gulf of Finland and thus to cut off the approach to Leningrad. In defensive warfare a Soviet Baltic fleet was unnecessary. In fact, that is what happened—the Soviet Baltic fleet stayed without action for the entire duration of the war. In the event of attack by an aggressor, the Soviet Baltic fleet was extremely vulnerable. the aggressor could simply block the Soviet fleet by laying a couple of hundred mines on the shallow accesses to the naval bases. Indeed, that was done by the German fleet in June 1941.

In 1939 Hitler launched World War II against the rest of the world, having in his possession only fifty-seven submarines. His opponents were the almighty British and French fleets and, potentially, the U.S. navy. Hitler's navy had to lead an uneven battle in the Atlantic and the Mediterranean. In the Baltic, Hitler had almost nothing left. In the summer of 1941 in the Baltic Sea, the German navy had only five training submarines and twenty-eight torpedo motorboats, some of which were also used for training. the rest were

secondary forces: mine blockers, various motorboats, and minesweepers.⁵ But peace-loving comrade Stalin watched the struggle between Germany, France, and Britain and beefed up the might of his Baltic fleet. What for? In 1933 Stalin had already said: "The Baltic Sea is a sealed bottle, and we can't open it."⁶ Nevertheless, out of every three battleships, Stalin kept two in the Baltic, as if in a corked bottle. In 1941 on the Baltic Sea alone Stalin had sixty-nine submarines.⁷ No one in the world had such a number of submarines collected in one place. What task could Stalin set before his battleships and submarines in the closed aquarium of the Baltic Sea? Only one: to sink German transports of iron ore. There was no other work there for them.

At any moment, the Soviet fleet could have raised anchor, reached the German and Swedish ports, blocked them with thousands of mines, and sunk the defenseless transports. It would have ended the war for Germany, and this must have been known and understood in Berlin from the start. Hitler fought against Britain and France, while behind his back Stalin held up high a glittering ax. At the end of November 1939, Stalin made a huge mistake—he launched a war against Finland. The victory in Finland was a second warning to Hitler that Stalin was approaching the Swedish sources of ore. The Red Army, acting on Stalin's orders, got through the Finnish fortifications and halted its advance. Finland without the fortifications was defenseless. At any moment, Stalin could have given another order and renewed the advance of the Red Army. From Finnish territory it could have bombed Swedish ore mines and railroads unhindered. No one could have impeded this. The seizure of the Åland Islands alone would have been enough to close off the mouth of the Gulf of Bothnia, which would have meant an end to World War II with a Soviet victory.

And that was not all. In the part of Europe that was occupied by Hitler there are no forests. The forests are in Finland and Sweden. Any possible cessation of the shipment of lumber across the Baltic Sea carried with it a multitude of consequences, and all were negative. The wood was needed for building and restoring railroad ties and for mining coal, which was needed for forging steel. No wood meant no transport along the railroads. During peacetime in Germany there was already a yearly timber shortage of about 6 million tons. Instead of wood pulp they had to use potato foliage. The Fuehrer himself attests to that.¹⁰ But that was just during peacetime, when no one hindered the transport of timber across the Baltic Sea. As soon as Stalin's submarines struck German timber carriers, Germany would have wound up without wood at all. On top of everything else, Germany had no nickel. It was impossible to fight without nickel—but the nickel supplies were in Finland. At the beginning of 1940, during the course of the war against Finland, the Red Army had seized control of the nickel mines in Petsamo, and then in the spring of 1940, according to the peace treaty, returned them. But now nickel was obtained according to joint Soviet-Finnish shareholding companies with the participation of Soviet engineers and workers. The Soviet government insisted that the director of the entire operation be a Soviet man. Nickel from Petsamo went to both Germany and the Soviet Union. Germany was receiving 70,000 tons from this area, or

70 percent of Germany's annual demand of this strategic mineral.¹¹ However, the nickel supply could be stopped at any moment. the Soviet 104th Rifle Division, under Major General Morozov (of the 42nd Rifle Corps of the 14th Army) stood right outside the nickel mines.

German strategists did not fear a new Soviet invasion of Finland in vain. On November 25, 1940, the People's Commissar of Defense of the USSR, Marshal of the Soviet Union S. K. Timoshenko, and Chief of General Staff of the Red Army General K. A. Meretskov signed a directive to the staff of the Leningrad military district. Only one copy of the document was produced, and it was labeled top secret and especially important. Let's remember the date—November 25, 1940—we will return to it later on. The document begins by saying:

“In the conditions of war only against Finland, the USSR establishes, for convenience of control and material supply, two fronts: the Northern front for action on the shoreline of the Barents Sea and in the direction of Rovaniemi, Kemi and Oulu; the Northwestern front for actions directed toward Kuopio, Mikkeli and Helsinki. The leadership of the Northwestern front falls on the shoulders of the command and staff of the Leningrad military district. It is ordered to start the development of plans for operations opening up the Northwestern front. . . . the main objectives of the Northwestern front are set: destruction of Finland's armed forces, gaining control of her territories within the boundaries, and gaining access to the Gulf of Bothnia by the forty-fifth day of the operation. . . . On the right, the Northern front (its staff in Kandalaksha) on the fortieth day of mobilization moves to assault, and on the thirtieth day of the operation gains control of the regions of Kemi and Oulu. . . . the Red-Flag Baltic fleet, subordinate in all operations to the Military Council of the Northwestern front, is issued the following tasks: Working jointly with the air force, destroy the active navy of Finland and Sweden (in case of involvement by the latter). Assist the ground forces, acting on the Finland Gulf shore and from the Hanko peninsula, by supplying their flanks and destroying the coastal defenses of the Finns. Provide the transfer of two rifle divisions during the first few days of the war from the northern shore of the Estonian SSR to the Hanko peninsula, as well as transporting and launching an amphibious assault on the Åland Islands. rough cruiser operations of submarines and air forces, interrupt Finnish-Swedish naval communications (in the event of the latter's interference against the USSR) in the Gulf of Bothnia and the Baltic Sea.”

This plan of action was given the name “S.3-20.” the plan was to be put into action at the moment of receipt of a coded telegram with the signature of the chief of the general staff and the following contents: “Commence execution of plan ‘S.3-20’.” In this plan there was no mention of the fact that the Soviet Union would fight for the “guarantee of safety to the city of Lenin,” that is, Leningrad. And there were no hints that military actions must be initiated only in response to enemy aggression. the usual words “if the enemy wages war upon us . . .” were absent. Here, it was much simpler: at any moment, the Leningrad staff would receive a telegram from Moscow, and Soviet armies would advance

to the Gulf of Bothnia, to the Swedish border, to the Åland Islands! the trusted comrades at the right moment would set up a new “provocation of the Finnish war machine on our frontier,” and those whose job it was to do so would explain to the workers of the world the meaning of the “peace-loving global politics of the USSR” and the necessity of our “counterblows to the Finnish aggressors.”

The plan “S.3-20” allowed the armies of the Leningrad and Arkhangelsk districts, together with the Baltic fleet, to deliver blows to Finland before the Red Army hit Germany, simultaneously, or slightly later. But in any case, the blow to Finland was also a blow to Germany. In the event of putting plan “S.3-20” into action, Soviet troops were to seize the nickel mines in Petsamo and the Åland Islands, and make their way to the city of Kemi. It was not a coincidence that in 1940, on the Baltic Sea, the first marine infantry brigade was formed under the leadership of the Soviet saboteur Colonel Parafilo. It remained only to send to the Leningrad headquarters the coded message: “Bring plan into execution.” There is no need to search for a plan for war against Germany. If plan “S.3-20” had been realized, it meant a deadly blow not only to Finland, but to Germany as well.

In the summer of 1940, Stalin committed another error: he brought Estonia, Latvia, and Lithuania into the Soviet Union, organized on their territory the Baltic special military district, and concentrated all the forces of that region on the border of Eastern Prussia. This was completely unnecessary, and even harmful, for defense. Some say that Stalin moved his border to the West and thus strengthened the safety of the USSR. But in fact the situation was exactly the opposite. Before the occupation of the Baltic states, the Red Army had a divisive barrier in this region. Consequently, in the event of aggression Hitler’s armies had to crush the armed forces of three independent states before meeting the Red Army. Even if he had to spend only a few days in order to crush the armies of Latvia, Lithuania, and Estonia, a surprise attack on Soviet airbases in this direction would have been out of the question. The Red Army would have had the chance to put its forces on high alert and take its positions. After the destruction of the three states’ armies Hitler’s forces would have approached Lake Chudskoe, which is impossible to cross. If they had tried to go around the lake, Hitler’s armies would have come straight into Soviet fortified areas. But everything unfolded according to a different scenario. The Red Army came out of its fortified areas to the front lines in Lithuania, right up to the German border, and transferred there its air bases, staff headquarters, communication centers, and strategic supply resources. For the people of the three Baltic states, Stalin’s army became the aggressor and occupant, and Germany, if it decided to attack the USSR, would have become the liberator.

On June 22, 1941, the Red Army suffered a surprise attack from the German armies along the entire stretch of the border, including the Baltic states. The command centers were disrupted and Soviet aviation suffered significant losses on border air bases. Moreover, a widespread popular uprising in the Baltic states flared up against the Red Army. The Soviet “liberators” were shot at from every rooftop. The Red Army was left in the Baltic

region without any fortified regions, and behind their backs, on Russian territory, remained empty fortified areas without any troops. German troops led by General Field Marshal von Manstein seized them immediately.

Skeptics disagree: if Stalin had not occupied the Baltic states, Hitler could have seized them without war, by simply moving his troops there as he did in Czechoslovakia. To this theory, there is a rebuttal. It should have been explained to Hitler clearly that if German troops attempted to enter the Baltic states area, the Soviet Union, without warning, would begin sinking German transports of ore and wood in the Baltic Sea, setting up mines in the entryways of German ports.

In August 1939 the Soviet Union's position was announced loud and clear: Mongolian territory will be defended from Japanese aggression as if it was our own. And that was done! is position was correctly understood in the entire world, including Japan. As a result of this decisiveness and strictness, Japanese aggression against the Soviet Union was averted. Why did the Soviet Union, in 1939, not take the same position regarding the Baltic states? The occupation of those states by the Red Army made sense only if there were plans for an aggressive war against Germany. the Red Army came right up to the German border and transferred its air bases to the very front edge of that border. From the bases in Lithuania it could support the advance of Soviet troops right up to Berlin. Additionally, the Soviet navy received naval bases in Tallinn, Riga, and Liepaja. the primary forces of the navy and reserves were immediately transferred there. From Liepaja to the routes taken by caravans carrying ore, nickel, and wood to Germany, there was a very small distance. A strike from this area could be sudden and crippling. For Hitler, this would have been the curtain call. Hitler understood that at any moment the Soviet fleet could cut the only tie binding the faraway Swedish ports with the metalforging bases in Germany.

The Carving Up of Romania, and its Consequences

Adolf Hitler on May 18 1942: "Had we not succeeded in halting Russian troops during their entrance into Romania and forcing them to be content with obtaining only Bessarabia, they would have taken the Romanian oil fields, and no later than that same spring they would have crushed us, for we would have lost all sources of fuel."

Stalin strove to persuade Hitler that he wanted peace. At the same time, Stalin very persistently crawled toward the vital life-sustaining resources of Germany. For Stalin, it was not enough that the Red Army and fleet had under their control all the routes through which Germany got her iron ore, timber, and nickel. Stalin decided to move his divisions right up to the regions from which Germany received its petroleum supplies. In August 1939, Stalin (with Molotov's hand) signed a pact, according to which Hitler got a war on two fronts, and according to which the British fleet blocked Germany and did not allow petroleum shipments to come in by sea. Germany had only one possible source of oil significant enough to be noted—Ploiesti in Romania. the loss of this source of oil

would have put a complete stop to German production, army, aviation, and navy.

Stalin ordered Zhukov to use threats or battle to obtain Bessarabia and Northern Bukovina from Romania, and to secure arm's-length access to Romania's undefended oil fields, which were two hundred kilometers from the border. Zhukov's Southern front was ready to crush Romania, but in the summer of 1940 he did not have to fight. Romania's leaders had witnessed the brilliant victories sustained by the Red Army in Finland and had a clear understanding that it was better to accede to Stalin's wishes without battle. The sides agreed to a peaceful resolution of the conflict. At the end of June 1940 Romanian troops retreated from and Soviet troops entered Bessarabia and Northern Bukovina. These territories were added to the constituency of the Soviet Union.

In June 1940 three paths were open before the Southern front commanded by General Zhukov: two were correct, one was deadly. The first correct path: deliver a blow to Bessarabia and continue to advance toward the oil fields of Ploiesti. Three thousand Soviet tanks and two thousand airplanes were more than enough to reach the oil fields and ignite a fire. This would have meant the end for Germany. If the Southern front in June 1940 had dealt a blow to Romania, World War II would have ended in 1940 with a victory by the Soviet Union and an establishment of Communist regimes over the entire European continent. If the events had unfolded in such a manner, giant colonies of the French, Belgian, and Dutch empires would have been transferred to Stalin's control.

The second path was more risky, but promised even more victories: in June 1940 Stalin could have simply done nothing. He could have waited. He would not have had to wait much longer. After defeating France, Hitler could have delivered a blow to Britain. The risk for Stalin lay only in the fact that after the defeat of France, Britain and Germany could have concluded peace. In that case, Stalin would have been left one-on-one against Germany. However, if Hitler, as he planned, landed his troops in Britain, the task of "liberating" Europe became much simpler: Zhukov would have struck the Romanian oil fields, then the Red Army would have begun its "liberating operations" in Europe, all while the best German troops were off the continent, in Britain, from where they could return immediately. The third path was deadly. In June 1940 Zhukov's Southern front took over Bessarabia and Northern Bukovina—then halted halfway to the oilfields of Ploiesti. Hitler said in 1942 that he was able to force Stalin to be satisfied in 1940 with Bessarabia alone. This was not so. Firstly, in the summer of 1940 Stalin had not yet set for Zhukov the objective of crushing Romania. Secondly, in 1940, in the heat of the fighting in France, Hitler had no means of exerting influence over Stalin. If Stalin had ordered his troops to crush Romania in the summer of 1940, nobody would have been capable of stopping the advance of Zhukov's Southern front.

As a result of the "liberation crusades" the distance from the new Soviet frontier to the oil fields of Ploiesti was now just 180 km. This was a clear, open area. Troops from the Odessa military district were concentrated at the very border, ready as soon as they got the first order to continue the "liberation" right up to the oil wells. Soviet tanks numbered over three thousand; the Romanians had sixty tanks. The Soviet "obsolete" BT-7M tank even

officially had a speed of 86 km/h (in reality it was faster). the Romanian tanks opposing it were FT-17s, and had a maximum speed of 9 km/h. Therefore, the Soviet tanks could just disregard their Romanian opponents, ignore them and bypass them at their will. Even if one were to set one thousand Soviet tanks against sixty Romanian ones, even then the remaining two thousand could advance to Ploiesti unhindered, without leaving the main road and without maneuvers.

A seizure of Ploiesti by Soviet troops, or just a fire in the oil production areas, would have meant paralysis for Germany. In the event of Ploiesti falling to the Soviets, all German tanks, automobiles, cruisers, battleships, submarines, and airplanes would have been stopped in their tracks. Who cares that you have talented generals, officers, soldiers, pilots, and artilleryists? Without fuel all their talents would be completely useless. A freeze on oil supply to the German war machine opened up the way for thousands of other Soviet tanks. From Brest and Lvov, from Belostok and Grodno, the road to Berlin was now very short. If the German army and aviation were paralyzed, and no one offered resistance, then on good roads the tank units could reach not only Berlin and Munich, but Paris and Marseille as well.

In May and June of 1940 Hitler was crushing the armies of Britain, Belgium, Holland, and France. German tank units headed for the Atlantic Ocean, making a huge detour around Paris. Practically the entire Germany army fought in the West. Hitler victoriously crushed France and British troops on the continent. Against France and Britain, Hitler threw his entire naval fleet, air force, all his tanks, and all his heavy artillery. the best German generals fought there. And in the rear, on the borders of the Soviet Union, Hitler left only ten weak infantry divisions. Here, there was not a single tank, a single airplane, a single heavy artillery weapon. Most importantly, the ten infantry divisions were all in Poland and Slovakia. In Romania, there were no German troops. In June 1940 neither Hitler nor his generals had any intentions or plans to attack the Soviet Union. the Oberkommando des Heeres (OKH—German Army High Command) and the Oberkommando der Wehrmacht (OKW—Supreme Command of the Armed Forces) had neither rough drafts nor preliminary designs for a war against the USSR. they had no orders from Hitler in this regard. Not a word was said about war against the USSR. After the defeat of France, Hitler ordered a drastic reduction in German armed forces. is reduction was widespread and intense, for there were no plans, hints, or foresight indicating that a war against the Soviet Union might be approaching. And all at once came the Soviet strike against Romania. Oil is the blood of war. Without oil, fighting becomes impossible. Stalin's axe was raised over the oil production in Romania.

In Berlin, it was finally recognized that the Soviet threat to Germany was lethal. Soviet tanks advanced to Romania, causing chaos in German headquarters: if the tanks did not stop, if they advanced another 180 km, then Germany would capitulate within the next few months. Romanian troops made no resistance and put up no obstacles to the Soviet advance.

Soviet troops occupied Bessarabia and Northern Bukovina and stopped. Berlin breathed

a sigh of relief. However, what would have happened if, the next day, Stalin had ordered the advance to continue? A solution was found: in case of an emergency, it would be necessary to deliver a warning blow to the Soviet Union, using ten divisions in another location, thereby creating for the Red Army a diversion from Romania. After conducting the battles on maps, the German high command understood that ten divisions would be insufficient. they decided to use twenty, and saw the same result. they increased the number of divisions, again and again. In the end, it was decided: in order to not allow Stalin to seize or destroy the oil industry in Romania, it was necessary to deliver a blow to the Soviet Union with the might of the entire German armed forces. On July 21, 1940, Hitler for the first time in a very tight circle uttered the idea of the "Russian problem." On July 21 the head of ground forces, General Field Marshal W. Brauchitsch, received an order from Hitler to begin developing a specific plan for war in the East. the next day, Brauchitsch entrusted Halder, the head of general staff for ground forces, with fully evaluating all the different potentialities "in a military operation against Russia." Major General Erich Marcks was then appointed to Halder's staff as an aide for developing the specifics of the eastern campaign. On July 29 Marcks began planning a military campaign against Russia.

For the Soviet Union, the consequences of a bloodless victory in Romania were catastrophic. First of all, neutral Romania was faced with a terrible choice: whose side should it take? Stalin had suddenly demanded Bessarabia and Northern Bukovina, and Romania was forced to give them up. What would Stalin demand tomorrow? Hitler, on the other hand, did not demand anything. the choice was simple, and Romania got Hitler's protection. the result: the Soviet Union obtained another hostile country along its border; the front, that was supposed to protect the USSR in case of war, stretched for almost another eight hundred kilometers; and Hitler received an ally that held oil. Without oil, Germany could not fight. In other words, having Romania in his arms, Hitler could attack the Soviet Union. Without this new alliance the attack would have been impossible. But the most important effect lay in something else. Stalin frightened Hitler. It was precisely the "liberation" of Bessarabia and Northern Bukovina that acted as the last warning for Hitler. A direct Soviet threat arose over the oil fields of Romania, and precisely because of this threat Hitler ordered his commanders to prepare a strike against the Soviet Union.

In Stalin's career there were few errors. One of the few, but the most significant one, was the occupation of Bessarabia in 1940. He could have taken Bessarabia and continued on to Ploiesti, which would have meant the destruction of Germany. Or, he could have waited until Hitler landed troops in Britain, and after that he could have taken over all of Romania. is too would have ended the "thousand-year Reich." Stalin, however, made one step in the direction of oil, took over the launching ground for the next attack—and stopped to wait. rough these actions, he showed interest in Romanian oil and alarmed Hitler, who before this had concentrated on the West, North, and South, without paying much attention to "neutral" Stalin in the East.

Why did Stalin need Bessarabia and Northern Bukovina? Here is the official answer of

the Soviet historians to that question: "From the Bessarabian territory, the Soviet air force could keep Romanian oil industry, which was the main supplier of oil to Germany, under constant threat. Northern Bukovina was needed because through its territory went a railroad of strategic importance, which stretched from Odessa through Kishinev, Chernovtsi, to Lvov, and which had a European track which enabled it to allow usage by railroad cars from all over Europe." Here is what Hitler had said regarding the same matter, but half a century earlier:

"It is absolutely obvious that the Soviets were determined to direct the unfolding of events in the Balkans in the direction necessary to them, and in that manner to transform the area into launching grounds for an attack on us and the remaining countries of Europe. And, doing everything possible to achieve this goal, they simultaneously declared readiness to sign trade agreements with us, which would seem to be favorable to us but would in fact cut us off from our oil sources as soon as their preparations for the decisive coup were finished. In the summer of 1941 they intended to deliver a crushing defeat to Romania, for it was the only country, except Russia, that delivered us oil."

A question arises: are we not giving too much importance to the role played by Romanian oil? Did not Germany establish her own production of synthetic fuel? Such an industry did indeed exist, but the problem of fuel was still not resolved. First of all, it is important to keep in mind that synthetic fuel can never compete in quality with fuel made from petroleum. The use of synthetic fuel significantly lowers the tactical and technical characteristics of weaponry, most of all airplanes, tanks, and ships. Your designers can create a wonderful aircraft, your factories can have the best technological capabilities in the world, your workers and engineers can put into the building process of the plane all their talent and effort, but with low-quality fuel the plane will still be slow, weak, and clumsy. On top of all this, synthetic fuel is also expensive. With timber, if there was a shortage, Hitler's Germany used potato stalks. Even though they were lower in quality than wood, at least they were cheap. But the production of synthetic fuel costs seven to twelve times as much as the production of fuel from petroleum. Hitler's decision to use synthetic fuel was not born out of good fortunes. Very few would be willing to repeat his experiences. The following facts enable us to judge the quality and costs of synthetic fuel. In the second half of the twentieth century the world suffered from an oil crisis more than once. At the beginning of the new millennium, the global chemical industry is far more powerful than the chemical industry of Germany in 1941. And still, for some reason there is no rush to produce synthetic fuels today.

Destruction of the Buffer States between Germany and the Soviet Union

It is a fact of history that on June 22, 1941, Germany attacked the Soviet Union, suddenly and treacherously. However, it is a very strange fact. Before World War II, Germany had no common border with the Soviet Union and therefore could not attack it, especially in a sudden fashion. Germany and the Soviet Union were separated by a solid barrier

of neutral countries. In order for the Soviet-German war to take place, it was necessary to create the right conditions: to destroy the barrier of neutral countries and establish common Soviet- German borders. Everyone interested in the date June 22, 1941, before cursing Hitler and accusing him of treachery, has to answer at least two questions: who destroyed the buffer row of neutral countries between Germany and the Soviet Union and what for?

Communist historians invented explanations for the deeds of the Soviet Union. The first explanation: having bloodied and ripped apart Poland, the Soviet Union moved its frontiers to the west, and thus fortified its security. What a strange explanation. Soviet frontiers were indeed moved two to three hundred kilometers, but at the same time Germany moved its frontiers two to three hundred kilometers to the east. Its move decreased, rather than increased, the Soviet Union's security. Furthermore, the completely new factor of a common Soviet-German border arose, which carried as a consequence the possibility of sudden war between Germany and the Soviet Union. Explanation number two: having axed Poland in the back at the moment of her desperate fight against the Nazis, Stalin attempted to delay the moment the Soviet-German war would start. This explanation stems from the old pretext: we started a fire in the neighbor's house, hoping that the fire will reach and destroy our house later than it destroys his. The third explanation: France and Great Britain did not want to make a deal with the Soviet Union. It is a blatant lie. France and Great Britain did want an anti-Hitler treaty with the USSR and started negotiations in Moscow. The negotiations were suddenly stopped by the Soviets who immediately signed the Molotov- Ribbentrop Pact with Germany.

Poland, Estonia, Lithuania, Latvia, Finland, and Romania were natural allies of the USSR. Unlike France and Britain, these countries were potential victims of Hitler's Drang Nach Ost (Drive towards the East). With them, the USSR should have sought an alliance against Hitler. But Stalin was not seeking such an alliance, and in the cases where pacts did exist, the Soviet Union did not act in accordance with them. Stalin could have remained neutral, but instead he stabbed in the back those who fought against Hitler.

In 1939 conditions for defense were much more favorable: forests, rivers, swamps, few roads, and lots of time. Soviet troops could have created a powerful barrier on the new Soviet-German border, especially since the opening was not wide. But at that moment the Soviet Union stopped producing anti-tank and anti-aircraft cannon. Instead of making the area impassable, it was quickly made more penetrable. The Red Army built bridges and roads, expanded and improved the railroads. Previously existing fortifications were torn down and buried under mounds of ground. One participant of those events, professor and Colonel I. G. Starinov of the GRU, candidly described what went on: "A stupid situation arose. When we faced weak armies of small countries, our borders were truly locked. But when Nazi Germany became our neighbor, the defense structures along the former border were abandoned and even partly dismantled."¹ And: "Engineering command of the Red Army sent a request for 120,000 railroad mines of delayed action. In the event of an invasion, this amount would have sufficed to paralyze the German army's supply routes

from the rear, on which it entirely depended. But instead of the requested amount, they sent . . . 120 mines.”² By the way, a mine is the most simple, most inexpensive, and highly effective weapon. The Soviet Union had huge land mine production, but after the new borders with Germany were established this production was curbed.

What did Stalin do aside from dismantling his own defenses? He also tore to pieces the barrier of neutral countries. For Hitler, one hole in the wall was enough. For Stalin, it was not. Hitler (with Stalin’s help) demolished the leadership of only one country in the dividing barrier—Poland. Stalin (without outside help) did the same in three countries (Estonia, Latvia, and Lithuania), tried to do it in a fourth country (Finland), and actively prepared for doing it in a fifth country (Romania), having first ripped from it a huge chunk of land. Hitler strove to force only one opening in the wall, Stalin tried to demolish the entire wall.³ And Stalin accomplished his goal. Only ten months after the signing of the non-aggression pact the dividing barrier was completely destroyed, from the Arctic Ocean to the Black Sea, by Stalin’s efforts. There remained no neutral countries between Stalin and Hitler, and thus the conditions for attack were set.

During this short time all of Stalin’s neighbors to the west became his victims. Aside from nations sharing borders with the Soviet Union, Lithuania, which did not have any common borders with the USSR at all, also fell under Stalin’s domination. the appearance of Soviet troops in Lithuania meant that they had truly reached Germany’s real borders: from September 1939 the Soviet-German border passed through the conquered Polish territories, and from the summer of 1940, Soviet troops came to the border of Eastern Prussia. Here it cannot at all be said that the monstrous Hitler was hacking corridors to the east, and the stupid Stalin was assisting him. No, Stalin hacked corridors to the west without any outside help.

Did the Red Army plan to stop at the borders it attained? the answer was given by the People’s Commissar of Defense of the USSR, Marshal of the Soviet Union S. K. Timoshenko: “In Lithuania, Latvia, Estonia we destroyed a power of landowners and capitalists hateful to the workers. the Soviet Union grew significantly and advanced its borders to the west. the capitalist world was forced to tremble and cede to our will. We, the fighters of the Red Army, should not be content and stop at what has been attained!”⁴ is was not the speech of a politician and not the announcement of a journalist. It was an official decree for the Red Army. But to the west of Soviet borders there was only Germany, or her allies; and a pact had been signed with Germany Stalin made no secret of how a true Communist should view promises and pacts: “The question of struggle . . . needs to be examined not from the standpoint of fairness, but from the standpoint of demands of the political moment, from the standpoint of the political demands of the [Communist] Party at each given moment.”⁵ “A war can turn upside down each and every pact.”⁶ Here are the “political demands”: “History says that when any country wants to fight against another country, even one that it does not neighbor, it begins to seek out borders, through which it could reach the borders of the country it wants to attack,”⁷ Stalin wrote.

Stalin needed a situation in which “capitalists gnaw at each other like dogs.”⁸ The Molotov-Ribbentrop Pact created precisely that situation. Pravda’s tone was excited: “Each war like this one brings us closer to that happy period, when there will be no more killings among people.”⁹ Lieutenant General S. M. Krivoshein describes a conversation with his deputy, P. M. Latyshev (at that time Krivoshein commanded the 25th Motorized Corps): “We made a deal with the Germans, but this does not mean anything. . . . Now is the best time for a final and constructive resolution to all of the world’s problems.”

Before the war, the main Communist Party newspaper, Pravda, did not call upon the Soviet people to build defenses. Pravda’s tone was different: soon the entire world will belong to us. “Our country is great. the globe itself needs to rotate nine hours in order for our huge Soviet country to enter the new year of its victories. There will be a time when it will need for this not nine hours, but a whole twenty-four. . . . And who knows where we will be greeting the New Year in five or ten years: along what time belt, on what new Soviet meridian?”¹¹ With the date of the Soviet break-in into Europe approaching, Pravda became more and more straightforward: “Divide your enemies, temporarily satisfy the demands of each of them, and then crush them one by one, without giving them an opportunity to unite.”¹² Hitler decided that he should wait no longer. He made the first move without waiting for the blow in the back from the liberating axe.

But even having started the war in the most favorable circumstances that had ever existed for an assailant, he was unable to win. Even in the most unfavorable of circumstances, the Red Army managed to “liberate” half of Europe and dominate Eastern Europe for half a century. One wonders what the outcome would have been if the best German forces had left the European continent to go to Africa and the British Isles, and, behind their back, the Red Army had destroyed the only German oil source in Romania?

Destruction of the Security Pale on the Eve of the War

To prevent a sudden enemy attack, a country preparing for defense deploys its troops not on the very border, but deeper in its territory. Between the border and the main line of defense, it creates a continuous zone of obstacles and barriers. This zone is called the security pale. Its purpose is to wear down the aggressor before he meets the main forces of the defense. In the 1920s, during their attempt to occupy Poland, commanders of the Red Army saw the effectiveness of the Polish security pales for the defense of Poland and had the bitter experiences of advancing through such pales.

In September 1939 the border of the USSR was moved 200 to 300 km to the west. The depth of their security pale increased greatly. Moreover, the railroad system on the territories acquired after the division of Poland was poorly developed. Out of 6,696 km of tracks, only 2,008 were two-way, and even they had a low capacity. In case of emergency, it was very easy to make them completely unusable. In November 1939, the Red Army in Finland learned the hard way that a security pale could ease the position of the defense and complicate the position of the aggressor. Crossing the Finnish security pale required

a huge expenditure of time, strength, resources, and blood.

In 1939, Poland was divided between Germany and the Soviet Union. Some rivers became borders. Bridges on those rivers that were not used were still kept intact. In the line held by the 4th Army alone, there were six such bridges. The former Chief of Staff of the 4th Army, Colonel General L. M. Sandalov, asked: "Why, to ask frankly, were so many bridges across the Bug [river] kept intact in the line of the 4th Army?"⁵ The German command hoped to use the bridges in an aggressive war, and thus did not ask for their destruction. But what did the Soviet command hope for? At the beginning of the war, a huge number of German troops went across those bridges, crushing the Soviet 4th Army in a surprise attack. The defeat of the 4th Army opened the way to the rear of the really powerful 10th Army, which also suffered unimaginable devastation. Without encountering any more barriers, Guderian's tanks headed straight for Minsk in Belarus. The German troops advanced without complications, taking bridges on the rivers Daugava, Berezina, Nieman, Pripiat, and Dnepr.

In January 1941, Stalin replaced Chief of General Staff K. A. Meretskov for not being sufficiently active in the construction of new roads, bridges, and air bases in the new regions. On February 1, 1941, General of the Army G. K. Zhukov replaced Meretskov as Chief of the General Staff. The work began at a truly Zhukov speed. Before 1941, the Red Army had five railroad brigades. Zhukov immediately increased this number to thirteen, ten of them in the west of the country. Each brigade consisted of one regiment, two separate battalions, and supply units. Almost all railroad troops were concentrated in the western border regions and worked intensively to modernize old railroads and build new ones right up to the border. Simultaneously with the construction of railroads, automobile roads were built in the western regions. What were those roads built for?

During preparations for a defensive war, roads parallel to the front line are laid down, so that reserves could be moved from passive areas of defense to dangerous areas. These roads must not be near the border, but much deeper in the country, leaving the border regions as clear of roads and bridges as possible. But the Red Army was building roads and railroads from east to west, which was usually done when preparing for advance, for a quick transfer of reserves from the depths of the country to the borders, and for further supplying the troops after they crossed the borders.

Zhukov remembered: "The web of automobile roads in Western Belorussia and Western Ukraine was in poor condition. Many bridges could not hold the weight of the medium tanks and artillery." Zhukov should have rejoiced at that fact. He should have commanded his men to covertly weaken the support beams on those bridges and thus lure the attacking enemy to send his tanks to those weakened bridges, to their sure demise. Instead, he built roads and replaced old bridges with new ones, so that any tank and any artillery could pass through.

The official History of the Kiev Military District stated: "In early 1941, Hitler's forces began to build bridges, railroads, and field air bases." Obviously, these were signs of

preparations for attack. the Soviet railroad forces were doing exactly the same: "Railroad troops in Western Ukraine worked to develop and strengthen the railroads." Railroad brigades, created by Zhukov's order, completed a tremendous amount of work on the Soviet territory, but their main job was planned to be on enemy territory: they had to follow the advancing army and quickly get through the enemy's security pale, repair enemy roads and bridges, and change the European narrow gauge to the broad Soviet standard one. Right on the borders, they piled huge reserves of railroad tracks, demountable bridges, construction materials, and coal.

On the eve of the war, the USSR launched a gigantic campaign to modernize and widen its road network in the western regions. All that work harmed the USSR very soon. Hitler used the roads, bridges, stocks of coal, rails, and the sectional bridges that the Soviet leadership prepared in the western regions of its country. As we know, all that did not help the invading German army: its advance was not as fast as planned. But even this advance could have been stopped if Zhukov had not built roads on the eve of the war, had not created huge reserves of railroad tracks, bridges, and construction materials. He should have introduced an effective system of defense: all bridges should have been blown up, all materiel reserves liquidated, railroads and trains evacuated, roads destroyed, drowned, turned into swamps and saturated with mines. On Soviet territory, all mines were disarmed and the barriers taken down. On the eve of the German invasion, General of the Army D. Pavlov, a commander of the Western Special Military District (then already secretly transformed into the Western Front), said that the Soviet sappers were not paying enough attention to preparing themselves properly for removing mines and other obstacles on enemy territory.

If the Soviet marshals had known better, they would have started their war on June 21: then they would not have needed to take down German obstacles, because the German army was doing on the German territory exactly what the Red Army was doing on Soviet territory. In early June, German troops were disarming mines, evening out barricades, and concentrating troops right on the border, without keeping in front of them any security pale. Soviet Marshal K. S. Moskalenko, who in 1941 commanded the First Artillery Anti- Tank Brigade, counted those German actions as an unquestionable piece of evidence that the Germans would attack soon. At the same time, the NKVD border troops were dismantling their own barbwire on the very border to clear the way into enemy territory for the "liberation" army. they had cut barbwire in exactly the same way before the "liberation" of Poland, Finland, Estonia, Latvia, Bessarabia, and Northern Bukovina. Now it was Germany's turn.

Destruction of the Stalin Line

From 1926 to 1937, thirteen fortified regions were constructed along the western borders of the USSR. at chain of fortifications was unofficially known as "the Stalin Line." A fortified region (FR) was an area prepared for defense; at the same time, it was also

a military formation, equal to a regiment or a brigade in number but equal to a corps in firepower. Each FR had a command and staff, from two to eight machine-gun and artillery battalions, an artillery regiment, several separate heavy artillery batteries, a tank battalion, a communications battalion, an engineering-sapper battalion and other formations. Each FR occupied an area from 100 to 180 km long and 30 to 50 km deep. the region was equipped with a complex system of concrete and armored military and supply buildings, mostly subterranean. Within the FR, there were underground concrete storage units, electricity stations, hospitals, command centers, and communication quarters. the underground constructions were connected through a sophisticated system of tunnels, galleries, and covered passageways. ere was also an intricate web of railroads for bringing in materials, maneuvering armored trains, and quickly transferring reserves to the troops. Each FR could independently conduct military operations during a long period of time and in isolated conditions.

Each FR consisted of “pillboxes,” each equipped with its own defenses and each capable of independently defending itself if fully encircled by the enemy, diverting to itself significant enemy forces and attention. Construction of the Stalin Line was not publicized like the construction of the French Maginot Line. the Stalin Line was built in secrecy. During the construction of each field stronghold, NKVD units put cordons around several areas. the construction went on simultaneously in all areas, but it was the real thing only in one—the rest were decoys. Not only the local population but also the construction workers had a very vague understanding of what was being built and where.

Unlike the Maginot Line, the Stalin Line wasn't built at the very border, but deeper into Soviet territory. A line of fortified regions in the depth of the country means that the first enemy artillery strike will be carried out against an empty space rather than the defending army. Therefore, during a surprise attack, defending garrisons have a minimum of several days to take their places in the casemates and prepare their arms and defense. If the fortified regions are in the depth of the country, the enemy, before beginning the storming, must cover from 20 or 30 to 100 or 150 km of territory saturated with minefields and other unpleasant surprises. the aggressor will have to cross many rivers and streams whose bridges have been destroyed. Before the storming, enemy troops will already have suffered significant casualties in the hundreds of ambushes along the way.

The thirteen fortified regions on the Stalin Line came at a tremendous cost in effort and money. In 1938 it was decided to strengthen all thirteen regions by building within them heavy artillery installations. the construction of eight more regions started. In one year, the new fortified regions counted 1,028 armed field strongholds. en, the Molotov-Ribbentrop Pact was signed. the pact created a common border between Germany and the USSR. In such a threatening atmosphere, Stalin could have done any number of things to increase the safety of the western Soviet borders and guarantee the USSR's neutrality in the war. Instead, in the fall of 1939, at the beginning of World War II, he ordered further construction of fortified regions to stop.⁷ Garrisons in fortified regions on the Stalin Line were the first to be cut back in numbers, and then completely disbanded.

Soviet factories lowered the output of arms and special materials for field stronghold structures. The existing fortified regions were disarmed; their ammunition, weapons, observation instruments, and communication lines were put in storage.⁸ Some buildings were given to the farming associations for use as crop silos. Most were just buried in soil. In addition to lowering the production of arms for fortified regions, Soviet industry, after the start of World War II, stopped producing other defense weapons. For example, the production of anti-tank cannon stopped completely, as well as the 76-mm division cannon, which could be used against tanks.⁹ Anti-tank rifles were taken out of production and out of the supply of the Red Army. they were taken away from all formations and put in storage.¹⁰ Everything connected with defense was mercilessly dismantled and destroyed. At the same time, the Red Army was fighting in Finland, where Stalin and his marshals saw that fortified regions and security pales had tremendous value for defense.

In the summer of 1941, the tragedy of the Stalin Line reached its climax. Wrote General Grigorenko:

“I do not know how future historians will explain this crime against our people. . . . The present ones bypass this occurrence with complete silence, and I myself do not know how to explain it. Many billions of rubles (according to my calculations, more than 120) were taken by the Soviet government from the people to build impassable barriers on the border, from sea to sea, from the grtheyBaltic to the blue Black Sea. And on the eve of the war, the spring of 1941, loud explosions boomed across the 1,200 km of fortifications. The formidable concrete structures, triple, double, and single embrasure firing points, command and observation points—tens of thousands of long-term defense structures were blown up according to a personal order from Stalin.”

Soviet generals and marshals, after Stalin's death, unanimously expressed their anger. Here are the words of Chief Marshal of Artillery N. N. Voronov: “How could our leadership, without building the necessary defenses on the new western borders of 1939, decide to liquidate and disarm the fortified regions on the old borders?”¹³ In addition, as Marshal M. V. Zakharov declared, it was decided to severely limit or even stop the production of all FR-type weaponry. is is a “red herring” argument used by pro-Communist historians to distract us. theywant us to bemoan the folly of breaking the old fortifications line before the new one was ready. But the relevant question is: why break the old one at all? Two lines surely provide better defense than one. Another pretext is that old fortifications were destroyed in order to move their weapons to the new ones. is is just another set of fallacies. Firstly, the weapons could have been left in the old line, and there had been enough time to order the Soviet industry to supply FRtype weaponry for the new line. But we know that the production of this type of weaponry was reduced immensely in favor of offensive-type arms. Secondly, one does not demolish his old house just to move the furniture to the new one, unless the old house is not needed. With weapons in the fortifications it is exactly the same. irdly, pro-Communist historians hope that we do not remember the chronology of the events: Stalin started to demolish the old line in September 1939, and decided to build the new one only on June 26, 1940. they want us

to believe that the cause came after its consequence. The dates demonstrate that there was no connection between those two events, except for the fact that the Stalin Line was built for a defensive war and the Molotov Line (which they started building in 1940 on the new German-Soviet border) was built for an aggressive war against Germany, as we shall show further on.

The Molotov Line drastically differed from the Stalin Line in design and in detail. There were four main differences between the field strongholds torn down near the old borders and those created near the new ones: the Molotov Line was built so that the enemy could see it; it was built on secondary locations; it was not covered by a security pale, minefields, or other engineered obstacles; and the builders did not use many opportunities available to them to fortify the line, and did not rush to complete their work. Unlike the Stalin Line, the fortified regions of the Molotov Line had very little depth. All that could be built on the very edge of the border was built there. According to Lieutenant General V. F. Zotov, rear defenses were neither built nor planned.¹⁶ New fortifications weren't built on locations tactically valuable for defense, but along the state border, following its twists and bends. New military buildings were not defended by barbwire fences, mines, trenches, or tetrahedrons. There were no engineered obstacles in the construction area. The new constructions were not camouflaged.

At the same time, the German generals were doing the same. Between 1932 and 1937, mighty field strongholds were built on the shores of the Oder River, shielding Germany from strikes from the east. These were first-rate military structures, blended with the landscape and brilliantly camouflaged. I will not describe them in detail, but they are a formidable example of the German preciseness, accuracy, and industriousness. Fortified regions in the area between the Oder and the Warta rivers could serve as examples of the highest achievement of military engineering of the early twentieth century. As soon as the Molotov-Ribbentrop Pact was signed in Moscow and the German army invaded Poland, the magnificent field strongholds near the old German border were abandoned and never again occupied by armies.

Having advanced and met with the Red Army in mid-Poland, the German troops began constructing a new line of fortified regions. They were built on secondary locations and pushed right up to the Soviet borders. In front of the new fortified regions, there were no minefields and no obstacles. The Germans worked night and day, and the Soviet border patrol saw that very clearly.¹⁸ German construction continued until May 1941, after which, to use Soviet language, "construction was rated as a second-class priority." Just like the Red Army! It was because both sides did not plan to defend their new borders for long. In August 1939, Zhukov brilliantly used these rules in Khalkhin-Gol: "With these actions, we strove to make the enemy believe in the absence of any sort of preparations for advance from our side, and to show that we [were] conducting widespread defensive works, and only for defense."¹⁹ The Japanese believed in Zhukov's "defensive" works and paid dearly for their folly. Later, on a much grander scale, Zhukov staged the same deception on the German border. However, he did not fool the German generals.

they had their own identical experience with Poland.

The Stalin Line was universal: it could be used either for defense or for attack—the wide passages between the fortified regions were left intact to let through masses of troops advancing west. When the border was moved a few hundred kilometers west, the Stalin Line completely lost its use as a fortified launching ground for attack, and Stalin did not need it for defense after he signed the Molotov-Ribbentrop Pact. As a result, the Stalin Line was disarmed and then dismantled: Stalin was not planning to fight on his territory. After Germany got bogged down in a war against Great Britain, Stalin no longer needed the fortified regions in the depths of Soviet territory.

Trotsky Murdered, Molotov in Berlin

Hitler will send his main forces west, and Moscow will want to use the advantages of her position. -Trotsky, June 21, 1939

On August 21, 1940, in Mexico, Leon Trotsky was gruesomely murdered. An agent of the NKVD, Spanish Communist Ramon Mercader (also known as “Jacques Mornar Vandrenin” and “Ramon Ivanovich Lopez”) posed as an idealistic Trotskyite and penetrated Trotsky’s inner circle. Trotsky liked the essays Mercader wrote and the pleasant young admirer became a fixture at Trotsky’s home. On the day of the murder, the two of them were alone in Trotsky’s office. Trotsky was bent over his desk reading an article by Mercader when his guest pulled out an ice-pick from inside his trench coat and crushed Trotsky’s skull with a monstrous blow. Mercader was arrested at the scene of the crime; but he refused to testify. the Mexican court sentenced him to twenty years in prison. On May 6, 1960, three months short of completing his term, he was released for good behavior. Mercader returned to the USSR and was awarded the title of Hero of the Soviet Union with the “Golden Star,” and the highest governmental award, the Order of Lenin. He was given a position as a researcher at the Marxism- Leninism Institute of the Central Committee of the Soviet Union Communist Party. At that time, people joked that, after becoming a staff fellow at such a respectable academic institution, Mercader was writing a multi-volume dissertation on the topic of “Alternative Uses for Ice-Picks.”

Some said that Trotsky’s murder had no meaning, that Trotsky had few followers, lived in remote Mexico, and posed no threat. It was said that the murder was Stalin’s personal vendetta and a manifestation of his paranoia. But some ambiguities remained. Why was Trotsky in Mexico in the first place? Trotsky reached the peak of his career in October 1917. Under his leadership, the Bolsheviks engineered the state coup and the takeover of Petrograd (St. Petersburg), the former Russian capital. Trotsky was effectively the founder and leader of the Red Army during the entire Civil War. However, already during the Civil War, he was not the most important man. He shared the top powers with Lenin. Gradually, Trotsky was relegated to secondary roles. His slide from the top accelerated and turned into a rapid fall. By 1923, Trotsky was the head of a leftist opposition within the Communist party, meaning that he was in the minority. By 1927, Trotsky was ousted

from all his posts and deprived of all duties and privileges. On November 7, 1927, Trotsky tried to give a speech in front of a column of demonstrators headed for Red Square, but he was pelted with empty bottles and stones. Killing Trotsky was not a challenge. There would have been plenty of volunteers. Why didn't Stalin kill Trotsky then?

In early 1928, Stalin exiled Trotsky to Kazakhstan. A year later, he sent Trotsky to Turkey. Again, we ask: what for? In Kazakhstan, Trotsky was completely isolated and fully monitored by Stalin's secret police. The Soviet Union's borders were hermetically sealed, and running out of the country was extremely difficult. For Trotsky, it would have been completely impossible, since he was under constant surveillance. He could not run away from Stalin. He did not even exhibit any desire to do so. As a political opponent, Trotsky was completely disarmed. He had no power strings, no influence, no money, and no means of communication. No one published anything he wrote. His letters were checked, detained for several months, and in most cases simply disappeared.

Human nature is such that people befriend those who are rich and powerful, but when someone falls from the top to the bottom of the power ladder, the number of his friends and supporters falls drastically. Suddenly volunteers appear to kick yesterday's boss. Stalin exterminated millions whom he considered to be his enemies or potential enemies. Stalin sent his opponents to Siberia, to the Far East, to Kazakhstan, to Sakhalin and Kolyma, or directly to the execution cellars. Only one enemy, Trotsky, the most significant one, Stalin brought out of Kazakhstan and sent to the heavenly islands in Turkey's Sea of Marmara. If Trotsky had been dangerous, Stalin could have isolated him the same way he isolated Lenin in the last years of his life.¹ Trotsky could have perished on the operating table, like Michael Frunze, who replaced Trotsky as the leader of the Red Army, in 1925. Trotsky could have drowned in a lake, like Efraim Skliansky, Trotsky's deputy commander of the Red Army during the Civil War, in 1925.

In Kazakhstan, Trotsky could not publish anything. By letting Trotsky go free, Stalin gave him the opportunity to say and write anything he wanted, including the most horrible things about Stalin. Why did Stalin postpone Trotsky's murder for so long? In the 1930s, Stalin accused all his enemies in the country of being Trotskyites. Trotskyites and those who were branded Trotskyites were executed by the thousands or sent to the camps by the thousands. Meanwhile, Trotsky himself was free. He lived on islands of fantastic beauty in Turkey, then in the south of France, in Norway, and finally in Mexico. Then, all of a sudden, the hunt for Trotsky began.

Did Stalin's paranoia increase? No. On the eve and at the very beginning of World War II, Trotsky presented a clear and imminent danger not only to Stalin, but to the entire Soviet leadership. Trotsky fanatically supported the World Revolution. Once he realized that it had failed in Germany and throughout the world he warned that Soviet Russia could not survive encircled by capitalist states. The only hope was to turn Soviet Russia into a military camp and use its forces to aid revolutions whenever and wherever an opportunity appeared. Stalin insisted that Trotsky was wrong and the Soviet Union first had to build "Socialism in One Country," the Soviet Union would not export revolution.

When Stalin took more radical measures than Trotsky had proposed to turn the Soviet Union into a military camp. He carried out forced collectivization and industrialization, and built the GULAG camps for forced labor. Under Stalin the Soviet Union became an industrial power and the military base for World Revolution. Summing up, Trotsky loudly called for the World Communist Revolution. Stalin acted to achieve the same goal, but said that Trotsky's slogans were wrong.

Stalin's rhetoric was successful and duped Trotsky, who thought he was exposing Stalin when he declared to the world that Stalin had betrayed the cause of Communism and World Revolution. Trotsky did not understand that criticism was necessary for Stalin and was part of his plan. With his accusations, Trotsky dulled the fears of the West that Stalin would pursue World Revolution. Trotsky claimed that there was no reason to fear Stalin, that Stalin was "the greatest mediocrity in power," and that his regime would implode from within. "Stalin's personal dictatorship clearly nears its sunset," Trotsky said in November 1931. us, with Trotsky's dubious endorsement, the West helped Stalin to create a powerful military industry, and to prepare his country and army to crush Western civilization.

Trotsky's opinion had credibility for Western politicians; after all, he had played a key role in the revolution, the Civil War, and the establishment of the Red Army. Trotsky launched the World Revolution, but he lost power. Stalin, if one believed Trotsky, was not instigating revolution but building socialism in one country, the Soviet Union. Stalin let Trotsky leave the Soviet Union and provided him with publicity around the world. Contact with Trotsky was a standard accusation against so called "enemies of the people" at every political trial in Moscow. Stalin could have called his enemies any number of names, but he stubbornly called them Trotskyites, giving Trotsky additional political weight. If Trotsky had asserted the opposite, if he had said that Stalin was preparing for aggression, if he had warned the West of the dangers of Stalin's malice, he would have been murdered as early as 1927.

Gradually, Trotsky sensed Stalin's true intentions. He stopped writing that Stalin had betrayed the cause of the World Revolution and started writing that Hitler had come to power with Stalin's help. "Without Stalin, there would be no Hitler," said Trotsky. "Hitler was preparing for war. . . . the strike against the West in the near or far future could only be realized in the conditions of a military alliance between Fascist Germany and Stalin."

On September 4, 1939, Trotsky reminded the world that "the Kremlin had fed oil to the Italian campaign into Abyssinia," and now it fed oil to Hitler's war against Europe. Trotsky asked why the pact of non-aggression between the Soviet Union and Germany had turned into war. "Is it unclear why Hitler began the advance on Poland immediately after the embraces between Ribbentrop and Molotov? Stalin knew very well what he was doing. For an attack against Poland and a war against England and France, Hitler needed favorable "neutrality" from the USSR, plus Soviet raw materials. the political and economic agreement provides Hitler with one and the other."

At that point Trotsky stopped being useful to Stalin, and Stalin decided to get rid of him. Moreover, Trotsky had become dangerous. He warned Great Britain and France that the root of all evil was not Hitler, but Stalin. Without Stalin's "neutrality" toward Hitler, without Soviet petroleum, chrome, tin, nickel, platinum, iron ore, cotton, grain, manganese, copper, vanadium, molybdenum, and tungsten, Hitler could not have unleashed the war in Europe. But Trotsky warned Hitler as well. Back in June 1939, when very few people in the world had any idea that in a couple of months World War II would start, Trotsky exhibited amazing foresight when he wrote: "Hitler is going to strike to the west with his main forces and Moscow will be eager to fully take advantage of the situation."

On November 12, 1940, Soviet foreign minister Molotov arrived in Berlin and presented to Hitler a long list of territorial claims on behalf of the Soviet Union. These demands were repeated on November 25, 1940, when the Soviet Union proposed a peace pact between Germany, Italy, Japan, and the USSR. The Soviet Union demanded:

From Finland: Pechenga, the only Finnish port on the Barents Sea, and Porkkala-Udd, the strategically located peninsula on the Baltic Sea controlling the entrance to the Gulf of Finland;

- naval bases on the Danish side of the straits of Kattegat and Skagerrak, controlling access to the North Sea and to the Baltic Sea;
- from Yugoslavia: a naval base on the Adriatic Sea;
- from Greece: a naval base in the Greek port of Saloniki;
- from Romania: the province of Southern Bukovina, a strategic foothold in the Carpathian Mountains to control access to the Ploesti oil fields;
- from Bulgaria: a pact of alliance with the Soviet Union including Bulgaria in the Soviet sphere of influence;
- from Turkey: bases in the Bosphorus and Dardanelles straits;
- from Iran: bases in the Persian Gulf;
- the transfer of territories south of the Baku-Batumi line (in eastern Turkey, north of Iraq and Iran) to the Soviet sphere of influence;
- from Japan: the renunciation of its oil concessions in the province of Northern Sakhalin.

Hitler and his officials were dumbfounded by such extraordinary demands and did not respond. On November 13, 1940, Molotov asked Stalin for instructions "about China, Turkey, and our interests regarding the Persian Gulf and the Arabian Sea."⁷ Stalin advised Molotov: "Do not expose our interest in Persia. . . . If the Germans suggest a division of Turkey, you can show our cards."⁸ In this correspondence, Stalin "suggested" to Molotov to obtain Germany's consent for another self-serving step to be taken by the Soviet Union. He told Molotov to advise Hitler that the Soviet proposal for an alliance with the Axis powers would "not be possible without a guarantee of our control of Bulgaria and the passage of our troops into Bulgaria."

For a drawn-out war, Hitler needed tremendous quantities of strategic raw materials,

which Stalin could provide. During the meeting, Molotov repeatedly reminded Hitler that without Soviet raw materials German victories in Europe would have been impossible: "The current status would not have been achieved without the influence of the German-Russian agreement [of August 1939] on the great German victories." "As far as Germany is concerned, these [1939] agreements secured a safe rear for Germany and played a major role in the development of a military campaign in the West, including France's defeat."¹ "Germany, not without the help of the pact with the USSR, was able so quickly and with military glory to execute its operations in Norway, Denmark, Belgium, Holland, and France."

Stalin twisted Hitler's arms. Trotsky predicted that Stalin "would want to fully use the advantage of his position." at was precisely what Stalin did. Hitler told Molotov that Germany had conquered so much territory in one year of war that it would need a hundred years to develop it. He offered: if space was needed, Germany and the Soviet Union could both move to the south of their borders. Molotov agreed with the proposal, but added that they had to discuss the issue of the Danish straits Store Baelte and Lille Baelte, as well as the straits between Denmark and Sweden and Norway, Sund, Kattegat, and Skagerrak. For the Germans, these straits were a strategic necessity, since they already occupied Denmark. Why would the Soviet Union need them? Hitler told Molotov: "While the war is going on, Germany is extremely interested in receiving nickel and timber from Finland." Hitler wanted to know whether the Soviet Union was preparing a war against Finland. If so, could it be postponed to a later date? Molotov answered that Finland was in the Soviet sphere of influence and that Germany had to remove its troops from Finland. Molotov "did not understand why Russia had to postpone the realization of its plans by six months or even a year. After all, the German-Russian pact did not contain any time limits and within their respective spheres of influence neither of the countries had its hands tied."

The Soviet Union had enough oil for both internal consumption and export. the Soviet Union did not need Romanian oil, while Hitler talked about Germany's complete dependency on Romanian petroleum, asserting that Germany would defend the Romanian oil industry at any cost. Hitler hinted that the Soviet Union should move away from Romanian oil. The Soviet Union had already taken over Northern Bukovina. With that invasion, the Soviet Union violated the pact about the division of the spheres of influence. Molotov replied that the Soviet Union did indeed take something from Romania, and did indeed violate the previously reached agreement with Germany. But the Soviet Union would not give up what it got; moreover, Stalin wanted Southern Bukovina and Bulgaria. "The fate of Romania and Hungary also interests the Soviet Union, and under no condition can it ever be indifferent to it."

Hitler reminded Molotov that they had agreed about the division of Europe back in August 1939. Molotov responded that it was time for a new division of Europe that would give an advantage to the Soviet Union. "The USSR considers last year's agreement fulfilled, with the exception of the question of Finland. . . . Now it is time to talk about a

broader agreement between the USSR and Germany.”¹⁴ Further discussions were in the same tone. During the course of the talks, Molotov did not raise questions about the security of the Soviet Union. Hitler brought up questions of safety from a Soviet invasion of territory crucial to Germany, but he did not receive any satisfactory reply. On the morning of November 14, 1940, Molotov left for Moscow. On November 25, the German ambassador to Moscow was told that Germany had to withdraw its troops from Finnish territory immediately. In addition, all the claims Molotov had made in his talks with Hitler and Ribbentrop were confirmed, even the demand to create Soviet bases on the Bosphorus and Dardanelles straits.¹⁵ On the same day, November 25, 1940, the People’s Commissar of Defense of the USSR, Marshal of the Soviet Union S. K. Timoshenko, and the Chief of General Staff of the Red Army, General K. A. Meretskov, wrote a directive to prepare a plan for a new war of aggression against Finland.

Hitler was preparing for a big war against Great Britain when Stalin demanded new territories in Europe—territories on which Germany’s economy and armed forces depended completely. If a war against Britain weakened Germany, what would Stalin demand? Hitler found an answer to all of Stalin’s demands. “After Molotov’s departure, Hitler gathered his most trusted subordinates and clearly let them understand that he planned to invade Russia.”

Kremlin Games

A conference of the High Command of the Red Army began on December 23, 1940. It lasted nine days and ended on the evening of December 31. The highest-ranking leaders of the Red Army—274 marshals, generals, and admirals—attended. Zhukov delivered the first and most important lecture on new tactics of sudden attack. Furthermore, most of the other speakers discussed only that subject. For example, Lieutenant General P. S. Klenov, Chief of Staff of the Baltic special military district, who spoke following Zhukov’s lecture, talked about special operations: “These will be operations of the starting phase, when the enemy’s armies have not yet completed their concentration and are not prepared for deployment. These are operations of invasion, for carrying out a whole chain of special tasks. . . . This is use of large air and, perhaps, mechanized forces, while the enemy has not yet prepared for decisive action. . . . The mechanized forces will have to be used independently, and they will solve the tasks of invasion into enemy territory.”

Colonel General of Tank Troops D. G. Pavlov, commander of the Western special military district, delivered the lecture titled “The use of mechanized units in contemporary offensive operations and breakthrough by mechanized corps.” The lecture titled “The Character of Contemporary Defensive Operations” was given by General of the Army I. V. Tulenev, commander of the Moscow military district. So, the questions dealing with defense were examined after all! Here is what Tulenev had to say in his lecture: “We have no established contemporary defense theory.”⁵ This was the truth. Until December 1940, Soviet military theory did not work on questions of defense. After December, it

did not work on them either. Tulenev said that such a theory was unnecessary. The goal was to conduct grandiose sudden offensive operations on enemy territory, and therefore to amass huge forces in narrow areas.

In the conclusive speech, the People's Commissar of Defense, Marshal of the Soviet Union Timoshenko reminded his audience to keep in mind "the possibility of the simultaneous conduct of two, maybe even three, offensive operations on different fronts in the theater of war, with the purpose of strategically shaking up the enemy's defense capabilities as widely as possible."⁷ Defense at the primary locations was not foreseen, even theoretically.

The conference of the High Command of the Red Army ended at 6 PM on December 31, 1940. Most of the participants were urgently and secretly sent back to their posts. Only the most important generals remained in Moscow. Even before the conference was over, at 11 AM on December 31, a group of forty-nine of the highest-ranking generals received instructions for a strategic staff game on maps. The maps denoted battles between the "Easterners" and "Westerners." The scope and importance of this game was the largest of all the prewar years.⁸ Pavlov, the Commander of the Western special military district, commanded the "Easterners," or the Soviet troops. Zhukov, Commander of the Kiev special military district, led the "Westerners," meaning the German troops. Pavlov's group had twenty-four generals, one rear-admiral, one navy captain of the first rank, one navy captain of the second rank, and one colonel. Zhukov's group, which played the role of the German command, had twenty generals, admirals, and officers besides Zhukov. The first strategic game began on the morning of January 2, 1941, at the General Staff of the Red Army. The scenario of the future war was being played out. The supervisor of the game was Timoshenko, the People's Commissar of Defense of the USSR. The referees of the game consisted of twelve top commanders of the Red Army, including four Marshals of the Soviet Union. The observers included Joseph Stalin and the entire Politburo. A colossal battle raged on the giant maps. For the time being just on the maps, the two most powerful armies on the planet clashed. For several days and nights, without rest or sleep, the staffs of the two opposing sides evaluated situations, made decisions, gave orders and directions. For now just on paper, thousands of tanks and airplanes, tens of thousands of guns and mortars, and millions of soldiers were brought into battle. Hundreds of thousands of tons of ammunition, fuel, and engineering and medical equipment were dispatched from the rear. Divisions, corps, and entire armies were going for the breakthrough. Soviet strategists were not working on any defense plans and not making any plans for rebutting a possible German aggression. They were thinking of a way to take Koenigsberg, Warsaw, Prague, Bucharest, Krakow, and Budapest. Soviet preparations for the invasion of Europe neared their final stage.

The game was called "Offensive Operation of the Front with Breaks through the Fortified Regions." The theme was not simply an attack, but an attack on Germany and more precisely on Eastern Prussia, which was defended by a line of fortified regions. The attacker was the Soviet troops on the northwestern front, under Pavlov's leadership. Pavlov delivered the blow to Eastern Prussia, to Koenigsberg, and Zhukov defended it.

The Communist leaders openly said that the war would be conducted only on enemy territory, as the popular Soviet antebellum song said: "And on enemy land we will crush the enemy, shedding little [of our] blood and by a powerful blow." they had in mind a "deep penetration," that is, a blitzkrieg. But this frankness always followed the condition that the enemy would force us into war. the Field Statute clearly stated that if the enemy attacked, the Red Army would transform itself into the most ferocious attacker of any aggressive armies.

It happened that Germany attacked precisely when the Red Army had everything ready to invade it. In November 1939, Stalin concentrated five armies on the Finnish border, got them ready, and then the Finns, as if on command, supposedly fired several cannon shells. Soviet newspapers exploded with rage: "We will repel the Finnish invasion!" "We will respond to the aggressor's blow with a threefold one!" "We will destroy the band of pests!" Preparations for attacking Germany followed the same rules. Stalin's strategists, with a mysterious smile on their lips, said that if the enemy forced them into war, they would have to retaliate on enemy territory.

The tasks for the strategy game were designed according to that principle:

1. On July 15, 1941, Germany attacks the Soviet Union.
2. German troops force their way 70 to 120 km into Soviet territory, but . . .
3. . . . by August 1, 1941, they are thrown back to their original positions.⁹

The scenarios of how the "Westerners" attacked, how the Soviet army managed to throw them back and get them off Soviet territory, were not played in the game. It was just mentioned that the Germans attacked and then the Red Army drove them back to the state border. the strategic game began precisely then, when there were no enemy troops on the Soviet soil. the "retaliatory actions" of the Red Army in Eastern Prussia began from that point. the German invasion of Soviet territory and the repelling of aggression did not interest Stalin, Zhukov, and the rest. they were interested in the conduct of assault operations from the border. the leadership concluded that "unfolding the main forces of the Red Army in the West and grouping the main forces against Eastern Prussia and in the direction of Warsaw brings about serious fears that the struggle on this front can turn into protracted fighting."

The actions of German and Soviet generals were almost mirror images of each other. One month earlier, the Germans played the same games. the gap in time between the actions of Soviet and German commanders was slowly decreasing. On November 29, 1940, a large strategic game on maps began in Berlin. the supervisor of the game was Major General Friedrich Paulus, the First Ober-Kvartirmeister of the General Staff of the Ground Forces. In Moscow, there had been two games, in Berlin only one, but it was divided into three stages: first, the invasion by German troops of Russian territory, and battles on the border; second, the German advance to the Minsk-Kiev Line; third, the conclusion of the war and destruction of the Red Army's last reserves, if such were found to the east of the Minsk-Kiev Line. The Germans didn't work out how they would

reach Kursk, Moscow, and Stalingrad. the generals thought that one blow would bring down the entire Soviet Union and send the Red Army on the run. In Berlin, a debriefing followed each stage of the game. the main debriefing of all stages of the game ended on December 13, 1940. Nineteen days later, the strategic games in Moscow began, the second of which, as we know now, ended on January 11, 1941.

History is written by the victors. the Red Army seized the archives of the Wehrmacht Heer, and Soviet historians demonstrated the aggressiveness of German imperialism to the rest of the world, exposing their terrible plans. Meanwhile, Soviet archives were carefully locked. is gave the Communist propagandists and agitators the opportunity to say that Soviet generals, admirals, marshals, and Stalin himself suffered from a chronic love of peace.¹¹ However, that love of peace was only pretence. the Soviet generals did not sleep. Like their German peers, they prepared an invasion.

We need Oil!

Hitler and Stalin both understood perfectly well what the expression “oil is the blood of war” meant. Colonel General A. Jodl testified that, in an argument with Guderian, Hitler declared: “You want to invade without oil—well, we shall see what comes out of this.” As early as 1927, Stalin took seriously the problems of the impending World War II. On December 3, 1927, he said: “It is impossible to fight without oil, and he who has the advantage in terms of oil has the chance of victory in the impending war.”³ In June 1940, when nobody was threatening the Soviet Union, tens of Soviet river military ships appeared in the Danube delta. at step had no defensive value, but was a threat to the unprotected Romanian oil routes and consequently a deadly threat to Germany. In July 1940, Hitler conducted intensive consultations with his generals and concluded that it was not at all easy to defend Romania: the supply routes extended all over and passed through the mountains. If a huge number of German troops were transferred to defend Romania, western Poland and eastern Germany, including Berlin, would be exposed to a Soviet attack. If a lot of troops were concentrated in Romania and tried to keep it at any cost, it would not help: the territory perhaps would be retained, but oil fields would still burn up from bombings and artillery fire. In July 1940, Hitler for the first time said that the Soviet Union could be dangerous, especially if German troops left the continent for the British Isles and Africa. On November 13, 1940, in a conversation with Molotov, Hitler indicated the necessity to retain a huge number of German troops in Romania, obviously hinting that the Soviet military posed a threat to Romanian oil.⁴ Molotov ignored the hint. After Molotov’s departure in December, Hitler issued a directive for the preparation of Operation Barbarossa.

In June 1940, when the German army was fighting in France, Zhukov, on Stalin’s orders and without consulting the German allies, brought river warships to the Danube delta. Hitler asked the head of the Soviet government to divert the Soviet threat from the oil heart of Germany. Stalin and Molotov refused.

A fortnight after Hitler's invasion of the USSR, on July 7, 1941, Stalin sent a telegram to the commander of the southern front, General I. V. Tulenev. In the telegram, Stalin demanded that the Soviet Union retain Bessarabia at any cost, "having in mind that we need the Bessarabian territory as a springboard for organizing our invasion."⁵ Hitler had already delivered his sudden blow, but Stalin still did not think of defense—his main concern was organizing an invasion from Bessarabia, meaning an attack on the Romanian oil fields. The invasion of Bessarabia by the Soviet Union and the concentration there of powerful aggressive forces, including the paratroops corps and the Danube flotilla, forced Hitler to look at the strategic situation from a completely different perspective and to take preemptive measures. But it was already too late. Even the sudden attack of the Wehrmacht Heer on the Soviet Union could not save Hitler and his empire.

Mountain Divisions on the Steppes of Ukraine

In the declaration made by the German government to the Soviets at the start of the war, reasons were listed for the German attack against the Soviet Union. Among them was the unjustified concentration of Soviet troops on Romanian borders, which presented a clear danger to Germany. Let's pay attention to the mountain rifle divisions in the 9th Army. the 9th Army was located on the Romanian border, and its headquarters was in Odessa. There are no mountains in the Odessa military district. the 30th Irkutsk Mountain Rifle Division of the 9th Army could be used only in Romania. There were plenty of mountains there. It is not at all coincidental that this division (commanded by Major General S. G. Galaktionov) was part of the 48th Rifle Corps of Major General Malinovsky, the most aggressive corps commander on the entire southern front. the 48th Rifle Corps was in the flank of the 9th Army which was closest to the front. If the 9th "Shock" Army moved to Romania, then most of the army would be fighting on flat land, while its right flank would scratch at the mountain chain.⁵ For this situation, it was most reasonable to have one mountain-rifle division, and precisely on the rightmost flank, which was exactly what was done. Let's examine another army, which was a carbon copy of the 9th Army. Formally, it was called just the 12th Army. It had one mechanized and two rifle corps, and other units. It had nine divisions, including two tank divisions and one motorized division. It was indistinguishable in number, name, and composition from other similar invasion armies. It had been set up specifically for the "liberation crusade" of the Red Army into Poland.⁶ It then had a tank corps, two cavalry corps, and two rifle divisions. It had little artillery and infantry, because there was no need here to break through a powerful defense. To the contrary, it had mobile troops necessary for a fast advance.

Its subsequent fate was also typical. After the "liberation" campaign in Poland, the army stayed on the German border. Later, the 12th Army underwent the same transformation as all adjacent invasion armies. Its main strike mechanism was no longer called a tank corps, but a mechanized corps, to allay the fears of the leaders of neighboring countries. the deletion of the word "tank" from the corps' name was followed by an increase in

the number of tanks in the army. the cavalry was taken away from it. Its capacity for disrupting the enemy's defenses was increased.

The unusual feature of the 12th Army was its ethnic composition. When Stalin was preparing to invade Poland in 1939, he filled the 12th Army with Ukrainians, apparently bearing in mind the long-standing animosity between Poles and Ukrainians. the army was formed in Ukraine. Therefore, the reservists were also drawn from there, and they formed a solid majority in the 12th Army. Far-reaching changes had already taken place in 1940. Ethnic Russians were appointed to ktheyposts to mask the army's unusual ethnic composition. Marshal of the Soviet Union Bagramian, then a colonel responsible for planning the military operations of the 12th Army, said: "When I was studying the operational plans, I was struck by the following fact—our frontier army had neither a deployment nor a border-protection plan." The colonel's words demonstrate that the safe of the operations branch of the 12th Army contained plans. they were complex documents that had to be studied. Yet among those war plans there were none for defense.

Bagramian also described training exercises of the 12th Army attended by General Zhukov. Only offensive tactics were worked on, and on the maps the war took place on German territory. the game began with Soviet troops crossing the border river San. The military game was against a real enemy and it involved top secret intelligence information. Differences arose between Zhukov and the army commander. Commander of the 12th Army General Parusinov insisted: "We must do our best to inflict maximum casualties on the enemy with our first strike."

Zhukov wasn't interested in the mountain passes because of defense. If he had wanted to make the passes impassable to the enemy, he would have sent his troops to the mountains, dug up all mountain paths and roads, and built reinforced concrete fortifications near the passes, instead of right alongside the border river. It would have been more economical; the enemy could not have observed the construction work and would have been unable to cross the passes. But would anyone really attack the Soviet Union across mountain ranges when there were plenty of open spaces? The mountains were exceptionally important to the Soviet command. Germany was separated from her main source of oil by a double barrier of mountains, in Czechoslovakia and Romania. A Soviet strike across the passes in Czechoslovakia or Romania would effectively cut the oil artery. Marshal Zhukov wrote: "Germany's weak spot was oil supply, but it made up for this to some extent by importing oil from Romania."⁹ the experiments in the mountains continued. the capabilities of each kind of troops and every type of combat and transport vehicle, operating in the conditions which prevailed in the Carpathian passes, were carefully studied. Standards were established and carefully checked, and guidance was compiled for the troops. the time taken by various types of vehicle to negotiate these mountain passes was carefully recorded and analyzed. the collected information, of course, was crucial for the planning of offensive operations, especially lightning operations.

The mountain rifle divisions were reinforced with specially selected and trained soldiers. ese divisions were transferred to a special personnel composition, very different from the

regular rifle divisions; they received special weapons and equipment. Just before the war began, a school for mountain training was established in the Caucasus. It trained the best Soviet mountain sportsmen and climbers to be military instructors. Once fully trained, these instructors were sent to the Soviet western frontier, since it was precisely here, and not in the Caucasus or Turkestan, that in June 1941 a great number of mountain rifle troops were concentrated. It is time to ask: for which mountains? There is only one comparatively small mountain range on the Soviet western frontier. The eastern Carpathians resemble gently sloping hills rather than mountains. There was no point in having a powerful defense in the eastern Carpathians in 1941. First, that area of the Carpathians was dangerous and unfavorable for an aggressor coming from west to east. The enemy would come down from the mountains to the plains, and its army would have to be supplied across the whole of the eastern Carpathian, the Tatry, the Erzgebirge, and the Sudeten mountains. Second, the northern slope of the eastern Carpathians formed a blunt wedge on the enemy's side of the frontier.

If many Soviet troops were concentrated there for defensive purposes, even in peacetime, they would be surrounded by the enemy on three sides. By using the plains farther to the south, and especially more to the north of the eastern Carpathians, the enemy could strike at any time at the rest of the troops deployed on the mountains, thereby cutting their supply lines. Third, in 1941, there were too few enemy troops in the Carpathian Mountains to carry out an aggression, and the Soviet High Command was fully aware of this.

The concentration of two Soviet mountain armies in the eastern Carpathians had catastrophic consequences. Nobody attacked these armies in the mountains. The German 1st Tank Group carried out its strike in the plain to the north of the eastern Carpathians, bypassing the mountains and cutting off the Soviet mountain armies from the main forces. The Soviet command confronted a dilemma: should they leave the two mountain armies in the Carpathian Mountains, where they would perish without a supply of ammunition and food, or should they urgently be led out of that mousetrap? They made the second choice. The two mountain armies, unprepared to fight in the plains, having light weapons and a lot of equipment useless in a flat area, fled from the mountains and immediately fell under attack from the German tank units. Having easily destroyed the fleeing Soviet mountain armies, the 1st Tank Group of the German army went ahead full speed and reached the rear of the Soviet 9th Army and defeated it. Once the German troops had dealt with those armies, the road opened to the totally undefended bases of the Soviet navy, to the Don basin, Kharkov, Zaporozhie, and Dnepropetrovsk. These were industrial regions of great importance. Once they were lost to the Germans, the Soviet Union produced only 100,000 tanks for the rest of the war, which was much more than Germany, but without the losses of these regions, the Soviet tank production could have been several times higher. When the Germans broke through to the south of Ukraine, the Soviet troops around Kiev found themselves in a very dangerous position. The Germans had cleared the road to the Caucasus and to Stalingrad—the heart of Soviet oil production.

Stalin in May

On May 4, 1941, Stalin became chairman of the Soviet government, replacing Molotov who became deputy chairman. At that time, many British and American politicians and diplomats were confused by that turn of events. For the first time in Soviet history, the top party and government leadership was officially concentrated in one man's hands. In 1922, having assumed the position of general secretary of the Communist Party, Stalin refused to take any government positions. Stalin elevated his command post above the government and above the country. Officially, he was responsible for nothing. All successes were attributed to Stalin. All failures were attributed to his enemies, careerists who took advantage of and distorted the orders of Stalin the genius. the "victory of the collectivization" was a creation of Stalin's genius, while millions perished from hunger because of the mistakes of regional level functionaries. Stalin officially had no ties to the Great Purge— Ezhov, the People's Commissar for Interior Affairs, shouldered the whole blame. at period was derogatorily called Ezhovshchina. It wasn't Stalin who signed a pact with Hitler. the treaty entered history as the Molotov- Ribbentrop Pact. In Germany, the responsibility for the pact was borne not so much by Ribbentrop as by Adolf Hitler, the chancellor, though he was not present when the pact was signed. But Stalin, who was present at the signing, had no government position at that moment. On April 13, 1941, a pact was signed with Japan: Stalin was present, but again, did not shoulder any responsibility. Hitler many times invited Stalin to a personal meeting in a friendly atmosphere. But Stalin sent Molotov to meet Hitler.

Then, when the victors were clearly defined, Stalin, of course, personally met with Churchill and Roosevelt. During the course of talks at the highest level, Stalin never said no. Molotov did it for him. He even received the nickname "Mr. No." All demands came from Molotov, all concessions from Stalin. Simply put, Stalin did good with his hands, and evil with the hands of others. ose who did evil on Stalin's orders carried the responsibility, while Stalin remained clean.

The Admiral of the Fleet of the Soviet Union N. G. Kuznetsov testified: "When Stalin took on the duties of Chairman of the People's Commissars Council, the system of leadership practically did not change."² If practically nothing changed, why did Stalin need the new title? "Meanwhile, all of Stalin's deeds and crimes were focused, logical and calculated."

What could Stalin, using his new official title of head of the government, undertake regarding Germany? There were three possibilities: establish an unshakeable peace with Germany; officially lead an armed struggle against German aggression; or officially lead a sudden attack on Germany. The first possibility can be ruled out immediately, because Molotov had already signed a peace pact with Germany. Stalin continued to use Molotov for peace talks. It is known that even on June 21, 1941, Molotov tried to meet with German leaders, while Stalin made no such attempts. The second possibility also doesn't withstand examination. Stalin could not have assumed leadership in anticipation of a German attack, simply because he did not foresee it. In the first day of the war, the head

of the government should have addressed the people and told them the terrible news. But Stalin avoided fulfilling his duties, and on June 22 Molotov spoke to the people. Why would Stalin sit in Molotov's chair in May, only to hide behind his back in June? In a defensive war, Stalin used his well-tested method of ruling the country: he took all important decisions, but the responsibility for them was borne by Molotov, Malenkov, Timoshenko, and Zhukov. Only a month later did the members of the Politburo force Stalin to take the official post of People's Commissar for Defense, and on August 8 the post of Supreme Commander in Chief. Would Stalin, "foreseeing a defensive war," have taken a high leadership position, just to shun all responsibility as soon as such a war started? We are left with the third explanation: Stalin had crushed Europe using Hitler's hands, and was preparing a sudden attack against Germany. Stalin planned to personally lead the "liberation" as the head of the government of the USSR.

The Communist Party prepared the Soviet people and army for the fact that the command to begin a "war of liberation" in Europe would be given personally by Stalin. Pravda wrote on August 18, 1940: "And when the Marshal of the Revolution comrade Stalin gives the signal, hundreds of thousands of pilots, navigators, [and] paratroopers will descend upon the enemy's head with all the might of their arms, the arms of socialist justice. the Soviet air force will bring happiness to mankind!" Similar statements filled the pages of Krasnaya Zvezda and all other Soviet newspapers and magazines.

Upon entering into office, every head of state declares his agenda. Stalin did so as well. Only Stalin gave his speech, which could be counted as an agenda, in the tight inner circle of the highest Red Army commanders, behind closed doors. On May 5, 1941, the day after his appointment as head of state, Stalin spoke in the Kremlin at a reception in honor of graduates from the military academies. the audience in the convention hall of the Great Kremlyovski Palace, where he gave the speech, consisted of graduates, professors, and teachers from sixteen academies of the Red Army and nine faculties of civilian universities, as well as representatives of the Red Army and the Fleet High Command (including the People's Commissars in both organizations and the Chief of General Staff). Stalin arrived, followed by members, actual and potential, of the Politburo (except for N. S. Khrushchev, who was holding a Central Committee plenary meeting in Kiev). the audience numbered two thousand people. Stalin spoke for forty minutes. Considering Stalin's capability for silence, forty minutes was an extraordinarily long time. Stalin did not speak before graduates of military academies every year. There were only two such occasions. the first time had been in 1935. the Great Purge was secretly being planned when Stalin told the graduates of military academies that "cadres determine everything." The meaning of Stalin's words was simple: for great feats, the country needed good teams; good commanders would solve all problems, but without them, everything would be lost. It is doubtful that anyone at the time understood the meaning of Stalin's words. But Stalin had in mind nothing less than the complete extermination of almost all of the Communist hierarchy—state, party, military, technical, scientific, cultural, and all others. Stalin planned almost a complete transformation of the leading layer of the country.

Almost everyone who listened to Stalin's speech in 1935 in two years landed in torture chambers and execution cellars.

In May 1941, Stalin for the second time spoke before graduates of military academies. Now, a more serious and dark deed was being planned, because this time Stalin's speech was given in secrecy. Stalin spoke about the situation in Europe, the war, and Germany. In his usual manner, Stalin posed questions and then answered them. Was it true that the German army was invincible? is question was repeated in Stalin's speech three times. Stalin's answer was no. Stalin said that Germany fought under the flag of conquering other nations. Under that flag, Germany would not be successful. Stalin asked why Germany lost World War I. Because it fought on two fronts, he answered. is was a very direct hint. Stalin led his audience to a logical conclusion: Germany fought Great Britain, which was backed by the United States. If the Soviet Union opened a second front, Germany would be defeated, just as it was during World War I.

I have in my possession the unpublished memoirs of Major General of the Air Force M. V. Vodopianov, who was the very first Hero of the Soviet Union. According to Vodopianov's memoirs, the listeners correctly understood Stalin's hints, and the room was filled with applause and cheer. the General Secretary of the Comintern, the Bulgarian Communist Georgyi Dimitrov, wrote in his diary that Stalin at that moment was in an extremely good mood. During the banquet that followed his speech, Stalin twice made a toast: the first was to the commanders and the professors from the military academies, the second to the health of artillerymen, tankers, and aviators.⁵ A third toast deserved special attention. It was given by Lieutenant General A. K. Sivkov, who toasted Stalin's peaceful foreign policy. Stalin intervened:

"Allow me to make a correction. A peaceful foreign policy secured peace in our country. A peaceful foreign policy is a good thing. For a while, we drew a line of defenses until we re-armed our army [and] supplied it with modern means of combat. Now, when our army has been rebuilt, our technology modernized, [now that we are] strong [enough] for combat, now we must shift from defense to offense. In conducting the defense of our country, we are compelled to act in an aggressive manner. From defense we have to shift to a military policy of offense. It is indispensable that we reform our training, our propaganda, our press to a mindset of offense. the Red Army is a modern army, and the modern army is an army of offense."

On May 5, 1941, Stalin made it perfectly clear to his generals that there would be a war with Germany and that the Soviet Union would be the aggressor. It is interesting to note that a few days after the celebration in the Kremlin, Lieutenant General Sivkov, who made a toast to Stalin's peaceful foreign policy, was discharged.

In March 1939, Stalin publicly accused Great Britain and France of wanting to draw all of Europe into war, while they stayed on the sidelines and would later "enter the scene with fresh forces, fight, of course, 'in the interests of peace,' and dictate their terms to the weakened participants of the war."⁸ In the same speech, Stalin for the first time declared

that the international arena needed to prepare for “surprises.” In August 1939, Stalin presented the first “surprise,” which stunned not only the Soviet people, but the entire world, the Molotov- Ribbentrop Pact. On September 1, 1939, a week after this pact, Germany invaded Poland. On September 17, 1939, the Red Army suddenly attacked the rear of the Polish army. the following day, the Soviet government proclaimed on the radio the cause for the attack: “Poland [has become] a convenient staging ground for any unanticipated events that might create a threat to the USSR. . . . the Soviet government can no longer hold a neutral position towards these facts. . . . In light of such a situation, the Soviet government [has] issued orders to the High Command of the Red Army to order troops to cross the border and take under their defenses the lives and property of the population.”

Stalin’s propaganda could not conceal its joy that Germany was destroying more and more countries, governments, armies, and political parties. the Soviet leadership was ecstatic: Pravda declared it “[m]odern warfare in all its terrible glory!” A description of Europe at war read: “a pile of corpses, a pornographic sight, where hyenas eat hyenas.” On the same page of Pravda, there was a friendly telegram from Stalin to Hitler. Suddenly, everything changed. May 1941 saw a sharp turn in all Soviet propaganda. Here is Pravda’s tone on the day after Stalin’s secret speech: “Beyond the borders of our Motherland burns the flame of the Second Imperialist War. All the burden of its countless calamities falls on the shoulders of the workers. the people do not want war. their eyes are looking toward the land of socialism, which reaps the fruits of peaceful labor. they rightfully see in the armed forces of our Motherland—in the Red Army and Fleet—a reliable bulwark of peace. In the current tumultuous world situation we must be ready for all surprises.” The same tone and the same words were used in September 1939, when the Red Army suddenly attacked the rear of the Polish army and “helped the Polish people to get out of the war.”

June 13, 1941

On May 5, 1941, in the Kremlin, Stalin in essence told the graduates of the military academies to disregard official propaganda and to prepare for war.¹ On June 13, 1941, Moscow radio broadcast a rather unusual announcement of the Soviet Union Telegraph Agency (TASS). It claimed that “Germany was following the conditions of the Soviet-German pact as flawlessly as the Soviet Union,” that the rumors of an impending German attack on the USSR “were clumsily fabricated propaganda by the enemies of Germany and the USSR, interested in broadening and prolonging the war.” the following day, central Soviet newspapers published that announcement; a week later, Germany invaded the USSR. Everyone knew the author of the TASS announcement. Stalin’s characteristic style was recognized by generals in Soviet staffs, inmates in the labor camps, and Western experts. Many of those who spoke out on the subject laughed at Stalin. the TASS announcement was sometimes described as a sign of nearsightedness. However, the June

13, 1941, TASS announcement was more mysterious and inexplicable than ridiculous. Only its author is clear, while the rest is a puzzle.

It has been said that the ability to keep silent is much less common among people than any other talent. From that standpoint, Stalin was a genius—he knew how to keep silent. It was not only the strongest point of his character, but his most powerful weapon. With his silence, he disarmed the vigilance of his enemies; Stalin's attacks were always sudden and therefore fatal. Why then did he speak on June 13, 1941, and to a mass audience? Whom did Stalin address? Stalin's empire was highly centralized, and the mechanism of state government, especially after the Great Purge, was so perfected that any order was immediately communicated from the highest ranks to the lowest executors, and was immediately carried out. If in June 1941 Stalin had some concerns that had to be related hastily to millions of executors, why not use the perfect power structure that communicated all orders without distortion or delay? If the TASS announcement of June 13, 1941, was serious, it would have been repeated on all the secret channels. But Marshal of the Soviet Union A. M. Vassilevsky testified that after the announcement was published in print it "was not followed by any directives regarding the armed forces or reexamination of previously adopted policy."² He also said that nothing changed in the agendas of the General Staff or the Narkomat (People's Commissariat for Defense), "and nothing was supposed to change. . . . But because no directives followed it, we quickly realized that it was irrelevant both for the armed forces and for the country as a whole."

Not only was the TASS announcement not repeated through secret military channels, but at the same time as the announcement came out, an order was issued to the troops in certain military districts, for example, in the Baltic district, that was in meaning and spirit quite the opposite of the TASS announcement.⁴ While the TASS announcement was broadcast on the radio, the military newspapers that were inaccessible to outsiders began to publish radically different ideas. It was reported, for instance, by Vice Admiral I. I. Azarov.

The Soviet system of secret classification had four levels of secrecy: "For Official Use Only," "Secret," "Top Secret," and "Top Secret, Special Importance." There was one more level, established by Stalin: "Top Secret, Special File." Documents in this category were produced only in one copy and could not leave the premises of the Kremlin. "Top Secret, Special Importance" was the highest level of secrecy that could have been used beyond the Kremlin. Such a document arrived at the staff headquarters of the Kiev special military district while the radio was broadcasting the strange TASS announcement. The directive ordered the "transfer [of] all deep-rear divisions and corps commands with the corps formations to new camps closer to the state border."

The moving of troops to the border under the pretext of training exercises was done on orders from Moscow. Marshal Zhukov said: "The Narkom [People's Commissar] for Defense S. K. Timoshenko recommended to the commanders of military districts to conduct tactical exercises in the direction of state borders, with the effect of bringing troops closer to the regions of planned deployment for the purpose of cover." As was

previously done prior to the Finnish campaign of 1940, “covering the state borders” was a code expression meaning “preparing to cross the borders.” This recommendation was brought into effect by the districts, but with a significant difference: “a significant part of artillery did not take part in the move.” Marshal of the Soviet Union K. K. Rokossovskii (at that time Major General, commander of the 9th Motorized Corps) explains that the artillery had been ordered to the border slightly earlier. This was a brief description of the events of this day in one of the five border military districts. On the eve of the broadcast of the TASS announcement, the commander of that same Kiev special military district received another directive, with the same signatures and same level of secrecy—“Top Secret, Special Importance.” The directive of June 12, 1941, stated:

“During the time period June 15 to July 10, 1941, the 16th army with the following components will arrive on the territory of the Kiev special military district: the command of the army with service personnel, 5th Mechanized Corps (13th and 17th Tank, and 109th Motorized Divisions); 57th Tank Division; 32nd Rifle Corps (46th and 152nd Rifle Divisions, 126th Corps Artillery Regiment). . . . I forbid all open telephone and telegraph communication in connection with the arrival, unloading, and placement of the new troops. Nobody except you, members of the Military Council, and the chief of staff in the district, can know about this. . . . All units arriving to the territory of the district have been issued false names, listed below. The false name is to be used in all correspondence, including on envelopes of top secret documents.”

Even before June 13, 1941, troops flowed from the central regions of the Soviet Union to the five border military districts. Just three armies from among these troops required 939 railroad trains—the 22nd Army from the Ural military district, the 21st Army from the Volga military district, and the 16th Army from the Trans-Baikal military district. The 57th Tank Division of the 16th Army came from Mongolia. Preliminary relocation of the armies began in May 1941; other troops were moving as well. The former deputy of the People’s Commissar for State Control, I. V. Kovalev, wrote that “in May [and] early June, the transportation system of the USSR had to complete [the] transportation of nearly 800,000 reserve troops. . . . these moves had to be conducted secretly.”

The relocation of the 16th Army from the region beyond Baikal to Ukraine began on May 26, 1941, and was scheduled to end on July 10. Lieutenant General P. A. Kurochkin, commander of the Trans-Baikal military district, personally supervised the dispatching of trains. We can find many testimonials to this massive railroad operation, among them the memoirs of Major General A. A. Lobachev, who at that time was a member of the military council of the 16th Army: “The chief of staff reported that an important cable came in from Moscow, concerning the 16th Army. . . . the order from Moscow proposed to relocate the 16th Army to a new place. M. F. Lukin was to immediately appear before the General Staff to receive directions, and Colonel M. A. Shalin and I were to organize the dispatch of trains.” Only three people—the Commander of the Army General Lukin, Lobachev, and the Chief of Staff of the 16th Army Colonel M. A. Shalin—knew that the 16th Army was being transferred west, but they did not know precisely where. All the

other generals of the 16th Army were “secretly” informed that the army was headed for the Iranian border, and that the junior commanders were to be told that the reason for the transfer was training exercises; the wives of the command staff were to be told that the army was leaving for training camps.

I have interviewed hundreds of people from that generation, and they all had forebodings of the war. Where did they come from? they could not have known about Hitler’s preparations. They must have seen the preparations of the Red Army and understood that war was unavoidable. General Lobachev described the extraordinary level of secrecy with which the 16th army was transferred: the trains were sent only by night and they did not stop at large and medium stations; the staff of the 16th Army was moved in cargo railroad cars with the doors and windows completely shut; at small stations, where the trains stopped, everyone was forbidden to exit the train. At that time, a passenger train covered the Trans-Siberian route in more than eleven days, while cargo trains were even slower. One could transport soldiers and officers in fully closed cars, but here we are talking about the high-ranking staff of an army. Such level of secrecy was unusual even by Soviet standards. In 1945, a flow of troops going in the opposite direction travelled on the Trans-Siberian railroad, heading for a surprise attack on Japanese troops in Manchuria and China. For the purposes of secrecy, all the generals wore officers’ uniforms, with many fewer stars than they had earned, but they still traveled in passenger trains. In 1941, on the other hand, generals were being transported in cargo trains. What for?

On June 14, the military council of the Baltic special military district approved a plan for the relocation of a row of divisions and regiments to the border zone. Major General S. Iovlev (at the time commander of the 64th Rifle Division of the 44th Rifle Corps, 13th Army) recounted: “On June 15, 1941, the commander of the Western special military district, General D. G. Pavlov, ordered the divisions of our corps to prepare for relocation in complete formation. . . . We were not told our destination.” Not only armies, corps, and divisions were transferred to the borders. We have hundreds of testimonies of much smaller units being transferred as well. Lieutenant General V. F. Zotov (at the time a major general, and chief of the engineer troops of the Baltic special military district) remembered: “The sapper battalions were mobilized according to wartime regulations . . . ten battalions, which arrived from the Far East, were completely armed.”²⁹ Colonel S. F. Khvaley (at the time deputy commander of the 202nd Motorized Division of the 12th Mechanized Corps of the 8th Army) recounted: “During the night of June 18, 1941, our division left for field training.”³⁰ As the colonel put it, “it so happened” that the units found themselves right at the border before the war began, in the immediate vicinity of the state frontiers.

A small fragment is known from the military order received on that same day by Colonel I. D. Cherniakhovsky, commander of a tank division in that same 12th Mechanized Corps: “Upon the receipt of this order, commander of the 28th Tank Division Colonel Cherniakhovsky is to bring all units to battle condition in accordance with plans of high alert, but without declaring a state of alert. All work is to be conducted quickly, but without

noise, without panic and talk; have the necessary norms of portable and transportable reserves needed for life and battle.”

Trophy German documents indicate that the Germans' first encounter with the 28th Tank Division occurred near Siauliai. However, as Marshal P. P. Poluboyarov testified, the division was supposed to come out of Riga to the Soviet-German border. the German invasion found this division, like so many others, still on its way, because it simply did not have enough time to reach the border. the memoirs of Major I. A. Khizenko begin with the chapter “Marching toward the Border.”³³ He wrote about the 80th Rifle Division of the 37th Rifle Corps: “In the evening of June 16, General Prokhorov gathered all staff personnel for a conference. He declared an order from the commander of the Kiev special military district to move the divisions to a new region of concentration. . . . There are talks that the impending march will be an unusual one.”

Overall, the First Strategic Echelon of the Red Army had 170 tank, motorized, cavalry, and rifle divisions. Fifty-six of them were located right on the border. they could not move any farther ahead. But even of these, everything that could move was moving forward and hiding in the border forests. General I. I. Feduninsky, commander of the 15th Rifle Corps of the Fifth Army, testified that he led four regiments from the 45th and 62nd Rifle Divisions “into the woods, closer to the border.”³⁵ the remaining 114 divisions of the First Strategic Echelon stayed in the deeper territories of the western border districts, and could be moved to the border. How many of the 114 divisions began to move toward the border in the wake of the reassuring TASS announcement from June 13, 1941? the answer is: all of them! “Between June 12 and June 15, all the western military districts were issued an order to move all deeply located divisions closer to the state borders.”

Now, let's look at what was happening on June 13, 1941, in the inner military districts of the Soviet Union, in the far inland Urals, and in the Siberian and Altay provinces. Lieutenant General N. I. Birukov, commander of the 186th Rifle Division of the 62nd Rifle Corps of the Ural military district, recounted: “On June 13, 1941, we received an order of special importance from staff headquarters, which stated that the division had to move to a ‘new camp.’ the address of the new quarters was not given even to me, the division commander. Only when passing through Moscow did I find out that our division was to concentrate in the forests west of Idritsa.” In peacetime, a division receives “secret,” but very rarely “top secret,” documents. A document of “special importance” can appear in a division only during wartime and only in extreme cases, when an operation of great importance is prepared. Many Soviet divisions did not receive a single document with this label of top secrecy during the four years of the war. Yet, it was peacetime when the commander of the 186th Rifle Division received a document of such an exceptionally high level of secrecy. the document's contents were ostensibly trivial: send the division to a new camp. General Birukov, however, placed the words “new camp” in quotation marks. He and the superior officials who had sent the document knew perfectly well that they were not talking of a “new camp,” but of something much more serious. All divisions in the Ural military district received similar orders. is mass of staffs and troops moved

from the Urals toward the Belorussian forests under the cover of the reassuring TASS announcement. Why didn't all eight armies move simultaneously? In February, March, April, and May, a grandiose secret transfer of Soviet troops—from the inner regions to the borders—was conducted. It was concluded in time, but thousands of railroad cars had to return thousands of kilometers back inland. Therefore, on June 13, when the new, giant, secret movement of troops began, there were not enough cars for all the armies. the Second Strategic Echelon contained seventy-seven tank, motorized, and rifle divisions, not counting tens of separate regiments and hundreds of separate battalions. they all began their secret movement toward the western borders of the USSR under the cover of the TASS announcement. To the 114 divisions of the First Strategic Echelon, we must add seventy-seven divisions of the Second Strategic Echelon that began to move toward the western borders from the central regions of the country, from Siberia, and even from the Far East.

Everything that Soviet officers, generals, and marshals wrote about in their memoirs was fully confirmed by reports of German intelligence to their commanders in the spring and early summer of 1941: the Red Army was heading in giant surges toward the western borders. Many independent sources confirm the same fact. the massive Red Army movement toward the western borders was felt even in Soviet prisons. G. Ozerov, one of the deputies of airplane designer A. N. Tupolev, at that time was in prison, together with Tupolev and his entire design bureau. they received an order to create the best dive-bomber in the world. ey were told that if they designed the plane, they would be let out of prison. they designed behind bars, but had constant contact with engineers from airplane and automobile factories, and with officials from the People's Commissariat of Aviation Industry. Former inmate Ozerov recounted: "Inhabitants of dachas along the Belorussian and Vindavsk roads complain that they cannot sleep at night [because] trains with tanks and cannon are being herded through!"

Thus, "right before the war, in accordance with orders from the General Staff of the Red Army, certain units of the western special military district began to move to the state border."⁴³ Having crushed the First Strategic Echelon and broken through its defenses, the first German units suddenly stumbled across new divisions, corps, and armies (for example, the 16th Army near Shepetovka in late June), about whose existence the German commanders had no idea. the plan for the blitzkrieg was built on calculations of lightning-speed destruction of the Soviet troops right along the borders. But having completed this plan, the German army discovered a new wall of armies, which was coming out of the Northern Caucasus, Volga, the Urals, Siberia, Trans-Baikal, and the Far East.

Thousands of railroad cars are needed for the transfer of even one army. they have to be sent to the station of departure, loaded with the army, heavy weapons, and reserves, and then cross thousands of kilometers. If the German troops encountered Siberian, Ural, and Trans-Baikal armies at the end of June, then their transfer to the west had not begun on June 22, but earlier. Simultaneously with the transfer of ground troops and navy, an intensive relocation of aviation was taking place. During the dark early

hours of the day, aviation divisions and regiments were transferred in small units to air bases, some of which were less than ten kilometers from the border. In addition to operational air force units, a rigorous transfer of the newest airplanes to these units was under way. Colonel General L. M. Sandalov recounted: "From June 15, we began to receive new combat technology. Kobrinsky and Pruzhansky fighter regiments received the Iak-1 fighters, armed with cannon; the ground attack regiment got the Il-2 plane, the bomber regiments [got] the Pe-2."

Besides the fighter planes, a mighty stream of tanks, artillery, ammunition, and fuel was also flowing in. At dawn on June 22, a trainload of heavy artillery regiments came into the Siauliai station. There were endless rows of trains full of ammunition. the Krasnaya Zvezda noted: "On the evening of June 21, 1941, the supervisor of the railroad station at Liepaja was told: 'Receive a special train. It carries ammunition. It must be sent to its destination as a matter of priority.'" Liepaja at that time was very close to the border, but the train was in transit, meaning it was going to the border lines. Railroad cars on all fronts were full of ammunition, which was usually done in preparation for an offensive of great depth. In a defensive war, it was easier and cheaper to store ammunition in previously prepared storage depots. Having used up all the ammunition from one storage depot, the troops easily retreated to another, where ammunition awaited them, then to a third, and so on. But before an invasion, ammunition was loaded onto mobile transport, which was very risky and expensive. For example, the southwestern front had 1,500 railroad cars of ammunition at the small Kalinovka station alone.⁵² Colonel General I. I. Volkotrubenko reported that in 1941, after the German attack, the western front alone lost 4,216 railroad cars of ammunition. There were five fronts, and it is incredible how much ammunition was stored on all fronts. Some of it fell into German hands; some of it was successfully rescued. In the middle of June, that incredible number of troops and ammunition—under the cover of the TASS announcement—was rolling toward the German borders in railroad cars.

Marshal of the Soviet Union S. K. Kurkotkin reported that in the beginning of June the "Soviet government, following a proposal by the General Staff, approved a plan to move 100,000 tons of fuel from the inland regions of the country." In addition, "about 8,500 railroad cisterns with fuel [were] amassed at railroad intersections." If the smallest 20-ton cisterns were being used, this would have meant much more than 100,000 tons. the most frequently used cistern in 1941 was the 62-ton. These 8,500 containers were at the stations waiting to be unloaded in the first days of the war. We also have to take into account all that was destroyed by enemy air raids at the railroad stations in the first minutes and hours of the war. Colonel General I. V. Boldin, deputy commander of the Western Front, related that the 10th Army (the most powerful army on the Western Front) had sufficient supplies of fuel in storage and in railroad containers, but lost everything in the first minutes of the war.⁵⁶ On the eve of the war, this mass of cisterns was moving toward the borders, together with troops, military equipment, weapons, and ammunition.

June 13, 1941, marked the beginning of the biggest organized movement of troops, arms, ammunition, and other military supplies in history. Now is the right time to look once again at the TASS announcement of June 13. Many historians for some reason focus their attention on the introduction of this announcement, which speaks of German intentions. But the TASS announcement also speaks of Soviet intentions, and the most interesting information is contained there: "Rumors that the USSR is preparing for war against Germany are false and provocative. . . . the gathering of air forces and reserves of the Red Army and the impending maneuvers have as their objective nothing but [the] training of reserves and [the] testing of railroad functioning; they are conducted, as is known, yearly, so to imagine that these events are hostile to Germany is ridiculous." Comparing the announcement with what occurred in reality, we find a big discrepancy between words and deeds.

The TASS announcement talked about the "testing of railroad functioning." is is questionable. the movement of Soviet troops began in February, in March it intensified, in April and May it reached grandiose proportions, and starting on June 13, 1941, it reached an all-encompassing character. the only divisions that did not participate in the move were those already at the border, those that remained in the Far East, and those that were preparing to invade Iran. the full concentration of Soviet troops along the German border was planned for July 10.⁵⁷ For almost half a year, railroad transportation, the main means of transportation in the country, was paralyzed by secret troop transfers. In the first half of 1941, the government plan for industry was only fulfilled for the military requirements. the main reason was that transportation was almost exclusively used for secret military transfers. the second reason was the secret mobilization of the male population to the newly formed armies. The disruption of the government plan could hardly be called "testing." The TASS announcement described it as "usual training," but Soviet marshals, generals, and admirals contradicted that claim. Major General S. Iovlev said: "The unusual aspect of the gatherings, not foreseen by plans of war readiness, alerted people." Vice Admiral I. I. Azarov remembered: "Usually, training was conducted closer to the fall, but here they were beginning in the middle of the summer." Colonel General I. I. Ludnikov said: "Usually, reserves are called in after the crops have been harvested. . . . In 1941, this rule was broken."

Major General M. I. Kazakov at that time was at the General Staff headquarters. here, he encountered the commander of the 16th Army, Lieutenant General M. F. Lukin, and other generals. their armies were secretly being transferred by train; the commanders of the armies moved ahead of their troops and arrived in Moscow by airplane. In Moscow, they received their last instructions. General Kazakov said: "It was clear that it was not maneuvers they were going to. It was something else."

Did Stalin have a premonition and concentrate troops along the borders for defense? at explanation is implausible. the massive operation described above couldn't be defensive. Troops preparing for defense dig themselves into the ground. they take over the largest fields that the enemy will have to cross, close off roads, establish barbwire barriers,

dig anti-tank trenches, and prepare covers behind the barricades. the Red Army did nothing of the kind. However, Soviet divisions, armies, and corps destroyed all previously constructed defensive structures. Troops were concentrated not behind water barriers, in a fashion convenient for defense, but in front of them, which was convenient for offense. Soviet troops did not take over vast fields that the enemy would need to cross, but hid in the woods, just like the German troops preparing for invasion. Perhaps all this was just a demonstration of might? Of course not—a demonstration has to be visible to the enemy. the Red Army, on the contrary, tried to hide its preparations. the TASS announcement was not written to scare Germany, but to allay its fears.

On June 13, 1941, Molotov summoned the German ambassador and related to him the text of the TASS announcement.⁹ the announcement stated that Germany did not want to attack the USSR, and the USSR did not want to attack Germany, but “enemies of Germany and the USSR interested in unleashing and broadening war” were trying to make them quarrel and were spreading provocations and rumors of imminent war. In the announcement, these “enemy forces” are listed by name: “the British ambassador in Moscow, Mr. Kripps,” “London,” and “the English press.” Our exploration of the day would not be complete if we do not turn to London on June 13, 1941. It is reasonable to suppose that on June 13 there was a meeting in London between the Soviet ambassador I. M. Maysky and the British foreign minister Anthony Eden. Indeed, the meeting was held, and, surprisingly, in a friendly atmosphere. Discussion revolved around a serious issue: measures Britain would take to aid the Red Army “if in the near future a war between the USSR and Germany begins.” Among other specific measures were military operations by the British air force, the transfer of military supplies, and the coordination of command between the two countries.

On June 13, 1941, Stalin’s diplomats were laying the foundation of what would soon be called the “Anti-Hitler Coalition.” From the British point of view, there was nothing wrong with this picture: at that moment, Britain was involved in a war against Hitler, and had full rights to talk with anyone about joint efforts against him. But the Soviet Union had signed a pact of non-aggression with Germany, and immediately after that an agreement of friendship. If Soviet leadership thought that these documents no longer suited the situation at hand, they should have had them annulled. But Stalin did not do this; he assured Hitler of friendship and in the TASS announcement denounced the British ambassador and press for “wanting to broaden the war.” At the same time, talks in London were under way concerning a military alliance with Germany’s enemy, and about specific military measures against Germany.

It is surprising that at the talks in London both sides used the phrase “if war begins” instead of “if Germany attacks.” In other words, those talking did not exclude the possibility that the war would start not with German aggression, but in some other way.

On June 22, 1941, Deputy Commander of the Volkhov front Lieutenant General Andrey Vlassov, was a major general in command of the 4th Mechanized Corps in the Lvov bulge. In 1942 he was ordered to command the 2nd Shock Army, which found itself in a hopeless

position. Vlassov was ordered to complete an operation that he had not prepared, had not started, and that had already failed. the 2nd Shock Army could not be saved. It perished, and Vlassov was taken prisoner. In a protocol from questioning on August 8, 1942, it was recorded: "Regarding the question of whether Stalin had intentions to attack Germany, Vlassov declared that such intentions, undoubtedly, existed. the concentration of troops in the Lvov region points to the fact that a strike against Romania was being planned in the direction of the petroleum sources. . . . the Red Army was not prepared for the German invasion. Despite all the rumors about the operations conducted by Germany, in the Soviet Union nobody believed in such a possibility. During preparations, the Russians meant only their own offensive."

Forty-nine years later the same explanation was given by the Deputy Chief of the General Staff of the Soviet Military Forces, General Makhmut Gareev: "A main blow to the flank in the main alignment of the enemy's troops, delivered in the direction of Krakow, would have allowed us to cut Germany off from the Balkans in the very beginning of the war, to deprive her of the Romanian oil, and to separate the allies. On the other hand, carrying out the main blow on the joint flanks of the western and northwestern fronts led to a frontal attack in difficult conditions against heavily fortified defense positions in East Prussia, where the German army could offer fiercer resistance. And totally different conditions, and consequently different objections, could have arisen if the strategic plans were to lead defensive operations to deflect aggression early in the war. In this case, no doubt, it was more advantageous to have main forces in the strip of the western front. But such a course of strategic actions was not planned."

Let's compare the opinions of the two generals. they are saying the same thing: there was no preparation for defense, only offense, moreover, an offensive in the southwestern direction (that is, from the Lvov bulge) with the objective of cutting Germany off from her oil suppliers and main allies. If someone places on the map the Soviet Shock armies, mechanized and airborne corps, air bases, staffs, and Zhukov's generals, he will be forced to acknowledge, even without Vlassov and Gareev's testimonies, that such positioning of troops in the bulges directed toward the enemy could only lead to catastrophe in the event of an invasion by the enemy, while it would lead to a brilliant victory in the event that the Red Army was first to deliver its sudden crushing blow.

Red Army, Black Gulag Uniforms

Immediately after the partition of Poland in the fall of 1939, a large number of Soviet troops were transferred from their permanent stations to the new borders. But the new territories were not adapted to the permanent deployment of large quantities of troops, especially troops with a lot of military equipment. The History of the Second World War tells us: "The troops in [the] western border districts experienced many difficulties. Everything had to be built and equipped anew: bases and supply points, airfields, systems of roads, lines of communication."¹ the official history of the Byelorussian military district

says: "Movement of units from the district to western parts of Byelorussia caused considerable difficulties. . . . the personnel of the 3rd, 10th and 4th armies . . . were busy with repair work and building barracks, storages, [and] camps, [and] furnishing training sites, shooting ranges, and tank depots. the troops were under considerable strain."² Colonel General L. M. Sandalov: "The movement of district troops here encountered huge difficulties. the barracks were miserably few. . . . For troops not provided with barracks, dugouts were being built."³ But troops kept arriving. General Sandalov says that in order to house all the troops in 1939–40, storages, barracks, and any kind of space was being used.

At the cost of tremendous effort, in 1939 and 1940 the troops of the First Strategic Echelon were set up and quartered. But from February 1941, at first slowly, then faster and faster, the seven armies of the Second Strategic Echelon began pouring into the same areas. At that moment, a change occurred that has not been noticed by historians: Soviet troops stopped caring about how they would spend the coming winter. the troops of the First Strategic Echelon abandoned their dugouts and unfinished barracks and entered the border zone. We are talking of all the troops.

Troops of the Second Strategic Echelon, moving from within the country, did not use the unfinished barracks and camps abandoned by the First Strategic Echelon. the arriving troops were not planning to spend the winter in these locations, and made no preparations for winter. they were not making dugouts or building training facilities and shooting ranges; they were not even digging foxholes. Many official documents and memoirs of Soviet generals and marshals attest to the fact that now the armies were lodged in tents. In March 1941, the 118th Division of the 16th Rifle Corps of the 11th Army was formed in the Baltic region. In May, reserves arrived. The division put up a temporary summer camp made of tents in the Kozlovo Ruda region (45 to 50 km from the state border). Safe under the cover of the TASS announcement, the division abandoned this camp and headed for the border. Any attempt to find even a hint of preparations for winter is doomed to fail—the division was not preparing to spend the winter here. In all tank divisions, all newly formed rifle divisions, the attitude toward winter changed—nobody feared winter any longer.

Where were they planning to spend the winter? Staying in tents in the Russian winter? Wasn't Central and Western Europe more comfortable? Major General A. Zaporozhchenko gives the following description: "The final phase of the strategic deployment was the secret movement of attack groups to staging grounds for invasion. It was carried out during the course of several nights before the attack. the cover of the movement was organized by reinforced battalions that had previously been moved to the border and, before the arrival of the main forces, controlled the areas of the front pre-assigned for the divisions. Transfer of aviation began in the last days of May and ended by June 18. Fighter and ground-attack planes concentrated at air bases up to 40 km from the border, and the bombers were no further than 180 km." In this description, we can be surprised only by the date of June 18. Soviet aviation did not complete its relocation

then; it only started it on June 13 under the cover of the TASS announcement. Why is the general mentioning June 18? the thing is, he is talking not of the Red Army, but of the German Wehrmacht, where the same exact thing was occurring— troops were also moving toward the borders at night. Reinforced battalions were sent ahead. Arriving divisions took predesignated areas for attack, or simply put, hid in the forests. The actions of the two armies are mirror images of each other. the only difference is the dates.

At first, the Soviet troops were ahead, but then Hitler got two weeks ahead of them—he had fewer troops, and they had less distance to cover. It is interesting that in the beginning of June the German army was in a very unfavorable position: it had troops in railroad trains. Guns were in one train, shells in another. Battalions were unloaded where there were no staffs, staffs where there were no troops. There were no communication lines, since for safety reasons usage of many radio frequencies was banned. German troops also did not prepare dugouts and build training ranges. But the most important similarity was the huge quantity of supplies, troops, aviation, hospitals, staffs, air bases—all this right on the Soviet borders, and very few people knew the plan of action, which was kept in extreme secrecy. All that we see in the Red Army and discount as stupidity was done, two weeks prior to that, in the German Wehrmacht. is is not stupidity, but preparation for invasion.

What was supposed to happen after the gathering of the Second Strategic Echelon of Soviet troops in the western districts of the country? the answer to this question was given long before the beginning of World War II. General V. Sikorsky: “Strategic waiting cannot last after all forces have been mobilized and concentration of troops achieved.” is was said by the Chief of the General Staff of the Polish army, in the 1936 book the Future War. However, according to a decision of the Soviet General Staff, the book was published in Moscow for Soviet commanders. the book was published because Soviet military science had earlier reached the same conclusion: “In modern conditions the worst idea in the beginning stages of the war is to attempt to use a tactic of waiting.” The advancement of the Second Strategic Echelon was not a reaction to Hitler’s actions. The creation of the Second Strategic Echelon began before the massive movements of German troops to the Soviet borders. the movement of the Second Strategic Echelon was a railroad operation that required lengthy preparations and extensive planning. Marshal S. K. Kurkotkin said that the General Staff transferred all necessary documents concerning the troop movements to the People’s Commissariat of Transportation on February 21, 1941.

The process of creating troop formations in inner districts and moving them to western border districts began on August 19, 1939. It originated with a decision by the Politburo; it was never stopped, and slowly gained momentum. Here is just one example: the Ural military district. At the end of August 1939 the 85th Division was formed; in September 1939, the 159th Division was formed. We see the 85th Division on June 21, 1941, right at the German borders in the region of Augustow, where the NKVD is cutting through barbwire. the 159th Division we find right on the border as well, in the Rava-Russkaya

region, in the 6th Army. In the same month of September 1939, in the same Ural district, the 125th and 128th Rifle Divisions were created, and each of them we can later find on the German borders. Moreover, according to Soviet sources, the 125th was “on the immediate borders” of East Prussia. The Ural district formed many other regiments and divisions, and all of them quietly crawled closer to the borders.

After the German invasion, the Second Strategic Echelon (as well as the first) was used for defense. But that does not at all mean that it was created for that purpose. General M. I. Kazakov says of the second echelon: “After the beginning of the war, radical changes to the plans for its use had to be made.” Major General V. Zemskov speaks more precisely: “We were forced to use these reserves not for attack, as planned, but for defense.”

From experience, as well as from theory, the Soviet High Command knew that not even one division could be left for a winter in the woods, unprepared. A soldier can spend the winter under any conditions—that was not the problem. the problem was that near the western borders there were no shooting ranges, no training camps, no tank depots, and no conditions for battle training. Troops must either immediately enter combat, or inevitable degradation of the level of battle readiness would ensue. the Soviet High Command knew that the culprits would be found, and they knew what the fate of the culprits would be—yet they took practically the entire Red Army into places where there were no conditions for battle training. the Soviet High Command did not fear Stalin’s ire, because the move forward did not endanger the troops’ combat readiness. Stationing them under such poor conditions was planned for a very short time only, after which the Red Army would attack westward. Stalin had no choice. He could not turn his armies around. Many armies and corps created in the first half of 1941 had nowhere to turn back to. Another troop transfer would have required many more months, would have paralyzed the entire railroad system, and would have meant economic catastrophe.

If the Red Army could not turn back and could not stay in the border regions for long, what was left for it to do? In order to answer this question one needs to bring up the opinion of Stalin: “In the condition when we are surrounded by enemies, a sudden attack from our side, an unanticipated maneuver, quickness, decides everything.”¹⁸ In every grandiose process, there is a critical moment, after which events cannot be turned back. For the Soviet Union, this moment came on June 13, 1941. After this day, war for the Soviet Union became inevitable, and it was to be in the summer of 1941, regardless of Hitler’s actions.

In the Second Strategic Echelon, which Stalin was secretly transferring to the borders, there were entire divisions, sometimes even corps, of soldiers dressed in old black uniforms. ere were enough of these soldiers for the German military intelligence to notice and unofficially dub these divisions and corps “black.” One example was the 69th Rifle Corps of the 20th Army. is corps was not the only one. the 63rd Corps of the 21st Army also figures in German documents as the “black corps.” the commander of the 63rd Rifle Corps was Komkor (Corps Commander) L. G. Petrovsky. During the war Komkor Petrovsky fought with dignity and courage, proving his ability as a great strategist in battle. On

July 31, 1941, he received the rank of lieutenant general and was promoted to command the 21st Army while the 63rd Rifle Corps, after heavy fighting, was encircled by the enemy. Stalin ordered him to leave the 63rd Corps encircled and to take command of the 21st Army. Petrovsky asked to delay the order of entering his post as army commander for a couple days, and the plane sent for him returned with critically wounded soldiers on board. Petrovsky brought his “black corps” out of encirclement and once again returned to the rear of the enemy, in order to bring another division out of encirclement, the 154th Rifle Division (under the command of Major General. S. Fokanov). During the breakout from encirclement, Petrovsky was fatally wounded. German troops, upon finding and recognizing Petrovsky’s body on the battlefield, gave the Soviet general a funeral with all military honors. A huge cross was placed on his tomb, with an inscription in German that read: “Lieutenant General Petrovsky, commander of the ‘black corps.’”

The armies of the Second Strategic Echelon, which included the “black” divisions and corps, began forming in June 1941. These divisions and corps began their movement west on June 13, 1941. German troops encountered the “black” divisions and corps in early July 1941. Every army of the Second Strategic Echelon was created specifically for the purpose of a surprise arrival at the western borders. Each army was located on a major railroad route. Each was formed in the vicinity of concentration camps: men there were used to order, didn’t ask for much, and it was easier to take them out of the camps than out of the villages—all were already gathered in one place, organized into brigades, and, most importantly, it was impossible to take men out of the villages without stirring rumors about mobilization and war. Stalin needed everything to proceed quietly, without rumors. That was why he wrote the TASS announcement. That was why men were in due time taken to concentration camps, trained and disciplined, and then sent to the front without fuss. If in early July the German army met divisions and corps filled with inmates, in the armies coming from the faraway Urals and from the Siberian and Trans-Baikal provinces, it means that Stalin handed weapons to the inmates before June 22, 1941. The main question that German command had to answer was: If we do not attack, what will Stalin do? Take away the weapons from the inmates, return them to the GULAG, or send them home? Or perhaps Stalin had some other options for using the armed inmates that were secretly gathering at the German borders?

Churchill’s Warning and Stalin’s Reaction

For more than half a century, historians have been saying that Churchill warned Stalin about the impending German invasion, but Stalin ignored his warnings. Perhaps we should ask a different question: Why should Stalin have believed Churchill? Churchill was one of the most powerful political leaders who had understood the great threat posed by Communism back in 1918. From the Soviet point of view, Churchill could have had only one political motive: to deflect the German attack to anywhere other than Britain. Even before World War II began, on March 10, 1939, at the Eighteenth Congress of the

Communist Party, it had been openly declared that Great Britain wanted to trigger a war between the Soviet Union and Germany, while it remained on the sidelines of this fight. We do not know whether that was indeed Churchill's intention, but it was exactly how Stalin interpreted every action of British leadership and diplomacy.

To understand Stalin's suspicion of Churchill's letters, we must also examine the strategic situation in Europe. The concentration of power against weakness was the main principle of strategy. Germany was unable to apply this principle in World War I, because it was fighting on two fronts. Attempts to concentrate great efforts on one front automatically led to the weakening of the other front, and the enemy immediately exploited it. As a result, Germany had to renounce a strategy of destruction in favor of the only other alternative, a strategy of attrition. But Germany's resources were limited, in contrast to the resources of its enemies. A war of attrition could only end in catastrophe for Germany.

In 1940, in terms of strategy, Churchill could only have dreamt that the war Germany was fighting would transform from a one-front war into a two-front war. It was the only way to save Great Britain. In May 1940, the British army suffered a crushing defeat unprecedented in history. The German tank divisions broke through to La Manche, and trapped forty British, French, and Belgian divisions against the coastline in the region around Dunkirk. Belgium capitulated on May 28. France fell on June 22, 1940. Hitler's troops reached the shores of the Atlantic Ocean and took over naval bases of tremendous strategic value. From this time, the piracy of German U-boats increased sharply on the sea routes. Britain, an island nation, faced the threat of a naval blockade and the most acute crisis in trade, industry, and finance. Worse still, the German military machine, which at that point seemed invincible, was making intensive preparations to land on the British Isles. It was in this environment that Churchill wrote to Stalin on June 25, 1940. On June 30, the German armed forces captured Guernsey, one of the Channel Islands. In almost a thousand years of British history, this was the first time since 1066, meaning after the Norman conquest of Britain, that an enemy had captured a part of the British Isles. What would follow—a German occupation of mainland Britain? Guernsey was taken without resistance. For how long could Britain resist? Stalin received Churchill's message the day after Germany had seized Guernsey. What were Churchill's interests? Did he want to save the British Empire or the dictatorship in the Soviet Union? For Stalin, Churchill was not an unbiased observer who, out of friendly sentiments, was warning of danger, but a man who desperately needed help and allies in a conflict against a fearful enemy. Stalin therefore was very suspicious of Churchill's letters.

Churchill wrote several letters to Stalin. But unfortunately they all reached Stalin at times when Churchill was in dire straits. Churchill wrote his first long letter to Stalin on June 25, 1940, when neither Hitler nor the German generals had any intention of invading the Soviet Union. The plan for Operation Barbarossa or any other plan for war against the Soviet Union simply did not exist. Churchill's letters were not based on knowledge of German plans, but on sound calculations. He simply directed Stalin's attention to the

situation in Europe: today Britain had problems with Hitler; tomorrow it would inevitably be the Soviet Union's turn. Churchill urged Stalin to unite with him against Hitler, and to lead the Soviet Union into the war on the side of Great Britain and all of vanquished Europe.

The text of Churchill's message received in Moscow on April 19, 1941, can be found in hundreds of Soviet books and articles. Here it is: "I have received reliable information from a trustworthy source that the Germans, after deciding that Yugoslavia had fallen into their clutches on 20 March, began to transfer three armoured divisions, of the five stationed in Romania, into the southern part of Poland. As soon as they learnt of the Serbian revolution, this transfer was cancelled. Your Excellency will easily appreciate the significance of these facts." All Soviet sources publish Churchill's message in this form, insisting and assuring that it was a "warning."

I see no warning here. Churchill was talking about three tank divisions—many by Churchill's standards, but by Stalin's, it was not a great deal. Stalin himself at the time was secretly setting up sixty-three tank divisions, each of which was stronger than a German division both in number and in quality of tanks. Having received a report about three German divisions, why should Stalin have guessed that there would be an invasion? If the report about the three tank divisions was sufficient "warning" about preparations of aggression, we should not accuse Hitler of being the aggressor: German intelligence gave Hitler reports about tens of Soviet tank divisions grouping along the German and Romanian borders.

Churchill's letter had tremendous significance, but it absolutely couldn't be regarded as a warning. It was more of an invitation to Stalin: the Germans wanted to transfer their divisions to Poland, but changed their minds; therefore, the Soviet Union had nothing to fear, especially since the German tank divisions in Romania had their backs turned to Stalin. Churchill wanted Stalin to evaluate these facts and act on them. Sir Basil Liddell Hart, the British military historian, made a brilliant analysis of the strategic situation of that time as seen from Hitler's standpoint. According to General Jodl, to whom Liddell Hart referred, Hitler repeatedly told his generals that Britain's only hope was a Soviet invasion of Europe.⁵ Churchill himself wrote on April 22, 1941, that "the Soviet government knows full well . . . that we stand in need of its help." the only way Stalin could help Britain was by attacking Germany.

Stalin knew that war on two fronts spelled suicide for Hitler. He calculated that Hitler would not commit suicide by starting a war in the east without first finishing the war in the west. Stalin was patiently waiting for the German tank corps to land in Britain. Meanwhile, he did everything possible to convince Hitler of his desire for peace. It was why Soviet anti-aircraft guns were not firing on German aircraft crossing the Soviet borders, and Soviet newspapers and TASS proclaimed that there would be no war between the Soviet Union and Germany. If Stalin had succeeded in convincing Hitler that the Soviet Union was neutral, then the bulk of German forces would have been engaged in fierce battles trying to land on the British Isles and leaving practically all Europe defenseless

and ripe to be “liberated” by the Red Army. Poland, Czechoslovakia, Denmark, Norway, Belgium, Holland, Luxembourg, Yugoslavia, France, Greece, and Albania no longer had armies, governments, parliaments, or political parties.

Stalin had helped Hitler come to power and transformed him, in Stalin’s words, into a real “Icebreaker” that would trigger the world revolution in Europe. Stalin pushed along that Icebreaker of the revolution. Stalin demanded from the French and from other Communists that they let the Icebreaker crush Europe. Stalin supplied the Icebreaker with everything needed for a victorious advance. Stalin closed his eyes to all the crimes committed by the Nazis. But Hitler guessed Stalin’s design. That was why World War II ended catastrophically for Stalin: he only got half of Europe.

A Blitzkrieg against Russia?

We are so accustomed to thinking of Hitler and his armies as remarkably superior that we accept without question that Stalin was afraid of Germany. However, why should Stalin have feared Hitler? Everyone, including Hitler himself and his generals, knew that Germany lacked the resources to fight a prolonged war. Hitler’s only chance was a lightning war, a blitzkrieg. But a blitzkrieg against the Soviet Union was impossible, because it stretched more than ten thousand kilometers from west to east. The challenges for the Germans wouldn’t end there. Even in the supercritical conditions of the summer of 1941, the Soviet system of mobilization worked perfectly, and an additional 5.3 million people joined the ranks of the Red Army within one week of the war, before July 1, 1941. After one week of the war, the Red Army consisted of over 10 million people. Even if Hitler continued to destroy a million per month, the war would still last a year. But the Soviet mobilization continued in July, August, September . . . “Our forces are innumerable,” Stalin once said. The mobilization resources of the Soviet Union were almost 20 percent of the population, meaning 34.5 million people. This resource was fully used during the war. It was even surpassed. How long would it take to destroy such an army?

A blitzkrieg is a tank war. On September 1, 1939, Germany only had 2,977 tanks. How did it happen that out of this number almost half (1,445 Pz-I tanks) had no cannon? How come the other half (1,223 Pz-II tanks) had only pathetic 20-mm cannons? How come they only had 98 Pz-III tanks with their useless 37-mm cannon, and only 211 Pz-IVs, which had 75-mm short-barreled cannon, not designed and not useful for war against other tanks? By June 1941, Hitler had in his invading army 3,332 tanks,⁵ all of them light and all of them obsolete—not one single heavy tank. There were medium ones, which were simply light tanks covered with an extra layer of armor plates. Their defenses increased from this, but their mobility decreased: their speed, maneuverability, and ability to pass through rough terrain—all of which were necessary for maneuvers in large open spaces. Hitler didn’t have a single amphibious tank, or one with anti-projectile armor, nor one with powerful cannon. Stalin, on the other hand, had 23,925 tanks, including

the best models in the world that had the best tank-building innovations of the time: powerful long-barrel cannons, wide caterpillar tracks, anti-tank defenses, diesel motors, and so on. Moreover, Stalin possessed almost endless means for producing these tanks. Stalin had more amphibious tanks than Hitler had tanks in total.

Tanks alone do not ensure strength. A lone tank that ventures far ahead is vulnerable. A tank must be supported by infantry. "In 1941, the German army still consisted mostly of plain infantry divisions, which moved on foot, and used animal transport," said German General Guenther Blumentritt.⁸ On June 22, Hitler had on the eastern front 750,000 horses. A convoy of 220 horses with carts followed each German tank. Was it on carts that they planned to carry out the blitzkrieg? Out of 153 divisions launched by Hitler against the Soviet Union, only seventeen were tank divisions. There was not a single tank in the thirteen German motorized divisions at the beginning of World War II, while each Soviet rifle division had its own tank battalion of T-26 tanks. We have been taught to laugh at this tank. But the German infantry did not have tanks at all!

The German army relied heavily on cars and motorized transportation. the plethora of such machinery—more than 500,000 cars in the invading army—played a cruel trick on the Germans. While on the European front, which was heavily road-linked, such an abundance of motorized transportation was more than sufficient, but the German cars on the Russian front (along its so-called roads) often turned into a setback. First, the Germans needed specialized, road-tolerant cars, wheel-track and track-based transport vehicles and tractors. Second, the chronic lack of fuel led to frequent halts in the general mass of automobiles. Field artillery was the main tool of the Red Army for breaking through enemy defense lines. First were the howitzers. A howitzer, compared to cannon of the same weight, had a slower initial shell speed and a smaller range. But its shells were more powerful and its fire trajectory was curved, which was useful for firing upon an enemy dug into the ground. Marshal Kulik commanded the Red Army artillery for many years. During his leadership, the best artillery systems in the world were created, primarily the howitzers. By June 22, 1941, the Red Army had 15,464 howitzers of all types.¹³ the most powerful ammunition factories were created for supplying them. the German army had 10,810 howitzers by June 1, 1941. However, those howitzers had to be divided among several fronts, including the African one. Furthermore, Germany had too few non-ferrous metals to manufacture artillery shells in such quantities as were being produced in the Soviet Union. Finally, the German howitzers were obsolete, developed during World War I or even before it.

Stalin had long-range bombing aviation, which Hitler did not have. In 1940 and 1941, Germany was already being bombed by British strategic aviation. Stalin was ready to add his forces to this effort. Hitler, meanwhile, planned to "bomb Britain out of the war," but that plan failed, because he had no strategic aviation at his disposal. Later on, Hitler decided to take over the European part of the USSR up to the Arkhangelsk-Astrakhan line, and everything east of that line he was going to leave to the bombers. the problem with this plan was that Hitler had almost no long-range bombers.

When he received reports that the German army was preparing to invade, Stalin simply did not believe them. Molotov said before the invasion: "One must be an idiot to attack us." According to Stalin's calculations, an attack on the USSR would have meant suicide for Hitler and his empire. His calculation was entirely confirmed by the results of the war. The question is not whether Stalin was afraid of Hitler or not. Stalin had no reason to be afraid. Stalin considered Hitler and his generals to be reasonable people, and reasonable people would not embark on such an adventure, with Britain on their back. Reasonable people could not plan to crush the Ural and Siberian industrial complexes using long-range bombers, especially when they had no such bombers. Here we must ask a different question: why did Hitler attack the USSR?

Hitler signed Open Directive No. 21 ordering Operation Barbarossa—the attack on the Soviet Union—on December 18, 1940: "The end goal of the operation is the creation of a protective barrier against Asian Russia along the line Volga-Astrakhansk. In this manner, in case of need the last industrial region the Russians have left in the Urals could be paralyzed using aviation." Since Germany invaded the USSR on June 22, it was impossible to reach the Volga line before the autumn rains. If Hitler had been able to build air bases on the right bank of the Volga River, he still would not have been able to bomb the industry centers of the Urals. The German Do-17, Ju-88, and He-111 bombers were created for completely different tasks. Their missions had been the destruction of small-scale, mostly mobile targets in the area of battle and in the enemy's near rear. These bombers were created for short-range flights, had a small bomb-carrying capacity, and could act only at low and medium altitudes. To reach the Urals and return, the bombers Hitler had in 1941 had to take with them plenty of fuel and no bombs at all. If Hitler's bombers had a sufficient radius of action, even then they could not have bombed the Urals. Germany was running out of fuel. In August 1941, it already had so little fuel that it had to halt large-scale operations.

In December 1940, when Hitler signed the directive for the attack on the Soviet Union, it was perfectly clear that the light single- and dual-engine bombers had too small a radius and too pathetic a bomb load, and were not fit for destroying industrial targets. At the same time, German bombers were flying from the excellent air bases in northern France, across the Channel, and bombing the industrial and military targets of London, Bristol, Coventry, Plymouth, and Southampton. Supplying fuel and ammunition from Germany to the airports of northern France was no problem. The targets were nearby, just across the Channel, and the planes could take less fuel and more bombs. Nonetheless, even in these most favorable circumstances, in nine months of intense bombing raids, from August 12, 1940, to May 12, 1941, all of Germany's aviation was still unable to "bomb British industry out of the war." If the entire German aviation could not in nine months destroy the industry of nearby Britain, how many months did Hitler plan to spend trying to destroy the industry centers of the remote Urals?

To destroy industrial regions situated in the deep rear of the enemy, an aggressor needs long-range bombers with a radius of action of several thousand kilometers and a bomb-

carrying capacity of over five tons. the long-range bomber must also be a high-altitude bomber, otherwise it would be vulnerable to the enemy's anti-aircraft artillery. Also, is necessary a minimum of one thousand such bombers. Hitler had none.

Intelligence Reports and Stalin's Reaction

Stalin had three separate independent espionage services: the First Directorate of the NKGB; the Intelligence Directorate of the General Staff (in 1942 it became Chief Directorate); and Stalin's personal intelligence service, concealed under the name "Special Section of the Central Committee of the Communist Party." The total power of these agencies was colossal. Sufficient information is available about the penetration into leading German military and political organs by Stalin's espionage services. A group under the code name "Viking" worked in the staff of the OKW (Supreme Command of the Armed Forces); seven high-ranking German officers and generals supplied information straight from Hitler's cabinet to Stalin's agents. In Germany, the Soviet military intelligence managed to gain access to the most secret information from the highest levels of power.

Several networks of agents simultaneously worked for Stalin, completely independent of each other. the lies of one were immediately exposed by information provided by the others. A group under the code name "Alta" worked in the German embassy in Moscow. Its members included Gerhard Kegel and Else Stoebe. the entire embassy was wrapped up in the web of Stalin's espionage. is group of agents "was supplemented by a man who had, in essence, unrestricted access to all [the] state secrets of Germany."² the German embassy in Moscow had ties to Goering's staff, to the science and technology organs of the ird Reich, and of course to the Ministry of Foreign Affairs. "Among these agents, there was even one of the closest associates of the foreign affairs minister, Ribbentrop. He was recruited in Poland to work for the British and in his convictions he was an adamant enemy of the Soviet Union."³ is agent, like many others, thought he was working against Stalin, when in reality he was working for him.

We must remember the friend of Goering's wife, the first-rate Nazi movie star Olga Tschechowa. is woman dazzled Berlin with her blinding beauty and her cruelty, which was inexplicable, unusual, and unseen even for that time. In 1936, on Hitler's orders, Olga Tschechowa was awarded the title People's Actress of Germany. She was often seen next to Hitler at receptions. en, in 1945, the popular ird Reich actress was befriended by Stalin and given the highest Soviet marks of distinction.

Testimonies about the might of Stalin's espionage abound. For example, Air Force Major General P. M. Stefanovsky recounted, as if it were something utterly insignificant, that in July 1941 he was summoned by Stalin and told: "In three days, the Germans will bomb Moscow." Stefanovsky described the measures that were taken, and in three days the first massive air raid on Moscow was deflected. But we can pause on this seemingly insignificant episode. How could Stalin have known that in precisely three days the

Germans would bomb Moscow? the pilots at the air bases did not know what they would be doing the following day. It was always a secret. the success of the upcoming operation, the lives and safety of the pilots, depended on that secret. A very small group of people knew the plans for air war. Commanders of formations and pilots found out the targets they had to bomb only at the last moment. Yet Stalin knew not only what the German pilots would be doing the following day, but also what they would be doing in three days.

Stalin was constantly peeking at Hitler's cards. During the development of German operations in the Kursk region, all details and all changes in the plan were immediately reported to Stalin. Before the beginning of the operation, German generals, who were the immediate executors of the plans, received the appropriate directives and the final draft of the operation. Stalin had received this draft six days earlier.

Hitler, whom Stalin had driven into a strategic impasse by the Molotov-Ribbentrop Pact, suddenly realized that he had nothing to lose and that inevitably Germany had two fronts: if he did not attack Stalin, Stalin would stab him in the back. Therefore, Hitler attacked first. Neither Golikov nor Stalin anticipated this. It was a suicidal decision, but Hitler had no choice. Stalin simply could not understand that having found himself in a strategic impasse, Hitler would take such a suicidal step.

Stalin also had military intelligence officers whose achievements were truly outstanding, but precisely because they were so successful, they remain unknown to us. One Soviet intelligence officer had access to some of Hitler's real secrets. According to Marshal of the Soviet Union A. A. Grechko, "eleven days after Hitler approved the final plan for the war against the Soviet Union (December 18, 1940), this fact and the basic details of the decision taken by the German High Command became known to our intelligence organs."

With these preparations it was not possible for Germany to begin the war. When the war broke out, Stalin sent Golikov on a trip to Britain and the United States and briefed him personally. Golikov was then put in command of armies and fronts. In 1943, Stalin appointed him to the crucial post of Deputy People's Commissar for Defense, which was deputy to Stalin himself, to deal with cadre matters. Stalin allowed only his most trusted men to handle the delicate task of selecting and placing cadres. Golikov continued to rise in rank after Stalin's death, and eventually became a Marshal of the Soviet Union. Golikov's impunity for obviously wrong intelligence had been worrying me personally for a long time, until I attended a lecture in the Academy of the GRU. Later, when I was working in the central apparatus of the GRU, I found confirmation to this answer. Golikov used to report to Stalin that Hitler was not preparing for war against the Soviet Union. It turned out that Golikov was reporting the truth to Stalin, since Hitler was not making such preparations. Golikov knew that Stalin did not trust documents. Golikov did not trust them either. He therefore looked for other indicators which would unerringly signal the moment when Hitler began his preparations for war with the Soviet Union.

All GRU agents in Europe were ordered to infiltrate organizations directly or indirectly connected with sheep farming. Over a few months, intelligence was gathered and carefully

processed on the number of sheep in Europe, on the main sheep-breeding centers and slaughterhouses. Golikov was informed twice a day about mutton prices in Europe. In addition, Soviet intelligence began to hunt for dirty cloths and oil-stained pieces of paper left behind by soldiers cleaning their weapons. There were many German troops in Europe. the troops were stationed in field conditions. Each soldier cleaned his weapon at least once a day. Cloths and paper which have been used for weapon cleaning were usually either burned or buried, but of course this rule was not always obeyed. the GRU had ample opportunity to collect an enormous quantity of dirty cloths. A large number of these dirty cloths were sent across the frontier wrapped around various iron implements, so as not to arouse suspicion. Larger-than-usual quantities of kerosene lamps, primus stoves, and lighters were sent across the border, by both legal and illegal means. Every piece of information was analyzed by hundreds of Soviet experts, and the results reported immediately to Golikov. He immediately informed Stalin that Hitler had not yet begun preparations to invade the Soviet Union, so there was no need to pay attention to every buildup of German troops or German General Staff documents. Golikov believed, with good reason, that a country needed serious preparation to fight the Soviet Union. One of the vital things Germany would need, if it were to be ready to fight such a war, was sheepskin coats—no fewer than six million of them. As soon as Hitler decided to attack the Soviet Union, his General Staff would have to order industry to begin producing millions of sheepskin coats. is would be reflected immediately on the European markets. In spite of the war, mutton prices would fall because of the simultaneous slaughter of millions of animals, while sheepskin prices would rise sharply.

Golikov also calculated that the German army would have to use a new type of lubricating oil for its weaponry. the usual oil used by Germany would congeal in the frost, component parts would freeze together, and the weapons would not work. Golikov waited for the German army to change the type of oil it used in weapon-cleaning. the Soviet experts' examination of dirty cloths showed that the German army was still using its usual oil, and there were no signs of a change to a new type. Soviet experts also watched motor fuel. In heavy frost, the normal German fuel broke down into incombustible components. Golikov knew that if Hitler decided to open a second front, he would have to order the mass production of a fuel which would not disintegrate in heavy frost. Soviet intelligence was sending samples of German liquid fuel across the border in lighters and lamps. There were many other indicators, which the GRU followed closely for warning signals.

But Hitler launched Operation Barbarossa without making any preparations. Stalin, therefore, had no reason to punish Golikov. Golikov had done all that was humanly possible to discover German preparations for war. He told Stalin that no preparations were taking place, and this was the truth. There had only been a great buildup of German troops. Golikov gave instructions that not all German divisions had to be targets of attention, but only those that were ready to invade; those were divisions that had 15,000 sheepskin coats in their depots. ere were simply no such divisions ready for war in the entire Wehrmacht. The GRU chiefs knew where, what quantities, and what kinds

of liquid fuel and lubricating oils were produced in Germany and the occupied territories. the quantities of liquid fuel possessed by Hitler were not at all sufficient to conduct deep offensive operations. But the most attention was paid to the type of fuel they produced. Analysis showed that Germany was not conducting intensive research in the field of creating frost-resistant fuels and oils; German industry was not producing them in any significant quantity; the rear units of the Wehrmacht Heer and the Luftwaffe were not storing such fuel and oil for a grand-scale war.

The temperature at which pure benzene crystallizes is 5.4 Celsius. In Germany, fuel was obtained by the hydrogenation of low-quality coal. Into this fuel, large quantities of benzol had to be added to raise the levels of octane. Benzol has high anti-detonation qualities. However, it drastically reduces low-temperature qualities. the temperature of crystallization for the main kinds of German fuels ranged between -9.6 and -14.5 Celsius. Only a madman could begin a war with such fuel against a country where in the winter a temperature of -20 Celsius was the norm. Soviet intelligence did not consider the German generals to be madmen, and it concluded that Germany was not preparing for war.

Colonel General H. Guderian, commander of the 2nd Tank Group, recounted: "When they unfolded a map of Russia before me, I could not believe my eyes. Everything that I considered impossible I was supposed to make into reality?" Guderian knew that Germany couldn't defeat the Soviet Union. Defeat was impossible not only in three months, but in general. "Just look at these vast territories," said General Field Marshal Karl von Rundstedt, Commander of Army Group South. "We cannot crush the enemy and occupy all of western Russia from the Baltic to the Black Sea in just a few months." Stalin and Golikov reasoned in a similar manner. they all expected Hitler and his field marshals to behave reasonably—in other words, to prepare for a prolonged war, including a war in winter. But reasonable actions were not being taken.

The War Has Begun

Only now did we realize how well the Russians had been prepared for war. —ADOLF HITLER, RADIO ADDRESS, OCTOBER 1941

In his memoirs, the German pilot Hans-Ulrich Rudel described the beginning of the war against the Soviet Union. He flew a Ju-87 and completed 2,430 battle missions. He wrote:

"By the evening of the first day I had completed four trips beyond the frontline to the area between Grodno and Vokovysk. We saw huge masses of tanks and trucks here. We mostly saw KV-1, KV-2, and T-34 tanks. We bombed tanks and anti-aircraft guns. . . . The next day, we first flew out at 3 AM, and finally returned at 10 PM. One had to forget about normal rest during the night, so we made use of every available minute to fall down on the grass by our airplanes and to sleep. . . . Even on my first mission,

I noticed innumerable fortifications built along the borderlines. they stretched for many hundreds of kilometers deep into Russian territory—and yet, they were partly unfinished. We flew over unfinished airbases: in some places, the concrete landing strips were just being constructed. Even at such airbases, however, one could find a few aircraft waiting. We saw, for example, along the road to Vitebsk, which our troops were advancing upon, one such almost-finished airbase with many “Martin” bombers. they either did not have enough fuel or enough crews. While flying over these numerous airbases and fortifications, we all had the same thought in our heads—how lucky we were to have struck first. It seemed that the Soviets were feverishly readying the groundwork for an attack against us. And which other Western country could Russia have attacked? If the Russians had completed their preparations, there would have been almost no hope of stopping them. . . . The highway [from] Smolensk [to] Moscow was the target of many raids; it was packed with huge amounts of Russian military equipment and supplies. Trucks and tanks were lined up one after another almost without any intervals, often in three parallel columns. If all this massive machinery had attacked us. . . . There were no difficulties in attacking so enticing a target. In a few days, the entire road was transformed into piles of rubble.”

In the German pilot’s description, there is one phrase about the construction of defense structures that might create some confusion. Perhaps the Red Army was preparing defenses? No, it was not. If it had been preparing for defense, the arriving troops would not have been kept in columns along the roads, they would have been sent immediately to the trenches. Rudel also mentioned the “Martin” bombers. Indeed, military supplies from the United States and Great Britain began to arrive in the Soviet Union long before June 22, 1941.

“Strategic defense was born out of necessity during combat, it was not planned ahead of time,” says official Soviet military-historical research. the defensive operations of the Red Army in the summer of 1941 were pure improvisation. Before the war, the Red Army neither prepared for defense nor conducted any training in defensive operations. Soviet field manuals don’t contain a word about defense on a strategic scale. Not only did the Red Army not have any defense plans, but even in a purely theoretical sense the issues involved in conducting defense operations were never worked out or discussed. Moreover, the Soviet people and army were not ready for defense, even psychologically. “It is precisely the interests of defending the USSR that will demand the conduct of broad offensive operations on enemy territory, and this does not in any way contradict the character of defensive war,” wrote Pravda on August 19, 1939. From the first moments of the German invasion, the Red Army tried to go on the offensive, or carry out counterattacks and counteroffensives. But this was also improvisation. Counteroffensives were not worked on at any of the prewar training exercises; they were not even discussed in theory: “The question of counteroffensive . . . was not posed before the Great Patriotic War.”

Something else is unclear. If the Red Army entered the war without any plans, then Stalin, upon finding out about this, should have shot the chief of general staff and all

those who participated in developing the plans. It did not happen. On the contrary, those who participated in developing Soviet plans—Vassilevsky, Sokolovsky, Vatutin, Malandin, Bagramian, Shtemenko, and Kurassov—began the war as major generals or even lieutenant colonels, and ended it as marshals or at least with the four stars of army generals. During the war, they all proved to be truly great strategists. They were all devoted, even pedantic, staff officers, who could not imagine life without a plan. If Soviet staffs worked very hard and developed war plans before the war, but those were not defense or counteroffensive plans, what kinds of plans could they be?

The Soviet Black Sea fleet had the following military objective before the war: “active military actions against enemy ships and transports near the Bosphorus and on the passageways to the enemy’s bases, as well as cooperation with land troops during their movement along the Black Sea coast.”⁶ Admiral S. Gorshkov remembered that the Baltic and Northern fleets, as well as the Black Sea fleet, had purely defensive objectives, but they were to be achieved through aggressive methods. The actions of the Soviet fleet during the first minutes, hours, and days of the war showed with sufficient clarity that they had plans, but these were not plans for defense. On June 22, 1941, Soviet submarines from the Black Sea fleet immediately sailed into the sea toward the shores of Romania, Bulgaria, and Turkey. On that same day, the submarines of the Baltic fleet sailed toward the shores of Germany with the objective of “sinking all enemy ships and vessels according to the rules of unrestricted submarine warfare.” The order made no exceptions, not even for medical vessels sailing under the Red Cross flag.

Starting on June 22, the Black Sea naval air force conducted open military actions in the interests of the Danube military flotilla with the objectives of opening the way for it to advance upward along the river. The garrison of the Soviet naval base Hanko, located on Finnish territory, did not switch to a defensive regime after the start of hostilities, but instead began intensive assault operations, taking over nineteen Finnish islands in the course of several days. On June 25, despite losses suffered by Soviet air forces during the first days of the war, airplanes of the Northern Front carried out a surprise bombing raid. The staff of the Northern Front reported on that morning: “The air force of the front and of the armies started on 6:20 AM to carry out, by bomber formations, the task of exterminating the enemy’s air force on his airfields.” On June 23, the 1st Long-range Bomber Aviation Corps carried out a massive attack against military targets in Königsberg and Danzig. It was no improvisation. On the morning of June 22, at 6:44 AM, the Soviet long-range bomber air force received orders to act according to the plans.

On June 26, 1941, the 4th Long-Range Bomber Aviation Corps began to bomb the Ploiesti oil fields in Romania. After just a few days of raids, the amount of oil obtained in Romania was reduced almost in half. On June 22, 1941, the 41st Rifle Division of the 6th Rifle Corps of the 6th Army, without waiting to hear orders from higher commanders, acted according to prewar plans and crossed the state border in the Rava-Russkaya region. The 102nd Rifle Regiment of this division crossed the border on a front line of eight kilometers and penetrated four to six kilometers into enemy territory. In the

morning of June 22, 1941, the commander of the Northwestern Front, Colonel General F. I. Kuznetsov, without awaiting orders from Moscow, issued an order to his troops to attack Tilzit in Eastern Prussia.

The High Command also ordered the neighboring Western Front to carry out a powerful attack on the Polish city of Suwalki. It was no surprise to the Western Front commander General D. G. Pavlov. He knew the objectives of his front long before the directives from Moscow arrived, and had already issued the orders to advance on Suwalki. However, because the German air force had not been destroyed in a surprise raid but, on the contrary, the entire Soviet Western Front had lost 738 planes during the first hours of the war, advancing was not at all the best option.

Soviet generals never concealed the fact that strictly offensive objectives were set before them. General K. Galitsky, when talking about the concentration of Soviet troops in the Augustow region, stressed that the Soviet command did not believe in the possibility of a German attack, while the Soviet troops were being prepared to conduct an offensive operation. The Soviet fronts directed against Eastern Prussia and Poland, as well as the fronts positioned against Romania and Hungary, were preparing strictly for an offensive. Major General A. I. Mikhalev acknowledged that the Soviet command did not plan to use the Southern and Southwestern fronts for defensive or counteroffensive actions. "The strategic goals were planned to be attained through the troops' switching to a decisively offensive course of action."

Meanwhile, from June 13 to 20, the NKVD troops were relocating by force the population of the border regions from the White Sea to the Black Sea. The Germans relocated people from a strip of land twenty kilometers in width, while the Soviets removed people from land one hundred kilometers wide. The Germans relocated the population. The Soviets relocated some people and sent others to the GULAG. On June 19, the day described by Sviridov, the NKVD operation to clear the front strip entered its bloodiest stage. After the forced deportation of the population, the border guards dismantled all mines and barbed wire obstacles on the Soviet border, and left the borders themselves. On strips tens of kilometers long, in the places where the Soviet assaults were being prepared, the border was opened, and the border guards had left, having handed the borders over to the Red Army. The reconnaissance battalions of the Soviet divisions came out right up to the borders.

The Red Army was not separated from the enemy even by a thin line of NKVD border guards. Neither Zhukov, nor Timoshenko, nor Shaposhnikov had the power to order the guards to leave the borders. The guards were not under their jurisdiction. The guards were subordinate to Beria, the NKVD commissar. But Beria did not have the power to order the army units to replace his people on the borders. Only one man, Stalin, could have ordered the NKVD commissar to remove the border guards and the Defense commissar to move the army divisions to the borders.

Then, the unexpected happened. The German army attacked. During the war, especially

in the beginning, the Red Army suffered many defeats. In August and September of 1941, a military catastrophe of historical proportions occurred in the region around Kiev: 665,000 Soviet troops were encircled and captured by the German army. Near Smolensk, 310,000 Soviet soldiers and officers were surrounded. In 1942 on the Crimean front: Soviet troops were encircled near Khar'kov; the 2nd Shock Army, headed by General Vlasov, was surrounded and exterminated. This kind of information was considered classified. Soviet historians and generals never wrote about these events. But there was an exception to the rule: June 22, 1941. The Soviet propaganda described without mercy everything related to that day, and denounced the Red Army before the entire world. Why was it allowed to talk about the lack of readiness for war? In the library of the Military-Diplomatic Academy of the Soviet Army, I stumbled across a very small book. It was titled *A Brief Russian-German Military Phrase Book for Soldiers and Junior Commanders*. The booklet was published in Moscow on May 29, 1941, and additionally on June 5 the same booklet was published in Leningrad, Minsk, and Kiev. In total, five million copies were printed. In all Soviet books, including military textbooks, the price was on the last page. The price was not printed only on those books and instructions that related to the conduct of battle. These publications were treated like ammunition, and were handed out to the troops during training exercises, and, when necessary, before and during battle. No price was stamped on the little book I found. It was a battle document; it proved that the USSR was preparing for the war with Germany.

The phrase book was composed very simply and intelligently: a question in Russian, followed by the same question in German written in Russian letters, then in German in Latin letters. The answers were also printed in Russian and German with Latin and Cyrillic letters. It is quite simple to speak according to the booklet—if you do not know how to pronounce the needed German phrase, simply point to the corresponding lines in the book and the Germans can read them themselves. The phrases are very interesting. For example: "Where is the water? Is it drinkable? Drink it first yourself." Imagine the situation: the Soviet soldiers are fighting, defending their motherland, enter a Russian village, take out the phrase book from their packs and read syllable by syllable: "Trinken Sie zuerst man selbst!" But they would be taken for Germans in Russia! Here is another example: "What is this station called? Stop the broadcast, or I will shoot you! Bring the conductor! Where is the fuel? Where is the garage? Gather and bring here [so many] horses [farm animals], we will pay!" To communicate with the local populations, it is not a bad idea to know phrases such as: "Where are the German soldiers hiding? Where is the burghermeister? Is there an observation point on the steeple?" But, there was not one burghermeister or steeple in the Soviet Union. Another very important question: "Where are the stores?" The most important phrases are the following: "You do not need to be afraid! The Red Army will come soon!"

A former Soviet diplomat, Nikolai Berezkhov, who accompanied Molotov to Berlin in 1940, wrote in his memoirs *With a Diplomatic Mission in Berlin* that a German printing press worker once brought to the Soviet embassy a German-Russian phrase book of the

same kind. For the Soviet embassy, the book was solid proof that the German army was preparing to invade the USSR. But in the USSR they were printing the same exact phrase books. Soviet soldiers and officers were preparing for a victorious march on Berlin, but the war against Germany in 1941 didn't run according to plan. As a result, when Soviet commanders were captured, the Germans found quite interesting maps and curious orders in their bags. Thousands of soldiers had Russian-German and Russian-Romanian phrase books. Many simply did not think of the necessity to get rid of this compromising evidence.

The commander of the 5th Battery of the 14th Howitzer Regiment of the 14th Tank Division of the 7th Mechanized Corps, Yakov Iosifovich Dzhugashvili, son of Stalin, was no exception. He was taken prisoner, but at first he was not recognized. The senior lieutenant was betrayed by his subordinates. Stalin's son was searched and questioned. A letter was found in his pockets, from a certain junior lieutenant in the reserves named Victor: "I am at the training camps, I would like to be home by fall, but the planned walk to Berlin might hinder this." The letter is dated June 11, 1941. The contents of this letter were reported to Hitler personally; he mentioned it on May 18, 1942.¹⁵ In June 1941, German intelligence officers showed the letter to Yakov Dzhugashvili and asked him to clarify the statement about the "planned walk to Berlin." The questioning protocol recorded Stalin's son's reaction. He read the letter and quietly muttered: "Damn it!"

During questioning, Stalin's son was asked why the Soviet artillery, which had the best cannon and howitzers in the world, and in incredible numbers, fired so poorly. Stalin's son answered: "The maps let the Red Army down, because the war, contrary to expectations, unfolded to the east of the state border."¹⁶ Stalin's son told the truth. In 1941, the Red Army fought without maps. There simply weren't any. But the artillery couldn't fire without maps. Direct aiming and firing was just a small fraction of the work done by artillery in war. Most of the time artillery fired beyond the horizon. "It turned out that in Soviet Russia a map-making industry was created that surpassed everything that had ever been done before in its size, organization, volume, and quality of work," concluded the Germans about the Soviet topographic services.¹⁷ How do we reconcile the best map-making industry in the world with the complete absence of maps? Lieutenant General A. I. Lossev explained: "Storages of topographic maps, located unreasonably close to the border, were either seized by the enemy, or destroyed by the enemy during the first bomb raids. As a result, the troops lost 100 million maps."

This is a modern-day evaluation, and the numbers are lowered. Lieutenant General M. K. Kudryavtsev, who under Stalin was director of the topographic services of the Red Army, said that during the first days of the war, and only in the Baltic, Western, and Kiev military districts, the Soviet troops destroyed during retreat over two hundred railcars of their own topographic maps.¹⁹ The smallest cargo railcar in the Soviet Union in 1941 could carry twenty tons. Even if we supposed that the smallest cars were used to store the maps, four thousand tons of maps were destroyed in the three districts. Kudryavtsev said that, on average, every railcar contained 1,033,000 maps. Two hundred cars equaled

200 million maps. Which of the two generals is right? they both are. One talked about what the German troops destroyed, 100 million, and the other added that the Soviets themselves destroyed 200 million maps, so they would not go to the enemy.

If the Soviet army planned to defend Moscow, Kursk, and Stalingrad, it needed maps of those regions. There was no reason to transport these maps to the state border. At the border, the army needed maps of border regions. And, if there was a plan to advance, the army needed maps of the territories that lay ahead. If the Soviet Union planned to take over large territories, it needed the corresponding number of maps to supply a multimillion-strong army. the Red Army did not save its maps in the border regions, because they were useless for defending the country. In 1941, the plans for the "liberation" of Europe crumbled, and the value of the maps that were kept in railcars on the border became zero. Millions of Russian- German and Russian-Romanian phrase books were burned along with the maps. The Soviet population was expecting a war, but it didn't anticipate a German invasion. Therefore, once the Germans attacked, everyone was shocked. Major General of the KGB O. D. Gotsiridze remembered: "Before July 3, when Stalin made a public appearance, it was completely unclear as to what we were to do. Everyone had thought that the war would be quick and on foreign soil."

"The complete demoralization among our troops occurred because . . . the people had planned to fight on the enemy's territory, and our military commanders were dreaming of a blitzkrieg no less than the Germans were. But everything turned out not quite so happily. . . . the sudden need for defense turned into a total retreat on all fronts for the troops and the people."

Stalin's Panic

After Stalin's death, Nikita Khrushchev recounted that in 1941, having found out about the German invasion, Stalin panicked, retreated to his dacha-fortress outside Moscow, completely kept out of all affairs, did not receive anybody, did not ask about developments on the front, and did not answer telephone calls. Stalin was totally apathetic. He isolated himself from all state and party obligations. Stalin was extremely depressed for over a week, and only on July 1 did the members of the Politburo manage to force him to return to the reins of power. is story was accepted and repeated in thousands of books and essays. It served as the main proof of Stalin's lack of readiness for war.

After 1991, the Soviet archives became more accessible, and researchers saw logbooks documenting visitors to Stalin's office from 1927 to 1953. It turned out that Stalin worked extremely hard in the first days of the war. the entry from June 21, 1941, read: "The last [visitors] left at 11 PM." is did not at all mean that Stalin's workday ended. After the last visitors left, he could have worked on the documents himself, talked on the telephone, worked outside of the office, in his Kremlin apartment or at his dacha. Stalin began receiving visitors on June 22, 1941, at 5:45 AM. He worked for eleven hours without breaks. His visitors included Molotov, Beria, Timoshenko, Mekhlis, Zhukov, Malenkov,

Mikoyan, Kaganovich, Voroshilov, Vyshinskyi, Kuznetsov, Dimitrov, Manuilsky, Shaposhnikov, Vatutin, Kulik, and others. The following week was one continuous workday for Stalin, with only brief breaks. Reception of visitors began at 3:20 AM (June 23), or at 1 AM (June 25), and ended the following morning. The meetings lasted five, six, twelve hours. Sometimes Stalin's workday lasted twenty-four hours, with short breaks. After this initial week of the war, the logbooks have nothing recorded for two consecutive days, June 29 and 30.

Khrushchev claimed that when the Germans attacked, Stalin got scared and isolated himself. Today, we know that right after the German invasion Stalin worked seven days in a row, as much as humanly possible. During the first moments, Stalin simply did not believe that Hitler had invaded. Stalin had calculated all possible moves, and none of them included an attack by Hitler. During the first week of the war, Stalin herded his troops into an attack. He should have been giving orders for defense, but he resisted. Finally, on June 28, he found out that the Western Front was surrounded, the 4th Army was destroyed, and the 3rd, 10th, and 13th armies were encircled. Only then did Stalin finally understand that his plans for the "liberation" of Europe were over. When he arrived at the People's Commissariat of Defense on June 29, Stalin learned the true dimensions of the utter failure of the Western Front. There, Stalin exploded in anger at Timoshenko and Zhukov, bringing the latter to tears. Anastas Mikoyan recollected: "Stalin was despondent. After leaving the Commissariat, he said: 'Lenin left us a grand legacy, and we, his followers, flushed that legacy down the toilet.' We were shocked by that statement. Was everything lost for good? In the end, we ascribed those words to Stalin's emotionally affected state."

Stalin realized that he could not fix anything. The socialist country was capable of crushing others, but it couldn't compete with other countries in peacetime. From June 22, 1941, the Soviet Union was destined for demise. Sooner or later, it was bound to collapse. It could survive only by consuming everything around it. Otherwise, it was doomed. The Soviet Union could exist only if the Soviet people would have no opportunities to compare their lives with the lives of people in surrounding countries. Therefore, Stalin's main idea was to destroy the capitalism surrounding the Soviet Union. All of Stalin's plans were simple, logical, and understandable: complete victory was only possible on a global scale. Hitler understood this as well: "The Bolshevized world will be able to hold only if it encompasses everything."² On June 22, 1941, Hitler delivered a suicidal but lethal attack on Communism. No matter how events unfolded afterward, Stalin could no longer conquer the whole world, which was the equivalent of his demise. On June 30, 1941, Molotov, Beria, Malenkov, and others entered Stalin's room in his dacha. Anastas Mikoyan, a member of Stalin's Politburo, left a wonderful description of this episode:

"We came to Stalin's dacha. Found him in the small dining room, sitting in his armchair. Upon seeing us, he seemed to shrink into the armchair, then look at us questioningly. He asked: 'What did you come for?' He had a wary, strange look on his face—and the question he asked was no less strange. As a matter of fact, he should have summoned us

all himself. I had no doubts: he had decided that we had arrived to arrest him. Molotov, speaking for us all, said that power had to be concentrated if the country were to get back on its feet, and that a State Committee of Defense had to be created. 'Who's in charge?' asked Stalin. When Molotov answered that he, Stalin, was in power, the latter looked at Molotov with surprise, but said nothing. 'Fine,' he eventually pronounced."

The members of the Politburo hadn't come to arrest Stalin. they needed Stalin as a symbol, a flag around which the remnants of a crushed division would rally in battle. ey talked of saving the country, but Stalin did not listen to them. Without taking Europe, without expanding the Soviet Union's borders, the USSR would sooner or later crumble. Stalin had lost the country founded by Lenin. In 1941, only Stalin could appreciate the full weight of the German invasion. In 1941, the members of the Politburo could not fully understand that Hitler's invasion meant death for the Soviet Union. the Politburo forced Stalin to resume power, and Stalin, with a careless wave of the hand, returned, fully aware that the cause he had worked for his whole life was dead.

If It Weren't for Winter!

During the war with the Soviet Union, Goebbels's "Reich Ministry for People's Enlightenment and Propaganda" quickly filled newspaper and magazine pages with thousands of photographs: German automobiles stuck in Russian mud, a horse being flogged because it couldn't pull a cart out of the terrible slush, blizzards covering tanks with a thick layer of snow, and gusts of wind ripping the summer hat off a poor German soldier's head. The core principle of propaganda is visual appeal. Goebbels showed the shocked Germans back home tons of chronicles: mud, mud, mud, impassable mud, endless fields, plains, snow, and hurricane-strength wind knocking the soldiers off their feet. (The photos were taken on an airfield, where a three-engine J-52's propellers helped the storm, adding wind—and drama—to the situation.) If it were not for winter . . . from German staffs and memoirs of generals were added to Goebbels's propaganda, and featured descriptions of the horrors of the Russian winter, the impassable mud, and the unimaginable lack of roads. It would seem that Marxist historians should have refuted these claims, so that nobody repeated the conclusions of Hitler's defenders. However, Marxist historians not only did not refute those claims, but they joined the chorus of Nazi voices. Marxist propagandists declared that the Russians were completely unprepared for war, and it wasn't them that defeated Hitler: all the credit should go to the endless Russian plains, the mud, and the fierce winter.

Why did the Communists need to repeat the Nazi lies? the answer was simple: they needed to prove that the Soviet Union could not have invaded Europe. they had to demonstrate weakness. Here is an example: "Artillery, motorcycles, trucks, and even tanks got stuck in the impenetrable mud; airplane wheels got stuck in the ground on air bases. the supply of ammunition, fuel, and produce to the front was drastically reduced. [An] early winter suddenly replaced an unusually rainy autumn. When the ground froze

in November, many cannon and vehicles were left right there on the spot, where they had gotten stuck in the mud several weeks earlier.”¹ The combined power of Nazi and Communist propaganda turned out to be so strong that the Hitler legend about the frost and winter, the lack of roads, and the vast open spaces was repeated by people who were wise and far removed from Goebbels’s propaganda. It is no surprise that to the question about the reasons for Hitler’s defeat, today’s German schoolchildren answer in unison: winter, frost, and open spaces.

When we are told of tanks getting stuck in the mud, we should remember their specific power and their specific pressure on the ground. the best German tank of 1941, the T-III A, had a specific pressure of 0.94 kilograms per square centimeter of support surface. Of course it sank in the mud! Its specific power was only 13.9 horsepower per ton of weight. the rest of the German models were even weaker. ese tanks were designed by people who simply did not understand the nature of war. ese tanks could not compete with the Soviet tanks, and yet we are told that the mud was to blame.

In February 1940, the Red Army broke through the impenetrable Mannerheim Line. At the same time, the German army was simply refusing to fight in France. German generals, by blaming the weather in France, sabotaged orders to invade issued by the High Command. “Here, luckily, nature intervened and forced the postponement of the set date, which between the fall of 1939 and the end of January 1940 changed fifteen times.”² the order to start the invasion was postponed many times even after January 1940. German generals were unprepared to fight in France even in April. In 1941, Hitler fought near Moscow. Here there was no Arctic frost like in Finland, no deep snow, no swamps. the topography around Moscow was an invader’s dream: there were no rocky rivers and no steep shores. Soviet defenses near Moscow did not compare to the Mannerheim Line. But Hitler got stuck. We are told: the Red Army could not fight, and that is why breaking through the Mannerheim Line took so much time. Nobody remembers the frost, snow, and impassable terrain in Finland. But the German army got stuck at Moscow’s gate only because the winter had prevented it.

Marshal K. K. Rokossovskii remembered: “Upon a realistic evaluation of the situation and a consideration of the coming winter, the enemy was only left with one choice—immediate retreat covering great distance.”⁷ Why didn’t the Germans retreat? On September 13, 1941, Halder wrote: “At the current moment, we cannot forecast the number of troops that can be freed from the Eastern Front upon arrival of winter, and the number of troops that will be needed for conducting operations in the following year.”⁸ is entry shows that the blitzkrieg was already over before the snow, before the mud. the war had already turned into a war of attrition—a prolonged war lethal for Germany. On May 29, 1942, Hitler watched the famous Soviet film German Defeat near Moscow. In Henry Piker’s Hitler’s Table Conversations, Hitler’s comments are recorded in the entry for that day: “is winter we experienced especially harsh trials, because our soldiers’ clothing [and] the level of their motorization and supply did not in any way correspond to the conditions of that winter, when the temperature dropped below 50 [degrees] Celsius.”⁹ “en the first

German prisoners come, who form hordes without coats, gloves, without winter clothing. They dance from the cold, their hands thrust deep into their pockets, which they take out from time to time to rub their ears and noses! . . . Finally, the frozen German tanks, trucks, and cannon stretch in an endless file; all are abandoned, because the General Staff of land forces did not prepare in time sufficient amounts of frost-resistant fuel and winter clothing.”

A Model War

A Soviet historian’s account of Japanese-German relations in World War II went as follows: “The German leaders had especially strong expectations from their Japanese allies. They really wanted Japan to be the first to start military action against the USSR. . . . But the Japanese leaders evaded talks with Germany. Only in March 1941 did the Japanese minister of foreign affairs, Yosuke Matsuoka, arrive in Berlin. . . . Matsuoka refused to determine the deadline for Japanese action against the USSR, which led to a strong clash between him and Hitler.”¹ The shortest route between Berlin and Tokyo lay straight through Moscow, and on his return trip from Berlin, the Japanese minister of foreign affairs, Matsuoka, stopped briefly in Moscow. Here, on April 13, 1941, he signed a pact of neutrality between the Soviet Union and Japan. Both countries pledged to “maintain peaceful and friendly relations and mutually respect each other’s territorial integrity and independence. . . . In the event that one of the sides becomes the victim of military actions from one or several other nations, the other side of the pact will observe neutrality for the duration of the entire conflict.”

The neutrality pact between the USSR and Japan was a remarkable achievement for Stalin’s diplomats and a crushing blow to Hitler’s plans. Japan was Germany’s ally, but it refused to fight against the Soviet Union. Moreover, Japan signed a pact with the Soviet Union instead. “When Matsuoka informed Ribbentrop about the high probability of a Soviet-Japanese pact, the head of German diplomacy stated that one would be wise not to involve oneself too intimately with the Soviet Union, but watch the events in the region.”³ The Japanese government, however, had its own opinion on the matter. On April 14, the day after the signing of the Soviet-Japanese pact, Goebbels wrote in his diary that the agreement caused a great sensation. For Germany, this was quite an unpleasant sensation.⁴ “The signing of the Soviet-Japanese neutrality agreement was a great surprise for Germany. Ribbentrop ordered the German ambassador in Tokyo to demand an explanation from the Japanese government.”⁵ An explanation was provided. Matsuoka told the German ambassador in Tokyo that “if Germany and the Soviet Union were to start fighting, not a single Japanese premier or minister of foreign affairs could keep the nation neutral. Japan will ally with Germany in attacking Russia, whatever the situation. Pacts of neutrality do not matter in this affair.”⁶ But this intent never materialized. Japan didn’t attack the Soviet Union.

On April 13, 1941, right after the signing of the agreement between Japan and the USSR,

Matsuoka headed for the train station in Moscow, on his way to Tokyo. According to protocol, many officials accompanied him. Suddenly, the rules of protocol were broken. At the last minute before the train left, Stalin appeared on the platform. He usually never met anyone or saw anyone off. On that day, Stalin was in a remarkably good mood. Obviously, the train departure was delayed. Stalin laughed and joked. He walked with the Japanese minister right to the steps of the railcar, and here he did something entirely uncharacteristic for him—he embraced the Japanese minister and proclaimed that the Soviet Union and Japan would remain friends forever. Among those seeing off the Japanese minister was the German military attaché—Stalin noticed and also embraced him, declaring that Germany and the Soviet Union would also remain friends. Stalin's behavior was very uncommon. He was usually very discreet. He never embraced anyone in the presence of outsiders. Many historians explained this unusual behavior as Stalin's commitment to peace, as proof that he attempted to avoid war with Japan and Germany at any cost.

Exactly ten weeks later, on June 22, 1941, Germany invaded the Soviet Union. Soon, Stalin found himself on the brink of defeat. At this critical moment, the Japanese government kept its word to the Soviets and remained neutral. In that same year, 1941, Japan attacked the U.S. Navy at Pearl Harbor, triggering the war between the United States and Japan. It was advantageous for Stalin, and despite the signed pact, he started secret preparations to attack Japan. "They did not know Stalin well in Tokyo," wrote one observer. "If the Japanese had at least superficially acquainted themselves with the lifestyle and career path of the great follower of Lenin's legacy, they would have noticed that his methods always remained the same: make an alliance with somebody against somebody else, and follow it with a stab in the back to the ally once he becomes useless."

Stalin kept his intentions secret until the right time, but in the beginning of 1943 he told the American president about his decision to attack Japan. Stalin had planned his sudden attack on Japan not for 1943, when America was engaged in a difficult war and needed help, but at the very last moments of the war, when Japan would be already on the verge of defeat. Stalin could have helped the United States much earlier. He had the capacity to drastically quicken Japan's defeat. The United States had a very powerful strategic air force, but they had to fly to Japan across the largest ocean in the world, and then fly back without refueling. Raids on Japan could also be carried out from islands in the Pacific Ocean, but these islands had to be taken first, and therefore it was first necessary to achieve naval domination. And even after taking the islands, the Americans still had to fly several thousand kilometers to their targets and back. Each plane had to carry a large amount of fuel and an insignificant number of bombs. The Soviet Union, on the other hand, was right next to Japan.

"Cordell Hull, the American Secretary of State, tried to obtain from Moscow permission for the American air force to use Soviet military airbases in the Far East." Stalin firmly refused. President Roosevelt sent messages to Stalin on December 30, 1942, and January 8, 1943, urging the Russian leader to allow American air force units to be stationed on

bases in the Soviet Far East. Stalin answered the messages with an uncompromising "no." If Stalin had given the Americans the opportunity to use Soviet air bases, instead of making long flights to Japan from the faraway islands, every plane could have completed several short flights with a large load of bombs. In that case, the American raids on Japanese targets would have been considerably more effective. But it was in Stalin's interest that the war between Japan and the United States be stretched as long as possible. By the way, Stalin allowed America to use several Soviet air bases in the Poltava region for bombing Germany. American B-17 strategic bombers took off from the airfields at Poltava and flew to bomb Germany. Their takeoffs were covered by Soviet fighters, which accompanied them to the length of their radius of action. At the same time, other waves of American bombers flew out of Britain. Having dropped bombs on German cities and factories, these bombers landed on the airfields at Poltava. They were met by Soviet fighters, which covered them during landing. But Stalin did not give permission to use the air bases in Nakhodka and Petropavlovsk for bombing Japan. Stalin waited for a complete depletion of Japanese forces in a prolonged war, and prepared his own attack. As Japan weakened, Stalin strengthened the preparation for a war against it. Stalin called Japan an aggressor for the first time on November 6, 1944. On April 5, 1945, the USSR leadership cancelled the Soviet-Japanese neutrality pact.

In the summer of 1944, Stalin told Marshal A. M. Vasilevsky that he would be the chief commander of Soviet troops in a war against Japan. The initial figures of the concentration of our troops in the Amur, Pacific Coast, and Trans-Baikal regions were sketched out in the fall of 1944. At the same time, rough calculations of the resources needed for a war in the Far East were made. Vasilevsky was one of the most talented commanders in the history of the Soviet Union. His talent became apparent during the war. In 1940, he was given the rank of major general. "[As] deputy chief of the Operations branch of the General Staff, he worked on the operational section of planning the strategic deployment of Soviet armed forces on the Northern, Northwestern, and Western Fronts."

A month after the beginning of the German invasion, Stalin appointed Vasilevsky as chief of the General Staff's Operations Directorate. Vasilevsky was responsible now not just for a separate (although the most important) sector of the front, but for all the plans of the war on all fronts. Two months later, Stalin promoted Vasilevsky to lieutenant general. Half a year later, Vasilevsky became colonel general. One month later, Vasilevsky received yet another promotion: Stalin named him chief of the General Staff, the central brain of the Red Army, and entrusted to him the preparations for offensive operations in the Stalingrad region. In October 1942, Colonel General Vasilevsky became Stalin's deputy. According to Vasilevsky's plans, all command and communications posts in the Stalingrad region were moved to the very front lines. He also moved there all air bases, hospitals, huge supplies of shells, cartridges, fuel, and lubricants. Until the very last moment, Soviet troops did not know anything about what they were going to do. By keeping his offensive preparations secret from his own troops, Vasilevsky managed to keep them secret from the enemy as well. And then, a sudden, crushing attack followed. All the so-called

“mistakes of 1941,” Vasilevsky repeated at Stalingrad, because they were not mistakes at all, but a preparation for sudden attack. Vasilevsky received the rank of General of the Army for the defeat of the surrounded German formations near Stalingrad. He only carried this title for twenty-nine days; after the Stalingrad operation, Stalin made him a Marshal of the Soviet Union. In the summer of 1944, during the peak of the war with Germany, Stalin not only gave Marshal Vasilevsky the task of planning a sudden attack on Japan, but appointed him to head all Soviet troops in a war against Japan. But Stalin had no intention of landing his troops on the Japanese islands. He had more attractive targets. Korea, Manchuria, the greater part of China, and French Indochina (Vietnam) were all occupied by Japan. Stalin planned to “liberate” them and take them under his control.

Starting in the summer of 1944, Soviet military might in the Far East began to grow, but it could not be observed from outside. There was rearmament and strengthening of divisions, corps, and armies, as well as a storing of the supplies necessary for a sudden and crushing attack. Roads, air bases, bridges, and command and communications posts were being built near the borders with great intensity. Soviet commanders, on orders from Moscow, moved ammunition and fuel storages and hospitals to the borders. A movement of regiments, brigades, and divisions from the German front to the Far East began in the early spring of 1945. “The most important aspect of the preparations for the operation was the fact that they all had to be done before an official declaration of war on Japan.”

In May 1945, the troop transfer took on truly gigantic dimensions. “The mass regrouping of troops began with a transport by railroad from Eastern Prussia of the 5th Army, which had gained rich experience in breaking through fortified regions and operating in forested territories.” The strategic regrouping of Soviet troops was carried out at a distance of nine thousand to twelve thousand kilometers. A regrouping of troops on such a scale was being performed for only the second time in human history. The first time was in May and June 1941, from the east toward the German borders. In 1945, it was done in the opposite direction. After the strategic regrouping of the troops was complete, the three Soviet fronts contained eleven field armies, three air defense armies, three air force armies, one tank army, and four separate air force corps.²⁴ In addition, the Pacific fleet, the Amur flotilla, NKVD troops, and the armed forces of Mongolia were all under the command of the Soviet commander-in-chief in the Far East. The formation of Soviet troops included 1,747,465 men, 29,835 guns and mortars, 5,250 tanks, and 5,171 airplanes.²⁵ The Pacific fleet had 417 warships, including 78 submarines, and 1,618 airplanes, including 1,312 combat aircraft. The Amur navy flotilla had 126 warships and 68 combat aircraft.

A stream of cargo flowed in from the United States at the same time Soviet forces were being transferred out of Central and Eastern Europe. Stalin was the most cunning diplomat of the twentieth century. He demanded that the president of the United States supply food and fuel for all Soviet troop formations. “An agreement was reached with the

United States about the concentration of three months' supplies and fuels for our troops in this theater of military operations." The United States also supplied airplanes, armored cars, automobiles, radios, telephone cables, medicines, optical devices, and much more.

The Trans-Baikal Front was deployed in a territory stretching 2,300 kilometers, and it was supposed to carry out a surprise attack eight hundred kilometers deep into enemy territory. There were 648,000 troops, 2,359 tanks and self-propelled guns, 1,324 warplanes, 9,668 guns and mortars, and 369 salvo-fire field installations ("Katyusha"). Four men, without secretaries, draftsmen, or other personnel, did all the planning of military operations for this mass of troops. The 1st Far Eastern Front had 589,000 troops, 11,430 guns and mortars, 274 salvo-fire field installations, 1,974 tanks and self-propelled guns, and 1,137 combat planes. All the planning on this front was also done by just four men. The Trans-Baikal and the 1st Far Eastern Fronts were to attack in converging directions. Between these two attack formations there was the relatively weaker 2nd Far Eastern Front, which had 333,000 troops, 5,988 guns and mortars, 72 salvo-fire field installations, 917 tanks and self-propelled guns, and 1,260 combat planes. A classic encirclement operation was being prepared, with a relatively weak middle and two extremely powerful flank formations. The newness lay in the size of the operation. All three fronts were meant to advance simultaneously along the front line of 5,130 kilometers. Such an operation was unprecedented. (Let's hope that it will never again be repeated.)

The core principle of strategy is the concentration of force against weakness. The most powerful Soviet formation, the Trans-Baikal Front, was deployed against the weakest area of the Japanese defenses. But even here the forces were not spread out evenly along the entire border. Instead, extremely powerful assault groups gathered. Between these groups remained significant gaps, which were not covered by any troops. For example, on the Trans-Baikal Front, there was a gap of two hundred kilometers between the 17th Army and the 6th Tank Guards Army. Long before World War II, there was a chain of fortified regions erected along the border in the Far East. These regions housed a significant number of troops that were specially trained for conducting long defense operations. But in the summer of 1945, Japan found itself on the verge of defeat. Therefore, the Soviet troops stationed in the fortified regions were issued orders to leave their armored concrete fortifications and reinforce the assault formations.

On August 6, 1945, the American air force dropped an atomic bomb over Hiroshima, and on August 9, over Nagasaki. Japan was on its deathbed. And at this moment, on August 9, 1945, the Red Army carried out its sudden and crushing attack against Japanese troops in Manchuria and China. The operations of all the armies were planned according to the principle of surprise attack and overpowering the enemy with the immediate use of gigantic force. Even in secondary locations, the actions immediately took on an active and maneuvering character. On August 8, the Soviet government declared: "This kind of action is the only measure capable of speeding up the coming of peace, to save people from further suffering and misery, and give the Japanese people the opportunity to rid themselves of danger and destruction."

In the evening of August 8, 1945, the Japanese ambassador in Moscow was notified of a Soviet statement, which read: "Starting the next day, August 9, the Soviet Union will consider itself in a state of war with Japan."⁴¹ On August 9, the Soviet armies carried out their surprise attack. One could ask: How was it possible to declare the war on August 8 and to deliver a sudden strike on August 9? The answer is that in Vladivostok the day begins seven hours earlier than in Moscow. Military actions began on August 9 at 12:10 AM Vladivostok time.⁴² At that moment in Moscow, it was still 5:10 PM on August 8. No one had yet warned the Japanese ambassador. Then, when night fell in Moscow, the Japanese ambassador was summoned to the People's Commissariat of Foreign Affairs and at 11:50 PM Moscow time, it was announced that a war would begin on the following day. In Moscow, there were still 10 minutes left until the next day, but in the Far East the new day had long since begun. At the time of the announcement, it was already 6:50 AM. War had been going on for over six hours. The most important events had already happened: a sudden Soviet air raid destroyed the Japanese air bases, the border defenses were liquidated, and powerful tank formations entered Manchuria and China, continuing an unstoppable thrust forward.

The Japanese ambassador in Moscow was told about the beginning of the war, but he still had to reach the embassy and communicate with his government. All the telephone and telegraph lines were not working. Even in normal circumstances, radio connection with Japan, which was almost halfway around the world, was difficult. But here the circumstances were not normal: someone had tampered with the radio stations. In other words, the Japanese government found out that war was declared after a huge delay and through entirely different channels. In military language, this could be called "preparation and carrying out of a sudden initial attack with the opening of a new strategic front."⁴³ In the language of politics, this was called a "just and humane action by the USSR."

After the first crushing attack, Marshal R. Y. Malinovsky told his troops on August 10, 1945: "The Soviet people cannot live and work in peace while the Japanese imperialists brandish arms at our far-eastern borders and await a convenient moment to attack our motherland."⁴⁵ Malinovsky spoke four days after an atomic bomb had been dropped on Hiroshima and one day after an atomic bomb had been dropped on Nagasaki. Those two Japanese cities lay in ruins unseen in human history, and Malinovsky was fully aware of the fact. Did the "Japanese imperialists," after Hiroshima and Nagasaki, really have nothing else to do but "await a convenient moment"?

In March 1939, Stalin had accused Great Britain and France of wanting to draw Europe into war while they remained on the sidelines: "In the politics of non-intervention, there is a desire not to hinder the aggressors while they do their dirty deeds, not to interfere, for example, with Japan involving itself in a war against China . . . the goal is to let all the participants of the conflict become engulfed by the quicksand of war, and let them weaken and exhaust each other. Then, when they are sufficiently weakened, one can enter the scene with fresh forces, act, of course, 'in the interests of peace,' and dictate to the weakened war participants all the terms of peace."⁴⁶ Stalin always ascribed his own

intentions to his enemies. Stalin did everything that he accused Great Britain and France of doing. Now, Japan was exhausted by the war, and it was time to intervene “in the interests of peace”: “The Soviet government, striving for the quickest possible restoration of peace, issued a declaration of war.”

The offensive operation by Soviet armies in August 1945 was truly a lightning war. “The forward battalions, accompanied by border guards, silently crossed the border without opening fire, and before the Japanese defenders had time to occupy them, took control of long-term enemy defense structures in a series of locations.”⁴⁸ In just the first day, the 6th Tank Guards Army completed a thrust of 150 kilometers. The advance took place in extremely difficult conditions. Manchurian summers were extremely rainy, especially in August.

Officially, the Soviet military campaign in the Far East lasted twenty-four days, but battles only took place for twelve days. Not even two weeks had passed before a massive surrender of the Japanese troops began. Japanese losses numbered 84,000 killed and 594,000 taken prisoner. Among the prisoners were 148 Japanese generals. Unbelievable trophies were captured. The results of the operation were enviable. The United States had fought against Japan for almost four years, and what did it receive? The Soviet Union fought against Japan for twelve days, and all of China, North Korea, and North Vietnam fell under the Soviet Union’s control. Vasilevsky happily reported:

By delivering a crushing blow to the Japanese troops in Korea, the Soviet Army created favorable conditions for the activities of revolutionaries. . . . In the northern section of the country, workers led by Communists began to build the first truly independent, democratic nation in Korean history. . . . As a result of Japan’s defeat, favorable conditions were created in China, North Korea, and North Vietnam for the victory of people’s revolutions. . . . The Chinese People’s Army of Liberation received huge reserves of trophy arms, military equipment, and supplies. . . . The defeat of Japanese militarism opened the way for national liberation movements throughout Asia. On September 2, when the Japanese foreign affairs minister Sigemitsu and Chief of Staff Umedzu signed the pact of total capitulation, President Ho Chi Minh declared the birth of the Democratic Republic of Vietnam. On October 12, the Laos patriots pronounced the birth of Phatet-Lao.

For many years, Soviet officers have been taught the lightning war of 1945 as an example. It was how one must fight: in two weeks, hundreds of millions of people were under Soviet control. One should be amazed by the assault of the 6th Tank Guards Army, the thrust of the Amur flotilla up the Sungari River, the bold actions of the paratroops. The most amazing was the coordination among the troops. Tankers, pilots, artillerists, sailors, communications men, paratroops, railroad workers, sappers, and the High Command staff in the Far East, the administrations and staffs of the three fronts and one fleet, eighteen armies and one flotilla, tens of corps, divisions, and brigades, hundreds of regiments and thousands of battalions, performed like one symphony orchestra under the direction of the great maestro Vasilevsky.

I reread many times Marshal Vasilevsky's biography, his book, and his articles, before I stumbled across a sentence that made me pause for breath: "Since May 1940, the deputy head of the Operations Directorate of the General Staff worked on the operational part of a plan of strategic deployment of Soviet armed forces in the northern, northwestern, and western directions." In other words, between May 1940 and June 1941—that is, for more than a year—Major General Vasilevsky worked on preparing a plan for war against Germany. He personally prepared war plans for the Northern, Northwestern, and Western Fronts—in other words, for the Soviet troops in the Karelian, Baltic, and Byelorussian regions. These regions were precisely where the Soviet troops were hit the hardest in the summer of 1941. The troops of the Northern Front let the Finnish troops from the north through to Leningrad, and the worst blockade in human history ensued. The formations of the Northwestern Front fell apart, letting German troops through to Leningrad from the south. The troops of the Western Front in Byelorussia were almost instantly surrounded and crushed, leaving the way to Moscow wide open.

I have been taught to search for rules in the actions of enemy troop leaders, to note all moments that repeat themselves. If a general has a propensity to use the same maneuver several times, his conduct in the future can be predicted and his plans can be resisted. I used this method to analyze the battle habits of Soviet generals. I discovered that they had constantly repeated the same preparations: before carrying out the surprise attack against the Japanese 6th Army at Khalkhin-Gol in 1939; before invading Finland in 1939; before the operation to take Bessarabia in 1940; before sending Soviet troops into Iran in August 1941. They did it in all the aggressive operations of World War II, and, finally, before the sudden defeat of Japanese troops in August 1945. In the summer of 1941, they followed the same program.

Understandably, Japanese intelligence was unable to determine the true scope of the Soviet troop transfer, the date of the beginning of the invasion, or the locations chosen for the primary attacks. But still, it saw something, and in the Japanese staffs it was understood that such a troop transfer meant that sooner or later the Red Army would attack. The Japanese had only one way out: to carry out a preemptive strike against the Soviet troops. If the Japanese army had carried out an attack, the disaster of June 1941 would have been repeated in the Far East at the end of July or the beginning of August 1945. Thousands of Soviet tanks without crews, as well as thousands of airplanes without pilots in the fields, were left right on the borders. The border forests were full of piles of shells, the railroad stations with trains of fuel and ammunition. If the Japanese had attacked, they would have seized all these resources, while the Red Army would have been left without ammunition or fuel. Thousands of soldiers from the railroad troops were ready to change the Japanese tracks to the Soviet standards, but they were not prepared to blow up their own bridges and tunnels. If they had attacked, the Japanese armies could have used Soviet bridges and tunnels. Soviet artillery had advanced right up to the border, but was not protected by infantry. For the purpose of surprise, the tanks and infantry would advance to the border only at the very last moment. If they had attacked,

the Japanese could have taken thousands of Soviet cannon and howitzers, millions of shells which were already piled on the ground, and the Red Army would have been left without artillery, just like in 1941. The Red Army's command posts and communication lines were also located right at the borders. In the event of a surprise Japanese attack, the Red Army would have been left without command or communication—in other words, without a head or a nervous system.

Arriving Soviet troops were formed into tight assault formations, which made great targets for the Japanese air force. The bare areas between the attack formations were two hundred kilometers or more. The Japanese would not even have to breach Soviet defenses in these locations, because there were none there. Most importantly, the Soviet troops had no plans for defense in the Far East in the summer of 1945. Invasion plans were relayed to the troops at the very last moment. If the Japanese troops had carried out a surprise attack before August 9, 1945, Soviet troops would have suffered almost the same losses as Soviet troops in the summer of 1941 on the German border. And we would now be laughing at the stupidity of Soviet marshals, who ordered soldiers to harvest the hay in the fortified regions and sent officers to rest homes and sanatoriums. But the Japanese did not attack, since they never planned to attack the USSR, at least not in 1945.

The Aggressor

The Soviet Union entered World War II as an aggressor. Poland, Finland, Estonia, Lithuania, Latvia, Romania—all the western neighbors of the Soviet Union—fell victim to the Red Army. During talks in Berlin, Stalin's envoy Molotov demanded strongholds in Yugoslavia, in the Adriatic Sea, in Greece, in the Bosphorus and Dardanelles, in the Persian Gulf; he demanded that countries south of the Baku-Batumi line, in the direction of the Persian Gulf, be given over to Soviet control, including eastern Turkey, northern Iran, and Iraq. He also declared the Soviet Union's interest in southern Bukovina. Molotov constantly asked Hitler and Ribbentrop whether Germany had reconsidered its position on the fate of Finland, seeing that the Soviet Union was not going to let that country be independent. Finally, Stalin's major demand at the Berlin talks in November 1940 was for Germany to acquiesce to a Soviet military presence in Bulgaria. Molotov added, in a conversation with Hitler, that "the USSR was ready to support Bulgaria in its desire for an outlet to the Aegean Sea, and considered said desire to be just." Stalin never specified which countries his puppet Bulgaria would have to invade to reach this outlet—Greece, Turkey, or both. In reality, the Germans took Greece and gave the go-ahead for Bulgaria to annex a part of the Greek territory—western race and eastern Macedonia, thus reaching the Aegean Sea. But it was Stalin who wanted to give this go-ahead.

The Soviet Union finished World War II as an aggressor as well. It was the only country that expanded its borders as a result of World War II. Stalin annexed Estonia, Latvia, Lithuania, northern Bukovina, western Ukraine, and western Byelorussia, as well as parts of eastern Prussia with Koenigsberg, Trans-Carpathian Ukraine, the Kuril Islands, South

Sakhalin, and Bessarabia.³ Under the banner of the “great patriotic war,” Stalin punished entire peoples and nations. On Stalin’s orders, all the Chechens, Ingushes, Crimean Tatars, Volga Germans, and other peoples were transported to empty frozen fields or waterless, lifeless steppes, and abandoned there to die. It is interesting to note that the Kalmyks, who already lived on the steppes, were not relocated further into their depths but into the Siberian taiga. Stalin controlled the fates of entire peoples, not only on the territory of the Soviet Union but also in nearby countries. Stalin relocated millions of Germans from Prussia, Silesia, and Sudet.

When the Nazi leaders went on trial in Nuremberg, Hitler’s concentration camps in Buchenwald, Sachsenhausen, Mulberg, Furstenwalde, Liebe-Roze, Bautzen, and others were not shut down. These concentration camps were simply taken out of the SS system and incorporated into the system of the GULAG. For example, the Nazi concentration camp at Buchenwald was transformed into “Special camp #2,” which remained operational until 1950.

The Red Army came to Central Europe with the supposedly noble goal of liberating it from the Nazis, but it left only after establishing puppet governments in most of those countries. Poland, Czechoslovakia, East Germany, Hungary, Romania, Bulgaria, Yugoslavia, part of Austria, and Albania were forced under Stalin’s control, as well as China, North Korea, and Vietnam in Asia. On July 22, 1945, the Soviet delegation suggested that the Soviet Union, the United States, and Great Britain separately or jointly oversee the former Italian colonies in Africa and the Mediterranean. On July 23, Stalin demanded the right to create Soviet military naval bases in the Black Sea region, in the straits of Bosphorus and Dardanelles.⁵ He also wanted parts of Turkey—the Kars and Ardagan regions—to belong to the Soviet Union.⁶ Stalin tried to take control of West Berlin by strangling it through a blockade. Soviet agents appeared in France, Italy, and Greece. The NATO military alliance was formed with the clear goal of preventing Stalin’s troops from occupying Greece and Turkey. Stalin declared northern Iran to be a part of Azerbaijan, and right until the end of his life never gave up trying to take control of this province. Stalin set up the People’s Democratic Republic of Southern Azerbaijan, and the Kurdish People’s Democratic Republic, respectively in northern and western Iran.

In 1945, tens of millions of square kilometers of territory, occupied by millions of people, lay at Stalin’s feet. But Stalin at that time did not have the resources to control all his conquests. On June 22, 1941, Hitler dealt a lethal blow to the Soviet Union. The best part of the male population of the Soviet Union perished in the war against Germany. After the war, the USSR was supposed to have conducted a population census and calculated its war losses. But Stalin did not conduct a census. It was only conducted fourteen years after the war, when Stalin was dead. “The decision not to count all the citizens until 1959 was founded on a desire not to draw attention to the huge unjustified human losses during the war period.”

During the last year of the war, the Red Army had to recruit underage boys, without saying how many years they would have to serve. They were kept in the army for seven

to eight years. Otherwise, there would have been nobody left to serve in the gigantic army, which controlled almost half the globe. These seven to eight years lasted until Stalin's death. If he had lived longer, these soldiers would have been kept in the army for fifteen years, or even more. World War II opened unlimited opportunities for Stalin to spread Communism throughout the world, but there was nobody left in the Soviet Union to reap the crops in the fields. Famine broke out in the country in 1946 and 1947. One soldier was quoted as saying: "In this awful regiment, we were awfully hungry. Our rations were very small, plus they somehow managed to rob us." The army, which the government was supposed to feed, starved. The people, whom the government was under no obligation to feed, starved as well. The famine of 1946 and 1947 claimed the lives of about a million people. Stalin had sentenced Europe to death, but he could not carry out the execution. Hitler, according to Stalin's plans, was supposed to crush Europe, and then Stalin, with a surprise attack, would "liberate" it from Hitler. In the name of that goal, German tankers and pilots were trained in the Soviet Union, and Stalin brought Hitler to power. But Hitler ruined Stalin's plan.

Some people did not even notice that the Soviet Union lost World War II. Where was Stalin's great victorious country? The Soviet Union was created for war and conquest. It was not adapted for peacetime. It could either spread over the entire planet and kill off all normal life, or die. Stalin did not succeed in taking over the world, and this meant another war or the end of the Soviet Union in the near future. The Soviet Union was preparing itself for a new war, World War III. It concentrated all its strength and resources in preparing for a new war, and it was crushed in 1991 by the burden of its military expenditures.

12.10 Roosevelt Seeks a Pretext for War

Hitler Launches a Blitzkrieg along the Western Front

Before the Nazi armed forces had scored an important success in the Norway campaign, President Roosevelt began a series of endeavors to keep Italy out of the war. On April 29 he sent a telegram to Mussolini in which he expressed his deepest satisfaction with reference to "the policy of the Italian Government in exerting every effort to prevent war from spreading to southern and southeastern Europe." A further extension of the area of hostilities would bring into the war "still other nations which have been seeking to maintain their neutrality." He could see "no reason to anticipate that any one nation or any one combination of nations" could successfully "dominate either the continent of Europe . . . or a greater part of the world." He earnestly hoped that the powerful influence of Italy would continue to be exercised "in behalf of the negotiation of a just and stable peace." When Ambassador Phillips conveyed this message to Mussolini he was informed that "Italy, Germany and Russia did not desire an extension of the war." The Duce then expressed the opinion that "Germany could not be beaten" and that an

Allied naval blockade would be “completely ineffective.” The President should realize that the political system created by the Treaty of Versailles had been liquidated. In the new system Germany “would willingly permit a new independent Polish State” to be erected but it would not have the “old boundaries which were completely without justification.” Germany was “also willing that a new Czechoslovakian state be reestablished.” Last, but not least, certain important concessions should be given to Italy. Throughout this conversation Mussolini appeared to go “out of his way to be friendly.” He requested Ambassador Phillips to “thank President Roosevelt cordially” for his message and he seemed to be “extremely appreciative of it.”

In his diary, Count Ciano had a somewhat different story to tell. He noted that the Duce received the Roosevelt message with “ill grace” and that he said “little or nothing to the American Ambassador.” Mussolini then sent a brief note to the President in which he argued that responsibility for World War II did “not fall upon Germany but upon the initiatives of the Allies.” As far as he knew, Germany was “opposed to a further extension of the conflict, and Italy likewise.” With reference to the President’s belief that “an extension of the war fronts” might have a serious effect upon the Western Hemisphere, he called attention “to the fact that Italy has never concerned itself with the relations of the American republics with each other and with the United States (thereby respecting the Monroe Doctrine), and might therefore ask for ‘reciprocity’ with regard to European affairs.” Ciano regarded this note as “cutting and hostile.” It was certainly not conciliatory. The Duce was “literally exalted” by the news of Hitler’s victories in Norway. In a letter describing his successes the Führer complained that the “excessive rapidity” of the advance of his troops had not “permitted his involving the English forces more effectively” so as to “destroy them completely.” He intimated that he would have to “obtain a victory in the West as soon as possible” because of “hidden threats of American intervention.”

On this same day (May 4) the German General Staff issued a statement that awakened instant apprehensions in Belgium and the Netherlands. The charge was made that those countries had not maintained an impartial neutrality. It was also alleged that on January 12, 1940, some extended discussions had taken place in Breda “between Dutch, Belgian, French and British staff officers.” These discussions were supposed to have been for the purpose of aiding British and French forces to launch an “attack on the Ruhr.” Alleging the necessity of anticipating this Anglo-French invasion, the German Government began a blitzkrieg upon the Western Front. News of this attack came to President Roosevelt early on the morning of May 10 when Ambassador Cudahy telephoned the White House to report that a large German air force was already over Luxemburg en route to Belgium and the Netherlands. Later during the morning “President Roosevelt and Secretary Hull called from time to time asking for latest developments.” Cudahy replied that the news was “entirely reassuring.” But King Leopold, of Belgium, was not so confident about the situation. Fearful of the outcome of the German invasion he sent a hurried telegram to President Roosevelt expressing the ardent hope that he would support with all his “moral

authority the efforts which we are now firmly decided to make in order to preserve our independence." The President could only reply that he and the American people cherished the strong desire that "policies which seek to dominate peaceful and independent peoples through force and military aggression may be arrested, and that the government and people of Belgium may preserve their integrity and freedom."

In Rome, Ambassador Phillips told Ciano that the German blitzkrieg was "bound to stir America profoundly." It had already stirred the Pope who had sent telegrams to the "rulers of the three invaded states." This act had incensed Mussolini who blurted out to Ciano that the Papacy was "a cancer which gnaws at our national life." If necessary he would "liquidate this problem once and for all." Later the Pope evidenced a "clear-cut intransigency" and remarked that he was "even ready to be deported to a concentration camp." Into this tense and ominous atmosphere in Rome the President once more intervened by sending another note to Mussolini. Rumors that the Duce was "contemplating early entry into the war" had given him "great concern." Most Americans believed that the whole world faced a "threat which opposes every teaching of Christ, every philosophy of all the great teachers of mankind over thousands of years." Therefore, as the President of the United States he made "the simple plea that you, responsible for Italy, withhold your hand, stay wholly apart from any war and refrain from any threat of attack."

Ciano noted that the new communication from the President was not in a "covertly threatening style." It was rather a "discouraged and conciliatory message." Allusions to the "Gospel of Christ" would have "little effect upon the mind of Mussolini," who was convinced that Germany would win the war. As an ally of Hitler, Italy could secure rich spoils of war.

Roosevelt Regards Neutrality as an Outmoded Concept

While the President was pleading with Mussolini to remain neutral in the great conflict that was wrecking Europe, he himself was pushing America down the road to war. On April 16 it was reported that the Anglo-French Purchasing Commission could obtain planes of almost any type then being produced for the armed forces of the United States. This news encouraged the French Premier, Paul Reynaud, to send to Washington (May 14) the startling request that the American Government arrange for the "sale or lease of old destroyers." On the following day Winston Churchill, who displaced Chamberlain as Prime Minister on May 10, sent a more ambitious request that was quite breath-taking:

"All I ask now is that you [President Roosevelt] should proclaim non-belligerency, which would mean that you would help us with everything short of actually engaging armed forces. Immediate needs are: First of all, the loan of forty or fifty of your older destroyers; . . . Secondly, we want several hundred of the latest types of aircraft; . . . Thirdly, anti-aircraft equipment and ammunition. . . . Fourthly, the fact that our ore supply is being compromised from Sweden, from North Africa and perhaps from Northern Spain, makes it necessary to purchase steel in the United States. . . . I should like to

feel reasonably sure that when we can pay no more, you will give us the stuff all the same. Fifthly, . . . the visit of a United States Squadron to Irish ports . . . would be invaluable."

The President replied that he could not make a deal concerning the destroyers "without authorization from Congress." Moreover, America "needed the destroyers" for its "own defences." Churchill greatly regretted this negative answer but he still hoped to get "at the earliest possible date" the "largest possible number of Curtiss P-40 fighters." In conclusion he sounded a loud note of alarm that he knew would profoundly affect the President. If Britain were "left by the United States to its fate," there was a definite danger that the British fleet might be turned over to the Germans as a bargaining point. We have already noted that in 1939, while Chamberlain was still Prime Minister, Churchill began his momentous personal correspondence with President Roosevelt. It has been stated that one of the first cablegrams sent by Churchill to Roosevelt was phrased in a most grandiloquent manner. The gist of it has been given as follows: "I am half American and the natural person to work with you. It is evident we see eye to eye. Were I to become Prime Minister of Britain we could control the world." Churchill states that he sent "nine hundred and fifty" of these cablegrams to the President and received "about eight hundred in reply." His relations with the American Chief Executive "gradually became so close that the chief business between our two countries was virtually conducted by these personal interchanges between him and me. . . . As head of the State as well as Head of the Government, Roosevelt spoke and acted with authority in every sphere." It is obvious that Churchill regarded Roosevelt as an American dictator who had little concern for the opinions of Congress and the American people. With reference to the matter of war the Churchill cablegrams reveal that he believed that Roosevelt could plunge America into the conflict in Europe at any time he desired. The French Cabinet apparently had the same viewpoint.

The urgency of Churchill was translated into hysteria by Premier Reynaud. On May 18, Bullitt was informed by Alexis Leger, Secretary- General of the French Foreign Office, that Reynaud was about to request President Roosevelt to ask Congress for a declaration of war against Germany. Bullitt frankly informed Leger that such a request would be worse than useless: Congress would almost unanimously vote against such a declaration. The President then talked to Bullitt over the telephone and instructed him to say that "anything of this nature was out of the question." But Reynaud continued to press for the impossible. On May 22 he told Bullitt that the German tide was growing more menacing every minute. There was grave danger that the French public would insist upon a separate peace with Germany. In that event a German victory over Britain "would follow in a few weeks." After this dire event the Panama Canal would be destroyed by air bombardment and the "American Army would be able to offer little resistance." Prompt action by the American Government was "the only real guarantee that Hitler v/ould not some day be in the White House."

A week later the Reynaud appeals grew more frantic. On May 28 he warned Bullitt that

he had convincing evidence that "if France and England were conquered, Hitler would move almost immediately against the United States." The American fleet should be sent at once to the Mediterranean so as to exert pressure upon Mussolini to stay out of the war. The President did not send the fleet to the Mediterranean but he decided to permit American pilots to fly planes, ordered by the Allies, to Halifax and other ports in the Canadian maritime provinces. Before this decision the Dominion had been designated as a combat area and American nationals had not been allowed to enter it in aircraft belonging to belligerent nations. The President then urged Churchill to send additional planes to France but he was told that Britain needed all available aircraft for defense against expected German attack. Ambassador Bullitt became furious over this negative reply from Britain and he confided to Secretary Hull his belief that the British Cabinet "might be conserving their air force and fleet so as to use them as bargaining points in negotiations with Hitler."

Both the President and Secretary Hull discounted these observations of Bullitt. They were certain that while France "was finished," Britain, with the aid of American supplies, could withstand a German assault. It was imperative, therefore, that these supplies be rushed at once to British ports. Joseph C. Green, chief of the Division of Controls, brought to Secretary Hull's attention an old statute of May 12, 1917. The language of this statute could be interpreted so as to authorize the exchange of army and navy aircraft for new models of a more advanced type. Arrangements were made with a Buffalo concern to deliver to them fifty planes belonging to the Naval Reserve squadrons in exchange for planes of a "superior type." These planes were then rushed to Britain. But Churchill wanted more than planes. In order to meet his importunate requests, the President turned to the Acting Attorney General, Francis Biddle, who conveniently ruled that the Secretary of War had the right to sell surplus war supplies to "any corporation or individual upon such terms as may be deemed best." General George C. Marshall, as Chief of Staff, now came to the front and directed his chief of Ordnance and his Assistant Chief of Staff to survey the entire list of American reserve ordnance and munitions stocks. On June 3 he approved these lists. The first list was a lengthy one:

"It comprised half a million .30 calibre rifles out of two million manufactured in 1917 and 1918. . . . For these there were about 250 cartridges apiece. There were 900 soixante-quinze field guns with a million rounds, 80,000 machine guns and various other items. . . . On June 3 all the American Army depots and arsenals started packing the material for shipment.... By June 11 a dozen British merchant ships moved into the bay [Raritan] and anchored, and loading from lighters began."

But this flood of war materiel reached the Allies too late to stop the rapid German advance. On May 15, General Winkelman, the Dutch Commander in Chief, signed articles of capitulation. German pressure upon Belgium rapidly mounted. When General Giraud's Army in Holland was completely crushed and the French Ninth Army collapsed on the Mezieres-Dinant front, it was evident that a crisis had arisen. After the news of the British retreat to Dunkerque was brought to King Leopold he realized that the

situation had become critical. On May 27 the demoralization of the French military forces was so rapid and complete that he decided the time had arrived to ask the German High Command to state its terms for a suspension of hostilities. The blunt answer called for unconditional surrender. The King felt compelled to comply with this grim demand, and at 4:00 A.M. on the following day the Belgian Army obeyed a cease fire order from headquarters.

The President Makes a Third Plea to Mussolini to Stay Out of the War

Before the bad news from Belgium was received in the United States, the President decided to make another plea to Mussolini to stay out of the war. In this third communication to the Duce, Roosevelt offered to act as a mediator between Hitler and the Allies. Ambassador Phillips was instructed to deliver this message to Mussolini personally, but Count Ciano bluntly informed him that this was not possible. When Ciano finished reading the President's plea he was asked by Phillips as to the nature of the reply: "He said with conviction—'it would be a no' and he went on to explain that Mussolini's position was not merely a question of securing Italy's legitimate aspirations but that the Duce was determined to carry out his obligations under his alliance with Germany." Later in the day Ciano sent for Ambassador Phillips and confirmed the statements he had made during the morning meeting. Mussolini desired to preserve his "freedom of action" and was not disposed to "enter into any negotiations which . . . would not be in the spirit of Fascism."

Although to Sumner Welles the "horizon looked extremely dark," Roosevelt thought that the clouds might take on a silver lining if he could persuade Mussolini to stay out of the war. On May 30 he made his fourth appeal to the Duce. Ambassador Phillips was instructed to call upon Count Ciano and once more emphasize the fact that the entrance of Italy into the war would "immediately and prejudicially affect" the interests of the United States. While the American Government had never "asserted any political interests in Europe," it had "asserted its clearly defined interests of an economic and property character. Through the extension of the war to the Mediterranean region and the inevitable destruction of life and property . . . the legitimate interests of the American people will be gravely curtailed." Inasmuch as the relations between the Italian and American peoples had always been particularly close, it was hoped that nothing would be done adversely to affect them.

On June 1, Ciano informed Ambassador Phillips that the Duce did not agree "with the point taken by the President with regard to the interests of the United States in the Mediterranean" and he maintained that the United States had the same interest in that area as Italy had, for example, "in the Caribbean Sea." The decision had "already been taken to enter the war."

Reynaud Makes a Last Appeal to Roosevelt for Immediate Military Assistance

It had long been realized in Paris that Italy would probably enter the war as soon as Hitler's armies had gained important successes. The early collapse of the Netherlands and Belgium had made a deep impression upon the mind of Mussolini who was intent upon securing some of the spoils of war. Ambassador Bullitt knew this fact only too well and for this reason he begged the President to consent to the delivery of some old destroyers that would strengthen French naval forces in the Mediterranean. The President's reply remained negative: "Any exchange for American destroyers probably unacceptable because of enormous sea area which must be patrolled by us and would require Congressional action which might be very difficult to get. Our old destroyers cannot be sold as obsolete as is proved by fact. All of them are now in commission and in use or are in process of being commissioned for actual use."

Churchill was critical of the President's continued refusal to send old destroyers to the Allies. On June 5 he remarked to Mackenzie King that although the American Chief Executive was an excellent friend he had sent "no practical help" to Britain. He had not expected any military aid from the Americans "but they have not even sent any worthy contribution in destroyers or planes." It would be expedient "not to let Americans view too complacently prospect of a British collapse, out of which they would get the British Fleet and the guardianship of the British Empire."

On the day that Churchill sent this letter to Mackenzie King, the Germans began the final phase of the Battle of France. In five days they blazed a path to Paris. With a crushing defeat staring him in the face, Reynaud sent another plea to President Roosevelt. Its tone was quite epic but there was a strong feeling that the French Premier was like some frightened boy whistling loudly as he walked down a very dark alley: "For six days and six nights our divisions have been fighting without one hour of rest against an army which has a crushing superiority in numbers and material. Today the enemy is almost at the gates of Paris. We shall fight in front of Paris; we shall fight behind Paris; we shall close ourselves in one of our provinces to fight and if we should be driven out of it we shall establish ourselves in North Africa to continue the fight and if necessary in our American possessions." To make matters even worse, at this tragic hour Italy had "stabbed France in the back." The Allies were in desperate straits and required at once all the material support of the United States "short of an expeditionary force."

Reynaud's allusion of Italy's entrance into the war was turned by Roosevelt into a sharp thrust at Mussolini. That evening, in an address at Charlottesville, Virginia, the President alluded to the sweep of the tides of war across the Continent of Europe and the consequent menace to America of such a martial flood. Then, adopting a graphic phrase from Reynaud's plea earlier in the day, he suddenly remarked with dramatic intensity: "On this tenth day of June, 1940, the hand that held the dagger has struck it into the back of its neighbor." This unexpected interpolation directed at the Duce indicated the President's bitterness towards a dictator to whom he had made four futile pleas for nonintervention.

But Reynaud needed more than bitter allusions. Churchill rushed to France and tried to recall to Marshal Petain the glorious stand of the Allied armies in the spring of 1918. The Marshal replied very quietly "that in those days he had a mass of manoeuvre of upwards of sixty divisions; now there was none." In 1918 there had been "sixty British divisions in the line." In 1940 the story was tragically different and Petain was "haunted" by the grief he felt "that Britain, with her fortyeight million population had not been able to make a greater contribution to the land war against Germany." The remarks of Marshal Petain irritated Churchill considerably. On June 12 he sent to President Roosevelt the latest news from the French front and in this communication he permitted his resentment to color his message: "The aged Marshal Petain, who was none too good in April and July, 1918, is, I fear, ready to lend his name and prestige to a treaty of peace for France." This was the moment for the President to "tip the balance in favour of the best and longest possible French resistance." In the White House it was believed that Reynaud's arm might be strengthened by brave words and bright promises. The Premier was assured that the American Government was "doing everything in its power" to make available to the Allied powers the war materiel they so urgently needed. The "magnificent resistance of the French and British armies" had profoundly impressed the American people.

When Ambassador Kennedy brought to Churchill a copy of this Presidential salute to Allied courage, the Prime Minister pressed for its immediate publication. It could play a "decisive part in turning the course of world history." At the very least it would "decide the French to deny Hitler a patched-up peace with France."³⁸ In a hurried note to Reynaud, Churchill indicated the compromising character of the Roosevelt message. If France, on the basis of this assurance from the American Chief Executive, would continue in the war, it should be obvious that the United States was "committed beyond recall to take the only remaining step, namely, becoming a belligerent in form as she has already constituted herself in fact."

The President realized the truth of this Churchill statement. He had already committed beyond recall the United States to take part in the war then raging in Europe but he could not afford in the summer of 1940 to let this fact become known. His campaign for re-election as President would soon take shape and he knew he could not hope for success if the voters knew that he was secretly putting America into World War II. He quickly sent word to Churchill explaining that he could not agree to the publication of his message to Reynaud. The Department of State saw in such publication the "gravest dangers." Churchill would not take this "disappointing telegram" as a final answer from the White House. On June 15 he frankly told the President that events in Europe were moving "downward at a pace where they will pass beyond the control of American public opinion." Eventually America would enter the struggle; why not now? It would be expedient to remember that if the Churchill Government fell a new cabinet might give the British fleet to Hitler. What would the United States do in that event? There was desperate need for the delivery of thirty-five destroyers at once. This matter should not be delayed.

Reynaud realized that he could not wait for several months until American assistance reached France. It was now or never. On June 14 he sent a message to Roosevelt that plumbed the depths of despair. German troops had just burst into Paris. Would it pay France to "continue to sacrifice her youth in a hopeless struggle? Unless America could rush to France's aid with armed force she would "go under like a drowning man and disappear after having cast a last look towards the land of liberty from which she awaited salvation." When Roosevelt replied with a warm encomium upon the "resplendent courage" of the French armies but with no promise of immediate military aid, Reynaud requested Churchill to release his Government from its obligations not to negotiate a separate peace. The Prime Minister hastened to France in a vain effort to save the situation, but Reynaud had resigned by the time he reached Bordeaux. Marshal Petain now assumed the burden of leadership and forwarded to Berlin a request for an armistice.

On June 18, Ambassador Biddle was assured that the French fleet would "never be surrendered to the enemy." After receiving this comforting news Secretary Hull instructed the American representatives in Berlin and Rome that the government of the United States "would not recognize any transfer, and would not acquiesce in any attempt to transfer any geographic region of the Western Hemisphere from one non-American power to another non-American power." Germany would not be permitted to occupy any French islands in the Caribbean.

The Destroyer Deal

The fall of France imparted a sense of urgency to the Administration's program for aiding Britain by the sale or lease of war materiel. The President's qualms about constitutional limitations slowly disappeared under the drumfire of repeated requests from Churchill. Moreover, he brought into his Cabinet certain new members who were not averse to a prowar inclination. This was particularly true of the new Secretary of War, Henry L. Stimson, who was a notorious war hawk. It is apparent that after June 1940 the Administration embarked upon a phony bipartisan policy that pointed directly to American intervention in the European conflict. This policy was given a green light on June 10 when Senator Sheppard offered an amendment to a pending defense bill authorizing the War Department to exchange unserviceable or surplus materials for others of which there was a scarcity. Senator Clark, of Missouri, declared that the purpose of the amendment was "an evasion of international law and of the Neutrality Act." But the amendment was adopted by a large majority and the measure finally became law on July 2, 1940.

In the meantime Senator David I. Walsh had sponsored legislation that would provide against any "limitation or reduction in the size of our Navy." The Act of June 28, 1940, embodied the ideas of Senator Walsh. It was not long, however, before the fertile mind of Benjamin Cohen, special assistant to the Attorney General, found several loopholes in this act. The President still had wide powers he could use without previous consultations with Congress. This opinion of Mr. Cohen was shrewdly argued but the Chief Executive

“frankly doubted” if it would “stand up.” He also feared that Congress was “in no mood at the present time to allow any form of sale.”

These doubts were dissolved under the impact of pressure from Churchill. On June 24 he wrote to Mackenzie King and once more emphasized the danger that if England fell there was the possibility that Hitler would get the British fleet. Four days later, in a letter to Lord Lothian in Washington, he repeated this disturbing thought which should be repeated to Roosevelt. He also complained that Britain had “really not had any help worth speaking of from the United States so far.” After more than a month of silence he wrote again to the President (July 31) to inform him that the need for destroyers had “become most urgent.” The whole fate of the war might rest upon the speed with which these destroyers were delivered. He was confident that the President would not “let this crux of the battle go wrong” for want of the much-needed warships. When Lord Lothian spoke of an exchange of naval bases for destroyers, Churchill indicated his preference was for an indefinite lease and not an outright sale.

Churchill’s cablegram to the President (July 31) had led to a Cabinet meeting in the White House on August 2. There was immediate agreement that “the survival of the British Isles under German attack might very possibly depend on their getting these destroyers,” but there was also recognition that legislation would be “necessary” to authorize any deal concerning the destroyers. If the British Government would give positive assurances that the British fleet “would not under any conceivable circumstances fall into the hands of the Germans,” the opposition in Congress would be “greatly lessened.” Perhaps William Allen White would work upon Wendell Willkie, Joseph Martin, and Charles McNary and thus divide the Republican ranks! When the President talked with White over the telephone he elicited a promise from the famous editor to get in touch with Willkie at once.

There was no doubt in Churchill’s mind that any transfer of American destroyers to Britain would be a “decidedly unneutral act by the United States.” It would justify a declaration of war by Hitler. Such action would be eminently agreeable to Churchill who would ardently welcome American help in the struggle against the dictatorships. But the situation had to be handled carefully. When Lord Lothian (August 6) cabled that the President was exceedingly anxious for a pledge that the British fleet would not be turned over to the Germans in the event that Britain fell, Churchill refused to give one. The British nation would “not tolerate any discussion of what we should do if our island were overrun.” It would be best to couple the transfer of destroyers with the lease of naval and air bases in Newfoundland and on some British islands in the Caribbean.

On August 13 the essential paragraphs in this agreement were worked out during a conference between the President, Secretaries Knox, Morgenthau, and Stimson, and Sumner Welles. In the meantime William Allen White had received assurances from Wendell Willkie that he would “not make a campaign issue of the transfer.” The services of General Pershing were next enlisted. The old warrior warned the American public in a broadcast that Britain needed immediate aid. This could best be given by placing at the disposal of the British and Canadian governments “at least fifty over-age destroyers

which are left from the days of the World War." Admirals Yarnell, Standley, and Stirling supported this viewpoint.

On August 16, President Roosevelt issued a statement that he was negotiating with the British Government for the acquisition of naval and air bases. Nothing was said about a deal for destroyers. Senator David I. Walsh was still showing strong opposition to such a transaction. With the hope of changing the Senator's opinion in this regard the President wrote him a letter with the familiar salutation, "Dear Dave." He assured the Senator that the British islands were "of the utmost importance to our national defence as naval and operating bases." After reminding him that Jefferson in 1803 had purchased Louisiana "without even consulting Congress," the President then expressed the hope that there would be no further opposition to a deal that would be the "finest thing for the nation that has been done in your lifetime and mine."

"Dear Dave" did not fall for this bait so he was later smeared as a loose character. But even so staunch a New Dealer as Secretary Hull had doubts about a destroyer deal and he regretfully informed Lord Lothian that in order "to meet the wishes of your Government an amendment to these provisions of law [the United States Code and the Act of June 28, 1940] may be necessary." But this would take time and Britain's need was immediate. In the meantime Churchill on August 20 had announced in Parliament that negotiations were in progress for leasing air and naval bases in Newfoundland and on British islands in the Caribbean to the United States. Two days later he explained to President Roosevelt the difficulties that would attend any exchange of letters that would admit "in any way that the munitions which you send us are a payment for the facilities." The dispatch of war materiel to Britain should seem to be "a separate spontaneous act on the part of the United States, arising out of their view of the world struggle." But Sumner Welles informed Lord Lothian that under existing legislation it was "utterly impossible" for the President to send destroyers to Britain as a spontaneous gift; they could be sent only as a quid pro quo.

On August 23 the President confessed to Secretary Hull that the negotiations with Britain "on the bases and destroyers have bogged down. Please see what you can do." In an extended conference among the President, Secretary Hull, and Lord Lothian the matter was further explored. Secretary Hull made it clear to the British Ambassador that the President "had no authority whatever to make a gift of public property to any Government or individual." But Attorney General Jackson had no trouble finding convenient loopholes in existing legislation. His assistant, Ben Cohen, had also discovered them some months previously. The Act of June 15, 1917, made it unlawful to send any ship out of the United States that was "built, armed or equipped as a vessel of war, with any intent or under any agreement or contract . . . that such vessel shall be delivered to a belligerent nation." This restriction did not apply "to vessels like the over-age destroyers which were not built, armed, equipped as, or converted into, vessels of war with the intent that they should enter the service of a belligerent."

Mr. Jackson blandly pushed aside the pertinent provisions of the Treaty of Washington

(May 8, 1871) and Article 8 of the Hague Convention XIII of 1907 which required that a neutral government take measures to prevent the departure from its jurisdiction of any vessel intended to engage in belligerent operations, if the vessel was specially adapted within the neutral's jurisdiction to warlike use. The one precedent that Mr. Jackson adduced to support his contention concerning the transfer of destroyers was a most dubious one. Indeed, the opinion of the Attorney General was distinctly "phony" and was based upon the familiar dictum: "What's the Constitution between friends." The way was now prepared for the destroyer deal. On September 2 notes were exchanged between Secretary Hull and Lord Lothian which first recited that the British Government, freely and without consideration, granted to the United States a lease for the "immediate establishment and use of naval and air bases and facilities" on the Avalon Peninsula and on the southern coast of Newfoundland, and on the east coast and on the Great Bay of Bermuda. The second item dealt with the establishment by the United States of air and naval bases on certain British territory in the Caribbean (Bahamas, Jamaica, Saint Lucia, Trinidad, Antigua, and British Guiana) in exchange "for naval and military equipment and material which the United States Government will transfer to His Majesty's Government." The leases would run for a period of 99 years. At the same time Churchill also gave an assurance that the British fleet would not be scuttled or surrendered. This assurance was not to be published.

From the viewpoint of international law the destroyer deal was definitely illegal. As Professor Herbert Briggs correctly remarks: "The supplying of these vessels by the United States Government to a belligerent is a violation of our neutral status, a violation of our national law, and a violation of international law." Professor Edwin Borchard expressed a similar opinion: "To the writer there is no possibility of reconciling the destroyer deal with neutrality, with the United States statutes, or with international law." The whole matter was correctly described by the 57. *Louis Post-Dispatch* in a pertinent headline: "Dictator Roosevelt Commits an Act of War."

Propaganda Pushes America towards Intervention

During the years 1914 and 1917, British propaganda played a significant part in preparing the American mind for intervention in the World War. In the period prior to American intervention in World War II the British Government did not have to bear a heavy burden of propaganda: there were thousands of Americans who eagerly assumed this responsibility. The colorful story of these merchants of death has been told in such detail that it will be given merely a brief mention in these pages. Rev. Harry Emerson Fosdick gave Roosevelt an excellent cue when he remarked that "of all the ways for Christians to make a war seem holy, the simplest way is to get Jesus into it." The President followed this tip on January 4, 1939, when he addressed Congress on the state of the nation. Storms from abroad were challenging three institutions "indispensable to Americans, now as always. The first is religion. It is the source of the other two—democracy and international good

faith. . . . We have learned that God-fearing democracies of the world which observe the sanctity of treaties and good faith in their dealings with other nations cannot safely be indifferent to international lawlessness anywhere. They cannot forever let pass, without effective protest, acts of aggression against sister nations."

The belligerent implications of these words were not lost upon members of Congress who fully realized the dangers and futility of embarking upon a holy war. Their fears were heightened when the President enlarged upon the same theme in an international broadcast under the auspices of the Christian Foreign Service convocation: "Today we seek a moral basis for peace. . . . It cannot be a moral peace if freedom from invasion is sold for tribute. . . . The active search for peace which the early Christians preached meant meeting and overcoming those forces in the world which had set themselves against the brotherhood of man and which denied the equality of souls before the throne of God." Catholic leaders did not respond to this summons to enlist the churches in a movement towards intervention. Catholic cardinals like O'Connell and Dougherty were strongly opposed to America's entry into World War II, and the Catholic press was outspoken in its criticism of the implications in the President's policy. The Catholic World thought Americans "were in no position to save anyone. We shall be lucky to save ourselves. . . . What kind of madness has got hold of those who advocate our settling the quarrels of the world, changing the habits of nations that have been fighting for the last thousand years? Who do we think we are?" The Ave Maria was equally opposed to intervention: "The people of this country do not want war at this moment; they can see no transgression against our safety or honor to justify a war. . . . They have no commission, human or divine, to challenge aggression not directed against them."

The Ave Maria was particularly sharp in its criticism of William Allen White, famous Kansas editor, who was "doing everything humanly possible to get us into the European conflict." It was certainly true that White had been very busy in the fight against fascism. He was a member of the Union for Concerted Peace Efforts, the American Committee for Non-participation in Japanese Aggression, the National Refugee Service, the Council Against Intolerance, and the Non-partisan Committee for Peace through the Revision of the Neutrality Law. This last organization was an active pressure group in favor of sabotaging existing neutrality legislation. After this work had been carried to a successful conclusion, White helped to launch the Committee to Defend America by Aiding the Allies. The implications of this movement should have been evident to him. In December 1939, Robert Sherwood wrote to White to express the view that "it was necessary for the United States to intervene in a military way to check aggression by dictators." In his reply White remarked that he had always stood with Sherwood "in spirit" but had been constrained "by an old man's fear and doubt when it comes to lifting my voice for war."

In the spring of 1940 after this new organization had begun its activities, White became feverish in his anxiety to speed the gift of munitions of war to the hard-pressed Allies. In July he and the members of the Committee to Defend America by Aiding the Allies bent every effort to secure "the release of fifty or sixty over-age but recently reconditioned

American destroyers to England." When the President failed to show any great enthusiasm to push through a destroyer deal, White felt that "he had, as it were, lost his cud." Contact was made with large numbers of influential persons throughout the United States and they were urged to exert pressure upon the Chief Executive. The committee with its six hundred local chapters and thousands of volunteer workers was able to inundate the Capitol in Washington with a flood of letters and telegrams favoring the destroyer deal. The President owed a big debt to White who was so naive as to believe that America could walk halfway down the road to war and then stop.

This naivete was clearly indicated on December 20, 1940, in a letter he wrote to Roy Howard of the Scripps-Howard newspaper chain. He assured Howard that "the only reason in God's world" he was a member of the Committee to Defend America by Aiding the Allies was to keep America "out of war." Some of the war hawks on the committee deeply resented White's letter to Howard. When Frederick McKee flew to Emporia to persuade White to issue a statement that he was "not for peace at any price," he was met with a flat refusal. But White then showed his mental confusion by signing a round-robin letter to the President urging him to do "everything that may be necessary to insure defeat of the Axis powers." This letter, as the committee recognized, had "more warlike implications than the repeal of the neutrality law or the convoy issue." But there were still some lingering doubts in the mind of Clark Eichelberger who wired White on December 26 about the "unfortunate repercussions" of the letter that had appeared in the Scripps-Howard newspapers. It was at last apparent to White that he had failed to understand the real intentions of the Committee to Defend America by Aiding the Allies. Its real drive was towards war, not peace. In his letter of resignation he confessed that he was "amazed" that he was "so far behind the procession," but he would go "no faster nor no further." He had been used as a convenient facade by an organization that had talked of peace while rushing down the road to war. He was the symbol of millions of Americans.

Lend-Lease

It was entirely fitting that lend-lease legislation should have a prelude of promises by the President that American boys would not be sent abroad to die along far-flung frontiers. It had been evident to the President in the summer of 1940 that American involvement in World War II might be just around the corner of the next year. Senator Wheeler had read between the lines of the President's pronouncements and when he saw the word war written in bold letters he tried to block such a contingency by a strongly-worded plank in the Democratic platform. But the pledge to keep out of "foreign wars" was nullified by the pregnant phrase—"except in case of attack." It would not be difficult for an Administration seeking war to push one of the Axis powers to the point where an attack was inevitable.

But the American people, like William Allen White, had to be fooled by pacific phrases. When the election currents in the fall of 1940 appeared to be making a turn towards

Wendell Willkie, the President made some new pledges at Philadelphia on October 23: "To every man, woman and child in the nation I say this: Your President and your Secretary of State are following the road to peace. . . . We are arming ourselves not for any purpose of conquest or intervention in foreign disputes." A week later, in Boston, his pledge became more specific: "While I am talking to you mothers and fathers, I give you one more assurance. I have said this before, but I shall say it again and again and again: Your boys are not going to be sent into any foreign wars."

Robert Sherwood who helped to prepare this Boston speech had some qualms of conscience in later years: "For my own part, I think it was a mistake for him [the President] to go so far in yielding to the hysterical demands for sweeping reassurance, but, unfortunately for my own conscience, I happened at the time to be one of those who urged him to go the limit on this. . . . I burn inwardly whenever I think of those words 'again—and again—and again.' " In the spring of 1941 these fires of conscience were burning very low in the President's entourage. Under the impact of appeals from Churchill in England the entire structure of American neutrality was finally demolished by the legislative bomb of lend-lease. This bomb was many months in the making. On November 6, 1940, Churchill wrote to Roosevelt to express his profound relief at the election results: "I feel you will not mind my saying that I prayed for your success and that I am truly thankful for it. . . . I must avow my sure faith that the lights by which we steer will bring us all safely to anchor." Those lights would lead America into the war.

On December 8, 1940, Churchill sent another long letter in which he outlined in great detail the pressing needs of Britain. In Churchill's eyes these needs were also America's needs because Britain was fighting our war as well as hers. The safety of the United States was "bound up with the survival and independence of the British Commonwealth of Nations." Therefore, America should rush to Britain war materiel of specified kinds together with the gift or loan "of a large number of American vessels of war." It was useless to expect Britain to pay for these loans. The moment was approaching when the British Government would "no longer be able to pay cash for shipping and other supplies." The few dollars Britain had left were badly needed for domestic requirements. It would be wrong "in principle" for Britain to be "divested of all saleable assets, so that after the victory was won with our blood, civilisation saved, and the time gained for the United States to be fully armed against all eventualities, we should stand stripped to the bone." America should bear a large part of the financial burden for a new crusade in Europe. Roosevelt received this communication while he was cruising in the Caribbean. When he returned on December 16 he signified his ardent approval of aid to Britain at America's expense. On the following day, at a press conference, he recited an interesting parable:

"four or five hundred feet away. If he can take my garden hose and connect it up with his hydrant, I may help him to put out the fire. Now what do I do? I don't say to him before that operation, "Neighbor, my garden hose cost me fifteen dollars; you have to pay me fifteen dollars for it." No! What is the transaction that goes on? I don't want fifteen dollars—I want my garden hose back after the fire is over.... What I am trying to

do is to eliminate the dollar sign.”

What he really meant to say was that he was trying to eliminate the dollar sign so far as Britain was concerned. The American taxpayers would have it before their anxious eyes for the next generation. But before they had time to make any estimates, a lend-lease bill was introduced in the House of Representatives. It bore the significant number H.R. 1776. In that year we declared our independence from Britain; in 1941 we put it into grave peril by giving Britain a blank check which Churchill filled in with great gusto and then sent back to Washington for Roosevelt's indorsement. Harry Hopkins was the contact man in this regard and while still in Britain he heard Churchill's famous broadcast in which the following dangerous nonsense was beamed to rapt American listeners:

“It seems now to be certain that the Government and the people of the United States intend to supply us with all that is necessary for victory. In the last war the United States sent two million men across the Atlantic. But this is not a war of vast armies, firing immense masses of shells at one another. We do not need the gallant armies which are forming throughout the American Union. We do not need them this year, nor next year, nor any year that I can foresee.”

These assurances of Churchill were of the same stripe as the Roosevelt assurances during the last days of his campaign for re-election. He probably remembered Lord Northcliffe's sharp indictment of the American masses during the World War: “What sheep! They could be sheared once more for British benefit by constant repetition of the old propaganda line about Britain fighting America's fight. Roosevelt repeated this line on December 29 in a “fireside chat” to the American people. Aid to Britain was now a question of “national security.” If Britain were conquered, “all of us in the Americas would be living at the point of a gun.”

On the following day the President summoned to the White House, Secretary Morgenthau and Arthur Purvis, head of the Anglo-French Purchasing Commission, to discuss the details of lend-lease legislation. On January 2, 1941, Edward Foley, Morgenthau's general counsel, and his assistant, Oscar Cox, began the arduous task of drafting the bill. When opposition to the bill developed in certain circles in the State Department, Secretary Knox remarked to Morgenthau in his best seriocomic manner: “Let's organize a hanging bee over there someday and hang the ones that you and I pick out.” Some of the clique around the President probably would have regarded the matter of a hanging bee very seriously when Senator Wheeler began a series of blasts against lend-lease legislation. On January 4, 1941, he asked some very pertinent questions: “If it is our war, how can we justify lending them stuff and asking them to pay us back? If it is our war, we ought to have the courage to go over and fight it, but it is not our war.” A week later, in a radio broadcast, he feathered a shaft that evoked an immediate cry of pain from the sensitive President. He regarded the lend-lease program as “the New Deal's 'triple A' foreign policy—to plow under every fourth American boy.” The President deeply resented these prophetic words and denounced the Wheeler comment upon lend-lease as the “rottenest thing that has been said in public life in my generation.”

Although Admiral Stark expressed on January 13 the opinion that “we are heading straight for this war,” the lend-lease program was sold to the American people as a form of peace insurance. On March 11, 1941, the lend-lease bill was signed by the President, and it was not long before a forecast of Senator Taft was proved correct: “I do not see how we can long conduct such a war [undeclared war] without actually being in the shooting end of the war.”

Hitler Is Anxious to Avoid Conflict with the United States

This “shooting end of the war” was greatly feared by Hitler who strove in every way to avoid any incident that might lead to war with the United States. In order to conciliate public opinion in neutral countries, submarine commanders, from the very beginning of the war, had been directed “to conform to the Hague Convention.” Passenger lines were not to be torpedoed even when under escort. In September and October 1939, Hitler had high hopes that America might be induced to accept the role of mediator and thus bring to an early close a war that he had entered with many misgivings. In a previous chapter we have dealt with the mission of William Rhodes Davis to Berlin for the purpose of arranging mediation. It is apparent that Berlin took this mission quite seriously. In Hitler’s speech of October 6 there were evident indications of his readiness to accept Roosevelt as mediator, and on the following day Mr. Kirk, American charge d’affaires in Berlin, cabled to Secretary Hull that “someone close to Hitler had conveyed the thought that the President might use Hitler’s speech as the occasion to send a confidential message to him endorsing his ‘efforts toward peace.’” On October 9, Kirk cabled that a German press spokesman informed him that Germany “would certainly accept from the President a suggestion for a truce and negotiations toward peace and intimated that Germany might take part in a conference somewhere far removed from the war theater—which some interpreted to mean Washington.”

The terms of peace that Germany would present to such a peace conference were made known to the President and Secretary Hull through the long letter that William Rhodes Davis had sent to the Chief Executive. General Goring had spoken to Mr. Davis (October 3) in the following terms:

“You may assure Mr. Roosevelt that if he will undertake mediation, Germany will agree to an adjustment whereby a new Polish State and a new Czechoslovakian independent government would come into being. . . . As for myself and my Government, I would be glad to attend and in the event of such a conference I would represent Germany. I agree that the conference should be in Washington.”

At this time Germany was already profoundly disturbed by the way the Russians were acting in Poland. During the meetings of a peace conference in Washington there would be an opportunity to focus the eyes of the world upon the ills of Europe and attempt to remedy them. If the President had possessed real courage and vision he would have welcomed these German overtures and staged a peace conference that would have saved

both Poland and Czechoslovakia. But he and Secretary Hull were fearful that a move towards peace might benefit Hitler and discourage the Allies so they rejected the German peace feelers⁹⁸ and thus prepared the way for eventual Red domination over both those countries. In the long chapter of historical might-have-beens, Roosevelt plays a prominent and dismal part.

Roosevelt's rejection of the idea of a peace conference in Washington did not put an end to Nazi efforts to conciliate the United States. Hitler was exceedingly anxious not to have war with America. This fact is clear in the testimony given during the Niirnberg trials. Ribbentrop insisted upon the pacific disposition of the Fihrer concerning the United States," and Weizsacker confirmed this fact: "No German desired to be at war with the United States or looked for trouble in that direction. . . . We were not to let ourselves be provoked to be the ones who bring the conflict to the open daylight. Wherever there would be unfriendly acts, . . . we would not be the ones who start." The German press, under strict instructions, stopped its sharp criticism of the United States and of prominent American officials. Nazi officials became increasingly careful about any statements that might offend American sensibilities, and the German charge d'affaires in Washington (Dr. Hans Thomsen), in a press release, went so far as to call President Roosevelt "high-minded" and to praise his admonitions of neutrality. In April 1940, General Walther von Brauchitsch assured representatives of the press that he had always admired the youthful strength of the United States and its people to which he attributed the "gigantic success of the new continent."

The new American neutrality law (November 4, 1939) gave certain satisfaction to Hitler who assured leading Nazis that it would render the United States harmless. Under this law the waters around the British Isles and the entire European coast from Bergen to the Spanish border were closed to American ships.¹⁰⁴ These restrictions pleased the Fihrer who decreed on December 30, 1939, that American crews were to be treated "with the greatest consideration." In this same spirit Admiral Raeder issued instructions that American ships were not to be pursued or sunk in order that "all difficulties which might result from trade war between the United States and Germany might-be avoided at the very beginning." But this German policy of conciliation was sorely tried by incidents arising out of the establishment of a neutrality zone announced by the Panama Conference, October 3, 1939. This safety belt around the Americas south of Canada varied in width from 300 to 1000 miles. Belligerents were warned to refrain from naval action within that area, but no armed forces were stationed along the safety belt to enforce this regulation.

In order to conciliate America the German Admiralty issued orders designed to prevent naval engagements within this safety belt. When the Admiralty wished to recede from this position, Hitler refused to permit any change of orders. Moreover, the Fihrer adhered to this conciliatory policy even when American vessels adopted a course that must have enraged him. In December 1939 the German liner Columbus left Veracruz and was closely trailed by the U.S.S. Tuscaloosa which constantly broadcasted her position. This action compelled the Nazi captain to scuttle his ship some 450 miles east of Cape May. The

same tactics were pursued by the U.S.S. Broome in trailing the Rhein, which also was scuttled by her captain. The freighter Idarwild was followed by the Broome until it was destroyed by H.M.S. Diomedé (November 1940), with the Broome standing by to watch the result of her pursuit. The German Government refrained from filing any protest at these actions.

At a naval conference on March 18, Admiral Raeder was finally able to secure an important concession from the Führer. This took the form of a new blockade order (March 25, 1941) which not only included Iceland but went as far as the waters of Greenland. The first naval incident in the North Atlantic would soon take place.

The background for such an incident had been carefully filled in by President Roosevelt. In August 1940 he had sent Admiral Robert L. Ghormley, Major General D. C. Emmons, and Major General George V. Strong to London for exploratory conversations concerning eventual "armed co-operation with the British Commonwealth." After some months of conversations with important officers in the British armed services, Admiral Ghormley, in October 1940, sent to Admiral Stark a full report on his mission. Stark, in turn, presented to Secretary Knox on November 12 a memorandum on national objectives. One of the most important items in this memorandum was "the prevention of the disruption of the British Empire." In order to achieve this objective, in January 1941 a series of secret staff conversations began in Washington. Two months later (March 27, 1941), the ABC-i Staff Agreement was consummated which envisaged a "full-fledged war co-operation when and if Axis aggression forced the United States into the war." One of the sections of this agreement was aimed at creating an incident that would "force the United States into the war." It contained the following explosive phraseology: "Owing to the threat to the sea communications of the United Kingdom, the principal task of the United States naval forces in the Atlantic will be the protection of shipping of the Associated Powers." In order to carry out this task the Royal Navy hastened to give the United States Navy the "benefit of its experience, and of the new devices and methods for fighting submarines that had already been evolved." The responsibility "now assumed by the United States Navy meant the organization of a force for escort-of-convoy." On February 1, 1941, this patrol force was given "the new and appropriate designation of Atlantic Fleet," and its commander, Rear Admiral Ernest J. King, was promoted to the rank of Admiral and designated Commander in Chief Atlantic Fleet. The first naval incident was almost at hand.

On April 10, 1941, the destroyer N/black (Lieutenant Commander E. R. Durgin), in the waters off Iceland, picked up three boatloads of survivors from a torpedoed Netherlands freighter. As the last men were being pulled aboard, the sound operator made contact on a submarine. The division commander, D. L. Ryan, immediately assumed that the submarine was approaching for an attack so he ordered Mr. Durgin to drop some depth charges which caused the submarine to retire. This was the first action between United States and German armed forces. As the system of convoy escorts developed in accordance with Anglo-American plans, other incidents were bound to occur. On April 17, John

O'Donnell, well-known newspaper commentator, published a statement that "battlecraft" of the American Navy and Coast Guard were "giving armed escort to munition-laden British merchantmen leaving American ports." The President, through his secretary, Mr. Early, replied that American naval forces were merely on "neutrality patrol" in the Atlantic. He then charged that Mr. O'Donnell was guilty of a "deliberate lie." On April 25, during a press conference, the President expressly denied that naval escorts were being provided for fleets carrying lend-lease goods, and he developed at great length the difference between patrolling and convoying. A month later (May 27), in a national broadcast, he insisted that the delivery of war materiel to Britain was "imperative" and then stated that he had extended "our patrol in north and south Atlantic waters."

It was evident to Senator Taft that the President's broadcast disclosed "an intention on his part to push further and further toward war without consulting the people. . . . His speech contains vague threats of aggressive, warlike action to be undertaken in his sole discretion." Two weeks later the *Washington Post* printed a story by two columnists, Alsop and Kintner, to the effect that more than a month earlier there had been an encounter between American and German vessels of war and this had been followed by offensive operations on the part of an American destroyer. The columnists were making a specific reference to the Niblack incident which had been kept very quiet by navy authorities. Secretary Knox promptly denounced this story but failed to confirm or explicitly deny it. In further statements he was purposely vague.

While these exercises in double talk were being carried on, the President was taking active measures to see that Greenland did not fall into German hands. On January 9, 1941, the Department of State issued a release indicating that an American consulate had been established at Godthaab, and that provision had been made for the purchase in the United States of small arms for the Greenland police. These steps were followed by the signature (April 9, 1941) of an agreement authorizing the United States to occupy Greenland for defensive purposes. Inasmuch as the Danish Minister in Washington (Henrik Kauffmann) had no authority to conclude such an agreement, he was recalled by the Nazi-controlled Danish Foreign Office. He preferred to remain in Washington and was recognized by Secretary Hull as the regularly accredited minister. Needless to say, from the viewpoint of international law, this whole transaction was legally indefensible. In the meantime the Fiihrer was showing a strong determination to adhere to his policy of keeping out of war with the United States. In May 1941 the German attitude was summed up at a meeting between Hitler and his naval advisers:

Whereas up to now the situation confronting submarines and naval forces on operations was perfectly clear, naval warfare in the North Atlantic is becoming increasingly complicated as the result of the measures taken by the U.S.A. In order to help Britain, the American neutrality patrol, which was hitherto confined to the area within the American neutrality zone, has been reinforced and considerably extended toward the east to about 38 degree W., i.e. as far as the middle of the Atlantic. The true character of the American neutrality patrol is shown by the fact that vessels on patrol have also been instructed

to report by radio any battleships encountered. . . . We have laid down the following rules for naval warfare in order to comply with German political aims with regard to the U.S.A.: No attack should be made on U.S. naval forces and merchant vessels. Prize regulations are not to be applied to U.S. merchant ships. Weapons are not to be used, even if American vessels conduct themselves in a definitely unneutral manner. Weapons are to be used only if U.S. ships fire the first shot. As a result of these instructions and of the constant endeavors on the part of Germany not to react to provocation, incidents with the U.S.A. have been avoided up to the present time. It is unmistakable that the U.S. Government is disappointed about this cautious attitude on the part of Germany, since one of the most important factors in preparing the American people for entry into the war is thus eliminated. The U.S. is therefore continuing its attempt to obliterate more and more the boundary line between neutrality and belligerency, and to stretch the "short of war" policy further by constantly introducing fresh measures contrary to international law.

The next naval incident involving German-American relations was the sinking of the American merchant ship (May 21, 1941) Robin Moor, New York to Cape Town, by a German submarine. There was no visit or search but the crew and passengers were allowed to take to open lifeboats. As the sinking occurred outside the blockade zone it is evident that the submarine commander disregarded orders concerning American ships. Admiral Raeder immediately issued orders to prevent further incidents of this nature, and Hitler, after confirming these instructions, remarked that he wished to "avoid any incident with the U.S.A." On June 20 the President sent a message to Congress in which he bitterly criticized Germany as an international outlaw. He followed this message with another move in the direction of war. On July 7 he ordered American occupation of Iceland. Two days later Secretary Knox gave a statement to the press which implied that the American patrol force in the North Atlantic had the right to use its guns when the occasion arose.

This occasion arose on September 4, 1941, when the destroyer Greer, bound for Iceland, was informed by a British plane that a submerged U-boat lay athwart her course some ten miles ahead. The Greer at once laid a course for the reported submarine, and after having made sound contact with it, kept it on her bow for more than three hours. During this period a British plane dropped four depth charges in the vicinity of the submarine without effect. Finally, the submarine commander grew tired of this game of hide-and-seek and launched a torpedo which the Greer was able to dodge. When the Greer counterattacked with depth charges, the submarine launched another torpedo which was avoided. When sound contact with the submarine could not be reestablished, the Greer resumed course for Iceland. On September 11 the President gave a broadcast which presented a distorted version of the Greer incident. He conveniently forgot to tell that the initiative had been taken by the Greer: "She [the Greer] was flying the American flag. Her identity as an American ship was unmistakable. She was then and there attacked by a submarine. Germany admits that it was a German submarine. . . . We have sought no shooting war

with Hitler. . . . The aggression is not ours. Ours is solely defense." American vessels would now shoot at sight.

In the face of this serious incident that clearly showed the aggressive character of American naval patrolling, Hitler maintained his policy of avoiding difficulties with the United States. On September 17 orders concerning American merchant vessels exempted them from attack, even when in convoy, in all zones except that immediately surrounding the British Isles. In the Pan-American safety belt "no warlike acts" were to be carried out on German initiative. The American answer to these pacific gestures was to authorize escort duty for American destroyers. It was arranged that an American escort group, based on Argentia, should take over from a Royal Canadian Navy escort at a designated place off Newfoundland and hand over the convoy to a Royal Navy escort at an agreed mid-ocean meeting place. Convoying was now an established practice, and it should be kept in mind that Secretary Knox, during the lend-lease hearings, had frankly admitted that he regarded convoying as an "act of war."

This de facto war in the Atlantic soon produced another incident. On October 16 five American destroyers rushed from Reykjavik, Iceland, to the help of a convoy that was being attacked by submarines. On the following day, while in the midst of the fighting, the destroyer Kearny was struck by a torpedo and slowly made its way back to Iceland. It had deliberately moved into the center of a pitched battle between German submarines and British and Canadian warships and had taken the consequences. It was not long before President Roosevelt gave to the American people a twisted account of the incident. On October 27 he recounted the happenings on October 16 and 17 and asserted that he had "wished to avoid shooting." America had "been attacked. The U.S.S. Kearny is not just a Navy ship. She belongs to every man, woman, and child in this Nation. . . . Hitler's torpedo was directed at every American." In order to give additional overtones of villainy to his description of Nazi wickedness he then stated that he had a secret map made in Germany which disclosed Hitler's plan to put all the continent of South America under his domination. But that was not all. He had in his possession another document made in Germany that revealed Hitler's intention, if he was victorious, to "abolish all existing religions."

It should be evident that the "forward march of Hitlerism" should be stopped. . . . We are pledged to pull our own oar in the destruction of Hitlerism." The American Navy had been given orders to "shoot on sight." The Nazi "rattlesnakes of the sea" would have to be destroyed.

This declaration of war was confirmed by the Reuben James incident. On October 31, while the Reuben James was escorting a convoy to Iceland, some German submarines were encountered about 600 miles west of that island. The American destroyer was struck by a torpedo and rapidly sank. Only 45, out of a crew of about 160, were saved. When the news of the sinking of the Reuben James reached Germany, Hitler remarked: "President Roosevelt has ordered his ships to shoot the moment they sight German ships. I have ordered German ships not to shoot when they sight American vessels but to defend

themselves when attacked." On November 13, 1941, the directives for conduct of German warships when encountering American naval vessels remained pacific: "Engagements with American naval or air forces are not to be sought deliberately; they are to be avoided as far as possible. . . . If it is observed before a convoy is attacked that it is being escorted by American forces, the attack is not to be carried out."

Germany was trying desperately to stay out of war with the United States. America's attitude was clearly stated by Sumner Welles at Arlington on November 11: "Beyond the Atlantic a sinister and pitiless conqueror has reduced more than half of Europe to abject serfdom. It is his boast that his system shall prevail even unto the ends of the earth. . . . The American people after full debate . . . have determined upon their policy. They are pledged . . . to spare no effort and no sacrifice in bringing to pass the final defeat of Hitlerism and all that which that evil term implies. . . . We cannot know, we cannot yet foresee, how long and how hard the road may be which leads to that new day when another armistice will be signed."

To the mind of Welles and to others in the White House group it was obvious that America was really in the war. But the American people did not realize that momentous fact, nor did they know that they were pledged "to spare no effort and no sacrifice in bringing to pass the final defeat of Hitlerism." It was easy for Mr. Welles to speak glibly of sacrifice. He had long enjoyed wealth and high social position. The word "sacrifice" had always been excluded from his dictionary. As the spokesman for the President he was suddenly breaking to the American people the dread news that they had become involved in a war they had ardently wished to avoid. The war hawks of 1941 were never tired of sneering at the majority of Americans as benighted isolationists who had tried to build a Chinese wall around the United States and thus cut it off from all foreign contacts. They knew their sneers were patent lies. America had never been isolated from the social, economic, religious, and cultural forces that shaped the modern world. Thanks to its geographical position it had escaped the recurring tides of conflict that had crumbled the walls of ancient civilizations and washed away the heritage men had earned through dauntless courage and high endeavor. Americans had been isolationists only against war and its evident evils, and their country had grown prosperous beyond the dreams of the founding fathers.

But in 1915, President Wilson began to nurse the thought of sharing America's ideals and wealth with the rest of the world, and two years later he led us into a foreign war that he hoped would make the world safe for democracy. But this theme song turned sour in American ears when it led to the great parade of 1917 which ended for many men in the vast cemeteries in France. It gained new popularity after 1933, and with Roosevelt as maestro, the old macabre accents began to haunt every home. In 1941 his orchestra of death was anxiously waiting for the signal to begin the new symphony. He had hoped for a German motif but Hitler had refused to assist with a few opening martial notes. Perhaps some Japanese statesman would prove more accommodating! At any rate, after the Reuben James incident had fallen flat he turned his eyes towards the

Orient and sought new inspiration from the inscrutable East. He found it at Pearl Harbor when Japanese planes sounded the first awesome notes in a chorus of war that is still vibrating throughout the world. The story of how the first notes in the script of that chorus were written in by President Roosevelt is told in the next chapter.

12.11 Pearl Harbor: A forced Incident

When the President perceived that Hitler would not furnish the pretext for a war with Germany, he turned to the Far East and increased his pressure upon Japan. The path to Pearl Harbor had already been pointed out by Mr. Hornbeck in February 1939. After discussing how the American Government had tried to restrain the Japanese advance in North China by "moral and economic opposition," he stated his belief that in the long run the situation would so "develop that military opposition by this country will have to be offered." But Herbert Feis, the adviser on International Economic Affairs, still favored economic pressure, so on July 26, 1939, Secretary Hull sent a note to Ambassador Horinouchi informing him that the Treaty of February 21, 1911, would terminate on January 26, 1940. The way was thus prepared for an all out economic offensive against Japan. But before this could be launched, several incidents arose which further disturbed the course of Japanese-American relations.

Japanese Bombings of Chungking

On July 10 the American charge d'affaires in Tokyo called on the Minister of Foreign Affairs and made "the strongest possible representation with regard to the recent bombings at Chungking." Mr. Arita said that he was "distressed" to learn that Ambassador Johnson and his staff "had been put in jeopardy," but it was "impossible for him to promise that the bombing of Chungking would cease." Attack from the air was an important phase of the military operations in that area. On this same day the President informed Secretary Hull that he desired to receive "without delay a statement from the Japanese Government in regard to the matter." On July 20 the Japanese Ambassador had a conference with Secretary Hull. When the Ambassador explained that military necessities dictated the bombings, Hull sharply rebuffed him by remarking that if the bombings continued "something very serious was liable to happen." When the Ambassador murmured that he hoped the American Government would urge its nationals to "keep away from places of danger," Hull acidly replied that the United States did not "concede the right of any other outside country to a monopoly of highways or streets or other localities in China."

The Tientsin Affair

It was soon apparent that the Department of State was adopting a far more aggressive attitude towards Japan than was the British Foreign Office. This fact was given a

convincing demonstration in the Tientsin affair. During the World War the Chinese liquidated the Austrian and German concessions in this city, and in 1920 the Russian concession was taken over. British investment in its concession in Tientsin was estimated at \$46,000,000; French investment in the French concession was considerably less. In the British concession banks held silver to the value of \$50,000,000 in the name of the Chinese Nationalist Government. When they refused to turn this over to Japanese authorities, reprisals were ordered against the British and French concessions. Barricades and wire entanglements were erected around them and they were subjected to a rigorous blockade. As a result of this pressure Sir Robert Craigie, the British Ambassador in Tokyo, consented to sign a far-reaching agreement (the Craigie-Arita Agreement) on July 21. Under the terms of this formula the British Government fully recognized that as long as large-scale military operations were in progress in China, the Japanese forces there would insist upon "special requirements for the purpose of safeguarding their own security and maintaining public order in the regions under their control, and that they have to suppress or remove any such acts or causes as will obstruct them or benefit their enemy."

The Department of State had no intention of following the British policy of appeasement. Although the Japanese had been unusually conciliatory towards the Americans and had given assurances that their goods would be permitted to move through the embargoes around the British and French concessions, the Department of State was disposed to challenge the Japanese program in Tientsin. Its attitude was reflected in a memorandum prepared in the Division of Far Eastern Affairs:

"If Great Britain should give way at Tientsin and substantially meet Japanese demands there, that surrender would signal to Japan Great Britain's vulnerability to further demands and would be the beginning of abandonment by the Powers of the National Government of China. If Great Britain and France were driven, through pressure . . . to close the French Indochina and Burman routes, the United States would be unable, in defense of its own interests, to afford China any further material assistance in the latter's resistance to Japanese aggression. If the United States does not make an effort at this point, the assistance of Great Britain and France may well be lost to any later efforts that developments may require the United States to make."

The outbreak of World War II eliminated any possibility that either Britain or France could give any real assistance to the United States in the Far East. It also occasioned a careful survey by the Japanese of the impact of the war upon its program. The Nazi-Soviet Pact had deeply disturbed Japanese statesmen who had welcomed ties with Germany as one means of blunting any Soviet thrust in the Far East. The international situation had to be restudied and a policy of caution was an imperative. From the American Embassy in Tokyo came a report that "the immediate effects of a European war should bring about a sharp increase in the demand for American goods, particularly cotton, wood pulp, machinery and other industrial equipment, nonferrous metals, iron and steel and chemicals." Without these imports from America, "Japan's industrial expansion program

would completely break down." America would have to be conciliated.

Chiang Kai-shek Asks that Roosevelt Mediate in Sino-Japanese War

While European statesmen were having a case of war jitters, Chiang Kai-shek suddenly asked for Roosevelt mediation in the Sino-Japanese War. On September 1 the Chinese Ambassador in Paris called on Bullitt and gave him the substance of some long telegrams he had received from Chiang Kai-shek. The Generalissimo hoped that President Roosevelt could "take action immediately to put an end to the war between China and Japan." He did not want the public to know "that this initiative had come from him." It should appear as "a purely American initiative." With regard to the Soviet Union the Generalissimo wanted the President to realize that he (the Generalissimo) retained "absolute freedom of action." He had "no pacts with the Soviet Union binding him in any way." There was need to take action before Japan established "a so-called Chinese Government under Wang Ching-wei." It would be best to have Britain and France associated in this move towards mediation.

The President was aware of the difficulties of proposing mediation at that time, and any inclination he might have had was checked by the news from China. After the outbreak of war in Europe, Britain was anxious to remove her troops from the Far East. To accelerate this movement, Japan addressed a note to Britain and France pointing to the importance of this action. This step was resented by Secretary Hull who frankly informed the Japanese Ambassador he regarded the move as an indication that Japan was anxious to push the Western powers out of China.⁹ The British Foreign Office welcomed these stern words to Japan but doubt was expressed that any real support would be given to British interests in the Tientsin concession where it was greatly needed. It would probably be expedient to remove British troops and thus avoid a clash with Japanese forces. In France the Foreign Office had been fearful that "the Soviet Union might send bombing planes to assist the German army in attacking France." They desired, therefore, "to placate Japan" even though this might injure China. This appeasement policy on the part of France would soon be put into effect.

The President's Attitude towards Japan Becomes Increasingly Belligerent

While Britain and France were making plans to appease Japan, President Roosevelt was giving extended consideration to a program of pressure upon that country. He knew from the dispatches from Tokyo that Japan would be increasingly dependent upon imports of certain basic commodities from the United States. The time had arrived when he could use to advantage this economic club. In his talks with the President in September (1939), Ambassador Grew had stressed the fact that sanctions against Japan might lead to war. If an embargo were placed upon American oil exports to Japan the result could well be a Japanese thrust in the direction of the Netherlands East Indies in order to control the

rich petroleum resources of Borneo. The President's answer to these fears indicated that he was thinking in terms of war with Japan: "We could easily intercept her fleet."

But Grew wished to prevent rather than provoke war with Japan. While the President was uttering this belligerent bombast, Grew was confiding to his diary that Secretary Hull should "offer the Japanese a *modus vivendi*" and then commence negotiations for a new commercial treaty. In Japan the Shidehara policy of conciliation "has existed. It can exist again."¹³ To Grew the Japanese program with its insistence upon "strategic protection against a future attack by Soviet Russia" did not appear too unreasonable. If America wished to change this program it should not try to do so through the employment of sanctions: "There must be no tone of threat in our attitude." It is evident that Grew did not appreciate the fact that the President's dislike of Japan had gone very deep and spread very far. He was inclined to discount all Japanese gestures for an understanding. In Japan, Grew had some friendly talks with the Foreign Minister who gave repeated assurances that "the Japanese forces in China have not the slightest intention to drive out American interests and that they have the strictest orders to the contrary." Measures were being taken "to facilitate American commerce." Indeed, certain "positive measures were being taken in line with the valuable suggestions" which Grew had recently made.

These Japanese gestures of conciliation were answered by a White House press release which called for a moral embargo upon the shipment to Japan of "airplanes, aeronautical equipment and materials essential to airplane manufacture." Japan was being penalized for her bombing operations in China. To make these penalties more effective a press release was issued by the Department of State on December 20 containing the significant statement that "national interest suggests that for the time being there should be no further delivery to certain countries of plans, plants, manufacturing rights, or technical information required for the production of high quality aviation gasoline." These measures were merely the prelude to a subsequent program of economic pressure upon Japan. Senator Pittman had introduced a resolution which authorized the President to forbid the export of specified war materiel whenever he found that any signatory of the Nine-Power Treaty was endangering the lives of American citizens or depriving them of their lawful rights. But the Department of State was not ready to push this legislation. A new ministry was about to take office in Japan and it would be given an opportunity to show its hand. On January 17 the newly appointed Minister of Foreign Affairs (Arita) issued a statement which spoke of the efforts he would make to "normalize" relations with the United States. He was referring particularly to the fact that treaty relations with the United States would expire on January 26. After that date there would be no legal barrier to legislation or to Presidential proclamations imposing severe restrictions upon exports to Japan.

Japan Establishes a New Central Government in China

Japan's program for expansion in China made it impossible to "normalize" relations with the United States. On March 15, 1940, the Japanese Prime Minister issued a statement which called for the creation of "a new international relationship between Japan, Manchukuo and China." This would necessitate the establishment of "a new Central Government of China" to be headed by Wang Ching-wei. On March 30, at Nanking, this puppet government was formally proclaimed. It was immediately noted, however, that the three important northern provinces of Hopeh, Shansi, and Shantung, including such key cities as Peiping, Tientsin, and Tsingtao, were not placed under the control of the Wang regime. Secretary Hull's answer to this Japanese action was immediate and forceful: "The Government of the United States has ample reason for believing that the Government [of Chiang Kai-shek] with capital now at Chungking, has had and still has the allegiance and support of the great majority of the Chinese people. The Government of the United States of course continues to recognize that Government as the Government of China."

The language of the Department of State was significantly different from that employed by Sir Robert Craigie, the British Ambassador in Tokyo. On March 28, Craigie delivered an address to the Japanese-British Society in which the note of conciliation was strongly accented. He believed that Britain and Japan were "striving for the same objective, namely, a lasting peace and the preservation of our institutions from extraneous, subversive influences." This friendly gesture towards Japan was favorably regarded by the London Times which spoke of the proposed establishment of the Wang regime as "an offer of peace to the Chinese people."

Japan Compels Both Britain and France to Adopt a Policy of Appeasement

The British Foreign Office quickly changed its tune when the Japanese Foreign Minister (Arita) announced on April 15 that the economic ties that bound Japan to the Netherlands East Indies were particularly important. For that reason the government of Japan could not but be "deeply concerned over any development accompanying the aggravation of the war in Europe that may affect the status quo of the Netherlands Indies." The Netherlands Minister in Washington (Dr. Loudon) immediately issued a statement that his government would resist any "preventive protection" of its colonial possessions. Secretary Hull was equally quick to announce the attitude of the Department of State: "Intervention in the domestic affairs of the Netherlands Indies or any alteration of their status quo by other than peaceful processes would be prejudicial to the cause of stability, peace and security not only in the region of the Netherlands Indies but in the entire Pacific area." He then alluded to the provisions of the Root-Takahira Agreement of 1908 and the Four-Power Treaty of 1921 with reference to "the maintenance of the existing status quo in the region of the Pacific Ocean." President Roosevelt was about to leave

for a vacation at Warm Springs, Georgia, when the Hull statement was given to the press. He remarked that the Secretary of State had spoken "right to the point," and then significantly added: "I'll be right back if another country is invaded."

Japan did not take this threat very seriously and immediately inaugurated a policy of pressure upon France. On June 17 the Japanese Government presented to the Petain regime a series of demands which were aimed at stopping all shipments of supplies to Chungking through Indochina. Three days later these demands were complied with and the government of Chiang Kai-shek received a severe setback. On June 19 another Japanese victory was recorded. For a year pressure had been applied to British and French banks in Tientsin to compel them to turn over to Japanese authorities a large amount of silver that belonged to the Nationalist Government of China. These banks finally yielded to Japanese demands and also agreed to permit Japanese-sponsored paper currency to circulate in the British and French concessions. The British Foreign Office resented this Japanese pressure and on June 10 made inquiries through Lord Lothian as to the possibility of Anglo-American fleet movements in the Atlantic and Pacific. When Hull gave a negative answer, Lothian, accompanied by the Australian Minister, pointedly asked Hull on June 27 "whether Japan should be opposed or appeased." A stringent economic embargo could be imposed upon Japan and warships could be sent to Singapore as a demonstration of naval unity. These measures might compel the Japanese Government to adopt a less aggressive policy. If appeasement appealed to the Department of State, Britain was ready to make further concessions. On June 28, Hull vetoed the idea of an embargo and refused to consider the dispatch of any American warships to Singapore. He was equally opposed to a policy of appeasement. It would be best to let things drift along and let Japan take the initiative.

Japan was not backward in this regard. After securing from France an agreement to stop the shipments of war materiel to Chiang Kai-shek through Indochina, the Japanese Government persuaded Britain (July 17) to close the Burma Road for a period of three months. Munitions of war, gasoline, motor trucks, and railway materials could no longer reach China by this route. Secretary Hull, although he had refused to make any promise of support to Britain, announced that the United States had a "legitimate interest in keeping open the arteries of commerce in every part of the world." The closing of the routes to China through Burma and Indochina had been "unwarranted interpositions of obstacles to world trade."

The President Orders a Cautious Economic Offensive against Japan

While Secretary Hull was following a policy of watchful waiting, the President favored more forceful measures. Under the recently enacted National Defense Act authority was granted for a rigid control over exports from the United States. Secretary Morgenthau was eager to have the Treasury Department take over this job of export control, while Secretary Hull was exceedingly anxious that the task be given to another department.

He was fearful that Morgenthau's crusading fervor against the dictatorships might lead to a clash in the Pacific. The President finally decided to appoint a single administrator of export control who would be directly under White House supervision. Actually, the control of policy and the issuance of licenses remained in State Department hands.

The basic differences of opinion between the State and Treasury departments were highlighted by what occurred the last week in July 1940. On the evening of July 18, Secretaries Stimson, Knox, and Morgenthau dined with Lord Lothian and the Australian Minister. After the conversation had centered upon the impact of an oil embargo upon Japan, Lothian suddenly suggested that it might be possible for Britain to arrange for the destruction of the oil wells in the Dutch East Indies. If these two sources of supply were cut off from Japan her war machine would come to an abrupt stop.

When this matter was discussed at the White House, the President seemed deeply interested in this program of pressure but Sumner Welles promptly asserted that an embargo against Japan would lead to a Japanese attack upon British or Dutch colonial possessions. This viewpoint was sharply challenged by Knox, Morgenthau, and Stimson who advised bold measures to curb Japan. Morgenthau, realizing that he "spoke to the President's nature and inclination," drew up a proclamation that placed the export of all kinds of oil and all scrap metals under control. This was signed by the President who sent it to Welles for countersignature. Under the excited insistence of Welles the President discarded the proclamation he had signed and substituted one that dealt only with aviation motor fuel and lubricants, and No. 1 heavy melting iron and steel scrap.

The Japanese Embassy, seeing the newspaper accounts that spoke of total embargo upon oil and scrap metals, hurriedly made inquiries at the Department of State. Welles gave comforting reassurances as to the real scope of the President's proclamation and asserted that the action was not aimed at any particular country. The Japanese Government assailed this position in three long diplomatic notes but Welles, with his tongue in his cheek, held his ground. Lord Lothian, fearing that Roosevelt had tipped his hand, counseled greater prudence in the future, and this advice was strongly seconded by the Dutch representative. This policy of prudence, however, received a sharp and unexpected attack from Ambassador Grew. He had long been opposed to sanctions against Japan because he believed they would be the prelude to war. But in a long dispatch of September 12, 1940, he reversed his opinions:

"If we conceive it to be in our interest to support the British Empire in this hour of her travail, and I most emphatically do so conceive it, we must strive by every means to preserve the status quo in the Pacific at least until the European war has been won or lost. In my opinion this cannot be done . . . by merely registering disapproval and keeping a careful record thereof. . . . Until such time as there is a complete regeneration of thought in this country [Japan], a show of force, together with a determination to employ it if need be, can alone contribute effectively to the achievement of such an outcome and to our own future security."

This dispatch from Grew confirmed the President's desire to exert more economic pressure upon Japan. The Japanese thrust southward gave him increasing concern. On September 23, Japanese soldiers moved into Indochina and soon took over Tonkin Province. When this news reached the White House, together with reports that Japan was about to conclude an alliance with Germany, it was decided to place an embargo upon the shipment of all grades of iron and steel scrap to Japan. This was a step Japanese statesmen had anticipated by building up a large stockpile for immediate needs. The President's action was a challenge instead of a bombshell.

Japan Concludes an Alliance with the Rome-Berlin Axis

The alliance with the Rome-Berlin Axis was long in the making. The most important Japanese promoter of this agreement was General Hiroshi Oshima, the Japanese military attache and subsequently the Ambassador in Berlin. He and Ribbentrop were particularly intimate. In the summer of 1938, during the Sudeten crisis, Ribbentrop inquired if Japan would be willing to sign a treaty aimed at all the potential enemies of the proposed Rome-Berlin-Tokyo triangle. Tokyo rejected this proposal and in February 1939, Prince Ito was sent to Berlin to acquaint Ribbentrop with the decision that Japan wished to limit the proposed treaty to action against Russia alone. In April 1939, Ribbentrop redoubled his efforts to reach an intimate accord with Japan. He insisted that such an arrangement would be a warning to Washington to remain neutral in the event of an outbreak of war in Europe. But Japan remained cold to these suggestions, and after the signature of the Nazi-Soviet Treaty in August 1939 this fridity definitely increased.

But Ribbentrop never lost hope that he could induce Japan to enter into closer political relations with Germany, and through the agency of the I. G. Farben Chemical Trust large sums of money were spent in Japan for propaganda purposes. On June 12, 1940, Ambassador Ott reported that he was "still endeavoring to stir up Japanese ill-feeling against America by influencing the press and leading political personalities." On July 8, Naotake Sato arrived in Berlin for a conference with Ribbentrop. He remarked that Japan had drawn the attention of the United States "to herself since the beginning of the Chinese war, and that she tied up the American fleet in the Pacific Ocean." When the Nazi Foreign Minister inquired as to the fundamental differences between Japan and the United States, Sato pointed to the Nine-Power Pact. It seemed evident to Ribbentrop that Japan could soon be brought into intimate association with the Rome-Berlin Axis.

On July 12 a conference was held in Tokyo between representatives of the ministries of War, Navy, and Foreign Affairs with reference to the signature of a tripartite pact. In order to hasten their decision, Heinrich Stahmer hurried to Tokyo. The conversations between Stahmer and Matsuoka began on September 9 with Stahmer always emphasizing the fact that Germany's prime purpose in seeking the alliance with Japan was to keep America out of the war. By September 16 the opposition in Japan had been largely silenced, and on September 27 the pact was signed with great pomp in Berlin. Article

3 was phrased in language that pointed straight at the United States: "Japan, Germany and Italy . . . undertake to assist one another with all political, economic and military means when one of the three Contracting Parties is attacked by a power at present not involved in the European War or in the Sino-Japanese Conflict."

There is evidence to show that Japan extracted from Stahmer a secret oral understanding that she retain for herself the right to decide whether the *casus foederis* existed in any situation that might arise. There is further evidence to indicate that Japan signed the tripartite pact primarily to deter the United States from entering the war. In the instructions from the Japanese Foreign Minister to Admiral Nomura on October 8, 1941, it was repeatedly stated that one of the reasons why Japan entered into the alliance with Germany and Italy was to maintain "amicable relations with America." Matsuoka made a similar statement to Masuo Kato in 1941. In September 1940 it was difficult for the Department of State to appreciate this viewpoint.

America Draws Closer to Britain

To the Roosevelt Administration it seemed obvious that the new Rome- Berlin-Tokyo Axis was a design for war. In order to sound a note of defiance to this menacing political alignment, the President, on October 12, boldly declared that the "Americas will not be scared or threatened into the ways the dictators want us to follow.... No combination of dictator countries of Europe and Asia will stop the help we are giving to almost the last free people fighting to hold them at bay" In order to implement these bold words, the President had already instructed the Department of Agriculture to cease paying subsidies for wheat exports to the Far East since much of this grain was being purchased by Japan. At the same time Prime Minister Churchill announced in the House of Commons that the Burma Road would be opened on October 8. Throughout November and December 1940, Lord Lothian continued to push for joint talks and joint action in the Far East. The conference between Secretary Hull and the British Ambassador on November 25 was typical:

"The British Ambassador came in at his request, having just returned from London. He referred to the Far Eastern situation with apprehension, saying that he believed the Japanese were likely soon to attack Singapore. . . . The main point the Ambassador raised was that there should be conferences between the naval experts of our two Governments with respect to what each would or might do in case of military outbreaks on the part of Japan. I [Hull] said that, of course there could be no agreement entered into in this respect, but there should undoubtedly be collaboration with the view of making known to each other any and all information practicable in regard to what both might have in mind to do, and when and where, in case of a military movement by Japan in the South or in some other direction."

"The Ambassador said that the information he had gathered in London was that, while our Naval Attache, Admiral Ghormley, was a good man, he consistently declined to discuss

possible future plans on the ground that he had absolutely no authority. . . . He said he hoped there would be discussion between his and our high naval officials with respect to all phases of the Pacific situation."

We have already seen how these conversations between Hull and Lord Lothian resulted in the Joint Staff conferences that began in Washington in the last week of January 1941. These conferences paralleled a drive to put into effect an embargo upon exports to Japan. On December 10 the White House issued a statement announcing that after December 30 new licensing restrictions would apply to exports of iron ore, pig iron, ferroalloys, and "certain iron and steel manufactures and semi-manufactures." On December 20 restrictions were placed upon the export of bromine, ethylene, abrasives, hydraulic pumps, and equipment for the production of aviation lubricating oil. Three weeks later (January 10, 1941) this economic offensive shifted to restrictions upon the export of copper, brass, zinc, nickel, and potash. These proclamations were followed by a series of others that seemed to touch everything from radium to kip skins—that is everything but oil.

Matsuoka and Prince Konoye Are Willing to Sacrifice Japan's Position in China for the Cause of Peace

While the President was preparing this new economic offensive against Japan, Matsuoka was prepared to sacrifice Japan's position in China for the cause of peace. In November 1940, Matsuoka asked Bishop James E. Walsh, Superior General of the Catholic Foreign Mission Society of Maryknoll, New York, and Father J. M. Drought, of the same order, to undertake a special mission to Washington in order to impress upon the President the fact that the Japanese Government "wished to negotiate a peace agreement: (1) An agreement to nullify their participation in the Axis Pact . . . (2) a guarantee to recall all military forces from China and to restore to China its geographical and political integrity." Other conditions bearing upon the relations of Japan and the United States were to be explored and agreed upon "in the conversations that it was hoped would ensue."

Bishop Walsh and Father Drought then had a conference with General Muto, the director of the Central Bureau of Military Affairs, who assured them that "he and his associates in the Japanese Army were in accord with the efforts to reach a peace agreement." Bishop Walsh and Father Drought hurried to Washington where (on January 23, 1941) they placed the whole matter before President Roosevelt and Secretary Hull during a long conference of more than two hours. They were told that the matter would be "taken under advisement," and thus ended an anxious effort on the part of the Japanese Government to find a path to peace even though this path led to a renunciation of Japan's objectives in China and a tremendous loss of face. It seems quite possible that the Far Eastern Military Tribunal brought to trial the wrong persons. It might have been better if the tribunal had held its sessions in Washington.

An Informal Negotiation Looking towards an Improvement in Japanese-American Relations

Just before Bishop Walsh and Father Drought placed their peace proposal before the President, an informal Japanese peace delegation began some fruitless conversations with officials in the Department of State. This delegation was headed by S. Hashimoto, once a member of the Amur Society and more recently connected with Shi-Un-So, the Purple Clouds Society. Mr. Hashimoto was devoted to the cause of peaceful relations between the United States and Japan and he had connections with important members of the Japanese Government. In lengthy conversations with Mr. Hornbeck, Mr. Hamilton, and Mr. Ballantine he explored every phase of the difficulties between Japan and the United States. To Mr. Hashimoto it appeared obvious that the best way to improve Japanese-American relations was for the Department of State to convince Prince Konoye of the "desirability of pursuing a new course." If America would help to secure for Japan "an open door to trade in the colonial possessions of various countries throughout the world," Prince Konoye might have the courage of his real convictions. This friendly gesture would be of enormous value. Mr. Hornbeck had no use for friendly gestures towards Japan. Japan should be chided, not conciliated. His answer to Hashimoto's plea for new efforts towards a friendly understanding was a gruff negative:

"It is Japan, not the United States, that has been the aggressor: Japan, not the United States, has disregarded law, violated treaties, killed and injured persons, created fear, destroyed property, discriminated, necessitated evacuations, piled up armaments, seized territory and threatened to seize more, et cetera. . . . It is Japan, not the United States, that has made threats and talked of war."

Blueprint for Anglo-American Co-operation

While informal negotiations looking towards an improvement in Japanese- American relations were reaching an impasse, the formal Joint Staff conferences between the American delegation and representatives of Britain, Canada, Australia, and New Zealand finally resulted in the ABC-1 Staff Agreement. During the sessions the British had ardently argued that the defense of Singapore was so essential that the United States should be willing to divide the Pacific fleet for that purpose. This proposal was rejected by the American delegation. In the ABC-1 Staff Agreement, in the event of American intervention in the war, the main task assigned to the American fleet was a defensive one (the protection of our island possessions). But it was also to undertake diversions in the direction of the Marshall and Caroline Islands and to attack Japanese communications and shipping. The plan, therefore, provided for connected but not joint naval operations.

After an extended consideration of all the factors involved, the plan was endorsed by the Secretaries of the Navy and War; the President gave it no explicit approval. It was soon apparent, however, that American military plans were profoundly affected by it. The

changes made in them were far more than mere technical details: they indicated a close community of thought between important representatives of America and Britain. They were additional bonds drawing the two countries closer together and all their dangerous implications were not lost upon the President. A blueprint had been drawn for Anglo-American co-operation. It would be implemented as soon as the Chief Executive could find a pretext for doing so.

Japan Seeks Peace, Not War, with the United States

As Hitler moved towards war with Russia he began to think more and more of Japanese assistance in this projected struggle with the Soviets. During a conference with his military leaders on January 8-9, 1941, Stalin was denounced as a "cold-blooded blackmailer" who would, if he found it expedient to do so, repudiate "any written treaty at any time." In any contest with Russia, Germany could receive vital help from Japan. Japanese assistance against Britain was equally important. When General Oshima returned to Germany in 1941 he hurried to Fuschl to see his old friend, Ribbentrop. The Nazi Foreign Minister had a great deal to say. Japan, in its own interest, should enter the war "as soon as possible." This intervention would destroy England's key position in the Far East. It was also "bound to keep America out of the war."

On March 3, Ribbentrop renewed his pressure upon Oshima in favor of an early entry into the war by Japan. He again advised that no action be taken against the United States. Two days later (March 5), Hitler issued a secret order to the German armed forces which summarized the Ribbentrop viewpoint:

"It must be the aim of the collaboration based on the Three Power Pact to induce Japan as soon as possible to take active measures in the Far East. Strong British forces will thereby be tied down, and the center of gravity of the interest of the United States of America will be diverted to the Pacific.... The common aim of the conduct of the war is to be stressed as forcing England to the ground quickly and thereby keeping the United States out of war."

On March 26, Matsuoka, now serving as the Japanese Foreign Minister, arrived in Berlin. On the following day Ribbentrop plied him with the usual arguments. It would be "very advantageous if Japan would decide as soon as possible to take an active part in the war upon England." Japanese intervention would be "most likely to keep America out of the war." When Matsuoka was taken into the presence of Hitler he heard a repetition of Ribbentrop's remarks, but he refused to commit himself. On March 28, Ribbentrop continued the conversations with Matsuoka and the war in the Pacific was discussed from all angles. Finally the Japanese Foreign Minister bluntly inquired about the attitude of Germany towards America after Britain was defeated. Ribbentrop quickly answered that "Germany did not have the slightest interest in a war against the United States." Matsuoka closed the conference with the expression of a wish that America might be converted to "our way of thinking."

Matsuoka moved from Berlin to Moscow where on April 13 he signed with Molotov a neutrality pact. It is possible that Hitler welcomed this pact as a part of his scheme to lull Russian suspicions with reference to the approaching Nazi offensive, but it is certain that it aroused apprehensions in many minds in Berlin.

Admiral Nomura Strives to Improve Japanese-American Relations

The appointment of Admiral Nomura as ambassador to the United States was another friendly gesture on the part of the Japanese Government. The new ambassador had been the naval attache in Washington during the World War where he formed a friendly acquaintance with Franklin D. Roosevelt then serving as the Assistant Secretary of the Navy. He had also been a member of the Japanese delegation to the Washington Disarmament Conference, 1921-1922. His reception at the White House (February 14) was cordial but the President frankly referred to the fact that relations, between Japan and the United States were steadily "deteriorating." At the State Department he discovered a studied "policy of coolness toward the Japanese."

On March 8, Hull and Nomura had their first conversation on Japanese- American relations. Subsequently they met more than forty times in vain endeavors to find some firm ground on which to build a new structure of friendship. Hitler viewed these negotiations with frank alarm. As Ribbentrop later remarked:

"The Fuehrer . . . saw the attitude of the United States "short of war" and he was worried . . . about groups in Japan who wanted to come to an arrangement with America. He was afraid that if an arrangement would be made between the United States and Japan, this would mean, so to speak, the back free for America and the expected attack or entry into the war by the United States would come quicker."

Ribbentrop, in the spring of 1941, exerted strong pressure upon the German Ambassador in Tokyo with reference to the Hull-Nomura talks. Japan should insist upon the abandonment of unneutral policies on the part of the United States. The ambassador, in turn, emphasized to the Japanese Foreign Office the importance of being firm with the United States. That was the only way to keep America neutral.

Matsuoka Advises a Policy of Delay

In the spring of 1941 before he left for Berlin, Matsuoka wrote to Thomas Lamont a "passionate plea" for the promotion of better understanding between Japan and the United States. When he reached Rome, en route to Berlin, he received a message from the Japanese Embassy in Washington that "a specially chartered airplane was waiting for him at Lisbon to take him to America for a confidential meeting with the President. This had been arranged by Roy Howard, Matsuoka's intimate friend." But Matsuoka would first have to go to Berlin and Moscow to complete the important items in his program.

In Moscow he talked freely with Ambassador Steinhardt in an effort to prepare the way for conversations in Washington. When he arrived in Dairen on April 21 he received a call from Konoye who asked him to fly at once to Tokyo. He returned to the capital to find an American proposal that Nomura had just cabled from Washington.

At this point, according to the story as related by Toshikazu Kase, Matsuoka found that negotiations in Washington were being conducted on the basis of a series of "informal" conversations between two American Catholic priests "and an ex-official of the Japanese Treasury Department whose integrity was rather dubious." For this reason, Matsuoka asked for a halt in the negotiations. As a matter of fact, Mr. Kase is badly confused in this matter of the negotiations. As the deposition of Bishop Walsh clearly shows, Matsuoka himself asked Bishop Walsh and Father Drought to go on a special mission to Washington, and their program was worked out in a series of conferences among Foreign Office officials, General Muto, and Prince Konoye. It is certainly incorrect to state that this mission had "been inaugurated without the knowledge of the foreign minister."

Secretary Hull and Ambassador Nomura Search in Vain for a Formula of Peace

During the spring and summer of 1941, through more than forty conversations between Hull and Nomura, the search for a formula of peace was carried on in vain. The story of these negotiations is told in great detail in the memoirs of Prince Konoye and in the documents published by the Department of State.

The Japanese Government was willing to give two important pledges: (1) to use only peaceful measures in the southwest Pacific; (2) to go to the support of Germany only in the event she was the object of aggression. In return for these pledges Japan wished America (1) to restore normal trade relations between the two countries; (2) to assist Japan to secure access to basic raw materials in the southwest Pacific area; (3) to exert pressure upon Chiang Kai-shek so that he would consent to certain peace terms; (4) if Chiang refused to yield to this pressure the American Government would withdraw support from his regime; (5) and finally, to lend friendly diplomatic assistance aimed at the removal of Hongkong and Singapore as doorways "to further political encroachment by the British in the Far East." Secretary Hull countered with a memorandum emphasizing the following points: (1) respect for the territorial integrity and the sovereignty of each and all nations; (2) support of the principle of noninterference in the internal affairs of other countries; (3) support of the principle of equality, including equality of commercial opportunity; (4) nondisturbance of the status quo in the Pacific except as the status quo may be altered by peaceful means.

The discussion of these bases for a friendly accord was not helped by occasional verbal pyrotechnics on the part of Matsuoka. On May 14 he had a conversation with Ambassador Grew during the course of which he sharply criticized the attitude of the United States towards Germany. American attacks upon German submarines might bring into action Article 3 of the Tripartite Pact of September 27, 1940. This conversation was the subject

of comment by Sumner Welles during a conference with the British Ambassador. Lord Halifax inquired as to the progress of the Hull-Nomura talks. Was there any chance that they would have a successful outcome? Welles thought that the "chances might not be better than one in ten." He then handed to Halifax a copy of a letter Matsuoka wrote to Grew immediately after their conversation on May 14. It was written in such a rambling style that Halifax thought it "bore evidence of lunacy." Welles shared this impression but finally came to the conclusion that it "might be due to the fact that Mr. Matsuoka was understood to be drinking extremely heavily at this time and the mental state apparent in the writing of this letter might be momentary rather than permanent." It is obvious that Matsuoka's belligerent state of mind was a result of the pressure from Berlin. Hitler would soon launch his attack upon Russia and he was particularly anxious that America remain neutral.

But this Japanese threat failed to restrain Roosevelt. On June 20 an announcement was made in Washington that no more oil would be exported from American eastern ports (including the Gulf of Mexico) except to the British Empire and the Western Hemisphere. Two days later, Hitler's armies crossed the Russian frontier and the German offensive began to roll. When the news reached Tokyo, Matsuoka rushed to the Emperor and vehemently argued that Japan should support Germany by immediately attacking Russia. He readily admitted that his program implied possible war with the United States.

Although Konoye wished to apply a brake to the forward tactics of Matsuoka, the Japanese army leaders were restive, and liaison conferences on June 25 and July 2 mapped a new and dangerous program: (1) Japan should not rush into a conflict with the Soviets; (2) the tripartite pact should not be abandoned; (3) Japan should move south into Indochina.⁸¹ Knowledge of this decision reached Washington during the first week in July. The Japanese code had been broken and from July to December 1941 the President and the Secretary of State could read the instructions from the Japanese Foreign Office to Ambassador Nomura. The projected Japanese drive to the South was soon familiar in all its details.

Matsuoka Is Dropped but Roosevelt Grows More Belligerent

Prince Konoye reluctantly accepted the decisions of the liaison conferences but he was determined not to endure the constant arguments of Matsuoka for a bolder policy towards the United States. During the new liaison conferences of July 10 and 12, Matsuoka led a bitter attack upon the United States and even asked for a termination of the Hull-Nomura conversations. But the Army and Navy representatives in the conference were strongly in favor of the continuation of the talks, so Matsuoka's proposal was quickly defeated. It was evident that the Foreign Minister was quite unpopular with his colleagues who decided to get rid of him by indirection. On July 16 the whole Cabinet resigned. Konoye was then asked to form a new cabinet, and when it was organized, Admiral Toyoda was given the post of Foreign Minister. This significant cabinet change made

little impression upon the President and several of his advisers who had been pushing for sanctions against Japan. One of the most active of these was Secretary of War Henry L. Stimson. As early as December 16, 1940, he confided to his diary that eventually America would be drawn into the war. During the spring and summer of 1941 he was constantly pressing the President to take stronger measures against the Germans.

Some of the instructions sent by Tokyo to Nomura strengthened the Stimson counsel. These intercepted messages were placed before the President and influenced his decisions. On July 14 a particularly important message was decoded. It clearly outlined Japanese objectives: "The immediate object of our occupation of French Indochina will be to achieve our purposes there. Secondly, its purpose is, when the international situation is suitable, to launch therefrom a rapid attack. . . . In the main, through the activities of our air arm . . . we will once and for all crush Anglo-American military power and their ability to assist in any schemes against us." A week later the Foreign Office sent an ominous instruction to Ambassador Nomura:

"Should the U.S. . . . take steps at this time which would unduly excite Japan (such as . . . the freezing of assets), an exceedingly critical situation may be created. Please advise the United States of this fact, and attempt to bring about an improvement in the situation."

The very step that the Japanese Foreign Office greatly feared was then being seriously discussed by American cabinet officials. The Navy Department counseled caution, the Treasury Department was anxious for prompt action against Japan, while the Department of State vacillated from day to day. On July 24 the President had a conference with Ambassador Nomura and talked with brutal frankness. He said that he had not shut off oil supplies from Japan because such action would have furnished a pretext for "moving down upon the Netherlands East Indies." But in view of the oil shortage in the eastern part of the United States there were many persons who were asking why further oil shipments to Japan were permitted while she was following a policy of aggression. In the event that Japan did move upon the Netherlands East Indies she could be certain that Britain would rush to the assistance of the Dutch, and this, in turn, might involve the United States in hostilities. The President then stated that he had a proposal to make to the Ambassador:

"If the Japanese Government would refrain from occupying Indochina with its military and naval forces, or, had such steps actually been commenced, if the Japanese Government would withdraw such forces, the President could assure the Japanese Government that he would do everything within his power to obtain from the Governments of China, Great Britain, the Netherlands, and of course the United States itself a binding and solemn declaration . . . to regard Indochina as a neutralized country."

On the following day (July 25) Colonel Iwakuro had a long talk with Mr. Ballantine and expressed the hope that an understanding with the United States could be effected. As far as Japan was concerned this could be achieved in a satisfactory manner if the

American Government "did not take measures in the nature of embargoes or freezing of assets against Japan." The President was not impressed with this gesture of good will. On the following day (July 26) an order was issued freezing Japanese funds in the United States. When Ambassador Nomura called at the Department of State to inquire as to the administration of this order, he was received in a definitely cold manner by Sumner Welles. He expressed the hope that the measure would not mean any "further deterioration in the relations of our two countries," but Welles parried the indirect query by remarking upon the "extraordinary patience which the United States had demonstrated in its relations with Japan during recent years." Nomura quietly stated that he believed the best thing to do under the circumstances was to adopt some "compromise solution which would prove acceptable to both sides." Welles crisply replied that he did not see "that there was the slightest ground for any compromise solution." It was evident that Welles was thinking of war.

This feeling of a deadlock was deepened during a conversation between Welles and Mr. Wakasugi, the Japanese Minister to the United States. Wakasugi was about to return to Tokyo to report to his Government on the actual state of Japanese-American relations. He wanted a frank statement from Mr. Welles in this regard. The Acting Secretary of State was glad to respond in his usual cold, detached manner. Japan should always keep in mind the basic principles of American foreign policy:

"The maintenance of peace in the Pacific; the renunciation by all of the powers interested in the Pacific of force and of conquest as their national policy; the recognition of the rights of independent and autonomous peoples of the Pacific to independence and integrity; and equal opportunity and fair treatment for all. . . . If Japan continued on an aggressive policy of force and undertook moves of expansion . . . I thought it necessary at this stage to say that in my judgment such a situation as that would inevitably be regarded as intolerable by the United States and . . . would inevitably result in armed hostilities in the Pacific."

This threat of war was very discouraging to Wakasugi who clearly realized that Japanese-American relations had reached an impasse that had very dangerous implications. On the following day (August 5) he received an instruction from Tokyo that gave ample evidence of the deep concern the Foreign Office felt with regard to the situation: "We are convinced that we have reached the most important, and at the same time the most critical, moment of Japanese-U.S. relations." In order to improve these strained relations the Japanese Government was willing to pledge that it would "not further station its troops in the Southwestern Pacific areas except French Indo-China and that the Japanese troops now stationed in French Indo-China will be withdrawn forthwith on the settlement of the China Incident." Japan would gladly guarantee the neutrality of the Philippine Islands if the United States, in turn, would suspend its military measures in the southwestern Pacific areas, would help Japan to secure access to the important natural resources of these areas, and would also restore normal trade relations between Japan and the United States. In answer to an oral statement by the Japanese Ambassador, Hull replied that

he felt "very discouraged indeed" about future relations between the two countries.

Similar discouragement in Tokyo led the Konoye Ministry to send instructions to Nomura to sound out Secretary Hull about a joint meeting between the Prime Minister and President Roosevelt. When the Japanese Ambassador handed to Hull this proposal for a conference between Prince Konoye and President Roosevelt, the reply came in the form of a written memorandum which rejected the Japanese proposals of August 6 as "lacking in responsiveness." It was evident that Hull thought no purpose would be served by a Konoye-Roosevelt meeting. This fact was clear to Nomura who cabled the Foreign Office that he greatly feared "that even the offer of the Prime Minister to personally come here would not move the United States to any perceptible degree." He could only report that he saw "dark clouds over the world."

The Atlantic Conference Pushes America Closer to a Break with Japan

For Japan there were very dark clouds along the Newfoundland horizon. On the evening of August 9, in the Newfoundland harbor of Argentia, Roosevelt and Churchill had their first conference. The British were particularly concerned about the danger of a Japanese thrust into the southwest Pacific area, and Sir Alexander Cadogan had drafted parallel Anglo-American declarations designed to halt this possible advance. America was to state very frankly that "any further encroachment by Japan in the Southwestern Pacific" would compel the United States to take measures that might lead to war. In order to implement this declaration the President was to "seek authority from Congress" to employ American armed forces as he thought best. The President at once rejected any thought of consulting with Congress. On his own initiative and responsibility he would let the Japanese Government know that if her armed forces moved southward, "various steps would have to be taken by the United States notwithstanding the President's realization that the taking of such further measures might result in war between the United States and Japan." But Sumner Welles thought that the United States should play the role of policeman in a much wider area than the southwest Pacific. America should be ready to repel any Japanese thrust whether it was directed "against China, against the Soviet Union or against the British Dominions or British colonies, or the colonies of the Netherlands in the Southern Pacific area." Churchill and Roosevelt were in hearty agreement with this wider formula, but the President was too cautious to broadcast it to the American public. It had better remain a secret understanding.

Churchill had failed to secure a parallel declaration that pointed straight to war, but the Roosevelt pledges of support relieved most of his fears. This fact was revealed in his speech to Parliament on January 27, 1942: "The probability, since the Atlantic Conference . . . that the United States, even if not herself attacked, would come into a war in the Far East, and thus make final victory sure, seemed to allay some of these anxieties. . . . As time went on, one had greater assurance that if Japan ran amok in the Pacific, we should not fight alone."

Roosevelt Refuses to Meet Prince Konoye

In a statement he handed to the Japanese Ambassador on August 17, Roosevelt carried out his pledge to Churchill. It was phrased in language that was not unduly provocative, but its meaning was very clear:

“If the Japanese Government takes any further steps in pursuance of a policy or program of military domination by force or threat of force of neighboring countries, the Government of the United States will be compelled to take immediately any and all steps which it may deem necessary toward safeguarding the legitimate rights and interests of the United States and American nationals and toward insuring the safety and security of the United States.”

With reference to a meeting between Prince Konoye and President Roosevelt, the Japanese Ambassador was informed that if his Government was ready “to suspend its expansionist activities” and embark upon a “peaceful program for the Pacific,” the government of the United States “would be glad to endeavor to arrange a suitable time and place to exchange views.” Before this Roosevelt statement could reach Tokyo, Foreign Minister Toyoda had a conference with Ambassador Grew and once more strongly pushed the idea of a meeting at Honolulu between Konoye and Roosevelt. He ardently hoped that at such a meeting it would be possible “to reach a just and equitable agreement.” Grew was so deeply impressed with the sincerity of Toyoda’s plea that he immediately sent a dispatch to Secretary Hull and urged, “with all the force at his command, for the sake of avoiding the obviously growing possibility of an utterly futile war between Japan and the United States, that this Japanese proposal not be turned aside without very prayerful consideration. . . . The opportunity is here presented . . . for an act of the highest statesmanship . . . with the possible overcoming thereby of apparently insurmountable obstacles to peace hereafter in the Pacific.” On August 28, Ambassador Nomura delivered to President Roosevelt a personal message from Konoye pleading for a meeting which could “explore the possibility of saving the situation.” In his remarks to Nomura with reference to a possible meeting with Konoye, the President appeared to think that it would be difficult for him to go as far as Hawaii. Possibly Juneau, Alaska, would be more suitable.

As the President vacillated as to what course to pursue about this proposed meeting with Konoye, an Imperial conference was held on September 6. It was finally decided that Japanese preparations for war would have to be continued so “that they be completed approximately toward the end of October.” At the same time, the Foreign Office should “endeavor by every possible diplomatic means to have our demands agreed to by America and England.” If these negotiations did not lead to favorable results by the early part of October, then the government should “get ready for war against America.” The position of Japan was very clear. It was insisting upon American recognition of Japan’s dominance in the Far East. In the Root-Takahira Agreement of November 30, 1908, we had given Japan a green light to move ahead in Manchuria. Japan had taken advantage of President

Theodore Roosevelt's friendly suggestions and had strongly entrenched herself in large areas in North China. In the face of rapidly expanding Russian power in the Far East, this action had been regarded as a national imperative. In the Far East the future belonged either to Japan or Russia, not to a China that had been exhausted by an endless cycle of war, revolution, and war. The policy of President Franklin D. Roosevelt and Secretary Hull in giving strong support to a gravely weakened China was highly unrealistic, and the later collapse of the American position in China stems straight back to the decisions taken in September and October 1941.

During the eventful weeks of September, President Roosevelt seemed unable to make up his mind concerning a meeting with Konoye. In order to dispel this sense of uncertainty, the Division of Far Eastern Affairs (Mr. Ballantine) prepared a long memorandum which was highly critical of Japan. In conclusion, Mr. Ballantine remarked: "The holding of the meeting between the President and the Japanese Prime Minister on the basis of the present status of the discussions between this country and Japan would result in more of disadvantage than of advantage as regards this country's interests and policies." From Tokyo, Ambassador Grew spoke from an entirely different angle. He would not stand inflexibly upon certain principles and demand that Japan agree to accept every one of them. Political differences can be expressed in subtle shades that need not affront nations involved in serious controversy; one does not have to insist upon the conventional pattern of black and white. If America would show some slight spirit of compromise, this concession might evoke concessions on the part of Japan and some path to understanding might be found. There was no real point in insisting that Konoye agree in advance to a long agenda which would awaken instant opposition in Japan. During the sessions of a conference between Konoye and Roosevelt it was highly possible that a spirit of reciprocity might arise which would turn thoughts from war to peace. The situation required statesmanship of the highest order. There seemed no reason to doubt that it could be found in Washington.

Unfortunately, at this time of national crisis, President Roosevelt did not measure up to the demands of the hour. Without the courage to make a decision in the matter of meeting Konoye, he pushed the responsibility upon the shoulders of Secretary Hull. Hull did not hesitate. He was always "Wound-up" for such occasions. On October 2 he handed to Ambassador Nomura a statement that contained all the Hull cliches about high moral principles being the directing force in international relations. Dubious American practices in the Caribbean were not mentioned. After a long rehearsal of the reasons why the Hull-Nomura conversations had been a flat failure, he sonorously remarked that before there could be a meeting between the President and Prince Konoye, there would first have to be an agreement upon basic principles of policy. He knew that such an agreement was not possible. He had cleared the decks of the American ship of state for war at any time. It would not be long in coming.

General Marshall and Admiral Stark Oppose an Ultimatum to Japan

The Hull note of October 2 did not kill all Japanese hopes for an adjustment of difficulties with the United States. Konoye retained a faint belief that through indirect channels he still might find a means of convincing President Roosevelt of his sincerity. Through August and September 1941 he had worked through Bishop Walsh, of the Maryknoll mission, who sent many messages to Father Drought in New York. These messages, which revealed a strong desire for accommodation, were "concealed under missionary phraseology." Father Drought conveyed the messages to Washington, but to no avail. Finally, on October 14, Walsh was commissioned by Konoye to hurry to Washington and tell the President that "the pressure of events on the Japanese Government was such that it would not be able to negotiate much longer." The Konoye Ministry fell long before Walsh reached Washington. In the meantime, Foreign Minister Toyoda had turned to the British Ambassador in Tokyo and requested his help with regard to the Konoye- Roosevelt meeting. Craigie at once cabled to London his view of the situation. It was decidedly critical of the Hull policy:

"By pursuing a policy of stalling, the United States is arguing about every word and every phrase on the grounds that it is an essential preliminary to any kind of an agreement. It seems apparent that the United States does not comprehend the fact that by the nature of the Japanese and also on account of the domestic conditions in Japan, no delays can be countenanced. It would be very regrettable indeed if the best opportunity for the settlement of the Far Eastern problems since I assumed my post here, were to be lost in such a manner. . . . Both the U.S. Ambassador in Japan and I are firmly of the opinion that it would be a foolish policy if this superb opportunity is permitted to slip by by assuming an unduly suspicious attitude."

On October 7, in a final bid for an understanding with the United States, Toyoda told Grew that it seemed apparent that the United States "wished the Japanese Government to revert at once and unqualifiedly to the status quo which had prevailed four years ago. . . . The Japanese Government was willing and prepared to return to the situation prevailing four years ago but it was essential that the Government of the United States should understand that to undo virtually at a moment's notice the work of the past four years is an undertaking of tremendous scope." It would take time on the part of the Japanese Government and understanding on the part of the American.

But these gestures of conciliation failed to evoke the hoped-for response from Washington, so on October 16 the Konoye Cabinet resigned. In the new Cabinet, General Hideki Tojo assumed the post of Prime Minister, with Shigenori Togo as the new Minister of Foreign Affairs. The story of the attempts of the Tojo Cabinet to find some formula of accommodation with the United States is a twice-told tale that does not have to be repeated here. The hopelessness of the situation was apparent to Ambassador Grew who warned Secretary Hull that "action by Japan which might render unavoidable an armed conflict with the United States may come with dangerous and dramatic suddenness."

The Army feared this sudden Japanese attack upon an American outpost, and they were deeply disturbed during a meeting of the Army- Navy Joint Board when Mr. Hornbeck, representing the Department of State, advocated a firm stand against Japan. The armed forces were not ready for war with Japan, and they resented the pressure of Chiang Kai-shek for assistance that might lead to American intervention. On November 2 the Generalissimo wrote to Roosevelt that a new Japanese offensive against Yunnan might shake the morale of the Chinese Army and the Chinese people "to its foundation." For the "first time in this long war a real collapse of resistance would be possible" if the Japanese drive succeeded in taking Kunming. General Marshall and Admiral Stark were extremely anxious that these appeals from Chiang should not push the President to some rash act. On November 5, after a review of the situation in the Far East, they strongly recommended that "no ultimatum be delivered to Japan."

This blunt recommendation temporarily slowed the President's progress down the road to war. On the following day (November 6) he had a talk with Secretary Stimson with reference to the pressing need for time to complete American military preparations. It might be well for the Department of State to arrange for a truce "in which there would be no movement or armament for six months." Stimson opposed such a truce. It was still "very important to keep the Chinese in the war, and I believed that they would feel that such a truce was a desertion of them, and that this would have a very serious effect on Chinese morale." On November 7 the President polled the Cabinet on the question of whether he would receive popular support "if it became necessary to strike at Japan in case she should attack England in Malaya or the Dutch in the East Indies. The Cabinet was unanimous in the feeling that the country would support such a move." This unanimity was not as genuine as Secretary Stimson's diary would indicate. Hull thought that there was definite need for numerous speeches throughout the country which would prepare the people for the possibility of war. The tragedy of the situation was that America was really at war without any clear perception of that fact by the popular mind. As Admiral Stark wrote to Admiral Hart on November 7: "The Navy is already in the war of the Atlantic, but the country doesn't seem to realize it. Apathy, to the point of opposition is evident in a considerable section of the press. . . . Whether the country knows it or not, we are at war."

Japan Is Maneuvered into Firing the First Shot at Pearl Harbor

In the second week in November 1941 tension began to mount in Tokyo. On November 10 the Japanese Foreign Minister expressed to Grew the opinion that the "preliminary and exploratory conversations" in Washington had proceeded long enough. It was time for both countries to "enter into formal and official negotiations." The Japanese Government had "repeatedly made proposals calculated to approach the American point of view, but the American Government. . . had taken no step toward meeting the Japanese position." On this same day (November 10), Ambassador Nomura presented to President

Roosevelt a further explanation of his Government's proposals. In the meantime the Japanese Foreign Office instructed Nomura that November 25 was the deadline. All negotiations would have to be concluded by that date. This deadline was repeated from Tokyo on November 11. Under pressure from the Foreign Office, Nomura was extremely anxious to secure an early answer to the Japanese proposals of November 7 and 10. While he was awaiting this answer, he noted the military preparations that were being rushed by the Roosevelt Administration: "They are contriving by every possible means to prepare for actual warfare." Tokyo replied to this cablegram by insisting that the deadline of November 25 was "an absolutely immovable one."

Secretary Hull knew of this deadline through intercepted Japanese instructions to Nomura, so on November 15 he handed to Nomura a long oral statement setting forth the bases of an agreement. He knew they would not be acceptable to Japan. Complete control over "its economic, financial and monetary affairs" should be restored to China, and Japan should abandon any thought of preserving in China, or anywhere else in the Pacific area, a "preferential position." The abrupt tone of this note was a challenge that could easily lead to a break in diplomatic relations. Japan had long feared that such a break was inevitable, but in a final attempt to stave off such an emergency it had been decided to send to Washington another diplomat who would assist Nomura in the delicate negotiations that were hanging by a very slender thread. The new appointee, Saburo Kurusu, had served as consul in Chicago and New York and had recently been in Berlin as ambassador. His happy marriage to an American girl gave him a personal interest in maintaining friendly relations between Japan and the United States.

On November 17, Nomura and Kurusu had a talk with President Roosevelt, and then long, inconclusive conversations with Hull were carried on. To Kurusu it seemed that the President was "very much in earnest in regard to effecting an understanding between Japan and the United States." With Hull, little progress was made. This was particularly true with reference to a solution of the difficulties between China and Japan. Roosevelt seemed to have taken a liking to his old naval acquaintance, Nomura, and was not ready to push things. One day Lowell Mellett and Max Lowenthal paid a visit to the office of Senator Burton K. Wheeler to convey the information that "the President does not want to push America into the war." The Senator took this statement with a large grain of salt, but he remembered that at times Secretary Hull had been more belligerent than the President. This fact had been particularly evident during the sessions of the Democratic National Convention in 1940. When Wheeler was putting up a strong fight to write an antiwar plank in such specific terms that the President could not disregard it, "Jimmy" Byrnes confided to him that Hull was strongly against such a plank. It would prevent him from exerting maximum pressure upon Japan.

In November 1941 the Hull policy of pressure upon Japan was being implemented at full strength. On November 20, Kurusu discussed with Hull the matter of bringing to a close the hostilities between China and Japan. The Japanese Foreign Office believed this could be arranged if the United States would stop sending supplies to China. After stressing

this point, Nomura then remarked: "If the tension between Japan and the United States can be relaxed, be it ever so little, particularly in the southwestern Pacific, and quickly clear the atmosphere, then I think we could go on and settle everything else." Kurusu pushed the idea of a *modus vivendi*,^{12*} and President Roosevelt responded by outlining one that might be accepted. The fourth item in this Presidential proposal read as follows: "U.S. to introduce Japs to Chinese to talk things over but U.S. to take no part in their conversations. Later on Pacific agreements."

Japan met this show of conciliation with a concession of her own. The deadline in the negotiations was now extended from November 25 to November 29. But this was the final concession: "This time we mean it, that the deadline absolutely cannot be changed. After that things are automatically going to happen." On the same day that this deadline was extended (November 22), Nomura and Kurusu once more met Hull in conference. It was soon apparent from his tone that there was small chance that Japanese conditions for a truce would be accepted: (1) a revocation of the American order of July 26 freezing Japanese credits in the United States and thereby stopping all shipments of oil from American ports; (2) American consent to a program aimed at increasing the export of oil and other commodities from the Netherlands East Indies to Japan; (3) American mediation between China and Japan so as to initiate negotiations between the two powers and the cessation of American assistance to Chiang Kai-shek. American consent to these conditions was out of the question even if Japan made far-reaching concessions in return.

During the conference on November 22, Hull acidly complained of the "threatening tone" of the Japanese press and then asked why some Japanese statesman did not start "preaching peace." When Nomura remarked that he "did not have the slightest doubt that Japan desired peace," Hull scoffed at this statement and lamented that it was a pity that Japan "could not do just a few small things to help tide over the situation." He was particularly critical of the Japanese attitude towards Chiang Kai-shek. Two days later (November 24), Hull had a conference with the diplomatic representatives of Australia, Britain, China, and the Netherlands. He quickly discovered that the Chinese Ambassador, Dr. Hu Shih, was not enthusiastic about a three months' truce with Japan. But Hull went ahead and drafted a *modus vivendi* which President Roosevelt regarded as a "fair proposition" but he was "not very hopeful" and thought there might be "real trouble very soon."

On the following morning (November 25), Hull showed to Secretaries Knox and Stimson this draft that provided for a three months' truce with Japan. But its terms were so drastic that Stimson believed that Japan would not accept it. That afternoon Secretaries Hull, Knox, and Stimson, along with General Marshall and Admiral Stark, went to the White House for a long conference with the President. From intercepted Japanese cablegrams to Nomura, the President knew that the Japanese deadline for an end to the current negotiations was on November 29. He expressed a fear that Japanese armed forces might make an attack "as soon as next Monday." The main question was "how we should maneuver them into the position of firing the first shot without allowing too much danger to ourselves."

When Hull returned to the Department of State he had a long talk with the Chinese Ambassador who handed him a telegram from Chungking: "After reading your [Hu Shih's] telegram the Generalissimo showed rather strong reaction. He got the impression that the United States Government has put aside the Chinese question in its conversations with Japan instead of seeking a solution and is still inclined to appease Japan at the expense of China." This impudent telegram placed Hull on the defensive. He frankly admitted that the conversations he had been carrying on with the Japanese envoys was merely a delaying action: "The official heads of our Army and Navy for some weeks have been most earnestly urging that we not get into war with Japan until they have an opportunity to increase further their plans and methods and means of defense in the Pacific area."

On the afternoon of November 25 there were more cablegrams from China. Mr. T. V. Soong handed Secretary Stimson another cablegram from Chiang Kai-shek in which the Generalissimo urged the United States to be "uncompromising" in its attitude towards Japan.¹³⁸ This pressure was increased by a communication from Owen Lattimore, the American adviser of Chiang Kai-shek, to Lauchlin Currie, administrative assistant to President Roosevelt: Any "modus vivendi" arrived at with Japan "would be disastrous to Chinese belief in America." For a week Currie was "terribly anxious" because he feared that "Hull was in danger of selling China and America and Britain down the river." In Chungking, Madame Chiang Kai-shek became "unrestrainedly critical" of the American Government for its failure to "plunge into the war" and thus aid China.

On the morning of November 26, Hull saw a telegram from Churchill to the President: "There is only one point that disquiets us. What about Chiang Kai-shek? Is he not having a very thin diet?" It was not long before Hull was nearly hysterical. During a telephone conversation with Secretary Stimson he remarked that he had just about made up his mind about the modus vivendi—he "would kick the whole thing over." A few moments later Stimson phoned to the President and informed him that a Japanese expeditionary force was moving south from Shanghai. The President promptly "blew up" and exclaimed that this fact "changed the whole situation because it was an evidence of bad faith on the part of the Japanese." But the leading officers of the American armed forces still counseled caution. On this same morning (November 26) there was a meeting of the Army-Navy Joint Board and Admiral Ingersoll presented a series of arguments "why we should not precipitate a war."

But Hull was tired of carrying on negotiations with Japan. He was not a master of diplomatic double talk and he squirmed under the direct questions of the Japanese envoys. As far back as January 23, 1941, he had listened without any real interest to the proposals that Bishop Walsh and Father Drought had brought from Matsuoka: "(1) an agreement to nullify their [Japanese] participation in the Axis Pact; (2) a guarantee to recall all military forces from China and to restore to China its geographical and political integrity." If he had rejected these unusually conciliatory proposals why should he be deeply concerned about recent ones that did not go nearly so far! On the afternoon of November 26 he abandoned all thought of a truce with Japan and put into final shape a ten-point

proposal. Both he and the President knew this program would be rejected by Japan. There was no thought of compromise or conciliation: "The Government of Japan will withdraw all military, naval, air and police forces from China and from Indochina." When Kurusu read the ten-point proposal of Secretary Hull he immediately inquired if this was the American answer to the Japanese request for a *modus vivendi* or truce. Was not the American Government interested in a truce? Hull merely replied that "we have explored that" but had arrived at no real decision. Kurusu could only reply that the Secretary's attitude "could be interpreted as tantamount to meaning the end." It was obvious that the next step was war.

On the morning of December 4, the Navy radio receiving station at Cheltenham, Maryland, intercepted a Japanese overseas news broadcast from Station JAP in Tokyo, in which there was inserted a false weather report, "east wind rain." On November 19 the Japanese Government had instructed its ambassador in Washington that such a weather forecast would indicate imminence of war with the United States. After intercepting this Japanese instruction the radio receiving stations of the American armed forces were on the alert for the "east wind rain" message. As soon as it was translated, Lieutenant Commander Kramer handed it to Commander Safford with the exclamation: "This is it." Safford got in touch immediately with Rear Admiral Noyes who telephoned the substance of the intercepted message "to the naval aide to the President." According to the testimony of Captain Safford [in 1941 a Commander], the

"winds" message and the change of the [Japanese] naval operations code came in the middle of the week: two days to Saturday and three days to Sunday. It was unthinkable that the Japanese would surrender their hopes of surprise by delaying until the week-end of December 13—14. This was not crystal-gazing or "intuition"—it was just the plain, common sense acceptance of a self-evident proposition. Col. Sadtler saw it, and so did Capt. Joseph R. Redman, U.S.N., according to Col. Sadtler's testimony in 1944. . . . The Japanese were going to start the war on Saturday, December 6, 1941, or Sunday, December 7, 1941."

For the next three days Commander Safford and Lieutenant Commander Kramer tried in vain to get some action out of their superior officers with regard to the implications of the "east wind rain" message. When they induced Captain McCollum to exert some pressure upon Admiral Stark he was given a sharp rebuke which so infuriated him that he later poured the whole story into the receptive ears of Admiral Kimmel. This disclosure led Kimmel to press for the Pearl Harbor investigations. The unaccountable failure of high naval officers to convey a warning to Honolulu about the imminence of war was given additional highlights on the evening of December 6 when the Japanese reply to the American note of November 26 was sent secretly to Ambassador Nomura. It was intercepted by Navy receiving stations and decoded. When the President read this message to Nomura he at once exclaimed: "This means war!" He tried to get in touch with Admiral Stark but was informed that the chief of naval operations was at the National Theatre enjoying the delightful strains of *The Student Prince*.1** The next day the

Admiral's ears would be assailed by the crashing echoes of the attack upon Pearl Harbor. It would ordinarily be assumed that the President, after reading this intercepted Japanese message, would hurriedly call a conference of the more important Army and Navy officers to concert plans to meet the anticipated attack. The testimony of General Marshall and Admiral Stark would indicate that the Chief Executive took the ominous news so calmly that he made no effort to consult with them. Did he deliberately seek the Pearl Harbor attack in order to get America into the war? What is the real answer to this riddle of Presidential composure in the face of a threatened attack upon some American outpost in the faraway Pacific? This problem grows more complicated as we watch the approach of zero hour. At 9:00 A.M. on December 7, Lieutenant Commander Kramer delivered to Admiral Stark the final installment of the Japanese instruction to Nomura. Its meaning was now so obvious that Stark cried out in great alarm: "My God! This means war. I must get word to Kimmel at once."

But he made no effort to contact Honolulu. Instead he tried to get in touch with General Marshall, who, for some strange reason, suddenly decided to go on a long horseback ride. It was a history-making ride. In the early hours of the American Revolution, Paul Revere went on a famous ride to warn his countrymen of the enemy's approach and thus save American lives. In the early hours of World II, General Marshall took a ride that helped prevent an alert from reaching Pearl Harbor in time to save an American fleet from serious disaster and an American garrison from a bombing that cost more than two thousand lives. Was there an important purpose behind this ride? This question looms constantly larger as we look further into the Pearl Harbor hearings. When Colonel Bratton, on the morning of December 7, saw the last part of the Japanese instruction to Nomura he realized at once that "Japan planned to attack the United States at some point at or near 1 o'clock that day." To Lieutenant Commander Kramer the message meant "a surprise attack at Pearl Harbor today." This information was in the hands of Secretary Knox by 10:00 A.M., and he must have passed it on to the President immediately.

It was 11:25 A.M. when General Marshall returned to his office. If he carefully read the reports on the threatened Japanese attack (on Pearl Harbor) he still had plenty of time to contact Honolulu by means of the scrambler telephone on his desk, or by the Navy radio or the FBI radio. For some reason best known to himself he chose to send the alert to Honolulu by RCA and did not even take the precaution to have it stamped, "priority." As the Army Pearl Harbor Board significantly remarked: "We find no justification for a failure to send this message by multiple secret means either through the Navy radio or the FBI radio or the scrambler telephone or all three." Was the General under Presidential orders to break military regulations with regard to the transmission of important military information? Did he think that the President's political objectives outweighed considerations of national safety? Was the preservation of the British Empire worth the blood, sweat, and tears not only of the men who would die in the agony of Pearl Harbor but also of the long roll of heroes who perished in the epic encounters in the Pacific, in the Mediterranean area, and in the famous offensive that rolled at high tide

across the war-torn fields of France? New cemeteries all over the world would confirm to stricken American parents the melancholy fact that the paths of military glory lead but to the grave.

But the President and Harry Hopkins viewed these dread contingencies with amazing equanimity. In the quiet atmosphere of the oval study in the White House, with all incoming telephone calls shut off, the Chief Executive calmly studied his well-filled stamp albums while Hopkins fondled Fala, the White House scottie. At one o'clock, Death stood in the doorway. The Japanese had bombed Pearl Harbor. America had suddenly been thrust into a war she is still fighting.

12.12 Operation Barbarossa

Book review by Daniel W. Michaels, 2001 of ("Operation Barbarossa and the Russian Historians' Dispute"), by Wolfgang Strauss. Munich: Herbig, 1998.

No two peoples suffered more during the Second World War than the Russians and the Germans. In the carnage of that great global conflict, nothing matched the massive destruction of life and property wrought on the Eastern front by Russian and German forces fanatically driven by irreconcilable ideologies. Now, more than 50 years after the end of the "clash of the titans," free Russian and German historians are collaborating to ascertain the historical decisions and actions that led to that bloodiest of all conflicts. Wolfgang Strauss, a respected German Slavist and political analyst, explains this clarifying historical process in "Operation Barbarossa and the Russian Historians' Dispute," his most recent work. He examines here the research of revisionist scholars in Russia and Germany on Stalin's role in igniting the German-Russian conflict and his efforts to expand the Soviet empire across Europe. Perhaps most importantly, he also shows how a shared understanding of the war is contributing to reconciliation between these two great European peoples.

Strauss affirms the view of German historian Ernst Nolte that Hitler's militant anti-Communism was an understandable reaction to the looming Soviet threat to Europe and humanity. Put another way, the militancy of the "fascist" movements that arose in Germany, Spain, Italy and other European countries in the 1920s and 1930s was, in essence, a response to the undisguised Bolshevik goal of dominating Europe. This view, Strauss contends, has now largely been embraced by Russian revisionists and the French historian François Furet. It is basically irrelevant whether one regards the war that broke out in June 1941 between Germany and Soviet Russia as a war of aggression, a preventive war or a counterattack. For each side, Nolte and others contend, this was a life or death struggle to decide which world view and way of life would prevail in Europe – atheistic, internationalist Communism or the bourgeois Christian civilization of the West.

The Black Book

In no way does Strauss dismiss or whitewash Hitler's brutal excesses. He also holds that Hitler's racist concept of the inferiority of the Slavic peoples and his attempt to colonize their lands was not only wrong but doomed his military campaign, and ultimately the Third Reich, to failure. At the same time, Strauss stresses the monumental brutality of Soviet and international Communism. In this regard he cites *The Black Book of Communism: Crimes, Terror and Repression*, a recent 860-page work by French scholar Stéphane Courtois and others.

As Courtois stresses, many American and European scholars have upheld a morally peculiar view of history that fervently condemns National Socialist Germany while maintaining a meretriciously non-judgmental "objectivity" toward Soviet Russia. But there is no hierarchy of death and suffering. As Courtois writes: "The death of a Ukrainian peasant child, deliberately exposed to starvation by the Stalinist regime, is just as important as the starvation of a child in the Warsaw Ghetto." As Strauss relates, Courtois finds that 1) some 100 million human beings lost their lives as a result of Communist policies in the Soviet Union, Red China and other Communist states 2) The Communists made mass criminality an integral part of their governmental system; 3) Terror was part of the Soviet regime from the outset, beginning with Lenin; 4) Class and ethnic genocide, begun by Lenin and systematized by Stalin, preceded Hitler's dictatorship by years; 5) Stalin was unquestionably a greater criminal than Hitler; and 6) Stalin's joint, if not primary, responsibility for the outbreak of Russo-German War is undeniable.

It is often forgotten that the Russian people were the first victims of Communism. Citing evidence from British, Russian and other sources, Strauss shows that those who imposed Communist despotism on the Russians were primarily non-Russian and non-Christian aliens – above all, Jews. Their goal was nothing short of eradicating Christianity and European civilization, at whatever the human cost. Many Russians place the primary responsibility for the crimes of Communism, particularly in the first ten years of Soviet rule, on the Bolshevik party's non-Russian elements. For example, Strauss notes, the Russian press has referred to the execution of Tsar Nicholas II and his entire family as a "Jewish ritualistic murder." In a similar context, Strauss cites from Solzhenitsyn the names of the ruthless Soviet secret police (NKVD) chiefs – all of them Jews – who put tens of thousands of slave laborers to death under appallingly inhumane conditions in building the White Sea Canal. One should not, however, get the impression that Slavs were the exclusive victims of Stalin's terror, or that the murderers were all non-Russians. During the Great Purge of 1937-39, Strauss points out, Stalin executed many Jews who had played a prominent role in the early Soviet regime. In 1940 Stalin succeeded in killing his greatest rival, Lev Trotsky (Bronstein), who had once been the second most powerful figure in the Soviet state. And when Stalin installed the Russian Nikolai Yezhov as head of the NKVD, replacing the Jewish Genrikh Yagoda, thousands of Yagoda's followers and their families, mostly Jews, were murdered or committed suicide.

Pioneering Russian Revisionists

One of the earliest Russian revisionists of World War II history was Pyotr Grigorenko, a Soviet Army Major General and highly decorated war veteran who taught at the Frunze Military Academy. Already in the early 1960s, during the Khrushchev era, he was a “dissident,” publicly supporting civil rights for oppressed ethnic minorities. (Authorities committed him to a mental asylum.) In 1967, Strauss relates, he was the first leading Soviet figure to advance the revisionist arguments, which became well known during the 1980s and 1990s, on Stalin’s preparations for aggressive war against Germany. In an article submitted to a major Soviet journal (but rejected, and later published abroad), Grigorenko pointed out that Soviet military forces vastly outnumbered German forces in 1941. Just prior to the German attack on June 22, 1941, more than half of the Soviet forces were in the area near and west of Bialystok, that is, in an area deep in Polish occupied territory. “This deployment could only be justified” wrote Grigorenko, “if these troops were deploying for a surprise offensive. In the event of an enemy attack these troops would soon be encircled.”

The best known Russian historian to advance revisionist arguments on Stalin’s preparations for a first-strike against Germany has been Viktor Suvorov (pen name of Vladimir Rezun). Strauss recapitulates his main arguments (which have been treated in detail in the pages of this Journal).[11] Strauss examines three significant speeches by Stalin (which have also been dealt with by Suvorov, as well as in the pages of this Journal):[12]

1. In his address of August 19, 1939, shortly before the outbreak of war, Stalin explained why a temporary alliance with Germany was more beneficial to Soviet interests than an alliance with Britain and France.
2. In his speech of May 5, 1941, Stalin explained to graduate officers of military academies that the impending war would be fought offensively by Soviet forces, and that it would nonetheless be a just war because it would advance world socialism.
3. In the speech of November 6, 1941, some four months after the outbreak of the “Barbarossa” campaign, Stalin stressed the importance of killing Germans. (This speech helped to “inspire” the Soviet Jewish writer Ilya Ehrenburg to make his notorious contribution to the war effort in the form of murderously anti-German propaganda.)

Recent Russian Revisionist Historiography

A radical revision of World War II history, Strauss contends, became possible only after the collapse of the multinational Soviet Union (1991), when some 14 million previously classified documents dealing with all aspects of Soviet rule were finally open to free examination. This book’s greatest contribution may well be to highlight for non-Russians the research of Russian revisionists. Strauss is very familiar with this important work, which has been all but entirely ignored in the United States. The most important publications cited by Strauss in this regard are two Russian anthologies, both issued in 1995:

“Did Stalin Make Preparations for an Offensive War Against Hitler?,” and “September 1, 1939-May 9, 1945: 50th Anniversary of the Defeat of Fascist Germany.” The first of these contains articles by revisionist scholars as well as by critics of revisionism. (The “Russian historians’ dispute” referred to in the subtitle of Strauss’ book echoes the “German historians’ dispute” of the 1980s, in which Ernst Nolte played a major role.) As Strauss notes, the most prominent critic of the revisionist view of Suvorov and others has been Israeli historian Gabriel Gorodetsky, who teaches at Tel Aviv University. (Strauss suggests that he is an long-time apologist for Stalin.) Gorodetsky is the author of a 1995 Russian-language anti-Suvorov work, “The ‘Icebreaker’ Myth,” and a detailed 1999 study, *Grand Illusion: Stalin and the German Invasion of Russia*.

In his discussion of “Did Stalin Make Preparations for an Offensive War Against Hitler,” Strauss writes (pages 42-44):

“Even though revisionists as well as the critics of revisionism have their say in this book, the end result is the same. The anti-Fascist attempts to justify and legitimize Stalin’s war policy from 1939 do not hold up. The view that the Second World War was “a crime attributable solely to National Socialist Germany” can no longer be sustained. The historical truth as seen by Russian revisionists is documented in this collection of articles published by Bordyugov and Nevezhin as well as by the renowned war historian Mikhail Melitiukhov, academic associate of the All-Russian Research Institute for Documentation and Archives.”

This most recent compendium of Russian revisionist writings deepens our understanding of Stalin’s preparations for a military first-strike against Germany in the summer of 1941. The strategic deployment plan, approved by Stalin at a conference on May 15, 1941, with General Staff chief Georgi Zhukov and Defense Commissar Semen Timoshenko, called for a Blitzkrieg:

“Tank divisions and mechanized corps were to launch their attack from the Brest and Lviv [Lemberg] tier accompanied by destructive air strikes. The objective was to conquer East Prussia, Poland, Silesia and the [Czech] Protectorate, and thereby cut Germany off from the Balkans and the Romanian oil fields. Lublin, Warsaw, Kattowice, Cracow, Breslau [Wroclaw] and Prague were targets to be attacked.”

A second attack thrust was to be directed at Romania, with the capture of Bucharest. The successful accomplishment of the immediate aims, namely, to destroy the mass of the German Army east of the Vistula, Narev and Oder rivers, was the necessary prerequisite for the fulfillment of the main objective, which was to defeat Germany in a quick campaign. The main contingents of the German armed forces were to be encircled and destroyed by tank armies in bold rapid advances. Three recurrent terms in the mobilization plan of May 15 confirm the aggressive character of Stalin’s plan. “A sudden strike” (*vnyyzapni udar*), “forward deployment” (*razvertyvaniye*), and “offensive war” (*nastupatel’naya voyna*). Of the 303 [Soviet] divisions assembled on the western front, 172 were assigned to the first wave of attack. One month was allotted for the total deployment – the period from

June 15 to July 15. Mikhail Melitiukhov: "On this basis it appears that the war against Germany would have to have begun in July."

This anthology also devotes much attention to analyzing Stalin's speech of May 5, 1941, delivered to graduates of Soviet military academies. In this speech Stalin justified his change of foreign policy in connection with the now decided-upon attack against Germany. From the Communist point of view even a Soviet war of aggression is a "just war" because it serves to expand the "territory of the socialist world" and "to destroy the capitalist world." Most important in this May 5 speech was Stalin's efforts to dispel the "myth of the invincible Wehrmacht." The Red Army was strong enough to smash any enemy, even the "seemingly invincible Wehrmacht."

Strauss lists (pages 102-105) the major findings and conclusions of Russian revisionists, derived mostly from the two major works cited above:

"Stalin wanted a general European war of exhaustion in which the USSR would intervene at the politically and militarily most expedient moment. Stalin's main intention is seen in his speech to the Politburo of August 19, 1939. - To ignite this, Stalin used the [August 1939] Soviet-German Non- Aggression Pact, which:

- a) provoked Hitler's attack against Poland, and
- b) evoked the declarations of war [against Germany] by Britain and France.
- In the event Germany was defeated quickly [by Britain and France], Stalin planned to "Sovietize" Germany and establish a "Communist government" there, but with the danger that the victorious capitalist powers would never permit a Communist Germany.
- In the event France was defeated quickly [by Germany], Stalin planned the "Sovietization" of France. "A Communist revolution would seem inevitable, and we could take advantage of this for our own purposes by rushing to aid France and making her our ally. As a result of this, all the nations under the 'protection' of a victorious Germany would become our allies."
- From the outset Stalin reckoned on a war with Germany, and the [Soviet] conquest of Germany. To this end, Stalin concentrated on the western border of the USSR operational offensive forces, which were five- to six-times stronger than the Wehrmacht with respect to tanks, aircraft and artillery.
- With respect to a war of aggression, on May 15, 1941, the Red Army's Main Political Directorate instructed troop commanders that every war the USSR engaged in, whether defensive or offensive, would have the character of a "just war."
- Troop contingents were to be brought up to full strength in all the western military districts; airfields and supply bases to support a forward-strategy were to be built directly behind the border; an attack force of 60 divisions was to be set up in the Ukraine and mountain divisions and a parachute corps were to be established for attack operations.
- The 16th, 19th, 21st, 22nd and 25th Soviet Armies were transferred from the interior to the western border, and deployed at take-off points for the planned offensive.
- In his speech of May 5, 1941, to graduate officers of the academies, Stalin said that war with Germany was inevitable, and characterized it as a war not only of a defensive

nature but rather of an offensive nature.

- Stalin intended to attack in July 1941, although Russian historians disagree about the precise date. Suvorov cites July 6, [Valeri] Danilov [a retired Soviet Colonel] gives July 2, while Melitiukhov writes: "The Red Army could not have carried out an attack before July 15."

Hitler's Proclamation

In an appendix of documents, Strauss includes portions of Hitler's "Operation Barbarossa" directive of December 18, 1940. Also here, in facsimile, is a German press announcement of June 22, 1941, that gives Hitler's reasons for Germany's attack against the Soviet Union:

"This morning the Führer, through Reich Minister Dr. Goebbels, issued a proclamation to the German people in which he explains that after months-long silence he can finally speak openly to the German people about the dangerous machinations of the Jewish-Bolshevik rulers in Soviet Russia. After the German-Russian Friendship Treaty in the Autumn of 1939, he hoped for an easing of tensions with Russia. This hope, however, was crushed by Soviet Russia's extortionist demands against both Finland and the Baltic states as well as against Romania."

After the victory in Poland the Western powers rejected the Führer's proposal for an understanding because they were hoping that Soviet Russia would attack Germany. Since the Spring of 1940 Soviet troops have been deploying in ever increasing numbers along the German border, so that since August 1940 strong German forces have been tied down in the East, making any major German effort in the West impossible. During his [November 1940] visit to Berlin, [Soviet foreign minister] Molotov posed questions regarding Romania, Finland, Bulgaria and the Dardanelles that clearly revealed that Soviet Russia intended to create trouble in eastern Europe. To be sure, the Bolshevik coup attempt against the [Romanian] government of Antonescu failed, but, with the help of the Anglo-Saxon powers [Britain and the United States], their putsch in Yugoslavia succeeded. Serbian air force officers flew to Russia and were immediately incorporated in the Army there.

With these machinations Moscow has not just broken the so-called German-Russian Friendship Treaty, it has betrayed it. In his proclamation the Führer stressed that further silence on his part would be a crime not only against Germany, but against Europe as well. On the border now stand 160 Russian divisions, which have repeatedly violated that frontier. On June 17-18 Soviet patrols were forced back across the border only after a lengthy exchange of fire. Meanwhile, to protect Europe and defend against further Russian provocations, the greatest build-up of forces ever has been assembled against Soviet Russia. German troops stand from the Arctic Ocean to the Black Sea, allied in the north with Finnish troops and along the Bessarabian border with Romanian forces. The Fuehrer concluded his proclamation with the following sentences: "I have

therefore decided to once again lay the fate and the future of the German Reich and of our people in the hands of our soldiers. May the Lord God help us especially in this struggle!”

Coming to Terms With the Past

Even though more and more independent Russian, German and other European historians support the revisionist arguments of Suvorov (and others), it still seems impossible, especially in Germany, to reappportion historical responsibility from Hitler to Stalin. In this regard, Strauss recalls (pages 45-46) a discussion in May 1993 at the Military History Research Office in Freiburg involving German historian Dr. Joachim Hoffmann, decades-long associate of the Research Office, and Russian historian Viktor Suvorov. Hoffman told of conversations on the “preventive war” issue he has had with prominent Germans, including President Richard von Weizsäcker, the influential journalist Marion Gräfin Dönhoff, and political figures Egon Bahr and Heinrich Graf von Einsiedel. In every case he was told that even if Suvorov is correct, and Hitler’s attack indeed preceded Stalin’s by weeks, this must not be acknowledged publicly because it would exonerate Hitler. This is typical, says Hoffmann, of the immoral attitude that prevails in Germany. In their egotism, he adds, these Germans do not realize that they are, in effect, demanding that Russians accept the propaganda lies of the Stalin era.

Strauss contrasts the very different attitudes of Germans and Russians toward 20th century history, and the role of historical revisionism. Whereas Germans are imbued with a national masochistic guilt complex about their collectively “evil” past, which was instilled during the postwar occupation as part of Allied “reeducation” campaign, and reinforced ever since in their media and by “their” political leaders, Russians are much more free and open about their Communist past, largely because they have not been occupied by foreign conquerors, and their media and educational system has not come under the control of outsiders. Although die-hard Communists try to uphold the historiography of the Soviet era, most Russians want to know the truth about their past. After all, Strauss points out, one out of every two Russian families suffered under the Stalinist tyranny. For the time being, anyway, nothing is taboo in Russia, including the role of Jews in the Communist movement. (By contrast, Germans are forbidden by law to say anything derogatory about the political activities of Jews in the first half of the 20th century.)

The term “genocide” is used to refer particularly to the World War II treatment of Europe’s Jews. Without in any way minimizing the sufferings of innocent Jews caught up in that maelstrom, one should not forget that Stalin’s Soviet regime inflicted a much more ruthless and widespread genocide against the Russian and Ukrainian peoples. It is estimated that in the Soviet Union about 20 million people, the vast majority of them Slavs, lost their lives as a result of Soviet policies, either executed or otherwise perished in the Gulag prison network or as victims of imposed famine, and so forth. Millions of Germans were also victims of genocide. It is estimated that some four million Germans

were killed or otherwise perished during the 1944-1948 period, victims of Allied-imposed "ethnic cleansing," starvation, slave labor in the USSR, and in inhumane POW camps administered by the victorious Allies.

In promoting greater understanding of the calamitous German-Russian clash of 1941-1945, German and Russian revisionist scholars foster reconciliation between these two peoples. Strauss cites recent developments that attest to this process. In Volgograd, victors and vanquished have joined to erect a monument dedicated to all the victims of the Battle of Stalingrad. Its inscription, written in Russian and German, reads: "This monument commemorates the suffering of the soldiers and civilians who fell here. We ask that those who died here and in captivity will rest in eternal peace in Russian soil." On the outskirts of St. Petersburg a German soldiers' cemetery and memorial was recently dedicated. Across Russia today, it is not unusual for Russian women to tend the graves of German soldiers. (Because the Soviet government did very little to help identify and provide decent burials for their war dead, few Russian women have had any idea where their own sons, brothers, and husbands fell.)

In the book's epilogue, Strauss describes the fervent indignation and rage of Russians over the criminal capitalism that has taken hold in their country. The inequities between the nouveau riches and the mass of Russian working class people are now greater than under Soviet rule. Many Russian revisionists see an intrinsic resemblance and affinity between capitalism and Communism. Given that many former Soviet officials still hold office or otherwise wield power in the "new Russia," everyone readily sees how easy it has been for members of the old Soviet elite – the Nomenklatura – to reemerge in Russia's predatory capitalism as racketeers, gangsters, money speculators, bank frauders, extortionists and mafiosi. On the ruins of the Soviet system, writes Strauss, has emerged a new dictatorship of pitilessness, corruption, criminality, social division, poverty and despair. Resentment against the "reformist" policies advocated by the United States is widespread. In this regard Strauss cites the views of Spanish writer Juan Goytisolo, who asserts that if this social pathology endures in Russia, then Karl Marx's analysis will be proven correct, at least in part. While Marx was wrong about the promised virtues of Communism, writes Goytisolo, events seem to confirm his critique of capitalism, especially of unrestrained monetarism that knows only one value, namely, maximum profits regardless of human cost.

'Strong and Free'

Whether they call themselves "Reformers" (Westernizers), Communists or nationalists ("Eurasians"), Russians today, writes Strauss, overwhelmingly reject all forms of internationalism, whether Communist or capitalist. They want a Russia that is strong and free.

Toward this goal, many look to geopolitics, an outlook built on the Eurasian "heartland" theory expounded by 20th-century British geographer Halford Mackinder and promoted in

Third Reich Germany by Karl Haushofer. (According to this theory, Russia has the potential for great power and prosperity because it is the core of the vast, resource-rich Eurasian heartland.) The leading exponent in Russia today of this view is Alexander Dugin, whose book, "The Basics of Geopolitics: Russia's Geopolitical Future," has been influential with both old Communists and new nationalists in a grouping sometimes referred to as the "national Bolshevik alliance," and whose adherents are known as "Eurasianists." Dugin is a close associate of Gennady Zyuganov, head of the country's largest political party, the Russian Communist Party (which, in spite of its name, is much more nationalist than Marxist). Zyuganov himself is the author of a recent book, "The Geography of Victory: The Bases of Russian Geopolitics." Russia's parliament, the Duma, has established a Committee of Geopolitical Affairs, chaired by Alexey Mitrofanov, a member of Vladimir Zhirinovksy's Liberal Democratic Party. (Zhirinovksy proposes the formation of a Berlin-Moscow-Tokyo axis, and has been quoted as saying: "Today, the United States of America is the major enemy of our country. All our actions and dealings with America from now on should be undertaken with this in mind.")

Russian and German Historians Debate Barbarossa and Its Aftermath

- Grand Delusion: Stalin and the German Invasion of Russia, by Gabriel Gorodetsky. New Haven: Yale University Press, 1999. 408 pages.
- Samoubiystvo (Suicide), by Viktor Suvorov. Moscow: AST, 2000. 380 pages. Illustrations.
- Upushchenny shans Stalina (Stalin's Lost Opportunity), by Mikhail Meltiukhov. Moscow: Veche, 2000. 605 pages. Illustrations, maps.
- Stalin's War of Extermination, 1941-45: Planning, Realization, and Documentation, by Joachim Hoffmann. Capshaw, Ala.: Theses and Dissertations Press, 2001. 415 pages. Illustrations.

Revising the history of the Second World War's crucial Russo-German campaign is very much a work in progress, nowhere more so than in Russia and Germany. Ever since Viktor Suvorov (Vladimir Rezun) broke the ice a decade ago with his sensational *Ledokol* (published in English as *Icebreaker* [reviewed in the *Journal of Historical Review*, (Nov.-Dec. 1997)]), Russian historians have been reexamining the many myths, legends, and fantasies associated with the outbreak of the death duel between Communism and National Socialism. The role of Joseph Stalin, in particular, has aroused the most heated controversy.

In Russia, the debate has involved two major groups. The first asserts that the Soviet Union had no aggressive designs against Germany or Europe and was unprepared for war, while the second maintains that Stalin and the Red Army indeed had plans for a surprise attack against Germany and Europe, but were beaten to the punch by Hitler.

Contending Factions

To the first group have belonged such notables as the late Marshal Georgi Zhukov, journalist Lev Bezymenski (also professor at the Academy of Military Sciences), General M. A. Gareyev, V. A. Anfilov, and Yu. A. Gorkov. This group, in general, also contends that Stalin had decapitated the Red Army by purging many high-ranking officers just before the war; that he was too trusting of Hitler, wrongly believing that the Führer would never deliberately initiate a two-front war; and that Stalin was the cause of Communism's failure. These views are shared by many, regardless of political leanings. An Israeli, Gabriel Gorodetsky, much ballyhooed in the English-speaking world, also fits in this company. Gorodetsky is a colleague of Lev Bezymenski, as he was of the late General Dmitri Volkogonov. Gorodetsky, Suvorov contends, has been granted unparalleled access to selected archives of the Russian Foreign Ministry, the General Staff, the NKVD, the GRU, and other records usually closed to researchers, above all revisionists, who might probe too deeply. For this reason Suvorov suspects Gorodetsky of being a conduit for information that the Russian government chooses to have disseminated.

To the second group belong military historians such as Viktor Suvorov, Mikhail Meltiukhov, V. A. Nevezhin, V. D. Danilov, and Aleksandr Solzhenitsyn, as well as several Germans (Joachim Hoffmann, Wolfgang Strauss, Fritz Becker) and Austrians (Heinz Magenheimer, Ernst Topitsch). (See review of Topitsch's *Stalin's War* in JHR, [Summer 1988]). They argue that Stalin trusted no one, least of all Hitler; that Stalin had, together with Marshal Zhukov, devised his own plan for a surprise offensive against Germany, with the ultimate goal of establishing Communism in Europe; and that it was the USSR, not Germany, which was better prepared for war. Suvorov has also argued that Stalin's purges actually improved the Red Army, by ridding it of the heavy-handed political commissars, most of whom were Trotskyite thugs despised by the people. As is well known, many of Trotsky's followers were his fellow Jews, often foreign born rather than native to Russia. The American historians Richard Raack and R. H. S. Stolfi (see review in JHR [Nov.-Dec. 1995]) have joined the debate, lending it a worldwide dimension. Professor Raack in particular has reinforced the arguments of the Suvorov group, writing that "in fact the discussion is now international ... the genie of truth is out of the bottle."

The first group has been taxed with harboring Stalinist apologists for the old Soviet Establishment, the second of seeking to justify Hitler's German invasion. Polemics aside, the historiographical roots of the division are manifest in the reliance of the first group on the Soviet political literature to substantiate its arguments, as opposed to the second group's reliance on historical analysis based on military science, studying and comparing troop deployments, weapons systems, and so on. In the past few years, several major books have appeared from representatives of both sides of the dispute. Gorodetsky, supported in his research by many former Soviet Jews now residing in Israel, has recently published *Grand Delusion*. Widely circulated in the West, it has won the acclaim of most of its Anglo-American reviewers. The irrepressible Suvorov, who resides in Eng-

land, has published his fourth major book on the war, entitled *Samoubiystvo* ("Suicide"), dealing with events immediately preceding the outbreak of hostilities, while Meltiukhov, currently associated with the All-Russian Scientific Research Institute of Documentation and Archival Science, has just published *Upushchenny shans Stalina* ("Stalin's Lost Opportunity"). Regrettably, with the exception of *Icebreaker*, none of Suvorov's and Meltiukhov's works are currently available in English, and they have only rarely been reviewed or evaluated in the English-speaking world. Finally, an excellent translation of *Stalin's War of Extermination*, by Joachim Hoffmann, historian at Germany's Military History Research Office (MGFA), has now been made available to English speakers. This book has gone through several editions in Germany, and is widely read there.

Suvorov's works enjoy the greatest sales and circulation of serious Russian literature on the war. At first his opponents (almost all professional historians) tried to ignore him. Later, when compelled to recognize his work, they attempted to dismiss his theses as the product of a fantast who had had no access to official documents whatsoever. Yet, working solely from Soviet open source literature on the war, Suvorov deduced the Soviet plan to invade Germany, predicting that in time official documents would be found to substantiate his conclusions. With the collapse of the Soviet Union, such documents have surfaced with increasing frequency, and in recent years Suvorov has found a perfect partner in Meltiukhov, who, with his experience in documentation and archival science and his easier access to Soviet-era records, has provided documentation for Suvorov's theses.

Plan of Attack

The Zhukov Plan of May 15, 1941, discussed briefly in these pages last year (see JHR [Nov.-Dec. 2000]), continues to be the focus of analysis and discussion. Recently, on the fifty-ninth anniversary of the German attack, Vladimir Sergeyev described and published excerpts from the Zhukov document, which was discovered in the Archives of the President of the Russian Federation some years ago. For ultimate security, the original twelve-page text had been handwritten by then Major General, later Marshal, A. M. Vasilevski, and addressed to the chairman of the USSR Council of Peoples Commissars, Joseph Stalin. The document, marked "Top Secret! Of Great Importance! Stalin's Eyes Only! One Copy Only!," was authorized and approved by People's Defense Minister S. K. Timoshenko and Zhukov, then chief of the Red Army general staff.

A key passage in the war plan not previously cited in these pages reads: In order to prevent a surprise German attack and to destroy the German Army, I consider it essential that under no circumstances should the initiative for freedom of action be given to the German High Command[. I consider it essential] to preempt enemy deployment, to attack the German Army when it is still in the stage of deployment and has not yet had time to organize his front and the interaction between his service arms.[The word for "preempt" was underlined twice in the original document. – D. M.]

Thus did Zhukov propose to Stalin precisely what the German Army would do to his forces a month later.

The Suvorov school and certain German military analysts speculate that Stalin's failure to attack before the German onslaught of June 22, 1941, was probably because his own forces had not yet fully deployed for the offensive. Sergeev, on the other hand, suggests that the attack plan prepared by Zhukov was faulty.

Upon his return from the successful blitzkrieg operation he had orchestrated in the battle of Khalkin-Gol in Mongolia (August 1939), Marshal Zhukov was put in charge of the Kiev Special Military District, where he commanded the Soviet Southwestern and Western fronts. His plan of May 15, 1941, assigned these fronts the task of destroying the Wehrmacht units before them, then advancing southwest across Poland to the German border. This operation was intended to cut German forces off from the Balkan theater of operations and from their Romanian and Hungarian allies, including their vital oil fields. Zhukov was unaware that the main deployment of German forces was not on the Soviet left flank, but in Army Group Center, further to the north. Thus, had Soviet forces attacked toward Cracow-Lublin, as Zhukov's plan called for, Army Group Center could easily have cut through the exposed right (northern) flank of the Soviet thrust, upset the Soviet offensive, and then advanced along the Minsk-Smolensk line toward Moscow. In that event, the Red Army would have found itself in an even worse situation than after the outbreak of the actual German offensive on June 22. Zhukov admitted as much later to military historian V. A. Anfilov: "In retrospect it is good that he [Stalin] did not agree with us. Otherwise, our forces might have suffered a catastrophe." Stalin's Aims

Soviet mobilization and deployment in the period January-June 1941 took place in three stages:

- first stage, January-March, the call-up of about a million reservists, industry ordered to step up production of T-34 and KV tanks, first echelon troops brought up to strength;
- second stage, April-June, second echelon forces moved up to the western border, Far Eastern troops moved west;
- third stage, June 1-June 22, Stalin agrees to open mobilization and to advancing second echelon armies to the front. All these operations were to be carried out in secrecy, without the enemy taking note. Once mobilized and in position, the Soviet forces were to launch a sudden, decisive offensive against Germany and her allies.

According to Meltiukhov, the correlation of forces along the front from Ostroleka (Poland) to the Carpathians at the time of the planned Zhukov offensive was as shown in the table below:

Red Army Wehrmacht Ratio

Divisions 128 55 2.3:1

Troop strength 3,400,000 1,400,000 2.1:1

Field guns 38,500 16,300 2.4:1

Tanks 7,500 900 8.7:1

Aircraft 6,200 1,400 4.4:1

The attack was to begin in typical blitzkrieg fashion – without warning, with air raids on enemy airfields, and with heavy artillery bombardment of frontline enemy forces. The USSR would thus have had the clear advantage of superior forces and the benefits of the first strike. Why Stalin did not give the order to attack is unknown.

In “Stalin’s Lost Opportunity,” Meltiukhov establishes, with meticulous documentation, that in the years 1938-40 the Soviet Union had carried out a massive build-up of military muscle that made it the superpower of the day, far exceeding the might of any enemy. Meltiukhov presents the comparative strength of the major belligerents for August 1939, on the eve of Germany’s invasion of Poland, as shown in the table above.

Accounting for Stalin’s Delay

Meltiukhov minces no words on Stalin’s intent: “The content of the Soviet operational plans, the ideological guidelines and the military propaganda, combined with information on the immediate military preparations of the Red Army for an offensive, attest unambiguously to the intention of the Soviet government to attack Germany in the summer of 1941.” He concludes that at first the opening strike against Germany (Operation Groza [Thunderstorm]) was scheduled for June 12, 1941, but that the Kremlin later fatefully shifted the date to July 15. According to Meltiukhov: “Unfortunately, what we now know today was a secret in 1941. The Soviet leadership made a fateful miscalculation by not striking first.”

Meltiukhov speculates that Stalin delayed the date for the attack when he learned, on May 12, of Rudolf Hess’ flight to Scotland. Stalin feared that if the Hess peace mission succeeded, and the British withdrew from the war, the Red Army would be left to stand alone against the Germans. When it became clear that the Hess mission had failed, Stalin set July 15 as the date for Operation Thunderstorm – 23 days after Hitler launched Operation Barbarossa. Had the Red Army attacked on the originally scheduled date, Meltiukhov believes, it would have succeeded.

Although Soviet intelligence had been informed of the precise date of the German attack by its agent Richard Sorge in Japan, and by its “Korsikanets” and “Starshina” sources in Berlin, Stalin refused to be convinced. Moreover, Prime Minister Churchill and President Roosevelt had also warned Stalin, to no avail: Stalin knew that Britain desperately needed the USSR in the war against Germany for its own sake. By failing to strike first, as planned, the USSR lost 800,000 men (Germany, 80,000), 4,000 aircraft (Germany, 850), 21,500 field guns and 11,800 tanks (Germany, 400) during the first two and a half weeks of the war. By the end of 1941 the Soviet Union had lost three million Red Army troops.

Meltiukhov rejects the term “preventive war.” For a true preventive war, it is necessary for the attacker to know definitely that his adversary is about to invade. Meltiukhov maintains that, while the each side was aware of the other’s build-up and deployment of forces, neither the Germans nor the Russians knew with certainty that the other was about to attack. Stalin believed, with some logic, that Hitler would never open a second front while the Britain was still in the war, but the German leader chose not to wait until the Red Army launched its attack: he unleashed his own blitzkrieg.

The situation best resembles two cats sitting on a fence waiting to see which will jump off first. On the day before the attack, Hitler signaled his frame of mind in a letter to Mussolini: “Even if I were forced to lose 60-70 divisions in Russia by the end of the year, this would still only be a small fraction of the forces I would have to maintain constantly on the eastern border under the present conditions.” In the end Germany failed, Meltiukhov states, simply because it had neither the resources nor the reserves necessary to bring a long war to a successful conclusion.

A Suicidal Invasion?

The ever controversial, iconoclastic Suvorov dedicates his new book to his adversaries. He writes, “You can’t dedicate a book with this title [Ledokol, or “Suicide”] to friends, so I dedicate it to my enemies.” An enemy of the Soviet regime who defected to England, Suvorov was tried in absentia and sentenced to death. Although his opponents are legion, including many in the post-Soviet as well as the Anglo-American establishments, in today’s Russia he is the most popular writer on the history of the Second World War.

Suvorov joins Meltiukhov in the belief that if any side was unprepared for the war that ensued, it was the Germans. On June 22, 1941 when Germany launched its desperate attack, Stalin had some 13,000 aircraft to Hitler’s 2,500. Moreover, the Red Army had an even greater advantage in numbers and quality of tanks (24,000:3,700).

In “Suicide” Suvorov analyzes secondary sources in German, just as he did in his books on Russian war plans, and concludes that Hitler had lost the war even before the first shot was fired. It is Suvorov’s contention that Hitler and the Nazi leadership were irresponsible in launching a war against the much larger, better prepared, and better armed Soviet Union in the absurd belief that the USSR could be defeated in 90 days – July-August-September. Hitler and the German high command unpardonably underestimated the strength of the Soviet armed forces, which Stalin had been building up since the mid- 1920s. Germany, of course, did not begin rearming until the mid-1930s, and would delay mobilizing for total war until around 1943. Stalin and his advisors knew that the Wehrmacht lacked all the essentials for a protracted war under conditions of extreme cold. Through their intelligence services and agents, the Soviets had learned that: German tanks were inferior to their own in both quantity and quality; Germany was critically short of oil; Germany did not manufacture cold-resistant lubricants; the German forces had not been issued winter clothing; Germany was dependent for its war effort on the import of many raw materials;

and much more. Exasperated by the short-sighted, superficial German plan for victory in three months, Suvorov asks a few rhetorical questions: Did Hitler think that May followed October in Russia? Had he learned nothing from Napoleon's campaign? Did he not know that, even if he reached Moscow, Russia would have continued the war from the Urals in the interior, far beyond the reach of German long-range bombers? By the end of the fourth month of Barbarossa, the German economy was already groaning. Fritz Todt, chief of arms production, advised Hitler to arrange for an armistice. Large-scale German tank operations had to be curtailed for lack of fuel. The German panzer units, with their limited number of tanks, were often forced to cover long distances to quell unforeseen exigencies, thereby further exhausting fuel supplies. (Large-scale blitzkrieg operations, ensuring the greatest possible encirclement and bag of prisoners, require that the tanks moving out from one pincer proceed with minimum diversion in order to meet those jumping off from the other pincer, thereby closing the encirclement.)

Overrating Stalin

Occasionally Suvorov contradicts himself. For example, he argues that when Hitler turned his troops southward to Kiev before Moscow was taken, he all but lost the war. But elsewhere Suvorov recognizes that in war the best strategy is to defeat the enemy's armed forces, not to take prestige cities. In fact the German forces turned south not so much to take Kiev as to destroy another Soviet army. The German generals, who after all had some experience in the conduct of war, were of course perfectly aware of the pointlessness of capturing large cities merely for trophy value. When the enemy's armed forces are destroyed, his cities will fall on their own.

Only in the case of Stalingrad did the German invaders commit all their forces and energies to take a city – with disastrous results. The previous winter, after the failure to take Moscow, reason had prevailed and the Germans retreated to a more defensible line, where they were able to regroup and reinforce their armies. Without the help of the Finns, German forces were inadequate to take Leningrad, so they bypassed the city. But Hitler forbade any retreat from Stalingrad. Its capture had been aimed, among other things, at blocking oil shipments up the Volga north to the Soviets. The Wehrmacht was no less concerned to fuel its own war machine: it had secured the Crimea in order to protect its chief sources of petroleum, in Romania and Hungary, from Soviet air attack from that peninsula.

Suvorov's excessive regard for Stalin's leadership and his equally overdone criticism of Hitler's ignores the fact that Germany nearly did defeat the Red Army. Had the United States, Great Britain, France, and other allies not supported Stalin with arms, trucks, provisions, and other necessities of war, the outcome might have been quite different. It must also be recalled that, throughout much of the long Russian-German conflict, Germany was compelled to divert 20-30 percent of its war effort to the Western front.

It must be recalled that Germany's ill-fated attack on the Soviet Union followed sev-

eral successive attempts at its encirclement by its enemies. In the 1930s British and French diplomacy had succeeded in surrounding her with hostile nations. Then came the attempted Scandinavian and Balkan encirclement, and finally that of the U.S., UK, and USSR. With both Soviet and Western forces increasing in strength, Germany took a desperate gamble to break the ring, rather than wait until the Red Army seized the most opportune time to pounce. True, the gamble failed. Today's Germany, however, is a prosperous country, much smaller than it might have wished, but the remnant of Stalin's USSR, stripped of the Tsar's empire, is not much more than an overgrown economic basket case.

Suvorov exaggerates Stalin's "genius." While it is true that he created a police state and built up the Red Army to superpower status, his armed forces failed miserably at the time they were most needed, June 1941. It is also true that Stalin dominated Churchill and Roosevelt, above all in the several conferences that determined postwar arrangements among the "Big Three," but the Western leaders had cast themselves in the role of supplicants who needed the Red Army to contain and destroy Germany.

For all that, Suvorov has made a great contribution to correcting the history of the Second World War by dispelling, once and for all, the myth of a peaceloving Soviet Union invented by Communist propagandists and circulated in the West by their dupes and sympathizers.

Trusting Stalin

According to Gorodetsky's version of the Soviet Union, the USSR planned only counter-attacks in defense of the homeland, and its leader, Stalin, was too trusting of Adolf Hitler. Gorodetsky completely ignores the Soviet Union's military build-up from the 1930s until the outbreak of hostilities in 1941. The tens of thousands of advanced tanks and aircraft; the training of hundreds of thousands of paratroopers; the forward deployment of airfields, depots, and attack units on the eve of the attack in June 1941 are all hard evidence of Stalin's real intentions.

The Israeli researcher has limited himself almost entirely to examining statements from official Soviet sources. For the most part, he ignores military analysts (whether Russian, German, or American), who are better equipped than he to evaluate military capabilities and designs. These researchers tend increasingly to agree with Suvorov. Gorodetsky retains the stale support of the old Soviet establishment, while Suvorov has gained many post-Soviet adherents in recent years. While Gorodetsky is read mostly in England and the United States, erstwhile allies of Stalinist Russia, Suvorov is read widely in Russia and Germany, whose peoples experienced Stalin's and Hitler's war first hand.

In Stalin's War of Extermination Joachim Hoffmann examines both the underlying causes and the ruthless execution of the war by Russians and Germans alike, in a thoroughly engrossing, systematic approach that is unsurpassed with respect to comprehensiveness,

objectivity, and documentation. Hoffmann has made extensive use of interrogations of Soviet prisoners of war, ranging in rank from general to private, conducted by their German captors during the war. These interviews, combined with the traditional exploitation of open-source, unclassified literature and recently declassified materials, irrefutably dispel the myth of a peace-loving Soviet Union led by a trusting, pacific Joseph Stalin. Hoffmann's research confirms conclusively that the Soviet Union was making final preparations for its own preemptive attack when the Wehrmacht struck.

Besides the POW interrogations, Hoffmann cites such military authorities as Dmitri Volkogonov, to the effect that Stalin needed only a few more weeks to bring his forces into complete battle readiness; Soviet military analyst Colonel Danilov, who agrees that the "vozhd" (commander) only needed a bit more time; and Colonel Karpov, who has written:

"In the early grayness of a May or June morning, thousands of our aircraft and tens of thousands of our guns would have dealt the blow against the densely concentrated German force, whose positions were known down to battalion level – a surprise even more inconceivable than the German attack on us."

Hoffmann contends that war between these two mutually hostile, ideologically driven nations was inevitable: it was merely a question of which side would initiate hostilities. He reminds us that the First World War had brought Communism to power over the one sixth of the Earth's surface that had been the Russian empire. A second world war, Lenin preached, would advance Communism throughout Europe. Stalin, Lenin's faithful disciple in propagating Communism, acted from the outset of his rule to increase the USSR's military might to that end. By 1941, the Red Army's aircraft, tanks, and field artillery exceeded Germany's by a factor of at least six to one in each category. In that year, the USSR's paratroops and submarines, exclusively offensive forces, exceeded those of the rest of the world combined.

The main principles of Soviet military doctrine in the spring of 1941 were: 1) the Red Army is an offensive army; 2) war must always be fought on enemy territory, with minimum friendly losses and the total destruction of the enemy; 3) the working class in the enemy's country is a potential ally and should be encouraged to rebel against its masters; and 4) war preparations must serve to ensure offensive capabilities.

So confident was Stalin of Soviet military superiority, Hoffmann asserts, that he doubted Germany would ever be foolish enough to attack, especially as long as Britain remained in the war. Dumbfounded at the German successes at the outset of Barbarossa, the Soviet dictator realized that he had underestimated Germany's chances of defeating the Red Army. Suvorov has described Stalin's probable state of mind as comparable to that of the designer of the Titanic after learning it had sunk. Nevertheless, vowing vengeance, still confident of ultimate victory, Stalin demanded the total extermination of the German invaders. On November 6, 1941, he declared:

"Well now, if the Germans want a war of extermination, they will get it. From now on it will be our task, the task of the peoples of the Soviet Union, the task of our fighters,

commanders, and the political officials of our Army and Navy, to exterminate to the last man all Germans who have invaded the Homeland as occupiers. No mercy to the German occupiers! Death to the German occupiers!

Hitler, for his part, by underestimating the military strength of the Soviet Union, led his country to a catastrophic defeat. Goebbels, in his diary, suggested that had Hitler known the actual strength of the Red Army, he might have at least paused before taking his fateful gamble. Yet, however disastrous the Axis attack finally proved for the German nation in the end, Hoffmann believes that all Europe would have suffered as grim a fate had the Red Army succeeded in striking first.

This clash to the death between two ideologically driven states, Hoffmann observes, left no room for chivalry, or for the strict observance of international conventions on land warfare. Stalin insisted that Soviet soldiers not surrender, and used maximal terror to prevent them from doing so. Soviet POWs were deemed deserters, and any Soviet soldier who surrendered was to be killed on falling into Soviet hands. (Near the end of the war German soldiers who refused to fight were shot and hanged from lamp posts for all to see.) Throughout the Great Patriotic War, as the Soviets dubbed it, "Soviet patriotism" and "mass heroism" were heavily dependent on terrorism. As Hoffmann writes, the head of Red Army Political Propaganda, Commissar Lev Sakharovich Mekhlis, was empowered by Stalin to use every device of terror to keep the Red Army fighting. This Mekhlis did with relish. In consequence of the activity of this and other commissars, Stalin's terror against his own people (soldiers and civilians) during the war accounted for a substantial percentage of the estimated twenty-five million Soviet war dead. (See also Walter Sanning's essay on Soviet losses, "Soviet Scorched-Earth Warfare," in JHR [spring 1985]). Even so, more than five million Soviet soldiers managed to surrender to the invaders by the end of the war. Of those who survived the war, many had cause to wish they hadn't following their repatriation to the USSR.

Unpunished Crimes, Aggressive Plans

From the onset of the war, German soldiers unfortunate enough to be taken prisoner were often mutilated and murdered. When the Soviet forces entered Germany, men and boys were murdered or drafted for forced labor; the women were often raped, sometimes murdered, and, if strong enough, dragooned for forced labor.

Although by about 1950 Stalin decided to lessen the influence of Jews in the Communist Party, Jews were very much involved in murderous assignments during the war. In addition to Mekhlis, there was Lazar Kaganovich, responsible for the deaths of millions; General Abakumov, who headed the NKVD/MVD (Ministry of Internal Affairs, or secret police), and Generals Reichman and Chernyakhovski, who were especially ruthless. Hoffmann hastens to add that the criminal actions of individual Jews should no more reflect on the Jewish people as a whole than the criminal actions of individual Nazis on the German people. Yet Nazis charged with war crimes have been, and continue to be, tried and

punished, while, curiously, no courts appear to be interested in bringing Communist criminals to justice.

The thoroughness and reliability of Hoffmann's work (which helpfully includes an appendix containing key original documents in Polish, Russian, English, and German) is nicely exemplified in his treatment of Zhukov's plan of May 15, 1941. While Sergeyev and Bezymenski seem to suggest that the plan was only recently discovered, Hoffmann makes manifestly clear that the plan has long been known and analyzed. Colonel Valeri Danilov and Dr. Heinz Magenheimer examined this plan and other documents that indicate Soviet preparations for attack almost ten years ago in an Austrian military journal (*Österreichische Militärische Zeitschrift*, nos. 5 and 6, 1991; no. 1, 1993; and no. 1, 1994). Both researchers concluded that the Zhukov plan of May 15, 1941, reflected Stalin's May 5, 1941 speech (see above) heralding the birth of the new offensive Red Army. Hoffmann reproduces an original document, referred to as "Short Notation of Comrade Stalin's Speech to the Red Army Academy on May 5, 1941," which concludes with the words:

"But now that we have reconstructed our army and abundantly saturated it with the technology to wage modern warfare, now that we have become strong – now we are obliged to go from defense to attack. In defending our country we are obliged to act in an offensive manner. To switch over from defense to a military policy of offensive action. We must reconstruct our training, our propaganda, our agitation, and our press in the spirit of attack. The Red Army is now a modern army, and a modern army is an army of attack."

The Zhukov plan of May 15, 1941, indicates clearly that the Red Army planned a preemptive strike against the German forces across the border. Hoffmann further notes that a few days later, on May 20, 1941, Mikhail Kalinin, then chairman of the presidium of the Supreme Soviet and nominally head of state, gave a speech in which he said:

"War is a very dangerous business, laden with sorrows, but when a time comes when it is possible to expand the realm of Communism, war should not be discounted ... and the zone of Communism must be expanded. The capitalist world can only be destroyed by the red hot glowing steel of a holy revolutionary war."

Kalinin thus strongly implied that the war the USSR was about to wage was not a preventive war forced upon it by Germany, but a war of conquest to expand the Communist empire.

The Perfect Storm

The preponderance of documents uncovered in the past decade, including further analyses of the Zhukov plan of May 15, 1941, by members of the Suvorov school, should convince the impartial reader that: Germany was woefully unprepared for a long war; that the Soviet Union was not only armed to the teeth, but poised to spring in July 1941; that

Stalin was Lenin's disciple in striving to advance Communism to the rest of Europe, especially to Germany; and that the governments of Britain and France were totally oblivious of the greater danger Communism posed to them when they declared war on Germany over its border dispute with Poland. The failure of the British, French, and American leaderships to perceive that the Soviet Union was by far the deadlier threat, even in 1939, was a mistake that has taken half a century to rectify, at the cost of countless millions of lives.

Hoffmann concludes that the war between the two irreconcilable ideologies was inevitable and unavoidable. Stalin's fanatical adherence to Communism (class hatred) and Hitler's equally fanatical adherence to racial theories (Hoffmann cites Disraeli: "The race question is the key to world history") led their peoples to a catastrophe unmatched since the Thirty Years' War. Hoffmann blames the horrible excesses the Red Army inflicted on German civilians on hate-obsessed war propagandists such as Ilya Ehrenburg in Russia who deliberately exaggerated German crimes. Thus, Hoffman notes, Ehrenburg announced a death toll of four million for Auschwitz on January 4, 1945, weeks before the capture of the camp. Likewise, months before the war's end, Ehrenburg reported that six million Jews had been murdered by the Germans. Moreover, in many instances, including the infamous Katyn forest massacre of Polish prisoners, Red propagandists shamelessly tried to blame the German army for crimes committed by the Soviets.

Like his colleague Wolfgang Strauss, Hoffmann advocates reconciliation between the peoples of Germany and Russia. The policies of both Stalin's Communist regime and Hitler's National Socialist state were aberrations far removed from the traditional friendship between the two peoples as prevailed under Bismarck and before him. In that spirit Hoffmann makes special mention of Drs. Heinz Magenheimer, Werner Maser, Ernst Topitsch, Günther Gillessen, Alfred M. de Zayas, Viktor Suvorov, and also Aleksandr Moiseevich Nekrich and Lev Kopelev, two former Soviet wartime commissars of Jewish extraction, for their courageous contributions to revisionist history. (Nor has Hoffmann been less than courageous: he testified in a German court to the scholarly quality of Germar Rudolf's Holocaust revisionist anthology, *Grundlagen zur Zeitgeschichte*, later published in English as *Dissecting the Holocaust*.)

The extreme economic and political conditions that afflicted much of the first half of the twentieth century devastated Germany and Russia. The slaughter of the First World War, the triumph of Communism in Russia, the treaty of Versailles, and the Great Depression combined to culminate in the political storm of the century, the Second World War, much as unique and unforeseen meteorological conditions in October 1991 – three merging hurricanes – combined to create what writer Sebastian Junger called "the perfect storm," a devastating "nor'easter" in the North Atlantic. In historians such as Suvorov and Hoffmann, the historical tempest of the twentieth century is, increasingly, finding able and objective chroniclers.

12.13 The Jewish Hand in the World Wars

by Thomas Dalton

As far back as the Book of Genesis, we find stories such as that of Joseph, son of Jacob, sold into slavery in Egypt. Joseph earns the favor of the Pharaoh and is elevated to a position of power. When a famine strikes, Joseph develops and implements a brutal policy of exploitation, leading Egyptian farmers to sell their land, animals, and ultimately themselves in exchange for food. Joseph himself survives unscathed, living out his days in “the land of Goshen,” with a life of luxury and ease — evidently as repayment for a job well done. Over time, Jews continued to build a reputation as rabble-rousers and exploiters. In 41 AD, Roman Emperor Claudius issued his Third Edict, condemning the Jews of Alexandria for abuse of privilege and sowing discord; he charged them with “fomenting a general plague which infests the whole world.” Eight years later he expelled them from Rome. As a result, the Jews revolted in Jerusalem in the years 66-70, and again in 115 and 132. Of that final uprising, Cassius Dio made the following observation — the first clear indication of Jews causing a major war:

Jews everywhere were showing signs of hostility to the Romans, partly by secret and partly overt acts. . . [M]any other nations, too, were joining them through eagerness for gain, and the whole earth, one might almost say, was being stirred up over the matter.

Jewish Advance in America and Elsewhere

The long history of Jewish involvement in social conflict has a direct bearing on both world wars. Consider their progressive influence in American government. Beginning in the mid-1800s, we find a number of important milestones. In 1845, the first Jews were elected to both houses of Congress: Lewis Levin (Pa.) to the House and David Yulee (Fla.) to the Senate. By 1887 they had their first elected governor, Washington Bartlett in California. And in 1889, Solomon Hirsch became the first Jewish minister, nominated by President Harrison as ambassador to the Ottoman Empire — which at that time controlled Palestine. Overseas, trouble was brewing for the Jews in Russia. A gang of anarchists, one or two of whom were Jewish, succeeded in killing Czar Alexander II in 1881. This unleashed a multi-decade series of periodic pogroms, most minor but some killing multiple hundreds of Jews. Further difficulties for them came with the so-called May Laws of 1882, which placed restrictions on Jewish business practice and areas of residency within the “Pale of Settlement” in the western portion of the Russian empire. Many Jews fled the Pale; of those heading west, Germany was their first stop.

Even prior to the 1880s, Jewish influence in Germany was considerable. In the 1840s, both Bruno Bauer and Karl Marx wrote influential essays on *Die Judenfrage* (The Jewish Question). In 1850, composer Richard Wagner complained that Germans found themselves “in the position of fighting for emancipation from the Jews. The Jew is, in fact. . . more than

emancipated. He rules..." By 1878, Wagner declared that Jewish control of German newspapers was nearly total. A year later Wilhelm Marr decried "the victory of Jewry over Germandom"; he believed it self-evident that "without striking a blow... Jewry today has become the socio-political dictator of Germany."

The facts support these views. And with the influx of Russian and Polish Jews in the late 1800s and early 1900s, the situation got demonstrably worse. Sarah Gordon (1984: 10-14) cites the following impressive statistics:

Before the First World War, for example, Jews occupied 13 percent of the directorships of joint-stock corporations and 24 percent of the supervisory positions within these corporations. ... During 1904 they comprised 27 percent of all lawyers, 10 percent of all apprenticed lawyers, 5 percent of court clerks, 4 percent of magistrates, and up to 30 percent of all higher ranks of the judiciary. ... Jews were [also] overrepresented among university professors and students between 1870 and 1933. For example, in 1909-1910... almost 12 percent of instructors at German universities were Jewish... In 1905-1906 Jewish students comprised 25 percent of the law and medical students... The percentage of Jewish doctors was also quite high, especially in large cities, where they sometimes were a majority. ... [I]n Berlin around 1890, 25 percent of all children attending grammar school were Jewish...

For all this, Jews never exceeded 2% of the German population. The public accepted the foreigners with a remarkable degree of tolerance, and more or less allowed them to dominate certain sectors of German society. There were no legal constraints, and violent attacks were rare. But the Germans would come to regret such liberal policies.

The other important factor at that time was the emergence of Zionism. Formally established by Theodor Herzl in 1897, its basic principles were laid out in his book *Der Judenstaat* (The Jewish State). He argued that the Jews would never be free from persecution as long as they were foreigners everywhere, and thus they needed their own state. A number of locations were discussed, but by the time of the first meeting of the World Zionist Organization in 1897, the movement had settled on Palestine. This, however, was problematic because the region at that time was under control of the Ottoman Empire, and was populated primarily by Muslim and Christian Arabs. Somehow, the Zionist Jews would have to wrest control of Palestine away from the Ottoman Turks and then drive out the Arabs. It was a seemingly impossible task.

They immediately understood that this could only be done by force. It would take a condition of global distress — something approaching a world war — in order for the Zionists to manipulate things to their advantage. Their guiding principle of 'profit through distress' could work here, but it would require both internal and external pressure. In states where the Jews had significant population but little official power, they would foment unrest from within. In states where they had influence, they would use the power of their accumulated wealth to dictate national policy. And in states where they had neither population nor influence, they would apply external pressure to secure support for

their purposes.

That the Zionists seriously contemplated this two-pronged, internal/external strategy is no mere speculation; we have the word of Herzl himself. He wrote: When we sink, we become a revolutionary proletariat, the subordinate officers of the revolutionary party; when we rise, there rises also our terrible power of the purse. (1896/1967: 26) In fact, Herzl apparently predicted the outbreak of global war. One of the original Zionists, Litman Rosenthal, wrote in his diary of 15 December 1914 his recollection of a conversation with Herzl from 1897. Herzl allegedly said,

It may be that Turkey will refuse or be unable to understand us. This will not discourage us. We will seek other means to accomplish our end. The Orient question is now the question of the day. Sooner or later it will bring about a conflict among the nations. A European war is imminent. . . . The great European war must come. With my watch in hand do I await this terrible moment. After the great European war is ended the Peace Conference will assemble. We must be ready for that time. We will assuredly be called to this great conference of the nations and we must prove to them the urgent importance of a Zionist solution to the Jewish Question. This was Herzl's so-called "great war prophecy." Now, he does not say that the Zionists will cause this war, only that they will "be ready" when it comes, and "will seek other means" than diplomacy to accomplish their end. A striking prediction, if true.

In any case, there was clearly a larger plan at work here. The Jews would pursue a policy of revolution in states like Russia in order to bring down hated governments. To the degree possible, they would seek to undermine the Ottoman Turks as well. And in Germany, the UK, and America, they would use "the terrible power of the purse" to dictate an aggressive war-policy in order to realign the global power structure to their favor. This would have a triple benefit: curtailing rampant anti-Semitism; enhancing Jewish wealth; and ultimately establishing a Jewish state in Palestine, one that could serve as the global center of world Jewry. Revolution and war thus became a top priority. Turkey was in fact an early success for the movement. The Sultan's system of autocratic rule generated some dissatisfaction, and a group of Turkish Jews exploited this to their advantage — resulting in the Turkish Revolution of 1908. As Stein explains,

the revolution had been organized from Salonica [present-day Thessaloniki], where the Jews, together with the crypto-Jews known as Dönme, formed a majority of the population. Salonica Jews and the Dönme had taken an important part in the events associated with the revolution and had provided the Committee of Union and Progress with several of its ablest members. (1961: 35)

This group of revolutionaries, today known as the Young Turks, was able to overthrow the Sultan and exert substantial influence on the succeeding ruler. But in the end they were unable to steer the declining empire in a pro-Zionist direction. Back in the USA, Jewish population was rising even faster than in Germany. In 1880 it had roughly 250,000 Jews (0.5%), but by 1900 — just 20 years later — the figure was around 1.5 million (1.9%).

A census of 1918 showed this number increasing to an astonishing figure of 3 million (2.9%). Their political influence grew commensurately. For present purposes, significant American influence began with the assassination of President William McKinley in 1901. He was shot by a Polish radical named Leon Czolgosz, who had been heavily influenced by two Jewish anarchists, Emma Goldman and Alexander Berkman. The presidency immediately fell to the vice president, Theodore Roosevelt — who, at age 42, was (and remains) the youngest president in history. His role as an army colonel in the 1898 victory in Cuba over the Spaniards had led to widespread publicity, and with the backing of the Jewish community, he won the New York governorship later that same year. Thus he was well situated to earn the vice presidential nomination in 1900.

A question of interest: Was Roosevelt Jewish? I will examine this issue in detail later with respect to FDR (as to whom there is more to say), but in brief, there is considerable circumstantial evidence that all of the Roosevelts were, at least in part, Jewish. In Theodore's case, the only explicit indication is a claim by former Michigan governor Chase Osborn. In a letter dated 21 March 1935, Osborn said, "President [Franklin] Roosevelt knows well enough that his ancestors were Jewish. I heard Theodore Roosevelt state twice that his ancestors were Jewish." But Osborn offers no specifics, and I am not aware of any further claims regarding Theodore himself.

However, there are two other relevant items regarding his Jewish connections. Having acceded to the office in 1901, he subsequently won the 1904 election. In late 1906 he appointed the first Jew to the presidential cabinet: Oscar Straus, a wealthy New York lawyer and former ambassador to the Ottoman Empire. As Secretary of Labor and Commerce, Straus was in charge of the Bureau of Immigration — at the critical time of accelerating Jewish immigration. We can be sure that his office was particularly amenable to incoming Jews.

The second event occurred in 1912. Roosevelt had declined to run again in 1908, preferring to nominate his Secretary of War, William Taft — who proceeded to win handily. Taft, however, disappointed many Republicans, and there was a call to bring Roosevelt back. But the party would not oust a sitting president, and so Roosevelt decided to run on a third-party ticket. Hence the peculiar status of the 1912 election: it featured Taft running for reelection, Roosevelt running as a third-party candidate, and Woodrow Wilson running as a first-term Democrat. As the history books like to say, we had a former president and a sitting president running against a future president. Wilson, as we know, would win this race, and go on to serve two consecutive terms — covering the lead-up, duration, and aftermath of World War I.

But less well known is this fact: For perhaps the first time in US history, all three major candidates had substantial Jewish financial backing. Henry Ford's Dearborn Independent reported on a 1914 Congressional testimony by Paul Warburg, best known as the Jewish "father of the Federal Reserve." Warburg was the prototypical Jewish banker, long-time partner at Kuhn, Loeb, and Co., and later head of Wells Fargo in New York. At some point during Taft's presidency, Warburg decided to get financially involved in politics. By

the time of the 1912 election, he and his partners at Kuhn, Loeb were funding all three candidates. Warburg's testimony, before Senator Joseph Bristow (R-Kan.), is revealing:

JB: "It has been variously reported in the newspapers that you and your partners directly and indirectly contributed very largely to Mr. Wilson's campaign funds." PW: "Well, my partners — there is a very peculiar condition — no; I do not think any one of them contributed largely at all; there may have been moderate contributions. My brother, for instance, contributed to Mr. Taft's campaign." . . .

JB: "I understood you to say that you contributed to Mr. Wilson's campaign." PW: "No; my letter says that I offered to contribute; but it was too late. I came back to this country only a few days before the campaign closed." JB: "So that you did not make any contribution?" PW: "I did not make any contribution; no." JB: "Did any members of your firm make contributions to Mr. Wilson's campaign?" PW: "I think that is a matter of record. Mr. [Jacob] Schiff contributed. I would not otherwise discuss the contributions of my partners, if it was not a matter of record. I think Mr. Schiff was the only one who contributed in our firm." JB: "And you stated that your brother had contributed to Mr. Taft's campaign, as I understand it?" PW: "I did. But again, I do not want to go into a discussion of my partners' affairs, and I shall stick to that pretty strictly, or we will never get through." JB: "I understood you also to say that no members of your firm contributed to Mr. Roosevelt's campaign." PW: "I did not say that." JB: "Oh! Did any members of the firm do that?" PW: "My answer would please you probably; but I shall not answer that, but will repeat that I will not discuss my partners' affairs." JB: "Yes. I understood you to say Saturday that you were a Republican, but when Mr. Roosevelt became a candidate, you then became a sympathizer with Mr. Wilson and supported him?" PW: "Yes." JB: "While your brother was supporting Mr. Taft?" PW: "Yes." JB: "And I was interested to know whether any member of your firm supported Mr. Roosevelt." PW: "It is a matter of record that there are." JB: "That there are some of them who did?" PW: "Oh, yes."

In sum: some unknown members of Kuhn, Loeb (which also financed the bolshevik revolution) donated to Roosevelt; Paul's brother (Felix) gave to Taft; and Schiff donated to Wilson. Cleverly, Paul Warburg himself admitted to no funding, but we can hardly take him at his word here. In any case, there was a Jewish hand in all three contestants, and the Jews were guaranteed influence with the winner, no matter the outcome. We don't know the extent of this influence, nor how long it had gone on. To date I have not uncovered evidence of Jewish involvement with Roosevelt's 1904 election, although his appointment of Straus to the cabinet is typical of the kind of political patronage that follows financial support. And the same with Taft: We don't know the degree of Jewish support for his initial run in 1908, but support in 1912 suggests that they were reasonably satisfied with his performance.

But Taft turned out to be a mixed bag for the Jews. On the one hand, Jewish immigration continued apace. And he did appoint Oscar Straus to the ambassadorship to the Ottoman Empire. However, he was less inclined to act on the international stage than the Jews

had wished. Of particular concern was the growing problem in Russia, and steady reports of Jewish pogroms. For example, there was the “Kishinev massacre” of April 1903; the New York Times reported that “Jews were slaughtered like sheep. The dead number 120. . . . The scenes of horror attending this massacre are beyond description. Babies were literally torn to pieces by the frenzied and blood-thirsty mob” (April 28; p. 6). A slight exaggeration — the actual death toll was 47. A second attack in Kishinev in 1905 left 19 dead; regrettable, but hardly a catastrophe. In early 1910 the NYT ran an article, “Russian Jews in Sad Plight.” Their source said, “The condition of Russian [Jews] is worse today than at any time since the barbarous massacres and pogroms of 1905 and 1906.” Then on 18 September 1911, the Russian Prime Minister, Pyotr Stolypin, was shot and killed — by a Jewish assassin, Mordekhai Gershtovich, aka Dmitri Bogrov. (The reader will recall Herzl’s demand for revolutionary action.) This of course brought even harsher recriminations.

But the last straw, for the American Zionists, was the restriction on American Jews from entering into Russia. There had been obstacles in place since the turn of the century, but they became much more stringent during Taft’s presidency. The Zionists wanted the US government to take action, but this was forestalled by a long-standing treaty of 1832, one that guaranteed “reciprocal liberty of commerce and navigation” and allowed mutual freedom of entry of citizens on both sides. The Zionists thus took it upon themselves to initiate the abrogation of this treaty as a means of putting external pressure on the Czarist regime. And, despite the wishes of President Taft and the best interests of America at large, they succeeded. This whole incident, thoroughly documented by Cohen (1963), is an astounding and watershed event in Jewish influence. As she says,

Credit for this act belongs to a small group which had campaigned publicly during 1911 for the abrogation of the treaty. How a mere handful of men succeeded in arousing American public opinion on a relatively obscure issue to a near “wave of hysteria,” how they forced the hand of an antagonistic administration, and what principal aim lay behind their fight for abrogation constitute an absorbing story of pressure politics.

The “mere handful of men” consisted primarily of Jewish lawyer Louis Marshall, the banker Jacob Schiff, and their colleagues at the American Jewish Committee — the ‘AIPAC’ of its day, and still a potent force a century later. They had raised the topic of abrogation as early as 1908, but it did not become a top priority until early 1910. They then approached Taft, knowing that he was preparing to run for reelection the following year. As Cohen (p. 9) says, “The quid pro quo was obvious; the Jewish leaders would try to deliver the Jewish vote to Taft.” But he was unsympathetic. Taft knew that, for several reasons, it was not in America’s favor: Our commercial interests, our Far East foreign policy, Russian good will, and our international integrity would all be harmed by abrogation. But the Jews were pressing; in February 1910 they met with Taft, to “give him one last chance” to support their cause. When he again declined, they decided to go around the president, to Congress and to the American people. They knew how to work Congress. As Cohen (p. 13) explains, “the pattern of Jewish petitions to the government. . . was

generally that of secret diplomacy. Wealthy or politically prominent individuals asked favors... but always in the form of discreet pressure and behind-the-scenes bargaining." But mounting a public campaign was something new.

In January 1911, Marshall "officially opened the public campaign for abrogation." He immediately appealed not to Jewish interest — though that was the sole motive — but rather to allegedly American interests. "It is not the Jew who is insulted; it is the American people," he said. As Shogan (2010: 22) puts it, "a key to the [Jewish] strategy was to frame its demand as a plea to protect American interests in general, not just the rights of Jews." The AJC then embarked on a massive propaganda effort. They enlisted Jewish support in the media; Samuel Strauss and Adolph Ochs (of the New York Times) helped coordinate a series of articles and op-eds in several major cities. They made the case "in popular emotional terms," organized petitions and letterwriting programs, and held dedicated, pro-abrogation rallies — one of which included such luminaries as William Hearst and future president Woodrow Wilson. Everything was designed to put maximum pressure on Congress to act.

At the same time, Taft remained firm in his opposition. In a private letter he wrote, "I am the President of the whole United States, and the vote of the Jews, important as it is, cannot frighten me in this matter" (Cohen, p. 21)

Secretary of State Philander Knox, and Ambassador to Russia William Rockhill, both strongly supported him. Rockhill was particularly galled; expressing his thoughts, Cohen asks, "were national interests to be subservient to a small group of individuals?" After all, the actual harm was near microscopic: "Only 28 American Jews resided in Russia, and the State Dept knew of only four cases in five years where American Jews were denied admission" (p. 16). And yet this "small group of men" was turning the tide in their favor.

By November of 1911, just 11 months after launching their public campaign, the AJC was confident of victory. Schiff was able to predict easy passage for the resolution. That same month an "unofficial delegation" of Jews met with Taft regarding his pending annual message, and they convinced him that Congressional action was inevitable, and veto-proof. Taft relented, agreeing to sign the resolution when it reached his desk. Wanting no further delay, the AJC pressed for a vote before the end of year. On December 13 the House approved the measure — by the astounding tally of 301 to 1. A slightly modified version came up for Senate vote on December 19, which was passed unanimously. A reconciled bill was approved the next day, and Taft signed it. So it came to be that, on 20 December 1911, the US government sold its soul to the Jewish Lobby.

The importance of this event can scarcely be overestimated. The interests of "a mere handful of men," acting on behalf of a small American minority, were able to dictate governmental foreign policy, against the express wishes of the president and his staff, and contrary to the larger interests of the nation. The Russians, incidentally, were stunned at this decision. They knew of the Jewish hand behind it, but could hardly believe that it had the power to carry through on its threat. The NYT again gives a useful report:

In parliamentary circles here [in Russia] the prevailing comment is characterized by astonishment that the American government has responded so readily to the Jewish outcry. The opinion is expressed by members of the Duma that in all probability the Jews will now attempt to force matters further. (20 Dec 1911; p. 2)

Indeed — the Jewish-led Bolshevik revolution was just six years away. Such was the state of things in America and globally at that time. International Jewry had sufficient wealth and influence to steer events at the highest levels, and American Jews (Zionist and otherwise) had come to permeate the government — and American culture generally. The situation so impressed German economist Werner Sombart that in 1911 he made this observation: “For what we call Americanism is nothing else than the Jewish spirit distilled.” From the perspective of a century later, this would seem truer than ever.

Wilson and the “Great War”

All this, then, serves as the context and backdrop for the emergence of Woodrow Wilson, beginning with the election of 1912. If Franklin Roosevelt was “the first great hero of American Jews,” then Wilson was the first great understudy. As Henry Ford saw it, “Mr. Wilson, while President, was very close to the Jews. His administration, as everyone knows, was predominantly Jewish.” Wilson seems to have been the first president to have the full backing of the Jewish Lobby, including multiple major financial donors. And he was the first to fully reward their support. It’s worthwhile summarizing the main figures in the Jewish power structure, as of 1912. Herzl died young in 1904, so he was out of the picture. But a “mere handful” of others came to dominate the movement, and the American scene:

- Oscar Straus (age 62), German-born, first Jewish cabinet member under T. Roosevelt, and later ambassador to the Ottoman Empire under Taft.
- Jacob Schiff (65), head of the Kuhn, Loeb banking firm.
- Louis Marshall (56), borderline Zionist, founder of the AJC.
- The Warburg brothers: Paul (44) and Felix (41), German-born bankers. A third brother, Max, stayed in Germany (until 1938).
- Henry Morgenthau, Sr. (56), German-born lawyer, father of the even more influential Henry, Jr.
- Louis Brandeis (56), lawyer, strongly Zionist.
- Samuel Untermyer (54), lawyer.
- Bernard Baruch (42), Wall Street financier.
- Stephen Wise (40), Austrian-born rabbi and fervent Zionist.

- Richard Gottheil (50), British-born rabbi and Zionist.

These, to emphasize, were all Americans. On the European side there was a different structure, one centered on such figures as Chaim Weizmann and Herbert Samuel in Britain, and Max Nordau in France.

Let me begin with financial backing — which of course has long been the trump card of Jewry. Many of the above individuals were prime supporters of Wilson. Cooper (2009: 172) remarks that his “big contributors” included the likes of “Henry Morgenthau, Jacob Schiff, and Samuel Untermyer, as well as a newcomer to their ranks, Bernard Baruch.” Such assistance continued throughout Wilson’s tenure; for his 1916 reelection bid, “financiers such as Henry Morgenthau and Bernard Baruch gave generously” (ibid: 350). As we saw, Schiff’s support was admitted by Warburg in his congressional testimony. Warburg himself was very evasive, allowing only that his “sympathies went with Mr. Wilson.” Yet we can hardly believe that no money followed. Warburg’s most profound impact was his leading role in the creation of the Federal Reserve in 1913, the year Wilson took office. Seligman (1914: 387) remarks that “it may be stated without fear of contradiction that in its fundamental features the Federal Reserve is the work of Mr. Warburg more than of any other man in the country.” Its basic principles, he said, “were the creation of Mr. Warburg and of Mr. Warburg alone.” In due recognition, Wilson appointed him to the Fed’s first Board of Governors in August 1914.

Morgenthau’s influence began in 1911, when Wilson was still governor of New Jersey. Balakian (2003: 220) notes that it was at this time that the two “bonded,” and that “Morgenthau offered Wilson his ‘unreserved moral and financial support’.” In the run-up to the 1912 Democratic convention, “Morgenthau was giving \$5,000 a month to the campaign, and continued to give generously throughout the fall” (ibid.: 221). In fact, says Balakian, only a few of his wealthy Princeton classmates gave more. Ward (1989: 252) confirms this, noting that Morgenthau “had been an important backer of Woodrow Wilson in 1912.” Morgenthau duly received his reward: ambassadorship to Ottoman Turkey, again overseeing Palestine. Of special importance was Wilson’s association with Louis Brandeis. The two first met back in 1910; Shogan (2010: 64) describes Brandeis’s “friendship with Woodrow Wilson,” noting that he had “worked mightily” for him in the 1912 campaign. In a telling statement, Wilson wrote to his friend after the election, “You were yourself a great part of the victory.” Brandeis would be rewarded by a successful nomination to the Supreme Court in June 1916 — the first Jew on the court. He would serve a full 23 years, well beyond Wilson’s lifetime, and, despite his formal ‘neutrality’ as a justice, would play a vital role in both world wars.

But perhaps the most significant of all was Bernard Baruch. A millionaire before he was 30, Baruch catapulted out of nowhere, under obscure conditions, to become a leading influence in the Wilson administration. Already in 1915, in the early years of the European war, he was convinced that America would be involved. In Congressional testimony of February 1920, Baruch stated that, in 1915, he “had been very much disturbed by the

unprepared condition of this country.” “I had been thinking about it very seriously, and I thought we would be drawn into the war. . . . I thought a war was coming long before it did.” Through some still-mysterious process, Baruch was named to the Council of National Defense in early 1916. He then came to control a particular subcommittee, the War Industries Board (WIB), which had extraordinary wartime powers. Baruch single-handedly ran it throughout the war years. His testimony before Sen. Albert Jefferis (R-Neb.) summarizes his role:

AJ: “In what lines did this board of 10 have the powers that you mention? BB: “We had the power of priority, which was the greatest power in the war.” AJ: “In other words, you determined what everybody could have?” BB: “Exactly; there is no question about that. I assumed that responsibility, sir, and that final determination rested within me.” AJ: “What?” BB: “That final determination, as the President said, rested within me; the determination of whether the Army or Navy should have it rested with me; the determination of whether the Railroad Administration could have it, or the Allies, or whether General Allenby should have locomotives, or whether they should be used in Russia, or used in France.” AJ: “You had considerable power?” BB: “Indeed I did, sir.” . . .

AJ: “And all those different lines, really, ultimately, centered in you, so far as power was concerned?” BB: “Yes, sir, it did. I probably had more power than perhaps any other man did in the war; doubtless that is true.”

An astonishing fact: a young, unelected Jew with no political experience becomes, in time of crisis, the most powerful man in the US government, after the president himself. And yet all this was just a rehearsal. Baruch would play a similar role in the Second World War under FDR, in his Office of War Mobilization. He was also a friend and confidant of Winston Churchill. No doubt “Barney” Baruch had lots of advice for all parties involved. World War I began in earnest in August of 1914, when the German army crossed into officially neutral Belgium on its way to France. A series of alliances and treaties triggered a chain reaction in which 10 nations entered the war by the end of that year. Ultimately another 18 would be engaged — though in the case of the US, it would be nearly two and half years later. It’s difficult today, with our present eagerness to engage in warfare around the world, to understand the degree to which Americans then were so strongly anti-interventionist. Neither the public nor the government had any real inclination to get involved in a European war. Publicly, at least, Wilson himself was a pacifist and an isolationist. In a speech of 19 August 1914, just after the outbreak of war, he proclaimed that “every man who really loves America will act and speak in the true spirit of neutrality, which is the spirit of impartiality and fairness and friendliness to all concerned.” We have a duty to be “the one great nation at peace,” and thus “we must be impartial in thought as well as in action.”

And yet, American governmental policy did not fully adhere to these lofty words. Under international law, the United States, as a neutral party, had the right to conduct commerce with all sides. But of course both Britain and Germany sought to restrict trade

with the other. A British naval blockade interrupted or seized a substantial portion of our intended shipments to Germany, reducing trade by more than 90%. And yet Wilson hardly objected. On the other hand, when German submarines attacked or threatened our shipments to England, he reacted in the strongest manner. The end result was a near quadrupling of trade with the Allies between 1914 and 1916. In practical terms, we were supporting the Allied war effort, even as we remained officially neutral. Wilson's government — if not he himself — was decidedly biased against the Germans. Not coincidentally, Wilson's Jewish advisors were, to a man, anti-German. By the time of the 1916 election, war was churning throughout Europe. Still, Wilson promised to remain unengaged; he ran and won on the slogan, "He kept us out of war." The American people too had little appetite for armed conflict; as Cooper (2009: 381) writes, "Clearly, the president was not feeling a push for war from Congress or the public." But like so many campaign promises, this one would be discarded soon afterward — in fact, barely one month after his second inauguration.

So: Why did he do it? Why did Wilson change his mind and, on 2 April 1917, issue his famous call to Congress to declare war on Germany? His official answer: German submarines were relentlessly targeting US military, passenger, and cargo ships, and thus we simply had no choice. But this explanation does not withstand scrutiny. Early in the war the Germans were sinking a number of ships that were trafficking with the Allies, but in September 1915, after urgent demands from Wilson, they suspended submarine attacks. This suspension held for an exceptionally long time — through February 1917. And all throughout that time, we, and other "neutral" nations, were trading with Germany's enemies, supplying them with material goods, and assisting in a naval blockade. Thus it is unsurprising that the Germans eventually resumed their attacks, on all ships in the war zone.

In his famous speech to Congress, Wilson said of the lifting of the suspension, "the Imperial German Government . . . put aside all restraints of law or of humanity, and uses its submarines to sink every vessel [in the war zone]." Sparing no hyperbole, he added, "The present German submarine warfare against commerce is a warfare against mankind. It is a war against all nations."

But what are the facts? Specifically, how big a threat did Germany pose to the US? In reality, it was not much of a threat at all. From the time of the outbreak of war (August 1914) until Wilson's declaration in April 1917, a total of three small military ships were lost — one submarine in 1915, one armored cruiser in 1916, and one protected cruiser in early 1917. Additionally, a total of 12 American merchant steamers (freight ships) were sunk in the same period, but with the loss of only 38 individual lives. So the US had lost a grand total of 15 ships to that point. Putting this in perspective: Over the course of the entire war, German U-boats sank roughly 6,600 ships in total. Hence the threat to the US was all but inconsequential. Clearly Wilson was thinking in internationalist terms, and someone or something convinced him that realigning the global order was more important than American public opinion; thus his famous and much-derided phrase:

“The world must be made safe for democracy.” Yes — but whose democracy?

A few powerful voices opposed Wilson, including Senators Robert La Follette (R-Wisc.) and George Norris (R-Neb.). Both spoke on April 4, just two days after Wilson’s plea for war. La Follette was outraged at the unilateral action taken by the Wilson administration. In a scathing speech, he said:

I am speaking of a profession of democracy that is linked in action with the most brutal and domineering use of autocratic power. Are the people of this country being so well-represented in this war movement that we need to go abroad to give other people control of their governments? Will the President and the supporters of this war bill submit it to a vote of the people before the declaration of war goes into effect? . . . Who has registered the knowledge or approval of the American people of the course this Congress is called upon to take in declaring war upon Germany? Submit the question to the people, you who support it. You who support it dare not do it, for you know that by a vote of more than ten to one the American people as a body would register their declaration against it.

Norris had some ideas about the driving forces behind the call to war. He believed that many Americans had been “misled as to the real history and the true facts, by the almost unanimous demand of the great combination of wealth that has a direct financial interest in our participation in the war.” Wall Street bankers loaned millions to the Allies, and naturally wanted it repaid. And then there were the profits to be made from military hardware and ammunition. These same forces also held sway in the media: [A] large number of the great newspapers and news agencies of the country have been controlled and enlisted in the greatest propaganda that the world has ever known, to manufacture sentiment in favor of war. . . . [And now] Congress, urged by the President and backed by the artificial sentiment, is about to declare war and engulf our country in the greatest holocaust that the world has ever known. . .

Indeed — every war is a ‘holocaust.’ Norris then encapsulated his view with a most striking line: “We are going into war upon the command of gold.” And everyone knew who held the gold. Norris and La Follette both realized they had no chance to change the outcome. Any force that could compel abrogation of the Russian treaty and monopolize a presidential election could manufacture Congressional consent for war. Later that same day, the Senate confirmed it, by a vote of 82 to 6. Two days thereafter, the House concurred, 373 to 50. And so we were at war. American troops would be on the ground in Europe within three months.

Balfour

Political power is a strange thing; it is one of those rare cases where appearance is reality. If you say you have power, and others say you have power, and if all parties act as if you have power — then you have power. Such is the case with the Jewish

Lobby. Simply because, at that time, they had no army, had internal disagreements, and in no country exceeded one or two percent of the population, we cannot conclude that they were mere helpless pawns, manipulated at will by the great powers. And yet today, modern commentators continue to refer to the 'illusory' or 'misperceived' power of the Jews at that time. This can now be exposed as a weak attempt to whitewash the Jewish power play. When a small minority can dictate foreign policy, promote global war, and steer the outcome in their favor, then they have substantial power — no matter what anyone says. It was true in 1911; it was true in the 1912 election; and it would be clearly demonstrated once again in the case of the Balfour Declaration of 1917.

To recap: During Wilson's first term, Jewish Americans achieved major political gains. Paul Warburg's Federal Reserve Act was passed, and he was named to the Board. Henry Morgenthau, Sr. was nominated ambassador to Turkey, watching over Palestine. Brandeis was named to the Supreme Court. And Baruch became the second most powerful man in the land. Jews also made important strides elsewhere in America during those four years. Two more Jewish governors were elected — Alexander in Idaho, and Bamburger in Utah. The motion-picture business witnessed the beginning of Jewish domination, with Universal Pictures (Carl Laemmle), Paramount (Zukor, Lasky, Frohmans, and Goldwyn), Fox Films (William Fox), and the early formation of "Warner" Bros. Pictures — in reality, the four Wonskolaser brothers: Hirsz, Aaron, Szmul, and Itzhak. This development would prove useful for wartime propaganda. And the Jewish population grew by some 500,000 people. 1917 was the first year of Wilson's second term. The European war was into its third year, and looking increasingly like a stalemate. With the German resumption of U-boat attacks on shipping to the UK and the American declaration, a true world war was in hand. And it was also a time of revolution in Russia. In fact, two revolutions: the worker's uprising in February that overthrew Czar Nicholas II, and the Bolshevik revolution in October that put the Jewish revolutionaries in power.

The role of Jews in the Russian revolution(s) is a complicated and interesting story. There isn't space here to elaborate, but in brief, the communist movement had a heavy Jewish hand from its inception. Marx, of course, was a German Jew, and his writings inspired an 18-year-old Vladimir Lenin in 1888. Lenin was himself one-quarter Jewish (maternal grandfather: Alexandr Blank). In 1898, Lenin formed a revolutionary group, the Russian Social Democratic Worker's Party (RSDWP), which was the early precursor to the Soviet Communist Party. Four years later, Lenin was joined by a full-blooded Jew, Leon Trotsky — born Lev Bronstein. Internal dissension led to a schism in 1903, at which time the RSDWP split into Bolshevik ('majority') and Menshevik ('minority') factions. Both factions were disproportionately Jewish. In addition to Lenin and Trotsky, leading Bolshevik Jews included Grigory Zinoviev, Yakov Sverdlov, Lev Kamenev (aka Rozenfeld), Karl Radek, Leonid Krassin, Alexander Litvinov, and Lazar Kaganovich. Ben-Sasson (1976: 943) observes that these men, and "others of Jewish origin... were prominent among the leaders of the Russian Bolshevik revolution." This was public knowledge, even at the time. As the London Times reported in 1919,

One of the most curious features of the Bolshevik movement is the high percentage of non-Russian elements amongst its leaders. Of the 20 or 30 leaders who provide the central machinery of the Bolshevik movement, not less than 75 percent are Jews. . . . [T]he Jews provide the executive officers.

The article proceeds to list Trotsky and some 17 other individuals by name. Levin (1988: 13) notes that, at the 1907 RSDWP Congress, there were nearly 100 Jewish delegates, comprising about one third of the total. About 20 the Mensheviks were Jews, but by 1917 they comprised eight of 17 (47 Central Committee members.

Thus it was that, in the years leading up to the 1917 revolutions, Jews were working internally and externally to overthrow the Czar. Stein (1961: 98) quotes a Zionist memo of 1914, promoting "relations with the Jews in Eastern Europe and in America, so as to contribute to the overthrow of Czarist Russia and to secure the national autonomy of the Jews." Temperley (1924: 173) noted that, "by 1917, [Russian Jews] had done much in preparation for that general disintegration of Russian national life, later recognized as the revolution." Ziff (1938: 56) stated the common view of the time that "Jewish influence in Russia was supposed to be considerable. Jews were playing a prominent part in the revolution. . . ." Surprisingly, even Winston Churchill acknowledged this fact. In 1920 he wrote an infamous essay explaining the difference between the "good" (Zionist) Jews and the "bad" Bolsheviks. This dichotomy, which was nothing less than a "struggle for the soul of the Jewish people," made it appear almost "as if the gospel of Christ and the gospel of Antichrist were destined to originate among the same people" (1920/2002: 24). The Zionists were "national" Jews who sought only a homeland for their beleaguered people. The evil "international Jews," the Bolsheviks, sought revolution, chaos, and even world domination. It was, said Churchill, a "sinister conspiracy." He continued:

This movement among the Jews is not new. From the days of Spartacus-Weishaupt to those of Karl Marx, and down to Trotsky (Russia), Bela Kun (Hungary), Rosa Luxemburg (Germany), and Emma Goldman (United States), this world-wide conspiracy for the overthrow of civilization and for the reconstitution of society on the basis of arrested development, of envious malevolence, and impossible equality, has been steadily growing. . . . It has been the mainspring of every subversive movement during the Nineteenth Century; and now at last this band of extraordinary personalities from the underworld of the great cities of Europe and America have gripped the Russian people by the hair of their heads and have become practically the undisputed masters of that enormous empire.

"There is no need to exaggerate" the Jewish role in the Russian revolution; "It is certainly a very great one. . . . [T]he majority of the leading figures are Jews." In the Soviet institutions, "the predominance of Jews is even more astonishing." But perhaps the worst aspect was the dominant role of Judeoterrorism. Churchill was clear and explicit:

[T]he prominent, if not indeed the principal, part in the system of terrorism applied by the Extraordinary Commissions for Combating Counter-Revolution has been taken by

Jews, and in some notable cases by Jewesses. The same evil prominence was obtained by Jews in the brief period of terror during which Bela Kun ruled in Hungary. The same phenomenon has been presented in Germany (especially in Bavaria), so far as this madness has been allowed to prey upon the temporary prostration of the German people. . . . [T]he part played by the [Jews] in proportion to their numbers in the population is astonishing.

By this time, Churchill had been working on behalf of Zionist Jews for some 15 years. He had long counted on Jewish political support, and was rumored to be in the pay of wealthy Zionists.

The Russian revolutions were significant, but the premier event of 1917 was surely the Balfour Declaration of November 2. This short letter from the United Kingdom's Foreign Secretary Arthur James Balfour to Baron Rothschild was remarkable: it promised to a "mere handful" of British subjects (and indirectly their coreligionists worldwide) a land that the United Kingdom did not possess, and that was part of some other empire. It is enlightening to examine the orthodox account of this event. According to the standard view, it was at this time that Britain was not only mired in the war on the Continent, but also that "British forces were fighting to win Palestine from the Ottoman Empire." The Brits wanted it "because of its location near the Suez Canal." (In fact, of course, Palestine is more than 200 km from the Canal, separated by the whole of the Sinai Peninsula.) "The British believed the Balfour Declaration would help gain support of this goal from Jewish leaders in the UK, the United States, and other countries."

So, here are a few relevant questions: Was control of the Canal really the primary objective? Or did the British think that the Jews would help them in their broader war aims? The Jews? — a beleaguered minority everywhere, with no nation, no army, no "real power"? Could they really help the British Empire? And did they in fact help them? And if so, how? Nothing in the documentation of the time suggests that the canal was anything more than an incidental concern. But there was clearly a larger goal — to enlist the aid of Jews everywhere, in order to help Britain win the war. Schneer (2010: 152) notes that, beginning in early 1916, the British sought to "explore seriously some kind of arrangement with 'world Jewry' or 'Great Jewry'." A diplomatic communiqué of March 13 is explicit:

[T]he most influential part of Jewry in all the countries would very much appreciate an offer of agreement concerning Palestine. . . . [I]t is clear that by utilizing the Zionist idea, important political results can be achieved. Among them will be the conversion, in favour of the Allies, of Jewish elements in the Orient, in the United States, and in other places. . . . The only purpose of [His Majesty's] Government is to find some arrangement. . . which might facilitate the conclusion of an agreement ensuring the Jewish support. (in Ziff 1938: 56)

Later that year, an advisor to the British government, James Malcolm, pressed this very point: that, by promising Palestine to the Zionists, they would use their influence around

the world — and especially in America — to help bring about overall victory. On the face of it, this was a preposterous suggestion: that the downtrodden Jewish minority, and in particular the even smaller minority of Zionist Jews, could do anything to alter events in a world war. And yet that quickly became the official view of the British government — particularly so when David Lloyd George became prime minister in December 1916. Lloyd George was, from the Zionist perspective, a nearly ideal leader. He had been working with them since 1903. He strongly believed in their near-mythic influence. And he was a devout Christian Zionist, making him an ideological compatriot. Immediately upon assuming office, Lloyd George directed his staff — in particular, Mark Sykes and Lord Arthur Balfour — to negotiate Jewish support. MacMillan explains:

From [early] 1917, with Lloyd George's encouragement, Sykes met privately with Weizmann and other Zionists. The final, and perhaps most important, factor in swinging British support behind the Zionists was to make propaganda among Jews, particularly in the United States, which had not yet come into the war, and in Russia... (2003: 416; my italics)

And as if the stalled war wasn't motivation enough, rumors were soon flying that the Zionists were also soliciting German support; the Jews, it seems, were willing to sell their services to the highest bidder. When these rumors reached London, "the British government moved with speed" (*ibid*). And with speed they did. With Brandeis's input, a first draft of the brief statement was completed in July. A second draft appeared in mid-October, and by the end of that month Balfour was ready to make public his Government's stance: "from a purely diplomatic and political point of view, it was desirable that some declaration favourable to the aspirations of the Jewish nationalists should now be made. . . . If we could make a declaration favourable to such an ideal, we should be able to carry on extremely useful propaganda both in Russia and America." Three days later, they did.

But most striking was the implication that the "mere handful" of Zionist Jews in England could actually be a decisive factor in bringing a reluctant US into the global war. If successful, this would dramatically swing the military balance of power. And via Wilson's Jewish advisors — most notably Baruch and Brandeis — they had the ear of the president. But could they do it? Unquestionably, the Brits thought they could — and that they did. This is such an astonishing manifestation of Jewish power that it is worth reviewing the opinions of several commentators. Speaking after the war, on 4 July 1922, Churchill argued for full implementation of the famous Declaration:

Pledges and promises were made during the War... They were made because it was considered they would be of value to us in our struggle to win the War. It was considered that the support which the Jews could give us all over the world, and particularly in the United States, and also in Russia, would be a definite palpable advantage. In his monumental six-volume study of the 1919 Paris Peace Conference, British historian Howard Temperley (1924) made this observation:

It was believed that if Great Britain declared for the fulfillment of Zionist aspirations in

Palestine under her own pledge, one effect would be to bring Russian Jewry to the cause of the Entente [Allies]. It was believed, also, that such a declaration would have a potent influence upon world Jewry in the same way, and secure for the Entente the aid of Jewish financial interests. It was believed, further, that it would greatly influence American opinion in favour of the Allies. Such were the chief considerations which, during the later part of 1916 and the next ten months of 1917, impelled the British Government towards making a contract with Jewry.

We must bear in mind that the Declaration was issued seven months after US entry into the war. But Temperley is unequivocal: the deal was concluded “during the later part of 1916,” well before Wilson’s decision to go to war. Apparently the deal was this: bring the US into the war, and we will promise you your Jewish homeland. Such was the “contract with Jewry.”

Sensing the importance, Temperley reiterates the point, to drive it home: “That it is in purpose a definite contract with Jewry is beyond question. . . . In spirit it is a pledge that, in return for services to be rendered by Jewry, the British Government would ‘use their best endeavours’ to secure. . . . Palestine.” And in fact, it was a good deal all around. “The Declaration certainly rallied world Jewry, as a whole, to the side of the Entente. . . . [T]he services of Jewry were not expected in vain, and were. . . well worth the price which had to be paid” (p. 174). Britain’s price was low: a spit of land far from the home country. True, there would be Arab resistance, but the Brits were used to that. A much higher price would be paid by Germany and the Central Powers, and by America — who would expend hundreds of millions of dollars, and suffer 116,000 war dead.

A Zionist insider, Samuel Landman, wrote a detailed and explicit account of these events in 1936. After noting some preliminary attempts in 1916, he remarks on the significance of Malcolm’s involvement. Malcolm knew that Wilson “always attached the greatest possible importance to the advice of a very prominent Zionist, Mr. Justice Brandeis. . . .” (p. 4). Malcolm was able to convince Sykes and French ambassador Georges Picot that: “the best and perhaps the only way. . . to induce the American President to come into the war was to secure the cooperation of Zionist Jews by promising them Palestine, and thus enlist and mobilize the hitherto unsuspectedly powerful forces of the Zionist Jews in America and elsewhere in favour of the Allies on a quid pro quo basis.”

Granted, Landman was not an unbiased observer, and had good reason to exaggerate Zionist influence. But that was not the case with the British Royal Palestine Commission, which issued a report in 1937. At the critical stage of the war, “it was believed that Jewish sympathy or the reverse would make a substantial difference one way or the other to the Allied cause. In particular, Jewish sympathy would confirm the support of American Jewry. . . .” (p. 23). The report then quotes Lloyd George:

The Zionist leaders gave us a definite promise that, if the Allies committed themselves to. . . a national home for the Jews in Palestine, they would do their best to rally Jewish sentiment and support throughout the world to the Allied cause. They kept their word.

Two years after this report, in 1939, the British contemplated starting a war with Germany. Churchill wrote a memo for his War Cabinet, reminding them that:

“it was not for light or sentimental reasons that Lord Balfour and the Government of 1917 made the promises to the Zionists which have been the cause of so much subsequent discussion. The influence of American Jewry was rated then as a factor of the highest importance, and we did not feel ourselves in such a strong position as to be able to treat it with indifference. (in Gilbert 2007: 165)“

The implication, of course, was that the British might once again need Jewish help to defeat the Germans. Having been goaded into war in 1939 by Roosevelt and his Jewish advisors, the British were becoming desperate once again to draw in the Americans. As David Irving reports, it was in late 1941 that Weizmann and his fellow British Zionists began “promising to use their influence in Washington to bring the United States into the war” (2001: 73). Irving quotes from an amazingly blunt letter from Weizmann to Churchill, promising to do again in this war what they did in the last:

“There is only one big ethnic group [in America] which is willing to stand, to a man, for Great Britain, and a policy of ‘all-out aid’ for her: the five million Jews. From [Treasury] Secretary Morgenthau [Henry, Jr.], Governor [Herbert] Lehman, Justice Frankfurter, down to the simplest Jewish workman or trader. . . . It has been repeatedly acknowledged by British Statesmen that it was the Jews who, in the last war, effectively helped to tip the scales in America in favour of Great Britain. They are keen to do it — and may do it — again.“

So here we have Weizmann explicitly naming the influential Jews with the power to bring Roosevelt and the United States into a war in which it, once again, had no compelling interest. The letter was dated September 10, 1941. Churchill did not have to wait long. Within 90 days, America would be at war.

Wars, of course, are not only events of great death and destruction; they provide tremendous opportunity for financial profit, and for dramatic shifts in global power structures. For those in the right position, warfare can yield extreme gains in wealth and influence. Specifically, the events surrounding the First World War brought substantial gains to Jews worldwide — in several ways. First, with highly-placed individuals in the Taft and Wilson administrations, the US was very amenable to Jewish immigration; in fact their numbers increased dramatically, from 1.5 million to over 3 million between 1905 and 1920 — on the way to 4 million by the mid-1920s. Second was the Balfour Declaration, which promised them Palestine. Granted, nothing was immediately delivered as to Palestine, but even so, it was a major concession by a world power. Third, the world order was changed in their favor: the hated and “anti-Semitic” Czarist rule in Russia was replaced by the Jewish-led Bolshevik movement, the hated and “anti-Semitic” Kaiser Wilhelm II of Germany was replaced by the Jewish-friendly Weimar regime, and the Jewish-influenced governments of the US and Great Britain reestablished their global dominance.

Finally, and as always, there was money to be made. Running the War Industries Board

for Wilson, Jewish Financier Bernard Baruch had extraordinary power to direct military spending; we can be sure that his preferred clients benefitted.¹ But perhaps Nebraska Senator George Norris said it best. Speaking in opposition to Wilson's call for a war declaration, Norris exclaimed that Americans were being deceived "by the almost unanimous demand of the great combination of wealth that has a direct financial interest in our participation in the war." Furthermore, "a large number of great newspapers and news agencies of the country have been controlled and enlisted in the greatest propaganda that the world has ever known, to manufacture sentiment in favor of war." Summarizing his case, Norris said this: "We are going into war upon the command of gold." Finance, media, 'gold' — Jewish interests prospered on many fronts. But Wilson was evidently unaffected by such matters, or by his pledge to his fellow Americans to "keep us out of war." His team of Jewish backers and advisors — Baruch, but also Henry Morgenthau Sr., Jacob Schiff, Samuel Untermyer, Paul Warburg, Stephen Wise, and Louis Brandeis — wanted war, and war they got. The fact that it would cost America \$250 billion (current equivalent), and some 116,000 war dead, did not seem to figure into their calculations. The main topic of the present essay is World War Two, but its roots lie in the outcome of the First World War. I therefore continue the story from that time.

Some Context

Before proceeding, we must bear something in mind. The striving of Jews for greater influence and political power is to be found on both of the sides of World War I. Russian imperial leaders had long been suspicious of the Jews, and largely banished them to the so-called Pale of Settlement that was established in western Russia in the 1790s. Beginning in the 1880s, western media issued exaggerated reports of slaughters, pogroms, and assorted massacres among the Russian Jews there, whose numbers were nearly always recorded — astonishingly — as "6 million."

This naturally generated deep hostility toward the House of Romanov, and the Jews sought its demise. Special animosity was reserved for Czar Nicholas II, who assumed power in 1894. In Part 1, I explained the stunningly successful effort of the American Jewish lobby to abrogate the long-standing US-Russia treaty in 1911; this was a small punishment aimed at the Czar. The ultimate goal, though, was his overthrow, and thus we can imagine the joy of the global Jewish community at his fall in March 1917. As we recall, the Czar and his family were then murdered by Jewish Bolsheviks in July of the following year.

It was a somewhat similar story with the German ruler Wilhelm II, who rose to power in 1888. There, however, Jews were prosperous and enjoyed a relatively high degree of freedom — despite the Kaiser's evident personal dislike of them. Previously I cited some impressive statistics by Sarah Gordon regarding their numbers in law, media, business, and academia, all prior to World War I. In the banking sector, they utterly flourished; prominent German-Jewish banking families included the well-known Rothschilds and War-

burgs, but also the Mendelssohns, Bleichroeders, Speyers, Oppenheims, Bambergers, Gutmanns, Goldschmidts, and Wassermanns. But despite their wealth and success, Jews had no access to political power, owing to the hereditary monarchy. This, for them, was unacceptable. Thus they had to introduce “democracy” — with all due high-minded values, of course. Only through a democratic system could they exert direct influence on political leadership.

Consequently, as soon as the Czar fell in Russia, calls came out to repeat the success in Germany. On 19 March 1917, four days after the Czar’s ouster, the *New York Times* reported on Louis Marshall lauding the event, and adding that “the revolt against autocracy might be expected to spread to Germany.” Two days later, Jewish speakers at Madison Square Garden “predict[ed] an uprising in Germany.” As the article explains, “[some] predicted that the revolution of the working classes of Russia was the forerunner of similar revolutions the world over. That the next revolution would be in Germany was predicted by a number of the speakers” (March 21). On March 24, Jacob Schiff took credit for helping to finance the Russian revolution. At the same time, Rabbi Stephen Wise put the blame for the pending American entry into WWI on “German militarism,” adding “I would to God it were possible for us to fight side by side with the German people for the overthrow of Hohenzollernism [i.e., Kaiser Wilhelm].”

Strangely enough, Wise got his wish. Within two weeks, America was in the war. And about 18 months later, Wilhelm would suffer defeat and be compelled to abdicate.

The Paris Peace Conference

Having won the war, Wilson’s Jewish team was anxious to dictate the peace. “As it turned out,” remarks Robert Shogan (2010: 25), “the war would bring benefits to the Zionist cause, in part because of Brandeis’ role as a trusted advisor [to Wilson].” The victorious nations convened in Paris in January 1919, and the American Jewish Congress was there as its own delegation. Shogan adds that “[Stephen] Wise was in Paris, on assignment from President Wilson to head the Zionist delegation to the peace talks.” (One might reasonably ask: Why do Zionists get their own delegation at all?) Louis Marshall was also prominent there among the American Jews.

The Jewish aim was neither a just implementation of peace, nor fair treatment of Germany, but rather to maximize benefit to the various Jewish communities of Europe and the US. “At the beginning of 1919,” says Ben-Sasson (1976: 940), “diplomatic activity in Paris became the main focus of the various attempts to fulfill Jewish aspirations.” Fink (1998: 259) concurs: “In March 1919, pro-Zionist and nationalist Jewish delegations arrived in Paris.” Nearly every victorious nation, it seems, had its own Jewish representatives. Some sought formal and explicit Jewish rights in their own nations, and others worked for recognition of a Jewish national state. Polish Jews were notable beneficiaries; they succeeded in achieving explicit mention in the Polish Treaty for Minority Rights.

Writing shortly after the event, Irish philosopher and journalist Emile Dillon saw it this way:

Of all the collectivities whose interests were furthered at the Conference, the Jews had perhaps the most resourceful and certainly the most influential exponents. There were Jews from Palestine, from Poland, Russia, the Ukraine, Rumania, Greece, Britain, Holland, and Belgium; but the largest and most brilliant contingent was sent by the United States. (1920: 12) Describing the American side, Fink explains that “the fervent Zionist Julius Mack and the more moderate Louis Marshall quickly overshadowed the leading American anti-nationalists, Henry Morgenthau, Oscar Straus, and Cyrus Adler.”

Though he was predisposed to be sympathetic to the Jewish plight, Dillon nonetheless noted that a “religious” or “racial” bias “lay at the root of Mr. Wilson’s policy” (496). It is a fact, he said, “that a considerable number of delegates believed that the real influences behind the Anglo-Saxon peoples were Semitic.” Summarizing prospects for the future, he remarked on the general conclusion by many at Paris: “Henceforth the world will be governed by the Anglo-Saxon peoples, who, in turn, are swayed by their Jewish elements.”

Among non-Jewish Americans there was a young Herbert Hoover, then- Secretary of the US Food Administration, and of course, future president. He was accompanied by a Jewish assistant, the financier Lewis Strauss, who remarked on his boss’s notable inclination to “champion Jewish rights,” especially in Poland. Strauss would later become instrumental in funding early development of the atomic bomb.

Treatment of the Germans at the conference, as is well known, was brutally harsh. They expected, and were promised, that the conference would be a fair settlement of the legitimate war claims of all belligerents — particularly given the complex and convoluted nature of the outbreak of hostilities. (We recall: the Archduke was assassinated by a Serb in June 1914; the Russian army mobilized and massed on the German border in July; a threatened Germany declared war on Russia in August; a Franco-Russian Pact required a simultaneous declaration against France; and Britain declared war on Germany as soon as its army crossed into Belgium.) By the time of the Peace Conference, Wilson and his team had decided that Germany alone was responsible for the war, and thus had to bear the full burden of reparations.⁶ The impossible conditions forced upon them set the stage for the rise of National Socialism and the next great war.

All in all, what emerges from the first war and the subsequent peace conference is a picture of British and American supplication to Jewish interests. Indeed, the prime beneficiaries of the war were Jews, both in America and in Europe generally. For Germany, it was obviously a disastrous event; it suffered some 2 million military deaths along with thousands of indirect civilian losses, crushing financial debts, and witnessed the end of the 900-year reign of the House of Hohenzollern. This was a tragedy for a nation that, according to Fay (1928: 552), “did not plot a European war, did not want one, and made genuine. . . efforts to avert one.”

America, which had no legitimate interest in the battles in Europe, was drawn in by Wilson's compliance with Jewish demands. For his part, Wilson comes across as something of an amoral political schemer. MacMillan (2010: 7) describes his close, "possibly romantic," relationships with several other women during his first marriage. Theodore Roosevelt viewed him "as insincere and cold-blooded an opportunist as we have ever had in the presidency" (ibid: 6). To Lloyd-George, he was "tactless, obstinate, and vain." Granted, we all have our faults; but for most of us, they do not lead to national catastrophe.

The Jewish Revolutions

With the fall of Czar Nicholas in March 1917, and upon the Bolshevik revolution of October that same year, Jewish revolutionaries became particularly active in East and Central Europe. Flush with success in Russia, they hoped to duplicate events in other countries. Ben-Sasson provides a typically understated account:

The new forces that emerged in many countries... opened up new horizons of activity for Jewish statesmen of liberal-democratic propensities, particularly those with radical-revolutionary views. ... Jews were also extremely active in the socialist parties that came to power or attained political importance in many European countries. They were even more prominent in the communist parties that split from the socialists... In short, never before in European history had so many Jews played such an active part in political life and filled such influential roles... (1976: 943)

In other words, Jewish anarchists and militant communists ("new forces") conducted violent insurrection ("new horizons of activity") aimed at overthrowing the ruling governments, and installing Jewish-led regimes. Bermant (1977: 160) confirms this point: "most of the leading revolutionaries who convulsed Europe in the final decades of the last [19th] century and the first decades of [the 20th], stemmed from prosperous Jewish families." This again is in keeping with the longstanding trend of Jewish rebellion. Not that any of this was news; major politicians of the time knew it well. Lord Balfour, for example, once remarked to Wilson's aide Edward House that "nearly all Bolshevism and disturbances of a like nature, are directly traceable to the Jews of the world. They seem determined either to have what they want or to upset present civilization" — a concise and accurate summary.

Consider Hungary, for example. There, a Hungarian Jew named Bela Kun (Kohn) founded and led the local wing of the Russian Communist Party in early 1918 — which later became an independent entity. Along with Jewish colleagues Matyas Rakosi (Roth/Rosenfeld) and Otto Korvin (Klein), Kun's party organized numerous strikes, and conducted violent and subversive attacks against President Karolyi and the ruling Social Democrats. In March 1919 Karolyi resigned, and the SD Party made an alliance of necessity with Kun's communists, in the hope of leveraging his connections to the Russian Bolsheviks. Kun agreed, on the condition that the government reestablish itself as the

“Hungarian Soviet Republic” — which it did.

Kun dominated the new government, filling many top seats with Jews; as Muller (2010: 153) explains, “Of the government’s 49 commissars, 31 were of Jewish origin.”⁸ He fended off a coup attempt in June, and then conducted what came to be known as the “Red Terror”; this was a paramilitary group, led by Jewish ideologues Georg Lukacs and Tibor Szamuely, that hunted down and killed members of the local opposition. Unfortunately for Kun, ongoing conflicts with neighboring Romania led to an invasion of Hungary, and the promised Russian aid never materialized. Kun and his fellow Jews were driven out in August, just 133 days after taking power. It was not only Russia and Hungary that had problems. “Jews had a prominent role in Communist parties elsewhere,” explains Bermant (172). In Poland, for example, “about a quarter of party members and about a third of delegates to party congresses were Jews.” The Polish Communists were unable, however, to generate sufficient force to oust the newly-established government of Jozef Pilsudski.

It was in Germany, though, that the most significant actions occurred, ones that would have a lasting effect. We need to recall events at the end of World War I. Long a stalemate, the war had essentially become a battle of attrition. American forces on the ground in mid to late 1917 threatened to change things, but for the Germans, the western front generally held up — even to the very end. At no point in time did it ever retreat into German territory. But even though the Germans were able to hold out, their allies could not. Bulgaria and the Ottoman Empire surrendered by the end of October 1918. Austria- Hungary yielded in early November. For the Germans, though, the last straw was their problems at home — with the Jews.

Trouble began with a minor naval mutiny in late October and early November 1918, at the ports of Kiel and Wilhelmshaven. A number of sailors, workers, and Jews from the Independent Social Democratic Party (USPD) joined forces to conduct a nonviolent rebellion against the Kaiser. The German rebels simply wanted the war to end, whereas the Jewish rebels sought power; in this sense it was a natural alliance. The “rebellion” — primarily in the form of a general strike — quickly spread, reaching Munich within a matter of days. In an attempt to cut short this action, the majority Social Democrats (SPD) called on the Kaiser to abdicate, at which time they would form a republican government. On November 9, they prevailed; Wilhelm stepped down and a new “German Republic” was proclaimed. It was this new leadership that signed the armistice agreement on November 11, ending the war.

The USPD rebels, however, had their own plans. On the very same day that the German Republic was created, they declared the formation of a “Free Socialist Republic.” This group had an almost entirely Jewish leadership: Rosa Luxemburg, Hugo Haase, Karl Liebknecht (half-Jewish), Leo Jogiches, Karl Radek (Sobelsohn), and Alexander Parvus (Gelfand/Helphand) were the dominant figures. And these were just the activists centered in Berlin. In Munich, other Jewish rebels were conducting a separate, simultaneous revolution, aimed at creating a Bavarian communist state. The leading USPD revolu-

tionary there was a Jewish journalist, Kurt Eisner. On November 7, he demanded the abdication of the local monarch, King Ludwig III. The king fled on the following day, and Eisner declared himself “Minister-President” of a free Bavarian state.

Soon enough, though, Eisner’s luck ran out. On 21 February 1919, he was assassinated by a fellow Jew, Anton Arco-Valley. Within a few weeks, other USPD Jews regained power and established a Bavarian Soviet Republic — the third in Europe, behind Russia and Hungary. Its leader was the Jewish playwright Ernst Toller. Among his group were the noted Jewish anarchists Gustav Landauer and Erich Muehsam. Through sheer incompetency, Toller’s government managed to get usurped by yet another Jewish faction, one led by Eugen Levine and the half-Jew Otto Neurath. Levine attempted to institute a true communist system, including its own “Red Army” modeled on the Russians’. But once again, his success was short-lived. Remnants of the old German army quickly intervened, deposing the communists in early May.

Things did not end well for the Jewish rebels. Levine was captured and executed, as was Landauer. Toller, Muehsam, Radek, Parvus, and Neurath managed to escape. Luxemburg and Liebknecht were shot by German soldiers in January, and Jogiches died under mysterious circumstances in March. Haase was killed by a deranged worker in November of that same year. But that was far from the end of their influence in Germany. The USPD was reconstituted as the German Communist Party (KPD), under the leadership of Paul Levi. The ruling SPD had meanwhile joined forces with the moderate German Democratic Party (DDP), convening in January 1919 in the city of Weimar to create a constitutional form of government. Jews were front and center in both of these parties: Otto Landesberg, Eduard Bernstein, and Rudolf Hilferding in the SPD, and Walter Rathenau in the DDP; Rathenau was eventually named as German Foreign Minister. His Jewish colleague, Hugo Preuss, wrote the Weimar constitution. This Jewish influence was well described by a philo-Semitic and Pulitzer Prize winning American journalist, Edgar Mowrer. Writing in 1933, he noted that:

“large number of Jews entered the Social Democratic Party [SPD] which inherited power as a result of the [November] Revolution. Other Jews flocked to the Democratic Party [DDP], a group which certainly overlooked no chance to favor the interests of trade, banking and the stock exchange. . . .”

It is interesting that then, as now, they seem to have covered all the bases: liberal, left-wing Jews dominated the SPD, and capitalist, right-wing Jews dominated the DDP. Thus, no matter which party emerged with control, Jews retained influence. Confirming my earlier statements, Mowrer added that “a number of outspoken revolutionary leaders, Rosa Luxemburg in Berlin, Erich Muehsam and Ernst Toller in Munich, were Jews.” He continued:

“In post-war politics any number of Jews rose to leadership. Both in the Reich and in the Federal States, Jews, particularly Social Democrats, became Cabinet Ministers. In the bureaucracy, the Jews rose rapidly to leading positions, and until about 1930 their

number seemed on the increase.“

Summing up the situation, he observed that, “in short, after the Revolution, the Jews came in Germany to play in politics and administration that same considerable part that they had previously won by open competition in business, trade, banking, the Press, the arts, the sciences, and the intellectual and cultural life of the country”

The new Weimar Republic was duly signed into law in August 1919. Unsurprisingly, it was notably friendly to German Jews, removing all remnants of legal obstructions, and granting them full access to business, academia, and government — the very process that Mowrer described. As Lavsky (1996: 41) says, “All remaining discrimination was abolished and there were no restrictions on participation in German public life.” The vital role played by Weimar Jews is concisely explained by Walter Laqueur:

“Without the Jews there would have been no ‘Weimar culture’ — to this extent the claims of the antisemites, who detested that culture, were justified. They were in the forefront of every new daring, revolutionary movement. They were prominent among Expressionist poets, among the novelists of the 1920s, among the theatrical producers and, for a while, among the leading figures of the cinema. They owned the leading liberal newspapers such as the *Berliner Tageblatt*, the *Vossische Zeitung* and the *Frankfurter Zeitung*, and many editors were Jews too. Many leading liberal and avant-garde publishing houses were in Jewish hands (S. Fischer, Kurt Wolff, the Cassirers, Georg Bondi, Erich Reiss, the Malik Verlag). Many leading theatre critics were Jews, and they dominated light entertainment.“

Laqueur, however, does not explain that the celebrated “Weimar culture” was perhaps best known for its licentiousness, promiscuity, and general moral depravity. “They established themselves in the universities, civil service, law, business, banking, and the free professions,” adds Lavsky. “Certain spheres were virtually monopolized by the Jews, and their contribution to journalism, literature, theater, music, the plastic arts, and entertainment was considerable.”

It was this very centrality of Jews to social upheaval, the November Revolution, and the new Weimar Republic that led three German activists and intellectuals — Anton Drexler, Gottfried Feder, and Dietrich Eckart — to found the *Deutsche Arbeiterpartei* (DAP) in January 1919. This would be the forerunner to the *National Socialist DAP* (NSDAP), or Nazi Party. One of their first recruits was a distraught 30-year-old former soldier, Adolf Hitler. In *Mein Kampf*, Hitler describes in painful, personal detail how the young German men went to fight and die on the front lines, even as the Jewish activists and rebels undermined the imperial government back home. Calling them “hoary criminals,” he adds that, all the while, “these perjured criminals were making preparations for a revolution” (1.5). Upon a medical leave from the front in October 1916, he describes the situation in Munich:

Anger, discontent, complaints met one’s ears wherever one went. . . . The administrative offices were staffed by Jews. Almost every clerk was a Jew and every Jew was a clerk. . . .

In the business world the situation was even worse. Here the Jews had actually become 'indispensable.' Like leeches, they were slowly sucking the blood from the pores of the national body. . . . Hence as early as 1916-1917 practically all production was under the control of Jewish finance. Hitler returned to the front in March 1917, and was struck by a mustard gas attack in October of the following year. The gas severely burned his eyes, sending him to a military hospital for recovery. It was there that he first heard about the revolution. The Jewish-Marxist "gang of despicable and depraved criminals" had led the overthrow of the Emperor and were attempting to take direct power themselves. Their revolts would be transitory, but the Jewishinfluenced Weimar regime would soon take control of the nation, and this was scarcely any better. It was these events that led Hitler to become politically active.

The Interwar Period and Emergence of FDR

1920 was a year of some importance. The Hitler-led NSDAP was formally established in February. That same month, a 46-year-old Winston Churchill penned his infamous article "Zionism versus Bolshevism," in which he decried the pernicious role of Jewish Marxists such as Trotsky, Kun, Luxemburg, and the American Emma Goldman. And in the US, Henry Ford had just begun his two-year series on the "International Jew." The following year, in late 1921, Ford recalled his past efforts to bring a peaceful end to WWI.

They explained to me] the means by which the Jew controlled the war, how they had the money, how they had cornered all the basic materials needed to fight the war. . . . They said. . . that the Jews had started the war; that they would continue it as long as they wished, and that until the Jew stopped the war, it could not be stopped. (New York Times, 5 December 1921, p. 33) During that earlier time, he says, "it was the Jews themselves that convinced me of the direct relation between the international Jew and war."

Meanwhile across the ocean, Lenin (a quarter-Jew) and his Jewish Bolshevik colleagues established the Soviet Union in December of 1922. The next year, Hitler and others within the NSDAP launched a failed coup attempt in Bavaria, leading to his 12-month imprisonment and consequent writing of *Mein Kampf*. In early 1924, both Lenin and Woodrow Wilson died within a month of each other.

Little of note occurred during the mid- to late-1920s. Jewish immigration into the US continued to expand, with their numbers surpassing 4.3 million by 1927. Jews made further inroads into Hollywood; Marcus Loew acquired MGM studios, the Cohn brothers took over at Columbia Broadcasting System, and David Sarnoff founded RKO Pictures. In the political sphere, the Republican and Christian Zionist Herbert Hoover won the presidential election of 1928, and a relatively unknown Democrat, Franklin D. Roosevelt, won the governorship of New York.

From the start, FDR had close and persistent ties to American Jews — ties that would

prove decisive to his actions in the Second World War. His running mate in New York was Herbert Lehman, the son of German Jews. (His Republican opponent, Jewish Attorney General Albert Ottinger, failed to draw the Jewish vote that FDR did; this says something about the strength of FDR's connection to that group.) Upon assuming the governorship, Roosevelt "filled a number of key positions from the state's large Jewish population," according to Shogan (2010: 5). One of his first major appointments was his longtime friend Henry Morgenthau Jr. to the New York State Agriculture Committee. He also named a former speechwriter, Samuel Rosenman, as "counsel to the governor." Both would play important roles in his presidency.

Other Jews, though, also had an interest in FDR — notably, Supreme Court Justice Louis Brandeis and his protégé, Harvard lawyer Felix Frankfurter. Even prior to his gubernatorial win in New York, "Brandeis alerted Frankfurter to his eagerness to connect with the man he believed would someday be the nation's president" (ibid: 72). And indeed, "for the next four years Brandeis was content to rely on Frankfurter to be his conduit to the governor's chambers in Albany."

The same election that put Roosevelt in the governor's seat placed Hoover in the presidency. As I noted earlier, he had long championed Jewish interests. As president, Hoover did his part for the Hebrews, naming Eugene Meyer Fed Chairman in 1930, and appointing the second Jewish justice, Benjamin Cardozo, to the Supreme Court in March 1932. But by then the Great Depression was well underway, dooming any chance for reelection.

FDR's Jewish Ancestry?

Before turning to FDR's long and historic stint as president, I want to recall a question I raised in Part 1 of the present series: Was Roosevelt Jewish? Previously I noted that his fifth cousin Theodore claimed to be Jewish, according to former Michigan governor Chase Osborn. I have yet to find any independent confirmation of this assertion, though there seems to be no reason why Osborn would lie about such a thing. Both were good Republicans, after all. But more to the point, Osborn would have much to say about FDR, as I will explain momentarily.

Regarding Franklin, he left many clues to a possible Jewish heritage, beginning as far back as 1914. In a letter to a friend upon the birth of his son Franklin Jr., he wrote that he had considered naming him Isaac — a classic Jewish name, and one shared by both his grandfather and great-greatgrandfather. But the family resisted: "this name is not met with enthusiasm, especially as the baby's nose is slightly Hebraic and the family have visions of Ikey Rosenvelt, though I insist it is very good New Amsterdam Dutch." For Shogan this is a sign of latent anti-Semitism, but I find that an unlikely excuse. What true anti-Semite would admit that his newborn son looked Jewish? Or would contemplate a Jewish name? More likely it was an inside joke, of the kind that people might say to family or close friends about a particular ethnic heritage within one's own background. Twenty years later, another clue. In 1934, now-president FDR gave a photo of himself

and Henry Morgenthau to Henry's wife. It bore this inscription: "For Elinor from one of two of a kind." Yes, but two of what kind? Democrats? Americans? Jews? An oddly suggestive remark.

That same year saw the publication of an enlightening interview with Osborn, one that would initiate a prolonged discussion on FDR's heritage. The 8 February 1934 edition of the St. Petersburg (Fla.) Times carried an interview in which Osborn claimed that the Roosevelts were descended from the Rossacampos, a Jewish family expelled from Spain in 1620. That family spread out into Europe and altered their spelling according to the various places where they took root: Rosenberg, Rosenblum, Rosenthal, and in Holland, Rosenvelt. "The Rosenvelts in north Holland finally became Roosevelt," claimed Osborn — which in fact seems to be true: the family patriarch, Claes van Rosenvelt, immigrated to the US in 1649. His son Nicholas apparently dropped the 'van' and changed the spelling to the standard form. A small Michigan publication, Civic Echo, picked up and repeated the story soon thereafter. A year later, Jewish journalist and publisher Philip Slomovitz came across the Echo story, and decided to write directly to FDR to get his opinion. On 7 March 1935 the president responded:

I am grateful to you for your interesting letter of March fourth. I have no idea as to the source of the story which you say came from my old friend, Chase Osborn. . . . In the dim distant past they [the Roosevelts] may have been Jews or Catholics or Protestants — what I am more interested in is whether they were good citizens and believers in God — I hope they were both. (cited in Slomovitz 1981: 5)

Once again this is a suspiciously circumspect reply by FDR. For him to say that his relatives "may have been Jews" sounds very much as if he knows this truth, does not want to openly acknowledge it, but cannot quite bring himself to lie about it. Slomovitz planned to publish the reply in his Detroit Jewish Chronicle. Before he could do so, the New York Times got wind of it and carried the text in their issue of March 15 — on page 1. Slomovitz passed this reply on to Osborn, who repeated his original assertion in a return letter of March 21: "President Roosevelt knows well enough that his ancestors were Jewish. I heard Theodore Roosevelt state twice that his ancestors were Jewish. Once was to me when I asked him about it after he had made a pleasing euphemistic statement in a speech to a Jewish gathering" (ibid: 6-7). Osborn is adamant. And it is important to note that he does not take this Jewish heritage as a slur; in fact, quite the opposite. He is evidently a Christian Zionist (and Republican), and thus views it as a redeeming quality. As such, he would likely not cast the Democrat Franklin in this positive light unless he actually believed it to be true. It seems that he was talking from a factual, if unconfirmed, basis.

If Slomovitz was inclined to doubt Osborn's claim, another letter would soon fortify his belief. On March 27 he received a note from none other than Rabbi Stephen Wise of New York City. Wise had evidently seen the New York Times story, and wrote to confirm it. In his letter he recounts an "almost literal transcript" given to him by his wife, who had previously attended a luncheon with Roosevelt's wife Eleanor — who said the following:

“Often cousin Alice and I say that all the brains in the Roosevelt family comes [sic] from our Jewish great-grandmother” (ibid: 9). She then allegedly added a name, ‘Esther Levy.’ The Alice in question was the oldest child of Theodore; Eleanor’s father Elliot was his brother. Their common great-grandmother would have been either Margaret Barnhill or Martha Stewart — neither of whom appears to be Jewish, unfortunately. And we have no record of any Esther Levy in the Roosevelt lineage. A bit of a mystery. The letter then takes a little twist. Eleanor continued: “Whenever mention is made of our Jewish great-grandmother by cousin Alice or myself, Franklin’s mother [Sara Delano] gets very angry and says, ‘You know that is not so. Why do you say it?’” Another puzzling remark, and one that Wise leaves unexplained.

Wise closes the letter with his own assessment: that Roosevelt “knows what I [Wise] have just written to be true, but deems it wiser and more expedient not to make any public mention of it at this time.” The letter, after all, was marked “Strictly private and confidential.” Wise adds that “you [Slomovitz] must not, however, make use of this. I think it is just as well to let the matter die down now.” A strange series of comments, to be sure. Many years later, a final small clue appeared. From the mid-1920s to mid-1930s, Franklin’s daughter Anna was married to a stockbroker named Curtis Dall. After having two children, they divorced in 1934. Three decades later Dall published a book, *FDR: My Exploited Father-in-Law* (1968). In it we read this sentence: “As I gathered it, the background of the Franklin Roosevelt family was a composite of English, Dutch, Jewish, and French stock” (98). There is no further elaboration.

In the end, many questions remain, but it seems very likely that the Roosevelts were at least in part Jewish. Perhaps the larger question is this: Does it matter? I believe it does, on two counts. First is the basic matter of historical accuracy; if we did in fact have a partially Jewish president, or rather two such presidents, the history books ought to reflect this reality. Likely other relevant evidence exists in the vast presidential archives, and an open admission might bring this to light. Second and more important is the possible effect this may have had on FDR’s actions prior to and during World War II. With even a partial Jewish heritage, he would likely have been more sympathetic to the Jewish cause, more amenable to Jews within his administration, and more likely to sacrifice on behalf of Jewish interests. The evidence shows that all these things actually happened — which is precisely why “Franklin Roosevelt was the first great hero of American Jews” (Shogan 2010: xi). The ‘family connection’ would certainly help to explain such things.

Alternatively, and as is often the case today, it could have been strictly a matter of money — of rewarding those who paved one’s way to the top. But perhaps the strongest case is this: that it was a combination of both. If FDR was predisposed by his heritage to be sympathetic to the Jews, and they also stepped forward to fund his campaigns and support him in the media, these would then be powerful incentives to reward them within his administration, and to be swayed by their concerns when it came time to deploy American military power. I examine that case now.

All the President's Jews

The case for a possible Jewish hand in World War II could be made, if we could show the following:

1. an extensive and influential Jewish presence in FDR's administration,
2. that the US public did not want war,
3. that influential American Jews did want war,
4. that FDR acted surreptitiously on behalf of war,
5. that Jewish-run US media supported war, and
6. that the US entered the war under false pretenses.

I will provide specific data on the first two points, and then address the remaining ones collectively.

Earlier I showed Roosevelt's dependence on Jewish supporters during his gubernatorial term. When it came time to mount a presidential campaign, his old buddies were there to help. As Scholnick (1990: 193) explains, "A number of wealthy Jewish friends contributed to Roosevelt's prenomination campaign fund: Henry Morgenthau Jr., Lt. Gov. Lehman, Jessie Straus, [and] Laurence Steinhardt." Once the primaries were out of the way, "Roosevelt's campaign was heavily underwritten by Bernard Baruch." The first rule in politics is to reward those who finance your path to success. Thus it is unsurprising that "[FDR's] administration contained a higher proportion of Jews than any other" (Michael 2005: 178). In the words of Herzstein (1989: 40), "Jews were indeed more prominent than ever before in American history." So who were these leading figures that were so dominant during the Roosevelt years? At the top of the list were the Big 5, the "President's Jews" as Shogan says, who had the largest hand in swaying events within the presidency: Louis Brandeis, Felix Frankfurter, Henry Morgenthau Jr., Sam Rosenman, and Ben Cohen.

Brandeis was of course a sitting Supreme Court justice long before Roosevelt ran for office, having been placed there by his friend Woodrow Wilson in 1916. Even prior to his initial election in 1932, FDR arranged a meeting with Brandeis to discuss policy. According to Shogan (2010), the Justice soon sent Roosevelt "a broad blueprint for the New Deal". Some years later, in 1938, "Brandeis made his first call on FDR on behalf of the Jews". Such involvement in government administration by a Supreme Court justice is unusual, to say the least. Others would call it flagrantly unethical. Justices are supposed to rule on constitutional matters, not make policy. He obviously knew this, and thus generally worked through Jewish intermediaries, like Frankfurter and Cohen, to get his message to the president.

On a day-to-day basis, Frankfurter was particularly important. Even by 1933 he had become "probably FDR's most influential advisor". Incensed at the extent of his power,

American general Hugh Johnson called him “the most influential single individual in the United States”. Frankfurter, he said, “had insinuated his boys into obscure but key positions in every vital department” related to the New Deal. Later, when Europe was on the brink of war, Frankfurter was apparently instrumental in initiating a series of secret correspondences between FDR and Churchill at a very sensitive time — neutral presidents are not supposed to be conducting secret negotiations with leaders of belligerent nations. Frankfurter, as we know, would be well rewarded by Roosevelt for his efforts, with the nomination to the Supreme Court in January 1939.

Moving down the list: Roosevelt “was as close to Henry Morgenthau. . . as to any man” . So close, in fact, that Franklin would make him the second Jew ever to join a presidential cabinet; he was named Secretary of the Treasury in early 1934, serving right through the end of the war. Henry would later author the notorious “Morgenthau Plan” — a policy for the virtual destruction of postwar Germany. This again was an outrageously out-of-line effort by a treasury secretary, who formally has no business conducting foreign policy. But this evidently did not stop him from trying. The two youngest members of the Big 5 were Rosenman and Cohen. Though serving as a New York state judge, Rosenman also functioned as “FDR’s chief speechwriter and a leading general advisor”. Ward notes that he was “a close aide from 1928 onwards” — that is, even before FDR’s governorship. The lawyer Benjamin Cohen became one of the key drafters of Roosevelt’s vital New Deal legislation, which was his lasting economic legacy. He clearly had the president’s ear; Nasaw calls him the “unofficial emissary of Justice Brandeis and Felix Frankfurter.”

But more importantly, Cohen was the lead architect and executor of the infamous ‘bases for destroyers’ plan of mid- to late-1940. At that time Britain was well into the war and badly needed military assistance from the US. But as a neutral nation, and by law, it was unable to help. Cohen then concocted a plan by which America would “loan” 50 warships to the UK in exchange for the use of certain global bases that they held. “Employing hairsplitting technicalities and unprovable assertions about national defense, [Cohen’s] memorandum stretched the law, creating a loophole wide enough for fifty warships to steam through on their way to join the Royal Navy,” says Shogan . Seeking legal approval for this blatantly illegal action, Roosevelt turned to. . . Justice Frankfurter. And to no one’s surprise, the Justice conferred his blessing. The Brits, of course, were elated. For the Germans, this was a veritable act of war by the nominally neutral Americans. Most fatefully, it seems to have been decisive in causing Hitler to sign a mutual-defense pact with Japan in October 1940; it was this agreement that would trigger Germany’s declaration of war on the United States following the attack on Pearl Harbor.

Beyond the Big 5, several other Jews played influential roles. Bernard Baruch, another Wilsonian holdover, was a part-time financial advisor and “prominent confidant” of both FDR and Churchill. Jerome Frank was a close aide, as was David Niles. James Warburg, son of Paul, was an early financial advisor. In May of 1934, Eugene Black was named Fed Chairman, and Jesse Straus was appointed ambassador to France — even as his nephew, Nathan Straus Jr., came to head the US Housing Authority. William Bullitt, a

quarter-Jew, was given two critical ambassadorships: first to the Soviet Union, and then, during the war, to France. Laurence Steinhardt, who had helped so much with campaign funding, was awarded a string of ambassadorships throughout FDR's tenure. Franklin's old friend Herbert Lehman was appointed head of the new Office of Foreign Relief and Rehabilitation in 1943. Herbert Feis was an influential economics advisor for the State Department. Abe Fortas served as Undersecretary of the Interior. Charles Wyzanski was solicitor general in the Labor Department. Mordecai Ezekiel was economics advisor to the Agriculture Secretary. David Lilienthal became chairman of the TVA. Other Jews, like Sidney Hillman and Rose Schneiderman, emerged as important advisors on labor matters.

Even some of FDR's non-Jewish team members had Semitic connections. Long-time Secretary of State Cordell Hull's wife, Frances Witz, was Jewish. So too was the spouse of New Deal architect and close confidant Harry Hopkins (Ethel Gross). We can be sure that they were sympathetic to the Jewish cause. All in all, one can well understand the motivation of Roosevelt's critics, who called his administration the "Jew Deal."

On the second point, it is uncontroversial that Americans overwhelmingly wanted to avoid the war. In a radio address of 23 April 1941, the leading antiwar advocate, Charles Lindbergh, condemned the course of action "to which more than 80 percent of our citizens are opposed." In an address the month before, Congressman Hamilton Fish stated that "somewhere between 83 and 90 percent of the people, according to the various Gallop polls, are opposed to our entrance into war unless attacked." The data supported such claims. According to surveys conducted in June and July 1940, between 81 and 86 respondents preferred to "stay out" of a war, if it were to come up for a vote. Another poll in July 1941 registered a 79% figure. The highest recorded number came somewhat earlier, in a report published in mid-1938; when asked "If another war like the World War [I] develops in Europe, should America take part again?," fully 95% of the respondents replied "No". Such figures generally held up right until the attack on Pearl Harbor.

The Path to War

As is well known, Jews worldwide confronted Hitler as soon as he assumed power in 1933 — witness the infamous "Judea Declares War on Germany" headline in the UK's Daily Express of 24 March 1933. In a sense, this was understandable. Putting an end to a post-World War I Weimar Republic dominated by Jews, Hitler quickly banished them from positions of power, and placed immediate restrictions on their movement and business practices. In fact, one may speculate that this was not unrelated to Germany's amazing economic renaissance. But the Western media did not see it this way. As early as April 1933, the New York Times was reporting on the "economic extermination of Jews in Germany" (April 6). Two months later we read, simply, that "Hitler's program is one of extermination" (June 29). In August, we are shocked to learn that "600,000

Jews are facing certain extinction" (August 16). Here we can graphically see how the 'extermination' myth rapidly evolved, from a simple plan of economic exclusion.

For the Germans, Western — particularly American — media meant Jewish media. As early as 1934, they viewed it as a potential threat. A communiqué by the German ambassador to the US, Hans Luther, observed that America possessed "the strongest Jewish propaganda machine in the world." This comment was made in light of Jewish dominance in Hollywood, and the fact that Jews owned two of the major American newspapers, the New York Times and the Washington Post. Luther's impression was held by German leadership throughout the war. Goebbels, for example, wrote the following in his diary entry of 24 April 1942: "Some statistics are given to me on the proportion of Jews in American radio, film, and press. The percentage is truly frightening. Jewry controls 100% of the film business, and between 90 and 95% of press and radio."

By the mid-1930s, Germany was in the midst of their astounding economic recovery, one that was particularly striking given their ruination after World War I, and that it occurred during the Great Depression. Within just his first four years, Hitler had reduced unemployment from 6 million to 1 million; the jobless rate fell from 43.8% when he took office, to effectively zero by the end of 1938. In just four years, he increased GNP by 37% increase in auto production. In effect, he single-handedly ended the Depression in Germany. Two more years, and the nation would be a world power of the first rank. Germany thus emerged as a viable competitor to the traditional global powers. Churchill felt particularly threatened. In a congressional testimony, US General Robert Wood recalled a statement by the British politician from 1936: "Germany is getting too strong. We must smash her." This suggests a belligerence on Churchill's part long before any aggressions by Hitler. As we know: it was the UK that declared war on Germany, not vice versa.

In October 1937, Roosevelt gave his famous 'quarantine' speech. Here we find one of the first indications, albeit indirect, that he anticipates a time when the US would come into direct conflict with Germany, and he subtly propagandizes the public in favor of war. The danger of Hitler is exaggerated; neutrality and isolation are disparaged; baseless assertions and cautiously conditional statements are thrown out — and all in the language of peace. Should Hitler prevail, "let no one imagine that America will escape, ... that this Western Hemisphere will not be attacked." "There is no escape through mere isolation or neutrality," he said; "international anarchy destroys every foundation for peace." "We are determined to keep out of war," said FDR, "yet we cannot insure ourselves against the disastrous effects of war and the dangers of involvement." Sparing no hyperbole, he added that, if Germany initiates a war, "the storm will rage till every flower of culture is trampled and all human beings are leveled in a vast chaos." This is difficult to read except as an indication that the path of violent confrontation had already been decided upon, and that the long process had begun to persuade a reluctant public that they must support it.

By this time, Jewish lobbies around the world, but especially in the UK and US, began

to press hard for military action, to intervene on behalf of their beleaguered coreligionists in Nazi Germany, and to once again overthrow a hated regime — never mind that the Germans may have had some right to selfdetermination. One of the first clear pieces of evidence of this came in early 1938, from the Polish ambassador to the US, Jerzy Potocki. He reported back to Warsaw on his observations of the American political scene:

“The pressure of the Jews on President Roosevelt and on the State Department is becoming ever more powerful... The Jews are right now the leaders in creating a war psychosis which would plunge the entire world into war and bring about general catastrophe. This mood is becoming more and more apparent. In their definition of democratic states, the Jews have also created real chaos; they have mixed together the idea of democracy and communism, and have above all raised the banner of burning hatred against Nazism. This hatred has become a frenzy. It is propagated everywhere and by every means: in theaters, in the cinema, and in the press. The Germans are portrayed as a nation living under the arrogance of Hitler which wants to conquer the whole world and drown all of humanity in an ocean of blood. In conversations with Jewish press representatives, I have repeatedly come up against the inexorable and convinced view that war is inevitable. This international Jewry exploits every means of propaganda to oppose any tendency towards any kind of consolidation and understanding between nations. In this way, the conviction is growing steadily but surely in public opinion here that the Germans and their satellites, in the form of fascism, are enemies who must be subdued by the ‘democratic world.’ (February 9)“

Such a view is confirmed in a letter by Senator Hiram Johnson (R-Cal.), written to his son that same year. The pro- and anti-war camps were clear: “all the Jews [are] on one side, wildly enthusiastic for the President, and willing to fight to the last American.” Though sympathetic, Johnson had no interest in fighting a war on their behalf. He and other like-minded politicians wanted to speak out, “but everybody is afraid — I confess I shrink from it — of offending the Jews.” The situation has hardly changed in 75 years.

For his part, Bernie Baruch was certainly itching for a fight. Speaking to General George Marshall, he said “We are going to lick that fellow Hitler. He isn’t going to get away with it.”³⁴ One wonders how he would know this, in 1938. Actually, it’s not much of a mystery: Churchill apparently told him so. As Sherwood (1948: 111) recounts, Churchill — then still First Lord of the Admiralty — said this to Baruch: “War is coming very soon. We will be in it and you (the United States) will be in it. You (Baruch) will be running the show over there, but I will be on the sidelines over here.” This is an astonishing claim; how would Churchill know such a thing, in 1938? The Anschluss with Austria had been completed in March that year, and Germany annexed the Sudetenland in October, but the Munich Accord was signed in September, nominally preserving a kind of tenuous peace. So what could have convinced Churchill that war was inevitable, and that the Americans would be running the show? Kristallnacht, perhaps? Was that the last straw, for the global Jewish lobby?

Apparently Lord Beaverbrook (Lord Beaverbrook is the top newspaper mogul in Great

Britain. His Daily Express is the most widely read newspaper in the world. During World War I, he served as UK's Minister of Information.) thought so. In a private letter written in 1938, Lord Beaverbrook voices concern over Jewish influence leading the UK towards war with Germany. He writes:

“There are 20,000 German Jews in England – in the professions, pursuing research. They all work against an accommodation with Germany.”

Writing to Frank Gannett in December 1938, he made this striking statement:

The Jews are after [Prime Minister] Chamberlain. He is being terribly harassed by them. . . . All the Jews are against him. . . . They have got a big position in the press here [in the UK]. . . . I am shaken. The Jews may drive us into war [and] their political influence is moving us in that direction. (cited in Nasaw 2012: 357-358) Beaverbrook was a prominent and influential media executive and politician, rather like the Rupert Murdoch of his day. He was well positioned to make such a claim.

The year 1939 opened with FDR's State of the Union speech — and more veiled threats. “We have learned that God-fearing democracies of the world. . . cannot safely be indifferent to international lawlessness anywhere. They cannot forever let pass, without effective protest, acts of aggression against sister nations.” He consequently called for an unprecedented peacetime allocation of \$2 billion for national defense. A message to Hitler — and to all those Americans who might oppose intervention in European affairs. Hitler, incidentally, was giving his own speeches, most infamously to the Reichstag on January 30. It included this memorable warning:

If the international Jewish financiers in and outside Europe should succeed in plunging the nations once more into a world war, then the result will not be the Bolshevization of the earth, and thus the victory of Jewry, but the annihilation [Vernichtung] of the Jewish race in Europe!

Two quick comments: The German word ‘Vernichtung’ has multiple meanings, and in no way requires the killing of the persons in question. The literal meaning is “to bring to nothing.” More broadly it means to completely remove or eliminate the presence, role, or influence of something. And there are many ways to do this short of murder. But more to the point, Hitler's alleged program of physical extermination was supposedly a great secret. He cannot possibly have told the world, in the most public of venues, of his ‘secret’ plan to kill all the Jews — in early 1939. Clearly he was referring to their displacement from Europe, and to an elimination of their previously dominant role there. But this was no secret at all — he had been doing that in Germany for some six years already.

Back in Washington, Ambassador Potocki sent two more revealing reports to Warsaw. A short statement on January 9 included this: “The American public is subject to an ever more alarming propaganda, which is under Jewish influence and continuously conjures up the specter of the danger of war. Because of this, the Americans have strongly altered

their views on foreign policy problems, in comparison with last year.” Three days later came the longest and perhaps most insightful report:

“The feeling now prevailing in the United States is marked by a growing hatred of Fascism and, above all, of Chancellor Hitler and everything connected with Nazism. Propaganda is mostly in the hands of the Jews, who control almost 100 percent radio, film, daily and periodical press. Although this propaganda is extremely coarse and presents Germany as black as possible — above all religious persecution and concentration camps are exploited — this propaganda is nevertheless extremely effective, since the public here is completely ignorant and knows nothing of the situation in Europe. . . .

The prevalent hatred against everything which is in any way connected with German Nazism is further kindled by the brutal policy against the Jews in Germany and by the émigré problem. In this action, various Jewish intellectuals participated: for instance, Bernard Baruch; the Governor of New York State, Lehman; the newly appointed judge of the Supreme Court, Felix Frankfurter; Secretary of the Treasury Morgenthau; and others who are personal friends of President Roosevelt. They want the President to become the champion of human rights, freedom of religion and speech, and the man who in the future will punish trouble-makers. These groups of people, who occupy the highest positions in the American government and want to pose as representatives of ‘true Americanism’ and ‘defenders of democracy,’ are, in the last analysis, connected by unbreakable ties with international Jewry. For this Jewish international, which above all is concerned with the interests of its race, to portray the President of the United States as the ‘idealist’ champion on human rights was a very clever move. In this manner they have created a dangerous hotbed for hatred and hostility in this hemisphere, and divided the world into two hostile camps. The entire issue is worked out in a masterly manner. Roosevelt has been given the foundation for activating American foreign policy, and simultaneously has been procuring enormous military stocks for the coming war, for which the Jews are striving very consciously.”

If Potocki were correct, it would mean that war had effectively been decided upon by the Allied powers. And in fact, that’s exactly what Bullitt said to American journalist Karl von Wiegand: “War in Europe has been decided upon. Poland had an assurance of the support of Britain and France, and would yield to no demands from Germany. America would be in the war after Britain and France entered it.” Bullitt obviously had inside access to a welldeveloped plan, one that was proceeding apace. In July, Potocki was back in Warsaw, speaking with a foreign ministry undersecretary named Jan Szembek. In his diary, Szembek recorded Potocki as stating the following: “In the West, there are all kinds of elements openly pushing for war: Jews, big capitalists, arms dealers. Now they are all ready for some excellent business. . . . They want to do business at our expense. They are indifferent to the destruction of our country.” This is notable, if only as confirmation of the legitimacy of the earlier reports.

Around that same time, the American ambassador to Great Britain began to cause a stir. He was a member of the Boston-area Irish Catholic set, a successful businessman. . . and

father of a future president. Joseph Kennedy contributed to Roosevelt's 1932 presidential campaign, and was rewarded with the chairmanship of the SEC. He left that office in 1935, and was appointed ambassador to the UK in January 1938. By mid-1939, Kennedy evidently began to have concerns about the Jewish role in the push toward war — and he began to speak openly to his colleagues in London. Somehow word of this got out to a local periodical, *The Week*, which found its way over the ocean to Washington D.C. and into the hands of the Secretary of the Interior, Harold Ickes. Convening with the president in early July, Ickes raised his concern: “This [story] was to the effect that Kennedy was privately telling his English friends in the Cliveden set that the Jews were running the United States and that the President would fall in 1940. It also charged that ‘[Kennedy believes] that the democratic policy of the United States is a Jewish production’.”

Amazingly, the president was unfazed. “It is true,” he said. Ickes provides no further information on the incident, and thus it is hard to know how to take this blunt response. Was FDR joking? A half-joke? An outright, straight-faced admission? We simply do not know. What was undoubtedly true, though, was that Kennedy had deep concerns about Jewish influence. He was not the only diplomat with such worries. A month later, reports Taylor (1961: 267), British ambassador to Germany Neville Henderson told Hitler that “the hostile attitude in Great Britain was the work of Jews and enemies of the Nazis.” Here again we see a parallel action on both sides of the Atlantic, and possibly coordinated. This would be consistent with Baruch’s role as a “prominent confidant” of both Roosevelt and Churchill.

A few weeks later, on September 1, the German army crossed into Poland. What began as part of a long-standing border conflict between two neighboring countries became, two days later, a European war, when England and France declared war on Germany.

England Stands Alone

On September 3, Roosevelt broadcast another of his many fireside chats to the American public. It contained the usual combination of exaggeration, propaganda, and misrepresentation. “When peace has been broken anywhere,” he said, “the peace of all countries everywhere is in danger.” Even one who strives for neutrality “cannot be asked to close his mind or his conscience.” His ending was again cloaked in the hypocritical language of peace:

“I hate war. I say that again and again. I hope the United States will keep out of this war. I believe that it will. And I give you assurance and reassurance that every effort of your government will be directed toward that end. As long as it remains within my power to prevent, there will be no black-out of peace in the United States.”

Here Roosevelt clearly reveals himself as a dissembler and a liar. Qualifications, conditionals, half-truths — all evidently designed to manipulate public opinion in favor of war. Jews inside and outside his administration had been pressing for intervention for

years; now with actual combat underway, the pressure would rapidly escalate. Roosevelt knew this, but said nothing. After all, he was facing another election the following year, and had to publicly maintain an anti-war stance, or risk losing to the Republicans. But he also had to keep his Jewish financiers happy. The fact that the vast majority of the American people were still strongly against the war apparently had no effect upon him — so much for democracy.

Kennedy could see what was happening. He strongly opposed American entry into the war, both on principle and because he had three sons who would likely be drawn in — and indeed, his eldest son, Joe Jr., would be killed during a bombing run in 1944. Speaking to his colleague Jay Moffat, Kennedy said, “Churchill. . . wants us there as soon as he can get us there. He is ruthless and scheming” — unsurprising, given that the Brits found themselves in a war that they were ill-prepared to fight. But Churchill knew whom to go to: “He is also in touch with groups in America which have the same idea, notably, certain strong Jewish leaders.”

Not that this was a secret. In a December 1939 memo to the British cabinet, Churchill recalled the vital role played by the Jews back in World War One — to draw in the Americans, against their wishes, against their desires, and against their national interests. “It was not for light or sentimental reasons,” wrote Churchill, that Balfour issued his famous promise of Palestine to the Zionists. “The influence of American Jewry was rated then as a factor of the highest importance. . . .” “Now,” he added, “I should have thought it was more necessary, even than in November 1917, to conciliate American Jewry and enlist their aid in combating isolationist and indeed anti-British tendencies in the United States.”

Here we have an amazingly bald-faced admission. Churchill has utter contempt for the “tendencies” (read: democratic principles) of the Americans. His sole concern is to leverage Jewish power to draw a neutral nation into yet another major war, to save his skin and to aid his Zionist friends. Kennedy was naturally appalled — both that Churchill would do such a thing, and that it seemed to be working. “I don’t trust him,” he wrote in his diary; “He always impressed me that he was willing to blow up the American Embassy and say it was the Germans if it would get the United States in.” No doubt that was true — just as FDR would be willing to sacrifice some 2,400 American lives at Pearl Harbor, for precisely that end. Into 1940, Hitler ran off an impressive string of victories, culminating in the capture of Paris in June. Chamberlain resigned as prime minister, to be replaced by Churchill, who immediately initiated the ‘bases for destroyers’ plan with the US.

As the year wore on, Roosevelt continued to lie to the American public. His campaign address in Boston on October 30 contained the same deceptive falsehoods of his earlier speeches. “Your government has acquired new naval and air bases in British territory in the Atlantic Ocean” — but no mention of the extralegal 50 destroyers that he gave them in return. He boasted of doubling the size of the army within the past year, and of letting out \$8 billion in defense contracts. But not worry, fellow Americans — “I give

you one more assurance. I have said this before, but I shall say it again and again and again: Your boys are not going to be sent into any foreign wars." An utter lie, and he knew it.

One is perhaps tempted to make excuses for FDR: that he was morally torn, that he could see a larger danger that the public could not see, that he had to lie to us 'for our own good.' None of these withstands scrutiny. The ethics of warfare are fairly well established, at least for nominal democracies. They would include, at a minimum: proportionality, mutuality, direct threat, and public support. That is, (a) any aggressions should be responded to only with equivalent force, (b) rules for one party hold for all, (c) force is justified only in the face of a direct and imminent threat, and (d) the public must be given an honest appraisal of the situation, and its wishes respected. Suffice it to say that none of these conditions would hold. One wonders: If the public had known of the ultimate cost — some 420,000 American deaths, and roughly \$4.2 trillion (present-day equivalent) — would they have embraced war, even after Pearl Harbor? Or would they perhaps have put FDR and his Jewish supporters on trial, for fraud, treason, and war crimes?

By October, Joe Kennedy had enough; he resigned his post. But he continued to comment on the role of the Jews, both to friends and in his private writings. On December 15, for example, he made this diary entry:

[Justice Frankfurter] is supposed directly and indirectly to influence Roosevelt on foreign policy over [Secretary of State] Hull's and [Undersecretary of State] Welles's heads, [and] whose cohort of young lawyers are in practically every government department, all aiding the cause of Jewish refugees getting into America. . . . It looks to me as if the English sympathizers were tying their cause in with the Jews because they figure they've got all the influence in US. (cited in Nasaw 2012: 507)

Jewish population in the US, incidentally, was soon to reach 5 million. Frankfurter's boys were doing a good job.

As before, Kennedy was not alone in his concern. Another Supreme Court Justice, Frank Murphy, confided to him that "it was Frankfurter and Ben Cohen who wrote the Attorney General's opinion on destroyers and bases." Kennedy added: "Murphy regards the Jewish influence as most dangerous. He said that after all, [Harry] Hopkins's wife was a Jew; Hull's wife is a Jew; and Frankfurter and Cohen and that group are all Jews." For his part, Welles privately referred to Frankfurter as "dangerous" and "a Jew chiseler." One of the most revealing remarks by Kennedy comes from the diary of James Forrestal, who at the time was Secretary of the Navy. In the entry from 27 December 1945, we read this:

Played golf today with Joe Kennedy. . . . He said Chamberlain's position in 1938 was that England had nothing with which to fight, and that she could not risk going to war with Hitler. Kennedy's view: That Hitler would have fought Russia without any later conflict with England, if it had not been for Bullitt's urging on Roosevelt in the summer of 1939 that the Germans must be faced down about Poland; neither the French nor the British

would have made Poland a cause of war, if it had not been for the constant needling from Washington. . . . Chamberlain, he says, stated that America and the world Jews had forced England into the war. (Forrestal 1951: 121-122)

So, we must ask: Why was the partly Jewish Bullitt — a mere diplomat — “urging” the president of the United States to face down Hitler? And why were Bullitt and Roosevelt “constantly needling” England and France to fight a war that they themselves did not see as necessary or winnable? And why did these nations succumb to American pressure? And why did Chamberlain ultimately link together America and “the world Jews” as the driving force for war? We need not look very hard to see a Jewish hand at work.

Media Blitz

Jewish-run media was becoming very active by this time. The newspapers, for example, had found much disagreement with Washington on domestic issues, but “Roosevelt’s standing with the press on foreign policy matters was much stronger,” according to Cole (1983: 478). Apart from the Chicago Tribune and the Hearst papers, most dailies backed intervention. Unsurprisingly, “the more prestigious and influential news publications strongly supported the president.” These included the New York Times, the New York Herald Tribune, the Chicago Daily News, and Time Magazine.

The motion picture industry certainly did its part to get America into war. Given that it took at least a year to get a motion picture from conception to theater, and that efforts to produce pro-war films did not start in earnest until 1937, it was well into 1939 before they began to appear. Early efforts like *Confessions of a Nazi Spy* and *Beasts of Berlin* came out that year, and set the stage for a flood of films over the next three years. In 1940, Hollywood released graphic and high-impact films like *Escape and Mortal Storm*; Hitchcock’s *Foreign Correspondent* came out that year, as did Chaplin’s *The Great Dictator*. In May, two major studio heads, Jack and Harry Warner — more accurately known as Itzhak and Hirsz Wonskolaser — wrote to Roosevelt, assuring him that they would “do all in our power within the motion picture industry. . . to show the American people the worthiness of the cause for which the free peoples of Europe are making such tremendous sacrifices.” It’s nice to see such unselfish, high-minded public service amongst corporate executives.

By early 1941, Jewish filmmakers and producers were working subtle, pro-war themes into many of their films. The anti-war group America First argued that belligerent propaganda was becoming widespread; “films that have nothing to do with the European war are now loaded with lies and ideas which bring about an interventionist reaction” (in Cole: 474). In August of that year, Senator Gerald Nye (R-N. Dak.) delivered a stinging radio address, arguing that the Hollywood studios “had become the most gigantic engines of propaganda in existence, to rouse the war fever in America and plunge this nation to her destruction” (in *ibid*: 475). By that time, nearly three dozen major pro-war films had been released.

In the end, more than 60 explicitly 'patriotic,' pro-war films were produced, along with dozens of ordinary films that incorporated subtle pro-war messages. There were a few classics — *Casablanca*, *Sergeant York*, *To Be or Not to Be* — and many duds. *Hitler's Children* and *Nazi Agent*, for example, won't be making any Top 10 lists.

In March of 1941, under pressure from the Jewish lobby, Congress passed the Lend-Lease Act; this allowed shipment of armaments and military supplies to Britain and the other Allied nations. The vote was 260-165 in the House, and 59-30 in the Senate. Public opinion was narrowly in favor of the Act, but only as a defensive measure; a strong majority still wished to stay out of the war. FDR could arm the Allies but not join the fighting. Roosevelt made a major radio address in May, declaring an "unlimited national emergency." It was filled with more war hyperbole, most notably regarding the Germans' alleged striving toward "world domination." Over and over came the words: "Nazi book of world conquest"; "Hitler's plan of world domination"; "a Hitler-dominated world." Suffice to say that no evidence of such a plan has ever come forth. Deploying the most facile, us-or-them language, FDR struggled to persuade reluctant Americans that they should fight and die: "Today the whole world is divided between human slavery and human freedom — between pagan brutality and Christian ideal." He even hinted at the essentials of his strategy, namely, to provoke an 'incident' that would allow him to declare war: "We are placing our armed forces in strategic military position. We will not hesitate to use our armed forces to repel attack."

In June, convinced of the Bolshevik threat posed by Stalin, Hitler invaded the Soviet Union. In August, the US placed military forces in Iceland, effectively occupying that country. And on 11 September 1941 — 60 years to the day before that other 9/11 — Charles Lindbergh gave his most famous speech, at Des Moines, Iowa. There he called out, for the first time, the three main groups that were driving the US toward war: the British, the Roosevelt administration, and the Jews. Of this latter group, Lindbergh acknowledged their plight under the Nazis, and their hatred of Hitler. But instead of inciting America to war, they should be working to halt it; "for they will be among the first to feel its consequences" — presumably meaning both in Germany and in the US, where anti-Semitism would surely be inflamed. In one of the more notable lines of the speech, he said that "[The Jews'] greatest danger in this country lies in their large ownership and influence in our motion pictures, our press, our radio, and our government." Lindbergh thus ran afoul of the first rule of wartime: Thou shalt never speak the truth.

Indeed: If Jewish influence in "our government" was part of the danger, then naming the "Roosevelt administration" was redundant. The true danger was Jews in media, Jews in Hollywood, and Jews in the government — along with those non-Jews who worked on their behalf. And even to name the British — Churchill and his Zionist backers — was, in effect, to name yet more Jews. On all fronts, it was powerful and influential Jews driving peaceful people toward war, simply to destroy the hated Nazi regime.

There is no doubt that Lindbergh was right — that British Jews were pushing the US

toward war, and that they were succeeding. In a strange coincidence, just one day before Lindbergh's Des Moines speech, leading British Zionist Chaim Weizmann delivered this notorious letter to Churchill:

There is only one big ethnic group [in America] which is willing to stand, to a man, for Great Britain, and a policy of "all-out aid" for her: the five million Jews. From Secretary Morgenthau, Governor Lehman, Justice Frankfurter, down to the simplest Jewish workman or trader, they are conscious of all that this struggle against Hitler implies. It has been repeatedly acknowledged by British Statesmen that it was the Jews who, in the last war, effectively helped to tip the scales in America in favour of Great Britain. They are keen to do it — and may do it — again. (cited in Irving 2001: 77)

A most explicit admission: American Jews, working in conjunction with British Jews, hold the key to war. They are "keen to do it." Virtually upon command, they can "tip the scales" — again — and drive the Americans into another war that they desperately want to avoid.

The Pearl Harbor Incident

With American opposition to war still hovering near 80team were evidently becoming desperate. Dramatic action was increasingly necessary. At that point, only a direct attack on American soil could alter public opinion. For a good two years, Roosevelt had been harassing the Germans. But they refused to bite. What to do?

History is full of 'false flag' operations in which governments or other actors conduct a fake attack, blame the enemy, and then use the event as a pretext for military action. By some accounts, the earliest was in 47 BC, when Julius Caesar arranged and paid for insurgent 'rebel' actions in Rome prior to his taking of the city. A more recent instance occurred in 1846, when President James Polk sent an army detachment into a disputed area along the Texas- Mexico border. When the Mexicans responded, he declared it an attack on "American soil," and promptly began the US-Mexico War. For centuries, military commanders have understood the benefits of false flags; Roosevelt's team was no different.

Though I cannot elaborate here, there is ample evidence that the Pearl Harbor attack was effectively a false flag event. While obviously not directly conducting the attack, Roosevelt did everything possible to encourage and allow the Japanese to strike — and then to feign shock when it actually happened. Below are the key elements of that story.

The earliest explicit indication that some such plan was in the works comes from October 1940, in the so-called McCollum Memorandum. Lt. Commander Arthur McCollum was director of the Office of Naval Intelligence's Far East Asia section, when he issued a five-page letter to two of his superiors. The memo describes a situation in which a neutral US is surrounded by hostile nations across two oceans, and notes that "Germany and Italy have lately concluded a military alliance with Japan directed against the United States."

This was a mutual-defense pact, such that an attack against Japan would be considered by Germany to be an act of war. This gave FDR two paths to war: attack by Germany, or attack by Japan. Germany was scrupulously eschewing conflict, but perhaps Japan could be engaged.

This was evidently well understood within the military establishment. As McCollum explained, "It is not believed that in the present state of political opinion, the US government is capable of declaring war against Japan without more ado; and it is barely possible that vigorous action on our part might lead the Japanese to modify their attitude" — clever language that essentially means: Japan does not really want war either, but perhaps we could provoke them enough ("more ado") that they would launch a first strike ("modify their attitude"). McCollum then suggested an eight-point action plan, anticipating conflict with Japan. Item Six includes this: "Keep the main strength of the US fleet now in the Pacific in the vicinity of the Hawaiian Islands." The memo concludes with this striking sentence: "If by these means Japan could be led to commit an overt act of war, so much the better." The plan could hardly be clearer.

On 19 August 1941, Churchill told his war cabinet that FDR was doing all he could to provoke an attack by the Axis powers — information which came to light only in 1972. Churchill said:

"[Roosevelt] was obviously determined that they [the US] should come in. . . . The president said to me that he would wage war but not declare it, and that he would become more and more provocative. If the Germans did not like it, they could attack American forces. . . . Everything was being done to force an 'incident.' The president has made it clear that he would look for an 'incident' which could justify him in opening hostilities."

Lindbergh essentially understood what was going on. In his September 1941 speech, he laid out FDR's three-part plan: (1) prepare for war in the guise of defense, (2) incrementally involve the US in conflict situations, and (3) "create a series of incidents which would force us into actual conflict." Near the end of his speech he added that "The war groups have succeeded in the first two of their three major steps into war. . . . Only the creation of sufficient 'incidents' yet remains." An amazing prognosis, given that the Pearl Harbor attack was just three months away.

On 25 November 1941, 12 days before the attack, Roosevelt held a War Cabinet meeting at the White House. Secretary of War Henry Stimson wrote the following in his diary of that day:

"[Roosevelt] brought up the event that we were likely to be attacked perhaps next Monday [December 1] (Pearl Harbor was attacked December 7), for the Japanese are notorious for making an attack without warning, and the question was how we should maneuver them into the position of firing the first shot without allowing too much danger to ourselves. It was a difficult proposition."

The following day, November 26, Secretary of State Hull presented a letter to the Japanese ambassador, demanding that they withdraw from China and French Indochina (section II, point #3). Though couched in the language of peace, it was effectively an ultimatum, and it was thusly perceived by the Japanese prime minister.

On December 4, the anti-war paper Chicago Daily Tribune ran a huge headline: "FDR's War Plans!" It detailed a plan for a 10-million-man military force, half of whom would be dedicated to fighting Germany. It even mentioned a specific date — 1 July 1943 — as the day for the "final supreme effort by American land forces to defeat the mighty German army in Europe." This was incredibly accurate; the Allied invasion of Sicily, the first direct assault on European territory, occurred on 9 July 1943. Clearly FDR's secrets were quickly unraveling.

At 4:00 pm on Saturday, December 6, a decoded Japanese communiqué was delivered to Roosevelt. It indicated that Japan was not going to accept any portion of America's ultimatum, and that they were compelled to respond to its on-going belligerence. "This means war," said the president. If war was inevitable, said Harry Hopkins, it was too bad that we couldn't strike first. "No, we can't do that," said Roosevelt, hypocritically; "We are a democracy of a peaceful people. We have a good record. We must stand on it." Pearl Harbor was not explicitly mentioned, but the president took no action to forewarn any of his commanders in the Pacific theater, thus rendering them defenseless before the oncoming assault.

Eight years after the attack, the president's administrative assistant, Jonathan Daniels, recalled events of that time. "There was a mass of warning before Pearl Harbor," he wrote (1949: 490). "As a matter of fact, warning had been clear for many months before Pearl Harbor. The increasing menace had been understood and accepted. Of course, even Senators can now read to precise clarity — to the place and the hour — the warnings we possessed." At the time, though, Roosevelt was surprised: "Of course, he was surprised. But he had deliberately taken the chance of surprise, as he had won the strategy of successful militant delay. The blow was heavier than he had hoped it would necessarily be." Indeed — 2,400 Americans killed in one day.

Or perhaps it was no "surprise" at all. In 1989, a 90-year-old British naval intelligence officer named Eric Nave came forth with a stunning assertion: that the Brits had detailed foreknowledge of the attack, days before the event. As reported in the Times of London (June 1), Nave's decoding of Japanese battle commands made "clear their intention to attack several days before the raid took place." "His revelations challenge the view that the Americans were taken by surprise, and support evidence that Churchill, and probably Roosevelt, allowed the attack to go ahead unchallenged as means to bring America into the Second World War." Nave added this: "We never had any doubt about Pearl Harbor itself. It should never have happened. We knew days, even a week before." His account is detailed in his book *Betrayal at Pearl Harbor* (1991). Nave died in 1993.

12.14 War Profit

The Empire of I.G. Farben

On the eve of World War II the German chemical complex of I.G. Farben was the largest chemical manufacturing enterprise in the world, with extraordinary political and economic power and influence within the Hitlerian Nazi state. I. G. has been aptly described as “a state within a state.” The Farben cartel dated from 1925, when organizing genius Hermann Schmitz (with Wall Street financial assistance) created the super-giant chemical enterprise out of six already giant German chemical companies — Badische Anilin, Bayer, Agfa, Hoechst, Weiler-ter- Meer, and Griesheim-Elektron. These companies were merged to become Inter-nationale Gesellschaft Farbenindustrie A.G. — or I.G. Farben for short. Twenty years later the same Hermann Schmitz was put on trial at Nuremberg for war crimes committed by the I. G. cartel. Other I. G. Farben directors were placed on trial but the American affiliates of I. G. Farben and the American directors of I. G. itself were quietly forgotten; the truth was buried in the archives.

It is these U.S. connections in Wall Street that concern us. Without the capital supplied by Wall Street, there would have been no I. G. Farben in the first place and almost certainly no Adolf Hitler and World War II. German bankers on the Farben Aufsichtsrat (the supervisory Board of Directors)¹ in the late 1920s included the Hamburg banker Max Warburg, whose brother Paul Warburg was a founder of the Federal Reserve System in the United States. Not coincidentally, Paul Warburg was also on the board of American I. G., Farben’s wholly owned U.S. subsidiary. In addition to Max Warburg and Hermann Schmitz, the guiding hand in the creation of the Farben empire, the early Farben Vorstand included Carl Bosch, Fritz ter Meer, Kurt Oppenheim and George von Schnitzler. All except Max Warburg were charged as “war criminals” after World War II.

I. G. Farben is of peculiar interest in the formation of the Nazi state because Farben directors materially helped Hitler and the Nazis to power in 1933. I.G. Farben contributed 400,000 RM to Hitler’s political “slush fund.” It was this secret fund which financed the Nazi seizure of control in March 1933. Many years earlier Farben had obtained Wall Street funds for the 1925 cartelization and expansion in Germany and \$30 million for American I. G. in 1929, and had Wall Street directors on the Farben board. It has to be noted that these funds were raised and directors appointed years before Hitler was promoted as the German dictator. Qualified observers have argued that Germany could not have gone to war in 1939 without I. G. Farben. Between 1927 and the beginning of World War II, I.G. Farben doubled in size, an expansion made possible in great part by American technical assistance and by American bond issues, such as the one for \$30 million offered by National City Bank. By 1939 I. G. acquired a participation and managerial influence in some 380 other German firms and over 500 foreign firms. The Farben empire owned its own coal mines, its own electric power plants, iron and steel units, banks, research units, and numerous commercial enterprises. There were over 2,000 cartel agreements

between I. G. and foreign firms — including Standard Oil of New Jersey, DuPont, Alcoa, Dow Chemical, and others in the United States, The full story of I,G, Farben and its world-wide activities before World War II can never be known, as key German records were destroyed in 1945 in anticipation of Allied victory.

Directors of Farben firms (i.e., the “I. G. Farben officials“ referred to in the investigation) included not only Germans but also prominent American financiers. This 1945 U.S. War Department report concluded that I.G.’s assignment from Hitler in the prewar period was to make Germany self-sufficient in rubber, gasoline, lubricating oils, magnesium, fibers, tanning agents, fats, and explosives. To fulfill this critical assignment, vast sums were spent by I.G. on processes to extract these war materials from indigenous German raw materials - in particular the plentiful German coal resources. Where these processes could not be developed in Germany ,they were acquired from abroad under cartel arrangements. For example, the process for iso-octane, essential for aviation fuels, was obtained from the United States.

The process for manufacturing tetra-ethyl lead? essential for aviation gasoline, was obtained by I. G. Farben from the United States, and in 1939 I.G. was sold \$20 million of high-grade aviation gasoline by Standard Oil of New Jersey. Even before Germany manufactured tetraethyl lead by the American process it was able to “borrow“ 500 tons from the Ethyl Corporation. This loan of vital tetra-ethyl lead was not repaid and I.G. forfeited the \$1 million security. Further, I.G. purchased large stocks of magnesium from Dow Chemical for incendiary bombs and stockpiled explosives, stabilizers, phosphorus, and cyanides from the outside world. In 1939, out of 43 major products manufactured by I.G., 28 were of “primary concern“ to the German armed forces. Farben’s ultimate control of the German war economy, acquired during the 1920s and 1930s with Wall Street assistance, can best be assessed by examining the percentage of German war material output produced by Farben plants in 1945. Farben at that time produced 100 percent of German synthetic rubber, 95 percent of German poison gas (including all the Zyklon B gas used in the concentration camps), 90 percent of German plastics, 88 percent of German magnesium, 84 percent of German explosives, 70 percent of German gunpowder, 46 percent of German high octane (aviation) gasoline, and 33 percent of German synthetic gasoline.

Unfortunately, when we probe the technical origins of the more important of these military materials — quite apart from financial Support for Hitler — we find links to American industry and to American businessmen. There were numerous Farben arrangements with American firms, including cartel marketing arrangements, patent agreements, and technical exchanges as exemplified in the Standard Oil-Ethyl technology transfers mentioned above. The Berlin N.W. 7 office of I.G. Farben was the key Nazi overseas espionage center. The unit operated under Farben director Max Ilgner, nephew of I.G. Farben president Hermann Schmitz. Max Ilgner and Hermann Schmitz were on the board of American I.G., with fellow directors Henry Ford of Ford Motor Company, Paul Warburg of Bank of Manhattan, and Charles E. Mitchell of the Federal Reserve Bank of New York.

The American I.G. Farben

American I.G. Farben directors included some of the more prominent members of Wall Street. German interests re-entered the United States after World War I, and successfully overcame barriers designed to keep I.G. out of the American market. Neither seizure of German patents. The Directors of the American I.G. were Carl Bosch (Ford Motor), Edsel B. Ford (Ford Motor), Max Ilgner, F. Ter Meer, H.A. Metz (Bank of Manhattan), C.E. Mitchell (Director Federal Reserve New York and National City Bank), Herman Schmitz (Deutsche Bank, Bank for International Settlements), Walter Teagle (Director Federal Reserve Bank New York and Standard Oil New Jersey), W.H. von Rath (Director of German General U.S. Electric A.E.G), Paul M. Warburg (U.S. First member of the Federal Reserve Bank of New York and Bank of Manhattan) and W.E. Weiss (Sterling Produits).

Directors of American I.G. were not only prominent in Wall Street and American industry but more significantly were drawn from a few highly influential institutions. Directors of American I.G. were not only prominent in Wall Street and American industry but more significantly were drawn from a few highly influential institutions. Between 1929 and 1939 there were changes in the make-up of the board of American I.G. The number of directors varied from time to time, although a majority always had I.G. backgrounds or connections, and the board never had less than four American directors. In 1939 — presumably looking ahead to World War II — an effort was made to give the board a more American complexion, but despite the resignation of Hermann Schmitz, Carl Bosch, and Walter Duisberg, and the appointment of seven new directors, seven members still belonged to the I.G. group. This I.G. predominance increased during 1940 and 1941 as American directors, including Edsel Ford, realized the political unhealthiness of I.G. and resigned.

Several basic observations can be made from this evidence. First, the board of American I.G. had three directors from the Federal Reserve Bank of New York, the most influential of the various Federal Reserve Banks. American I.G. also had interlocks with Standard Oil of New Jersey, Ford Motor Company, Bank of Manhattan (later to become the Chase Manhattan), and A.E.G. (German General Electric). Second, three members of the board of this American I.G. were found guilty at Nuremburg War Crimes Trials. These were the German, not the American, members. Among these Germans was Max Ilgner, director of the I.G. Farben N.W. 7 office in Berlin, i.e., the Nazi pre-war intelligence office. If the directors of a corporation are collectively responsible for the activities of the corporation, then the American directors should also have been placed on trial at Nuremburg, along with the German directors — that is, if the purpose of the trials was to determine war guilt. Of course, if the purpose of the trials had been to divert attention away from the U.S. involvement in Hitler's rise to power, they succeeded very well in such an objective.

General Electric

The multi-national giant General Electric has an unparalleled role in twentieth-century history. The General Electric Company electrified the Soviet Union in the 1920s and 1930s, and fulfilled for the Soviets Lenin's dictum that "Socialism = electrification." The Swope Plan, created by General Electric's one-time president Gerard Swope, became Franklin D. Roosevelt's New Deal, by a process deplored by one-time President Herbert Hoover and described in *Wall Street and FDR*. There was a long-lasting, intimate relationship between Swope and Young of General Electric Company and the Roosevelt family, as there was between General Electric and the Soviet Union. In 1936 Senator James A. Reed of Missouri, an early Roosevelt supporter, became aware of Roosevelt's betrayal of liberal ideas and attacked the Roosevelt New Deal program as a "tyrannical" measure "leading to despotism, [and] sought by its sponsors under the communistic cry of 'Social Justice.'" Senator Reed further charged on the floor of the Senate that Franklin D. Roosevelt was a "hired man for the economic royalists" in Wall Street and that the Roosevelt family "is one of the largest stockholders in the General Electric Company."

As we probe into behind-the-scenes German interwar history and the story of Hitler and Naziism, we find both Owen D. Young and Gerard Swope of General Electric tied to the rise of Hitlerism and the suppression of German democracy. That General Electric directors are to be found in each of these three distinct historical categories — i.e., the development of the Soviet Union, the creation of Roosevelt's New Deal, and the rise of Hitlerism — suggests how elements of Big Business are keenly interested in the socialization of the world, for their own purposes and objectives, rather than the maintenance of the impartial market place in a free society. General Electric profited handsomely from Bolshevism, from Roosevelt's New Deal socialism, and, as we shall see below, from national socialism in Hitler's Germany.

General Electric in Weimar Germany

Walter Rathenau was, until his assassination in 1922, managing director of Allgemeine Elektrizitäts Gesellschaft (A.E.G.), or German General Electric, and like Owen Young and Gerard Swope, his counterparts in the U.S., he was a prominent advocate of corporate socialism. Walter Rathenau spoke out publicly against competition and free enterprise, Why? Because both Rathenau and Swope wanted the protection and cooperation of the state for their own corporate objectives and profit. (But not of course for anybody else's objectives and profits.) Rathenau expressed their plea in *The New Political Economy*:

"The new economy will, as we have seen, be no state or governmental economy but a private economy committed to a civic power of resolution which certainly will require state cooperation for organic consolidation to overcome inner friction and increase production and endurance."

When we disentangle the turgid Rathenau prose, this means that the power of the State

was to be made available to private firms for their own corporate purposes. Owen D. Young of General Electric was one of the three U.S. delegates to the 1923 Dawes Plan meeting which established the German reparations program. And in the Dawes and Young Plans we can see how some private firms were able to benefit from the power of the State. The largest single loans from Wall Street to Germany during the 1920s were reparations loans; it was ultimately the U.S. investor who paid for German reparations. The cartelization of the German electrical industry under A.E.G. (as well as the steel and chemical industries discussed in Chapters One and Two) was made possible with these Wall Street loans.

In 1928, at the Young Plan reparations meetings, we find General Electric president Owen D. Young in the chair as the chief U.S. delegate, appointed by the U.S. government to use U.S. government power and prestige to decide international financial matters enhancing Wall Street and General Electric profits. In 1930 Owen D. Young, after whom the Young Plan for German reparations was named, became chairman of the Board of General Electric Company in New York City. Young was also chairman of the Executive Committee of Radio Corporation of America and a director of both German General Electric (A.E.G.) and Osram in Germany. Young also served on the boards of other major U.S. corporations, including General Motors, NBC, and RKO; he was a councilor of the National Industrial Conference Board, a director of the International Chamber of Commerce, and deputy chairman of the board of the Federal Reserve Bank of New York.

Gerard Swope was president and director of General Electric Company as well as French and German associated companies, including A.E.G. and Osram in Germany. Swope was also a director of RCA, NBC, and the National City Bank of New York. Other directors of International General Electric at this time reflect Morgan control of the company, and both Young and Swope were generally known as the Morgan representatives on the G.E. board, which included Thomas Cochran, another partner in the J.P. Morgan firm. General Electric director Clark Haynes Minor was president of International General Electric in the 1920s. Another director was Victor M. Cutter of the First National Bank of Boston and a figure in the "Banana Revolutions" in Central America. In the late 1920s Young, Swope, and Minor of International General Electric moved into the German electrical industry and gained, if not control as some have reported, then at least a substantial say in the internal affairs of both A.E.G. and Osram. In July 1929 an agreement was reached between General Electric and three German firms — A.E.G., Siemens & Halske, and Koppel and Company — which between them owned all the shares in Osram.

In July 1929 great interest was shown in rumors circulating in German financial circles that General Electric was also buying into A.E.G. and that talks to this end were in progress between A.E.G. and G.E.⁸ In August it was confirmed that 14 million marks of common A.E.G. stock were to be issued to General Electric. These shares, added to shares bought on the open market, gave General Electric a 25-percent interest in A.E.G. A closer working agreement was signed between the two companies, providing the German company U.S. technology and patents. By 1930, unknown to the German

financial press, General Electric had similarly gained an effective technical monopoly of the Soviet electrical industry and was soon to penetrate even the remaining bastions in Germany, particularly the Siemens group. In January 1930 three G.E. men were elected to the board of A.E.G. — Clark H. Minor, Gerard Swope, and E. H. Baldwin — and International General Electric (I.G.E.) continued its moves to merge the world electrical industry into a giant cartel under Wall Street control.

In February General Electric focused on the remaining German electrical giant, Siemens & Halske, and while able to obtain a large block of debentures issued on behalf of the German firm by Dillon, Read of New York, G.E. was not able to gain participation or directors on the Siemens board. Consequently, in the early 1930s, as Hitler prepared to grab dictatorial power in Germany — backed by some, but by no means all, German and American industrialists — the German General Electric (A.E.G.) was owned by International General Electric (about 30 percent), the Gesellschaft für Electriche Unternehmen (25 percent), and Ludwig Lowe (25 percent). International General Electric also had an interest of about 16 2/3rds percent in Osram.

General Electric and the Financing of Hitler

The tap root of modern corporate socialism runs deep into the management of two affiliated multi-national corporations: General Electric Company in the United States and its foreign associates, including German General Electric (A.E.G.), and Osram in Germany. We have noted that Gerard Swope, second president and chairman of General Electric, and Walter Rathanau of A.E.G. promoted radical ideas for control of the State by private business interests.

From 1915 onwards International General Electric (I.G.E.), located at 120 Broadway in New York City, acted as the foreign investment, manufacturing, and selling organization for the General Electric Company. I.G.E. held interests in overseas manufacturing companies including a 25 to 30-percent holding in German General Electric (A.E.G.), plus holdings in Osram G.m.b.H. Kommanditgesellschaft, also in Berlin. These holdings gave International General Electric four directors on the board of A.E.G., and another director at Osram, and significant influence in the internal domestic policies of these German companies. The

significance of this General Electric ownership is that A.E.G. and Osram were prominent suppliers of funds for Hitler in his rise to power in Germany in 1933. A bank transfer slip dated March 2, 1933 from A.E.G. to Delbruck Schickler & Co. in Berlin requests that 60,000 Reichsmark be deposited in the “Nationale Treuhand” (National Trusteeship) account for Hitler’s use. I.G. Farben was the most important of the domestic financial backers of Hitler, and (as noted elsewhere) I.G. Farben controlled American I.G. Moreover, several directors of A.E.G. were also on the board of I.G. Farben — i.e., Hermann Bucher, chairman of A.E.G. was on the I.G. Farben board; so were A.E.G. directors Julius Flechtheim and Walter von Rath. I.G. Farben contributed 30 percent of the 1933 Hitler

National Trusteeship. Walter Fahrenhorst of A.E.G. was also on the board of Phoenix A-G, Thyssen A-G and Demag A-G — and all were contributors to Hitler's fund. Demag A-G contributed 50,000 RM to Hitler's fund and had a director with A.E.G.

Osram contributed 40,000 RM directly to the Hitler fund. The Otto Wolff concern, Vereinigte Stahlwerke A-G, recipient of substantial New York loans in the 1920s, had three directors on the A.E.G. board: Otto Wolff, Henry Nathan and Jakob Goldschmidt. Alfred Krupp von Bohlen, sole owner of the Krupp organization and an early supporter of Hitler, was a member of the Aufsichtsrat of A.E.G. Robert Pferdmenges, a member of Himmler's Circle of Friends, was also a director of A, E.G. Walter Rathenau became a director of A.E.G. in 1899 and by the early twentieth century was a director of more than 100 corporations. Rathenau was also author of the "Rathenau Plan," which bears a remarkable resemblance to the "Swope Plan" — i.e., FDR's New Deal but written by Swope of G.E. In other words, we have the extraordinary coincidence that the authors of New Deal-like plans in the U.S. and Germany were also prime backers of their implementers: Hitler in Germany and Roosevelt in the U.S. In brief, we have hard evidence of unquestioned authenticity (see p, 56) to show that German General Electric contributed substantial sums to Hitler's political fund. There were four American directors of A.E.G. (Baldwin, Swope, Minor, and Clark), which was 80 percent owned by International General Electric. Further, I.G.E. and the four American directors were the largest single interest and consequently had the greatest single influence in A.E.G. actions and policies.

Standard Oil Fuels World War II

The Standard Oil group of companies, in which the Rockefeller family owned a one-quarter (and controlling) interest,¹ was of critical assistance in helping Nazi Germany prepare for World War II. This assistance in military preparation came about because Germany's relatively insignificant supplies of crude petroleum were quite insufficient for modern mechanized warfare; in 1934 for instance about 85 percent of German finished petroleum products were imported. The solution adopted by Nazi Germany was to manufacture synthetic gasoline from its plentiful domestic coal supplies. It was the hydrogenation process of producing synthetic gasoline and iso-octane properties in gasoline that enabled Germany to go to war in 1940 — and this hydrogenation process was developed and financed by the Standard Oil laboratories in the United States in partnership with I.G. Farben.

During World War II Standard Oil of New Jersey was accused of treason for this pre-war alliance with Farben, even while its continuing wartime activities within Himmler's Circle of Friends were unknown. The accusations of treason were vehemently denied by Standard Oil. Whatever may have been Standard Oil's wartime recollections and hasty defense, the 1929 negotiations and contracts between Standard and I.G. Farben were recorded in the contemporary press and describe the agreements between Standard Oil of New Jersey and I.G. Farben and their intent. In April 1929 Walter C. Teagle, president

of Standard Oil of New Jersey, became a director of the newly organized American I.G. Farben. Not because Teagle was interested in the chemical industry but because,

It has for some years past enjoyed a very close relationship with certain branches of the research work of the I.G. Farben-industrie which bear closely upon the oil industry.

It was announced by Teagle that joint research work on production of oil from coal had been carried on for some time and that a research laboratory for this work was to be established in the United States. In November 1929 this jointly owned Standard — Farben research company was established under the management of the Standard Oil Company of New Jersey, and all research and patents relating to production of oil from coal held by both I.G. and Standard were pooled. Previously, during the period 1926-1929, the two companies had cooperated in development of the hydrogenation process, and experimental plants had been placed in operation in both the U.S. and Germany. The Farben memorandum answered the key question: What did I.G. Farben acquire from Standard Oil that was "vital for the conduct of war?" The memo examines those products cited by Haslam — i.e., iso-octane, tuluol, Oppanol-Paratone, and buna — and demonstrates that contrary to Standard Oil's public claim, their technology came to a great extent from the U.S., not from Germany.

Another prominent example of Standard Oil assistance to Nazi Germany — in cooperation with General Motors — was in supplying ethyl lead. Ethyl fluid is an anti-knock compound used in both aviation and automobile fuels to eliminate knocking, and so improve engine efficiency; without such anti-knocking compounds modern mobile warfare would be impractical. In 1924 the Ethyl Gasoline Corporation was formed in New York City, jointly owned by the Standard Oil Company of New Jersey and General Motors Corporation, to control and utilize U.S. patents for the manufacture and distribution of tetraethyl lead and ethyl fluid in the U.S. and abroad. Up to 1935 manufacture of these products was undertaken only in the United States. In 1935 Ethyl Gasoline Corporation transferred its know-how to Germany for use in the Nazi rearmament program. This transfer was undertaken over the protests of the U.S. Government.

All this goes on also for rubber and petroleum.

I.T.T. Works Both Sides of the War

The multi-national giant International Telephone and Telegraph (I.T.T.)¹ was founded in 1920 by Virgin Islands-born entrepreneur Sosthenes Behn. During his lifetime Behn was the epitome of the politicized businessman, earning his profits and building the I.T.T. empire through political maneuverings rather than in the competitive market place. In 1923, through political adroitness, Behn acquired the Spanish telephone monopoly, Compañia Telefonica de Espana. In 1924 I.T.T., now backed by the J.P. Morgan firm, bought what later became the International Standard Electric group of manufacturing plants around the world. The parent board of I.T.T. reflected the J.P. Morgan interests,

with Morgan partners Arthur M. Anderson and Russell Leffingwell.

The National City Bank (NCB) in the Morgan group was represented by two directors, Sosthenes Behn and Allen G. Hoyt. In brief, I.T.T. was a Morgan-controlled company; and we have previously noted the interest of Morgan-controlled companies in war and revolution abroad and political maneuvering in the United States. In 1930 Behn acquired the German holding company of Standard Elektrizitäts A.G., controlled by I.T.T. (62.0 percent of the voting stock), A.E.G. (81.1 percent of the voting stock) and Felton & Guillaume (six percent of the voting stock). In this deal Standard acquired two German manufacturing plants and a majority stock interest in Telefonfabrik Berliner A.G. I.T.T. also obtained the Standard subsidiaries in Germany, Ferdinand Schuchardt Berliner Fernsprech-und Telegraphenwerk A.G., as well as Mix & Genest in Berlin, and Suddeutsche Apparate Fabrik G.m.b.H. in Nuremberg.

It is interesting to note in passing that while Sosthenes Behn's I.T.T. controlled telephone companies and manufacturing plants in Germany, the cable traffic between the U.S. and Germany was under the control of Deutsch-Atlantische Telegraphengesellschaft (the German Atlantic Cable Company). This firm, together with the Commercial Cable Company and Western Union Telegraph Company, had a monopoly in transatlantic U.S.- German cable communications. W.A. Harriman & Company took over a block of 625,000 shares in Deutsch-Atlantische in 1925, and the firm's board of directors included an unusual array of characters, many of whom we have met elsewhere. It included, for example, H. F. Albert, the German espionage agent in the United States in World War I; Franklin D. Roosevelt's former business associate von Berenberg-Gossler; and Dr. Cuno, a former German chancellor of the 1923 inflationary era. I.T.T. in the United States was represented on the board by von Guillaume and Max Warburg of the Warburg banking family.

There is no record that I.T.T. made direct payments to Hitler before the Nazi grab for power in 1933. On the other hand, numerous payments were made to Heinrich Himmler in the late 1930s and in World War II itself through I.T.T. German subsidiaries. The first meeting between Hitler and I.T.T. officials — so far as we know — was reported in August 1933, when Sosthenes Behn and I.T.T. German representative Henry Manne met with Hitler in Berchtesgaden. Subsequently, Behn made contact with the Keppler circle (see Chapter Nine) and, through Keppler's influence, Nazi Baron Kurt von Schröder became the guardian of I.T.T. interests in Germany. Schröder acted as the conduit for I.T.T. money funneled to Heinrich Himmler's S.S. organization in 1944, while World War II was in progress, and the United States was at war with Germany.

Through Kurt Schröder, Behn and his I.T.T. gained access to the profitable German armaments industry and bought substantial interest in German armaments firms, including Focke-Wolfe aircraft. These armaments operations made handsome profits, which could have been repatriated to the United States parent company. But they were reinvested in German rearmament. This reinvestment of profits in German armament firms suggests that Wall Street claims it was innocent of wrongdoing in German rearmament — and

indeed did not even know of Hitler's intentions — are fraudulent. Specifically, I.T.T. purchase of a substantial interest in Focke-Wolfe meant, as Anthony Sampson has pointed out, that I.T.T. was producing German planes used to kill Americans and their allies — and it made excellent profits out of the enterprise.

In Kurt von Schröder, I.T.T. had access to the very heart of the Nazi power elite. Who was Schröder? Baron Kurt von Schröder was born in Hamburg in 1889 into an old, established German banking family. An earlier member of the Schröder family moved to London, changed his name to Schroder (without the diëresis) and organized the banking firm of J. Henry Schroder in London and J. Henry Schroder Banking Corporation in New York. Kurt von Schröder also became a partner in the private Cologne Bankhaus, J. H. Stein & Company, founded in the late eighteenth century. Both Schröder and Stein had been promoters, in company with French financiers, of the 1919 German separatist movement which attempted to split the rich Rhineland away from Germany and its troubles. In exchange for financial and industrial support arranged by von Schroder, he later gained political prestige. Immediately after the Nazis gained power in 1933 Schrader became the German representative at the Bank for International Settlements, which Quigley calls the apex of the international control system, as well as head of the private bankers group advising the German Reichsbank. Heinrich Himmler appointed Schroder an S.S. Senior Group Leader, and in turn Himmler became a prominent member of Keppler's Circle.

In 1938 the Schroder Bank in London became the German financial agent in Great Britain, represented at financial meetings by its Managing Director (and a director of the Bank of England), F.C. Tiarks. By World War II Baron Schrader had in this manner acquired an impressive list of political and banking connections reflecting a widespread influence; it was even reported to the U.S. Kilgore Committee that Schroder was influential enough in 1940 to bring Pierre Laval to power in France. In the mid-1930s another link was forged between Wall Street and Schröder, this time through the Rockefellers. In 1936 the underwriting and general securities business handled by J. Henry Schroder Banking Corporation in New York was merged into a new investment banking firm — Schroder, Rockefeller & Company, Inc. at 48 Wall Street. Carlton P. Fuller of Schroder Banking Corporation became president and Avery Rockefeller, son of Percy Rockefeller (brother of John D. Rockefeller) became vice president and director of the new firm. Previously, Avery Rockefeller had been associated behind the scenes with J. Henry Schroder Banking Corporation; the new firm brought him out into the open.

Westrick, Texaco, and I.T.T.

I.T.T. had yet another conduit to Nazi Germany, through German attorney Dr. Gerhard Westrick. Westrick was one of a select group of Germans who had conducted espionage in the United States during World War I. The group included not only Kurt von Schröder and Westrick but also Franz von Papen — whom we shall meet in company with James Paul Warburg of the Bank of Manhattan in Chapter Ten — and Dr. Heinrich Albert.

Albert, supposedly German commercial attache in the U.S. in World War I, was actually in charge of financing von Papen's espionage program. After World War I Westrick and Albert formed the law firm of Albert & Westrick which specialized in, and profited heavily from, the Wall Street reparations loans. The Albert & Westrick firm handled the German end of the J Henry Schroder Banking loans, while the John Foster Dulles firm of Sullivan and Cromwell in New York handled the U.S. end of the Schroder loans.

Just prior to World War II the Albert-Papen-Westrick espionage operation in the United States began to repeat itself, only this time around the American authorities were more alert. Westrick came to the U.S. in 1940, supposedly as a commercial attache but in fact as Ribbentrop's personal representative. A stream of visitors to the influential Westrick included prominent directors of U.S. petroleum and industrial firms, and this brought Westrick to the attention of the FBI. Westrick at this time became a director of all I.T.T. operations in Germany, in order to protect I.T.T. interests during the expected U.S. involvement in the European war. Among his other enterprises Westrick attempted to persuade Henry Ford to cut off supplies to Britain, and the favored treatment given by the Nazis to Ford interests in France suggests that Westrick was partially successful in neutralizing U.S. aid to Britain.

Although Westrick's most important wartime business connection in the United States was with International Telephone and Telegraph, he also represented other U.S. firms, including Underwood Elliott Fisher, owner of the German company Mercedes Buromaschinen A.G.; Eastman Kodak, which had a Kodak subsidiary in Germany; and the International Milk Corporation, with a Hamburg subsidiary. Among Westrick's deals (and the one which received the most publicity) was a contract for Texaco to supply oil to the German Navy, which he arranged with Torkild Rieber, chairman of the board of Texaco Company. In 1940 Rieber discussed an oil deal with Hermann Goering, and Westrick in the United States worked for Texas Oil Company. His automobile was bought with Texaco funds, and Westrick's driver's license application gave Texaco as his business address. These activities were publicized on August 12, 1940. Rieber subsequently resigned from Texaco and Westrick returned to Germany. Two years later Rieber was chairman of South Carolina Shipbuilding and Dry Docks, supervising construction of more than \$10 million of U.S. Navy ships, and a director of the Guggenheim family's Barber Asphalt Corporation and Seaboard Oil Company of Ohio.

During World War II International Telephone and Telegraph was making cash payments to S.S. leader Heinrich Himmler.¹⁰ These payments enabled I.T.T. to protect its investment in Focke-Wolfe, an aircraft manufacturing firm producing fighter aircraft used against the United States.

Henry Ford

Henry Ford is often seen to be something of an enigma among the Wall Street elite. For many years in the 20s and 30s Ford was popularly known as an enemy of the financial

establishment. Ford accused Morgan and others of using war and revolution as a road to profit and their influence in social systems as a means of personal advancement. By 1938 Henry Ford, in his public statements, had divided financiers into two classes: those who profited from war and used their influence to bring about war for profit, and the “constructive” financiers. Among the latter group he now included the House of Morgan. During a 1938 New York Times interview Ford averred that:

“Somebody once said that sixty families have directed the destinies of the nation. It might well be said that if somebody would focus the spotlight on twenty-five persons who handle the nation’s finances, the world’s real warmakers would be brought into bold relief.”

The Times reporter asked Ford how he equated this assessment with his long-standing criticism of the House of Morgan, to which Ford replied:

“There is a constructive and a destructive Wall Street. The House of Morgan represents the constructive. I have known Mr. Morgan for many years. He backed and supported Thomas Edison, who was also my good friend”

After expounding on the evils of limited agricultural production — allegedly brought about by Wall Street — Ford continued,

“... if these financiers had their way we’d be in a war now. They want war because they make money out of such conflict — out of the human misery that wars bring.”

On the other hand, when we probe behind these public statements we find that Henry Ford and son Edsel Ford have been in the forefront of American businessmen who try to walk both sides of every ideological fence in search of profit. Using Ford’s own criteria, the Fords are among the “destructive” elements. It was Henry Ford who in the 1930s built the Soviet Union’s first modern automobile plant (located at Gorki) and which in the 50s and 60s produced the trucks used by the North Vietnamese to carry weapons and munitions for use against Americans. At about the same time, Henry Ford was also the most famous of Hitler’s foreign backers, and he was rewarded in the 1930s for this long-lasting support with the highest Nazi decoration for foreigners.

This Nazi favor aroused a storm of controversy in the United States and ultimately degenerated into an exchange of diplomatic notes between the German Government and the State Department. While Ford publicly protested that he did not like totalitarian governments, we find in practice that Ford knowingly profited from both sides of World War II — from French and German plants producing vehicles at a profit for the Wehrmacht, and from U.S. plants building vehicles at a profit for the U.S. Army.

Ford Motor Company Assists the German War Effort

A post-war Congressional subcommittee investigating American support for the Nazi military effort described the manner in which the Nazis succeeded in obtaining U.S. technical

and financial assistance as “quite fantastic.¹¹ Among other evidence the Committee was shown a memorandum prepared in the offices of Ford-Werke A.G. on November 25, 1941, written by Dr. H. F. Albert to R. H. Schmidt, then president of the board of Ford-Werke A.G. The memo cited the advantages of having a majority of the German firm held by Ford Motor Company in Detroit. German Ford had been able to exchange Ford parts for rubber and critical war materials needed in 1938 and 1939 “and they would not have been able to do that if Ford had not been owned by the United States.” Further, with a majority American interest German Ford would “more easily be able to step in and dominate the Ford holdings throughout Europe.” It was even reported to the Committee that two top German Ford officials had been in a bitter personal feud about who was to control Ford of England, such “that one of them finally got up and left the room in disgust.”

According to evidence presented to the Committee, Ford-Werke A.G. was technically transformed in the late 1930s into a German company. All vehicles and their parts were produced in Germany, by German workers using German materials under German direction and exported to European and overseas territories of the United States and Great Britain. Any needed foreign raw materials, rubber and nonferrous metals, were obtained through the American Ford Company. At the outbreak of the war Ford-Werke placed itself at the disposal of the Wehrmacht for armament production. It was assumed by the Nazis that as long as Ford-Werke A.G. had an American majority, it would be possible to bring the remaining European Ford companies under German influence — i.e., that of Ford-Werke A.G.

And, of course, this kind of strict “neutrality”, taking an international rather than a national viewpoint, had earlier paid off for Ford Motor Company in the Soviet Union, where Ford was held in high regard as the ultimate of technical and economic efficiency to be achieved by the Stak-hanovites. In July 1942 word filtered back to Washington from Ford of France about Ford’s activities on behalf of the German war effort in Europe. The incriminating information was promptly buried and even today only part of the known documentation can be traced in Washington.

Although there is evidence that European plants owned by Wall Street interests were not bombed by the U.S. Air Force in World War II, this restriction apparently did not reach the British Bombing Command. In March 1942 the Royal Air Force bombed the Ford plant at Poissy, France. A subsequent letter from Edsel Ford to Ford General Manager Sorenson about this RAF raid commented, “Photographs of the plant on fire were published in American newspapers but fortunately no reference was made to the Ford Motor Company.¹⁵ In any event, the Vichy government paid Ford Motor Company 38 million francs as compensation for damage done to the Poissy plant. This was not reported in the U.S. press and would hardly be appreciated by those Americans at war with Naziism. Dubois asserts that these private messages from Ford in Europe were passed to Edsel Ford by Assistant Secretary of State Breckenridge Long. This was the same Secretary Long who one year later suppressed private messages through the State

Department concerning the extermination of Jews in Europe. 16 Disclosure of those messages conceivably could have been used to assist those desperate people.

A U.S. Air Force bombing intelligence report written in 1943 noted that,

Principal wartime activities [of the Ford plant] are probably manufacture of light trucks and of spare parts for all the Ford trucks and cars in service in Axis Europe (including captured Russian Molotovs).

The Russian Molotovs were of course manufactured by the Ford-built works at Gorki, Russia. In France during the war, passenger automobile production was entirely replaced by military vehicles and for this purpose three large additional buildings were added to the Poissy factory. The main building contained about 500 machine tools, "all imported from the United States and including a fair sprinkling of the more complex types, such as Gleason gear cutters, Bullard automatics and Ingersoll borers. Ford also extended its wartime activities into North Africa. In December 1941 a new Ford Company, Ford-Afrique, was registered in France and granted all the rights of the former Ford Motor Company, Ltd. of England in Algeria, Tunisia, French Morocco, French Equatorial, and French West Africa. North Africa was not accessible to British Ford so this new Ford Company — registered in German-occupied France.

In brief, there is documentary evidence that Ford Motor Company worked on both sides of World War II. If the Nazi industrialists brought to trial at Nuremberg were guilty of crimes against mankind, then so must be their fellow collaborators in the Ford family, Henry and Edsel Ford. However, the Ford story was concealed by Washington — apparently like almost everything else that could touch upon the name and sustenance of the Wall Street financial elite.

Wall Street-Nazi Collaboration in World War II

Behind the battle fronts in World War II, through intermediaries in Switzerland and North Africa, the New York financial elite collaborated with the Nazi regime. Captured files after the war yielded a mass of evidence demonstrating that for some elements of Big Business, the period 1941-5 was "business as usual." For instance, correspondence between U.S. firms and their French subsidiaries reveals the aid given to the Axis military machine — while the United States was at war with Germany and Italy. Similarly, the Rockefeller Chase Bank was accused of collaborating with the Nazis in World War II France, while Nelson Rockefeller had a soft job in Washington D.C.

Treasury officials urged that an investigation be started with the French subsidiaries of several American banks — that is, Chase, Morgan, National City, Guaranty, Bankers Trust, and American Express. Although Chase and Morgan were the only two banks to maintain French offices throughout the Nazi occupation, in September 1944 all the major New York banks were pressing the U.S. Government for permission to re-open pre-war branches. Subsequent Treasury investigation produced documentary evidence of

collaboration between both Chase Bank and J.P. Morgan with the Nazis in World War II.

American I.G. in World War II

Collaboration between American businessmen and Nazis in Axis Europe was paralleled by protection of Nazi interests in the United States. In 1939 American I.G. was renamed General Aniline & Film, with General Dyestuffs acting as its exclusive sales agent in the U.S. These names effectively disguised the fact that American I.G. (or General Aniline & Film) was an important producer of major war materials, including atabrine, magnesium, and synthetic rubber. Restrictive agreements with its German parent I.G. Farben reduced American supplies of these military products during World War II.

An American citizen, Halbach, became president of General Dyestuffs in 1930 and acquired majority control in 1939 from Dietrich A. Schmitz, a director of American I.G. and brother of Hermann Schmitz, director of I.G. Farben in Germany and chairman of the board of American I.G. until the outbreak of war in 1939. After Pearl Harbor, the U.S. Treasury blocked Halbach's bank accounts. In June 1942 the Alien Property Custodian seized Halbach's stock in General Dyestuffs and took over the firm as an enemy corporation under the Trading with the Enemy Act. Subsequently, the Alien Property Custodian appointed a new board of directors to act as trustee for the duration of the war. These actions were reasonable and usual practice, but when we probe under the surface another and quite abnormal story emerges.

Between 1942 and 1945 Halbach was nominally a consultant to General Dyestuffs. In fact Halbach ran the company, at \$82,000 per year, Louis Johnson, former Assistant Secretary of War, was appointed president of General Dyestuffs by the 'U.S. Government, for which he received \$75,000 a year. Louis Johnson attempted to bring pressure to bear on the U.S. Treasury to unblock Halbach's blocked funds and allow Halbach to develop policies contrary to the interests of the U.S., then at war with Germany. The argument used to get Halbach's bank accounts unblocked was that Halbach was running the company and that the Government-appointed board of directors "would have been lost without Mr. Halbach's knowledge."

During the war Halbach filed suit against the Alien Property Custodian, through the Establishment law firm of Sullivan and Cromwell, to oust the U.S. Government from its control of I.G. Farben companies. These suits were unsuccessful, but Halbach was successful in keeping the Farben cartel agreements intact throughout World War II; the Alien Property Custodian never did go into court during World War II on the pending antitrust suits. Why not? Leo T. Crowley, head of the Alien Property Custodian's office, had John Foster Dulles as his advisor, and John Foster Dulles was a partner in the abovementioned Sullivan and Cromwell firm, which was acting on behalf of Halbach in its suit against the Alien Property Custodian.

There were other conflict of interest situations we should note. Leo T. Crowley, the Alien Property Custodian, appointed Victor Emanuel to the boards of both General Aniline & Film and General Dyestuffs. Before the war Victor Emanuel was director of the J. Schroder Banking Corporation. Schroder, as we have already seen, was a prominent financier of Hitler and the Nazi party. The wartime influence of General Dyestuffs and this cozy government-business coterie on behalf of I.G. Farben is exemplified in the ease of American Cyanamid. Before the war I.G. Farben controlled the drug, chemical, and dyestuffs industries in Mexico. During World War II it was proposed to Washington that American Cyanamid take over this Mexican industry and develop an "independent" chemical industry with the old I.G. Farben firms seized by the Mexican Alien Property Custodian.

At the end of World War II, Wall Street moved into Germany through the Control Council to protect their old cartel friends and limit the extent to which the denazification fervor would damage old business relationships. General Lucius Clay, the deputy military governor for Germany, appointed businessmen who opposed denazification to positions of control over the denazification proceeds. William H. Draper of Dill. on, Read, the firm which financed the German cartels back in the 1920s, became General Clay's deputy.

The Pervasive Influence of International Bankers

Looking at the broad array of facts presented in the three volumes of the Wall Street series, we find persistent recurrence of the same names: Owen Young, Gerard Swope, Hjalmar Schacht, Bernard Baruch, etc.; the same international banks: J.P. Morgan, Guaranty Trust, Chase Bank; and the same location in New York: usually 120 Broadway. This group of international bankers backed the Bolshevik Revolution and subsequently profited from the establishment of a Soviet Russia. This group backed Roosevelt and profited from New Deal socialism. This group also backed Hitler and certainly profited from German armament in the 1930s. When Big Business should have been running its business operations at Ford Motor, Standard of New Jersey, and so on, we find it actively and deeply involved in political upheavals, war, and revolutions in three major countries.

The version of history presented here is that the financial elite knowingly and with pre-meditation assisted the Bolshevik Revolution of 1917 in concert with German bankers. After profiting handsomely from the German hyper-inflationary distress of 1923, and planning to place the German reparations burden onto the backs of American investors, Wall Street found it had brought about the 1929 financial crisis.

On May 1st, 1918, when the Bolsheviks controlled only a small fraction of Russia (and were to come near to losing even that fraction in the summer of 1918), the American League to Aid and Cooperate with Russia was organized in Washington, D.C. to support the Bolsheviks. This was not a "Hands off Russia" type of committee formed by the Communist Party U.S.A. or its allies. It was a committee created by Wall Street with George P. Whalen of Vacuum Oil Company as Treasurer and Coffin and Oudin of General

Electric, along with Thompson of the Federal Reserve System, Willard of the Baltimore & Ohio Railroad, and assorted socialists.

When we look at the rise of Hitler and Naziism we find Vacuum Oil and General Electric well represented. Ambassador Dodd in Germany was struck by the monetary and technical contribution by the Rockefeller-controlled Vacuum Oil Company in building up military gasoline facilities for the Nazis. The Ambassador tried to warn Roosevelt. Dodd believed, in his apparent naiveté of world affairs, that Roosevelt would intervene, but Roosevelt himself was backed by these same oil interests and Walter Teagle of Standard Oil of New Jersey and the NRA was on the board of Roosevelt's Warm Springs Foundation. So, in but one of many examples, we find the Rockefeller-controlled Vacuum Oil Company prominently assisting in the creation of Bolshevik Russia, the military build-up of Nazi Germany, and backing Roosevelt's New Deal.

Is the United States Ruled by a Dictatorial Elite?

Within the last decade or so, certainly since the 1960s, a steady flow of literature has presented a thesis that the United States is ruled by a self-perpetuating and unelected power elite. Even further, most of these books aver that this elite controls, or at the least heavily influences, all foreign and domestic policy decisions, and that no idea becomes respectable or is published in the United States without the tacit approval, or perhaps lack of disapproval, of this elitist circle. Obviously the very flow of anti-establishment literature by itself testifies that the United States cannot be wholly under the thumb of any single group or elite. On the other hand, anti-establishment literature is not fully recognized or reasonably discussed in academic or media circles. More often than not it consists of a limited edition, privately produced, almost hand-to-hand circulated. There are some exceptions, true; but not enough to dispute the observation that anti-establishment critics do not easily enter normal information/distribution channels.

Whereas in the early and mid-1960s, any concept of rule by a conspiratorial elite, or indeed any kind of elite, was reason enough to dismiss the proponent out of hand as a "nut case," the atmosphere for such concepts has changed radically. The Watergate affair probably added the final touches to a long-developing environment of skepticism and doubt. We are almost at the point where anyone who accepts, for example, the Warren Commission report, or believes that that the decline and fall of Mr. Nixon did not have some conspiratorial aspects, is suspect. In brief, no one any longer really believes the Establishment information process. And there is a wide variety of alternative presentations of events now available for the curious.

Several hundred books, from the full range of the political and philosophical spectrum, add bits and pieces of evidence, more hypotheses, and more accusations. What was not too long ago a kooky idea, talked about at midnight behind closed doors, in hushed and almost conspiratorial whispers, is now openly debated — not, to be sure, in Establishment newspapers but certainly on non-network radio talk shows, the underground press, and

even from time to time in books from respectable Establishment publishing houses. So let us ask the question again: Is there an unelected power elite behind the U.S. Government?

A substantive and often-cited source of information is Carroll Quigley, Professor of International Relations at Georgetown University, who in 1966 had published a monumental modern history entitled *Tragedy and Hope*.¹ Quigley's book is apart from others in this revisionist vein, by virtue of the fact that it was based on a two-year study of the internal documents of one of the power centers. Quigley traces the history of the power elite:

... the powers of financial capitalism had another far reaching aim, nothing less than to create a world system of financial control in private hands able to dominate the political system of each country and the economy of the world as a whole. Quigley also demonstrates that the Council on Foreign Relations, the National Planning Association, and other groups are "semi-secret" policy-making bodies under the control of this power elite. Possibly, the papers used by Quigley had been vetted, and did not include documentation on elitist manipulation of such events as the Bolshevik Revolution, Hitler's accession to power, and the election of Roosevelt in 1933. More likely, these political manipulations may not be recorded at all in the files of the power groups. They may have been unrecorded actions by a small ad hoc segment of the elite. It is noteworthy that the documents used by this author came from government sources, recording the day-to-day actions of Trotsky, Lenin, Roosevelt, Hitler, J.P. Morgan and the various firms and banks involved.

On the other hand, such authors as Jules Archer, Gary Allen, Helen P. Lasell, and William Domhoff, writing from widely different political standpoints² are consistent with the "Wall Street" evidence. These writers present a hypothesis of a power elite manipulating the U.S. Government. The "Wall Street" series demonstrates how this hypothesized "power elite" has manipulated specific historical events. Obviously any such exercise of unconstrained and supra-legal power is unconstitutional, even though wrapped in the fabric of law-abiding actions. We can therefore legitimately raise the question of the existence of a subversive force operating to remove constitutionally guaranteed rights.

The New York Elite as a Subversive Force

Twentieth-century history, as recorded in Establishment textbooks and journals, is inaccurate. It is a history which is based solely upon those official documents which various Administrations have seen fit to release for public consumption. But an accurate history cannot be based on a selective release of documentary archives. Accuracy requires access to all documents. In practice, as previously classified documents in the U.S. State Department files, the British Foreign Office, and the German Foreign Ministry archives and other depositories are acquired, a new version of history has emerged; the prevailing Establishment version is seen to be, not only inaccurate, but designed to hide a pervasive fabric of deceit and immoral conduct.

The center of political power, as authorized by the U.S. Constitution, is with an elected Congress and an elected President, working within the framework and under the constraints of a Constitution, as interpreted by an unbiased Supreme Court. We have in the past assumed that political power is consequently carefully exercised by the Executive and legislative branch, after due deliberation and assessment of the wishes of the electorate. In fact, nothing could be further from this assumption. The electorate has long suspected, but now knows, that political promises are worth nothing. Lies are the order of the day for policy implementors. Wars are started (and stopped) with no shred of coherent explanation. Political words have never matched political deeds. Why not? Apparently because the center of political power has been elsewhere than with elected and presumably responsive representatives in Washington, and this power elite has its own objectives, which are inconsistent with those of the public at large.

In this three-volume series we have identified for three historical events the seat of political power in the United States — the power behind the scenes, the hidden influence on Washington — as that of the financial establishment in New York: the private international bankers, more specifically the financial houses of J.P. Morgan, the Rockefeller-controlled Chase Manhattan Bank, and in earlier days (before amalgamation of their Manhattan Bank with the former Chase Bank), the Warburgs.

The United States has, in spite of the Constitution and its supposed constraints, become a quasi-totalitarian state. While we do not (yet) have the overt trappings of dictatorship, the concentration camps and the knock on the door at midnight, we most certainly do have threats and actions aimed at the survival of non-Establishment critics, use of the Internal Revenue Service to bring dissidents in line, and manipulation of the Constitution by a court system that is politically subservient to the Establishment.

It is in the pecuniary interests of the international bankers to centralize political power — and this centralization can best be achieved within a collectivist society, such as socialist Russia, national socialist Germany, or a Fabian socialist United States. There can be no full understanding and appreciation of twentieth-century American politics and foreign policy without the realization that this financial elite effectively monopolizes Washington policy. In case after case, newly released documentation implicates this elite and confirms this hypothesis. The revisionist versions of the entry of the United States into World Wars I and II, Korea, and Vietnam reveal the influence and objectives of this elite. For most of the twentieth century the Federal Reserve System, particularly the Federal Reserve Bank of New York (which is outside the control of Congress, unaudited and uncontrolled, with the power to print money and create credit at will), has exercised a virtual monopoly over the direction of the American economy. In foreign affairs the Council on Foreign Relations, superficially an innocent forum for academics, businessmen, and politicians, contains within its shell, perhaps unknown to many of its members, a power center that unilaterally determines U.S. foreign policy. The major objective of this submerged — and obviously subversive — foreign policy is the acquisition of markets and economic power (profits, if you will), for a small group of giant multi-nationals under the virtual control

of a few banking investment houses and controlling families.

Through foundations controlled by this elite, research by compliant and spineless academics, “conservatives” as well as “liberals,” has been directed into channels useful for the objectives of the elite essentially to maintain this subversive and unconstitutional power apparatus. Through publishing houses controlled by this same financial elite unwelcome books have been squashed and useful books promoted; fortunately publishing has few barriers to entry and is almost atomistically competitive. Through control of a dozen or so major newspapers, run by editors who think alike, public information can be almost orchestrated at will. Yesterday, the space program; today, an energy crisis or a campaign for ecology; tomorrow, a war in the Middle East or some other manufactured “crisis.”

The total result of this manipulation of society by the Establishment elite has been four major wars in sixty years, a crippling national debt, abandonment of the Constitution, suppression of freedom and opportunity, and creation of a vast credibility gulf between the man in the street and Washington, D.C. While the transparent device of two major parties trumpeting artificial differences, circus-like conventions, and the cliché of “bipartisan foreign policy” no longer carries credibility, and the financial elite itself recognizes that its policies lack public acceptance, it is obviously prepared to go it alone without even nominal public support. In brief, we now have to consider and debate whether this New York-based elitist Establishment is a subversive force operating with deliberation and knowledge to suppress the Constitution and a free society. That will be the task ahead in the next decade.

The Slowly Emerging Revisionist Truth

The arena for this debate and the basis for our charges of subversion is the evidence provided by the revisionist historian. Slowly, over decades, book by book, almost line by line, the truth of recent history has emerged as documents are released, probed, analyzed, and set within a more valid historical framework. Let us consider a few examples. American entry into World War II was supposedly precipitated, according to the Establishment version, by the Japanese attack on Pearl Harbor. Revisionists have established that Franklin D. Roosevelt and General Marshall knew of the impending Japanese attack and did nothing to warn the Pearl Harbor military authorities. The Establishment wanted war with Japan. Subsequently, the Establishment made certain that Congressional investigation of Pearl Harbor would fit the Roosevelt whitewash. In the words of Percy Greaves, chief research expert for the Republican minority on the Joint Congressional Committee investigating Pearl Harbor:

“The complete facts will never be known. Most of the so-called investigations have been attempts to suppress, mislead, or confuse those who seek the truth. From the beginning to the end, facts and files have been withheld so as to reveal only those items of information which benefit the administration under investigation. Those seeking the truth are told that other facts or documents cannot be revealed because they are

intermingled in personal diaries, pertain to our relations with foreign countries, or are sworn to contain no information of value.”

But this was not the first attempt to bring the United States into war, or the last. The Morgan interests, in concert with Winston Churchill, tried to bring the U.S. into World War I as early as 1915 and succeeded in doing so in 1917. Colin Thompson’s *Lusitania* implicates President Woodrow Wilson in the sinking of the *Lusitania* — a horror device to generate a public backlash to draw the United States into war with Germany. Thompson demonstrates that Woodrow Wilson knew four days beforehand that the *Lusitania* was carrying six-million rounds of ammunition plus explosives, and therefore, “passengers who proposed to sail on that vessel were sailing in violation of statute of this country.”

The British Board of Inquiry under Lord Mersey was instructed by the British Government “that it is considered politically expedient that Captain Turner, the master of the *Lusitania*, be most prominently blamed for the disaster.” In retrospect, given Colin Thompson’s evidence, the blame is more fairly to be attributed to President Wilson, “Colonel” House, J.P. Morgan, and Winston Churchill; this conspiratorial elite should have been brought to trial for willful negligence, if not treason. It is to Lord Mersey’s eternal credit that after performing his “duty” under instructions from His Majesty’s government, and placing the blame on Captain Turner, he resigned, rejected his fee, and from that date on refused to handle British government commissions. To his friends Lord Mersey would only say about the *Lusitania* case that it was a “dirty business.”

Then in 1933-4 came the attempt by the Morgan firm to install a fascist dictatorship in the United States. In the words of Jules Archer, it was planned to be a Fascist putsch to take over the government and “run it under a dictator on behalf of America’s bankers and industrialists.”⁵ Again, a single courageous individual emerged — General Smedley Darlington Butler, who blew the whistle on the Wall Street conspiracy. And once again Congress stands out, particularly Congressmen Dickstein and MacCormack, by its gutless refusal to do no more than conduct a token whitewash investigation. Since World War II we have seen the Korean War and the Vietnamese War — meaningless, meandering no-win wars costly in dollars and lives, with no other major purpose but to generate multibillion-dollar armaments contracts. Certainly these wars were not fought to restrain communism, because for fifty years the Establishment has been nurturing and subsidizing the Soviet Union which supplied armaments to the other sides in both wars — Korea and Vietnam. So our revisionist history will show that the United States directly or indirectly armed both sides in at least Korea and Vietnam.

In the assassination of President Kennedy, to take a domestic example, it is difficult to find anyone who today accepts the findings of the Warren Commission — except perhaps the members of that Commission. Yet key evidence is still hidden from public eyes for 50 to 75 years. The Watergate affair demonstrated even to the man in the street that the White House can be a vicious nest of intrigue and deception. Of all recent history the story of Operation Keelhaul is perhaps the most disgusting. Operation Keelhaul was the forced repatriation of millions of Russians at the orders of President (then General)

Dwight D. Eisenhower, in direct violation of the Geneva Convention of 1929 and the long-standing American tradition of political refuge. Operation Keelhaul, which contravenes all our ideas of elementary decency and individual freedom, was undertaken at the direct orders of General Eisenhower and, we may now presume, was a part of a long-range program of nurturing collectivism, whether it be Soviet communism' Hitler's Naziism, or FDR's New Deal. Yet until recent publication of documentary evidence by Julius Epstein, anyone who dared to suggest Eisenhower would betray millions of innocent individuals for political purposes was viciously and mercilessly attacked.

What this revisionist history really teaches us is that our willingness as individual citizens to surrender political power to an elite has cost the world approximately two-hundred-million persons killed from 1820 to 1975. Add to that untold misery the concentration camps, the political prisoners, the suppression and oppression of those who try to bring the truth to light. When will it all stop? It will not stop until we act upon one simple axiom: that the power system continues only so long as individuals want it to continue, and it will continue only so long as individuals try to get something for nothing. The day when a majority of individuals declares or acts as if it wants nothing from government, declares it will look after its own welfare and interests, then on that day power elites are doomed. The attraction to "go along" with power elites is the attraction of something for nothing. That is the bait. The Establishment always offers something for nothing; but the something is taken from someone else, as taxes or plunder, and awarded elsewhere in exchange for political support.

Periodic crises and wars are used to whip up support for other plunder-reward cycles which in effect tighten the noose around our individual liberties. And of course we have hordes of academic sponges, amoral businessmen, and just plain hangers-on, to act as non-productive recipients for the plunder. Stop the circle of plunder and immoral reward and elitist structures collapse. But not until a majority finds the moral courage and the internal fortitude to reject the something-for-nothing con game and replace it by voluntary associations, voluntary communes, or local rule and decentralized societies, will the killing and the plunder cease.

12.15 Winning with combined forces: Lend-Lease

One chapter of this book already mentioned lend-lease. From Wikipedia, we learn:

The Lend-Lease policy, formally titled "An Act to Promote the Defense of the United States", was a program under which the United States supplied Free France, the United Kingdom, the Republic of China, and later the USSR and other Allied nations with food, oil, and materiel between 1941 and August 1945. This included warships and warplanes, along with other weaponry. It was signed into law on March 11, 1941 and ended in September 1945. A total of \$50.1 billion (equivalent to \$659 billion today, roughly the current, yearly US military expenses) worth of supplies was shipped, or 17% of the total

war expenditures of the U.S. In all, \$31.4 billion went to Britain, \$11.3 billion to the Soviet Union, \$3.2 billion to France, \$1.6 billion to China, and the remaining \$2.6 billion to the other Allies.

Lend-Lease would help the British and Allied forces win the battles of future years; the help it gave in the battles of 1941 was trivial. In 1943–1944, about a quarter of all British munitions came through Lend-Lease. Aircraft (in particular transport aircraft) comprised about a quarter of the shipments to Britain, followed by food, land vehicles and ships. Even after the United States forces in Europe and the Pacific began to reach full strength in 1943–1944, Lend-Lease continued. Most remaining allies were largely self-sufficient in front line equipment (such as tanks and fighter aircraft) by this stage, but Lend-Lease provided a useful supplement in this category even so, and Lend-Lease logistical supplies (including motor vehicles and railroad equipment) were of enormous assistance. Furthermore, the logistical support of the Soviet military was provided by hundreds of thousands of U.S.-made trucks. Indeed, by 1945, nearly a third of the truck strength of the Red Army was U.S.-built.

According to the Russian historian Boris Vadimovich Sokolov, Lend-Lease played a crucial role in winning the war:

“On the whole the following conclusion can be drawn: that without these Western shipments under Lend-Lease the Soviet Union not only would not have been able to win the Great Patriotic War, it would not have been able even to oppose the German invaders, since it could not itself produce sufficient quantities of arms and military equipment or adequate supplies of fuel and ammunition. The Soviet authorities were well aware of this dependency on Lend-Lease. Thus, Stalin told Harry Hopkins [FDR’s emissary to Moscow in July 1941] that the U.S.S.R. could not match Germany’s might as an occupier of Europe and its resources.”

Nikita Khrushchev, having served as a military commissar and intermediary between Stalin and his generals during the war, addressed directly the significance of Lend-lease aid in his memoirs:

I would like to express my candid opinion about Stalin’s views on whether the Red Army and the Soviet Union could have coped with Nazi Germany and survived the war without aid from the United States and Britain. First, I would like to tell about some remarks Stalin made and repeated several times when we were “discussing freely” among ourselves. He stated bluntly that if the United States had not helped us, we would not have won the war. If we had had to fight Nazi Germany one on one, we could not have stood up against Germany’s pressure, and we would have lost the war. No one ever discussed this subject officially, and I don’t think Stalin left any written evidence of his opinion, but I will state here that several times in conversations with me he noted that these were the actual circumstances. He never made a special point of holding a conversation on the subject, but when we were engaged in some kind of relaxed conversation, going over international questions of the past and present, and when we would return to the subject

of the path we had traveled during the war, that is what he said. When I listened to his remarks, I was fully in agreement with him, and today I am even more so.

US deliveries to the USSR

Delivery was via the Arctic Convoys, the Persian Corridor, and the Pacific Route. The Arctic route was the shortest and most direct route for lend-lease aid to the USSR, though it was also the most dangerous. Some 3,964,000 tons of goods were shipped by the Arctic route; 7% was lost, while 93% arrived safely. This constituted some 23% of the total aid to the USSR during the war.

The Persian Corridor was the longest route, and was not fully operational until mid-1942. Thereafter it saw the passage of 4,160,000 tons of goods, 27% of the total. The Pacific Route opened in August 1941, but was affected by the start of hostilities between Japan and the US; after December 1941, only Soviet ships could be used, and, as Japan and the USSR observed a strict neutrality towards each other, only non-military goods could be transported. Nevertheless, some 8,244,000 tons of goods went by this route, 50% of the total. In total, the U.S. deliveries through Lend-Lease amounted to \$11 billion in materials: over 400,000 jeeps and trucks; 12,000 armored vehicles (including 7,000 tanks, about 1,386 of which were M3 Lees and 4,102 M4 Shermans); 11,400 aircraft (4,719 of which were Bell P-39 Airacobras) and 1.75 million tons of food. Roughly 17.5 million tons of military equipment, vehicles, industrial supplies, and food were shipped from the Western Hemisphere to the USSR, 94% coming from the US. For comparison, a total of 22 million tons landed in Europe to supply American forces from January 1942 to May 1945. It has been estimated that American deliveries to the USSR through the Persian Corridor alone were sufficient, by US Army standards, to maintain sixty combat divisions in the line.

The United States gave to the Soviet Union from October 1, 1941 to May 31, 1945 the following: 427,284 trucks, 13,303 combat vehicles, 35,170 motorcycles, 2,328 ordnance service vehicles, 2,670,371 tons of petroleum products (gasoline and oil) or 57.8 percent of the High-octane aviation fuel, 4,478,116 tons of foodstuffs (canned meats, sugar, flour, salt, etc.), 1,911 steam locomotives, 66 Diesel locomotives, 9,920 flat cars, 1,000 dump cars, 120 tank cars, and 35 heavy machinery cars. Provided ordnance goods (ammunition, artillery shells, mines, assorted explosives) amounted to 53 percent of total domestic production. One item typical of many was a tire plant that was lifted bodily from the Ford Company's River Rouge Plant and transferred to the USSR. The 1947 money value of the supplies and services amounted to about eleven billion dollars.

British deliveries to the USSR

In June 1941, within weeks of the German invasion of the USSR, the first British aid convoy set off along the dangerous Arctic sea routes to Murmansk, arriving in September.

It was carrying 40 Hawker Hurricanes along with 550 mechanics and pilots of No. 151 Wing to provide immediate air defence of the port and train Soviet pilots. After escorting Soviet bombers and scoring 14 kills for one loss, and completing the training of pilots and mechanics, No 151 Wing left in November, their mission complete. The convoy was the first of many convoys to Murmansk and Archangelsk in what became known as the Arctic convoys, the returning ships carried the gold that the USSR was using to pay the US. By the end of 1941, early shipments of Matilda, Valentine, and Tetrarch tanks represented only 6.5% of total Soviet tank strength, but over 25% of medium and heavy tanks in service with the Red Army. First seeing action with the 138 Independent Tank Battalion in the Volga Reservoir on 20 November 1941, Lend-Lease tanks constituted between 30 and 40% of heavy and medium tank strength before Moscow at the beginning of December 1941.

Significant numbers of British Churchill, Matilda and Valentine tanks were shipped to the USSR along with the US M3 Lee after it became obsolete on the African Front, ceasing production in December 1942 and withdrawn from British service in May 1943. The Churchills, supplied by the arctic convoys, saw action in the Siege of Leningrad and the Battle of Kursk, while tanks shipped by the Persian route supplied the Caucasian Front. Between June 1941 and May 1945, Britain delivered to the USSR: 3,000+ Hurricanes, 4,000+ other aircraft, 27 naval vessels, 5,218 tanks, 5,000+ anti-tank guns, 4,020 ambulances and trucks, 323 machinery trucks, 2,560 Universal Carriers, 1,721 motorcycles, £1.15bn worth of aircraft engines, 600 radar and sonar sets, Hundreds of naval guns, 15 million pairs of boots.

In total 4 million tonnes of war materials including food and medical supplies were delivered. The munitions totaled £308m (not including naval munitions supplied), the food and raw materials totaled £120m in 1946 index. In accordance with the Anglo-Soviet Military Supplies Agreement of 27 June 1942, military aid sent from Britain to the Soviet Union during the war was entirely free of charge.]

Especially all support vehicles (trucks, trains, etc.) the USSR received were of great importance since the USSR lost most of these, like most of their military, in the first few month's of Operation Barbarossa. Looking through Soviet diaries, one finds that the soldiers were extremely greatfull for the US support, especially food. This shows that the Allies won the Second World War only through a team effort.

From the Russian Historian Oleg Budnitskiy we also learn:

The importance of economic cooperation with the U.S., UK and Canada cannot be overestimated. According to the dollar rate of 2003, the inflation-adjusted value of these supplies amounted to \$130 billion. These supplies were critical in some key areas. For example, in the beginning of 1942, Western tanks fully replenished Soviet losses, and exceeded them by three times. About 15 percent of the aircraft used by Soviet air forces were supplied by Allies, including the Airacobra fighter and Boston bomber. The Allies supplied 15,000 state-of-the-art machines at that time; for example, famous Soviet ace

Alexander Pokryshkin flew Airacobra, as did the rest of his squadron. He shot down 59 enemy aircraft, and 48 of them were thanks to American military equipment.

One of the main areas of cooperation was aviation fuel. The USSR could not produce gasoline with high octane. However, it was this fuel that was used by the equipment supplied by the Allies. In addition, the Achilles heel of the Soviet Army was communication and transport. The Soviet industry simply could not meet the demand either in number or in quality. For example, the army lost 58 percent of its vehicles in 1941 alone. To recover these losses, the Allies supplied more than 400,000 vehicles, mainly trucks, to the USSR. During the occupation, the German concern Daimler Benz set up a vehicle assembly line at a factory in Minsk (now the capital of Belarus). After the liberation of the city, the assembly of American vehicles under Lend-Lease was organized there. It was not only supplies of finished products, but also raw materials that were extremely important – metals, chemicals and products, which were either not produced in the USSR or lost to the enemy. For example, more than half of Soviet aircraft were produced using aluminum supplied by the Allies.

It is impossible to imagine how the Soviet economy would have functioned without these supplies. For example, the telephone cable provided by the Allies could wrap the Earth at the equator. The Allies' aid was also critical in the reconstruction of production in the liberated regions of the country, including the role of seeds for the resumption of agriculture. Specific products were also supplied; the Allies delivered 610,000 tons of sugar to the USSR, whereas the USSR itself produced little more than 1.46 million tons.

Peace with Britain, War with the USSR?

How important was the Western Front for the war effort? Some considerations:

Well over half the Luftwaffe was engaged in the west from 1942-5, and 75% of German aircraft casualties were against the western Allies. Each U-boat cost 5,000,000 Marks to build. The Germans built over 1,000. A Panther tank cost 117,000 Marks, That means about 40,000 tanks were not built so that the Germans could wage the War of the Atlantic. Think 40,000 panthers might have made a difference against an unallied Russia in the East?

Each V2 rocket cost, in labor and material, the same as 3.5 fighter planes. The Germans launched over 3,000 V2's, the equivalent of 10500 fighter planes which could have been used in the east. The British and Americans deployed over 20,000 heavy bombers against the Germans, causing great destruction. What would have happened if Rommel's Africa Corps and the 30+ German divisions in France would have been in the don bend in fall 1942 protecting Stalingrad instead of waiting for British and American divisions to land? What would have happened if the 400,000 troops stationed in Norway could have helped Army Group North capture Leningrad? What would have happened if, in 1944, the German armies trying to hold the divisions fighting in Italy and the Balkans could

have been freed to fight against the Russians in the south? I think it becomes apparent just how important keeping the Western Front alive was for the Allies.

Britains categorical refusal of any peace offers kept the Western Front open (of course, accepting the peace offers would have ended the war), the Soviets poured in from the East with millions of lives sacrificed and all of this was kept running by the US industrial strength. Just one of these 3 things missing and the war would have taken a different turn.

If the reader is interested to learn more about the Lend-Lease Programm and just how important it was for the survival of the Soviet Union, lots of information can be found in the book "Russia's Life-Saver: Lend-Lease Aid to the U.S.S.R. in World War II" by Albert L. Weeks.

'The United States is a country of machines. Without the use of these machines through Lend-Lease, we would lose this war.' - Josef Stalin (1943), quoted in W. Averell Harriman and Elie Abel, Special Envoy to Churchill and Stalin, 1941-1946, Random House, N.Y., 1975, p. 277.

12.16 The Number One Enemy

Mercantile rivalry among nations is often the genesis of armed conflicts, though those profiting from the adventures publicly describe them as defensive wars or waged for altruistic reasons. The former U.S. President William Taft confessed that modern diplomacy is "fundamentally commercial," but cloaked in "idealistic feelings of humanitarianism and moral obligations." Regarding American hostility toward Germany, which plagued Hitler throughout his tenure in office, economic considerations played a major role. His country drained of gold reserves, Hitler created a novel money system to get the national economy back on its feet. Accordingly capital came to represent human productivity; work itself became money. Currency was no longer a commodity to be speculated upon, loaned at high interest, or wielded to manipulate economic life, but solely a means to facilitate transactions. Germany introduced new principles to international commerce as well. Hitler, in the words of the Canadian historian Helmut Gordon, "was firmly convinced that as long as the international monetary system remains based on the value of gold, nations able to hoard the most gold can force those nations lacking gold to their will...compelling others to accept loans at high interest to dissipate their assets." Hitler believed that a country's power of production should determine the strength of her economy, and not the amount of gold in the treasury.

Germany concluded trade agreements with 25 financially distressed countries in southeastern Europe, the Near East, and South America. The treaties based transactions on an exchange of wares without monetary payments. In return for foodstuffs and raw materials, Germany supplied poorer nations with agricultural machinery, locomotives, and manufactured goods. This was a barter system, which spared trade partners having to

borrow from foreign banks to finance purchases—a relief for countries already in debt during the world-wide depression. The mutually beneficial arrangement gradually deprived the United States, France, and Britain of markets they had previously dominated. Financial institutions in London and New York, accustomed to providing credit to smaller nations, lost a lucrative portion of their international commerce. British General Fuller wrote that Hitler's "economic policy of direct barter and subsidized exports struck a deadly blow to British and American trade." Lord Forbes, belonging to an English trade commission visiting South America, warned, "We don't want the Germans continuing to conduct their system of an exchange of goods and other disrespectful trade methods right under our nose."

In 1941, President Roosevelt asked rhetorically, "Will anyone suggest that Germany's attempt to dominate trade in central Europe was not a major contributing factor to war?" Churchill remarked in 1938, "What we desire is the complete destruction of the German economy." He told Lord Robert Boothby, "Germany's most unforgivable crime before the Second World War was her attempt to extricate her economic power from the world's trading system and to create her own exchange mechanism which would deny world finance its opportunity to profit." Addressing newly commissioned officers of the armed forces in May 1942, Hitler explained the challenge Germany's foreign trade treaties posed for the USA. He described how America enjoyed an abundance of grain and natural resources, plus maintained her own manufacturing industry. Countries wishing to trade with the United States therefore, had little to offer in exchange: "So America began taking gold for her labors, piling up this gold into the billions. Naturally this mineral threatens to become utterly worthless once it's realized that a new world is forming, one that no longer recognizes the concept of gold, but substitutes the concept of work and human productivity, and from then on begins to trade what is produced through labor without using gold."

As far as the Germans were concerned, the U.S. Government and corporate America pursued the same goals. In the words of Giselher Wirsing, there was "no longer any force in the United States that could resist the unbridled domination of big business. There appeared to be no more difference between the interests of high finance and those of the state." In Roosevelt, America elected a president inordinately concerned with foreign affairs. "Roosevelt was a determined internationalist and interventionist," observed Congressman Hamilton Fish. The New York Times correspondent Arthur Krock described FDR as "considering himself absolutely indispensable to mankind." A proponent of liberal democratic globalization, the new president strongly believed in the Versailles structure. Hitler's step-by-step eradication of the post-war order, German competition in European and South American markets, and the Reich's stand for the sovereignty of nations over the one-world concept made Roosevelt an irreconcilable enemy of Germany.

During the peacetime years, Washington opposed Hitler's efforts to revise the Versailles construction. In April 1933, Roosevelt told the French ambassador, "The situation is alarming. Hitler is a madman and his advisors, some of whom I know personally, are

crazier than he is.” (So far, Ambassador Hans Luther was the only German official the president had met.) FDR told his French guest, “France must not disarm and no one will demand it to.” A month later, Roosevelt wrote the heads of 54 countries urging disarmament. The president discussed foreign affairs before an audience in Chicago in October 1937. He told listeners, “The present reign of terror and international lawlessness began a few years ago,” referring to Germany and Italy. Aggressor nations were supposedly “piling up armament on armament. . . . Their national income is being spent directly for armaments. It runs from 30 to as high as 50 percent in most of those cases.” He suggested that such diseased countries should be quarantined, in other words economically boycotted. After publication of the speech, the Reich’s War Ministry notified German military commanders, “Roosevelt’s words may be regarded as America’s formal decision to join the front of the democracies against the fascist states, abandoning the policy of isolation.” The Reich’s press described FDR’s speech as the “prelude to a huge armaments appropriation planned for the near future” by the Roosevelt administration.

Upon orders from the White House, U. S. Navy Captain Royal Ingersoll went to London in December to discuss fleet cooperation with the British. The prospect of American naval support against Japan, Italy and Germany strengthened England’s hand in negotiations with Hitler. The German annexation of Austria on March 12, 1938, initially produced a mild reaction from the American press and from Secretary of State Cordell Hull. This altered abruptly within 24 hours. The German ambassador reported to Berlin that the Anschluss suddenly became “regarded as a breach of treaty, as militarism, as the rape of defenseless little Austria by a neighbor armed to the teeth, and as a product of the policy of might makes right.” As to the probable genesis of the about-face in American attitude, “the president personally became involved and gave both the State Department and the press corresponding guidelines.” The ambassador warned the Reich’s Foreign Office that were Germany ever to become involved in a conflict against England, “there isn’t much left here that could prevent the entrance of the United States into a war against us.”

Roosevelt reached beyond America’s borders – and his authority – during the Sudeten crisis that September. To prevent this crucial revision of the Versailles system, he proposed to British Ambassador Sir Ronald Lindsay that the U.S. and Royal Navies blockade the entire European Atlantic coast and the Mediterranean to cut Germany off from overseas imports. Sea blockades are by international law an act of belligerency. FDR was prepared to abandon neutrality and wage war to preserve Czechoslovakia’s claim to the Sudetenland. Chamberlain, wary of Roosevelt’s endeavors to extend U.S. influence into Europe, rejected the idea. “Then Washington began a savage campaign to malign the ‘appeasers’ who had again backed down before the dictators,” wrote the editor of Germany’s *Völkischer Beobachter* (National Observer). “Chamberlain and Daladier were branded in the U.S. press as downright traitors to the democratic world cause.”

Washington’s intrigues impeded diplomatic resolution of Germany’s bid for Danzig in 1939. On December 2, 1938, America’s ambassador in Poland, Biddle, met with the Free City’s Commissioner Burckhardt. Biddle, Burckhardt recalled, “declared with gen-

uine glee that the Poles are ready to wage war over Danzig. . . . Never since the torpedoing of the Lusitania has such religious hatred against Germany existed in America like today. Chamberlain and Daladier will be blown away by public opinion. It will be a holy war." Roosevelt disrupted negotiations between Germany and England regarding a trade agreement in February 1939, during which Berlin offered far-reaching concessions to improve diplomatic relations, by making London a substantially better offer. In this way he obstructed another attempt at Anglo-German reconciliation. The following month, Hans Thomsen, Ribbentrop's chargé de affaires in Washington, advised Berlin, "Roosevelt is personally convinced that Germany is the enemy that must be destroyed, because she is seriously disrupting the balance of powers and the status quo."

On March 23, the president promised the British to transfer more U.S. Navy warships to Hawaii, thereby freeing the English Pacific fleet for deployment in the Atlantic and in the Mediterranean. He instructed the American ambassador in London, Kennedy, to shore up Chamberlain's resolve to guarantee Poland. On FDR's instructions, the U.S. military attaché in Paris pledged American naval support to protect the French colony of Indochina from the Japanese. In this way, the president gradually increased Anglo-French dependency on the United States, indirectly augmenting his influence over the democracies in their negotiations with Hitler. The April 14, 1939 edition of the Washington Times Herald reported that Roosevelt was warning the English, in the form of an ultimatum, to make no concessions to Germany.

The American ambassador in Paris, William Bullitt, informed the French government during the summer that if England and France did not come to Poland's aid in the event of a German attack, then they could expect no assistance from Washington in a general European war. They could on the other hand, reckon with the "full support" of the USA if they declared war on Germany on Poland's behalf. The former French Foreign Minister Georges Bonnet later wrote that Bullitt "urged France to take a strong stand against Hitler. I am convinced also that he persuaded Daladier that Roosevelt would intervene (in the war) if he saw that France and England were in danger. . . . Bullitt in 1939 did everything he could to make France enter the war." Congressman Fish concluded, "If Roosevelt had refrained from meddling in the European situation by encouraging England and France to believe that we would fight their battles, they would have reached an agreement by peaceful means to settle the Danzig issue . . . (and) avoided the disastrous war." On August 17, Hans Herwarth von Bittenfeld, a traitor on the Reich's embassy staff in Moscow, disclosed information about German-Soviet negotiations to the American diplomat Charles Bohlen. The German government had reassured the Kremlin that there "are no conflicts of interest (between us) regarding the countries from the Baltic Sea to the Black Sea" and it was prepared to discuss "every territorial question in eastern Europe" with Stalin. The State Department's Sumner Welles relayed this intelligence to British Ambassador Lindsay. He in turn forwarded news of the German-Soviet understanding, which implied dire consequences for Poland, to the Foreign Office in London. A Soviet spy there, Herbert King, notified Stalin of

the intrigue. The Soviet dictator most likely assumed that the British would forewarn Beck of the danger facing his country, leading him to seek rapprochement with Germany. "But Stalin overestimated British and American fairness," as a German historian put it. Neither democratic government passed this vital information on to Warsaw.

Herwarth also leaked the complete text, including the secret protocol about dividing Poland, of the August 23 agreement Ribbentrop had concluded in Moscow. Bohlen likewise communicated it to Washington. Bullitt, fully aware of the text and import of the German-Soviet secret protocol, told a Polish diplomat in Paris, Count Lukasiewicz, that the document addressed only the status of the Baltic States and not Poland. As a result, Beck remained doubtful about serious cooperation between Moscow and Berlin. The result of Germany's rapid victory over Poland in September, France's passive strategy of defense, and England's token commitment to the continental war was a stalemate. On October 6, 1939, Hitler addressed the Reichstag, asking for a peace conference. Chamberlain himself admitted in his diary that the Führer presented some "very attractive proposals." Roosevelt however, pressured the British not to allow a "second Munich." Göring, Hitler's number-two man, met with the American consul general in Berlin on October 9 and urged that FDR mediate peace talks. Offering to travel to Washington personally to represent Germany in the negotiations, Göring expressed Berlin's willingness to re-establish Polish and Czech independence as a demonstration of good faith. Roosevelt formally refused to arbitrate a cease fire. During a press conference that month, he described the German offer as the product of anonymous subordinates in the Reich's propaganda ministry and without substance.

Two American tycoons visited Germany in October, hoping to open the road to negotiations. On the 19th, Göring told James Mooney, a senior executive of General Motors, "If we could conclude a treaty with the English today, we'll throw Russia and Japan overboard tomorrow." Göring again offered to reinstate Poland and the Czech state to William Davis, a Texas oil magnate on a semi-official visit to Berlin. Even American newspapers acknowledged that considering Roosevelt's outspoken hostility toward Germany, for the Germans to nominate him and accept his judgment as arbitrator in a peace conference was a generous concession. Upon returning home, Davis was unable to obtain an audience with the president. Hull yanked his passport, to prevent Mr. Davis from returning to Europe and interfering with the progress of the war.

In Warsaw, Ribbentrop's staff compiled the pre-war diplomatic correspondence between Warsaw and its missions in Washington, London, and Paris. The *Völkischer Beobachter* published the content on October 27. Its editor summarized, "The Polish documents prove that Roosevelt's diplomacy bears a major, if not the greatest measure of responsibility for the outbreak of the English war." One letter for example, was from the Polish general staff to Beck. It quoted the American military attaché, Commander Gade, as promising Poland 1,000 airplanes "as soon as the war begins." The Polish staff officer described Gade as "a man who enjoys the confidence of Roosevelt and is a personal friend of his. . . . He is very unfriendly towards Germany. Personally he is very wealthy."

Another document the Germans brought to light was a report by Count Jerzy Potocki, the former Polish ambassador in Washington, about a conversation he had had with Bullitt in November 1938: "About Germany and Chancellor Hitler, he (Bullitt) spoke vehemently and with great hatred.... The United States, France, and England must rearm tremendously in order to be in a position to cope with German power. Only then, when the moment is ripe, declared Bullitt further, will one be ready for the final decision.... In reply to my question whether the United States would take part in such a war, he said, 'Undoubtedly yes, but only after Great Britain and France had made the first move!'" Ribbentrop presented the original Polish foreign policy letters to the international press for inspection. The editor of the American edition of the German White Book, which published 16 of the letters in English, concluded, "It is likely that they are authentic documents. This is the opinion of many Washington correspondents, including Sir Willmott Lewis of the London Times, who might be expected to be skeptical of them." Roosevelt and Hull publicly claimed that the Polish documents were forgeries.

During this time, the White House focused on persuading Congress to amend the 1937 neutrality law. The law imposed an embargo on the sale of war materiel to belligerents in Europe. Already in September, the president had managed to have the restrictions partially relaxed. As a result, U.S. arms manufacturers sold \$4,429,323 worth of ordnance to France that month, and \$1,422,800 to England.²⁴² Germany's share in armaments purchases from America, according to the State Department Bulletin of October 28, 1939, was \$49.²⁴³ By the close of 1940, Britain had purchased \$2.7 billion in arms from the United States. Roosevelt told a cabinet member, "We have been milking the British financial cow, which had plenty of milk at one time but which has now about become dry." The president speculated on how to keep the British at war "until their supply of dollars runs out."

Giselher Wirsing, editor of Germany's popular Signal magazine, made this observation about the arsenal of democracy: "The armaments business has grown to one of the worst rackets in American history and has amassed billions in profits through this 'trading in death.' During 1940, there was an enormous increase in dividends. According to an exhibit of the National City Bank in New York, the clear profit of around 2,600 shareholding companies in 1940 amounted to \$4,253 million, compared to \$3,565 million in 1939."²⁴⁶ Congressman Fish recalled, "Roosevelt's war cabinet had a great deal of cooperation from the powerful Eastern press, largely for war.... Pro-war propaganda was heavily financed by the international bankers, armament makers, and big business, numerically few in numbers but exceedingly powerful in financial resources and control over vast publicity and propaganda." Reverend John McNicholas, the Archbishop of Cincinnati, remarked in January 1941, "Ten percent of our people are cunningly forcing the United States into a world conflict, while the majority of 90 percent, which is for peace, stands aside silently and helplessly."

As Congress eased restrictions on selling weapons to belligerents, America provided logistical support for England to continue the war. Under Washington's leadership, the Western

Hemisphere countries proclaimed a nautical security zone southward from Canada. This zone, 300 to 1,000 miles wide in places, was off-limits to combat operations of warring powers. Hitler ordered his navy to refrain from attacking British merchant vessels inside this belt. It substantially reduced the sea lanes the English Royal Navy had to patrol to guard cargo ships en route to Britain. U.S. warships eventually assisted in protecting convoys, monitoring the movement of German U-boats, and reporting their findings to the Royal Navy. During September 1941, Roosevelt decided to become "more provocative," adding that if the Germans "did not like it they could attack American forces." He ordered U.S. warships "to attack any U-boat which showed itself, even if it were 200 or 300 miles away from the convoy." In three separate incidents in September and October, U.S. destroyers on anti-submarine patrol crossed lances with German U-boats. In one occurrence, the USS Greer assisted a British bomber in a depth charge attack against the U-652. Bombarded for four hours, the U-boat finally launched two torpedoes against its assailant. The Greer eventually broke off the engagement. Roosevelt told the American public in a September 11 radio address, "I tell you the blunt fact that the German submarine fired first upon the American destroyer without warning and with deliberate design to sink her. . . . We have sought no shooting war with Hitler." The Navy Department refused to furnish the Greer's log to the Senate.

Hitler instructed his U-boats to avoid confrontations with the U.S. Navy and to fire only in self-defense. According to a Gallup survey, 87 percent of Americans opposed involvement in a European war, and in that day and age Congress still had many representatives who understood their duty to respect the wishes of the majority. Roosevelt could not arbitrarily start a war against Germany. Unless the enemy fired the first shot, and Hitler was eschewing incidents, the United States would remain sidelined: a silent partner in the Allied war effort. The president therefore sought what an American historian described as the "back door to war"; to provoke a conflict with Germany's ally, Japan. Like Germany, Japan is a country that relies heavily on imports. The European war seriously curtailed her commerce. As a result, the Japanese depended on increased trade with the United States. Supporting China in her war against Japan, Roosevelt imposed various embargoes on the island empire. On October 10, 1940, the secretary of the navy told Admiral James Richardson, commander-in-chief of the fleet, that the president wants U.S. warships deployed "across the western Pacific in such a way as to make it impossible for Japan to reach any of her sources of supply." Richardson objected that distributing our navy in such a vulnerable manner against a formidable maritime adversary, and in so doing provoking it to belligerency, would be militarily senseless. Roosevelt dropped the idea.

Considering the USSR the greater menace, Tokyo sought an understanding with the United States. In November 1940, Foreign Minister Yosuke Matsuoka asked Bishops James Walsh and Pater Drought of the Catholic Missionary Society of Maryknoll, New York, to deliver his peace proposal to Washington. Meeting with the president and secretary of state on January 23, 1941, the emissaries relayed Japan's willingness to negotiate

cancelling her pact with Germany, evacuating her army from China, and respecting Chinese sovereignty. At the close of the two-hour meeting, Roosevelt and Hull agreed to consider the proposals. Walsh and Drought heard nothing further from the White House. In February, Tokyo appointed Admiral Kichisaburo Nomura, acquainted with Roosevelt from World War I, ambassador to the United States. Meeting with the president on the 14th, and in over 40 sessions with Hull during the next several months, Nomura was unable to reach a compromise with the administration. Washington was in fact more interested in the action proposal submitted on October 7, 1940, by naval Lieutenant Commander Arthur McCollum. This memorandum stated, "Prompt aggressive naval action against Japan by the United States would render Japan incapable of affording any help to Germany and Italy in their attack on England. ... It is in the interest of the United States to eliminate Japan's threat in the Pacific at the earliest opportunity."

McCollum suggested among other things, that America "completely embargo all U.S. trade with Japan, in collaboration with a similar embargo imposed by the British Empire," and pressure the Dutch to "refuse to grant Japanese demands for undue economic concessions, particularly oil." McCollum cautioned, "It is not believed that in the present state of political opinion the United States government is capable of declaring war against Japan without more ado." The author introduced an eight-point program to provoke the Japanese: "If by these means Japan could be led to commit an overt act of war, so much the better. At all events we must be fully prepared to accept the threat of war." In November 1941, Secretary of War Henry Stimson speculated in his diary on how to maneuver Japan into "firing the first shot without allowing too much danger to ourselves." Without Congress' knowledge, Hull delivered an antagonistic ultimatum to Japanese negotiators on November 26. He himself confessed, "We had no serious thought that Japan would accept our proposal." The terms, had Tokyo agreed to them, would have so substantially weakened Japan's position in the Far East, especially with respect to China and Russia, that they were unacceptable. The Japanese responded by opening hostilities against U.S. and British bases in the Pacific. The infamous air raid on the U.S. naval base at Hawaii, conducted by 350 carrier-based Japanese bombers and fighters, galvanized American public opinion and Congress to enter the war.

The Three Power Pact that Germany had concluded with Italy and Japan in September 1940 was a defensive alliance. It did not obligate the Reich to declare war on the United States, since Japan had struck the first blow. The Japanese for example, had done nothing to assist the Germans in their war against the Soviet Union which had been raging for six months. But U.S. warships were taking part in the battle of the Atlantic. Federal attorneys in fact had determined that Roosevelt's swap in September 1940 of 50 destroyers in exchange for British bases in the Caribbean and Newfoundland not only violated American laws, but by international law put the USA in a technical state of war with Germany. The primary influence in Hitler's deliberations was the situation in the East. During the summer of 1941, the German armed forces had advanced far into Russia, winning impressive victories over the Red Army. Dogged Soviet resistance,

overextended German supply lines and a severe winter then forced the invaders onto the defensive. Another factor contributed to the shift of the initiative to the Russians: logistical support from the United States. Less than five weeks after Germany had invaded the USSR, Roosevelt's emissary, Harry Hopkins, was in Moscow offering aid to Stalin: "The president regards Hitler as the enemy of all humanity and therefore wishes to help the Soviet Union in its war against Germany." Without demanding any payment whatsoever, and despite protests from the U.S. Army, Roosevelt prioritized supplying the Russians with immense quantities of war materiel by sea. Stalin confessed in 1943 that without American aid, "we would lose the war."

Hitler believed that it would only be possible to regain the initiative against this military behemoth were the flow of supplies from the United States curtailed. Unrestricted submarine warfare could sever the nautical lifelines keeping the Soviet fighting forces combat-effective. His U-boat commanders were still under orders not to torpedo American ships and to avoid the expansive security zone of the Western Atlantic. These orders not only prevented the German navy from disrupting the delivery of ordnance to England and Russia, but were demoralizing the U-boat crews. Declaring war on the USA would free the German navy to fight the battle of the Atlantic with the gloves off, and buy the army time for another major thrust against Russia during the 1942 campaign season. Against the advice of Ribbentrop, Hitler declared war on December 11, 1941. This gained Germany a temporary tactical advantage. The Reichstag convened on the 11th to hear the Führer's announcement. He recapped the history of his country's poor relations with Washington, beginning with Roosevelt's 1937 quarantine speech, through the president's promises to Poland in 1939, and finally the U.S. Navy's operations on behalf of Britain. Hitler also offered a personal comparison of his own experience as a combat soldier during World War I with that of FDR, who had then been undersecretary of the navy: "Roosevelt comes from a super-rich family, belonging from the start to that class of people whose birth and background pave the way to advancement in a democracy. I myself was just the child of a small and poor family, and had to struggle through life through toilsome work and by personal industry.

"When the World War came, Roosevelt found a spot in the shade under Wilson and experienced the war from the sphere of those who reaped dividends from it. He therefore knew only the pleasant consequences of the clash of nations and states; those that provide opportunity for one to do business while another bleeds. . . . As an ordinary soldier I tried to do my duty in the face of the enemy during these four years, and naturally returned home from the war as impoverished as I had entered it in the fall of 1914. I shared the fate of millions. Mr. Franklin Roosevelt shared his with the so-called upper ten thousand. While Mr. Roosevelt after the war was already trying his hand at financial speculation . . . I was still lying in a hospital."

The German U-boat fleet launched its first coordinated operation, Paukenschlag (Pounding), against American shipping on January 13, 1942. During the balance of the month, the Germans sank 49 merchant vessels in the Atlantic and in the North Sea. They tallied

84 steamers during a second nautical offensive in March. By the end of 1942, the U-boats had conducted five major operations, sinking 1,160 ships totaling 6,266,215 tons. They targeted both convoys bound for English harbors and those delivering supplies to the Soviet port of Murmansk. This brought some relief to the German armies fighting in the East. In the long run however, American wharves built more ships than the U-boats could torpedo. As the 1942 summer offensive against Russia lost impetus, Germany gradually became snared in the “east-west pincers” as Hitler had feared.

12.17 The Mission of the Reich

The Waffen SS

Nations often maintain elite troops to supplement regular military forces. They serve as personal bodyguards for the ruler, perform ceremonial functions, and in wartime deploy where the fighting is the hardest. From the Persian Immortals and Roman Praetorians of the Ancient World throughout the ages, elite formations uphold traditions of prowess in combat and loyalty. During World War II, France’s Chasseurs Alpains, British Royal Marines, Soviet Guard divisions and the U.S. Marine Corps were among units retaining this select status.

In addition to the prestigious army divisions Brandenburg, Feldherrnhalle and Grossdeutschland, as well as the airborne, Germany fielded an entire service branch of elite ground forces: the Waffen (armed) SS. It evolved from four pre-war internal security regiments into a dauntless and respected front-line troop. It challenged official German policy and dogma and helped introduce significant amendments. Considering the obedience to state authority customarily drilled into military establishments, this was an unusual well-spring for political and social reform. The maturation of the Waffen SS demonstrates how National Socialism’s emphasis on personal initiative created the opportunity for flexibility and development on an unprecedented scale.

The SS traces its origin to the early years of the NSDAP. Fewer than 100 men formed the “Adolf Hitler Shock Troop” in Munich in 1923. This was a personal bodyguard recruited from SA men displaying personal loyalty to the Führer. Its members generally possessed better comprehension of the movement’s political objectives than the rank-and-file SA. The troop received its final name, Schutzstaffel (Security Echelon), in April 1925. It maintained strict discipline and a small, selective affiliation. Heinrich Himmler became chief of the SS in January 1929, and proved a talented organizer and a match for political rivals in the party. Once Hitler gained power in 1933, Himmler sought to enroll affluent persons, such as successful businessmen and aristocrats, to enhance the organization’s prestige. Private contributions through a public sponsorship program helped finance the administration. The SS grew from 280 members in 1929 to 52,000 by 1933.

National security issues led to the formation of an SS military branch. When Hitler

became chancellor, Communists were still numerous in Germany. They hijacked 150 tons of explosives, of which just 15 tons had been recovered by the police by mid-March 1933. The exiled Communist Wilhelm Piech issued a proclamation in September, calling for a general strike and "armed insurrection by the majority of the German proletariat" to topple the "Hitler dictatorship." The police were neither equipped nor trained to suppress a possible uprising. The German army was not psychologically suited to wage urban warfare against elements of the indigenous population.

After discussions with War Minister Werner von Blomberg, Hitler decided that the task of combating potential civil unrest should fall to a party formation. Blomberg's decree of September 24, 1934, defined its purpose as "for special, internal political missions assigned by the Führer to the SS." This was the birth of the Waffen SS, officially titled the Verfügungstruppe from 1935-1940. Abbreviated to VT, the expression translates literally as "Availability Troop," meaning ready for immediate deployment. Hitler himself stated, "The SS Verfügungstruppe is neither a part of the armed forces nor of the police. It is a standing armed troop available exclusively for my use."

The VT consisted of the Leibstandarte, Hitler's Berlin-based bodyguard, which performed primarily ceremonial functions, the Deutschland regiment garrisoned in Munich, Germania in Hamburg, plus an engineer battalion in Dresden and a signals battalion in Berlin. A fourth motorized infantry regiment, Der Führer, mustered in Vienna in 1938. With army approval, the SS established a military academy to train VT officers at Bad Tölz in October 1934. General Paul Hausser, who had retired from the army in 1932, received a commission to found a second school in Brunswick. Each institution offered a ten-month curriculum to commission officers. The VT soldier's pay was the same as that of the regular army.

Adding an artillery regiment, as well as anti-aircraft, anti-tank, and reconnaissance battalions, the VT numbered 18,000 men by May 1939. Though the army assisted in instruction, the VT's training departed from military convention. Its senior commanders had been junior officers during World War I. They witnessed how battles of materiel had decimated the army's long-standing cadre of well-schooled professional officers, non-commissioned officers (NCO's) and reservists. The quality of personnel declined as hastily-trained replacements filled the void. The general staff failed to break the deadlock of trench warfare. Frontline regiments began forming small, independent units called shock troops. They re-trained behind the lines to fight in close coordination using flame throwers, smoke canisters, machine guns, pistols, and grenades. Officers displayed boldness and initiative, directly leading their men into combat.

The commander of the Deutschland regiment, Felix Steiner, wrote that during World War I, the officers "assembled the best, most experienced soldiers the front could spare. . . . They realized the shock troop concept of spontaneity, rapid assault, and the mechanics of the little troop's trade within the framework of entire formations. They were of different spirit than the mobilized masses. . . . In a world of standardization of soldiering, they proved that better trained, hand-picked soldiers, mastering the military technology of the

times, were a match for any vastly superior, collective soldierly mass." After World War I, the German general staff reverted to the pre-war concept of a disciplined professional army without particular emphasis on improvisation. Though the army still trained officers at lower command levels to take initiative and be decisive in battle, the program did not include forming shock troops. Steiner exploited the comparative independence of the VT to develop a contemporary fighting force less constrained by customary military regimen. "Not the form of Prussian drill still in part practiced in the army, but training and educating men to become modern, individual fighters was the goal," wrote the former SS Captain Fritz Schutter. Though Steiner acknowledged that mass armies are an indispensable element of total war, he considered rapidly mobile elite formations distributed among the army decisive, in order to "disperse the enemy through lightning-fast blows and destroy his scattered units." In the words of one historian, the training program Steiner introduced to the Deutschland regiment "broke the preeminence of mechanical barracks drill."

Physical education also played a significant role in the VT. It promoted the "soldier-athlete" concept. Competitive sports supplanted calisthenics and forced marches as the focus of the training. Enlisted personnel competed against their officers and NCO's in sports contests. The purpose was not just to weld leader and followers into a cohesive fighting unit. It also taught officers to rely on their ability to command and strength of character to gain the confidence and respect of the men, rather than on the customary aloofness and strict discipline of military protocol. In the same spirit, the VT dropped the practice of soldiers addressing officers as "sir" or speaking in the third person. Through such steps, "the relationship between the leadership and men became much more personal and ultimately more binding." Officers and men dined together in the same mess hall. Pastor Karl Ossenkop, a former army captain transferred to the Waffen SS, recalled, "contrary to the army, disparity in rank was no barrier dividing person from person. There was no pedantic structure held together by fear of punishment. This did not lead to a lack of discipline, but to a voluntary discipline such as I have seldom experienced. . . . In this corps one felt completely free." A former director of the Tölz academy summarized, "The authority of the officers, who were scarcely older than the men, rested far more on esteem for their character, performance, and care for the men's welfare." A soldier in the Germania regiment in 1937 and future officer, Heinrich Springer, wrote this of his first platoon commander: "He was not just a military instructor, but guided us in cultivating a decent personal bearing, inwardly and outwardly perceptible. Throughout the entire time as a recruit, I never once heard him shout at or curse the men."

The former general staff officer Hausser patterned the instruction at the Brunswick academy to be similar to army institutions. The two SS Junkerschulen, or Schools for Young Gentlemen, assigned top priority to preparing candidates for field operations and tactical combat command. Instructors also placed emphasis on personality development. As Lieutenant Colonel Richard Schulze wrote, "The Junker Schools' goal was to produce men of refined, fearless character, chivalrous with an unblemished sense of honor and obedience, displaying helpfulness, camaraderie, and willingness to accept re-

sponsibility. Impeccable deportment in public and cultivation of family values were also prerequisites." The staff encouraged cadets to exhibit a respectful, but never subservient demeanor toward superiors. The VT educated field officers to exercise audacity as well as initiative.

The Junker Schools did not select candidates from among the general SS, but from enlisted members of the VT. Only men who had already served in the ranks could receive an appointment to Bad Tölz or to Brunswick. In the German army, a university degree was sufficient for an applicant to be accepted into a war college. Education had no influence on VT standards for enrollment. Many Junker School cadets did not possess a high school diploma. The institutions nonetheless graduated capable officers. The English historian Gerald Reitlinger concluded, "Under the influence of Hausser's cadet schools, the Waffen SS developed the most efficient of all military training systems of the Second World War." Georg Jestadt, who belonged to the 12th SS Panzer Division in 1944, wrote this of the men he served under: "We had fantastic superior officers, from platoon leaders to the battalion commanders and upward, who were genuine ideals for the men. Looking back, I can objectively state that during the Normandy operation, amid all the inferno and terror, I never saw a superior officer suffer a breakdown or lose his nerve. Again and again, when things looked so hopeless and critical, they mastered the situation calmly and with presence of mind."

When Germany invaded Poland in September 1939, the VT fell under armed forces command. The OKW distributed most VT formations among army divisions participating in the campaign. The SS soldiers acquitted themselves well in battle, and expansion and reorganization of the VT followed. Hausser formed Deutschland, Germanid, Der Führer, and their combat support units into a single division in October 1939. That same month, the SS transferred 15,000 law enforcement personnel to create the SS Police Division. Yet another new division, Totenkopf (Death's Head), filled its roster largely from concentration camp guards and incorporated the Home Guard Danzig. Together with Hitler's bodyguard, the Leibstandarte, the military branch of the SS now numbered 100,000 men. The entire force deployed in the 1940 campaign against Holland, Belgium, and France, fighting side by side with the regular army.

The SS had accomplished the expansion of the VT, renamed the Waffen SS in 1940, by shifting men from other contingents under Himmler's command. This was necessary because the OKW, which had jurisdiction over the draft, limited the number of indigenous recruits whom the Waffen SS could induct. In order to increase its quantity of divisions, the chief of SS recruitment, Gottlob Berger, developed a fresh source of manpower. He introduced a campaign to encourage enlistment from among the expansive ethnic German colonies in Southeastern Europe. In May 1939, 1,080 members of Rumania's German community left the country to join the Waffen SS. They preferred to avoid service in the Rumanian army, whose officers treated ethnic German recruits badly. During the war, the roster of ethnic Germans from beyond the Reich's frontier who served in the Waffen SS would greatly increase; over 60,000 of them came from Rumania alone. In time, Berger's

solution for increasing manpower would significantly redefine the character of the Waffen SS.

Germanic Volunteers

A primary element determining the survival of a species is its ability to adapt to shifting environs. This natural law applies to nations as well. War forces abrupt changes that demand endurance and flexibility of disposition in order to rapidly accept new conditions. In Hitler's time, nationalism was a compelling influence. It roused people to give for their country, but simultaneously maintained barriers between nations. On the threshold of World War II, Europe stood in the shadow of peripheral superpowers prepared to contest her leadership in world affairs. To assert her economic and political independence and preserve her cultural identity, her populations needed to evolve toward mutual cooperation and fellowship. Italy's former treasurer Alberto De Stefani observed, "We're all persuaded that continuation of this intransigent nationalism, which has no understanding for the requirements of a continental policy, is finally turning Europe against herself."

Europe settled into an uneasy peace in the summer of 1940, following a series of rapid campaigns Germany had conducted against neighboring states. German army garrisons held Western Poland, Denmark, Norway, Luxembourg, Holland, Belgium, and Northern France. Allied with Italy and favored by Spain, the Reich also enjoyed economic influence over the Balkans. Cooperation with Germany was necessary for a strong, unified continent. The continuing war against Britain required the German armed forces to occupy the North Atlantic coast to guard against potential British landings. The German military presence was not popular with the populations affected. The English also supported Communist "resistance" movements in the occupied countries, encouraging sabotage. They trained and smuggled in agents, plus weapons and explosives, while the BBC broadcast anti-German wireless propaganda designed for Western Europe.

At the same time, many Europeans regarded the Reich's victories as a demonstration of the authoritarian state form's superiority. Democracy had not only failed to alleviate unemployment and depression for the past 20 years, but bungled national defense. Germany's spirited, martial society aroused awe and to some extent, admiration among her neighbors. The parliamentary debates, scandals, lack of progress and uninspired leadership associated with democracy seemed vapid by comparison. Marxism had an equally unimpressive track record. Leon Degrelle, a Belgian who eventually served in the Waffen SS, wrote that Marxism "nowhere reached its promised goal of welfare for all. . . . The broad masses considered it a complete failure during the 1930s. They sought the remedy in other mass movements, those that tried to realize the desired social objectives within the framework of order, authority, firm leadership, and devotion to fatherland."

One blight on the track record of Western European governments, as far as the people in their charge were concerned, was the dismal military performance against Germany in 1940. In Norway for example, the state had periodically slashed defense spending between

the World Wars. The army could no longer afford to conduct field exercises, officers and men received inadequate training, and there were no anti-tank weapons for the infantry. The Germans invaded Norway on April 9. The German navy had urged Hitler to take this step in order to thwart a planned British amphibious operation to come ashore to sever the Reich's transit route importing strategic minerals from Sweden and Finland via Norway. The German armed forces landed 100,000 men from ships and planes. The indecisive reaction of the Norwegian government and conflicting military orders plunged Norway's mobilization into chaos.

Retreating Norwegian army units failed to uniformly destroy tunnels, bridges, or lines of communication to delay the enemy's advance. German motorized units refueled their vehicles at pumping stations the defenders had abandoned intact. Some Norwegian troops surrendered at first sight of the invaders. The capital fell without a shot fired. The German 324th Infantry Regiment landed at a nearby airfield and entered Oslo in marching order led by its brass band. The German armed forces simultaneously occupied Denmark. This was to secure lines of communication and supply to the strategic Norwegian theater of operations. The previous January, Thorvald Stauning, head of the country's social-liberal government, had more or less admitted publicly that Denmark would be unable to defend her neutrality. He did nothing to improve defense capabilities.

In the early morning of April 9, the German icebreaker Stettin and the troop transport Hansstadt Danzig, ferrying 1,000 riflemen of 198th Infantry Division, steamed into Copenhagen harbor. Danish searchlights illuminated the ships' German war flag and the soldiers on deck. The coastal batteries however, never fired. As one Danish lieutenant told a parliamentary commission after the war, "The men on watch fumbled with the cannon but had no idea of what actually to do. The mechanism was out of order, so that the breach didn't work." A crewman of another shore battery testified, "We didn't have a single man who would have been able to operate the cannon." The German troops landed unmolested and occupied the capital. The day before, the government had received a report that German forces were massing at Flensburg, a city near the Danish frontier. When the invasion began, the Stauning administration stated in a proclamation, "It is the people's duty to offer no resistance against these troops." It ordered the Danish army to stand down. This evoked bitterness among soldier and civilian alike. The public suspected that the government had sabotaged national defense in collusion with the Germans. One Dane recalled, "Many young people had already been disappointed over political developments in Denmark for a long time.... The political system the government represented finally lost our confidence." Holland, another constitutional monarchy, Germany invaded the following month. The Dutch parliament underfunded the military; shortages of uniforms and small arms compelled recruits to wear a motley combination of army tunics and civilian caps and often to substitute wooden staffs for rifles when standing post. One Dutchman wrote, "Because of the general disinterest in the army, also manifest among politicians, not a single cadet enrolled in the Imperial Military Academy during 1935 and 1936." Dutch pacifists lobbied to have the army disbanded. The German armed forces

required just five days to break its resistance.

France, a pioneer of democracy, displayed weaknesses that one might attribute to the influence of liberalism's emphasis on the individual. Lieutenant Pierre Mendès-France observed this upon returning home from Syria only days before the Germans invaded his country on May 10, 1940: "Everyone, civilians as well as those in the military, had but one thing on their minds; to arrange their personal affairs as well as possible, to get through this seemingly endless period with little or no risk, loss or discomfort." On May 18, with the French army already reeling before the German offensive, General Gamelin wrote this to France's prime minister: "The German success is most of all the result of physical training and of the lofty moral attitude of the people. The French soldier, the private citizen of yesterday, never believed there would be war. Often his interests did not reach beyond his work bench, his office or his farm. Inclined to habitually criticize anyone in authority, and demanding on the pretext of civilization the right to live a comfortable existence from day to day, those capable of bearing arms never received the moral or patriotic upbringing between the two wars that would have prepared them for the drama that would decide the fate of their country."

Inadequate defense preparations, craven leadership and moral deficiency were not the only factors causing Western Europeans to lose confidence in the parliamentary system or in democracy. English conduct during the fighting left a bad impression. Retreating across Belgium and Northern France toward Dunkirk, demolition parties of the British Expeditionary Force destroyed bridges, warehouses, refineries, fuel dumps, harbor installations, and anything else presumed potentially useful to the advancing German army. A Belgian sergeant described, for example, how on May 27 his men saw British troops destroying food stores: "Worst of all was that refugees were there also, who had not eaten for days. They watched English soldiers throw eggs against the walls of houses, stomp on biscuits, and split tinned preserves with axes."

Germany and France concluded an armistice on June 22, 1940. The agreement stated that the "German government . . . does not intend to use the French battle fleet in wartime for its own purposes," acknowledging that the French need the warships "to safeguard their interests in their colonial sphere." On July 3, a British Royal Navy squadron steamed from Gibraltar to the French Algerian anchorage at Mers-el-Kebir. The English demanded that the French battle fleet moored there join them, to continue fighting Germany, or scuttle the ships. When French Admiral Marcel Gensoul refused the ultimatum, the British bombarded his fleet.

The battleship *Bretagne* sank, the *Provence* and the *Dunkerque* suffered serious damage, and the barrage cost 1,147 French sailors their lives. Royal Navy torpedo planes raided the harbor again on July 6, killing another 150 seamen. Two days later, British naval forces attacked Dakar, damaging the French battleship *Richelieu*. All this evoked strong anti-English sentiment throughout France. Britain extended her nautical blockade of foodstuffs to include European countries occupied by the German army, creating hardships for the populations. London established sham "governments in exile" for these states.

They consisted of democratic politicians, officers, and aristocrats who had deserted their country and fled to Britain, in most cases when the fighting was still going on. Entirely dependent on England for their existence, these administrations supposedly represented the true interests of Europe.

The United States also sought to indirectly influence European affairs. On February 9, 1940, the U.S. State Department announced an economic plan for post-war Europe. According to Secretary of State Hull, America would support the principle European currencies through loans backed by gold. This would supposedly regenerate commerce once peace returned. It was apparent that Washington was intent on eradicating Germany's burgeoning international barter system and restoring trade based on gold as the medium of exchange. The State Department relied on the counsel of American bankers when preparing the plan, not consulting representatives of the continent it was intended for. Other resolutions and proposals for post-war reconstruction followed, such as the Atlantic Charter, the Keynes Plan, the Morgenthau Plan, and economic conferences in Hot Springs in 1943 and in Bretton Woods, New Hampshire, in July 1944. The Bretton Woods session established the International Monetary Fund in order to influence and if possible regulate foreign economies after the war, bringing the world one step closer to Roosevelt's vision of a global government. In a speech in Königsberg on July 7, Walter Funk, the Reich's minister of economics, told European economists, "Today the Americans are propagating a return to the gold standard. What this means, especially considering this country's dominant hoard of gold, is nothing but an elevation of the dollar to the basis for currencies worldwide and a claim to absolute control of the world's economy." A German diplomat pointed out, "The prerequisite for practical implementation of such plans is the conquest of Europe by the other side."

German propaganda capitalized on the subjective character of these programs. *Germanisches Leitheft*, a periodical targeting a broad-based European readership, asked in its January 1941 issue, "Will foreign powers and racially alien forces determine Europe's fate for all time to come, or will Europe form her own future, through her own vitality and on her own responsibility?" Another German publication stated, "One of the main deficiencies in the mentality of the American is that he has no clear comprehension of other peoples. For this reason, he shrugs off their rights and natural requirements for life with a wave of the hand. He claims the prerogative to dictate his boundless wishes to the rest of the world, thanks to an unrivaled sense of superiority."

German leaders realized that to win European support, they would have to offer a viable alternative to the Anglo-American agenda. The most immediate requirement was to regulate the continental economy to become as self-sufficient and cooperative as possible. The British endeavored to starve or make destitute the populations of states under German occupation, in order to lend impetus to resistance cells. Werner Daitz, economic advisor in the NSDAP Foreign Policy Branch, submitted a memorandum in May 1940 urging establishment of a trade commission to explore Germany's options: "The present blockade has unavoidably made necessary the formation of a continental European econ-

omy under German leadership, as an economic self-help measure. . . . If we expect to direct Europe's commerce, which is absolutely essential to economically strengthen the continent that is the mainstay of the white race, then we must naturally not publicly declare this to be a German economic sphere. We must always speak only of Europe."

As the ranking industrial power, only Germany could organize a prosperous and independent continental economy. The September 1940 edition of *Nationalsozialistische Monatshefte* (National Socialist Monthly) stated, "Without the Reich, a European community of nations can never be established. . . . The Reich is the great political mission of the German people. It represents the concept of a European order. It eliminates foreign influences and guards against powers hostile to Europe. It strives for European cooperation on the principle of ethnic kinship, and of productive labor as the substance and foundation of all life."

One of Germany's more astute propagandists was Major Walther Gehl, who served in the infantry in both world wars. He recognized that securing his country's influence depended not on military conquest, but on gaining the popular support of neighboring peoples. In *Die Sendung des Reiches* (The Mission of the Reich), he wrote that in order for Germany to succeed, she would have to devote herself to the welfare of the continent and not vice versa: "With a sacred sense of responsibility for the future of Europe, Germany will incorporate the natural rights of the other peoples into her own political ambitions, and hold a protective, not ruling hand over them. And her military protection is a better guarantee for perpetuating their sovereign culture than are anti-German alliances with nations beyond our continent."

Germanisches Leitheft maintained that the "Reich does not mean domination, but responsibility and a sense of mission; not hegemony, but a unifying inspiration of our clans, particular nations and ethnically-related families." Thus far-sighted Germans advocated the need for the transition from the German Reich into a European Reich. Franz Six, director of ideological research in the SS, wrote that "Common racial ancestry, despite political and ideological differences, is the binding element of the European nations."

One Dane recalled, "Young people receptive to this biologically-based perception correspondingly adjusted their attitude toward foreign peoples. This led to a genuine broadening of the national sense of belonging. It was the starting point for renewing the 1,100 year-old idea of a unified Europe." Many such Western Europeans sought an opportunity to "help build a better, stronger, and wealthier Europe."

With Hitler's approval, the SS established recruiting offices in Oslo, The Hague and Copenhagen in April and May 1940. Several hundred Norwegian, Danish, and Dutch volunteers signed on for a pre-military training course. Lasting months, the course included weapons firing, sports, German language instruction, and ideological lectures. Conducted in Kärnten, Germany, it also acquainted participants with the indigenous population. Upon conclusion of the course, officers invited the young Europeans to enlist in the SS as Germanic volunteers.

Beyond the allure of a unified continent and disenchantment with previous democratic administrations, economic factors contributed to a gradual rapprochement with Germany. Many unemployed Scandinavians and Western Europeans sought work in the Reich. The Germans registered 100,000 Hollanders who migrated and found jobs in Germany. Denmark recorded 147,000 men out of work in the summer of 1940. The unemployment rate was 18 percent.

Germany helped revive industry in Belgium and in the Netherlands by awarding armaments contracts to manufacturing companies there. The cooperative attitude of the workers, many of whose plant managers had fled to Britain, led the Germans to implement measures to improve labor's social conditions. Unemployment in France, the largest foreign producer for the German war industry, dropped to practically nil by 1943. Having grappled with Communist trade unions before the war, French industrialists favored collaboration with the Germans. They also recognized that France and her colonies were too small a market for the country's modern, expansive industry, and sought to cultivate European clientele.

The NSDAP's foreign policy chief, Alfred Rosenberg, argued in a speech that Europeans should acquiesce to German leadership in continental affairs: "A smaller nation does not relinquish its honor by subordinating itself to a more numerous people and a larger realm. We must acknowledge the laws of life to survive. The facts of life show that there are numerically, geographically and politically powerful nations and there are smaller ones. To accept the influence of a realm like that of the Germans, demonstrating its former strength after years of hard trials, is not a sign of weak character or of questionable honor, but a recognition of the laws of life." The German army instructed its soldiers garrisoning conquered countries to assume a firm but cordial posture. Guidelines for soldiers stationed in Denmark stated, "Every German in Denmark must always be conscious that he represents the German Reich, and that Germany will be judged by his conduct. When meeting Danes, avoid anything that could insult the Danish national honor. The Danish woman is to be treated respectfully. Avoid political arguments." These circumstances reaped benefits for the Germans. According to a 1947 Gallup poll, 40 percent of Danes canvassed had been outspokenly sympathetic toward Germany. Just 32 percent had felt hostile.

Late in 1940, the Waffen SS established its first division incorporating Germanic volunteers. Flemish and Dutch enrolled in the Westland regiment, while Nordland recruited Norwegians and Danes. Joined by the seasoned VT regiment Germania, these formations merged into the 5th Waffen SS division Wiking (Viking). The roster included 400 Finns, plus smaller contingents from Switzerland and Sweden. Hausser later observed, "They thought beyond the boundaries of their national states toward something greater, a common purpose." A post-war poll of surviving Dutch SS men summarized that "the better educated were fascinated by the Reich concept, with its prospect of the consolidation of all Germanic peoples." The Israeli historian Zeev Sternhell saw their commitment as proof that "there could be a civilization based not on birth or on the privilege of wealth,

but on community spirit.... They sought new values which could guarantee the state's cohesion, and this disavowal of materialism excited, fulfilled and influenced the spirit of many Europeans -and not just the least prominent among them."

The German cause, groping for acceptance among European populations, gained favor when war broke out with the Soviet Union in June 1941. Hitler authorized a Waffen SS proposal to establish national legions of volunteers from neighboring states to fight in the East. Opening on June 27, recruiting offices counted 40,000 applicants the first day. The German security police, the SD, circulated a confidential analysis to leading representatives of the Reich's government and the NSDAP on the reaction in the occupied countries. It reported "a direct reversal in attitudes in Germany's favor" in Denmark: "Prominent people in Danish business life and in the clergy, who had up till now been reserved or even hostile toward Germany, are changing their position on Germany now that she has begun the battle for European civilization against Soviet Russia. . . . Applications to join the Waffen SS have markedly increased."

One recruit, among the 6,000 Danes to serve in the Waffen SS, recalled how many of his countrymen feared that were Germany defeated, "Denmark could suffer the same fate as the small Baltic states; degraded to a Russian military district, politically neutralized, forcible implementation of the Communist bureaucratic economic system, gradual Russianization, and deportation of the political and cultural elite, with ruinous consequences for the biological substance of the Danish people." The Danish government founded the Freikorps Danmark (Denmark Volunteer Corps) on July 3, 1941, which granted authorized absence, without forfeiture of seniority or pension, to members of the Danish army who transferred to the new formation. Its first commanding officer, Christian Kryssing, stated in a national radio speech in July, "Regardless of our political affiliations, we all feel that Bolshevism and its threat to the northern states must be destroyed....I call upon all Danish men capable of bearing arms to take part in this crusade... to secure a rightful place for our fatherland in the reformation of Europe."

In Amsterdam, 50,000 people attended an anti-Communist rally in support of the German war effort. Regarding Scandinavia, the SD reported, "The German-Russian conflict has turned attitudes in Norway more favorably toward Germany. . . . There are countless volunteers for the SS Nordland regiment." In Belgium, "Flemish nationalist circles are unconditionally on Germany's side in the struggle against Bolshevism." Eventually over 20,000 Flemish served in the Waffen SS, many joining to combat "the arch-enemy of Christian Europe" in the East. The Swiss journalist Armin Mohler wrote, "They came because they hoped for the German Reich to forge a unified Europe of free nations. They wanted neither a commissar state nor a society of everyone competing against one another. There was much idealism then, such as is really only possible among the young."

In Paris, French politicians met on July 7 to discuss formation of the Legion des Volontaires Francais (Legion of French Volunteers), or LVF. The resulting fighting force left to deploy against the Soviets in August 1941. Within months a sponsorship program, "Friends of the Legion," gained 1.5 million supporters.⁶² The rector of the Catholic Uni-

versity of Paris, Alfred Cardinal Baudrillart, called the volunteers "among the best sons of France." They defended not only the honor of their country, he stated, but "fight also for the Christian civilization of the continent. . . . This legion is in fact in its own way a new knighthood. These legionnaires are the crusaders of the 20th Century."

Jacques Benoist-Mechin, a cabinet minister in the government of unoccupied France, regarded a pan-European war effort against the USSR as "the platform upon which provincial patriotisms can bond together, free from antagonism and traditional rivalries. It is the vehicle to break nationalism's inner conflicts, to develop into a European super-nationalism." The threat of Soviet expansion was a genuine concern to Europeans, who were more familiar with the consequences of earlier Communist revolutions in Russia, Germany, Hungary, and Spain than were the people of Britain and the United States. German correspondents covering the advance of the fighting forces into Russian territory filled the news media with reports about destitute living conditions among populations under the hammer and sickle as well as the merciless treatment of political dissidents there.

An article published in the *Volkischer Beobachter* in August 1941 expressed more or less popular views about the Soviet menace: "Today all Europe knows that the war against Bolshevism is Europe's own decisive struggle, the consolidated war of European civilized nations against the powers of destruction and formless chaos. A new, revitalized Europe has learned to grasp what an enormous danger the specter of Bolshevism represents. It is of symbolic significance that the unity of Europe has begun to take place and prove itself in this struggle. "We know only too well what this war is about. But only when one sees the reality of the Bolshevik regime face to face, the influence of this system on the individual person and on his life, only then can one comprehend the cruelty, the overall horror of this system. It is a system that combines every element of devastation and absolute ruin of human values and ruin of humanity itself. Bolshevism is not even a political system one can intellectually debate with, but the organized murder of all life, the degradation of the earth and its people, destruction for the sake of destroying." Regardless of their personal attitude toward Germany, the war against the Soviet Union was in part a unifying factor out of necessity for Europeans.

French, Walloon, and Spanish volunteers served in the Germany army, in ethnic regiments commanded by officers of their own nationality. French and Walloon troops eventually transferred to the *Waffen SS*. Berger arranged for German drill instructors conducting recruit training to attend special courses to acquaint themselves with the national and religious customs of the inductees in their charge. *SS Colonel Richard Schulze* recalled, "The instructors needed to summon sympathy and understanding, and a well-balanced acceptance of the mentality of the various nations." In a September 1941 article, an *SS combat correspondent* described the Odyssey of foreign volunteers serving in the *Wiking* division: "They came to us, misunderstood by their countrymen, not in proud columns but individually, resolute and clear-minded, often against father, mother, and family. They are not strangers here, but through their blood and their deeds have found in their

regiments honor, a rightful place, and a home.”

Negative Nationalism

Germanic volunteers often experienced isolation from their countrymen, thanks to lingering ambivalence among the populations of the occupied lands toward Germany. Traditional international rivalries, a saturation of anti-German publicity in the pre-war democratic press, suspicion of Hitler's motives and the German invasion of 1940 all retarded appeals for European unity. Another obstacle to cooperation and good will, ironically, sprung from the Reich itself. Powerful and numerous, it was unavoidable that the Germans would exercise great influence over European affairs. Prominent nationalists in the country believed that this entitled them to subordinate the interests of neighboring states to those of Germany.

In June 1940, the German government introduced proposals to restructure European commerce. Addressing members of the planning committee, Funk offered this guideline: “Germany now possesses the power in Europe to implement a reorganization of the economy according to her requirements. The political will to use this power is on hand. It therefore follows that the countries must fall in line behind us. The economy of other European lands must suit our needs.” Foreign observers heard Funk state in a speech in July, “Future peacetime commerce must guarantee the Greater German Reich a maximum of economic security, and the German people a maximum of consumer goods to elevate the national economy. European trade is to be aligned with this goal.”

Based on a 1939 study by the Prussian jurist Carl Schmitt, National Socialist officials proposed granting sovereignty only to countries populated by “ethnically worthwhile peoples.” The German commissioner for occupied Holland, Seyss-Inquart, championed similar views. Party zealots considered him a better choice for foreign minister than the pragmatic, more constructive Ribbentrop. In his essay, “The European Order,” Seyss-Inquart wrote of “a natural ranking, in which every nation has a place in the community according to its economic capabilities, its biological vitality, its martial strength, and cultural value.” He called upon Europeans to “acknowledge the Reich as the principle power, through which their own strength can best be realized.” He added that Germany, “through superior achievement is accorded higher responsibility for all” who comprise European civilization, “which was formed by the industriousness of the Nordic race.” Such one-sided proposals regarding post-war Europe dismayed Ribbentrop. He warned in a memo that Germany's allies fear that after the war, Berlin will place a German governor in every country. Neutrals, he wrote, are concerned that Germany plans to annex them. The notion of ranking European peoples according to their value, racial or ethnic heritage among the criteria, threatened to create the divisions Hitler had previously sought to avoid in Germany proper when combating the party's race theorists.

In the occupied countries, attitudes of German superiority were often apparent at lower administrative levels. Lvov for example, was a Polish- Ukrainian city the German army

wrested from the Soviets in June 1941. It subsequently came under the Reich's civil jurisdiction. An ethnic German resident there recalled, "The passenger compartments of the street cars were divided in the middle by wide leather tubing. A sign in the front section read, 'Only for Germans and their allies – Italians, Hungarians, Slovaks, and Rumanians.' It was shameful to see how people were crowded together in the rear section, while up front sat perhaps two people, and one or two policemen stood on the platform or beside the engineer." Though Hitler had decided to gradually release all Polish prisoners of war, German authorities discouraged fraternization. In a 1939 assessment, the SD faulted members of the armed forces for their "great broad mindedness and sympathy" toward the Poles, especially former Austrian officers for their "respectful attitude." The German military command then ordered that Poles clear the sidewalk for German soldiers and remove their hats when passing officers; however, few occupational troops enforced this tactless regulation. In the west, Hitler detained 65,000 Walloon prisoners of war, while sending all Flemish captives home. Germany continued to hold one-and-a-half-million French soldiers prisoner.

The war demanded that the Germans abandon such counterproductive policies. The Reich's disorganized armaments industry experienced a decline in weapons manufacture during 1941. Production of howitzers, artillery rounds and small arms ammunition substantially dropped between February and December. The factories could not keep pace with the quantity of ordnance being lost in the Russian campaign. As the Red Army retreated in the east, the Soviets dismantled and evacuated 1,360 industrial plants. Their demolition squads destroyed remaining facilities, including 95 percent of the Ukraine's power works, plus granaries, warehouses, refineries, bridges and machinery. The Germans were able to partially restore the economy at considerable cost, investing far more in reconstruction than they were able to reap in raw materials and surplus grain. These circumstances placed an enormous burden on German resources.

There were seven-and-a-half million foreign workers in the Reich by September 1944. These included prisoners of war, the voluntarily recruited, and eventually those impressed into the work force. Northern and Western Europeans received the same pay, vacation time and health care benefits as German labor. Eastern Europeans suffered poor treatment. Fritz Sauckel, in charge of mobilizing labor, stated in December 1942 that "whipped, undernourished and cowed eastern workers will more burden the German economy than be of use to it." A decree enacted by Himmler that month made abuse of foreign laborers by Germans a punishable offence. Only as the military situation worsened, did conditions for Russian and Ukrainian workers improve.

Poles fared better, largely due to the value of Polish industry for the war economy. Decent treatment of foreign labor, plus the re-organization of the entire armaments industry by civilian officials, led to a dramatic improvement in output. Between December 1941 and June 1944, armaments manufacture increased 230 percent, though the work force was augmented by just 28 percent. In 1944 alone, German industry produced enough ordnance to fully equip 225 infantry and 45 panzer divisions. German factories accounted

for 88 percent of arms production, foreign contracts for the balance. A unified Europe, based on good will and equal status for all countries, was now a necessity.

Hitler harbored reservations about restructuring Europe with all nations on equal footing. He mistrusted his allies. German intelligence reported that after German defeats in 1943, Rumania, Hungary, Finland and Bulgaria discreetly contacted London and Washington about concluding a separate peace. The Allies informed them that the USSR must be involved in the negotiations, leading Germany's satellites to drop the initiative. The Führer was no less wary of Philippe Petain, president of unoccupied "Vichy" France, who proved unsympathetic to the German cause. Hitler limited the roster of the Legion of French Volunteers to 15,000 men, even though there was available manpower to quadruple the number. The contemporary historian Franz Seidler pointed out, "Hitler feared losing his freedom to make decisions about regulating post-war Europe if he accepted foreign help." When the Walloon Legion officer Degrelle addressed Belgian workers in the Berlin Sportspalast in January 1943, he received acclaim from his audience . . . and a total press blackout in the German media. Recognizing German policy as an obstruction to the rapprochement supported by many of his countrymen, the French politician Laval told Hitler, "You want to win the war to create Europe. You must create Europe to win the war."

At the time of Degrelle's Berlin speech, the German armed forces and their allies were already losing ground in a war of attrition against Russia, Britain, and the United States. More Germans saw the need for foreign assistance. This required rethinking the Reich's continental attitude. In February 1943, the foreign policy advisor Dr. Kolb introduced proposals for multilateral cooperation. He recommended that treaties be concluded upon the basis of absolute equality of the signatories. A nation should enjoy parity in the European community regardless of its form of government. Kolb's plan required Germany to relinquish hegemony over the continent.

In September 1943, Arnold Köster, head of the planning commission of the armaments ministry, bluntly stated in a memorandum that the Reich conducts an improvised exploitation of the occupied territories. The result was "resentment among society's elements of good will, mounting hatred among hostile strata of the populations, passive resistance, and sabotage." The German diplomat Cecil von Renthe-Fink reported to Ribbentrop on September 9, "It is obvious that the mood in Europe has been worse for some time and that resistance movements are growing rapidly. This development can have dire consequences for the willingness of the European nations to commit their resources for our victory, and must be countered."

Renthe-Fink considered one of the worst shortcomings to be the fact that "apart from what is occasionally stated about the economic field, we have so far avoided saying anything more concrete about our intentions. This gives the impression that we want to keep our hands free to implement our own political plans after the war." Attending a wartime lecture on the danger of Communism, Degrelle voiced pan-European concerns when he told the speaker that the volunteers understand what they are fighting against,

but not what they are fighting for. German occupational policy in former Soviet territory was counterproductive. Aware of the threat that eastern populations such as the Mongols had historically posed, Hitler preferred to keep them politically impotent. He stated during a military conference in June 1943, "I cannot set any future objective that would establish independent states here, autonomous states." He privately remarked in April 1942, "To master the peoples east of the Reich whom we have conquered, the guiding principle must be to accommodate the wishes for individual freedom as far as possible, avoid any organized state form, and in this way hold the members of these nationalities to as limited a standard of civilization as possible."

The *Völkischer Beobachter* mirrored this contempt for the Russians, as in the following description of a group of Soviet prisoners, published in a July 1942 edition: "We all know him from the newsreels; this earthcolored, leathery face with the apathetic, furtive animal gaze and the wearied, mechanical motions; this grey, monotonous, nameless mass, this herd in the truest sense of the word." Thousands of Russians deserted to the invaders, often giving the reason that Stalin had executed someone in their family. In July 1941, out of 12,000 members of the Soviet 229th Rifle Division, 8,000 jumped ship. In September, 11,000 men belonging to the 255th, 270th, and 275th Rifle Divisions went over the hill as well. Desertions continued to plague the Red Army. In May 1942 alone, 10,962 Soviet soldiers crossed over to the Germans. Another 9,136 followed in June, then 5,453 in July. The Germans counted 15,011 Red Army deserters in August. In May 1943, 90 Russian battalions, 140 independent rifle companies, 90 battalions consisting of non-Russian troops such as Georgians and Tartars, plus over 400,000 unarmed auxiliaries served in the German armed forces. A Cossack division and several regiments supplemented this military force. At least 500,000 former Soviets fought on the German side that year, and Cossacks were especially effective in combating Communist partisans. Hitler was initially shocked by the number of Russian units in German army service, and in February 1942, forbade more to be established. He soon gave up his resistance to the practice, thanks to the achievements of these formations.

Since the beginning of the Soviet-German war, captured Russian officers repeatedly advised the invaders that the establishment and formal recognition of a Russian national state with its own army of liberation was essential to overthrow the Stalin regime. Officers testifying included former commanders of the 3rd Guards Army, the 5th, 12th, 19th and 22nd Armies and more than a dozen other generals. The German diplomat Hilger interviewed three prominent Russian prisoners in August 1942: General Andrei Vlassov, Colonel Vladimir Soyersky, and Regimental Commissar Joseph Kerness. Vlassov himself told Hilger, "Soviet government propaganda has managed to persuade every Russian that Germany wants to destroy Russia's existence as an independent state. . . . The Russian people's resistance can only be broken if they are shown that Germany pursues no such objective, but is moreover willing to guarantee Russia and the Ukraine... an independent existence."

Hilger recorded Colonel Soyersky as stating that "Stalin, because of continuous defeats

he is considered responsible for, has lost all his popularity in the army. The Soviet regime has always been hated by the broad mass of the population." Soyersky also opined that publicly defining German war aims favorable to Russia would lead to the "immediate collapse" of Red Army and national resistance. At this stage, Hitler, his influential chancery director Martin Bormann, and Reich's Commissioner for the Ukraine Erich Koch opposed post-war Russian autonomy. Italian Marshal Giovanni Messe observed, "Germany has not understood how to awaken the sympathy and willingness to cooperate among the populations of the occupied territories."90 Hitler's mistrust of Germany's treaty partners and of the eastern peoples obstructed a rational European policy.

Throughout most of the war, German propaganda vilified the governments of enemy countries while describing their civilian populations and military personnel as decent but duped by unscrupulous leaders. The Reich's media revised this prudential practice with respect to the war in the East. When the Germans invaded, the Soviet secret police, the GPU, liquidated political prisoners in eastern Poland and in the Baltic States. The Germans discovered over 4,000 victims in Lvov, in Luck 1,500, in Dubno 500. Summarizing the German official inquiry, Dr. Philipp Schneider wrote, "Without any doubt, those murdered were tortured before their death in a sadistic way. Torture chambers built especially for the purpose were used."

Along retreat routes, the GPU and the Red Army strew mutilated bodies of German prisoners shot or tortured to death. The purpose was to provoke reprisals against surrendering Russians by the invaders, thereby deterring desertion. In the Tarnopol jail, German troops found one of their missing bomber crews with eyes gouged out, tongues, ears and noses cut off, and the skin on the hands and feet peeled away. This was a favorite GPU torment accomplished by first immersing the appendages in boiling water. During January 1942, the Soviet Black Sea fleet landed Russian marines along the German-occupied section of the Crimean coast near Odessa. An engineer with a German infantry division there recalled this: "Many houses along the beach had served as hospitals or as collection areas for the wounded. The Russians entered, killed the orderlies and the physicians, and raped the nurses and female assistants. Then they threw the women into the ice-cold waters of the harbor basin. They shot the wounded and sick soldiers, or dragged them into the street and poured cold water over them, so that they would freeze to death in the outdoors."

The German press described GPU agents and Soviet soldiers committing atrocities as *Untermenschen*. The expression literally translates as "lowly persons," but historians sometimes interpret it as meaning subhuman or racially inferior. It in fact refers to the depravity of the individual mind and spirit, the triumph of corruption over the refined qualities of civilized man. Beyond the Soviet troops, Stalin's enforcers, and rank-and-file Russian Communists, the word more or less became associated with the eastern peoples in general.

Melitta Wiedemann, editor of the diplomatic journal *Die Aktion*, expressed the frustration over German propaganda and foreign policy felt among many prominent citizens. In

1943, she wrote to several SS leaders, advocating the pan-European idea and a revision of German practices in the East. She directed a letter to Himmler via his advisor on October 5, in which she maintained, "Our silence over the future form of the new Europe is considered in the occupied territories and among those who are officially our friends to be absolute proof of our wicked intentions." Wiedemann added, "First the Jews were declared Untermenschen and deprived of their rights. Then the Poles joined them, then the Russians, and very nearly the Norwegians as well. Who's protecting any nationality from being relegated to the realm of Untermenschen by Germany and then destroyed?"

She continued, "Our Untermensch slogan has helped Stalin proclaim a national war. . . . The entire Russian farming community, most of the intelligentsia, and the senior leadership of the Red Army are enemies of Bolshevism and especially of Stalin. Our policy confronts these people with a tragic dilemma; either fight for Stalin, or abandon their people, surely among the most talented of the white race . . . to the fate of a destitute, looted colonial territory."

The German army suffered a catastrophic defeat at the six-month battle of Stalingrad, which ended in February 1943. This forced many Germans to the conclusion that without active foreign help, the war would be lost, which required a fundamentally new approach to the Reich's administration in Europe. To implement such a revision, resisted by the highest state leadership, advocates needed a vehicle, an organized bloc. They found it in the Waffen SS.

The European Mission

Early in the war against Russia, Hitler spoke of the need for Europeans to overcome nationalist proclivities: "The threat from the east alone, with the danger of reducing everyone to the Bolshevik-Asiatic plane, which would mean the destruction of all basis of European civilization, compels us to unify." A prominent journalist and former Waffen SS lieutenant, Hans Schwarz van Berk, wrote later, "The old points of departure of German policy were too provincial to realize the European revival in a voluntary spirit of freedom, so passionately striven for by activist, optimistic younger elements. . . . Only the foreign units with their clearcut European will, anchored in the perception of the SS as the European fighting elite, changed this. . . . This war's fury demanded more than hired mercenaries. It demanded constructive, common goals and binding, idealistic motives of the fighters."

Germanic volunteers in the Reich's service did not consider themselves to be in a subordinate role. "We fought neither for Germany nor for Hitler, but for a much greater idea; the creation of a united states of Europe," wrote Degrelle. "We were all unified by the same will: Honorably represent our nation among the 30 that came to fight. Do our duty, since we fought for Europe. Gain an honorable place for our fatherland in the continental community that would evolve from the war, and finally, create combat units whose value guaranteed achieving social justice, when we ultimately returned home after

the end of hostilities.”

The Swiss SS man Heinrich Büeler recalled, “Regarding the restructuring of Europe after the war, there was no program. This question was nevertheless often discussed in the Waffen SS. . . . We were certain that the struggle against Asiatic Bolshevism, and the camaraderie joining Germanics and Europeans, will lead to reforming Europe in the same spirit.” The Swiss journalist Francois Lobsiger considered the men “political soldiers in the loftiest sense,” fighting to achieve a “strong, unified, and brotherly Europe.” The historian Lothar Greil summarized, “With the beginning of the Russian campaign, a decisive mental awareness developed within the Waffen SS: The fight for freedom for the realm of all Germans became a struggle for the freedom of the European family of nations. The common cause of volunteers from throughout Europe reinforced this ideal.” The French historian Henri Landemer concluded that within the Waffen SS, “The Reich is no longer Germany but Europe.”

Himmler, primarily involved in law enforcement, intelligence gathering and counter-espionage, initially envisioned a post-war Europe with Germany dominant. He harbored a colonial attitude toward the East. Influenced not only by the deteriorating military situation but by many letters he received from soldiers of the Waffen SS, he gradually abandoned this imperialistic viewpoint. In a 1943 speech to NSDAP officials in Posen, he described the brotherhood in arms of the Wiking division, in which Germans and non-Germans served together, as the basis for the greater Germanic Reich to come. When a local party functionary refused to approve the application for marriage of a Germanic volunteer to a German woman, Himmler reacted sharply. On October 4, 1943, he sent a letter to Bormann arguing, “If on one hand the Reichsführer SS (Himmler’s title) is supposed to recruit Flemish, Dutch, and other Germanics to fight and die . . . and in return declare that they have equal rights, then marriage to the sisters and daughters of these Germanics, or of a German maiden to a member of these Germanic peoples, cannot be forbidden.” Demanding that the NSDAP’s Racial Policy Office be deprived of the authority to license marriages, Himmler added, “It makes no sense for me to try for years, under difficult circumstances, to animate a Germanic idea and win people for it, while other offices in Germany thoughtlessly and categorically make it all for nothing.”

Despite the authority of his office, Himmler was navigating precarious waters. He advocated a European commonwealth, challenging official “Germany first” programs and NSDAP dogma. “He became the most demonstrative critic of this policy and tacitly the most significant enemy of all supporters and defenders of this policy,” stated Schwarz van Berk. Himmler began gaining the upper hand early in 1943. In February, the Reich’s Chancery granted him supervision over all “mutual ethnic- Germanic affairs” in the occupied countries. German officials could no longer act on related issues unless “in agreement with the Reichsführer SS.” The historian Seidler observed, “To shape the new order in Europe after the war, the SS had an optimal starting position in competition with organs of the NSDAP.” The SS planned to establish a European union with close economic co-operation and a universal currency system, without German domination. “The loyalty of

the foreign SS men gave Himmler more weight . . . in opposing official German policy. These men were not in the slightest degree of a subservient nature," wrote Schwarz van Berk. Eventually non-Germans became the majority in half of the SS combat divisions in active service.

The Waffen SS took control of all foreign legions serving in the German army in 1944 except for Cossacks. This was an important step in supplanting the concept of national armies with that of a multi-national fighting force defending common interests, a force whose veterans could maintain a camaraderie transcending customary European rivalries after the war. The Waffen SS actively promoted establishment of a Russian army of liberation. After meeting with Vlassov, Himmler approved not only the

formation of this army but the founding of an "exile" Russian government. Vlassov stated that he found greater understanding for his proposals during negotiations with the SS than with the German army. He ultimately received the green light to establish the Russian army of liberation, which deployed toward the end of the war. Estonians and Latvians became the vanguard of eastern peoples donning the uniform of the Waffen SS. Not without reservations, Himmler eventually acquiesced to Berger's appeal to enroll Ukrainians. Formation of the 14th SS Grenadier Division, together with Yugoslavian contingents, ultimately broke down the "Slav skepticism" that had infected the Reichsführer SS no less than NSDAP doctrinaires. The diplomat Renthe- Fink wrote, "The Estonian SS has proven itself in action against the Bolsheviks, and these developments appear to be taking place with the Führer's approval." The former director of the Bad Tölz officer's academy noted, "The N.S. racial concept became less plausible after the forming of Slavic divisions. It gave way to the unifying element of anti- Communism, especially welding together the eastern and western SS."

The example of the Waffen SS encouraged others in Germany opposed to national policies detrimental to a community of nations. In February 1944, the German commissioner in the Crimea, Alfred Frauenfeld, sent Berlin a 37-page memorandum describing National Socialist eastern policy as a "masterpiece of poor management." That June, the economist Walter Labs submitted proposals for administrative reform in occupied Russia. He asked, "Are the eastern territories and the populations residing in them to be accepted as members of the European realm, or are they simply colonies and colonial peoples to be exploited?" Labs demanded they be accorded the right to private property, advanced education and opportunities to realize prosperity. He bluntly pointed out that "nations which achieve as much in wartime as what the Red Army has demonstrated, are too advanced to accept being reduced to the standard of a colonial people."

For its part, the German army issued lengthy guidelines to its troops in Russia in 1943, ordering them to "be fair.... The Russian hates nothing more than injustice. The Russian is an especially good worker; if he is treated decently he works hard. He is intelligent and learns easily." Nearly two years earlier, the Waffen SS had already instructed its members to "sincerely try to gain a fundamental understanding of the contemporary Russian psyche," every SS man being "not just a soldier but a bit of a politician." The

purpose, stated in a directive for soldiers of the Leibstandarte, was “one of the most important tasks for the German people, namely to win these populations for the European family of nations.”

The Leibstandarte defended the Mius River position on the eastern front until April 1942, when it received transfer orders. A grenadier recalled, “During our withdrawal from Taganrog, thousands of residents stood along the road and waved to the units as they drove away; an example of how good the relationship between an SS division and the Russian civilian population could become.” Though better known for its reputation as an elite fighting troop, the Waffen SS was no less resolute in advancing social and political reforms necessary for Europe to recover supremacy and renown in world affairs. In combating both the lingering 19th Century nationalism dividing the continent and the unproductive dogma of the Racial Policy Office within Germany, the Waffen SS trod a solitary path; few among the Reich’s hierarchy risked contradicting the NSDAP’s legislated programs. Albert Frey, a regimental commander in the Leibstandarte, recalled that “during the war, in no other realm of the NS state were the flawed political and military decisions of the senior leadership so openly discussed and criticized as within the Waffen SS.” Induction into the Waffen SS of non-German volunteers forced the Reich’s Government to recognize the contribution of foreign peoples to the war effort. Germanic recruits demanded a post-war European federation in place of German hegemony. They found political expression through the SS, steadily leading the German government toward a balanced perspective. This augmented the influence of the under-represented strata that did the fighting, much in the sense that the wars of liberation in 1813 began shifting power from the imperial dynasty to the Prussian peasant militia.

Thousands of Ukrainians volunteered to serve in the Waffen SS. The Ukrainian 14th SS Grenadier Division, which the Germans decided to establish in April 1943, went into action the following year. When Hitler learned of its existence he questioned its dependability, suggesting it would be better to give its weapons to a new German division. Hearing of General Vlassov’s wish to lead an army of liberation, Hitler retorted, “I’ll never form a Russian army. That’s a specter of the first order.” When SS Colonel Günther d’Alquen criticized the official attitude degrading the Russians, Himmler expressly warned him against the SS taking any course of action contrary to the Führer’s wishes. Yet the Waffen SS prevailed. Again citing Schwarz van Berk, “In Himmler, those demanding that the narrowly defined racial policy be abolished in favor of a broader, more rational interpretation found their strongest voice. And now this same Himmler, who in his own domain once established the most stringent racial criteria, became the advocate of a liberal understanding of the rights of nationalities and races.”

Hitler disapproved of the revisions doggedly promoted by the Waffen SS, yet ironically, he had created the system that enabled them to progress. In a 1937 speech at Vogelsang he had once stated, “From our ranks the most capable can reach the loftiest positions without respect to origin and birth. . . .What they’ve been, what their parents do, who their mother was, mean nothing. If they’re capable, the way stands clear. They just have

to accept responsibility; that is, have it in them to lead." Hitler's policy resembled the spirit of 18th Century liberalism in France, in which talented individuals realized their potential and rose to positions of leadership. Since its establishment in 1934, the VT, the future Waffen SS, attracted men from the untapped wellspring of superior human resources once identified by Gneisenau. Frey, among the first to join the armed SS, wrote that regarding fellow recruits in training at the Ellwangen barracks, "Most were farm lads and came from villages." In the German army, 49 percent of the officer corps hailed from military families. In the VT, the figure was five percent. Just two percent of army officers had rural backgrounds, but a substantial percentage of VT officers grew up on farms. Despite their comparatively limited education, SS officers enrolled in army general staff courses consistently scored in the upper ten percent of graduates. In some German provinces, nearly a third of the farm lads applied to enlist in the VT.

Like the German army, this novel fighting force encouraged battlefield initiative at junior command levels. However, it also relaxed social barriers between officers and subordinates, based authority on winning the men's respect rather than on rank and instilled a liberal attitude that enabled Germans and other Europeans to stand together as brethren. In a few short years, the Waffen SS contributed to political and military evolutions that might otherwise have taken decades, and without the patronage of the men's respective governments or populations.

In its final form, the Waffen SS bore little resemblance to the party's showpiece guard troop, personifying the flower of German manhood, that Hitler originally intended for domestic missions at his discretion. Himmler ultimately acknowledged that "the Waffen SS is beginning to lead a life of its own." Not constrained by established military convention, the men of the Waffen SS approached their craft with a spirit of independence and innovation. Through their voluntary commitment and wartime sacrifices they lobbied for political reform—customarily forbidden waters for the armed forces. And yet its members hailed largely from a stratum historically lacking public influence. Despite the dynamics, boldness and aplomb of the Waffen SS, it never would have gained leverage without a state system in place that fostered discovery of latent ability. The Führer approved expansion of the Waffen SS despite its defiance. Hitler was a man who sought not to control his people but to guide them, to help them explore, discover, and harness their potential, even when the changes they introduced contradicted his personal beliefs.

12.18 Traitors to the Reich

Fatal Diplomacy

What the Waffen SS could have finally achieved toward a European confederation, what caliber of leadership the Adolf Hitler Schools would have produced, or how education and advancement of Germany's nonaffluent classes might have reshaped the nation will never be known. Military defeat in 1945 ended the era of German self-determination, quelling

a revolution of historical consequence that may never be emulated. Germany's overthrow we broadly attribute to the larger populations and superior industrial capacity of the Allies, but a seldompublicized, insidious factor also contributed to the outcome of the war. This was the systematic sabotage, conducted by disaffected, malevolent elements within Germany, of the Reich's peacetime diplomacy and wartime military operations.

Unlike the Bolsheviks, Hitler did not oppress the aristocracy to promote labor. He personally considered the role of the nobility "played out". It would have to prove itself to regain its former prestige, but only by competing against other classes within the parameters of the Reich's social programs. A tract published for officers declared, "The new nobility of the German nation, which is open to every German, is nobility based on accomplishment." Many from the country's titled families accepted the challenge. They enrolled in the NSDAP or the SS or served with valor in the armed forces during the war. A small percentage, concentrated in the army general staff and in the diplomatic corps, resented the social devaluation of their high-born status. Rather than contribute to the new Germany, they conspired against her. Together with a self-absorbed minority of misguided intellectuals, clerics, financiers and Marxists, they intrigued to bring down both the National Socialist government and their country as well.

An especially harmful characteristic of this subversive resistance movement was that its leaders tenanted sensitive positions in public office and in the military. Major players included Leipzig's Mayor Carl Goerdeler, Ribbentrop's subordinates Baron von Weizsäcker, Ewald von Kleist-Schmenzin and Erich Kordt, and chief of military intelligence Admiral Wilhelm Canaris. They and their fellow conspirators knew that Hitler was too popular for them to incite a national insurrection against him. They sought assistance beyond Germany's borders, from England. The subversives established contact with British politicians in June 1937. With Canaris providing a smoke screen, Goerdeler covertly travelled to London using foreign currency provided by the banker Schacht. He met with Halifax, Churchill, Eden, Vansittart and Montague Norman of the Bank of England. Goerdeler told his hosts of an approaching "unavoidable confrontation between Hitler and the conspirators," giving the impression that plans for a coup were well under way.

That December, Ribbentrop submitted to Hitler a confidential analysis of attitudes in Britain. He warned that the English were by no means weak and decadent and would go to war were German ambitions considered a threat to their empire. In secret discussions with Vansittart, Churchill and British diplomats, Weizsäcker falsely claimed the opposite, that Ribbentrop was advising the Führer that London was too spineless to seriously oppose the Reich.

During the Sudetenland crisis in the summer of 1938, the resistance attempted to persuade the British to reject Hitler's proposed territorial revisions. Its envoy, Kleist-Schmenzin, was a patrician landowner and monarchist. He enjoyed a certain reverence among peers for his fight to reduce the wages of Pomerania's farmers during the 1920s. He once maintained, "The nobility must adhere to the sovereign manner developed over centuries, the feeling of being master, the uncompromising feeling of superiority."

On August 19, Kleist-Schmenzin told Churchill that in the event of war, German generals were prepared to assist in a revolt to establish a new government in Berlin "within 48 hours." The envoy also supplied the British Secret Service with classified information regarding the Reich's defense capabilities. Just as Goerdeler had previously described German rearmament as a "colossal bluff" in London the year before, Kleist-Schmenzin told the English that the German army was unprepared for war. The British agent Jan Colvin wrote later that every single sentence Kleist uttered would suffice on its own to earn him a death sentence for treason.

The back gate of Number 10 Downing Street swung open on the evening of September 7, 1938, to admit Erich Kordt with a private letter from Weizsäcker for Halifax. The German baron wrote of how "the leaders of the army are ready to resort to armed force against Hitler's policy. A diplomatic defeat would represent a very serious setback for Hitler in Germany, and in fact precipitate the end of the National Socialist regime." Thanks to his lofty position in the Reich's Foreign Office, Weizsäcker knew that the Führer's determination to recover the Sudetenland was no bluff. By encouraging London toward a showdown, he hoped to provoke an armed confrontation.

Chamberlain prudently concluded the Munich accord with Hitler on September 30, peacefully transferring the Sudetenland to Germany. The resistance movement considered this a "crushing defeat" for its machinations. Disappointed, Kordt declared that "the best solution would have been war." Undaunted, its members exploited covert diplomatic channels to flood London with more bogus news about Germany. Goerdeler told the English on October 18 how supposedly Ribbentrop was boasting that Chamberlain "signed the death sentence of the British Empire" in Munich: "Hitler will now pursue a relentless path to destroy the empire."

As the Polish crisis charged the diplomatic atmosphere in the summer of 1939, the resistance again poured oil on the fire. After meeting with Danzig's Commissioner Burckhardt in June, the British diplomat Roger Makins stated in a Foreign Office memo, "Great Britain should continue to show an absolutely firm front. This is the course advocated by Baron von Weizsäcker and by most well-disposed Germans." Assistant Undersecretary Sargent summarized, "Weizsäcker is constant in his advice that the only thing which makes Hitler see reason is the maintenance of a firm front and no premature offer to negotiate under pressure." Weizsäcker, the number-two man in German foreign affairs, contributed to the inflexibility of the other side.

The resistance continued to supply Chamberlain with descriptions alleging the desperate economic situation in Germany, Hitler's unpopularity and the army's readiness to mutiny. The better-informed British emissaries in Berlin maintained a sober perspective. Henderson's subordinate, Ogilvie-Forbes, wrote Halifax about the conspirators on July 4, 1939: "I have a deep-rooted mistrust of their advice and their information. They are quite powerless to get rid of the Nazi leaders by their own efforts and they place all their hopes for this purpose in war with England and the defeat of Germany. One can have little respect for or confidence in Germans for whom the destruction of a regime is a higher

aim than the success in war of their own country.”

Despite such warnings, Henderson saw with dismay how his government based some policy decisions on intelligence provided by the resistance movement. To be sure, Chamberlain was aware of the risk posed by war. An all-out conflict with Germany would compel England to seek American aid, increasing U.S. influence abroad. Waging war against the Reich was therefore contingent on an immediate collapse of enemy resistance. Told by conspirators in August 1939 that German generals anxiously await London’s declaration of war so that they can topple the government, and that Hitler is on the verge of a nervous breakdown, Britain’s prime minister reacted. The director of the Central European Section of the British Secret Service, Sigismund Best, recalled, “At the outbreak of the war our Intelligence Service had reliable information that Hitler faced the opposition of many men who occupied the highest functions in his armed forces and his public offices. According to our information, this opposition movement had assumed such proportions as to be able to lead to a revolt and overthrow the Nazis.”

French Foreign Minister Bonnet wrote in his memoirs, “We expected an easy and rapid victory. The declaration of war by England and France on Germany of September 3 was supposed to clear the way for the military coup so sincerely promised to us.” General Gamelin told Benoist-Mechin, “I don’t anticipate having to deal with the German army. Hitler will be ousted the day we declare war.” Right after the war’s start, Chamberlain noted in his diary, “What I hope for is not a military victory – I doubt very much that this is possible – but a collapse of the German home front.”

The Early Campaigns

Germany’s campaigns in World War II are a popular subject for study by historians and military analysts; however, when researching Hitler’s strategies, successes and failures, few take into account the pernicious influence of the resistance movement. Just as turncoats in the diplomatic service helped block an understanding with England in 1939, high-ranking members of the army consistently disrupted the war effort once hostilities opened. Though less than five percent of German army officers identified with those betraying their country,¹⁹ the unfaithful few often occupied positions in planning and logistics, enabling them to cause havoc disproportionate to their number. The Gestapo eventually maintained a watch list but generally did not investigate the army. This allowed subversion of combat operations to continue virtually undetected. The Prussian aristocrat Fabian von Schlabrendorff, a staff officer and remorseless saboteur, expressed the spirit of the plotters: “Preventing Hitler’s success under any circumstances and through whatever means necessary, even at the cost of a crushing defeat of the German realm, was our most urgent task.”

Appointments to key posts in the general staff gained the conspirators insight into military strategy as it was formulated, information they communicated to the enemy. The former army chief of staff, Haider, testified in 1955, “Almost all German attacks, immediately

after being planned by the OKW, became known to the enemy before they even landed on my desk." The German armed forces lacked the element of surprise from the first day of the fighting. On August 30, 1939, two days before Germany invaded Poland, Kleist-Schmenzin delivered the detailed operational orders to the British embassy in Berlin with instructions to "pass this on to Warsaw." Chamberlain duly forwarded the document to Colonel Beck. A few months after the Polish campaign, a member of the Reich's Foreign Office in Berlin who was smuggling microfilm was arrested by the SD. The film contained precise information about the strength and locations of the German occupational forces in Poland. The former SD chief wrote later, "In the OKW they were more than a little surprised at such an accurate and comprehensive report, especially as the statistics were correct to the smallest detail." He speculated that "only senior German officers" could have provided the material.

Among the loosely-affiliated subversive groups, military intelligence, the Abwehr, was especially destructive. Its chief, Canaris, was a master of disinformation. In his memoirs, Grand Admiral Karl Doenitz stated that the Abwehr "delivered not a single useful report about the enemy throughout the entire war." Canaris recruited the equestrian monarchist Hans Oster to run the Central Department of the agency. A general staff officer during World War I, Oster had left the army in 1932 for violating its code of honor. Canaris reinstated him as an ersatz lieutenant colonel in 1935. When war broke out anew, Oster began drawing acquaintances hostile to the state into the Abwehr as "specialists." From October 1939 on, Oster furnished copies of every agency report, plus whatever could be obtained from the OKW, to the Dutch military attaché in Berlin, Colonel Gijsbertus Sas. He urged Sas to use the information to reinforce Holland's defenses against Germany and to relay the reports to the Western powers. On April 3, 1940, Oster provided him the details of the imminent German invasion of Norway in order for him to forewarn Oslo.

One month later, Oster gave Sas the target date of the German surprise offensive in the West. The Dutch disbelieved the information. Similarly instructed, Belgian Ambassador Adrien Nieuwenhuys opined skeptically, "No German would do something like that!" Believing to have tipped the Allies off in time, Oster calculated that the abortive offensive would cost the German army 40,000 dead. In his own words, he still considered himself "a better German than all those who run after Hitler."

Canaris not only protected Oster, but betrayed military secrets on his own. The fact that he had served as a U-boat captain during World War I did not prevent Canaris from providing the British Secret Service with details of German submarine development during the 1930's. Senior Abwehr officers profited from the war, accepting bribes in exchange for draft deferments, and the police arrested Hans von Dohnanyi, a "specialist" recruited by Oster, for public graft. Abwehr directors in Munich sold paintings, tapestries and currencies on the black market. Canaris himself arranged for his agency courier plane to regularly fly in fresh strawberries for himself from Spain.³⁰ Abwehr corruption and incompetence became so rife that Hitler eventually relieved the crafty admiral of his post and placed the agency under Himmler.

The house-cleaning, however, was far off in 1940, when Canaris struck another serious blow to the German cause. After London rejected Hitler's generous peace offer that July, the Führer contemplated how to continue the war against England. Considering an amphibious invasion of the British Isles too risky, he decided to attack the enemy's overseas possessions. Capture of the British base at Gibraltar, controlling the nautical lifeline to Egypt and the Suez Canal, was an option. Not only would the conquest virtually cripple England's position in the Mediterranean, but the operation was within Germany's resources. Prerequisite was Spain entering the war on the German side, and Madrid already favored Germany and Italy. In July 1940 the Spanish head of state, Francisco Franco, publicly stated, "Control of Gibraltar and expansion into Africa is both the duty and the calling of Spain." On the 19th, he announced his willingness to declare war on Britain, adding, "In this case, some support by Germany would be necessary for the attack on Gibraltar." Hitler could transfer troops to southern Spain to stage the expedition against the strategic English base. Berlin sent Canaris to negotiate the alliance because of his good relations with prominent Spaniards. In collusion with Weizsäcker, however, he accomplished the opposite by privately informing Franco that Germany's position was desperate, with almost no hope of winning the war. He advised his host to keep Spain neutral, reassuring him that Hitler would not send troops into Spain to force Madrid's cooperation. Had Canaris persuaded Franco to support the Reich, "It's more than possible that such a decision by Spain at this moment would have meant the end of the war," wrote Spanish Foreign Minister Serrano Suner. With Germany's position thus strengthened, Hitler would have possessed a more formidable hand when dealing with Molotov that November. He may have been able to resolve his differences with the USSR without resorting to arms.

Betrayal in the East

Germany possessed a superb intelligence-gathering network for the war in the East. Her specialists had already cracked the complex Soviet radio encryption and monitored its traffic. Since 1934, code breakers at the Hillersleben installation had been tapped into secure telephone lines connecting Moscow to its European embassies. In 1937, the Germans began deciphering Soviet photo-telegraphic communications. In addition to reading diplomatic correspondence, they gained knowledge of Russian armaments production, the location and capacity of the factories and shortfalls in industry. Theodor Rowehl's Long Range Reconnaissance Squadron, subordinate to the Luftwaffe Supreme Command, flew high-altitude missions over the USSR beginning in 1935. Air crews photographed Soviet naval installations, armaments and industrial complexes, military fortifications and troop concentrations. Thousands of pictures of the Russian interior provided ample images to produce accurate maps. In 1947, the USA used Rowehl's photographs to prepare its own maps of the Soviet Union. During the first weeks of the Russian campaign, advancing German troops captured many official documents which Soviet administrators had failed to destroy or evacuate. The cache offered a comprehensive picture of the USSR's

infrastructure, analyses of civilian attitudes and so forth. Luftwaffe communications specialists deciphered Soviet military radio traffic, promptly and consistently delivering details about Russian troop strength, status of available ammunition and fuel, planned aerial and ground attacks and the marching routes of enemy divisions. The post-war American Seabourne Report concluded that German code breakers maintained 80 percent accuracy in their knowledge of all planned Soviet military operations and armaments production.

Monitoring stations forwarded this vast quantity of intelligence to the Abwehr for assessment. Canaris, Oster and fellow conspirators relayed almost none of the findings to Hitler. They instead stored the cache of documents in Angerburg, East Prussia, never evaluated. Military cartographers prepared maps of the East without referencing Rowehl's pictures. Some they based on Russian maps that had been printed in 1865. The German army received inaccurate ones depicting dirt roads, which became impassable quagmires after rainfall, as modern, paved highways. This misinformation often confounded the tactical advance of German mechanized forces. They occasionally approached towns that were not even shown on the maps.

Shortly before the Russian campaign began, members of the German military mission in Rumania had already learned from locals and from Red Army deserters of formidable new Soviet armor sighted during Stalin's occupation of Bessarabia. Witnesses provided details about the Russian KV-I and KV-II heavy tanks plus sketches of a third model that was faster, wellarmored and boasting equally good firepower. Georg Pemler, a reconnaissance flight officer, pored over aerial photographs taken by Rowehl's squadron above the Pruth and Dneestr River areas. He discovered images depicting the mystery tank on railroad flatcars, en route to Red Army units stationed near the Reich's frontier. Called by Pemler to examine the pictures, Rumanian Colonel Krescu told him, "Until now, we thought that this tank is still in development and being tested. That manufacture has progressed so far that the troops are already receiving deliveries, is a discovery of great importance.... The supreme command must be informed of this at once!" Gathering the photographs and relevant data, Pemler personally flew to Berlin to disclose his findings. Intelligence officers accepted his report but did not forward it to the OKW. When the new Soviet tank, the T-34, appeared in battle in June 1941, it shocked German frontline troops. Its innovative sloping armor was too thick for German tank guns to penetrate, and it rendered German anti-tank ordnance obsolete.

While German intelligence concealed Soviet armaments capability from OKW planners, Canaris assured Hitler that only one single-track railroad joined the Russian source of raw materials in the Urals to industrial centers in Moscow. An Abwehr liaison in Rumania, Dr. Barth, told his associate Pemler, "The leadership of the armed forces is grossly underestimating the strength of the Red Army. I personally can't avoid the impression that this is even promoted by certain men. We have confirmed confidential information, for example, that in one particular tank factory around 25 heavy tanks are produced daily. Since then we've identified three such plants.... The chief of the general staff scribbles a question mark here, sending the report back for re-evaluation without informing the

Führer.“

Barth was referring to Haider, who had become chief of staff in September 1938. A post-war “de-Nazification” panel judged Haider’s earlier conduct a “complete betrayal of his country.”⁴¹ After the conquest of Poland in 1939, he formed a secret planning staff to overthrow the government and placed General Heinrich von Stuipnagel in charge, who one German historian described with admiration as an “old-school European nobleman.” Haider urged Hitler to invade Russia, downplaying the hazards of the campaign. On February 3, 1941, Hitler directed Foreign Armies East, a branch of military intelligence, to assess the Red Army’s ability to deploy large formations in the expansive Pripyat marshland. This consisted of swampy terrain in the south-central sector of the future front. Receiving the finished report on the 12th, Haider made an alteration before forwarding it to the Führer. He deleted the assessment’s conclusion that it would be possible for the Russians to shift troops within the marsh, thus posing a threat to the flank and rear of advancing German divisions. Based on this evaluation, the OKH did not allot formations to guard the southern periphery of the wetlands to screen the planned thrust of the German 6th Army and 1st Panzer Army toward Kiev.

Soon after hostilities broke out, the Soviet 5th Army, transferred south via Pripyat’s railroad network, assaulted the open left flank of the German 6th Army. This compelled Hitler to halt the advance on July 10. “The capture of Kiev by the beginning of July 1941, barely three weeks into the campaign, would have been entirely possible but was prevented by strong Soviet forces operating from out of the Pripyat marshlands,” concluded the military historian Ewald Klapdor. Unable to continue the advance without infantry support from the 6th Army, the 1st Panzer Army became deadlocked in costly battles of attrition against frontally attacking Russian divisions for another seven weeks. Two months into the campaign, Hitler remarked that the entire operation would have been planned differently, had he known the enemy’s actual disposition and strength. Once the invasion began, the Soviets received timely reports on German military operations from the Supreme Command of the Army, the OKH, right from Hitler’s headquarters. The communications chief there, General Erich Fellgiebel, secretly installed a direct telephone line to Switzerland to transmit classified information. Stationed in Bern was Hans Gisevius, another of Canaris’ s Abwehr “specialists.” He relayed the reports to Moscow. Other agents in Switzerland such as Rudolf Rössler participated, identified but tolerated by Swiss intelligence. The sophisticated espionage network was nicknamed the Red Orchestra by the SD. Schellenberg wrote later that the information it leaked “could only have come from the highest German sources.” When the SD finally shut down the spy ring in 1942, it arrested 146 suspected operatives in Berlin alone. The courts condemned 86 of them to death for treason. They had transmitted over 500 detailed reports to the Kremlin. In October 1942, the Gestapo arrested 70 more Communist operatives in the Reich’s Air Ministry and in the Bureau for Aerial Armaments.

On June 22, 1941, the Red Army possessed 25,508 tanks, 18,700 combat aircraft, and 5,774,000 soldiers. There were 79,100 cannons distributed among the 303 divisions

deployed in the first and second waves. Hitler took on this force with crucial information withheld, his intelligence agencies consciously understating enemy resources, and officers forewarning the enemy of German attacks. On August 1, five weeks into the campaign, the Red Army deployed 269 divisions, 46 of them armored, and 18 brigades against the invaders. An intelligence report the Führer received two weeks earlier had fixed Russian strength at just 50 rifle divisions and eight tank divisions. On August 10, German soldiers overran the command post of the Soviet 16th Army east of Smolensk. The field police discovered copies of two OKH plans for the German attack. They found another German operational plan upon capturing Bryansk soon after, which the OKH had presented to Hitler on August 18. Gisevius later boasted, "We had our spies all over the war ministry, in the police, in the ministry of the interior, and especially in the foreign office. All threads connected to Oster."

Advance knowledge of German plans helped the Red Army embroil the invaders in heavy fighting around Smolensk in July and August. The Germans regained the initiative when Hitler decided on August 21 to shift his panzer divisions southward toward Kiev. "The senseless operation now decided upon," fumed Haider in his diary, will "scatter our forces and stall the advance on Moscow." The Germans in fact destroyed four Soviet armies and mauled a fifth around Kiev, an immense battle of encirclement, capturing much of the Ukraine. Hitler told his architect Giesler, "I saw in these flanking thrusts and envelopments the only chance of beating the Russian mass-formations.... I had to literally wrest operations away from my generals.... Not even this success persuaded my generals of the only possible strategy in Russia."

Weary of wrangling, the Führer ultimately endorsed Haider's brainchild; a frontal attack against Moscow. Operation Typhoon began on October 1, but deception and sabotage determined the outcome. Quartermaster General Wagner reported the stockpile of provisions for the attack to be "satisfactory." Against the minimum requirement of 24 supply trains per day for Army Group Center, however, between eight and 15 reached the front daily during August, twelve in September. Even during fair weather, hundreds of fully-laden freight trains sat idle in switch yards between Berlin and Krakow. Largely responsible for the delay in supplies were the director of Main Rail Transport South, Erwin Landenberger in Kiev, and the director of Main Rail Transport Center, Karl Hahn in Minsk. Hitler ordered both men arrested for sabotage. Released from Sachsenhausen concentration camp months later, Hahn described himself to another officer as a "mortal enemy of the Nazis." Hitler personally selected their replacements. Erhard Milch and Albert Speer assumed responsibility for getting the trains rolling again. The situation improved within weeks. Speer prioritized locomotive manufacture, while Milch reorganized rail and canal transportation to the front. Milch warned subordinates, "I have permission to hang any railroad official from any tree, including senior managers, and I'll do it!"

Typhoon made progress nonetheless. Northwest of Moscow, the 1st Panzer Division took Kalinin. Instead of wheeling southeast to invest the capital, the troops advanced northward. Eyewitness Carl Wagener recalled, "The capture of Kalinin opened a great

tactical opportunity for us. We now held the cornerstone of Moscow's defense system and could push toward the poorly-secured northern flank of the city. The place was ours for the taking, with good roads and less than a day's travel time. Instead, our panzers and the 9th Infantry Army supporting us received the order to attack the completely insignificant town of Torzhok, more than 100 miles north of Kalinin. We felt that the new directive from the OKH didn't make any sense."

The worst handicap confronting German combatants was the dearth of cold-weather gear. The Reich's industry had manufactured enough quilted winter uniforms to equip at least 56 divisions. Also, prefabricated shelters and barracks heaters had been loaded into 255 freight trains awaiting rail transport east. On November 1, Hitler inspected winter apparel earmarked for the Russian front, and Quartermaster Wagner assured him that the gear was already en route to the field armies in sufficient quantity. Nine days later, Wagner confided to Haider that most quilted uniforms would not go forward until the end of January. They remained loaded on trains in Warsaw for months. Hitler did not learn of the shortages until December 20, when General Heinz Guderian flew in from the central front and told him. Luftwaffe personnel all received cold-weather apparel, only thanks to Milch's personal supervision.

The OKH was no less remiss about advising Hitler of intelligence reports predicting a planned Soviet counteroffensive. During November, the Russians transferred most of their Siberian rifle divisions from the Far East to the Moscow sector. German aerial reconnaissance monitored the augmenting concentration of enemy reserves. Long-range observation planes reported an alarming increase in the number of Soviet transport trains conveying fresh formations to the Kalinin-Moscow sector. The OKH disregarded the information. Sweden supplied the Germans with accurate statistics of the planning and scope of the approaching Red Army offensive, but the Abwehr group receiving this intelligence did not forward it to Berlin.

In mid-November, Foreign Armies East assessed that Soviet divisions are 50 percent understrength, with more than half the officers and men untrained. In fact however, many of the 88 rifle divisions, 15 cavalry divisions and 24 armored brigades about to attack the German lines were well-equipped and at full roster. On the evening of December 4, 1941, only hours before the onslaught began, Foreign Armies East concluded that the combat effectiveness of the Red Army is insufficient for "the Russian to be capable of a major offensive at this time, unless he introduces significant reinforcements."

At the end of its strength, caught by surprise, the ill-clad German army gave ground that winter. Hitler was exasperated over the failure to realize his strategic concept in the face of opposition from the general staff. He cited "the total underestimation of the enemy, the false reports of enemy reserves and of the strength of his armaments... and incomprehensible treason" as contributing to the German army's first major defeat of the war.

In late October, the Führer directed that the crack 6th Panzer Division and two more

infantry divisions be shifted from France to buttress the Rumanians and the Italians. The OKH delayed the full transfer of these formations until December. It was equally tardy about stationing new Luftwaffe field divisions behind the armies of Germany's allies, as Hitler had called for. The 22nd Panzer Division, which he thought was at full strength, sorely needed replenishment. Of its 104 panzers, just 32 were operational. The OKH concealed this fact from its commander-in-chief.

On September 9 and 16, the war diary of the OKW staff recorded Hitler's orders to reinforce the Italian 8th Army. The diary noted on October 6, "The Führer repeats his anxiety over a major Russian attack, perhaps even a winter offensive in the sector of our allies' armies, driving across the Don toward Rostov. The reasons for apprehension include strong enemy troop movements and bridge-building over the Don in many places." Once more the OKW diary, from November 5: "The feared Russian attack over the Don is again discussed. The number of bridges under construction there is constantly growing. The Luftwaffe wants to show pictures. The Führer orders strong air attacks against the bridge sites and suspects enemy assembly areas in the woods along the banks."

Reconnaissance confirmed Hitler's concerns. From the comparatively high ground they defended southwest of Sirotinskaya, men of the 44th Hoch und Deutschmeister Infantry Division observed concentrations of Soviet troops and materiel along the Don, opposite positions of the Rumanian 3rd Army. In a nearby sector, Russian deserters told Italian interrogators that they had been ordered to remain in concealment during the day. The Abwehr liaison to whom the Italians relayed this intelligence, replied that German aerial observation was more credible and had reported nothing, when in fact, the opposite was true. Max Ladoga, a radioman with the long-range reconnaissance squadron, wrote, "The Russians there are constantly bringing up strong reinforcements. Our daily flights have captured it all, filmed and reported it." The observer Pemler recalled that flight crews sent timely warnings up the chain of command, which no one took seriously.

Other sources delivered details of Red Army preparations. The Abwehr had launched Operation Zeppelin in July 1942, during which hundreds of anti-Communist Russians parachuted behind Soviet lines and provided information to the Germans. Over the next several months, they counted 3,269 railroad trains ferrying Soviet troops toward the Stalingrad combat zone, plus another 1,056 trains carrying war materiel. German aerial reconnaissance discovered on November 10 that the Russians had transferred the 5th Tank Army there as well. On November 11, the commander of Nachrichtenaufklärung 1 (Communications Evaluation Section 1) submitted to the OKH a comprehensive analysis of intercepted Soviet military radio traffic. It identified enemy reserves transferred to the Stalingrad area of operations. The report accurately predicted that that Russians were about to launch a pincer attack to surround the German 6th Army: "The deployment may already be substantially progressing." Foreign Armies East was responsible for assessing these reports. In the spring of 1942, Halder had arranged for his former adjutant, Reinhard Gehlen, to become its chief. Believing like Hindenburg that "Germany should not be governed by a Bohemian corporal," Gehlen later acknowledged actively supporting the

resistance. In August 1942, he reported with a straight face that since the previous February, due to a shortage of officers, the Red Army had not formed a single new combat division.

Gehlen disclosed to Hitler neither the progress of Zeppelin nor the proximity of the 5th Tank Army, which he claimed was stationed far to the north. Even though the Red Army had massed 66 percent of its armor opposite Army Group B, Gehlen warned that the Russians were planning instead to attack near Smolensk farther north. He reassured the Führer's headquarters on November 11, "There is no indication of a possible attack soon.... Available (Soviet) forces are too weak for major operations."

The Russian offensive began on November 19, 1942. Tanks steamrolled the Rumanian positions as Hitler had feared. In a major pincer operation, they drove southward to surround Stalingrad. The Soviet 57th Army plunged headlong into General Hans-Georg Leyser's full-strength, motorized 29th Infantry Division, which counterattacked without authorization from the general staff. Its 55 tanks of Panzer Battalion 129 struck furiously along a railroad line detraining masses of surprised Russian infantrymen and supplies. Sealing off this enemy penetration, the 29th turned southwest to assault the flank of the Soviet 4th Corps. Before the operation began, the division received the suspicious order to break contact and withdraw into the Stalingrad perimeter. This enabled the Russians to continue their encirclement of the 6th Army.

Believing that the Luftwaffe could airlift sufficient supplies into Stalingrad, but also based on Gehlen's report that the Soviets had no reserves left, Hitler decided to supply the trapped garrison by air until a relief operation could be prepared. Junkers transport planes and Heinkel bombers delivered provisions to the 6th Army's airfields and evacuated wounded on return flights out. Organizing the missions was quartermaster Colonel Eberhard Finckh. An active conspirator, he arranged for a substantial number of flights to carry useless cargo. In addition to food, medical supplies and ammunition, the beleaguered troops at Stalingrad received thousands of old newspapers, candy, false collars, barbed wire, roofing paper, four tons of margarine and pepper, 200,000 pocketbooks, shoe laces, spices and so on.

The German army launched a relief expedition on December 13, spearheaded by General Erhard Raus's 6th Panzer Division. Ten percent above full strength, the formation possessed 160 tanks, including Panzer IVs fitted with the new high velocity cannon, 4,200 trucks, 20 heavy armored cars and 42 self-propelled assault guns. The 17th and 23rd Panzer Divisions (which had been weakened by constant fighting that autumn) took part in the operation. The attack progressed to within 30 miles of Stalingrad. Some 50 miles west, Soviet tanks counterattacked and captured the airfield at Morosovskaya, threatening the German flank on the lower Chir River. Instead of dispatching weaker covering units to plug the gap, the high command transferred the 6th Panzer Division to the Chir position. This, in the opinion of the historian and former Waffen SS Lieutenant Heinz Schmolke, was pure overkill: "Two weeks later, I myself was commander of a strongpoint on the Donez River, which was completely frozen over, with two bridges. I held the

position there for ten days and nights against a vastly superior Russian force. No one can tell me that the Chir front could not have held out one more day, until contact with the surrounded 6th Army was established." When on December 23 the 6th Panzer Division received the incomprehensible order to withdraw from the relief operation, its officers at first assumed it to be a mistake. Deprived of this armored spearhead, the remaining units proved too weak to press the attack toward Stalingrad. Shortly before his death in the 1950's, Raus expressed the torment his conscience still suffered for not disobeying the order and continuing the advance. There were 220,000 German soldiers and foreign auxiliaries on the 6th Army's roster in mid-January 1943, two weeks before the garrison surrendered. Six thousand survived Soviet captivity.

The battle of Stalingrad not only proved a crushing military defeat for Germany but, for her civilian population, became the psychological turning point of the war. In 1948, former Gestapo chief Heinrich Müller summarized the dissonance in the Führer's headquarters: "Many older officers of high rank sabotaged Hitler's plans.... Although I'm no military expert, I know that Hitler was right about military matters more often than these people. Hitler would issue an order, and because some general would find Hitler personally offensive, this officer would indirectly disobey the order. Then when a disaster occurred, the same man and his friends dumped the blame on Hitler. And they often lied right to his face."

Herbert Brunnegger, serving in the SS Totenkopf division, recalled that the day before the offensive, "Two deserters, waving a white flag, come over to us from the Pirol woods. . . . The deserters tell us what we still don't know; the scope and exact timetable of our offensive!" During the battle, Brunnegger continued, "I learn from one of our artillery officers that this operation was already postponed twice because the attack schedule had been betrayed." Hitler called off the slow-moving, costly advance in less than two weeks.

The fighting at Orel-Belgorod coincided with Anglo-American landings in Italy. This compelled the OKW to transfer troops to the Mediterranean theater, so the Red Army went over to the offensive. It never relinquished the strategic initiative for the balance of the war. Traitors on the general staff continued to work for their country's defeat. General Rudolf Schmundt said this of the plotters: "They stick together through thick and thin, sabotage the Führer's orders whenever they can, naturally in such a way that the evidence never points to them. They're always scattering sand in the machinery of our armed forces. Each one watches the other's back. Officers who don't belong to their clique they try to banish to some insignificant post."

In the summer of 1944, law enforcement authorities cracked the resistance movement and began trying the ringleaders for treason. One of the defendants, the former social democrat Wilhelm Leuschner, testified about a conversation he had once had with Ludwig Beck. A general staff officer during World War I, Beck had become chief of staff in 1935. He had retired from active service before the second war, but the former general still intrigued against Hitler. His fellow plotters considered him the military head of the anti-government movement. Leuschner's recollection of Beck's words, quoted here, offer

disturbing insight into the designs of these so-called Germans: "Beck explained that there are now enough people we can depend on in positions of command on the eastern front, that the war can be controlled until the regime collapses. They arrange, for example, retreats of their units without ever informing neighboring formations, so that the Soviets can penetrate the gap and roll up the front on both sides. These neighboring units are therefore also forced to retreat or are captured."

The following illustrates what it meant to be captured by the Red Army, as Leuschner so indifferently described. In June 1944, the Soviets began a major offensive against Army Group Center. The Germans had shifted reinforcements too far south, to the sector where Gehlen had falsely warned that an enemy operation would take place. Foreign Armies East apparently took no notice of the 138 Soviet divisions and 5,200 tanks (in all 2.5 million Russian soldiers), massed opposite Army Group Center. The army group's first general staff officer, a tenanted aristocrat named Henning von Tresckow, had gradually filled the entire staff with anti-Hitler officers.

The Russian attack, Army Group Center's report for the first day stated, was "a complete surprise, since according to the current evaluation of the enemy, no one presumed such massing of enemy forces." In the path of the Soviet juggernaut was the fully operational German 4th Army. Much according to Beck's recipe for defeat, it received no orders; nor was it informed of the plight of neighboring formations. In the words of historian Rolf Hinze, it suffered from an "inexplicable lack of direction" from the headquarters of Army Group Center. Tresckow made no effort to reestablish communications or to airlift supplies. His staff dispatched not one observation plane to reconnoiter the progress of advancing enemy mechanized forces, which would have been necessary for determining a retreat route for the 4th Army. The Germans lost a total of 350,000 men during the Soviet offensive, of which 150,000 became prisoners of war. Roughly half of these men soon died from shootings along the march to collection areas, starvation or neglect during the torturous rail journey, jammed into freight cars, toward the Russian interior. The Soviets paraded 57,600 survivors through Moscow. The mob lining the street cursed, threatened and spat at the helpless prisoners. This was the fate that Tresckow, Gehlen, Beck and company visited upon their countrymen who wore the same uniform.

D-Day Normandy

Throughout the struggle against the USSR, the German soldier fought in the Mediterranean theater as well. First engaged in Libya and in the Balkans, he eventually defended Tunisia, Sicily, and Italy against slowly advancing Allied forces. He also guarded Europe's Atlantic coast in preparation for the Anglo-Americans' long-heralded invasion. Until the Allied troops that were massing in England crossed to Normandy on June 6, 1944, the German garrison in France experienced comparative tranquility. Pre-invasion France was a suitable environment for subversive staff officers to reinforce their position without distraction. They transferred abettors to the corps and divisional headquarters where the

armed forces were most vulnerable, and contrived to coordinate their sabotage with the Western Allies. The resistance liaison agent was Count Helmuth von Moltke, a wealthy landowner hoping “to exterminate the National Socialist ideology.” He maintained contact with Goerdeler, Halder and Beck, and told an English acquaintance in 1942 that he and his friends consider a “military defeat and occupation of Germany absolutely necessary for moral and political reasons.”⁹¹ Canaris sent Moltke to Istanbul the following year to establish contact with the Americans. There he met with two professors affiliated with the U.S. intelligence agency, the Office of Strategic Services (OSS).

After the interview, the pair submitted a report to OSS chief Bill Donovan, describing “the readiness of a powerful German group to prearrange and support military operations of the Allies against Nazi Germany.” The OSS drafted the “Hermann Plan,” based on negotiations with Moltke, which it forwarded to the Allies’ combined chiefs of staff. It stated that the German group is prepared “to develop as far-reaching a military plan of cooperation as possible with the Allies . . . so that rapid, decisive success on a wide front is secured.” Moltke’s accomplices offered to fly a general staff officer to England “to arrange with the western Allies the opening of the German west front” in case of a planned invasion.

U.S. records on the progress of the negotiations remain classified to this day. Washington withholds the names of German contact persons and agents who never came to light through arrest by the Gestapo, post-war admission in personal memoirs and interviews or by accident. In October 1945, representatives of the U.S. military government in Germany and the War Department convened to discuss “views on documents which should be destroyed, or to which the Germans were to be denied all future access.” The conference chairman, Lieutenant Colonel S.F. Gronich, recommended, “Serious consideration must be given to plans for the organized destruction of papers which possess no value for the Allies, and . . . which must not be permitted to fall into German hands after the departure of the occupational forces.”

Among the inaccessible records are those pertaining to U.S. collusion with German subversives before and during the Normandy invasion. The reader must decide whether incidents cited below, in which German command centers issued orders which were militarily incomprehensible given the tactical situation, are the product of pre-arranged sabotage or examples of gross misjudgment by well-trained and thoroughly experienced professional staff officers. Prior to the beginning of Operation Overlord, the Allies’ code name for the invasion, the Germans possessed a communications, espionage and reconnaissance network capable of discerning the enemy’s plans well in advance; technicians in the German Postal Investigation Office had even tapped into the Atlantic cable. In early 1944, they monitored a conversation between Churchill and Roosevelt about the approaching landings. At the same time, a specially-trained SD agent parachuted into England from a captured B-17 bomber. He had been reared in the United States, so the German-born operative could convincingly pose as a British officer of engineers. Arriving in Portsmouth, he visited unit after unit inquiring about how he could improve the troops’ equipment.

He supplied Berlin with detailed messages regarding invasion preparations using a radio transmitting a virtually untraceable signal.

April 1944, the U.S. 4th Division conducted a mock landing, Operation Tiger, at Slapton Sands, to simulate the planned attack on Utah beach along the Normandy coast. The German operative sent his superiors advanced warning of the exercise, where a large number of ships and troops would be concentrated in broad daylight. He even transmitted the precise location of the building where U.S. Generals Dwight Eisenhower and Omar Bradley intended to observe the maneuver. Though the 9th Air Fleet of the Luftwaffe had enough bombers available to launch a surprise raid on the Allied ships as the SD agent recommended, it neglected the opportunity. On the second day of the exercise, German speed boats attacked on their own initiative, torpedoing four large landing ships, causing the death of hundreds of Allied troops. The question of whether the Allies would land at Calais, where the English Channel is most narrow, or further south at Normandy, supposedly tormented German intelligence. In February 1944, an Arado 240 twinengine observation plane joined the 3rd Test Formation, an air force reconnaissance unit. Thanks to its exceptionally high speed, the Arado began safely flying two to three missions daily over English ports. Curiously, the Luftwaffe staff abruptly transferred it to Reconnaissance Squadron F100 on the eastern front in March, depriving the Atlantic defenses of this valuable spotter.

Though incapable of the Arado's performance, Messerschmidt 410 and Bf 109 combat aircraft were able to patrol the English coast during variable weather, descending from a high altitude to gain speed. The pilots identified hundreds of landing vessels assembled at Southampton and Portsmouth on April 25. They discovered no similar concentration in the English harbors of Dover and Folkestone, which were opposite Calais. German signals personnel monitoring enemy radio traffic between Plymouth and Portsmouth established beyond any doubt that these ports were the staging zones for an invasion army. Nevertheless, the general staff took no corresponding measures, such as transferring more troops to Normandy or laying nautical mines. The Germans also employed a captured American Thunderbolt fighter to photograph the enemy ship build-up that spring. Shortly before D-Day, the Allied landings on June 6, however, the OKW suspended all reconnaissance flights over England without explanation. At Tourcoing, headquarters of the German 15th Army, Lieutenant Colonel Helmut Meyer operated a sophisticated radio monitoring station. Its 30 specialists were each fluent in three languages. They intercepted English radio traffic on June 1, 2, 3, and 5 announcing the invasion. This discovery Meyer sent up the chain of command, but no one alarmed the front-line units."

In May 1942, Hitler had ordered the systematic construction of fortifications along the Western European coastline. In addition to large artillery emplacements reinforced by thick concrete walls, his plan called for a myriad of smaller steel and concrete structures. These included shallow, one-man wells to conceal machine gunners, bunkers for anti-tank or anti-aircraft guns, protected storage for munitions and shelters for personnel. The building of this Atlantic Wall, defending the beaches of Calais, Normandy and Brittany,

consumed immense quantities of cement and iron, and employed thousands of artisans and laborers. In May 1943 alone, 260,000 men were at work on the project. Defending the coast was Army Group B, consisting of the German 7th and 15th Armies. The commander of the army group, Field Marshal Erwin Rommel, believed that the invasion should be repulsed right on the beaches. Were the invaders to penetrate inland, the German army would succumb to their quantitative superiority and control of the skies.

The basic plan was that once the enemy landed, the coastal artillery and front-line infantry divisions would keep him pinned down until German armored formations could counter-attack. The Allies intended to land 20,000 men in the first wave, and have 107,000 ashore by the second night of the invasion. The German 7th Army, which would bear the brunt at Normandy, was 128,358 men strong. Many were veterans of earlier campaigns, occupying numerous fortified, well-concealed positions constructed of solid building materials. The 91st Airborne Division, comprising another 10,555 men, supplemented this force. The OKW subordinated the 4,500-man Parachute Rifle Regiment 6 to the 91st. This was a superbly trained and resolutely led formation especially suitable for combating Allied paratroopers.¹⁰¹ Supporting the 7th Army were three armored divisions comprising 56,150 men, and the Germans had three more Panzer divisions in western France. By all estimates, the defenders, even considering Allied air power, had sufficient forces on hand to repel the invasion. In fact, the American chief of staff, General Walter Bedell Smith, estimated that there was a 50 percent chance the Allies would be unable to hold the Normandy beachhead.

During the final weeks before D-Day, German staff officers neglected opportunities to strengthen the Atlantic Wall and arranged troop and supply movements that substantially weakened its defensive capabilities. One German surveillance unit infiltrated French resistance cells with 35 of its operatives. They furnished Colonel Oskar Reile, the unit's commander, with a list of lines of communications, power stations, rail and traffic junctions, and fuel depots the French planned to sabotage once the invasion was under way. They also revealed the locations of where partisans intended to ambush German troops en route to the combat zone. Reile delivered a comprehensive, written report to General Heinrich Stuipnagel, the military commander in France. The report included the prearranged sentences the BBC would broadcast to alert the French resistance that the invasion fleet is at sea. Stuipnagel, however, was secretly attempting to win the cooperation of this Communist-oriented terrorist organization for the coup against Hitler. He took no action on Reile's information.

Rommel implored the OKW to release several million French-made teller mines in storage since the 1940 campaign. He wished to incorporate them into the network of wire obstacles along the beaches. After months of stalling, the OKW delivered them a couple of days before the invasion, too late to emplace. The Germans' own coastal mines, equipped with both magnetic and pressure detonators and difficult to disarm, had been in production since 1943. Some 2,000 of these powerful explosive devices had been stowed in an underground airplane hangar at Le Mans, but instead of using them to mine

coastal waters, supply personnel received orders to transfer the mines to Magdeburg, Germany, as a "precaution against sabotage."

On May 15, 1944, the German high command transferred the second group of Fighter Squadron 26 from Normandy to Mont-de-Marsan in southern France. Only days before the invasion, it also relocated elements of Fighter Squadron 2 to airfields around Paris. The Luftwaffe still possessed 183 FW190 daylight fighters in camouflaged bases near the coast, but on June 4, 26th squadron commander Joseph Priller received orders to fly another 124 fighters to Mont de Marsan in southern France, far from Normandy. Ground personnel and ordnance would travel there by truck, hence temporarily neutralizing the squadron's combat effectiveness.

Priller telephoned General Werner Junck, chief of the 2nd Fighter Corps and protested, "This is just pure insanity! If we're expecting an invasion, the squadrons have to be here, not gone away somewhere. And what happens if the attack takes place right during the move? . . . Are you all nuts?" Junck brusquely replied that his irate subordinate cannot judge "important developments of state" from the perspective of a squadron commander. On the morning of June 6, Colonel Priller and his wing man, Sergeant Heinz Wodarczyk, strafed the first wave of the Allied landing forces. Two FW190s were all that the Luftwaffe could scramble after years to prepare a defense.

The Germans concentrated a substantial amount of artillery on the Atlantic Wall, whose crews conducted frequent firing exercises. Many batteries rested in massive concrete bunkers that could withstand repeated hits from naval or aerial bombardment. Observation posts and range finders were in reinforced emplacements to direct the fire. However, ten days before D-Day, orders came to move over half the artillery ammunition into storage in St. Lo, and the crews of the observation bunkers received instructions to dismount all range finders for immediate shipment to Paris for inspection.¹⁰⁹ On June 6, German coastal gunners had to fire on Allied warships by sighting down the barrel. Once the invasion began, the gun crews received deliveries of ammunition from the St. Lo arsenal. Projectiles were often of the wrong caliber. One 88mm battery was issued a load of special rounds for spiking the barrels.

One of the worst disadvantages for the defenders was the absence of senior officers the morning of June 6. The day before, the commander of the 7th Army, General Friedrich Dollmann, had ordered all divisional, regimental, and artillery chiefs to Rennes to take part in war games. He also personally postponed an alarm exercise for his army scheduled for the night of June 5/6. Had the drill run its course, the troops would have been on full alert when the invaders came. Other commanders were on inspection tours, hunting, or visiting Paris nightclubs. Even Rommel was away. His chief of staff, General Hans Speidel, was an active conspirator, and had encouraged Rommel to return to Germany for a family birthday party. Among the few generals to remain at his post was Dietrich Kraiss, who kept his 352nd Infantry Division on alert on his own initiative. Defending "bloody Omaha" beach, his men inflicted serious losses on the first waves of U.S. troops.

The trump card of the German defense scenario was armor. During 1943, the Waffen SS established two new tank divisions, the 9th Hohenstaufen and 10th Frundsberg. Formed into the 2nd SS Panzer Corps under Paul Hausser, their mission was to help repulse an invasion in the west, and their training emphasized countermeasures against airborne and nautical landings with enemy air superiority. In March 1944, despite Hitler's misgivings, the OKW transferred the corps to the southern Ukraine to rescue General Valentin Hube's surrounded 1st Panzer Army. Hausser's divisions accomplished the task, but the supreme command kept them in the Ukraine as an army reserve. The OKW shifted the corps from sector to sector, performing no useful purpose and disrupting training.

Corporal Franz Widmann recalled, "Then comes the report from the western front on June 6 that the Allies have landed in Normandy. We, the Hohenstaufen and Frundsberg, who had drilled and prepared for this landing for months, sat around in Russia doing nothing and waited for the Russians to attack." Finally on June 12, Hausser received orders to return with his corps to France. The fatiguing rail journey across Europe ended over 150 miles from the invasion front. Since the June nights were short, much of the road march west took place in daylight. This not only exposed the vehicles to attacks by enemy fighter-bombers but the inordinate driving distance reduced engine life of the tracked vehicles by half.

The army's most formidable formation was the Panzer-Lehrdivision. Its 229 fully operational tanks included upgraded Panzer IV's and highperformance Panthers. The division had 658 armored half-tracks serving as personnel carriers or mounting anti-aircraft guns, rocket launchers, flame throwers, and cannons. The OKW stationed this mechanized monolith nearly 100 miles from the Normandy coast. On June 4, the high command ordered the division to load its Panther tanks onto a freight train for transfer to Russia. They were en route east when the invasion began. "Taking away the Panther battalion robbed the division of its strongest attack force," wrote its last commanding officer after the war.¹¹⁴ The U.S. Army later calculated that it averaged a loss of five Sherman tanks to neutralize a single Panther in combat.

Shortly before 10:00 pm on the evening of June 5, 1944, naval personnel manning the German radar station at Paimbeouf near St. Nazaire discovered a large concentration of ships making south from England. Radio operator Gerhard Junger recalled, "It was clear to every one of us that the long awaited invasion had begun." The radar stations at Le Havre and Cherbourg also monitored the Allied armada, reporting its movement to the staff of the Commander-in-Chief West, Gerd von Rundstedt, in Paris. They further intercepted American meteorological predictions transmitted to U.S. bomber squadrons, which normally did not fly nocturnal missions. At 3:09 am on June 6, the navy reported "hundreds of ships course south" to the Supreme Command West. The Luftwaffe signals company on the isle of Guernsey off the Normandy coast identified 180 Lancaster bombers towing gliders toward the mainland at 10:40pm. The commander of a German army regiment on the island was duly notified, and relayed the information to an adjutant at his corps headquarters in St. Lo. Having hosted guests that evening at Army Group

B headquarters in La Roche-Guyon, Speidel received word from General Erich Marcks' army corps of Allied airborne landings in five different areas, another report from the Navy Group West of paratroopers dropping in sectors defended by the German 716th and 711th Infantry Divisions, confirmation from Major Förster about the situation developing near the 711th and a Luftwaffe report that 50-60 transport machines were ferrying in enemy paratroops. Speidel did not alarm his divisions. When Rundstedt's staff telephoned Speidel for clarification, he replied that "the reports are considered exaggerations." Army Group B headquarters wrote them off as "possibly confused with flight crews bailing out." The commander of the 716th Infantry Division, General Wilhelm Richter, wrote that there was no alert until Allied paratroopers were already in action. The chief of staff of OB West, Günther Blumentritt, justified not sounding the alarm to avoid "unnecessarily disturbing the troops, who...need time to sleep."

Once the landings were under way, Rundstedt formally requested immediate release of the three armored divisions in Normandy from the OKW reserve for deployment at the front. From Hitler's headquarters General Alfred Jodl refused, explaining, "according to the reports I've received, this attack can only be a feint. ... I don't think now is the time to release the OKW reserves." In Rommel's absence, Speidel had persuaded the Führer's headquarters by telephone that until the situation becomes "clarified," the OKW has to "keep its nerve and wait." Rundstedt's chief of operations, Colonel Bodo Zimmermann, telephoned the OKW to protest the senseless delay. The OKW's Baron Horst von Buttlar-Brandenfels, another general conspiring against the government, shouted in reply, "You have no right without our prior permission to alarm the armored troops. You are to halt the panzers at once!"

The OKW posted the weakest of the three reserve armored divisions, the 21st, closest to the coast. Despite the urgings of its commanding officer to authorize an attack against British paratroopers who had landed nearby, Speidel denied permission at 4:30am to commit the division's panzer regiment. The formation remained concealed in a wooded area for hours. Finally released by the 7th Army to attack the drop zone, Panzer Regiment 22 began rolling at 8:00am. Speidel soon directed it to aboutface and advance toward the coast, keeping the troops on the road and out of action for much of the day. The 21st suffered repeated aerial attacks and lost 50 tanks on the march. It ultimately attacked on direct orders from Rommel, who had just returned to Normandy. Speidel had briefed his commander-in-chief on the situation in a telephone conversation at 10:15 am. The marshal's arrival late that evening put an end to his chief of staff's dilatory tactics. Speidel had however, effectively sabotaged the timely deployment of three armored divisions. During midday on June 6, he also refused requests by General Max Pemsel to reinforce the hard-pressed 716th Infantry Division, defending the east bank of the Orne River, with elements of a neighboring formation. The division was practically wiped out by nightfall.

The 12th SS Panzer Division Hitlerjugend was alerted by its commanding officer at 2:30am and by the OB West at 4:00. On his own initiative, Speidel sent the division in the wrong direction. In position near Lisieux, it received his instructions to transfer 30

miles further from the coast. "The order had a shocking effect" on the troops, wrote its first general staff officer, Hubert Meyer, after the war. A new directive arrived for the division to about-face and advance toward Caen late in the afternoon. "That meant a change of direction, more time lost and for our strung-out armored unit, one more day's march under rotten conditions," recalled the Panther crewman Georg Jestadt. "We had the impression that the whole movement of our army's components was like an anthill someone had struck with a stick." Jestadt reflected on the corresponding influence on morale: "Disappointment, even anger spread among the men. Almost every soldier saw that something here just isn't right." Heinz Schmolke, a company commander in the division's Panzer Grenadier Regiment 26, wrote later, "The troops and frontline officers of all ranks knew back then that the enemy had to be driven back into the sea in his moment of weakness; that is during the first hours after the landings.... My regiment only went into action on the third day of the invasion, although we could have engaged the enemy within the first three hours."

The *modus operandi* of various army staffers was to keep the troops on the roads as long as possible, often exposing the men to strikes by Allied aircraft. As columns of the Panzer-Lehrdivision approached Caen, according to a surviving officer, "they were discovered by enemy aerial reconnaissance and a short time later attacked with machine guns, rockets, and bombs. . . . Soon black pillars of smoke from the burning vehicles revealed the route for fresh waves of fighter-bombers. Even today, many years later, recalling this march causes nightmares for everyone who participated." The division lost ten percent of its strength before reaching the combat zone. Despite the protests of its commanding officer, Fritz Bayerlein, Dollmann had ordered the Panzer-Lehrdivision to advance on Caen at 5:00pm, in broad daylight, after having withheld its marching orders for nine hours.

On D-Day, Rommel ordered the transfer to Normandy of the fullymotorized 3 Flak Corps, quartered south of Amiens, but the corps commander, General Wolfgang Pickert, only learned of the invasion well into the afternoon. He first had to drive to Paris to get confirmation. His batteries, which were also effective against armor, did not reach the front until June 8 and 9.¹³¹ Even arriving late, the corps shot down 462 aircraft and destroyed over 100 Allied tanks.

One staff officer who played a primary role in thwarting German countermeasures at Normandy was Colonel Alexis Freiherr von Roenne. As chief of Foreign Armies West and a protégé of Gehlen, he sought to deceive Hitler, Rommel, and Rundstedt through bogus reports that the Normandy operation was a feint intended to divert German formations from Calais, further to the north where the real invasion was supposedly about to take place. General Eisenhower had hoped to mislead the defenders through operation Fortitude, consisting of false reports about a fictitious "First U.S. Army Group" waiting in reserve in England to launch an invasion at Calais. Roenne came by this information as the Allies had intended. He forwarded it to the OKW, but not before drastically inflating the number of American divisions beyond that which U.S. intelligence had fabricated on

June 2. Receiving Roenne's analysis, Speidel's staff actually increased the tally further. The assessments regarding the Allies' disposition and plans that Roenne supplied to Army Group B were too consistently inaccurate to have been unintentional. Evidence of surveillance refuting Roenne's mendacious predictions never reached the Führer. At dawn on June 6, Lieutenant Adalbert Bärwolf flew a Messerschmidt Bf 109 model G8 observation plane over the Allied invasion fleet. The photographs he took of the enormous armada off the Normandy coast should have dispelled any doubt that this was the only landing force. The general staff of Army Group B took no action, nor did it forward the images up the chain of command

Staff officers transplanted from the eastern front caused terrible consequences for the German defense at Normandy. In May 1944, General Wagner, remiss in shipping cold weather gear to the troops in 1941, attempted to transfer the entire stockpile of artillery rounds for the 352nd and 716th Infantry Divisions to an army ammunition depot far behind the lines. This was supposedly to increase the amount of munitions in reserve. Only the intervention of General Marcks prevented Wagner from carrying out this suspicious directive, which would have practically crippled the two divisions on D-Day. Wagner appointed Colonel Finckh, who had previously mismanaged supply deliveries to Stalingrad, to quartermaster for Rommel's army in June 1944. Almost immediately, deliveries to the front of fuel and munitions slowed down drastically. The German method of employing French waterways at night to convey materiel remained successful and undetected by the Allies until Finckh interfered. Under his direction, just one tenth of the artillery's allotted ammunition was coming forward, despite sufficient stores in the depots. The troops were receiving only one fifth of the required quantity of other supplies. On July 2, General Alfred Gause reported from Caen that only three to five rounds per gun were available to German batteries per day. Rommel assigned General Friedrich Dihm to investigate the bottleneck. Dihm advised Rommel of Finckh's dereliction of duty. The field marshal wanted Finckh courtmartialled.

Among the supplies that never reached the front, subsequently falling into U.S. hands, were 500,000 gallons of aviation fuel and 175,000 day's rations for the troops, including 2.5 million cigarettes. What German soldiers did receive was often useless. At Carentan for example, transport planes airdropped provisions to Parachute Rifle Regiment 6. The German paratroopers, low on small arms ammunition, found some containers filled with condoms.

Hitler believed that treason played a decisive role in the success of the Allied landings. Regarding the German defense of Cherbourg, Rochus Misch of the Führer's staff recalled, "Pictures reached us from Sweden showing a German colonel in command of a bunker installation defending Naturally without having fired a single shot.... Nothing, absolutely nothing worked right on the German side during the invasion. There was but one explanation; betrayal and sabotage."

In his memoirs, Corporal Otto Henning of the Panzer-Lehrdivision attributes the fall of Cherbourg to "unknown individuals in the Führer's headquarters," who stalled the trans-

fer of fully equipped reserves to Normandy while the 7th Army bled. The eyewitness Henning's verdict: "One can't avoid the impression that here, the most varied orders were intentionally twisted, while other, equally important orders were simply never forwarded." Gestapo chief Müller, perhaps the best informed man in Germany with respect to sabotage, said after the war, "A great measure of the German military's wretched performance in France after the invasion was the result of attempts by the conspirators and their friends to surrender to the Western powers or to let the Americans and the English pass right through our front lines, so that they would reach Germany before the Russians did."

German headquarters staffers failed to alarm front-line units, air crews, and naval forces in a timely manner. They delayed counterattacks, issued frequently conflicting orders, and commanded anti-aircraft batteries to hold their fire during the Allied aerial bombardment of the Le Havre naval base. They transferred combat-ready formations away from the enemy, and plotted against their own government. Speidel, who in Rommel's initial absence directed Army Group B during the critical first stage of the invasion, spent much of the morning of June 6 playing table tennis with fellow staff officers.

It is inconceivable that the German army in France, major component of an experienced combat force accustomed to fighting at unfavorable odds, could function in such chaotic fashion after months of preparation and rehearsal for a crucial battle. In January 1944 by comparison, withdrawing German troops in Italy occupied the Gustav Line south of Rome. Their engineers had begun fortifying it the previous October. Despite being outnumbered in some sectors by Allied forces ten to one, with virtually no armor or air support, the German defenders held their position for four months. At Cassino, the key position on the Gustav Line, a New Zealand division spent four days trying to neutralize a single German panzer concealed in the ruins, suffering nearly 300 men killed. The Germans at Normandy possessed hundreds of panzers and stronger, more systematically prepared defenses, yet forfeited the initiative on the first day of combat.

Stauffenberg

So surreptitious was the German resistance movement, its ruinous influence may never have come to light but for a single incident. A bungled attempt to assassinate Hitler on July 20, 1944, prompted an ongoing state investigation. This exposed the conspiracy to sabotage the German war effort. It led to the death by firing squad, suicide, or execution after trial of 160 plotters. The would-be assassin was Count Claus von Stauffenberg, chief of staff of the Reserve Army since July 1, 1944. There were approximately half a million soldiers, trained and fully equipped, awaiting transfer to the front. In charge of the Reserve Army was General Friedrich Fromm. To weaken the field formations, he contrived ways to delay the deployment of the ersatz troops under his administration. During the first month of fighting in Normandy for example, the Germans suffered 96,000 men killed, wounded or captured. Under Fromm's direction, the western army received

just 6,000 replacements and 17 new tanks. In July, battalions stationed in Holland for the purpose of replacing losses to infantry divisions fighting in Normandy were transferred to southern France instead.

Stauffenberg represented Fromm at the Führer's headquarters in Rastenburg during situation conferences. His job was to report on the progress of replenishing the combat divisions with reserve personnel. Stauffenberg understood his mission as the fabrication of plausible excuses for why only a fraction of the troops languishing in homeland garrisons were moving forward. An officer on Goebbels's staff summarized the deceptive explanations Stauffenberg offered Hitler: "The air raids are responsible, he says. Then only the gas masks are lacking, next the NCOs still have some mandatory course, or a particular type of ammunition isn't available, or rather can't be delivered because of the destroyed transportation network, an arsenal suffered a direct hit where the rifle bolts for a whole regiment were stored. . . . Always at the last minute something gets in the way." Stauffenberg once told fellow plotters that their "allies" were Germany's "military crises and defeats." Stauffenberg concealed in his brief case a time bomb, weapon of choice for terrorists worldwide, and smuggled it into the July 20 conference at Rastenburg. He prudently left the session before the explosion and boarded a courier plane for Berlin. The blast superficially injured Hitler but mortally wounded a stenographer and three officers. Several others among the 24 participants suffered injuries. Among those to die was Rudolf Schmundt; he had recently used his personal influence with the Führer to promote Stauffenberg's lackluster career. Another victim was the staff officer Colonel Heinz Brandt, an opponent of National Socialism whom no one had forewarned of the day's agenda.

At the OKW offices on Bendler Street in Berlin, accomplices awaited news of Hitler's demise to launch *Wälkure*, the coup to overthrow the National Socialist government. There among others were the pensioned General Ludwig Beck, ex-general Erich Hoepner, who had been dishonorably discharged from the army in 1942 for insubordination and cowardice, the retired Field Marshal Erwin von Witzleben, and General Friedrich Olbricht, who was Fromm's subordinate (Based on the examination of captured German records, the U.S. State Department later established that Olbricht had leaked military secrets to the Red Orchestra via Gisevius). When Stauffenberg arrived, he told his colleagues that the commander-in-chief did not survive the bombing. The plotters therefore set the revolt in motion. Back at Rastenburg, General Fellgiebel, who was privy to the planned assassination, did not contact the Berlin conspirators to warn them of its failure. Instead, he was among the first to congratulate Hitler on his narrow escape from death. Fellgiebel was able to briefly block communications between Rastenburg and the outside world, but could not indefinitely disrupt telephone service. Hitler reached Goebbels in the capital. He also spoke on the line with Major Ernst Remer, commander of the Berlin Watch Regiment. He ordered Remer to arrest the conspirators.

One reason for the coup's rapid collapse was the lack of cooperation the usurpers received from the army. Signals personnel on the Bendler block monitored the Führer's telephone

conversation. Aware of the circumstances, they did not transmit teletype orders formulated by the plotters to military units. Colonel Fritz Jäger, a member of Stauffenberg's circle, visited several barracks to muster a company of riflemen to seize the radio station, the propaganda ministry, and to arrest Goebbels. He could not find a single soldier willing to carry out his orders. Stulpnagel and a handful of like-minded aristocrats supported the coup from their Paris headquarters. They managed to mobilize a battalion of German Security Regiment No. 1 to arrest members of the SD and the Gestapo, including the SS police chief in Paris, Carl Oberg, in their office. Stulpnagel's associates persuaded the battalion's troops that the SD had rebelled against Hitler; only through this fiction did they gain the men's cooperation. In Berlin, one of the teletype orders Witzleben drafted for the army falsely blamed "an unscrupulous clique of party leaders who are nowhere near the front" for the mutiny he himself helped instigate. According to an analysis by a contemporary German historian, "The plotters did not risk openly confessing that the coup was directed against Hitler, but argued instead to be acting supposedly in the name of the dead Führer against an 'unscrupulous clique.' They were themselves not certain in their own cause. They feared that most of the armed forces and the German people stood behind Hitler in their hearts and would therefore not obey them."

Military members of the resistance movement had no connection with the rank-and-file of the armed forces. "They have nothing within them in common with the German soldier," charged the *Völkischer Beobachter* on July 22. Stauffenberg, for example, had never held a combat command. His army driver, Karl Schweizer, testified later that the count had maintained a generous supply of wine, champagne, schnapps, liqueurs and tobacco at both his Berlin residence and his duty office in the war ministry. Lieutenant Colonel Fritz von der Lancken had regularly procured these luxury items, unavailable to the front-line soldier or to the German public in the fifth year of war, for his fellow conspirator. Schweizer stated that he could scarcely remember a day when Stauffenberg did not consume alcohol. The count had also arranged for frequent deliveries to his address of smoked eel, oil sardines and other delicacies through administrative contacts with North Sea fisheries.

The chief of the SD, Dr. Ernst Kaltenbrunner, prepared a series of confidential reports for the Reich's Chancery analyzing the motives of the plotters. After the war, the former resistance member Friedrich Georgi judged the reports to be "absolutely sober and factual, if not of course one-sided." Regarding Stauffenberg, Kaltenbrunner concluded in his September 23, 1944 report that the count and his circle of aristocrats "pursued not only political objectives but social ones, namely to reinstate and maintain the privileged position of a select, socially-connected group of persons."

Major Remer wrote of July 20, "The presumed death of Adolf Hitler left all the officers and also the troops in a state of shock. Never in my life, even after the collapse (in 1945), have I witnessed such profound sorrow." In his post-war autobiography, Günther Adam, a veteran of the SS Hohenstaufen division which was deployed in France that July, included his own recollection: "That evening, after a day of combat, some young

army officers come to us in our command post and tell us that there was an attempt on the life of the Führer that had failed. They said that senior army commanders had been involved. They ask in complete sincerity if they can join us, since they are too ashamed now to be officers of the army." In the opinion of Rolf Hinze, a veteran of the 19th Panzer Division, the assassination attempt came "at the most unfavorable time imaginable, at a time when unified, firm leadership was essential. The troops felt this way regardless of their diverse ideological viewpoints, even among those who inwardly rejected Hitler. Everywhere we heard the expression, 'stab in the back', and were relieved that the Führer's central authority remained intact." The Führer's adjutant, Colonel Nicolaus von Below, stated, "In as much as the senior generals had lost that unswerving confidence in Hitler, in the same measure the ordinary soldier trusted in his leadership. I have no doubt that only this fact held the front together."

Right after the assassination attempt, signals personnel at Rastenburg discovered Fellgiebel's secret telephone line to Switzerland that had served to communicate military intelligence to Soviet agents. The Gestapo questioned staff officers, some of whom were already on the watch list, making arrests when suspicion of subversive activity surfaced. Colonel Below told the Führer of word received from his cousin: Since the roundup began, his army corps on the eastern front was finally receiving supplies at consistent and timely intervals. Discovery of the sabotage "totally depressed" Hitler, Goebbels told an associate. The Führer's personal security officer, Hans Rattenhuber, said this to Giesler: "The betrayal of the fighting front hit him harder than the attempt on his life. He just repeated to us that he has long reckoned with being shot at by someone in this reactionary clique. But something this underhanded he never would have expected from an officer, certainly not this shabby betrayal of the soldier who risks his life every day for Germany."

In the past, Hitler had not acted on warnings from NSDAP subordinates about the general staff's disloyalty. A military liaison officer in the propaganda ministry, Colonel Hans Martin, recalled that Goebbels claimed to "possess a great amount of irrefutable evidence that a defeatist attitude among many officers of the OKW, especially in the OKH, is assuming serious proportions." The Führer nonetheless shielded them from attacks by Goebbels and Himmler. The officers had sworn an oath of fealty to him, and "he firmly believed in their code of loyalty and honor," wrote another Goebbels aid, Wilfred von Oven. Addressing the Rastenburg staff on July 24, Jodl told how whenever suspicions had surfaced about particular officers, Hitler had "laughed it off goodnaturedly... as with the case of General Fellgiebel, who had already brought attention to himself through some of his remarks."

The Führer expressed bitterness over the affair to his staff: "I took over the old officer corps just as it was, preserved its traditions, and respected them," he said. "I advanced the officers' careers and their economic status whenever I could. I recognized their achievements and rewarded them. I promoted and decorated them. Each of them who reported to me I shook hands with as a comrade. And now every officer up to general

who comes to me I have to have searched in a vestibule first, in case he's bringing in some killing device like this Count Stauffenberg, who had nothing better to do than sneak a bomb under my conference table to rid the world of me and his own comrades."

The German public reacted to news of the assassination attempt "with horror and loathing," the former Gauleiter Rudolf Jordan recorded in his autobiography. "In the evening I addressed the population outdoors in the cathedral square in Magdeburg. The whole town took part in this demonstration of loyalty, with deep emotion. It seemed to me that in view of the fateful, life-or-death situation of the war, the people stood behind Adolf Hitler as one." The Lutheran bishop of Hannover, who was personally unsympathetic to National Socialism, publicly condemned Stauffenberg's "criminal scheme."

At Carlshof hospital, Hitler visited officers who had been seriously injured in the July 20 bombing. He offered General Karl Bodenschatz an analysis of the murder plot: "I know that Stauffenberg, Goerdeler, and Witzleben thought through my death to rescue the German nation. . . . But these people really had no fixed plan of what to do next. They had no idea which army would support their coup, which military district would help them. First of all, they had not established contact with the enemy. I've even found out that the enemy refused their offer to negotiate."

Hitler's information was accurate. In April 1941, the Reich's Foreign Office assigned Hans Buwert to manage France's Hachette Publishing House. In late 1942 the Berlin police chief, Count Heinrich Helldorf, and a general staff officer, Count Heinrich Dohna-Tolksdorf, brought him into Stulpnagel's circle. Buwert met with Allied representatives during a trip to Spain and Portugal. "Contact with the Allies turned out badly," he wrote later. In the summer of 1940, the Churchill cabinet had adopted the policy of "absolute silence" toward the German resistance. Even before the war, the British Foreign Office had cautioned against such an alliance. In November 1938, Undersecretary Sargent had warned in a memo, "An open and capable military dictatorship could be even more dangerous than the NS regime."

The subversives encountered another obstacle with respect to the United States. At the Casablanca conference in January 1943, Roosevelt publicly announced that the Allies will accept nothing less than the Reich's unconditional surrender. What this portended for Germany, FDR's private notes from December 1944 reveal: **"Whatever measures may be taken against Japan and Germany, they must in any case include the reduction of their industrial output, to prevent them from competing on the world markets against the English, French, Dutch, Belgians, and other exporters, and against us as well."** U.S. General Albert Wedemeyer wrote, "The western Allies made not the slightest attempt to divide the Germans by promising the enemies of the Hitler regime acceptable peace terms."

The Allies' attitude was no secret to members of the resistance movement. Count Ulrich Schwerin von Schwanefeld, a staff officer and determined advocate of Hitler's murder, continued his intrigues even though acknowledging that FDR will not mollify

surrender conditions.¹⁷⁷ Just two days before Stauffenberg bombed Hitler's situation conference, the conspirator Otto John returned from fruitless negotiations with Allied representatives in Madrid. He informed his fellow plotters that even were the Führer dead, unconditional surrender is still in force.¹⁷⁸ He ultimately acknowledged that "the internal German resistance against Hitler was no longer a factor of significance for the political and military strategy of the western powers... in contrast to the resistance in France, which was nurtured by the western powers morally and with all kinds of materiel."¹⁷⁹

The staff officer Tresckow, who described Hitler as "a mad dog that has to be put down," also realized that the demise of his commander-in-chief would have no influence on the Allies' war effort. Dr. Eugen Gerstenmaier, a former conspirator and president of the West German parliament after the war, stated in a 1975 interview, "What we in the German resistance during the war didn't really want to see, we learned in full measure afterward; that this war was ultimately not waged against Hitler, but against Germany." Right after Stauffenberg's botched assassination attempt, British radio stations for Europe broadcast the names of Germans known to the English to be conspiring against Hitler. This enabled the Gestapo to round up the subversives more quickly. A BBC editorial dismissed the coup as a product of Prussia's military caste, the very stratum which the Anglo-Saxons are waging war to eradicate. The German people, the BBC continued, would be deceiving themselves to entrust their leadership to such people. Fritz Hesse, a specialist on English affairs in the German

Foreign Office, monitored the Allied reaction and ventured, "Not much further and the English and American radios would have congratulated Hitler on his survival." The Führer, shocked at the hostility manifest in some Allied news coverage, remarked to Ribbentrop, "These people hate Germany even more than they do me." On July 25, John Wheeler-Bennett, a British historian assisting the Foreign Office in London, submitted a memorandum on the consequences of the recent events at Rastenburg: "It may now be said with some definiteness that we are better off with things as they are than if the plot of July 20 had succeeded and Hitler had been assassinated. . . . The Gestapo and the SS have done us an appreciable service in removing a selection of those who would undoubtedly have posed as 'good' Germans after the war. . . . It is to our advantage therefore that the purge should continue, since the killing of Germans by Germans will save us from future embarrassment of many kinds." Churchill, Eden, and the Foreign Office staff accepted Wheeler-Bennett's viewpoint. An in-house analysis prepared by the OSS also regarded Hitler's escape as a blessing, explaining that it robbed the conspiring German generals of the opportunity to dump the blame for losing the war on him alone.

One German general who clearly understood the Allies' outlook was Walter von Brauchitsch, commander of the army until December 1941. In April 1940, Halder had presented him with a written proposal to overthrow Hitler and reach a settlement with the West. Brauchitsch rebuked him with the words, "What's going on here is pure treason. . . . In wartime this is unthinkable for a soldier. This battle isn't about governments

anyway, but a battle of diametrical ways of life. So getting rid of Hitler will serve no purpose."

A Contrast of Motives

In July 1944, the armed forces journal *Offiziere des Führers* (Officers of the Führer) published an essay by Walter Gross of the Racial Policy Office. It presented the usual argument that bloodlines contribute more to a person's intrinsic characteristics and qualities of leadership than academics and material circumstances. With respect to the military, Gross added this: "On the Führer's orders, the officer's career became open to every German man without consideration of social origin and education. Some expressed misgivings. They saw this as the intrusion of a radical socialist principle, and a danger to the accomplishments and bearing of the officer corps. Dozens of times I've encountered objections to this National Socialist innovation; objections from those who point to the lofty, inherent value of a leadership class cultivated over generations of selecting the best from soldiers' and officers' families." Gross parried this protest with the observation that any traditional, exclusive system stifles the development of unexplored human resources within the nation: "Beyond such socially elevated families, there also rests within a people thousands upon thousands of individuals of comparable aptitude, submerged in the broad masses. They possess the same value to the community and are capable of accomplishing just as much in a particular field as the best of the old, cultivated families. . . . Wherever people with similar and equally precious qualities lie undiscovered, then it is possible and indeed necessary to find them, and place them in communal life. With the right training, they can achieve the utmost they're capable of. . . . The standard for determining whether the inherent prerequisites are present or are lacking, is one and the same for both groups; it lies exclusively in accomplishing the task at hand."

When Hitler reinstated national defense before the war, the men occupying positions of command had entered service during the time of the old army. Many senior officers displayed little imagination or adaptability to warfare's innovations such as armor, aviation, and elastic defense. Their shortcomings became especially apparent in the campaign against Soviet Russia. Some generals lacked the boldness, initiative, and raw nerve to outthink, outmaneuver, and outfight such an imposing military goliath and were dismissed. Replacing them were often men from ordinary backgrounds. Hitler himself stated in January 1944, "More than 60 percent of the new officer corps rose through the ranks, creating a bridge to the hundreds of thousands of workers, farmers and members of the lesser middle class."

Though deprived of imperial privilege, the scions of Germany's distinguished families retained their ancestral honors, and found the same path of opportunity open to them as to all of their countrymen. Most men of their younger generation dutifully entered frontline service during World War II, doing credit to their traditional standing. The inveterate conservatives and reactionaries among the aristocracy gravitated to the diplomatic corps

and to the general staff, where they could inflict maximum damage to the German cause at minimal risk. Solitary and aloof, the resistance movement allied itself with the only group capable of destroying the social revolution that had transformed Germany: the enemy. To topple a form of government, the subversives accepted the enemy's war aims, with all the consequences for their own country.

During a session with the Western Allies in Madrid on April 17, 1944, the conspirator Otto John asked that the demand for unconditional surrender be rescinded. The Anglo-American representatives replied that they intend to allow the Russians to be the first to invade Germany and enter Berlin. The Germans deserve to be punished, they maintained, and the job was better left to the Soviets. The Russians discharged the task as follows: In October 1944, the German 4th Army repulsed an offensive toward Königsberg in East Prussia by the Soviet 11th Guards Army. Recapturing Nemmersdorf, German soldiers discovered 72 murdered civilians, including the ravaged bodies of young women whom the Russians had nailed to barn doors. In Schillmeyszen in the Memel territory, the German artillery gunner Erich Czerkus was among the counterattacking troops re-entering the village, which was his home town. This is what he discovered after the withdrawal of the Soviet 93rd Rifle Corps: "I found my father in a barn, lying face-down with a bullet hole in his neck. In a stall lay dead a man and a woman with their hands tied behind their back, both bound together by a rope. In another farm we saw five children with their tongues nailed to a large table. Despite a desperate search I found no trace of my mother. While looking, we saw five girls bound together with rope. Their clothing was completely stripped away and their backs badly lacerated. It appeared that the girls had been dragged a long distance." The Germans documented countless other atrocities.

The Soviets renewed the invasion of East Prussia in January 1945. They surrounded Königsberg. The German army conducted a relief operation beginning on February 19. Several German divisions, including the 5th Panzer, simultaneously attacked outward from the invested city. In the town of Metgethen, advancing troops recovered the bodies of 32 women whom the Russians had raped, murdered, and thrown into a shell crater. Master Sergeant Kurt Göring, a German tank commander participating in the attack, offered this testimony: "Then we reached Metgethen. We were appalled to see what had happened here. At the rail station was a refugee train standing on the tracks, with women and young girls. They had all been raped and murdered. We wrote on the side of the rail car, 'Avenge Metgethen.' The fighting went on without quarter."

Another eyewitness participating in local German counterattacks was Sergeant Günther Adam, who recalled this: "We attacked and recaptured a town displaying the same crimes of these beasts. On a snow-covered, trampled-down village street was what remained of a young woman. It looked as though she was wearing a fur coat. She was lying on her back, her arms and legs outstretched. (The Soviets) had run her over with a tank and crushed her. This bloody, ground-up mass was frozen solid and the most horrible thing I ever saw during the war.... In a house, we found some men who had been beaten to death. In blood-soaked beds were ravaged women, who were still alive. Then worst of

all, we found the head of a baby spiked to a bed-post.”

Red Army units overrunning German POW camps ruthlessly impressed the Russian inmates into first wave infantry battalions, or treated them as deserters. At the Alt-Drewitz camp, they fired on 30 American prisoners whom the German guards had failed to evacuate, killing some. This was the Soviet army, which Stauffenberg, Olbricht and their associates enabled to enter Germany. The Western powers also waged war against German civilians, but from the air. In July 1943, the British Royal Air Force and the U.S. Army's 8th Air Force conducted several nearly consecutive bombing missions against Hamburg. In the bombardment 30,482 residents perished by being blown apart, incinerated, asphyxiated, or buried by rubble. Among them were 5,586 children. Fires destroyed 24 hospitals, 277 schools, and 58 churches. An officer assisting in the evacuation of refugees described how some passenger cars carried grey-haired children, aged practically overnight from the terrors of the raid. Among the eyewitnesses was Gerd Bucerius of the resistance movement. In a Hamburg suburb, he watched the approach of the English bombers from his rooftop: “Finally, I shouted! Too long I have waited for the Allies to destroy the world-enemy Hitler. . . . What horror, what sorrow, I naturally thought back then. But also, you dead want it this way. And whom did I worry about during the attack? The pilots! They were valiant and did what I had hoped of them.” After the war, the U.S. Army conducted a survey of German morale. Responding to the query about what caused the population the greatest suffering under Hitler, 91 percent of Germans who were polled cited Allied air raids. Just two percent completing the questionnaire marked “loss of freedom” or “Nazi crimes.”

“July 20 demonstrated that thoughts about high treason had no roots in the majority of the people,” Schwarz van Berk summarized. “What deprived the would-be usurpers of the last grain of sympathy was the clearly apparent intention of those involved not to risk their lives for what they claimed was an urgent necessity in the interests of their country, but to personally survive and satisfy their ambition for future positions of authority.” This SS officer also emphasized that the Gestapo was not the force that maintained cohesion and kept the Germans in line. This, he argued, was an illusion nurtured among those opposing the government. “The people and the troops fought bitterly and doggedly in the awareness that this struggle was literally a question of national and personal existence. Especially on the eastern front, there were as good as no deserters in the front lines. There were practically no saboteurs on the workbenches in the armaments factories at home. . . . The nation stood as never before in common cause, summoning all its moral strength to survive.”

Of the 70 military officers implicated in the plot to overthrow or assassinate Hitler, 55 were aristocrats. This class-conscious clique resorted to sabotage, treason, and murder to achieve its ends. Also dissatisfied with elements of the Reich's foreign and domestic policies were members of the Waffen SS. Youthful and idealistic, they fought both to preserve their continent from foreign invasion and for revolutionary change, not to restore anachronistic distinctions in title and rank of the former imperial age. The SS men

promoted their social and political agenda through loyalty, service, and sacrifice. They gained influence through courage and commitment, working within the legal framework to reform rather than destroy the existing order. They were prepared to give up more than they expected to gain as individuals, for the benefit and growth of the European community. A comparison of two persons, one an icon of the resistance and the other an ordinary German infantryman, illuminates the essence of the contrast: The son of a prominent psychiatrist, Pastor Dietrich Bonhoeffer covertly assisted the Abwehr in its intrigues against the German cause. His relatives traded profitably on the black market. Visiting Geneva in 1941, he told fellow clerics, "The Christian faith must be rescued, even if an entire nation must perish" (He apparently saw no contradiction in aiding the Soviets)... "I pray for the defeat of my fatherland." Nowhere near the fighting front, Bonhoeffer occasionally travelled and enjoyed a comfortable existence until April 1943, when the authorities jailed him for undermining the war effort.

In August 1940, the 17-year old Fritz Hahl volunteered for the Waffen SS. Assigned to the Wiking division, he saw his first action against the Red Army on July 1, 1941. During the balance of the war, Hahl was on the front line 861 days. He suffered seven wounds in combat. He wrote after the war, "Today I can no longer comprehend how as a young man from 17 to 22 years of age, I found the strength to keep my self-control again and again, to conquer my fears and then continue fighting, and despite the setbacks still believe in a good outcome. One argument alone determined my actions and those of my generation: Together with my troops, like all German soldiers, we wanted to protect our homeland with its women and children from the Soviets - and without regard for ourselves."

12.19 Bits and Pieces about the War

"I lived in Germany during the 1980's when many people who lived during the war were still alive. I sought out anyone who lived near Poland in 1939 and was lucky enough to meet several people. One was a customs official who said it was so bad on the border they were armed and also had grenades in their office ready for attacks. Another told me his farm animals were often stolen by Polish (Jewish?) terrorists. Another told of his niece being raped by a Pole who crossed the border. He told me in 1940 they caught the man and showed me a copy of the death order signed by Heydrich, in which he ordered the man be put to death. This is just one of many stories told to me by German civilians who witnessed these border incursions just like had happened in 1919-1928. One thing many people fail to see is that Poland openly attacked Germany right after World War I, which led to many border battles. Once Germany started pressing Poland to work out a solution to the corridor, the attacks started again. .And one thing that is clear to me is that Germany did not make up these attacks." - George H. Ohio, USA

SEPTEMBER 17, 1939 Soviet Union Invades Poland

With the Polish army being routed by the advancing Germans in the west, Stalin cleverly decides to break the Soviet-Polish Non Aggression Pact of 1932. Poland is stabbed in the back as Soviet forces pour in from the east. The advancing Reds carry out massacres, the most infamous being the Katyn Forest Massacre in which 10,000 Polish Army officers are shot in the head. Other than the pre-Versailles German areas which Germany reclaims, the Soviets will eventually take all of Poland. In a shocking double-standard, the anti-German, FDR, France & the UK remain oddly silent about this brutal Soviet aggression. Poland appeals to Britain for help, citing the Poland-British Defense Pact just signed a few weeks ago. The Polish ambassador in London contacts the British Foreign Office pointing out that clause 1(b) of the agreement, which concerned an "aggression by a European power" on Poland, should apply to the Soviet invasion. The UK Foreign Secretary responds with hostility, stating that it was Britain's decision whether to declare war on the Soviet Union. The truth is, the Allies don't give a rat's ass about Poland. They only used its foolish ultra-nationalist leader, who by now has shamelessly abandoned his troops and fled to Romania, to instigate Hitler so that they could have their war. The horror that Poland will suffer under Soviet occupation is now Poland's problem, not Britain's.

OCTOBER, 1939 – MAY, 1940 Hitler pleads for Peace

The German-Polish War has ended quickly. The Allies never had any intention of helping Poland. The French actually invade Germany on September 7th, advancing 8 km before stopping. The quiet period between the end of the Polish war until May 1940, is dubbed by a U.S. Senator as "The Phony War." During this time, Hitler pleads for the Allies to withdraw their war declarations. Towards France he declares: "I have always expressed to France my desire to bury forever our ancient enmity and bring together these two nations, both of which have such glorious pasts." To the British, Hitler says: "I have devoted no less effort to the achievement of Anglo-German friendship. At no time and in no place have I ever acted contrary to British interests. . . . Why should this war in the West be fought?" Hitler's pleas for peace are ignored as the allies begin to mobilize more than 2,000,000 troops in Northern France. Plans are openly discussed to advance eastward upon Germany, via "neutral" Belgium and Holland, as well as establishing operations in "neutral" Norway and Denmark, with or without their consent.

APRIL 9, 1940 Norway and Denmark

The Allied plan of attack is to disrupt Germany's iron ore imports from Sweden by illegally mining Norwegian waters, and then occupying the important Norwegian port of Narvik. Plans are also made for imposing a base of operations in Denmark, Germany's neutral neighbor to its north. A Norwegian politician named Vidkun Quisling confirms

the existence of these Allied plots. (Operation Wilfred and Plan R 4). Sympathetic to Germany, and not wanting his country to become a battlefield, Quisling informs Hitler of the Anglo-French plot to wage war from the two Scandinavian countries. Germany moves quickly to secure the Norwegian port of Narvik just before the British can place their mines, and also to occupy Denmark. German diplomats assure the leaders of both Scandinavian nations that Germany seeks neither conquest nor interference in internal affairs. Life under limited German occupation goes on quietly for the Scandinavians during the war. Quisling's name is now a dictionary word in the English language, synonymous with "traitor" – a totally unfair characterization.

MAY 10, 1940 Great Britain invades Iceland

The British invasion of tiny, neutral Iceland is code named "Operation Fork." It begins on May 10, 1940 (the same day that Churchill comes to power) with British troops disembarking in the Capital City of Reykjavik. The British quickly move inland, disabling communications networks and securing landing locations. The government of Iceland protests the violation of their neutrality, but to no avail. This force is then subsequently augmented, to a final strength of 25,000. The recently thwarted British occupations of neutral Denmark and Norway, and the successful occupation of neutral Iceland, show that Rothschild Britain is the true aggressor of the coming war in Western Europe. Although FDR, up until December 1941, promises that America will remain non-belligerent, 30,000 US troops will relieve the British and occupy Iceland in spring of 1941.

MAY 10, 1940 The "Low Countries

Hitler's pleas for peace have been repeatedly ignored as 400,000 British and at least 2,000,000 French troops have massed in northern France. The massive invasion of Germany's industrial Ruhr region is to come through the ostensibly "neutral" League of Nations member states of Belgium and The Netherlands (Holland), whose governments are under intense Allied pressure to allow safe passage for the planned Allied attack on the bordering Ruhr region of Germany. Again, Hitler's hand is forced. On the same day that Churchill comes to power, and that the UK invades Iceland, as an act of national self-defense, Germany takes the fight to the Allies before they can bring it to German soil and reinstitute a 2nd Versailles Treaty. In a stunning advance westward, the German Blitzkrieg quickly overtakes the smaller nations (known as the Low Countries because of their geography) and pushes the Allied armies into a full retreat towards the beaches of northern France. The globalist press, as well as today's history books, portrays the Blitz as "the Nazi conquest of Holland, Belgium, and France." But the menacing presence of the massive Allied force on Germany's industrial frontier is conveniently ignored, as is the undeniable and extensive collaboration between the "neutral" Low Countries and the Allies.

MAY, 1940 Peace through Swedish Channel

After having just defeated the French the British invaders, Hitler, via a Swedish third party, proposes generous peace terms to Britain. The Germans contact the British ambassador in Sweden, Victor Mallet, through Sweden's Supreme Court Judge Ekeberg, who is known to Hitler's legal advisor, Ludwig Weissauer. Hitler's peace proposal demands nothing of Great Britain and implies that the states currently occupied by Germany would de-occupied; as Germany's occupation was only due to the present war situation. But Winston Churchill is not interested in peace. The offer goes nowhere.

JULY 20, 1940 Peace Leaflets over London

With Germany in total control of the continent and the war situation, Hitler responds to Churchill's bombs by dropping mass quantities of leaflets over London. The 4-page broadsheet contains an English language summary of Hitler's recent speech before the Reichstag. The speech is entitled, "A Last Appeal to Reason", in which he closes with a final appeal for peace:

"In this hour I feel it to be my duty before my own conscience to appeal once more to reason and common sense in Great Britain as much as elsewhere. I consider myself in a position to make this appeal, since I am not the vanquished, begging favors, but the victor speaking in the name of reason. I can see no reason why this war must go on. I am grieved to think of the sacrifices it will claim. Possibly Mr. Churchill again will brush aside this statement of mine by saying that it is merely born of fear and of doubt in our final victory. In that case I shall have relieved my conscience in regard to the things to come."

The British respond to Hitler's sincere plea with mockery, threats, and more bombs.

SEPTEMBER 16, 1940 First ever Peace-Time Draft in the US

While publicly insisting that American boys "will not be going to foreign wars", FDR continues to secretly prepare for entry into the Globalists' World War. FDR institutes a peacetime "Selective Service" Act which requires all males aged 26-35 to register for an upcoming draft "just in case". The actual draft begins in October 1940. The unlucky draftees are told that they will serve a 12 month term, based in either the Western Hemisphere, or a US territory. By the summer of 1941, the deceitful FDR (who is planning to trick America into the war by way of a Japanese provocation) decrees that the terms be lengthened. Outraged draftees protest FDR's broken promise and threaten to desert when their 12 months are up. But most will obey the order and continue to serve past the promised October 1941 release date, and right up until the "surprise attack" upon Pearl Harbor in December of 1941. This is the first, and only, peacetime draft in U.S. history.

OCTOBER 28, 1940 Italy Invades Greece

Italy had occupied tiny Albania in the spring of 1939. Mussolini now turns his ambitions towards Greece. Greece has good relations with Germany, but Mussolini wants to claim the Ionian Islands. Italy's invasion of Greece is completely unrelated to Germany's war and creates unexpected problems for Hitler. The Greeks repel the invasion. The British then offer to send troops to assist Greece. Churchill now has an opening on the European mainland from which he can move north towards Germany and eastward towards Romania and the crucial oil fields which supply Germany.

NOVEMBER, 1940 The Vatican Helps

As far back May of 1939, as revealed by the front page of the New York Times, the Vatican had been trying to mediate between Britain and Germany. Hitler was ready and willing to talk peace at all the times. It was the British who said "no". The peace-seeking Vatican and peace-seeking Germany remained in contact as the war raged. The following excerpt from Martin Allen's 'Himmler's Secret War' describes a meeting held in Spain between the Papal Nuncio and British officials Hoare and Hilgarth; and the latest peace offer from Hitler:

"The nature of the concessions that the German Fuhrer was prepared to make in order to obtain peace with Britain must have astounded the men at the head of SO1. This was not even a deal worked out through a process of hard negotiation. It was Hitler's opening gambit....an offer so generous and pragmatic that it would be very tempting to anyone who genuinely wanted peace. His (Hitler's) offer of such remarkable concessions was an extremely threatening development. Should the terms become public, it had the potential to render British resolve to stand firm against German aggression to a shattering halt."

MARCH, 1941 Germany Must Perish!

"Germany Must Perish!" is a 104 page booklet published by an American Zionist businessman named Theodore Kaufman. Kaufman calls for the complete extermination of the German people through forced sterilization and total dismemberment and reappportionment of German territory. The murderous hate-fest starts out in the very opening lines of Germany Must Perish as follows:

"This dynamic volume outlines a comprehensive plan for the extinction of the German nation and the total eradication from the earth, of all her people. Also contained herein is a map illustrating the possible territorial dissection of Germany and the apportionment of her lands."

Incredibly, at a time when America is supposedly "neutral", the hateful book is actually reviewed by The New York Times, Time Magazine and the Washington Post. Though

not widely distributed in America, *Germany Must Perish* is read throughout Germany. Propaganda Minister Dr. Josef Goebbels states: "Thanks to the Jew Kaufmann, we Germans know only too well what to expect in case of defeat."

'Germany Must Perish!' will inspire the frightened German people to fight harder. Kaufman's work, along with the deadly Jewish Partisan guerilla warfare against German troops, will contribute to Hitler's decision to intern the Jews of occupied Europe into wartime work camps later in 1941.

APRIL 6, 1941 Greece & Yugoslavia

Though unrelated to Germany's war, Mussolini's foolish adventure in Greece has already created a big problem for Hitler. As Italian forces meet stiff Greek resistance, Churchill uses the conflict as an opportunity to again establish armies on Europe's mainland, in Europe's "soft underbelly". British troops begin arriving in Greece to help the Greeks in their fight against the Italians. Hitler offers to mediate peace between Italy and Greece, but the Greeks (egged on by the British) won't come to the table as more British troops keep arriving. In March, 1941, Yugoslavia joins Hitler's defensive Tripartite Pact. In response, British intelligence immediately triggers an orchestrated coup. The new Yugoslavian regime is now a British puppet state, which immediately signs a "Treaty of Friendship" with the USSR. Stalin's Yugoslavian Communists take to the streets in support of the new government. Again, Hitler's hand is forced. If he does not act now, the "soft underbelly" of Europe will be flooded with British troops destined for southern Germany, as well as the Romanian oil fields upon which Germany depends. On April 6, 1941, the Germans invade both Greece and Yugoslavia. The still small numbers of British troops are forced to evacuate, spoiling Churchill's scheme to inflame southern Europe and invite the Soviets in to help. Naturally, the Globalist media simplistically portrays these events as: "Germans Invade Yugoslavia & Greece".

Hitler on Operation Barbarossa

"Already in 1940 it became increasingly clear from month to month that the plans of the men in the Kremlin were aimed at the domination, and thus the destruction, of all of Europe. I have already told the nation of the build-up of Soviet military power in the East during a period when Germany had only a few divisions in the provinces bordering Soviet Russia. Only a blind person could fail to see that a military build-up of world-historical dimensions was being carried out. And this was not in order to protect something that was being threatened, but rather to attack that which seemed incapable of defense..... I may say this today: .If the wave of more than 20,000 tanks, hundreds of divisions, tens of thousands of artillery pieces, along with more than 10,000 airplanes, had not been kept from being set into motion against the Reich, all of Europe would have been lost."
(30) - Adolf Hitler, 12-11-1941

JUNE, 1941 Lend Lease Begins

With Stalin's Empire facing swift extinction at the hands of German forces, FDR moves quickly to rescue Stalin's murderous regime. He unfreezes Soviet assets that had been frozen after Stalin's attack on Finland in 1939, enabling the Soviets to immediately purchase 59 Fighter aircrafts. The "Arsenal of Democracy" is now, "The Arsenal of Communism." By 1945, the staggering amount of Lend-Lease deliveries to Stalin include 11,000 aircraft, 4,000 bombers, 400,000 trucks, 12,000 tanks and combat vehicles, 32,000 motorcycles, 13,000 locomotives and railway cars, 8,000 anti-aircraft cannons, 135,000 submachine guns, 300,000 tons of explosives, 40,000 field radios, 400 radar systems, 400,000 metal cutting machine tools, several million tons of food, steel, other metals, oil and gasoline, chemicals etc.

JULY, 1942 – FEBRUARY, 1943 Stalingrad

The Battle of Stalingrad between the Germans and the Soviets was fought for control of the strategically vital Russian city that Stalin named after himself (today known as Volgograd). It will go down in history as the bloodiest battle ever, with combined deaths of nearly 2 million. Stalin's refusal to pull the Red Army out of the city leads to a long siege and great suffering for the hungry residents. After the German offensive manages to capture most of the city, the U.S. Lend Lease-equipped Red Army wears the Germans down with bloody house-to-house fighting. Brainwashed and inflamed by the NKVD's false atrocity propaganda, much of the city's civilian population fiercely resists the Germans as well. As intended, this "false flag" terror enflames the civilian population against the Germans. The losses suffered by the Germans will make victory in Russia impossible.

1943 Famine in India

While famines were not uncommon in India, largely because of droughts or monsoons, the 1943 tragedy in Bengal has the unmistakable fingerprints of the mad dog Churchill on it. In the prior year, when Japan occupied Burma, an important rice exporter, the British bought up massive amounts of rice and hoarded it. Churchill then orders the diversion of food away from India and toward British troops around the world. Now a rare commodity, the price of rice shoots up four-fold. Wheat from Australia (which could have been delivered to starving Indians) is instead transported to British troops as well. Even worse, British colonial authorities (again under Churchill's leadership) actually turn down offers of food from the U.S. Churchill hates Indians almost as much as he hates Germans; mainly because India wants its independence from Britain. Later, at a War Cabinet meeting, Churchill blames the Indians themselves for the famine, saying that they "breed like rabbits."

1943-45 Protection of European Art

Under Kaiser Wilhelm II during World War I, the highly cultured Germans had gone to great lengths to protect and preserve artworks located in near zones of combat. The German word to describe this principal of saving Europe's cultural and artistic treasures during wartime is "Kunstschutz" (art protection). A talented painter himself, Adolf Hitler has a great appreciation for art and culture. He sees Churchill and FDR as uncultured barbarians with merciless disregard for innocent life, architecture, and works of art. As the Germans had done during World War I, Hitler too orders the protection of artworks throughout the combat theatres of Europe. The task of protecting the art is handed over to Air Force Marshal Hermann Goering. As Allied terror bombing ravages Europe, thousands of paintings and sculptures from Italy, France, Belgium, Russia, Romania, and Poland are gathered and meticulously inventoried by the Germans. After the war, the American Art Looting Investigation Unit (ALIU) of the Office of Strategic Services (OSS) issues 13 reports on the German "looting" of artworks. By the way, this is the same OSS (forerunner of the CIA) that also accused the Germans of using dead Jews to make "shrunken heads", "lamp shades" and "bars of soap" - allegations which are today universally acknowledged as false.

1943 US postpones Advance, Aids Stalin

With "the soft underbelly of Europe" now vulnerable, Churchill and British General Montgomery argue for an immediate Allied advance upon Germany from the south of Europe. This was Hitler's greatest concern. The oil fields of Romania fuel the German military. An Allied advance on the Balkans through Yugoslavia and Greece would be disastrous for Germany. From Italy and the Balkans, the Allies can then launch a final push upon Germany itself from the south and southeast. Inexplicably, Allied Commander Dwight Eisenhower ('Ike') and Army Chief of Staff George Marshall (who had promoted Eisenhower over scores of senior officers) insist upon making preparations for an invasion of heavily fortified Northern France the following year. This bizarre "blunder" prolongs the war, buys the Soviets much needed time to march westward, and eventually enables Stalin to steal Eastern Europe. There is a reason for this geo-political "blunder". FDR and his Globalist gang envision a post-war world in which the Soviets and the United States join forces to lay the foundation for a 'New World Order' (World Government). However, after the war, Stalin will break with the Globalists and move towards a form of Nationalistic Communism instead; an extension of the ideological conflict that had bitterly divided Stalin and Trotsky during the 1920's. Stalin still supports world-wide Communist revolution, of course. But his vision of a New World Order is one in which Moscow calls the shots, not London or New York.

1943-1945 Russians fighting Soviets

Stalin's tyranny was hated by so many Russians that as many as 300,000 Russian POW's volunteered to fight for Germany! The anti-Communist soldiers of the Russian Liberation Army wore German uniforms with a Russian patch. They were led by General Andrey Vlasov, but under German high command. The RLA fought valiantly, mainly in key rear guard support roles against Communist partisans. After the war, the RLA will attempt to surrender to the western allies. Not wanting to deny 'Uncle Joe' of his revenge, Eisenhower will turn down their offers and forcibly repatriate those who were already in U.S. custody. Despite pleading with the Americans for political asylum, General Vlasov and his freedom fighters will then be handed over to the brutal Soviets. Vlasov and 11 of his senior officers are hanged in Moscow in August, 1946.

JUNE 6, 1944 Normandy Invasion

At the 6th hour, of the 6th day, of the 6th month of 1944, Allied armies based in England launch 'D-Day' (Devil's Day?), and successfully cross the English Channel. The cost of Operation Overlord (the Devil?) is high as nearly 10,000 men are killed storming the fortified beaches of Normandy. But Overlord establishes an initial beachhead of 100,000 troops. From this base in northern France, the Allies will be reinforced for the push towards Germany. At the same time, the Soviet Red Army, armed to the teeth with state-of-the-art American weaponry, advances upon Germany from the east. With Italy also under Allied occupation, Germany has three fronts to defend (West, South, and East) as its cities, railways, dams, factories and civilian population endure relentless bombardment and Partisan sabotage. In order to give Stalin time to conquer Eastern Europe, Generals Eisenhower and Marshall repeatedly delay the advance of General Patton's unstoppable 3rd army, going so far as to cut off shipments of gasoline to Patton's army! Patton (August, 1944): "At the present time our chief difficulty is not the Germans, but gasoline. If they would give me enough gas, I could go all the way to Berlin!"

SUMMER, 1944 France gets "liberated"

Under what was intended to be only temporary, wartime German occupation (1940-1944), life in Northern France goes by peacefully for French civilians. The conduct of the German occupiers is impeccable. Many French women fall in love with German soldiers. But with the Normandy invasion (June 6, 1944), the peace and security of France is shattered into a million pieces. To support the cross-channel invasion, and to then push the Germans eastward, the Allies unleash a ferocious aerial bombardment campaign. Entire towns are mercilessly carpet bombed. Cultural icons and works of art are destroyed, 65,000 French civilians are killed, 150,000 are injured, and at least 500,000 left homeless. Even Paris is heavily bombed. Incredibly, twice as many French civilians are bombed to death during only a few months, as the total amount of British civilians killed during the entire war!

(10) Of course, these numbers pale in comparison to the 1,000,000 + German civilians who were killed by Allied bombings. The horror doesn't end with the bombardment either. The Allied occupation and subsequent economic collapse bring new nightmares for the women of France. Under Allied occupation, American troops rape 1000's of French women, and turn many 1000's more hungry women into sex-for-food prostitutes. To appease the French population, the U.S. Army will eventually hang 130 of its rapist soldiers, a majority of them Black. It will take years for these areas of France to recover from the tragedy. Such is the glorious "liberation" that Churchill, FDR, and the French traitor de Gaulle have imposed upon France.

AUGUST, 1944 French Revenge

After the collapse of the Vichy French regime, General Charles de Gaulle returns from his English exile. The Globalist and Communist French then impose a new Reign of Terror. Cruel punishment is meted out against those labeled as "Nazi collaborators", whose only crime was in making peace with Germany, or to have fought against the Soviets on the eastern front as members of the German SS units. The de Gaullist 'liberals' will murder as many as 40,000, and imprison 100,000 of their countrymen. French women who dated German soldiers during the occupation are humiliated by having their heads shaved bald or stripped naked. Marshal Petain escapes to Germany. After the war, he will be sentenced to death for "treason", but due to his age, 88, and hero status from WW I, de Gaulle has no choice but to reduce Petain's sentence to life in prison.

FEBRUARY, 1945 The Yalta Conference

The most historic of the "Big Three" conferences is held in the Black Sea resort of Yalta (Russian Crimea). At the Yalta Conference, FDR & Churchill (especially FDR).make easy concessions to the mass-murdering Communist, "Uncle Joe". With Red spies Alger Hiss and Harry Hopkins influencing the dying Roosevelt (who dies in April), it is decided that after Germany's defeat:

The Soviets will occupy Eastern Europe until free elections can be held.

The Soviets will eventually join the war against Japan and be supplied with U.S. arms for the effort.

After Japan is defeated, the Soviets will occupy northern Korea (without Korea's approval!), and Manchuria in China (without China's approval!)

Millions of Russian POWs captured by the Germans, as well as Russian refugees fleeing Stalin, will be forcefully returned to Stalin.

Germany will be split in half as will the Capital of Berlin.

APRIL 15, 1945 Eisenhower Orders Patton to halt

British General Bernard Montgomery argues that there is now nothing to stop the Allies from sweeping into Berlin, thus taking the German Capital before the advancing Soviet army can get there. Eisenhower, however, has other ideas. As FDR's loyal lapdog had done time and time again, "Ike" would find a way to delay the Allied advance so as to buy time for Stalin to advance from the east. On March 28, '45, Ike sends a message to Stalin, assuring him that the Allied advance will focus on western Germany. On April 15, Ike issues a halt order forbidding Allied commanders from crossing the Elbe River. (22) Generals Montgomery and Patton are very upset over the sudden order to halt the advance, thus condemning Berlin, and all of Eastern Europe, to Soviet barbarism.

APRIL 30, 1945 Hitler's Final Testament

With the situation in Berlin hopeless, Hitler marries his longtime mistress, Eva Braun. The two then commit suicide; Eva by poison, Hitler by gunshot. Hitler's dog Blondie is also poisoned. The staff is under orders to burn the bodies and to escape Berlin before the Soviets can capture them. One day before committing suicide, Hitler had dictated his final Political Testament, a suicide note, in essence, in which he denied any responsibility for starting the war. Some critical excerpts that you'll not find in your High School history book:

"More than thirty years have now passed since I in 1914 made my modest contribution as a volunteer in the First World War that was forced upon the Reich. In these three decades I have been actuated solely by love and loyalty to my people in all my thoughts, acts, and life. They gave me the strength to make the most difficult decisions which have ever confronted mortal man. I have spent my time, my working strength, and my health in these three decades. "It is untrue that I or anyone else in Germany wanted war in 1939. It was wanted and provoked solely by international statesmen either of Jewish origin or working for Jewish interests.

I have made too many offers for the control and limitation of armaments, which posterity will not for all time be able to disregard for the responsibility for the outbreak of this war to be laid on me. Nor have I ever wished that after the appalling First World War a second against England, or even against America, should break out. Centuries will pass away, but out of the ruins of our towns and monuments the hatred of those whom we have to thank for all this will always grow anew: international Jewry and its henchmen.

Three days before the outbreak of the German-Polish war I again proposed to the British ambassador in Berlin a solution to the German-Polish problem—similar to that in the case of the Saar district, under international control This offer also cannot be denied. It was only rejected because the leading circles in English politics wanted the war, partly on account of the business hoped for and partly under influence of propaganda organized

by International Jewry.

After six years of war, which in spite of all setbacks will go down one day in history as the most glorious and valiant demonstration of a nation's life purpose, I cannot forsake the city which is the capital of this Reich. As the forces are too small to make any further stand against the enemy attack at this place, and our resistance is gradually being weakened by men who are as deluded as they are lacking in initiative, I should like, by remaining in this town, to share my fate with those, the millions of others, who have also taken upon themselves to do so.

Moreover, I do not wish to fall into the hands of an enemy who requires a new spectacle organized by the Jews for the amusement of their hysterical masses. I have decided therefore to remain in Berlin and there of my own free will to choose death at the moment when I believe the position of the Fuehrer and Chancellor itself can no longer be held. I die with a happy heart, aware of the immeasurable deeds and achievements of our soldiers at the front, our women at home, the achievements of our farmers and workers and the work, unique in history, of our youth who bear my name".

JUNE 26, 1945 The United Nations

At the founding San Francisco Conference that established the United Nations, the U.S. official serving as Secretary General is the Communist agent Alger Hiss. Hiss will later be exposed as a Soviet spy in 1948. The U.N. replaces the League of Nations as the foundation of The New World Order. All 51 nations signing the original charter agree to be bound by its articles. The all-out propaganda campaign surrounding the UN's establishment is pervasive and intense. It is argued that "isolationist" America's refusal to join the League of Nations after World War I was the tragic mistake that led to World War II. That mistake "must not be repeated". Within 30 days, the US Senate will approve the UN Treaty by a vote of 89-2! Even the conservative legend, Senator Robert Taft (son of President William.Howard.Taft) votes in favor of U.S. entry. The embryonic World Government will be headquartered in New York, on 18 acres of prime real estate donated by the Rockefeller Family. Globalism has won World War II!

1945-1947 Operation Keelhaul

Stalin brands Russian POW's captured by Germany, and Russian refugees who fled west with the retreating Germans, as traitors. At Yalta, FDR and Churchill had agreed that Russian "traitors" and SS men should be sent to Stalin in exchange for American & British POW's "liberated" by the Soviets. General Eisenhower eagerly carries out this atrocity; which was mockingly code named: "Operation Keelhaul" (after an old naval punishment that involved tying a rope around a sailor and then dragging him under the hull of a ship)! Up to 3 million terrified Russian POWs are forced at gunpoint onto trains and trucks that bring them to their Soviet executioners. (11) Many commit suicide.

U.S. troops, upon returning from the drop-off points, later report seeing rows of bodies already hanging from the trees. In separate operations, anti-Communist refugee families, who actually followed their German protectors as they retreated from Russia, are also shipped back to "Uncle Joe", and subjected to special tortures, including rape of the women. As a final insult from our "ally", Stalin holds on to 25,000 American POW's and 30,000 British, sending them to his Siberian Gulags, and even summarily executing some..(12) Ike, Churchill, and Truman are aware of the missing POW's but say nothing!

1945 - Present: The Occupation of Germany

From the days of the post war "de-Nazification" of Germany, throughout the 45 year Communist rule over East Germany, as well as the 70 U.S. domination of a united Germany that continues to this day, perhaps the greatest crime of all is the psychological rape of three subsequent generations of Germans. From an early age, German school children are taught to hate the great accomplishments of previous generations and wallow in self-loathing. Most pathetic Germans today fervently believe all the lies told about "Nazi" Germany as they continue to hunt down and imprison "holocaust deniers" and innocent 90-year old SS men for "war crimes". Those Germans who are not full of self-loathing are too afraid to speak up, lest the occupation governments of Germany or Austria throw them in jail. Many Germans today actually enjoy self-flagellation! It's like a woman who has been raped and battered to near death, blaming herself and apologetically groveling before the perpetrator.

1960 History is written by the Winners

After having received what he calls a "generous grant" from the New York-based Council on Foreign Relations (CFR), American newspaper hack and former CBS mouthpiece William Shirer publishes his "definitive" and "comprehensive" history of World War II, *The Rise and Fall of the Third Reich*. In the book's opening acknowledgement, Shirer thanks "the Council" - whose Globalist members were the very ones that engineered the war in the first place! Shirer's *Rise and Fall* is heavy on the empty verbiage and page-count (1,245!), but extremely light on essential facts. Weaving truths with half truths and outright lies, while sprinkling in a few seemingly objective, even pro-German nuggets of truth; Shirer skillfully paints a deceptive facade; one which any reader of *The Bad War* should now be able to easily crack open. The Jewish publishing giant Simon & Schuster publishes the book, and the Jewish press hypes it to the stars. Shirer becomes wealthy beyond his wildest dreams. His putrid package of propaganda remains, to this day, the "go to" book for those who think they know anything about World War II. What a joke!

Closing Statement

World War II, or 'The Good War' as modern day court-historian refer to it - is the gift that keeps on giving - giving us problems that is! This tragedy, and its aftermath, haunt humanity to this day, and will continue to well into the foreseeable future. Out of the aftermath of World War II comes the Cold War, the Korean War, the Viet Nam War, the wars and ongoing problems in the Middle East, the financial schemes and distress caused by the IMF and the World Bank, the framework of the tyrannical and corrupt European Union, and so many other problems of the modern day. The Bad War was a complete disaster for the forces of civilization, stability, virtue, culture, and independent nationalism of blood-related kinfolk...But it was a total triumph for the overlapping dark forces of Globalism, debt-based "Crony Capitalism", World Communism, misguided liberalism and Zionism.

Behold what the victorious "good guys" have wrought in the days since that tragic war. Europe, and by extension America, Canada and Australia, no longer exist as peoples with common history, heritage or values. The Globalists have reduced the beloved "Europa" of Hitler into a rootless, cultureless, godless, genderless, alienated, infertile, pornographic, multi-cultural, homosexual mish-mash of mentally medicated tax and debt slaves. The true European essence that was once rooted in places like ancient Athens, Rome, Florence, Paris, London, Madrid, Dresden; and grand historical personages such as Plato, Aristotle, Pericles, Jesus, Marcus Aurelius, Charlemagne, Mozart, Kant, Dante, Shakespeare, Jefferson; and vital institutions such as family, farm, folk, community, church and civic groups, is, if not totally "gone with the wind", certainly in the process of coming off its moorings.

Collectively, the people of the West are no longer really even 'peoples' defined by common cultures, traditions, bloodlines and sets of eternal values. We are economies defined solely by the Gross Domestic Product. As individuals, we are no longer persons defined by our virtues and intellects. We are soulless machines – disposable, pill-popping, TV-addicted "human resources" and "tax payers" defined solely by our "net worth" and ability to "consume" - a euphemism for going into debt to buy crap that we don't need. In a broader philosophical sense, that's what World War II was all about. It was a titanic struggle between the forces of classical Europa (as well as historic Japan) and those of the culturally degenerate and predatory Capitalist-Communist hybrid New World Order in which we live in, no, exist in today.

12.20 Never Retreat, Never Surrender!

After reading about the history of World War 2, many people often ask "Why did they not surrender?" when certain doom was inevitable for the National Socialists? The answer to that might be Allied/Jewish Propaganda, the knowledge of the use of Soviet Gulags for slave labor during peace time and also the killing of millions of Christian Russians during

peace time. Here is what their plans for Central Europe looked like:

The Kalergi-Plan

Kalergi was the son of an Austrian diplomat named Heinrich von Coudenhove-Kalergi and a Japanese woman named Mitsu Aoyama. His movement was financially backed by Zionist billionaire bosses such as Rothschild, Baruch and Warburg. With such high-powered backers and close contacts with European aristocrats and politicians, Kalergi managed to attract important heads of state to his project for European integration – what Winston Churchill openly referred to, in 1945, as the “United States of Europe.” Very few people know that Kalergi, one of the main “founding fathers” of the process of European integration, also designed the genocide for the peoples of Europe. As far back as 1922, Kalergi founded the “Pan-European” movement in Austria, which aimed to create a federation of nations led by the United States. European integration would be the first step in creating a future world government. With the rise of Benito Mussolini in Italy, Adolf Hitler in Germany and General Francisco Franco in Spain, Kalergi’s Jewish-inspired ‘One Europe’ project was put on hold. But very soon after the final crushing defeat of Germany in 1945, Kalergi’s New World Order, thanks to the support of Winston Churchill, the Jewish B’nai B’rith and major newspapers like the New York Times, began to take its first visible steps toward fruition.

Coudenhove-Kalergi is recognized as the founder of the first popular movement for a united Europe. In December 1921, he joined the Masonic lodge “Humanitas” in Vienna. In 1922, he co-founded the Pan-European Union (PEU) with Archduke Otto von Habsburg. In 1923, he published a manifesto entitled Pan-Europa, each copy containing a membership form which invited the reader to become a member of the Pan-Europa movement. According to his autobiography, at the beginning of 1924 his friend Baron Louis de Rothschild introduced him to Max Warburg who offered to finance his movement for the next 3 years by giving him 60,000 gold marks. Warburg remained sincerely interested in the movement for the remainder of his life and served as an intermediate for Coudenhove-Kalergi with influential Americans such as banker Paul Warburg and financier Bernard Baruch. In April 1924, Coudenhove-Kalergi founded the journal *Pan-europa* (1924–1938) of which he was editor and principal author. The next year he started publishing his main work, the *Kampf um Paneuropa* (The fight for Paneuropa, 1925–1928, three volumes). In 1926, the first Congress of the Pan-European Union (basically the forerunner of the EU) was held in Vienna and the 2,000 delegates elected Coudenhove-Kalergi as president of the Central Council, a position he held until his death in 1972. Coudenhove-Kalergi attempted to enlist prominent European politicians in his pan-European cause and European freemason lodges supported his movement, including the lodge Humanitas.

Coudenhove-Kalergi had less success with Tomáš Masaryk, who referred him to his uncooperative Prime Minister Edvard Beneš. However, the idea of pan-Europe elicited support

from politicians as diverse as Carlo Sforza and Hjalmar Schacht. Although Coudenhove-Kalergi found himself unable to sway Benito Mussolini, his ideas influenced Aristide Briand through his inspired speech in favour of a European Union in the League of Nations on 8 September 1929, as well as his famous 1930 "Memorandum on the Organisation of a Regime of European Federal Union." Hitler's view of Coudenhove-Kalergi was that the "rootless, cosmopolitan, and elitist half-breed" was going to repeat the historical mistakes of Coudenhove ancestors who had served the House of Habsburg, i.e. creating a multi-ethnic state which will eat itself up through internal friction and ultimately collapse.

In his book 'Praktischer Idealismus', Kalergi boldly declares that the citizens of the future "United States of Europe" will not be White people anymore. In his own words: "The man of the future will be of mixed race. The races and classes of today will gradually disappear due to the elimination of space, time, and prejudice. The Eurasian-negroid race of the future, similar in appearance to the Ancient Egyptians, will replace the diversity of peoples with the diversity of individuals. Of course, Kalergi's chosenite paymasters will not be replaced or blended out by this "Eurasian-negroid race of the future". Writes the hired hack of his paymasters:

"... Inbreeding builds character, weakens the mind - crossing weakens the character, strengthens the Spirit. Where inbreeding and crossbreeding meet under happy auspices, they testify to the highest type of human being the strongest character with the sharpest mind connects. Where under unfortunate auspices inbreeding and mix meet, they create degeneration types with a weak character, dull mind... Instead of destroying European Judaism, Europe, against her will, refined and educated this people, driving them to their future status as a leading nation through this artificial evolutionary process. It's not surprising that the people that escaped from the Ghetto-Prison, became the spiritual nobility of Europe. Thus, the compassionate care given by Europe created a new breed of aristocrats. This happened when the European feudal aristocracy crashed because of the emancipation of the Jews... Russian Bolshevism constitutes a decisive step towards this purpose where a small group of Communist spiritual aristocrats govern the country... The general staff of both... are recruited from Europe's spiritual leader race, the Jews"

In Kalergi's World, by his own admission, Whites are to be blended out of their own nations while the Jew becomes "the spiritual nobility." He states that the peoples of Europe should interbreed with Asians and colored races, thus creating a multinational flock with no quality and easily controlled by the ruling elite. Kalergi proclaims the abolition of the right of self-determination and then the elimination of nations with the use of ethnic separatist movements and mass migration. In order for Europe to be controlled by an elite, he wants to turn people into one homogeneous mixed breed of Blacks, Whites and Asians. Although no textbook mentions Kalergi, his ideas are the guiding principles of the European Union. The belief that the peoples of Europe should be mixed with Africans and Asians, to destroy our identity and create a single mestizo race, is the basis of all community policies that aim to protect minorities.

Every year the Coudenhove-Kalergi Prize is awarded to the two Europeans who have done

most to promote this genocidal plan in that year. In 2010, the prize was awarded to none other than Angela Merkel. In 2012, the President of the European Council, Herman Van Rompuy, was awarded the Coudenhove-Kalergi Prize. They both made speeches praising the writings and ideas of Kalergi as they accepted the prize. Kalergi was also had a hand in designing the flag of the European Union and it is rumored that the 12 stars of the flag represent the 12 Tribes of Israel.

Germany Must Perish!

Theodore Newman Kaufman was an American Jewish businessman and writer known for his eliminationist views on Germans. In 1939, he published pamphlets as “chairman of the American Federation of Peace” that argued that Americans should be sterilized so that their children will no longer have to fight in foreign wars. In 1941, he wrote and published *Germany Must Perish!* which called for the sterilization/genocide of the German people and the distribution of the German lands. The text was used extensively in Nazi propaganda, often as a justification for the persecution of Jews and was specifically cited as a reason to round up the Jews of Hanover, Germany. Some excerpts:

“Since Germans are the perennial disturbers of the world’s peace ... they must be dealt with like any homicidal criminals. But it is unnecessary to put the whole German nation to the sword. It is more humane to sterilize them. The army groups, as organized units, would be the easiest and quickest to deal with. ... The population of Germany, excluding conquered and annexed territories, is about 70,000,000, almost equally divided between male and female. To achieve the purpose of German extinction it would be necessary to only sterilize some 48,000,000 – a figure which excludes, because of their limited power to procreate, males over 60 years of age, and females over 45. ... Taking 20,000 surgeons as an arbitrary number and on the assumption that each will perform a minimum of 25 operations daily, it would take no more than one month, at the maximum, to complete their sterilization. ... The balance of the male civilian population of Germany could be treated within three months. Inasmuch as sterilization of women needs somewhat more time, it may be computed that the entire female population of Germany could be sterilized within a period of three years or less. Complete sterilization of both sexes, and not only one, is to be considered necessary in view of the present German doctrine that so much as one drop of true German blood constitutes a German. Of course, after complete sterilization, there will cease to be a birth rate in Germany. At the normal death rate of 2 per cent per annum, German life will diminish at the rate of 1,500,000 yearly. Accordingly in the span of two generations that which cost millions of lives and centuries of useless effort, namely, the elimination of Germanism and its carriers, will have been an accomplished fact. By virtue of its loss of self-perpetuation German Will will have atrophied and German power reduced to negligible importance.”

When the Nazis required German Jews to wear a yellow badge on their clothing on September 1, 1941, they published a flyer explaining to the German people that those

individuals wearing the star were conspiring to implement Kaufman's plan for the destruction of Germany. The Nazi propaganda ministry continued to publish pamphlets, posters and flyers on Kaufman's ideas through the end of the war, and also urged newspapers and public speakers to remind Germans of Kaufman's book. Kaufman's last major appearance in Nazi propaganda occurred in late 1944, when a five-page section on him was included in the widely published booklet *Never!*, which described a number of plots to destroy Germany.

The book received considerable attention in the United States. An advertisement in *The New York Times* stated that the book was released to the public on March 1, 1941. *Time* magazine published a review in its 24 March and described it as the "enshrinement of a single sensational idea." Kaufman's advocacy of mass sterilization of Germans was echoed in a later book by another American Jew, Louis Nizer, who cited Kaufman.[8] In his 1944 book *What To Do With Germany*, Nizer accepted collective punishment of Germans and considered, but ultimately rejected, their mass "eugenic sterilization".

The Morgenthau Plan

From "Nuremberg: The Last Battle" by David Irving

Firstly, there was President Roosevelt. While he talked eloquently in public of pursuing the Nazi criminals to the ends of the earth, privately he too intended that they should be punished without trial. At a stag dinner held at the White House on June 7, 1944, he had regaled Polish prime minister Stanislas Mikolajczyk with stories of Stalin's plans to 'liquidate 50,000 German officers,' and he had laughed out loud as he recalled how his joint chiefs had listened with round eyes to these words. Talking, later that evening, about which of the victorious powers should acquire the great north German ports, Henry L. Stimson, the U.S. secretary of war, urged Roosevelt to caution. 'I felt,' Stimson recorded in his diary, in an oblique hint at the ethnic cleansing that would occur after those regions were turned over to the Poles, 'that repercussions would be sure to arise which would mar the page of our history if we, whether rightly or wrongly, seemed to be responsible for it.'? Still worried about the bloodbath in store for the defeated Germans, Stimson wrote two days later that occupying the southern sector of Germany would be more congenial as it 'keeps us away from Russia during occupational period. Let her do the dirty work but don't father it.'

Such was the climate of hatred that even Cordell Hull, Roosevelt's secretary of state and a distinguished statesman, argued for nothing less than the summary liquidation of the Axis leaders as and when they fell into Allied hands. 'Hull surprised me,' admitted the British ambassador Lord Halifax in his secret diary after dining with him on March 16, 1943, 'by saying that he would like to shoot and physically kill all the Nazi leaders down to quite low levels!' In this belief Hull was on a par with the ambassador's barber in Washington, who perpetually told him: 'Kill every one. Leave one - they will breed again and you have to do the job again. It is like leaving one rabbit in a young plantation.'?

In the autumn of 1944 Cordell Hull again graphically proposed: 'If I had my way, I would take Hitler and Mussolini and Tojo and their arch accomplices and bring them before a drumhead court-martial, and at sunrise on the following day there would occur an historic incident.'

General Dwight D. Eisenhower, who has a well-manicured image in the history books as a military commander blessed with both chivalry and decency, was little better. He told Lord Halifax on July 22, 1944 that in his view the enemy leaders should be 'shot while trying to escape' - the common euphemism for murder used in Hollywood's cheaper films about the Nazis. Eisenhower's naval aide Harry Butcher heard his chief of staff, Lieutenant-General Walter Bedell Smith, an officer who nursed a phenomenal hatred for the Germans, urge that imprisonment was not enough for the enemy's General Staff, a body of some 1,000 officers. 'There was agreement,' noted the aide in his unpublished diary, 'that extermination could be left to nature if the Russians had a free hand.' Why just the Russians? inquired Eisenhower: the victorious powers, he suggested, could temporarily assign zones in Germany to the smaller nations with scores to settle.

He repeated these views to Henry Morgenthau when the latter visited the Portsmouth command post of the Supreme Headquarters, Allied Expeditionary Force (S.H.A.E.F.) on August 7 - indeed, Morgenthau would, with some justification, point to Eisenhower as the father of his famous Plan. According to Morgenthau's version, General Eisenhower opposed any soft line: 'The whole German population is a synthetic paranoid,' he told the treasury secretary. 'And there is no reason for treating a paranoid gently. The best cure is to let the Germans stew in their own juice.' 'General Eisenhower had stated,' Morgenthau told his officials five days later, '... that in his view we must take a tough line with Germany as we must see to it that Germany was never again in a position to unleash war upon the world.'?? According to another witness, Eisenhower also said: 'The ringleaders and the S.S. troops should be given the death penalty without question, but punishment should not end there.' Eisenhower himself later summarised as follows: 'The German people must not be allowed to escape a personal sense of guilt for the terrible tragedy that had engulfed the world. Germany's war-making power should be eliminated. Certain groups should be specifically punished by Allied tribunals: leading Nazis, Gestapo members, S.S. members.' He added, 'The German General Staff should be utterly eliminated. All records destroyed and individuals scattered and rendered powerless to operate as body. In proper cases more specifically punished.'

Morgenthau tackled the British prime minister Winston S. Churchill about this three days later, over lunch on August 10, 1944. The prime minister indicated his 'general concurrence' with Eisenhower's viewpoint. Morgenthau then sketched the outlines of what later became his Plan - 'In his opinion serious consideration should be given to the desirability and feasibility of reducing Germany to an agrarian economy wherein Germany would be a land of small farms, without large-scale industrial enterprises.' Morgenthau reported all this to his Washington staff a few days later, one of whom recorded: 'He said that in his conversation with Churchill the question of the program to be followed

upon occupation of Germany had come up and that he had gathered from the Prime Minister's comments that he was in agreement with the view expressed by Morgenthau.

Morgenthau advised the president on August ??, on his return from Europe to Washington, that some people in Europe were planning a soft future for Germany. Roosevelt confidently assured him, 'Give me thirty minutes with Churchill and I can correct this.' He added, 'We have got to be tough with Germany and I mean the German people, not just the Nazis. You either have to castrate the German people or you have got to treat them in such a manner so they can't go on reproducing people who want to continue the way they have in the past.' (The presidential interest in castration is worth bearing in mind.) Stimson, the U.S. secretary of war tried to collect his own thoughts about the future of Germany, drafting a document entitled 'Brief for Conference with the President on August 25,' in which he listed 'a number of urgent matters of American policy' including in particular their policy vis-a-vis the 'liquidation of Hitler and his gang.' Stimson's wording was very explicit. 'Present instructions seem inadequate beyond imprisonment. Our officers must have the protection of definite instructions if shooting [is] required. If shooting required it must be immediate; not post-war.' He also asked the question, 'How far do U.S. officers go towards preventing lynching in advance of Law and Order?'

Morgenthau got at Roosevelt first, lunching with him at the White House on August 25. Here he filled in more details of his Plan for punishing and emasculating post-war Germany - regardless of the effect which this 'running sore' would have on the rest of the European economy. The treasury secretary visited Roosevelt early on August ?? to hand him his own memorandum on the German problem. Later that day he and Stimson both lunched with the president. Stimson again focused attention on the allocation of British and American zones of occupation in Germany. He now urged Roosevelt to dump on the British the occupation of northern Germany. 'By taking south-western Germany,' he recorded in his diary, 'we were ... further away from the dirty work that the Russians might be doing with the Prussians in Eastern Germany' - another unsubtle reference to the mopping up or purification operations which the Russians would conduct in their own occupation zone. Stimson wrote in his diary:

"I found around me, particularly Morgenthau, a very bitter atmosphere of personal resentment against the entire German people without regard to individual guilt and I am very much afraid that it will result in our taking mass vengeance on the part of our people in the shape of clumsy economic action."

The economic part of the Morgenthau Plan, what was properly called the Treasury Plan, was drafted by Morgenthau's principal assistant Harry Dexter White (an actual Soviet agent, who is also remembered as the architect of the Bretton Woods Conference that created the International Monetary Fund (IMF) and World Bank, and he had his hands also full with disrupting Japanese desires for peace... which ultimately led to the incident at Pearl Harbor (more to be found via google)); Roosevelt's current thinking on Germany was still rather simplistic: no aircraft, uniforms, or marching. Morgenthau said: 'That's very interesting, Mr President, but I don't think it goes nearly far enough.' He wanted to

put eighteen or twenty million Germans out of work, and he wanted able-bodied Germans transported to Central Africa as slave labour on 'some big TVA project.' (The Tennessee Valley Authority hydroelectric project of Roosevelt's New Deal had generated employment for half the continent.) How different was the staid, elderly Republican Stimson from the vengeful Democrat Morgenthau. That Monday, September 1, the former flew back to Washington and conferred with General George C. Marshall, Roosevelt's chief of staff, about the treatment of Germany and ways of investigating and punishing the Gestapo. 'It was very interesting,' Stimson dictated afterwards in a note, 'to find that army officers have a better respect for the law in those matters than civilians who ... are anxious to go ahead and chop everybody's head off without trial or hearing.'

'My plan,' said Morgenthau in a meeting, unabashed, 'will stop the Germans from ever trying to extend their domination by force again. Don't worry. The rest of Europe can survive without them.' Stimson was unconvinced. 'This plan will breed war,' he said, 'not prevent it!' To General Marshall he wrote, 'It's very singular. I'm the man in charge of the Department which does the killing in this war, and yet I am the only one who seems to have any mercy for the other side.' Stimson returned to his office and dictated this note for his diary:

"As soon as I got into the meeting it became very evident that Morgenthau had been rooting around behind the scenes and had greased the way for his own views by conference with the president and others. I, to my tremendous surprise, found that Hull was as bitter as Morgenthau against the Germans and was ready to dump all the principles that he had been laboring for in regard to trade for the past twelve years. He and Morgenthau wished to wreck completely the immense Ruhr-Saar area of Germany into a second rate agricultural land. I found myself a minority of one and I labored vigorously but entirely ineffectively against my colleagues. In all the four years that I have been here I have not had such a difficult and unpleasant meeting."

It was decided that each of the three men (Hull, Morgenthau and Stimson) would submit to the president a memorandum on the treatment of Germany. Stimson utterly rejected Hull's proposals, which closely tallied with Morgenthau's. 'I cannot treat as realistic the suggestion that such an area in the present economic condition of the world can be turned into a non-productive "ghost territory" when it has become the center of one of the most industrialized continents in the world, populated by peoples of energy, vigor, and progressiveness.' Lord Halifax sent a further telegram to London, briefing the foreign office at McCloy's request on what Morgenthau was up to. Two awesome questions were now being raised, on which the ambassador asked for formal instructions: 'Whom do we imprison or intern? On what scale? Is it by tens of thousands or hundreds of thousands?' And, more crucially, 'Whom do we shoot or hang? The feeling is that we should not have great state trials, but proceed quickly and with despatch. The English idea, once preferred but then withdrawn, was to give the army lists to liquidate on mere identification. What has happened to this idea? Besides individuals, what categories should be shot?'

General Marshall was a wise, unhurried soldier-politician. On September 7, Stimson secured him as an ally. After reading the memorandum which Stimson had received from Morgenthau 'demanding,' as Stimson summarised it, 'that the leaders of the Nazi party be shot without trial and on the basis of the general world appreciation of their guilt,' Marshall gave it the reception that his political master had expected - 'absolute rejection of the notion that we should not give these men a fair trial.' Morgenthau nonetheless stuck to his guns and went to the very top, demanding of the president a re-hearing. Learning of this, Stimson cast about for other allies. He dined with Justice Felix Frankfurter, one of the twelve members of the Supreme Court and one of Roosevelt's less extreme advisers. 'Although a Jew, like Morgenthau,' dictated Stimson afterwards, 'he approached this subject with perfect detachment and great helpfulness.' He went over the whole matter with the judge from the beginning, reading out Morgenthau's proposals on the future of the Ruhr and on the summary liquidation without trial of the Nazis, at both of which Frankfurter 'snorted with astonishment and disdain.' He fully backed Stimson's views and those of his army generals. The accused Germans, said Frankfurter, were to be given a fair hearing: 'They cannot be railroaded to their death without trial.'

The fight nonetheless continued. By September 9 Morgenthau had his full Plan ready, 'a new diatribe' on the subject of how to deal with the Nazis. At a meeting that day with Roosevelt, Stimson waded into it. But the meeting was very unsatisfactory. Hull sat silent.?? Morgenthau's record shows that Roosevelt said he wanted Germany partitioned into three parts. He flipped through the pages of Morgenthau's Plan, and kept prodding Morgenthau: 'Where is the ban on uniforms and marching?' Morgenthau reassured him it was all there. The president was planning to meet in a few days' time with the British war leadership at Quebec, in Canada, to decide on these and other matters. He now, as Stimson put it, 'pranced up to the meeting at Quebec,' leaving Hull and Stimson behind.?? Morgenthau seized the opportunity to share the train journey north with the president as far as Hyde Park. Roosevelt's country home in upstate New York. He wanted to have the last word.

What views did Churchill bring with him to Quebec? His cabinet had displayed some differences of attitude on the punishment of enemy war criminals. A number of German prisoners-of-war had been shot in Britain during the war, but the file on these episodes is closed to public scrutiny. The treatment of the principal enemy leaders was clearly a different matter altogether. The archives show that as early as 1942 Churchill had decided that they should be executed without trial, and he repeatedly canvassed this proposal until long after the war was over, although there is no trace of it in his memoirs. For example, when the British ambassador in Moscow conveyed a Foreign Office statement on the case of Rudolf Hess to Marshal Stalin on November 5, 1942, the Soviet leader put his concerns to Sir Archibald Clark Kerr outright: 'After the war it is customary to repatriate prisoners-of-war: do you intend to send Hess home?' and he added, 'If Goebbels landed in the U.K. tomorrow, would you send him back as a P.o.W. (Prisoner

of War) too?' He was perturbed about the plan to set up a United Nations commission to try these criminals. 'I would not like to see Hitler, Mussolini, and the rest of them escaping like the Kaiser to some neutral country.' (The German Kaiser had been given sanctuary by the Netherlands after World War One.)

It was then that His Majesty's ambassador reassured the dictator that Churchill proposed a 'political decision,' whereby the enemy leaders would be liquidated upon capture. Both on this occasion and subsequently when Churchill tried to force this solution on him Stalin voiced wise objections. 'Whatever happens,' he lectured the ambassador in November 1942, 'there must be some kind of court decision. Otherwise people will say that Churchill, Roosevelt, and Stalin were wreaking vengeance on their political enemies!' 'I am sure,' persisted the ambassador laconically, 'that the political decision that Mr Churchill has in mind will be accompanied by all the necessary formalities.' This was not an isolated document, in which an ambassador had perhaps expressed an opinion without sufficient warrant from his superiors. From both the British and American archives it becomes clear that the British - from their autocratic prime minister Winston Churchill downwards - were set on executing against the Nazi leadership what can only be described as lynch justice without the palliative noun, or alternatively as judicial murder without the exculpatory adjective. It was a matter on which Anthony Eden, the foreign secretary, equivocated. Cabinet papers show that in July 1943 he proposed that the United Nations warn all neutral countries that the harbouring of war criminals at any future time would be regarded as an unfriendly act.

Responding to this, another cabinet minister, Duff Cooper, pointed out that the United Nations had yet to decide on the fate of Hitler and Mussolini if they should be taken prisoner. As for the alternative, 'punishment without trial,' Duff Cooper warned that this would shock the consciences of many people at the time and 'many more in retrospect.' Since Hitler and Mussolini would no doubt meet their deaths with dignity, the result would be that their 'memories would be enshrined for ever in the hearts of their people.' He argued that it would be infinitely preferable for the Axis leaders to creep into a despised and dishonoured exile than to have trials leading to a St Helena or, worse, to executions. Duff Cooper quoted historical parallels - showing that the exiles of James II, the Kaiser, and Charles X were fatal to their dynasty; while the harsher punishments meted out to Napoleon, Louis XVI, and Charles I built up legends on which restorations were later founded. Churchill's drafted a paper in which the three powers, speaking in the interest of the thirty-two United Nations, declared that at the time of any armistice with Germany, those Germans who had been responsible for the atrocities 'will be sent back to the countries in which their abominable deeds were done.' 'The above declaration,' he was careful to end, 'is without prejudice to the case of the major criminals, whose offences have no particular geographical localisation.'

Eden carried Churchill's draft to Moscow and, with minor amendments, it was adopted as the declaration issued there at the end of the foreign ministers' meeting on October 30. This Moscow Declaration became the basis of the post-war disposition of many of the

German war criminals - though not of the Italian and Japanese. Churchill expressed relief at this, telling the cabinet, 'I am certain that the British at any rate would be incapable of carrying out mass executions for any length of time, especially as we have not suffered like the subjugated countries.' This left unresolved the awkward problem of how to deal with the major war criminals, particularly those 'whose offences however have no particular geographical localisation' - the major criminals like Hitler. For these the prime minister reverted, in November 1943, to his own final solution. 'A list,' he suggested, 'shall be compiled by the United Nations of all major criminals other than those provided for by local jurisdiction.' This growing list, of fifty or at the most one hundred names, would include 'the Hitler and Mussolini gangs and the Japanese War Lords.' From time to time at a conference of jurists the lists would be pruned, added to, and approved. 'Thereafter, the persons named on the approved list will, by solemn decree of the 32 United Nations, be declared world outlaws.' The beauty of this proposal was that the 'outlaws' could be liquidated at will: 'No penalty will be inflicted on anyone who puts them to death in any circumstances.' 'As and when any of these persons falls into the hands of any of the troops or armed forces of the United Nations,' suggested Churchill, 'the nearest officer of the rank or equivalent rank of Major-General will forthwith convene a Court of Inquiry, not for the purpose of determining the guilt or innocence of the accused but merely to establish the fact of identification. Once identified, the said officer will have the outlaw or outlaws shot to death within six hours and without reference to higher authority.'

It was perhaps infelicitous for the leader of a great democracy, the head of a nation fighting a war to re-establish the rule of law, to have put his name to such a document. It was drafted in November ????, even as Churchill was issuing orders for the severest fire raids in history to be executed against the capital of Germany, with the specific aim of killing as many of its civilian inhabitants as possible. There is no historian writing on the Third Reich who has not shuddered with uncomprehending disgust upon finding broadly identical orders signed by Adolf Hitler for the summary execution or liquidation of commandos, commissars, and Allied 'terror fliers' - and precisely those were the documents which were to be used as prosecution exhibits in the Tribunal that forms the centrepiece of this narrative.

These were some of the consideration on how Germany shall be treated after the War.

When General Eisenhower asked the British government in April 1944 for a statement to issue to the Germans about how they would be treated in defeat, Churchill wrote to the Foreign Office as follows:

" I have pointed out to the cabinet that the actual terms contemplated for Germany are not of a character to reassure them at all, if stated in detail. Both President Roosevelt and Marshal Stalin at Teheran wished to cut Germany into smaller pieces than I had in mind. Stalin spoke of very large executions of over 50,000 of the staffs and military experts. Whether he was joking or not could not be ascertained. The atmosphere was jovial, but also grim. He certainly said he would require 4,000,000 German males to work for an indefinite period to rebuild Russia. We have promised the Poles that they shall

have compensation both in East Prussia and, if they like, up to the line of the Oder. There are a lot of other terms implying the German ruin and indefinite prevention of their rising again as an armed Power."

Unlike Churchill, Stalin seemed inclined to take the judicial path, albeit using the trial procedures for which the Russians were already well known. On December 16, 1943 they opened a war crimes tribunal against three German officers taken prisoner in Stalingrad, accused of murdering Russian civilians by means of gassing-trucks. The trial ended after only three days with death sentences. The three officers were executed in a public square in Kharkov before forty thousand spectators. The Russians spliced together a gruesome documentary film about the Kharkov trials, and its message - the Soviet trial procedures - was not lost on Justice Robert H. Jackson when it was shown to him and his entire newly assembled staff on the evening of May 17, 1945. Limiting his own verdict on it, the judge diplomatically called it 'a very interesting exposition of the Russian method of proving a case by the defendants themselves' - that is, the tortured 'self-confessions' for which Soviet-style trials had long become renowned.?? As the British attorney-general Sir David Maxwell Fyfe wrote, these trials were efficiently stage-managed examples of summary action, in which the defendants abjectly confessed to their crimes and were convicted and executed without further ado.

The show trial in Kharkov was not without consequences in Berlin during that winter of 1943-4. Goebbels' senior colleagues Dr Hans Fritzsche, who would also be indicted at Nuremberg, would testify in June 1946 to having particularly clear recollections of the moment when he learned that the Russians had staged a trial after recapturing the city of Kharkov. It was then that he heard for the first time the allegations about people being killed with gas. Dr Goebbels had told him explicitly, he said, that 'The gas trucks that they mentioned in the Russian trial were a product of somebody's fevered imagination, without any basis whatever in fact.'

Going further towards the International Military Trial (IMT) at Nuremberg:

Left in Washington, Stimson was disgusted on hearing of his president's action. 'I cannot believe that he will follow Morgenthau's views,' he wrote on the thirteenth. 'If he does, it will certainly be a disaster.' Churchill later wrote: 'We had much to ask from Mr Morgenthau.' When he discussed policy toward Germany with Roosevelt later that day he declared himself in favour of the Plan, as explained to him by Lord Cherwell (basically, that by smashing Germany's industries the British Empire could grab the defeated enemy's export markets.) Lord Cherwell produced a one-page draft memorandum on the treatment of Germany. Out of earshot of Churchill, Morgenthau invited the Prof. and Harry Dexter White up to his room at eleven A.M. on September 15, read the Prof.'s draft - and expressed a profound dislike for it. It represented 'two steps backward,' he suggested. Since the last discussion, he said, Churchill had seemed to accept the Plan, and had himself spoken promisingly of turning Germany into an agricultural state as she had been in the last quarter of the nineteenth century. Churchill added:

'This programme for eliminating the war-making industries in the Ruhr and in the Saar is looking forward to converting Germany into a country primarily agricultural and pastoral in its character.'

It went in fact far beyond the Morgenthau Plan in its punitive economic provisions. The Morgenthau Plan included controversial provisions for the establishment of slave-labour battalions comprised of all the members of the 'S.S., the Gestapo and similar groups,' and it proposed to punish with death any person trying to leave Germany. As for the punishment of 'arch-criminals' the Morgenthau Plan seemed to convey more than just the spirit of Churchill's original 'outlaw' proposals. Roosevelt was still under Morgenthau's influence. Both Stimson and Hull continued to lobby him against the Morgenthau Plan. Remarkably, almost overnight, he began to reconsider. It was of course an election year, and what finally helped change his mind was when the newspapers got wind of the Plan; details of it appeared on September ?? in the Wall Street Journal. There was a torrent of criticism directed at both the president and Morgenthau. The five biggest American engineering unions issued a declaration dismissing the Plan as economically unsound and warning that it 'contained the seeds of a new war.'

Soviet Foreign Minister Molotov asked outright for Churchill's view on the Morgenthau Plan. Churchill admitted that Roosevelt and Morgenthau had been taken aback by its public reception. The prime minister repeated, according to the British record, that, as he had declared at Teheran, Britain would not agree to the mass execution of Germans, since he feared that 'one day' British public opinion would cry out. 'But it was necessary,' the British minutes record Churchill as saying, 'to kill as many as possible in the field.' Stalin made no comment on that. A few moments later Churchill suggested that the population of Silesia and East Prussia should be 'moved' to other provinces in western Germany, explaining with disarming cynicism: 'If seven million had been killed in the war there would be plenty of room for them.'

After a week dominated by Polish affairs - of which Churchill declared both British and Russia to be 'heartily sick' - the two leaders renewed their discussion on the future in a macabre humour. British foreign secretary Anthony Eden had already secretly promised the Russians on October 16 that Britain would repatriate to the Soviet Union eleven thousand Russian prisoners-of-war 'without exception,' even if they did not wish to return. (The eleven thousand would be shot as soon as they arrived on Russian soil.) The next day Churchill regaled Stalin with an account of his bombing onslaught - boasting that three days earlier R.A.F. Bomber Command had put down ten thousand tons of bombs in twelve hours on one minor Ruhr town, Duisburg. 'The war,' boasted Churchill, 'is the most cruel since the Stone Age.' When Stalin allowed himself a witticism about cannibalism, Churchill chimed in, 'Talking of eating - Britain has managed to arrange for the despatch of 45,000 tons of corned beef to the Soviet Union.' With a guffaw he added, 'We are also sending eleven thousand Soviet ex-prisoners-of-war to eat the beef.' The reader can almost hear the unkind laughter crackling from the pages in the archives - but they merit quoting here as an indication of the kind of reprehensible remarks which are

exchanged at high-level conferences between men of war, and which hardly bear reading out by public prosecutors in the cold light of a war-crimes tribunal years later.

When Stalin asked point-blank what they were to do with Germany, Eden dutifully talked of dismemberment; and Churchill reverted to his old bugaboo, Prussia and her military caste as 'the root of the evil.' They should strip everything out of the Ruhr and the Saar, he said. 'This was the policy which Mr Morgenthau had laid before the President,' Churchill explained, adding, 'Mr Morgenthau's hatred of the Germans was indescribable.' 'A second Vansittart,' remarked Stalin approvingly, referring to the pathologically anti-German Lord Vansittart, a former adviser to the British foreign office. Roosevelt, continued the prime minister, had liked what Morgenthau had said; so did he, and he quoted page after page from the Plan as they both pored over maps of Europe, Germany, and the Dardanelles Straits, pencils in hand. It was a pity, Churchill murmured, that when God created the world he had not consulted the two of them. 'God's first mistake,' agreed Stalin.

This should give the reader a good view on what the Allied leader thought needed to be done to the losing side of the war which was forced into it by the Allies in the first place.

The Hooton Plan

A plan similar to Kaufman's (Germany Must Perish) was issued during the war years by a prominent American anthropologist. In an article headlined "Breed War Strain Out of Germans" in the New York daily newspaper P.M., January 4, 1943, Ernest Hooton laid out an "outbreeding" plan that would "destroy German nationalism and aggressive ideology while retaining and perpetuating desirable German biological and sociological capacities. The Harvard University professor's proposal called for genetically transforming the German nation by encouraging mating of German women with non-German men, who would be brought into the country in large numbers, and of German men, forcibly held outside of Germany, with non-German women. Ten to twelve million German men would be assigned to forced labor under Allied supervision in countries outside of Germany to rebuild their economies. "The objects of this measure," wrote Dr. Hooton, "include reduction of the birthrate of 'pure' Germans, neutralization of German aggressiveness by outbreeding and denationalization of indoctrinated individuals."

This plan, Hooton estimated, would require at least 20 years to be implemented. "During this period," he went on, "encourage also the immigration and settlement in the German states of non-German nationals, especially males."

12.21 Adolf Hitler: An Overlooked Candidate for the Nobel Prize

By Alex S. Perry Jr.

If anyone deserved the Nobel Peace Prize, it was Adolf Hitler. Hitler did not want war. World War II was forced on Germany. Poland was encouraged to attack Germany by the promises of British Ambassador Sir Howard William Kennard and French Ambassador Leon Noel. They promised unconditionally that England and France would come to Poland's immediate aid should she need it in case of war with Germany; therefore, no matter what Poland did to provoke Germany's attack, Poland had an assurance from England and France. With this guarantee, Poland began acting ruthlessly. In addition, Kennard and Noel flattered Poland into thinking she was a great power. As the Chinese proverb says, "You can flatter a man to jump off the roof." They sabotaged the efforts of those Polish leaders who wanted a policy of friendship with Germany.¹

Poland delivered the first blow, and Hitler announced, "Since dawn today, we are shooting back," when he spoke to the Reichstag on September 1, 1939. "Shooting back" is not the statement of an aggressor.² When Hitler attacked, Donald Day said, Poland got exactly what she deserved. None of Poland's immediate neighbors felt sorry for her. Poland had conducted a policy of terror. Ethnic Germans living on German soil that had been given to Poland at the end of World War I by the Versailles Peace Treaty had been so mistreated that 2 million left the area for Germany and elsewhere.³ They were driven from what had been their homeland long before World War I. Leon Degrelle, a young Belgian political leader in the 1930s, and who later joined Hitler's hardest fighting unit, the Waffen SS, with over 400,000 other non-German European volunteers, says, "Of all the crimes of World War II, one never hears about the wholesale massacres that occurred in Poland just before the war. Thousands of German men, women and children were massacred in the most horrendous fashion by press-enraged mobs. Hitler decided to halt the slaughter and he rushed to the rescue."⁴ Young German boys, when captured by the Poles, were castrated.⁵

William Joyce, nicknamed Lord Haw Haw by British propaganda, became a German citizen and took up for the German cause. He described the conditions of the Germans who were living in Poland because of the Versailles Treaty: German men and women were hunted like wild beasts through the streets of Bromberg. When they were caught, they were mutilated and torn to pieces by the Polish mob. . . . Every day the butchery increased. . . . [T]housands of Germans fled from their homes in Poland with nothing more than the clothes that they wore. Moreover, there was no doubt that the Polish army was making plans for the massacre of Danzig. . . . On the nights of August 25 to August 31 inclusive, there occurred, besides innumerable attacks on civilians of German blood, 44 perfectly authenticated acts of armed violence against German official persons and property. These incidents took place either on the border or inside German territory. On the night of [August 31], a band of Polish desperadoes actually occupied the German

Broad casting Station at Gleiwitz. Now it was clear that unless German troops marched at once, not a man, woman or child of German blood within the Polish territory could reasonably expect to avoid persecution and slaughter.⁶

Due to Poland's atrocious acts against the German people, Hitler declared to British Ambassador Sir Nevile Henderson on August 25, 1939: "Poland's provocations have become intolerable."⁷ So Poland delivered the first blow, not Germany. The first blow was important to the United States in its war with Japan. It gave the United States the right and justification to do whatever was necessary to defeat the Japanese. But Germany did not have this right with Poland even after Poland had delivered the first blow. What fair-minded man, if he knew the true facts involved in the Polish situation, could blame Hitler for his retaliatory attack on Poland? Poland, if any nation ever did, deserved exactly what Germany gave her in return. But Hitler did not even want to do what he had to do. No sooner than Hitler began protecting the German people inside Poland, he was ready to stop all hostilities and begin peace negotiations. Prince Sturdza narrates: Only hours after the outbreak of hostilities between Germany and Poland, Mussolini, renewing his efforts for peace, proposed to all the interested powers an immediate suspension of hostilities and the immediate convocation of a conference between the great powers, in which Poland would also participate. Mussolini's proposals were, without any delay, accepted by all governments concerned except Great Britain.⁸

Before war broke out Britain's ambassador to Berlin, Sir Nevil Henderson, on August 30, 1939, said, in his final report of Germany's proposed basis for negotiations, "Those proposals are in general not too unreasonable." Even Pierre and Renee Gosset, in their rabid anti-German book *Hitler*, declare: "It was a proposal of extreme moderation. It was in fact an offer that no Allied statesman could have rejected in good faith."⁹ As early as January 1941, Hitler was making extraordinary efforts to come to peace terms with England. He offered England generous terms. He offered, if Britain would assume an attitude of neutrality, to withdraw from all of France, to leave Holland and Belgium . . . to evacuate Norway and Denmark, and to support British and French industries by buying their products. His proposal had many other favorable points for England and Western Europe. But England's officials did not want peace. They wanted war. Had they not celebrated their declaration of war by laughing, joking and drinking beer?¹⁰

Hitler allowed the British to escape at Dunkirk (Note: This is not entirely true. Letting the British troops escape was no deliberate decision, rather a later rationalization to justify having lost a great opportunity.) He did not want to fight England. German Gen. Blumentritt states why Hitler allowed the British to escape: He [Hitler] then astonished us by speaking with admiration of the British Empire, of the necessity for its existence, and the civilization that Britain had brought into the world. He remarked with a shrug of the shoulders, that the creation of the Empire had been achieved by means that were often harsh, but "where there is planning there are shavings flying." He compared the British Empire with the Catholic Church—saying they were both essential elements of stability in the world. He said that all he wanted from Britain was that she should acknowledge

Germany's position on the continent. The return of Germany's lost colonies would be desirable but not essential, and he would even offer to support Britain with troops if she should be involved in any difficulties anywhere.¹¹

Blumentritt's statement is not the only notice about Hitler's hope of peace and friendship with England. The renowned Swedish Explorer Sven Hedin observed Hitler's confusion about Britain's refusal to accept his peace offers: Hitler "felt he had repeatedly extended the hand of peace and friendship to the British, and each time they had blacked his eye in reply." Hitler said, "The survival of the British Empire is in Germany's interests too because if Britain loses India, we gain nothing thereby."¹² Harry Elmer Barnes says that Hitler lost the war because he was too good. While the theory of Hitler's diabolism is generally accepted, there are very well informed persons who than too tough and ruthless. They point to the following considerations: he made a genuine and liberal peace offer to Britain on August 25, 1939; he permitted the British to escape at Dunkirk to encourage Britain to make peace, which later on cost him the war in North Africa; he failed to occupy all of France, take North Africa at once, and split the British Empire, he lost the Battle of Britain by failing to approve the savagery of military barbarism which played so large a role in the Allied victory; he delayed his attack on Russia and offered Molotov lavish concessions in November 1940 to keep peace between Germany and Russia; he lost the war with Russia by delaying the invasion in order to bail Mussolini out of his idiotic attack on Greece; and he declared war on the United States to keep his pledged word with Japan which had long before made it clear that it deserved no such consideration and loyalty from Hitler.¹³

David Irving's descriptive account of Hitler's love for Great Britain confirms what others had to say of Hitler's desire to do no harm to England: For 20 years Hitler had dreamed of an alliance with Britain. Until far into the war he clung to the dream with all the vain, slightly ridiculous tenacity of a lover unwilling to admit that his feelings are unrequited. As Hitler told Maj. Quisling on August 18, 1940: "After making one proposal after another to the British on the reorganization of Europe, I now find myself forced against my will to fight this war against Britain. . . ." This was the dilemma confronting Hitler that summer. He hesitated to crush the British. Accordingly, he could not put his heart into the invasion planning. More fatefully, Hitler stayed the hand of the Luftwaffe and forbade any attack on London under pain of court-martial; the all-out saturation bombing of London, which his strategic advisers Raeder, Jodl, and Jeschonnek all urged upon him, was vetoed for one implausible reason after another. Though his staffs were instructed to examine every peripheral British position—Gibraltar, Egypt, the Suez Canal—for its vulnerability to attack, the heart of the British Empire was allowed to beat on, unmolested until it was too late. In these months an adjutant overheard Hitler heatedly shouting into a Chancellery telephone, "We have no business to be destroying Britain. We are quite incapable of taking up her legacy," meaning the empire; and he spoke of the "devastating consequences" of the collapse of that empire.¹⁴

Hitler told Undersecretary of State Sumner Welles, March 2, 1940, (1) that he had

long been in favor of disarmament, but had received no encouragement from England and France; (2) he was in favor of international free trade; (3) Germany had no aim other than the return of the “German people to the territorial position that historically was rightly theirs”; (4) he had no desire to control non-German people and he had no intention to interfere with their independence; and (5) he wanted the return of the colonies that were stolen from Germany at Versailles.¹⁵ Churchill wanted war. Churchill was a war criminal. Churchill did not want peace. He wanted the war to continue as long as possible. In a January 1, 1944, letter to Stalin, Churchill said: “We never thought of peace, not even in that year when we were completely isolated and could have made peace without serious detriment to the British Empire, and extensively at your cost. Why should we think of it now, when victory approaches for the three of us?”¹⁶ This is a confession even by Churchill that Hitler never did want war with England. Churchill in his July 1943 Guildhall speech stated quite plainly, “We entered the war of our free will, without ourselves being directly assaulted.”¹⁷

When Churchill was leaving London to meet Roosevelt for a conference in Quebec late in the summer of 1943, a reporter asked if they were planning to offer peace terms to Germany. Churchill replied: “Heavens, no. They would accept immediately.”¹⁸ So the war went on from August 1943 until May 1945—for 22 more months just because peace terms were not offered. Churchill wanted England to be in war with Germany as early as 1936.¹⁹ Roosevelt was a war criminal. He wanted war and he wanted World War II to last as long as possible. Hitler and the German people did not want war, but Roosevelt wanted war. He worked for getting World War II started. He wanted war for political reasons. Jesse Jones, a member of Roosevelt’s cabinet for five years, states, “Regardless of his oft-repeated statement, ‘I hate war,’ he was eager to get into the fighting since that would ensure a third term.”²⁰ While the president repeated he did not want war and had no intent to send an expeditionary force to Europe, the militant secretaries of the Navy and of the War Department, Knox and Stimson, denounced the neutrality legislation in speeches and public declarations and advocated an American intervention in the Atlantic Battle. As members of the cabinet they could not do it without the president’s consent.²¹ When the press quoted Frank Knox as saying: “The only hope for peace for the United States would be the battering of Germany,” FDR did not rebuke him.²²

Dr. Milton Eisenhower, Gen. Eisenhower’s brother, said, “President Roosevelt found it necessary to get the country into World War II to save his social policies.”²³ Clare Booth-Luce shocked many people by saying at the Republican Party Convention in 1944 that Roosevelt “has lied us [the U.S.A.] into the war.” However, after this statement proved to be correct, the Roosevelt followers ceased to deny it, but praised it by claiming he was “forced to lie” to save his country and then England and “the world.”²⁴ Rep. Hamilton Fish made the first speech in Congress on December 8, 1941, asking for a declaration of war against Japan. In his book, *FDR: The Other Side of the Coin*, Fish says he is ashamed of that speech today and if he had known what Roosevelt had been doing to provoke Japan to attack, he would never have asked for a declaration of war.²⁵ Fish

said Roosevelt was the main firebrand to light the fuse of war both in Europe and the Pacific.²⁶ Roosevelt's real policy was revealed when the Germans were able to search through Polish documents and found in the archives in Warsaw "the dispatches of the Polish ambassadors in Washington and Paris which laid bare Roosevelt's efforts to goad France and Britain into war. In November 1938, William C. Bullitt, his personal friend and ambassador in Paris, had indicated to the Poles that the president's desire was for "Germany and Russia [to] come to blows, whereupon the democratic nations would attack Germany and force her into submission"; in the spring of 1939, Bullitt quoted Roosevelt as being determined "not to participate in the war from the start, but to be in at the finish."²⁷ Oliver Lyttelton, wartime British production manager, was undeniably correct when he declared, "America was never truly neutral. There is no doubt where her sympathies were, and it is a travesty on history ever to say that the United States was forced into the war. America provoked the Japanese to such an extent that they were forced to attack."²⁸

The Japanese were begging for peace before the atom bombs were dropped, and MacArthur recommended negotiation on the basis of the Japanese overtures. But Roosevelt brushed off this suggestion with the remark: "MacArthur is our greatest general and our poorest politician."²⁹ These statements tell the whole history of World War II from the beginning to the end, The war was started to keep Roosevelt in office and it was allowed to go on much longer than necessary—it could have been over any day from 1943 on. At the same time American boys were battling to end World War II, leading American politicians were doing all they could for political reasons to continue the conflict. Hitler had only one goal with regard to his relations with other nations. That goal was peace. On May 17, 1933, Hitler addressed the Reichstag about his intentions: Germany will be perfectly ready to disband her entire military establishment and destroy the small amount of arms remaining to her, if the neighboring countries will do the same thing with equal thoroughness. Germany is entirely ready to renounce aggressive weapons of every sort if the armed nations, on their part, will destroy their aggressive weapons within a specified period, and if their use is forbidden by an international convention. Germany is at all times prepared to renounce offensive weapons if the rest of the world does the same. Germany is prepared to agree to any solemn pact of non-aggression because she does not think of attacking anybody but only of acquiring security.³⁰ None of the "peace loving democracies" paid any attention to Hitler's offer. The only reason why King Edward was not allowed to remain on the British throne was because he let it be known that as long as he was the king, England would not go to war with Germany. Hitler expressed himself about the results Germany would gain from war: "A European war could be the end of all our efforts even if we should win, because the disappearance of the British Empire would be a misfortune which could not be made up again" (Michael McLaughlin, *For Those Who Cannot Speak*, page 10). Based on the above, Hitler should be awarded the Nobel Peace Prize posthumously to set things straight. He was not the cause of World War II and he did not want any war. He was a man of peace and he worked for peace in every way he could.

12.22 More Untruths, really?

This chapter depicts more possible untruths told about history but I was not able to find them in history books, just from the Internet. Hence, this information should definitely be taken with a grain of salt.

Hiroshima and Nagasaki

From "Washington's Blog and Global Research 12 October 2012"

It is perceived wisdom throughout the Western world – particularly America – that the dropping of two nuclear bombs on Hiroshima and Nagasaki was "necessary" to end the war with Japan. Printed throughout textbooks in the post-war world, the understanding is that, had these targets not been struck, the war would have waged on indefinitely, with potentially untold American soldier and Japanese civilian deaths. We are told repeatedly that, without the use of weapons which current Hiroshima Mayor Kazumi Matsui refers to as the "ultimate inhumane weapon and an absolute evil", Japan would never have surrendered. We are told that President Truman was troubled by the mounting Allied casualties, and that the Joint Chiefs had told him to expect 1,000,000 dead Americans in the pending attack on the Japanese home islands. Yet this figure is a complete fabrication, invented by Secretary of War Stimson. No such claim was made by the Joint Chiefs of Staff, and Truman himself, in different statements, asserted "thousands of lives would be saved," and "a quarter of a million of the flower of our young manhood was worth a couple of Japanese cities," and also "I thought 200,000 of our young men would be saved by making that decision." None of these statements were based on any evidence.

Truman knew weeks before the Potsdam Conference, which began in July, 1945, that the Japanese were making overtures to surrender, the only condition being the retention of the Emperor. But Truman was determined to test the new bombs. In the words of General Douglas MacArthur: "The war might have ended weeks earlier, he said, if the United States had agreed, as it later did anyway, to the retention of the institution of the emperor." In the event, the US agreed to the terms of the Japanese surrender anyway – but not until they had tested their new weapons and caused the deaths of 100,000s of innocent civilians. In reality, most of the military top brass were disgusted at the decision to bomb Hiroshima and Nagasaki and understood completely that it served no military purpose whatsoever.

The U.S. Strategic Bombing Survey group, assigned by President Truman to study the air attacks on Japan, produced a report in July of 1946 that concluded:

Based on a detailed investigation of all the facts and supported by the testimony of the surviving Japanese leaders involved, it is the Survey's opinion that certainly prior to 31 December 1945 and in all probability prior to 1 November 1945, Japan would have surrendered even if the atomic bombs had not been dropped, even if Russia had not

entered the war, and even if no invasion had been planned or contemplated.

General (and later president) Dwight Eisenhower – then Supreme Commander of all Allied Forces, and the officer who created most of America's WWII military plans for Europe and Japan – said:

“The Japanese were ready to surrender and it wasn't necessary to hit them with that awful thing.”

Newsweek, 11/11/63, Ike on Ike

Eisenhower also noted (pg. 380):

“In [July] 1945... Secretary of War Stimson, visiting my headquarters in Germany, informed me that our government was preparing to drop an atomic bomb on Japan. I was one of those who felt that there were a number of cogent reasons to question the wisdom of such an act. . . . the Secretary, upon giving me the news of the successful bomb test in New Mexico, and of the plan for using it, asked for my reaction, apparently expecting a vigorous assent. During his recitation of the relevant facts, I had been conscious of a feeling of depression and so I voiced to him my grave misgivings, first on the basis of my belief that Japan was already defeated and that dropping the bomb was completely unnecessary, and secondly because I thought that our country should avoid shocking world opinion by the use of a weapon whose employment was, I thought, no longer mandatory as a measure to save American lives. It was my belief that Japan was, at that very moment, seeking some way to surrender with a minimum loss of 'face'. The Secretary was deeply perturbed by my attitude...”

Admiral William Leahy – the highest ranking member of the U.S. military from 1942 until retiring in 1949, who was the first de facto Chairman of the Joint Chiefs of Staff, and who was at the center of all major American military decisions in World War II – wrote (pg. 441):

“It is my opinion that the use of this barbarous weapon at Hiroshima and Nagasaki was of no material assistance in our war against Japan. The Japanese were already defeated and ready to surrender because of the effective sea blockade and the successful bombing with conventional weapons. The lethal possibilities of atomic warfare in the future are frightening. My own feeling was that in being the first to use it, we had adopted an ethical standard common to the barbarians of the Dark Ages. I was not taught to make war in that fashion, and wars cannot be won by destroying women and children.”

General Douglas MacArthur agreed (pg. 65, 70-71):

“MacArthur's views about the decision to drop the atomic bomb on Hiroshima and Nagasaki were starkly different from what the general public supposed When I asked General MacArthur about the decision to drop the bomb, I was surprised to learn he had not even been consulted. What, I asked, would his advice have been? He replied that he saw no military justification for the dropping of the bomb. The war might have ended weeks earlier, he said, if the United States had agreed, as it later did anyway, to the

retention of the institution of the emperor.”

Moreover (pg. 512):

“The Potsdam declaration in July, demand[ed] that Japan surrender unconditionally or face ‘prompt and utter destruction.’ MacArthur was appalled. He knew that the Japanese would never renounce their emperor, and that without him an orderly transition to peace would be impossible anyhow, because his people would never submit to Allied occupation unless he ordered it. Ironically, when the surrender did come, it was conditional, and the condition was a continuation of the imperial reign. Had the General’s advice been followed, the resort to atomic weapons at Hiroshima and Nagasaki might have been unnecessary.”

Similarly, Assistant Secretary of War John McLoy noted (pg. 500):

“I have always felt that if, in our ultimatum to the Japanese government issued from Potsdam [in July 1945], we had referred to the retention of the emperor as a constitutional monarch and had made some reference to the reasonable accessibility of raw materials to the future Japanese government, it would have been accepted. Indeed, I believe that even in the form it was delivered, there was some disposition on the part of the Japanese to give it favorable consideration. When the war was over I arrived at this conclusion after talking with a number of Japanese officials who had been closely associated with the decision of the then Japanese government, to reject the ultimatum, as it was presented. I believe we missed the opportunity of effecting a Japanese surrender, completely satisfactory to us, without the necessity of dropping the bombs.”

Under Secretary of the Navy Ralph Bird said:

“I think that the Japanese were ready for peace, and they already had approached the Russians and, I think, the Swiss. And that suggestion of [giving] a warning [of the atomic bomb] was a face-saving proposition for them, and one that they could have readily accepted... In my opinion, the Japanese war was really won before we ever used the atom bomb. Thus, it wouldn’t have been necessary for us to disclose our nuclear position and stimulate the Russians to develop the same thing much more rapidly than they would have if we had not dropped the bomb.”

He also noted (pg. 144-145, 324):

“It definitely seemed to me that the Japanese were becoming weaker and weaker. They were surrounded by the Navy. They couldn’t get any imports and they couldn’t export anything. Naturally, as time went on and the war developed in our favor it was quite logical to hope and expect that with the proper kind of a warning the Japanese would then be in a position to make peace, which would have made it unnecessary for us to drop the bomb and have had to bring Russia in.”

General Curtis LeMay, the tough cigar-smoking Army Air Force “hawk,” stated publicly shortly before the nuclear bombs were dropped on Japan:

“The war would have been over in two weeks.... The atomic bomb had nothing to do with the end of the war at all.”

The Vice Chairman of the U.S. Bombing Survey Paul Nitze wrote (pg. 36-37, 44-45):

“[I] concluded that even without the atomic bomb, Japan was likely to surrender in a matter of months. My own view was that Japan would capitulate by November 1945. Even without the attacks on Hiroshima and Nagasaki, it seemed highly unlikely, given what we found to have been the mood of the Japanese government, that a U.S. invasion of the islands [scheduled for November 1, 1945] would have been necessary.”

Deputy Director of the Office of Naval Intelligence Ellis Zacharias wrote:

“Just when the Japanese were ready to capitulate, we went ahead and introduced to the world the most devastating weapon it had ever seen and, in effect, gave the go-ahead to Russia to swarm over Eastern Asia. Washington decided that Japan had been given its chance and now it was time to use the A-bomb. I submit that it was the wrong decision. It was wrong on strategic grounds. And it was wrong on humanitarian grounds.”

Ellis Zacharias, *How We Bungled the Japanese Surrender*, Look, 6/6/50, pg. 19-21.

Brigadier General Carter Clarke – the military intelligence officer in charge of preparing summaries of intercepted Japanese cables for President Truman and his advisors – said (pg. 359):

“When we didn’t need to do it, and we knew we didn’t need to do it, and they knew that we knew we didn’t need to do it, we used them as an experiment for two atomic bombs.”

Many other high-level military officers concurred. For example:

The commander in chief of the U.S. Fleet and Chief of Naval Operations, Ernest J. King, stated that the naval blockade and prior bombing of Japan in March of 1945, had rendered the Japanese helpless and that the use of the atomic bomb was both unnecessary and immoral. Also, the opinion of Fleet Admiral Chester W. Nimitz was reported to have said in a press conference on September 22, 1945, that “The Admiral took the opportunity of adding his voice to those insisting that Japan had been defeated before the atomic bombing and Russia’s entry into the war.” In a subsequent speech at the Washington Monument on October 5, 1945, Admiral Nimitz stated “The Japanese had, in fact, already sued for peace before the atomic age was announced to the world with the destruction of Hiroshima and before the Russian entry into the war.” It was learned also that on or about July 20, 1945, General Eisenhower had urged Truman, in a personal visit, not to use the atomic bomb. Eisenhower’s assessment was “It wasn’t necessary to hit them with that awful thing . . . to use the atomic bomb, to kill and terrorize civilians, without even attempting [negotiations], was a double crime.” Eisenhower also stated that it wasn’t necessary for Truman to “succumb” to [the tiny handful of people putting pressure on the president to drop atom bombs on Japan.]

British officers were of the same mind. For example, General Sir Hastings Ismay, Chief of Staff to the British Minister of Defence, said to Prime Minister Churchill that “when Russia came into the war against Japan, the Japanese would probably wish to get out on almost any terms short of the dethronement of the Emperor.”

On hearing that the atomic test was successful, Ismay’s private reaction was one of “revulsion.”

Why Were Bombs Dropped on Populated Cities Without Military Value?

Even military officers who favored use of nuclear weapons mainly favored using them on unpopulated areas or Japanese military targets ... not cities. For example, Special Assistant to the Secretary of the Navy Lewis Strauss proposed to Secretary of the Navy James Forrestal that a non-lethal demonstration of atomic weapons would be enough to convince the Japanese to surrender ... and the Navy Secretary agreed (pg. 145, 325):

“I proposed to Secretary Forrestal that the weapon should be demonstrated before it was used. Primarily it was because it was clear to a number of people, myself among them, that the war was very nearly over. The Japanese were nearly ready to capitulate. . . My proposal to the Secretary was that the weapon should be demonstrated over some area accessible to Japanese observers and where its effects would be dramatic. I remember suggesting that a satisfactory place for such a demonstration would be a large forest of cryptomeria trees not far from Tokyo. The cryptomeria tree is the Japanese version of our redwood. . . I anticipated that a bomb detonated at a suitable height above such a forest. . . would lay the trees out in windrows from the center of the explosion in all directions as though they were matchsticks, and, of course, set them afire in the center. It seemed to me that a demonstration of this sort would prove to the Japanese that we could destroy any of their cities at will. . . Secretary Forrestal agreed wholeheartedly with the recommendation. . . It seemed to me that such a weapon was not necessary to bring the war to a successful conclusion, that once used it would find its way into the armaments of the world. . .”

General George Marshall agreed:

“Contemporary documents show that Marshall felt “these weapons might first be used against straight military objectives such as a large naval installation and then if no complete result was derived from the effect of that, he thought we ought to designate a number of large manufacturing areas from which the people would be warned to leave—telling the Japanese that we intend to destroy such centers. . . .” As the document concerning Marshall’s views suggests, the question of whether the use of the atomic bomb was justified turns . . . on whether the bombs had to be used against a largely civilian target rather than a strictly military target—which, in fact, was the explicit choice since although there were Japanese troops in the cities, neither Hiroshima nor Nagasaki was deemed militarily vital by U.S. planners. (This is one of the reasons neither had been heavily bombed up to this point in the war.) Moreover, targeting [at Hiroshima and Nagasaki] was aimed explicitly on non-military facilities surrounded by workers’ homes.”

As historian Doug Long notes:

“U.S. Nuclear Regulatory Commission historian J. Samuel Walker has studied the history of research on the decision to use nuclear weapons on Japan. In his conclusion he writes, “The consensus among scholars is that the bomb was not needed to avoid an invasion of Japan and to end the war within a relatively short time. It is clear that alternatives to the bomb existed and that Truman and his advisors knew it.” (J. Samuel Walker, *The Decision to Use the Bomb: A Historiographical Update*, *Diplomatic History*, Winter 1990, pg. 110).“

Many high-level politicians agreed. For example, Herbert Hoover said (pg. 142):

“The Japanese were prepared to negotiate all the way from February 1945... up to and before the time the atomic bombs were dropped; ... if such leads had been followed up, there would have been no occasion to drop the [atomic] bombs.“

Under Secretary of State Joseph Grew noted (pg. 29-32):

“In the light of available evidence I myself and others felt that if such a categorical statement about the [retention of the] dynasty had been issued in May, 1945, the surrender-minded elements in the [Japanese] Government might well have been afforded by such a statement a valid reason and the necessary strength to come to an early clearcut decision. If surrender could have been brought about in May, 1945, or even in June or July, before the entrance of Soviet Russia into the [Pacific] war and the use of the atomic bomb, the world would have been the gainer.“

Why Then Were Atom Bombs Dropped on Japan?

If dropping nuclear bombs was unnecessary to end the war or to save lives, why was the decision to drop them made? Especially over the objections of so many top military and political figures? One theory is that scientists like to play with their toys:

“On September 9, 1945, Admiral William F. Halsey, commander of the Third Fleet, was publicly quoted extensively as stating that the atomic bomb was used because the scientists had a “toy and they wanted to try it out” He further stated, “The first atomic bomb was an unnecessary experiment It was a mistake to ever drop it.”“

However, most of the Manhattan Project scientists who developed the atom bomb were opposed to using it on Japan. Albert Einstein – an important catalyst for the development of the atom bomb (but not directly connected with the Manhattan Project) – said differently:

“A great majority of scientists were opposed to the sudden employment of the atom bomb.” In Einstein’s judgment, the dropping of the bomb was a political – diplomatic decision rather than a military or scientific decision.

Indeed, some of the Manhattan Project scientists wrote directly to the secretary of defense in 1945 to try to dissuade him from dropping the bomb:

“We believe that these considerations make the use of nuclear bombs for an early, unannounced attack against Japan inadvisable. If the United States would be the first to release this new means of indiscriminate destruction upon mankind, she would sacrifice public support throughout the world, precipitate the race of armaments, and prejudice the possibility of reaching an international agreement on the future control of such weapons.”

Political and Social Problems, Manhattan Engineer District Records, Harrison-Bundy files, folder # 76, National Archives (also contained in: Martin Sherwin, *A World Destroyed*, 1987 edition, pg. 323-333).

The scientists questioned the ability of destroying Japanese cities with atomic bombs to bring surrender when destroying Japanese cities with conventional bombs had not done so, and – like some of the military officers quoted above – recommended a demonstration of the atomic bomb for Japan in an unpopulated area.

The Real Explanation?

History.com notes:

“In the years since the two atomic bombs were dropped on Japan, a number of historians have suggested that the weapons had a two-pronged objective It has been suggested that the second objective was to demonstrate the new weapon of mass destruction to the Soviet Union. By August 1945, relations between the Soviet Union and the United States had deteriorated badly. The Potsdam Conference between U.S. President Harry S. Truman, Russian leader Joseph Stalin, and Winston Churchill (before being replaced by Clement Attlee) ended just four days before the bombing of Hiroshima. The meeting was marked by recriminations and suspicion between the Americans and Soviets. Russian armies were occupying most of Eastern Europe. Truman and many of his advisers hoped that the U.S. atomic monopoly might offer diplomatic leverage with the Soviets. In this fashion, the dropping of the atomic bomb on Japan can be seen as the first shot of the Cold War.”

New Scientist reported in 2005:

The US decision to drop atomic bombs on Hiroshima and Nagasaki in 1945 was meant to kick-start the Cold War rather than end the Second World War, according to two nuclear historians who say they have new evidence backing the controversial theory... Causing a fission reaction in several kilograms of uranium and plutonium and killing over 200,000 people 60 years ago was done more to impress the Soviet Union than to cow Japan, they say. And the US President who took the decision, Harry Truman, was culpable, they add... “He knew he was beginning the process of annihilation of the species,” says Peter Kuznick, director of the Nuclear Studies Institute at American University in Washington DC, US. “It was not just a war crime; it was a crime against humanity.”... [The conventional explanation of using the bombs to end the war and save lives] is disputed by Kuznick and Mark Selden, a historian from Cornell University in Ithaca, New York, US. ... New studies of the US, Japanese and Soviet diplomatic archives

suggest that Truman's main motive was to limit Soviet expansion in Asia, Kuznick claims. Japan surrendered because the Soviet Union began an invasion a few days after the Hiroshima bombing, not because of the atomic bombs themselves, he says... According to an account by Walter Brown, assistant to then-US secretary of state James Byrnes, Truman agreed at a meeting three days before the bomb was dropped on Hiroshima that Japan was "looking for peace". Truman was told by his army generals, Douglas MacArthur and Dwight Eisenhower, and his naval chief of staff, William Leahy, that there was no military need to use the bomb... "Impressing Russia was more important than ending the war in Japan," says Selden.

John Pilger points out:

"The US secretary of war, Henry Stimson, told President Truman he was "fearful" that the US air force would have Japan so "bombed out" that the new weapon would not be able "to show its strength". He later admitted that "no effort was made, and none was seriously considered, to achieve surrender merely in order not to have to use the bomb". His foreign policy colleagues were eager "to browbeat the Russians with the bomb held rather ostentatiously on our hip". General Leslie Groves, director of the Manhattan Project that made the bomb, testified: "There was never any illusion on my part that Russia was our enemy, and that the project was conducted on that basis." The day after Hiroshima was obliterated, President Truman voiced his satisfaction with the "overwhelming success" of "the experiment"."

We'll give the last word to University of Maryland professor of political economy – and former Legislative Director in the U.S. House of Representatives and the U.S. Senate, and Special Assistant in the Department of State – Gar Alperovitz:

"Though most Americans are unaware of the fact, increasing numbers of historians now recognize the United States did not need to use the atomic bomb to end the war against Japan in 1945. Moreover, this essential judgment was expressed by the vast majority of top American military leaders in all three services in the years after the war ended: Army, Navy and Army Air Force. Nor was this the judgment of "liberals," as is sometimes thought today. In fact, leading conservatives were far more outspoken in challenging the decision as unjustified and immoral than American liberals in the years following World War II."

"Instead [of allowing other options to end the war, such as letting the Soviets attack Japan with ground forces], the United States rushed to use two atomic bombs at almost exactly the time that an August 8 Soviet attack had originally been scheduled: Hiroshima on August 6 and Nagasaki on August 9. The timing itself has obviously raised questions among many historians. The available evidence, though not conclusive, strongly suggests that the atomic bombs may well have been used in part because American leaders "preferred"—as Pulitzer Prize-winning historian Martin Sherwin has put it—to end the war with the bombs rather than the Soviet attack. Impressing the Soviets during the early

diplomatic sparring that ultimately became the Cold War also appears likely to have been a significant factor.”

“The most illuminating perspective, however, comes from top World War II American military leaders. The conventional wisdom that the atomic bomb saved a million lives is so widespread that . . . most Americans haven’t paused to ponder something rather striking to anyone seriously concerned with the issue: Not only did most top U.S. military leaders think the bombings were unnecessary and unjustified, many were morally offended by what they regarded as the unnecessary destruction of Japanese cities and what were essentially noncombat populations. Moreover, they spoke about it quite openly and publicly.”

“Shortly before his death General George C. Marshall quietly defended the decision, but for the most part he is on record as repeatedly saying that it was not a military decision, but rather a political one.”

The Gleiwitz Incident

Robert H. Jackson, a U.S. Supreme Court Justice from 1941 to 1954, was sent to Europe when the war was ending to make sure that Germany alone would be blamed for the Second World War. Jackson, as leader of the U.S. legal team, helped draft the London Charter of the International Military Tribunal, which created the legal basis for the Nuremberg Trials. (You have read about Jackson in the chapter about the Morgenthau Plan and he will also be part of the later story of the Nuremberg Trials). After studying some of the documents, Jackson knew well and emphasized that the German declaration of war on the United States was perfectly legal. Therefore, he pointed out, it had to be shown before the court that the war in Europe was, from the beginning, a German aggression contrary to international law (making it a Crime Against Peace). Thus, the invasion of Poland had to be shown to be an aggressive move with no justification, and no blame on Poland. Further study of the files brought Jackson to doubt that a fair trial would support, in any way, the finding of Germany’s exclusive responsibility. On the contrary, he said:

“The Germans will certainly accuse our three European allies to have pursued a policy that has enforced the war. I say this because the seized documents from the German Foreign Office, which I have seen, all come to the same conclusion: “We have no escape, we must fight, we are surrounded, we are strangled.” How would a judge react if this is found in the trial? I think he would say: “Before I condemn anyone as the aggressor, he ought to describe his motives.”

And that would be catastrophic, Jackson continued, because

“... if this trial leads to a discussion of the political and economic causes of the war, this may cause infinite damage, both in Europe I do not know well, and in America that I know fairly well.”

As a servant of the U.S. Government and U.S. war policy, Jackson came up with the only solution: to ban any discussion on the causes of the war before the Nuremberg tribunal. In other words, not to have a fair trial. In the transcripts of the proceedings, nothing is found on the war policies of the West, Poland, or the USSR since almost all documents and testimonies that would have been relevant in this respect were rejected by the court as irrelevant.

But affidavits like the one signed by Alfred Naujocks, in which he claimed, without any corroboration, that he participated in a German undercover operation to attack the Gleiwitz radio station on the very night that Hitler ordered the invasion of Poland, and blame it on the Poles in order to “justify” Germany’s “crime against peace”—this was admitted by the court with no questions or discussion. Naujocks did not appear in person, only his affidavit was put in evidence; there was no opportunity for cross-examination of the witness by the defense. In such a way did the “evidence” accumulate to find Germany’s National Socialist government guilty of “Crimes Against Peace.”

What the German reports said at the time

A communication was sent from the chief of police in Gleiwitz on the night of August 31 that the radio station was assaulted by irregular Polish troops who, for a short time, succeeded in occupying the station before being chased out by the German Frontier Police. During their defense [of the station] one Polish irregular was mortally wounded and left behind. Another communication came from a representative of the town of Troppau about the customs house of Hohenlinde. In the night of August 31, it was attacked by Polish irregulars who succeeded in occupying it; but thanks to a counterattack by Waffen-SS auxiliary troops, the irregulars were routed. If true, this means that the first two war crimes of WWII were committed by the Poles! First, by making incursions into German territory when a declared state of war did not exist. Second, by using irregular, non-uniformed troops (as doing so invites attacks on any suspicious civilians).

In the official German documents about the border raids, there are mentioned fully 44 acts of Polish aggression over the six days and nights before the German invasion (which began around 4 a.m. on September 1st). On the night of August 31st, there were reportedly 14 incidents of provocation by Polish irregulars of which Gleiwitz and Troppau were but two. In this text, it is clearly stated that the attackers did not wear Polish uniforms, but that they were irregular troops, based in Hohenlinde and in Gleiwitz. And finally, according to the German documents detailing Polish prewar attacks, the post of Hohenlinde was not burned (as stated by H. S. Hegner) but merely occupied. In his speech to the nation on Sept. 1, 1939, Adolf Hitler did not mention, except indirectly, this so-important Gliewitz “false flag” that was supposedly ordered by him to justify his invasion order, but instead spoke at length about the ongoing provocations over the past

four months by the Poles. He pointed out that since 1919-1920, 100,000 ethnic Germans who were Polish citizens had been forced to flee their homes in Poland. He had only this to say about what occurred during the previous night:

“These proposals for mediation have failed because in the meanwhile there, first of all, came as an answer the sudden Polish general mobilization (Aug. 30), followed by more Polish atrocities. These were again repeated last night (Aug. 31). Recently in one night there were as many as twenty-one frontier incidents: last night there were fourteen, of which three were quite serious. I have, therefore, resolved to speak to Poland in the same language that Poland for months past has used toward us. This attitude on the part of the Reich will not change.”

Further on in his speech, Hitler said

“This night for the first time Polish regular soldiers fired on our territory. Since 5:45 A.M. we have been returning the fire, and from now on bombs will be met by bombs.”

Fire coming across the border from Polish regular soldiers does not mean a raid on a radio station by irregulars. The raid on the Gleiwitz station and the customs house in Hohenlinde must be included in the “three which were quite serious.” But is that how a leader makes use of a “false flag” event that he ordered, intending to use as a pretext? No. The words “Gleiwitz” or “radio station” never came up in the speech, nor afterward from Hitler. So much for it being a German “false flag” from the German perspective!

The “confession” of Alfred Naujocks is the sole basis for the story

The only “evidence” for the Gleiwitz radio station attack as a Nazis operation consists of the uncorroborated “confession” (signed statement) in 1945 of a German SS officer, Alfred Naujocks, who was then in the hands of the Allies. Here is the affidavit taken from the transcript of the tribunal.

COL. STOREY:

I now offer in evidence Document 2751-PS, which is Exhibit USA-482. It is an affidavit of Alfred Helmut Naujocks, dated November 20, 1945. This affidavit particularly refers to the actual occurrences in connection with the Polish border incident. I believe it was referred to by the Witness Lahousen when he was on the stand:

“I, Alfred Helmut Naujocks, being first duly sworn, depose and state as follows:

“1. I was a member of the SS from 1931 to 19 October 1944 and a member of the SD [Sicherheitsdienst: SS Security Service] from its creation in 1934 to January 1941. I served as a member of the Waffen-SS from February 1941 until the middle of 1942. Later I served in the Economics Department of the Military Administration of Belgium from September 1942 to September 1944. I surrendered to the Allies on 19 October 1944.

“2. On or about 10 August 1939 the Chief of the Sipo and SD, Heydrich, personally ordered me to simulate an attack on the radio station near Gleiwitz, near the Polish

border, and to make it appear that the attacking force consisted of Poles. Heydrich said: 'Actual proof of these attacks of the Poles is needed for the foreign press, as well as for German propaganda purposes.' I was directed to go to Gleiwitz with five or six SD men and wait there until I received a code word from Heydrich indicating that the attack should take place.

My instructions were to seize the radio station and to hold it long enough to permit a Polish-speaking German, who would be put at my disposal, to broadcast a speech in Polish. Heydrich told me that this speech should state that the time had come for the conflict between the Germans and the Poles and that the Poles should get together and strike down any Germans from whom they met resistance. Heydrich also told me at this time that he expected an attack on Poland by Germany in a few days.

"3. I went to Gleiwitz and waited there a fortnight. Then I requested permission of Heydrich to return to Berlin but was told to stay in Gleiwitz. Between the 25th and 31st of August I went to see Heinrich Müller, head of the Gestapo, who was then nearby at Oppeln. In my presence Müller discussed with a man named Mehlhorn plans for another border incident, in which it should be made to appear that Polish soldiers were attacking German troops Germans in the approximate strength of a company were to be used. Müller stated that he had 12 or 13 condemned criminals who were to be dressed in Polish uniforms and left dead on the ground at the scene of the incident to show that they had been killed while attacking. For this purpose they were to be given fatal injections by a doctor employed by Heydrich. Then they were also to be given gunshot wounds. After the assault members of the press and other persons were to be taken to the spot of the incident. A police report was subsequently to be prepared.

"4. Müller told me that he had an order from Heydrich to make one of those criminals available to me for the action at Gleiwitz. The code name by which he referred to these criminals was 'Canned Goods.'

"5. The incident at Gleiwitz in which I participated was carried out on the evening preceding the German attack on Poland. As I recall, war broke out on the 1st of September 1939. At noon on the 31st of August I received by telephone from Heydrich the code word for the attack which was to take place at 8 o'clock that evening. Heydrich said, 'In order to carry out this attack, report to Müller for "Canned Goods."' I did this and gave Müller instructions to deliver the man near the radio station. I received this man and had him laid down at the entrance to the station. He was alive, but he was completely unconscious. I tried to open his eyes. I could not recognize by his eyes that he was alive, only by his breathing. I did not see the shot wounds, but a lot of blood was smeared across his face. He was in civilian clothes.

"6. We seized the radio station as ordered, broadcast a speech of 3 to 4 minutes over an emergency transmitter, fired some pistol shots, and left."

And then "sworn to and subscribed to before Lieutenant Martin".

Note that the simulated attack on the radio station is ordered already on August 10, whereas the Ribbentrop-Molotov pact was not signed until the 26th of August. It seems the prosecutors are wanting to show that it was pre-planned in order to emphasize the criminal nature of it. Heydrich tells Naujocks that the purpose is to create something for German propaganda and for the foreign press ... but was it used for that? No. Who were the five or six SD men who accompanied him? Why aren't they named? Pointing out that a Polish-speaking German was going to be put at his disposal to broadcast the message over the radio transmitter seems an unnecessary appendage. After two weeks of waiting, Naujocks goes to see Gestapo chief Heinrich Müller and hears a discussion with a man named Mehlhorn about another planned incident in which it should be made to appear that Polish soldiers were attacking German troops. Twelve or thirteen condemned criminals were to be dressed in Polish uniforms and left dead on the ground. But rather than just shooting them, they were to be given "fatal injections" by a doctor employed by Heydrich, and then given gunshot wounds. Afterwards, members of the press were to be taken to the spot and shown the dead bodies. Do we have any reports of this? No.

Müller told Naujocks he had been ordered by Heydrich to make one of those condemned criminals available to him for Gleiwitz. On the 31st of August, Naujocks reported to Mueller again and requested his one "dead man" be delivered near to the radio station. The man who was delivered was still alive, but unconscious. Naujocks saw no gunshot wounds on the man and he, Naujocks, did not shoot him. But also, this man was not wearing a Polish uniform as previously determined, but was dressed in civilian clothes! He then said "they" (wearing Polish uniforms?) broadcast a message of 3 to 4 minutes over the emergency transmitter ... fired some shots, and left.

This story doesn't hold together and doesn't sound like the kind of plan intelligent Germans would come up with. As pointed out above, it was totally unnecessary. It was only of value to the Nuremberg prosecutors who needed some believable German aggression against Poland for their "Crimes against Peace" charge. But the Nuremberg prosecutors were accusing the SD of carrying out a crime against peace by staging so-called border incidents before the outbreak of the [German-Polish] war to give Hitler an excuse for starting the war. However, as the defense for the SD showed, nothing of the sort was carried out by the pertinent departments (Amt. III and VI). Naujocks explained this away by saying it was a personal request made to him by Reinhard Heydrich. No one in the appropriate SD departments had any knowledge of such an operation.

Background Information on Alfred Naujocks

Born in Kiel in 1911, where he studied engineering. As is said in the affidavit, he became a member of the SS in 1931, and the SD in 1934. In 1941, with the rank of SS Sturm-bannführer, he was dismissed from the SD after disputing one of Reinhard Heydrich's orders. He was demoted and had to serve in the Waffen-SS on the Eastern Front. In 1943, due to his health, he was sent to the West, where he served as an economic administrator for the troops in Belgium. These experiences may have soured him and made him want to look after himself first when the opportunity arose. Because...in October

of 1944, Naujocks surrendered or “deserted”—turned himself over to U.S. forces—who placed him in detention as a possible war criminal.

He is said to have “escaped custody” after the war, but he signed the Nuremberg affidavit on November 20, 1945 – the day before testimony at the war crimes trial started. Was he in custody at that time, and was he released following the carrying out of that service for the United States prosecutors? Naujocks turned up later as a businessman in Hamburg operating under his own name, and later sold his story to a newspaper, under the title “The Man Who Started The War.” All this occurred very much in the open. He died of a heart attack in 1966 in Hamburg without ever being interviewed by a historian. Strange.

The writer H.S. Hegner, aka Harry Wilde, included an account of the Gleiwitz incident from the Polish/Jewish propaganda point of view in his book *Die Reichskanzlei 1933-1945*. Since no one else has done so, (realize that there exists no official version with respect to this subject—not in the French Yellow Book [of diplomatic documents] about the war, nor in Churchill’s *Memoirs*) Hegner’s has become the most widely quoted reference for Gleiwitz, in spite of the fact that it differs in important ways from the Naujocks affidavit. A summary of Hegner’s version was included in Spanish revisionist Joachin Bochaca’s *Los Crimenes de los “Buenos”* (The Crimes of the “Good Guys”), 1982, quoted below:

Heinrich Mueller, a high functionary in the Gestapo, had been tasked (by someone, perhaps Hitler) with concocting an official motive for Germany’s declaring war on Poland. **A hundred prisoners** from German concentration camps were taken to the city of Oppeln, next to the Polish frontier. These men were **put into German SS uniforms** and posted near the frontier. There they were surprise-attacked by **German soldiers dressed in turn in Polish uniforms**, who pounced on the poor prisoners – the faux SS – **and murdered them**. That was part one.

Once this was done, the Germans in their Polish uniforms next headed toward the Polish frontier and, in passing, occupied and burned their own German customs post in Hohenlinde. Next, an **alleged agent of the Gestapo named Naujocks, in command of German soldiers** disguised as members of a Polish patriotic paramilitary organization – a detail that Hegner omits to mention – **attacked the German radio station in Gleiwitz**.

In the Gleiwitz operation there was only one fatality, which Mueller conveniently took care of. It was of a **prisoner wearing a Polish military uniform**, who had been **rendered unconscious by an injection and was afterwards executed** in the course of the action.

Differences between Hegner and Naujocks:

- One hundred prisoners instead of twelve or thirteen.
- Heinrich Müller concocts the fake incident, rather than Reinhard Heydrich
- Says the Customs House in Hohenlinde was burned, while Naujocks doesn’t even

mention Hohenlinde.

- Naujocks is said to be a member of the Gestapo rather than the SS and SD.

- Naujocks commands "German soldiers" rather than "a few SD men."

- The single prisoner at Gleiwitz was dressed in a Polish military uniform rather than civilian clothes.

- The prisoner was not given a fatal injection, but only to render him unconscious, and was executed by the Germans, while Naujocks says he did not shoot him.

This is all reminiscent of rumors and stories that are passed around—the details change in ways that make it something quite different.

Background on H.S. Hegner, aka Harry Wilde

Harry Paul Schulze was born on July 16, 1899 in Zwickau, to Clara Hegner and Paul Schulze, a butcher. He became a journalist and author under the pseudonyms Harry Schulze-Wilde, Harry Schulze-Hegner and H.S. Hegner. In his youth he apprenticed as a businessman, but in the 1920's he went on his own as a city tour guide in Erfurt and Weimar. He became involved in the German leftist youth movement, becoming a member of German Labor Youth. He then became involved with the Christian Revolutionaries under the leadership of the leftist, Pleivier. Schulze was a member of the communist party until 1932. In 1933, the Hitler government jailed him for suspicious activity.

He managed to run away to Dresden, where he had an aunt; then, pretending to be a representative for a publisher, made his way to Prague. There he met Comintern representatives Willi Muenzenberg and Johannes Becher. They sent him to Amsterdam to check out the story of Marinus van der Lubbe, who was found guilty of starting the Reichstag Fire, which occurred in February 1933... In Amsterdam Hegner-Schulze became close friends with Dutchman Jef Last, and together they wrote a book about von der Lubbe, which came out in 1939. Their friendship was of a nature that indicated a homosexual relationship. After the war, Hegner-Schulze wrote a book about National Socialism against homosexuality with the title (in English): *The Fate of the Damned*. Wilde also lived in France, Belgium and Luxembourg, before fleeing to Switzerland in 1942.

After the war—He founded a magazine in 1947 in Munich called (in English) *Echo of the Week*. He also wrote biographies for the publishing house Rowohlt, under the name Harry Wilde, including a monograph about Walther Rathenau, the German-Jewish diplomat of the Weimar regime. What he wrote suggested suppressed homosexual desires in Rathenau. In 1959 his book *Die Reichskanzlei 1933-1945* came out in Germany. As best I can gather, this is where his account of the Gleiwitz incident first appeared. Later he wrote books on Rosa Luxemburg and Leon (Lev) Trotsky. From this point on, Hegner led a secluded private life with his daughter, Cordelia, while at the same time he had a boyfriend, Joachim Klose. He is categorized as a historical journalist . . . heavy on the "stori" part. One critic stated: "Where the real history ends, and where the stories of the

author Hegner, alias Schulze-Wilde, begins, no reader can tell.”

What more is left to be said?

Where are pictures of the dead man found at the radio station? The Nazis would surely have photographed the scene to document the “Polish crime.” Where are the newspaper headlines and the newsreels that are said to have been produced for the same purpose? Every false flag operation has to have these. Gunther Kumel has stated that neither Hitler, nor Goebbels, nor any other official made use of the Gleiwitz incident to vindicate the attack on Poland. The Gleiwitz incident, in which a gang of Polish irregulars occupied a German radio station on the frontier before being chased away, could not have triggered the German invasion of Poland a few hours later. By March 1939, Polish atrocities against the German minority had reached peaks unknown before. Ethnic Germans were fleeing into the woods to prevent being beaten. Seventy thousand reached Germany and were placed in camps. How many others fled to friends and relatives? The number is not known. As Germans crossed the border, the Polish Military shot at them with live ammunition, killing many. Polish artillery shot at German civilian aircraft heading for East Prussia. The Poles had prepared lists of all ethnic Germans and started to kill them in the first days of September (Bloody Sunday is an example).

Since everyone in Germany and Europe knew these facts, there was no need for an additional faked provocation. What was necessary for the Allies at Nuremberg, however, was a way to bury the Polish provocations that were aimed at forcing Germany to attack. Turning all the Polish aggressive acts into “false flags” that were really carried out by Germany to fool the world, is the solution they came up with. Since the victors were then in total control, they had no trouble pushing through anything they wished. They are still in control and still keeping it in place. The real aggressor was Poland, and it’s guarantors in case of war with Germany—France and England. Those three are the nations truly guilty of “crimes against peace.”

Pearl Harbor

The following text illustrates what people write about Pearl Harbor today because many believe, with supporting evidence, that it was just as much a false flag attack as the Lusitania-incident from World War 1.

On 7 December 1941 the greatest disaster in United States history occurred. Truly this was and is, "A date which will live in infamy." (Costello 1), but not for the bombing of Pearl Harbor, rather for the deception and the mis-guidance used by the Government and Franklin D. Roosevelt. In a purely artificial chess game Roosevelt sacrificed over 2400 American Seamen's lives, thanks to his power as Commander in Chief of the Armed Forces. By over-looking the obvious facts of an attack by Japan on Pearl Harbor, Roosevelt was able to control both the political and economic systems of the United States. Most of American society before the Pearl Harbor bombing believed in the idea of isolationism. Franklin D. Roosevelt knew this, and knew the only way in which United States countrymen would take arms and fight in Europe's War was to be an overt action against the United States by a member of the Axis Power. Roosevelt also believed Hitler would not declare war on the United States unless he knew they were beatable. There are numerous accounts of actions by Roosevelt and his top armed forces advisors, which reveal they were not only aware of an attack by Japan, but also they were planning on it, and instigating that attack. On 7 October 1940, Lieutenant Commander Arthur H. McCollum, head of the Far East desk of the Office of Naval Intelligence, wrote the eight-action memo.

This memo outlined eight different steps the United States could do that he predicted would lead to an attack by Japan on the United States. The day after this memo was given to Franklin D. Roosevelt, he began to implement these steps. By the time that Japan finally attacked the United States at Pearl Harbor on 7 December 1941, all eight steps had occurred (Willy 1). The eight steps consisted of two main subject areas; the first being a sign of United States military preparedness and threat of attack, the second being a forceful control on Japan's trade and economy. The main subject area of the eight-action memo was the sign of United States military preparedness and threat of attack. McCollum called for the United States to make arrangements with both Britain (Action A) and Holland (Action B), for the use of military facilities and acquisition of supplies in both Singapore and Indonesia. He also suggested for the deployment of a division of long-range heavy cruisers (Action D) and two divisions of submarines (Action E) to the Orient. The last key factor McCollum called for was to keep the United States Fleet in the vicinity of the Hawaiian Islands (Action F). Roosevelt personally took charge of Action's D and E; these actions were called "pop up" cruises. Roosevelt had this to say about the cruises, "I just want them to keep popping up here and there and keep the Japs

guessing (Stinnett 9).” With the fleet located around Hawaii and particularly in Pearl Harbor a double-sided sword was created; it allowed for quicker deployment times into South Pacific Water, but more importantly it lacked many fundamental military needs, and was vulnerable due to its geographic location. To understand the true vulnerability of Pearl Harbor one must look at Oahu, the Hawaiian Island that the military base is located. The North part of the island is all mountains, these mountains hinder the vision of military look out points, making an attack from the North virtually a surprise until the sound of fighter planes are over head.

There were many key military needs that were missing from Pearl Harbor, and they were: a lack of training facilities, lack of large-scale ammunition and fuel supplies, lack of support craft such as tugs and repair ships, and a lack of overhaul facilities such as dry-docking and machine shops. Commander in Chief, United States Fleet - Admiral James O. Richardson, was outraged when he was told by President Roosevelt of his plans on keeping the fleet in Hawaiian Waters. Richardson knew of the problems and vulnerability of Pearl Harbor, the safety of his men and warships was paramount. In a luncheon with Roosevelt, Richardson confronted the President, and by doing so ended his military career. Four months later Richardson was removed as commander-in-chief, and replaced by Rear Admiral Husband Kimmel (Stinnett 11). Kimmel by many top Naval personal was looked down upon on, for taking orders from Roosevelt and not considering the immediate dangers he was putting the fleet in. The second part of McCollum’s eight-action memo was a forceful control on Japans trade and economy. He insisted that the Dutch refuse to grant Japanese demands for oil (Action G), and a complete embargo of all trade with Japan (Action H), by the United States. This embargo closely represented a similar embargo that was being imposed by the British Empire. McCollum also knew that if Japan controlled the Pacific, it would put a strain on America’s resources for copper, rubber, tin, and other valuable goods. These imports from the Pacific were all essential to America’s Economy, and to protect these trading routes McCollum insisted for all possible aid to be given to the Chinese government of Chiang Kai-shek (Action C).

Japan had some control over China due to a military operation, which took over part of the country. Thanks to the control, Japan took and used many raw goods from China that were not in abundance in their own homeland. The government of Chiang Kai-shek was completely against Japan, and with economic support from the United States, they were able to deny certain possessions from Japan. The United States Government and United States Navy by withholding important information about the bombing of Pearl Harbor have done everything they can do to protect the integrity of President Franklin D. Roosevelt and the government. True nationalist believe this information is withheld from the general public in order to protect national security, and not to hide a conspiracy that was created by the United States Government some fifty years ago. This school of thought asks people and wants them to think, “How in the world could the President of the United States sacrifice over 2400 American seamen’s life’s, horrific amounts of

damages to the Fleet, and tremendous amounts of destruction to Army fighter planes?" This group also asks, "In the past fifty years why has there not be one single piece of hard evidence which links Roosevelt to Pearl Harbor, or why has there not been one person who had top security clearance to come out and say something about Roosevelt and his involvement with the bombing?"

On 5 December 1941 at a Cabinet meeting, Secretary of the Navy Frank Knox said, "Well, you know Mr. President, we know where the Japanese fleet is?" "Yes, I know, ... Well, you tell them what it is Frank," said Roosevelt (Toland 294). Knox became extremely excited with the ok from Roosevelt, and he went to tell the group of where the Japanese were and where they were headed. Just as Knox was about to speak Roosevelt interrupted saying, " We haven't got anything like perfect information as to their apparent destination (Toland 294)." All Navy reports showed the Japanese were in Pacific Water, and were in a direction towards Hawaii and Pearl Harbor. Roosevelt knew this information, but one must wonder why in the world would he not want to tell his cabinet this information, unless he wanted to hide something? On 6 December 1941 at a White House dinner Roosevelt was given the first thirteen parts of a fifteen part decoded Japanese diplomatic declaration of war and said, "This means War (Toland 318)."

Later that night, Roosevelt along with top advisor Harry Hopkins, Henry Stimson, George Marshall, Secretary of the Navy Knox, with aides John McCrea and Frank Beatty deliberately sat through the night waiting for the Japanese to strike Pear Harbor (Toland 320). Not until the morning of 7 December 1941 at 7:55 Hawaii Time did Japan deliberately and forcefully attack the United States at Pearl Harbor, finally ending disillusioned isolationist ideas of an only European War. United States countrymen immediately ran to recruiting offices after the news of the attack, to join the armed forces and fight against the Japanese and Hitler.

Beyond a doubt Pearl Harbor was President Franklin D. Roosevelt's back door into the European War. Roosevelt's decisions and actions were very much so, deliberate and calculated, in order to lead a victorious Allied Powers in World War II. By provoking the Japanese and the foreknowledge of an attack on Pearl Harbor, Roosevelt along with his top advisors and the Federal Government are truly to blame for the lost of American life's and American property. 7 December 1941 shall be a day in American history, which will be remembered as "a day of deceit."

And further on Pearl Harbor: A question of honor by William Brand

For 59 years, the names of Adm. Husband E. Kimmel and Gen. Walter C. Short have carried the stigma of two men who were either incompetent or simply in the wrong place at the wrong time and left way out of the loop. Just before 8 a.m. on Dec. 7, 1941, Kimmel and Short watched as carrier-launched Japanese aircraft crisscrossed above the Hawaiian Islands, their bombs, torpedoes and bullets laying virtual waste to U.S. military installations, men and machines commanded by the two career officers. It was the Sunday morning attack on Pearl Harbor, and it began the United States' direct participation in World War II and ended the careers of the islands' two top military commanders, both of whom had stellar service jackets. Now, the U.S. Congress wants to reverse the actions taken against the Navy's Kimmel and Army's Short following the attack. It is asking, by a joint resolution, that President Clinton exonerate the two men.

The key to the resolution is simple: Washington failed to warn Kimmel and Short that intercepted Japanese radio messages showed war was imminent. The resolution asks Clinton to clear Kimmel and Short of any wrongdoing and to posthumously grant them promotions - promotions that were given to every other World War II flag officer upon retirement, but were denied Kimmel and Short. Retired in disgrace, Short died in 1949; Kimmel in 1968. Both were refused courts martial - trials that would have given them a chance to clear their names.

What has brought this latest effort to restore the names and memories of Kimmel and Short to ones of respect is the relentless pleas of their families and investigations by the government and by historians. Helping the cause is a book published last year by Oakland resident Robert Stinnett, a WW II Navy Veteran turned historian. His "Days of Deceit: The Truth About FDR and Pearl Harbor," documenting for the first time the real lack of intelligence information given to Kimmel and Short, continues to draw both raves, from supporters, and objections, from those who flatly say there was no conspiracy to deprive the two commanders of needed information. The Congressional resolution cites a number of government Pearl Harbor inquiries and notes, for example, that a 1995 Department of Defense study concluded "Army and Navy officials in Washington were privy to intercepted Japanese diplomatic communications ... which provided crucial confirmation of the imminence of war."

Rejected by Congress previously, this version of the resolution has garnered powerful, bipartisan backing. In the U.S. Senate, Delaware's Republican William Roth and Democrat Joseph Biden Jr., carried the proposal, along with Republicans Jesse Helms of North Carolina and Strom Thurmond of South Carolina. In the U.S. House of Representatives,

John M. Spratt Jr., D-S.C., and Floyd Spence, R-S.C., were co-sponsors. After approval, the resolution was included in the defense appropriations bill, which cleared Congress Oct. 30. Clinton has already signed the appropriations bill, but still must sign an order concerning the Pearl Harbor commanders to put the Congressional resolution into effect.

So what are the chances of approval of the resolution this time? Perhaps a tossup at best. The White House has no comment, and a Department of Defense spokeswoman at the Pentagon said it's unsure if the Army and Navy will recommend that the President sign the resolution. "There's still a lot of opposition here," the spokeswoman, Cathy Abbott, said. U.S. Army historian Col. Fred Borsht served on the 1995 Pearl Harbor inquiry panel and retains his belief that Kimmel and Short should not be exonerated. "It's a time-honored tradition in the armed services that the senior man on the spot when something happens bears ultimate responsibility," Borsht said. "During the investigation, we went to Pearl Harbor; we looked at Battleship Row; we also looked at all the millions of pages of documents. I think there were nine investigations," he said. "Speaking only for myself, I came away convinced that both of these men - who were good men and had been very successful - simply failed to appreciate that technology had changed and it was, in fact, possible for our forces to be seriously hurt by an aerial attack," Borsht said. Opinions in the military notwithstanding, members of the Kimmel and Short families hope the resolution will be signed by Clinton. "A lot of us have been working for a long time and I'm tickled to death," said Edward R. "Ned" Kimmel, Adm. Kimmel's son.

The Kimmel and Short families say openly that Stinnett's "Days of Deceit" and its conspiracy implications helped turn sentiment in their favor in Congress. Short really died of a broken heart, and the fact that he could never clear his name haunted Kimmel, Stinnett said. If he helped, he's very pleased, he said. Stinnett's book, published by the Free Press, an imprint of the New York publisher Simon & Schuster, is based on thousands of long secret American intercepts of Japanese fleet radio messages that he obtained through the Freedom of Information Act. The documents indicate America did know an attack was coming. This is historical revisionism. For decades, revisionist historians have argued that Kimmel and Short were kept in the dark, because President Franklin D. Roosevelt needed Japan to attack the United States to inflame Americans and force the country from its isolationist stance. It worked, the argument goes. America entered the war.

The congressional resolution stops short of calling it a conspiracy. Congress cites the 1995 report which found that "the evidence of the handling of [the intercepted Japanese] messages in Washington reveals some ineptitude, some unwarranted assumptions and mis-estimations, limited coordination, ambiguous language and lack of clarification and follow-up at higher levels." Nuts, Stinnett says. There was a conspiracy to keep Kimmel and Short out of the intelligence circle and it extended as far as Roosevelt. Most historians, though, say Stinnett's trail of uncovered memos doesn't squarely nail Roosevelt. With or without a Roosevelt smoking gun, "Days of Deceit" has created a furor. More than 100,000 copies have been printed. It will soon be published in Japanese, and a paperback version

with a new epilogue, adding more documentation showing the attack was no surprise in Washington, is scheduled in the United States in a few months. "We're so grateful to Mr. Stinnett," said Emily Short, the general's daughter-in-law, who lives in Las Cruces, NM. "I credit "Day of Deceit" with being the needed impetus to shake the Congress loose from the forces opposing the truth," she said.

In Wilmington, Del., Ned Kimmel, 79, a retired lawyer and the admiral's only child, said the Stinnett book added another important chapter to the long struggle to vindicate his father and Short. "When "Days of Deceit" came out last December, there was a seminar about Adm. Kimmel by the Naval Historical Foundation. The book had some helpful information, and it was read by an awful lot of people," he said. Kimmel said a committee is working hard to convince Clinton to sign the proclamation. "My opinion is this," Kimmel said, "finally, after all these years, the people of the United States in the form of the House and Senate have addressed this question, and my father and Gen. Short are exonerated." Most mainstream historians say there never was a plot. But revisionists long have argued that the attack was anticipated in Washington. Dissident revisionists argue that Pearl Harbor, while horrible, did what Roosevelt wanted: It galvanized Americans and drove the country into World War II against the Axis powers. Congress was right to pass the resolution, Stinnett says. The conspiracy is no theory. It really happened, he believes.

It took Stinnett, a retired Oakland Tribune photographer who served in the Pacific in WW II, 17 years of research through volumes of previously classified U.S. intercepts of secret Japanese radio messages and government memos to produce the book. The radio intercept-code-breaking information went to Washington, but it didn't come back to Pearl, he said. He learned about America's secret code-breaking war 20 years ago during a visit to "Station Cast," a former radio signal listening post in Hawaii, while on a Tribune assignment. After retirement, Stinnett started his own investigation - interviewing former American military communications personnel and asking our government for long-classified messages, now controlled by the National Security Agency. When he was rebuffed - he began firing off Freedom of Information requests - called FOIAs and based on a law first passed by Congress in 1966, requiring the government to make records public unless it is in the modern-day security interests of the country to keep them secret. They're regularly submitted by investigative journalists, but little used by academics. Today, his office is stuffed with tens of thousands of declassified memos and messages. Despite Stinnett's exhaustive effort and support for his conclusions, his detractors are equally strong in their belief that he has not supported his case.

Stanford History Professor Barton Bernstein said Stinnett's evidence linking Roosevelt to a plot to allow the Japanese to bomb Hawaii, is flimsy. "This is a book full of speculation; the evidence seems to be lacking," Bernstein said. He admitted he knows nothing about the Navy's message intercept and code-breaking prowess. At the University of California, Berkeley, History Professor Anthony Adamthwaite takes a more neutral stand. "There really isn't enough evidence to say if the Roosevelt Administration knew of an imminent attack on Pearl Harbor," Adamthwaite said. "No doubt there was monitoring of Japanese

transmissions going on - but electronic intelligence was quite new at that time. Now we have the leisure to analyze this data," he said. "But at that time - there was a tremendous amount of data coming in and the question was - who read the intercepted signals?" "I don't think the evidential chain is strong enough to reach the conclusion that the White House let the attack happen," he said. "You have to realize - for Japan to attack an American base so far away - that would seem like a crazy thing to do from the American point of view."

David Kahn, author of a definitive book on U.S. code-breaking, leveled a scathing attack on Stinnett's code research in the latest issue of the *New York Review of Books*. The operating Pearl Harbor attack story long has been that the Japanese Navy task force, commanded by Adm. Isoroku Yamamoto, kept strict radio silence as the fleet crossed the Northern Pacific en route to Pearl. That's what really happened, Kahn said. No wonder. "Central to the surprise [attack] was the radio silence of the strike force," Kahn says. "The Japanese commanders and radio operators alike, say unanimously they never transmitted any messages." He adds that the Japanese code at that time, labeled JN 25, by the United States, had not been cracked, and U.S. intelligence summaries produced in Hawaii stated there was no information on submarines or carriers. Now it's Stinnett who is scoffing.

Sitting in his basement office in his house near Lake Merritt, he pulls out a sheaf of photocopied message intercepts from the days and hours before the Pearl Harbor attack. All were obtained under the Freedom of Information Act in May of this year. The intercepts show that American radio operators in Hawaii, Corregidor in the Philippines and near Half Moon Bay here in the Bay Area tracked the Japanese fleet before the Pearl Harbor attack. The information went to Washington - but it never reached the two key commanders in Hawaii, Stinnett said. He also produces a communiqué from the listening station on Corregidor: "We are redoing enough current traffic to keep two translators very busy," the station commander wrote Washington on Nov. 16, 1941.

Stinnett adds that after his book was published, four retired Navy officers who worked at the Navy listening post in San Francisco in 1941 contacted him. One is Charles Black, husband of former U.S. Ambassador and film star Shirley Temple Black. "These guys knew we had broken the Japanese code," Stinnett said. "They didn't say definitely they knew Pearl Harbor was being attacked. But they said the threat was very well-known in their department in San Francisco," he said. The admission that American cryptographers had broken the Japanese code was kept in secret U.S. Navy vaults until this May, Stinnett said. Stinnett believes that one reason the National Security Agency remains reluctant to declassify the rest of the Pearl Harbor documents is because the United States still relies on communications intelligence. "Who knows? Maybe there's some way they can track Saddam Hussein. Maybe they're monitoring his radio communications, and they don't want publicity about what our government does," he said. Meanwhile, the mystery continues.

After the book "Day of Deceit" came out, the National Security Agency reviewed doc-

uments about U.S. intercepts of coded Japanese messages before Pearl Harbor that Stinnett had requested. "They withdrew about two dozen documents," Stinnett said. "I don't know what in the world was in the text - all I have is the withdrawal slips."

13. Post War Era

Report of Friedrich Grimm concerning a visit in May 1945: 'In May 1945, a few days after the collapse, I had a memorable discussion with an important representative of the opposing side. He introduced himself to me as a university professor of his nation who wished to talk with me about the historical foundations of the war. It was a conversation on an elevated level that we were having. Suddenly, he broke off and pointed to the leaflets which were lying on the table in front of me, with which we were flooded in the first days after the surrender and which were mainly concerned with the concentration camp atrocities. 'What do you say to that?' he asked me. I replied: 'Oradour and Buchenwald? You're beating a dead horse with me. I am an attorney and condemn injustice wherever I meet it, but most of all when it occurs on our side. Nonetheless, I know how to make a distinction between facts and the political usage made of them. I know what atrocity propaganda is. After the First World War, I read all publications of your experts concerning these questions, the writings of the Northcliff bureau, the book 'From War to Peace' of the French finance minister Klotz, in which he describes how the fairy tales about the hacked-off children's hands were invented, and what use was made of them, the enlightening writings of the magazine Crapouillot, which compares the atrocity propaganda of 1870 with that of 1914/1918, and finally the classic book by Ponsonby: 'Falsehood in Wartime.'

In it, it is revealed that in the previous war they already had magazines in which artificial mountains of corpses were arranged by means of a photo montage with dolls. These pictures were distributed. In doing so, the captions were left blank. They were later inserted telephonically by propaganda headquarters according to need.' My visitor exploded: 'I see I've come across an expert. Now I also want to say who I am. I am no university professor. I am from the headquarters of which you have spoken. For months I have been conducting what you have correctly described: atrocity propaganda - and with it we have won the total victory.' I replied: 'I know and now you must stop!' He responded: 'No, now we are just properly beginning! We will continue this atrocity propaganda, we will increase it until no one will have a good word to say about the Germans any longer, until any of the sympathy you have had in other countries will have been destroyed, and until the Germans themselves will have fallen into such confusion that they no longer know what they are doing!' I ended the conversation: 'Then you will be taking a great responsibility upon yourself!'"

The British magazine Sunday Correspondent on September 17, 1989, for the fiftieth anniversary of the start of the Second World War and of the reunification marking it: 'We must now be honest about the German question, as uncomfortable as it may be for the Germans, for our international partners and even ourselves [...] The question remains, in essence, the same. Not how do we prevent German tanks from rolling over the Oder or

the Marne, but how Europe will deal with a people whose number, talent, and efficiency is allowing it to become our regional super-power. We did not enter the war in 1939 in order to save Germany from Hitler or the Jews from Auschwitz or the Continent from Fascism. As in 1914, we entered the war for the no less noble reason that we were not able to accept a German predominance in Europe.“

Henry Kissinger in the *Welt am Sonntag* of November 13, 1994: 'President Clinton's idea of the USA and Germany as Partners in Leadership was not exactly very wise [...] Actually, this notion drives everyone to the barricades, for in the final analysis two world wars were waged in order to prevent just that, a dominant role of Germany.“

The citations imply that all the wars, revolutions, persecutions and expulsions of the 20th century were matter-of-factly initiated by rationally planning nations or were tolerated, for the sake of power and money. In view of the apocalyptic terror and horror resulting from these undertakings, a clear analysis appears more practical than moral accusations. For the British upper class - and their international partners - war is an entirely normal activity. The British pragmatically ask: How did our forebears hold it? What was their advantage? Did they not, for four hundred years, wage war against their main rival or the strongest continental power? One weighs, like a merchant: is it advantageous to wage war against France, can Austria hurt us? What will war against Germany bring us? 250 million pounds = 5 million marks per year? The security of our predominance? Must we fight against the USA later?

On March 12, 1948, a few days after the downfall in the CSR and the subsequent suicide of Jan Masaryk, the Chief Prosecutor for Great Britain at the Nuremberg war crime trials, Sir Hartley Shawcross, stated according to the *London Times*: 'Step by step I have been forced more and more to the conclusion that the aims of Communism in Europe are sinister and deadly aims. I prosecuted the Nazis in Nuremberg. With my Russian colleagues I condemned Nazi aggression and Nazi terror. I feel shame and humiliation now to see under a different name the same aims pursued, the same technique followed, without check.“

The international edition of the U.S. magazine *Newsweek* wrote on May 8, 1995, the 50th anniversary of the unconditional surrender of the German Armed Forces: 'The chiefs of state who are assembling this week for the solemn remembrance of the end of the Second World War, will formally dedicate themselves to the theme of reconciliation. The winners of the year 1945 showed toward the losers an unusual degree of generosity, as they had not done after the First World War - with disastrous consequences. However, the state which first brought about this reconciliation will not be taking part in the gathering. It is the Soviet Union, whose ideological menace caused the victorious Western powers to put Germany and Japan on their feet again in the framework of a free-market economy and political democracy. More closely considered, this war did not end even in 1945. Those who were waging war merely found themselves in new systems of alliances, and with modified tactics. The end did not come until 1990-91, when Germany was reunified and the Soviet Union imploded. According to this general view of the chronology, it can

be said that the war lasted seventy-five years. The Kaiser and Hitler lost and Germany has won."

And the German government? A small episode proves that those who govern there know much better than the governed what is going on globally. When then British Prime Minister John Major, in his address in Berlin for the 50th anniversary of the war's end, spoke of the second Thirty Years War from 1914-1945: 'Fifty years ago Europe saw the end of the 30 Years War, 1914 to 1945. The slaughter in the trenches, the destruction of cities and the oppression of citizens: all these left a Europe in ruins just as the other 30 Years War did three centuries before."

The Bulletin of the German government (No. 38, May 12, 1995) falsified the text of the speech into: 'Fifty years ago, Europe experienced the end of the thirty years which encompassed not one, but two world wars. The slaughter in the trenches, the destruction of cities and the oppression of citizens left behind a Europe in ruins, just as the Thirty Years War had done some centuries before.' But still weeks after the speech, the British embassy sent the upper text with the clear formulation 'the other 30 Years War'! By the will of the German Federal Government, the fact that Major sees the First and Second World War as parts of a single event, was not allowed to become publicly known in Germany.

The dark side of that triumph, however, has been all but suppressed. It is the story of the crimes and atrocities of the victors and their proteges. Since Winston Churchill played a central role in the Allied victory, it is the story also of the crimes and atrocities in which Churchill was implicated. These include the forced repatriation of some two million Soviet subjects to the Soviet Union. Among these were tens of thousands who had fought with the Germans against Stalin, under the sponsorship of General Vlasov and his 'Russian Army of Liberation.' This is what Alexander Solzhenitsyn wrote in *The Gulag Archipelago*:

In their own country, Roosevelt and Churchill are honored as embodiments of statesman-like wisdom. To us, in our Russian prison conversations, their consistent shortsightedness and stupidity stood out as astonishingly obvious ... what was the military or political sense in their surrendering to destruction at Stalin's hands hundreds of thousands of armed Soviet citizens determined not to surrender. Most shameful of all was the handing over of the Cossacks. They had never been Soviet citizens, since they had fought against the Red Army in the Civil War and then emigrated. Stalin, understandably, was particularly keen to get hold of them, and the British obliged. Solzhenitsyn wrote of Winston Churchill: He turned over to the Soviet command the Cossack corps of 90,000 men. Along with them he also handed over many wagonloads of old people, women, and children. This great hero, monuments to whom will in time cover all England, ordered that they, too, be surrendered to their deaths.

The 'purge' of alleged collaborators in France was a blood-bath that claimed more victims than the Reign of Terror in the Great Revolution - and not just among those who in one

way or other had aided the Germans: included were any right-wingers the Communist resistance groups wished to liquidate. The massacres carried out by Churchill's protege Tito must be added to this list: tens of thousands of Croats, not simply the Ustasha, but any 'classenemies,' in classical Communist style. There was also the murder of some 20,000 Slovene anti-Communist fighters by Tito and his killing squads. When Tito's Partisans rampaged in Trieste, which he was attempting to grab in 1945, additional thousands of Italian anti-Communists were massacred. As the troops of Churchill's Soviet ally swept through central Europe and the Balkans, the mass deportations began. Some in the British government had qualms, feeling a certain responsibility. Churchill would have none of it. In January 1945, for instance, he noted to the Foreign Office: 'Why are we making a fuss about the Russian deportations in Rumania of Saxons [Germans] and others? ... I cannot see the Russians are wrong in making 100 or 150 thousand of these people work their passage. I cannot myself consider that it is wrong of the Russians to take Rumanians of any origin they like to work in the Russian coal-fields.' About 500,000 German civilians were deported to work in Soviet Russia, in accordance with Churchill and Roosevelt's agreement at Yalta that such slave labor constituted a proper form of 'reparations.'

Worst of all was the expulsion of some 15 million Germans from their ancestral homelands in East and West Prussia, Silesia, Pomerania, and the Sudetenland. This was done pursuant to the agreements at Tehran, where Churchill proposed that Poland be moved west, and to Churchill's acquiescence in the Czech leader Eduard Benes's plan for the 'ethnic cleansing' of Bohemia and Moravia. Around one-and-a-half to two million German civilians died in this process. As the Hungarian liberal Gaspar Tamas wrote, in driving out the Germans of east-central Europe, 'whose ancestors built our cathedrals, monasteries, universities, and railroad stations,' a whole ancient culture was effaced. Then, to top it all, came the Nuremberg Trials, a travesty of justice condemned by the great Senator Robert Taft, where Stalin's judges and prosecutors - seasoned veterans of the purges of the 30s - participated in another great show-trial.

13.1 Gruesome Harvest

At Yalta in the Crimea, Messrs. Churchill, Roosevelt, and Stalin met to decide the fate of Europe and in their joint statement solemnly declared:

"It is not our purpose to destroy the people of Germany."

Again at Potsdam, the representatives of the Big Three met and in their joint Declaration, signed by Messrs. Stalin, Truman, and Attlee, officially proclaimed:

"It is not the intention of the Allies to destroy or enslave the German people."

Despite these and other assurances, the Potsdam decisions, as we at first interpreted them, meant throwing the German people on their own, with outside assistance prohib-

ited, after the necessary means for their survival had been destroyed. This could have but one result: to blot out Germany and the German people. The life of every nation is supported by three main pillars: land (all natural resources), labor (both brawn and brains), and capital (plants and equipment). Break down any one of these and the nation is plunged into catastrophe. We have been guilty of pulling down all three in Germany.

The war started the process by destroying the flower of German manpower, shattering cities, factories, railroads, and impoverishing the soil by a five year cessation of fertilizer production. And an equally oppressive war has been waged against the German people since their unconditional surrender. The supporting power of the land has been undermined by vital territorial losses followed by overcrowding caused by the influx of millions of Germans expelled into the shrunken Reich from the lost areas and from Czechoslovakia, and Poland. Industrial capital resources have been further diminished by loss of all production facilities in the territories taken by the conquerors and by a gigantic program of sacking politely known as "deindustrialization" and "reparations in kind." The working force had been decimated by the enslavement of millions, the throwing of other millions out of posts of responsibility through "denazification," and weakened by undernourishment which causes workmen to fall at their posts of duty. Even the German race itself has been attacked by a program of mass violation of Germany's unconditionally surrendered motherhood.

In consequence, Germany lies prostrate and her people famish. After they began to die en masse, it was finally decided that the importation of some food would be necessary - unfortunately barely enough to keep the great masses of people in the twilight zone between life and death. Their agonies and despair have been perpetuated at the maximum of human capacity. The following pages portray what TIME magazine has aptly called "history's most terrifying peace", a peace which fully explains why many Germans are ready to turn to communism, or worse. For, strangely, our modern age which brought us the atom bomb has also given birth to nations which at the expense of their allies are able to derive profit from the production of human suffering.

War Devastation

Devastation of the Reich by total warfare was alone enough to cast serious doubt on Germany's postwar ability to survive. Never before in history have the life-sustaining resources of a nation been so thoroughly demolished. Returning from victory in Europe, General Bradley declared, "I can tell you that Germany has been destroyed utterly and completely." The demand for unconditional surrender had forced the desperate Germans to fight to the bitter end, until their cities had been pulverized into death-ridden rubble and their factories, railroads, canals, dams, power installations, communications, buildings, homes - all their exposed facilities - had been converted into heaps of twisted, smouldering ruins. Allied fervor to destroy everything German had been expressed by General Eisenhower with the opening of the Ruhr drive. "Our primary purpose," he de-

clared, "is destruction of as many Germans as possible. I expect to destroy every German west of the Rhine and within that area in which we are attacking."

Allied capacity to destroy became overwhelming after the American industrial colossus had been converted from peace-time to war production. American output soon surpassed that of all other belligerents in the war combined and became twice as great as the capacity of the doomed Axis. Stunned by American power, Hermann Göring confessed to his Nuremberg prison guards: "The industrial genius of America is something of which no one dreamed." A glimpse of America's smashing force when devoted to the grim business of mass production of death and destruction is provided by the following description written by a front line war correspondent:

"A cataclysmic blast of exploding, splintering steel rent the earth before us and it seemed like the world was coming to an end. "The Americans were blasting out a path for a forward drive. "Man and beast shuddered in their tracks. Whole towns were disintegrating. Life seemed to disappear from the scene. It was the most terrifying destructive force of warfare Germany has ever seen. And it was a symbol of what was to come as the U.S. 1st Army unloosed this shattering blow within the borders of Germany. "For an hour and a half more than 2,000 bombers and hundreds of guns pounded the German countryside, making the earth dance before this mighty man-made force. When the heavies and mediums were not making the earth quake for miles around, our massed artillery was giving them hell out there. They were firing at an average rate of one round every 15 seconds, blasting every conceivable obstacle in our path. Minefields went up as though touched off by an electric switch... "In the center of that frightful scene, the Germans were entrenched as a 'human wall.' They were dug in foxholes and inside houses of 'fortified towns.' Many died without knowing what had hit them. "Having seen brave men and wild beasts crack as they do sometimes in the grip of a terrible earthquake, I could have sworn there would be no opposition when the zero hour came. "Yet, when our tanks and doughboys went over the top after the barrage, as in the battle of Verdun, there were Germans still alive and they fought us with violence."

Great though it was, the destruction resulting from ground fighting pales in comparison with that caused by our gigantic air raids. The two atom bombs dropped on Japan may have been more dramatic, but they could hardly have been more destructive than the millions of phosphorous, fire, and "blockbuster" bombs dropped on Germany. Near the end we were using 11-tonners which crews said caused their planes to bounce up over 500 feet when the huge 25-foot missiles were released, sending up "a tremendous pall of black smoke and a fountain of debris" which "dwarfed the terrific explosions of the six-ton 'earthquake' bombs." During the war, more bombs by weight were dropped on Berlin alone than were released over the whole of England. So great was the ruin that General Eisenhower was constrained to say:

"I have seen many great engineering jobs during the war - such as the clearing of the port of Cherbourg - but I just wouldn't know where to begin to rebuild Berlin."

An American writer, among the first group of correspondents allowed to spend more than 24 hours in the smashed metropolis, wrote:

“The capital of the Third Reich is a heap of gaunt, burned-out, flame-seared buildings. It is a desert of a hundred thousand dunes made up of brick and powdered masonry. Over this hangs the pungent stench of death . . . It is impossible to exaggerate in describing the destruction . . . Downtown Berlin looks like no thing man could have contrived. Riding down the famous Frankfurter Allee, I did not see a single building where you could have set up a business of even selling apples.”

All German cities above 50,000 population and many smaller ones were from 50 to 80 per cent destroyed. The story of Kassel typifies the tragedy which befell the others:

“Three hundred times the people of Kassel ran terrified to their air-raid shelters as giant British and American planes dropped their bombs. Nearly 10,000 were killed in the first terrible bombing, the night of October 22, 1943. That was largely an incendiary attack, which set the whole center of the city afire. Thousands were killed in their air-shelters by the gas fumes from great piles of burning coal, never knowing why they felt sleepy, never awakening. “From that night on they never knew when; they just knew they were doomed. Sometimes they got only a few bombs; often raiding parties which couldn’t reach objectives farther east around Berlin picked Kassel on the way home. “Occasionally swarms of planes went directly overhead and nothing happened; other times they went overhead, and when the people of Kassel thought they were going on eastward, they wheeled around and came back to drop their powerful tons of TNT. “They got so they knew all the tricks, those that remained in Kassel. Steadily their town was beaten down upon their heads . . . Less than 15,000 of their 65,000 homes remained livable. They learned how to dig in, to escape the coal fumes, the fires. Somehow, I thought it was with just a touch of pride that the Burgomeister said, ‘And then our latest raid, March 8 and 9, 1945. It was by far the biggest. Perhaps a thousand big bombers, one of the biggest raids in all Germany; and we lost very few killed - less than 100.’ ““And then, just before Easter, we heard the American armies were coming and wanted to make Kassel an open city,’ said Helga Aspen, a pretty blond girl who stayed through it all. ‘But,’ she added bitterly, ‘the Fuehrerhauptquartier (Himmler) gave orders to defend to the last man.’ “And so Kassel, beaten by 300 air-raids, must know the crashing of American artillery fire. They gathered about 6,000 civilians in a deep bunker in the center of town and waited - as the rather inept German defense units gradually were driven back. “So, on April 4, 1945, Kassel surrendered, not more than 15,000 of its 250,000 still in the the city and living. Thousands lay buried under the countless tons of brick and mortar and twisted steel that had been dwellings and stores and factories. “That was a year ago and it’s no exaggeration to say that they are still dazed. Only a few have snapped out of their stupor to become real leaders. It is not uncommon to see a person burst into helpless tears, if the conversation turns to recounting the war terror.”

Some of Germany’s jobless millions have found temporary employment in clearing rubble and similar work. But genuine reconstruction is impossible without production of vast

amounts of building materials and new equipment, neither of which can be produced in Germany today, because the necessary facilities no longer exist. It takes factories and machines Germany lacks to build the factories and machines Germany needs.

Extermination by Overcrowding

As her agricultural lands became overcrowded, Germany had resorted to manufacturing. By importing iron ore and exploiting her coal and potash resources to the utmost, she had built up the world's second largest steel and chemical industries which, in turn, formed the "workshop of Europe," raised the general European standard of living, and provided direct or indirect support for fully two thirds of her own population. On account of destruction by total warfare and deliberate Allied policy, these industrial resources are now largely wiped out. Without them, over half of the German workers must resort to the soil as their only other means of life. Under the circumstances it is extremely doubtful that the land, even if all held in 1937 were left intact, could support the huge, now jobless, industrial population on even the barest subsistence level.

Without waiting to see, Germany's conquerors have ruthlessly stripped her of lands constituting 28 per cent of her living space, producing an even higher proportion of her food, and containing two of her three principal coal regions. To make matters still worse, they are expelling into the remaining Reich millions of Germans from the lost provinces, Poland, Hungary, Czechoslovakia, and elsewhere; are coddling a large population of "displaced persons" within stricken Germany; and, in the case of the Russians and French, are maintaining large armies of occupation which live off the land. Both the "displaced persons" and these occupation forces enjoy priority over the Germans by being able to make requisitions against them for whatever food and other items they need in order to live in comparative ease and luxury. The deplorable situation created by these actions can well be imagined.

In their Yalta statement, the Big Three reaffirm their "faith in the principles of the Atlantic Charter" and say they uphold "the right of all people to choose the form of government under which they live." Yet in the same pronouncement they grant Russia the eastern half of Poland and as compensation promise the Poles "substantial accessions of territory" in eastern Germany - all without regard to "the wishes of the peoples concerned," - "freely expressed" or otherwise. Although Yalta prescribes that the exact amount of such territory Poland is to receive must await final adjudication at the peace conference, Russia at Potsdam confronted her two western allies with a territorial fait accompli. She had taken a third of East Prussia as her own permanent acquisition and had placed her Polish puppet in possession of all other German territory east of the Oder and Neisse Rivers. Even the drastic Morgenthau Plan had called for ceding Poland only the part of East Prussia not taken by Russia and the Upper Silesian coal and industrial region. But in addition to these areas, Poland had now possessed herself of German Posen, nearly all of Pomerania and Lower Silesia, and the eastern part of Brandenburg - the best part of

the Reich's breadbasket.

Russia's seizure of Koenigsberg and adjacent East Prussian territory was accepted at Potsdam and has since gone unopposed. Renamed Kaliningrad, the former East Prussian capital has been developed into a prized warm water port for the Soviet Union, most of the German inhabitants have been ousted, and the whole region has been thoroughly Russified.

France, meanwhile, had waged a bitter fight to deprive Germany of vital western areas. Insisting that the Reich must be permanently weakened by economic and political dismemberment, she demanded that the Ruhr be detached and internationalized, that the Rhineland be turned into an autonomous state, and that she be allowed to annex the rich Saar coal and industrial regions. Placing settlement of these questions and her exorbitant reparation claims above all bilateral agreements and alliances, she attempted to force the issue by blocking all Allied attempts to treat Germany as an economic whole. Despite this stinging Russian rejection of territorial changes in western Germany, the United States, in exchange for a French promise to cease blocking treatment of Germany as an economic whole, promised to back French claims to the Saar which France thereupon began to enlarge by annexing adjoining areas. But at Stuttgart, Mr. Byrnes, after repeating the promise to support the French claim to the Saar, followed Mr. Molotov's example and opposed detachment of the Ruhr and Rhineland. His stand, supported by both Russia and Britain, will undoubtedly force substantial moderation in future French claims.

Byrnes declared that apart from the Saar, and the eastern territories to go to Russia and to Poland as decided at the peace conference, "the United States will not support any encroachment on territory which is indisputably German or any division of Germany which is not genuinely desired by the people concerned. So far as the United States is aware the people of the Ruhr and the Rhineland desire to remain united with the rest of Germany. And the United States will not oppose their desire."

The Germans have long suffered from acute overpopulation. In earlier years they sought relief in colonies and heavy emigration, which incidentally brought us the large German element in our own population. Later, they resorted to intensive industrialization. After World War I, they were stripped of their colonies, emigration was impeded by barriers such as immigration quotas, and their homeland was reduced from 208,830 to 181,699 square miles. Following World War II, emigration has been entirely prohibited, and all the Germans in Europe are being jammed into a homeland further slashed to only 133,000 square miles. Although Germany's population is half as large as our own, her territory in 1937 was only one sixteenth as large as ours, or about equal to the combined areas of Michigan, Indiana, Ohio, and Pennsylvania. Since the present losses to Poland, Russia, and France subtract an area as large as Pennsylvania, they mean that the 70 million Germans are being crammed into a territory no larger than Michigan, Indiana, and Ohio. Imagine trying to force half the people of the United States into these three states with their cities, factories, railways, and, other production facilities demolished! The resultant population compression is tremendous. Thinking people in France are justly worried that

it will bring another violation of their territory impelled by millions of desperate Germans faced by extermination through overcrowding. Diplomacy which creates such powder kegs is singularly lacking in statesmanship and humanity. It makes sense only in terms of Soviet designs.

The forced exodus of Germans from the lost German territories and elsewhere in eastern Europe constitutes one of the blackest pages of history. Potsdam gives its permission by saying that the "transfer to Germany of German populations, or elements thereof, remaining in Poland, Czechoslovakia, and Hungary, will have to be undertaken." However it adds that "any transfers that take place should be effected in an orderly and humane manner." Some 15 million people are victimized by this decree: a half million from Hungary, nearly three million from Czechoslovakia, and most of the rest from the German territories taken by Russia and Poland.

Winston Churchill was not exaggerating when, in referring to the expulsions some three months after V-E Day, he informed the House of Commons:

"It isn't impossible that a tragedy on a prodigious scale is imposing itself behind the iron curtain which presently divides Europe."

The conservative newsletter, REVIEW OF WORLD AFFAIRS, quotes as follows from a confidential memorandum prepared by an eminent European economist:

"Since the end of the war about 3,000,000 people, mostly women and children and overaged men, have been killed in eastern Germany and south-eastern Europe; about 15,000,000 people have been deported or had to flee from their homesteads and are on the road. About 25 per cent of these people, over 3,000,000, have perished. About 4,000,000 men and women have been deported to eastern Europe and Russia as slaves. ... It seems that the elimination of the German population of eastern Europe - at least 15,000,000 people - was planned in accordance with decisions made at Yalta. Churchill had said to Mikolajczyk when the latter protested during the negotiations at Moscow against forcing Poland to incorporate eastern Germany: 'Don't mind the five or more million Germans. Stalin will see to them. You will have not trouble with them: they will cease to exist.'"

In describing the expulsions in Poland and Czechoslovakia, Russian officers told Chicago Daily News correspondents:

"The Poles have cleaned out all the Germans as far west as the Oder River, and now all that property is for any Poles who want it. "The Czechs have taken care of the Germans in Sudetenland in their own way - and it's not pretty. They round them up, with only what they can carry, and start them moving."

Upon returning to his post as professor of political science at the University of Michigan, after serving 14 months as director of AMG's regional government coordinating office, Dr. James K. Pollock, in August, 1946, said most of the 2-1/4 million expellees from Hungary and Sudetenland are old women and children. He said:

“The Germans we are getting are mostly from the Sudetenland or Germans whose families had been living in Hungary for some 500 years. They come in perfectly frightful condition. They even took the women’s wedding rings before they left. In many cases they have no clothes except those they are wearing.”

An officer would call at the door of the victims and order them to leave their home within a few hours, permitting them to take along 30 to 100 lbs. of luggage containing nothing of value which might help them in making a new start elsewhere. The property forcibly left behind would be confiscated by the state. Any able-bodied men found would be hustled off to slavery. The others would then start their perilous hegira to overcrowded Germany wholly without protection of law, subjected to every conceivable abuse, including robbery, beatings, rape and murder. A dispatch in December, 1945, paints a picture of the plight of the exiles in the new Poland, where hundreds of thousands had been ousted from their homes and left to wander where they would. Former German cities like Breslau are described as almost depopulated of Germans, with Poles taking their place. The dispatch goes on to say:

“Hundreds of thousands of persons in Poland are constantly on the move, restlessly seeking a spot where they can grub a living out of the war raged land. In every rail station and junction men, women, and children await transport. Clusters of human beings, almost hidden under loads of parcels and cans and other remnants of what must have been their homes, wait along the roads or in blasted villages for any transport that will carry them somewhere else. Life with its birth and death continues even in these nomadic streams and everywhere you see womenfold tending their sick or nursing babies.”

Precedent for these inhuman expulsions was set long before Potsdam in Romania where, according to a diplomatic report from Bucharest, 520,000 Romanian citizens of German ancestry, men between the ages of 17 and 45 and women between 18 and 30, were rounded up like slaves and deported to Soviet Russia. The document said “there were heart-rending scenes and many preferred suicide to an unknown fate in Soviet Russia.”

Pulling down the Pillar of Labor

Allied attacks against German manpower have proceeded along three main fronts: enslavement, denazification, and physical incapacitation through undernourishment. President Roosevelt on October 21, 1944, promised that “the German people are not going to be enslaved, because the United Nations do not traffic in human slavery.” In the preceding month of Quebec, however, he had used strong pressure to obtain Mr. Churchill’s acceptance of the Morgenthau Plan which called for “forced German labor outside Germany.” Pravda writer Boris Izakov wrote that when in the following February at Yalta the proposal was advanced to force German workers to rebuild war-damaged areas, “President Roosevelt called this a healthy idea.” It was at this meeting that Mr. Roosevelt pressed the Morgenthau Plan and won Mr. Stalin’s ominously ready acceptance.

Although at Potsdam it was solemnly promised again that "It is not the intention of the Allies to . . . enslave the German people," thousands of Germans had already been marched eastward into Russia's yawning slave camps. More than a month earlier, on June 29, 1945, the following had been published:

"German prisoners in Russian hands are estimated to number from four to five millions. When Berlin and Breslau surrendered, the long grey-green columns of prisoners were marched east. . . downcast and fearful. . . toward huge depots near Leningrad, Moscow, Minsk, Stalingrad, Kiev, Kharkov, and Sevastopol. All fit men had to march some 22 miles a day. Those physically handicapped went in handcarts or carts pulled by spare beasts. . . They will be made to rebuild the Russian towns and villages which they destroyed. They will not return home until the work is completed."

It has long been an open secret that Russia maintains under the direction of the NKVD (secret police) a vast army of Russian slaves, varying in number from 10- 20 millions, mainly recruited as "political unreliaables." The presence and importance of this huge slave force explains, among other things, the profitability and frequency of Soviet Russia's many "purges": they are primarily a device for rounding up prisoners for enslavement. It is not surprising, therefore, that the Soviet Union should jump at the opportunity to enslave millions of defeated enemy civilians and soldiers and, to avoid special criticism, induce her allies to do likewise. A few crippled and ailing Germans who have survived the ordeal have been returned from the Russian slave camps to Berlin where American correspondents have obtained first hand accounts of what is happening. German Red Cross girls went at 9 a.m. on the morning of September 10, 1946, to meet a 20-car trainload of returning forced laborers. As the sealed cars were opened by the armed guards who had been riding on top, the girls were greeted with thin, scabby-faced men in rags begging for water or hysterically calling for help in removing the dead.

The daily diet in Russian slave camps is soup and lectures on the glories of Communism and the evils of western democracy. The slightest disobedience is penalized by such heavy work that a third of the culprits die within three weeks from exhaustion. A tenth of the slaves died during the first year, according to those who have returned. When the war ended, we enjoyed a decided advantage over the Russians in German esteem. Aware of the barbarities of the NKVD's treatment of slaves, German soldiers did their best to avoid falling into the hands of the Red armies, preferring instead to surrender to the British or Americans. France, according to the International Red Cross, had 680,000 former German soldiers slaving for her in August, 1946. 475,000 of their number had been captured by the United States and later turned over to the French for forced labor.[10] French treatment of her slave subjects is revolting to the civilized conscience. In an article entitled, "We Should Not Resemble Them," FIGARO reveals:

"In certain camps for German prisoners of war . . . living skeletons may be seen, almost like those in German concentration camps, and deaths from undernourishment are numerous. We learn that prisoners have been savagely and systematically beaten and that some have been employed in removing mines without protection equipment so that

they have been condemned to die sooner or later. "People, of course, will point to the Gestapo tortures, the gas chambers and the mountains of human bodies found in the internment camps in Germany. But these horrors should not become the theme of sports competition in which we endeavor to outdo the Nazis. . . We have to judge the enemy, but we have a duty not to resemble him."

Gathering his facts from numerous reliable sources, Louis Clair writes in *THE PROGRESSIVE* of "the horrible conditions in the French camps of German POW's." He says:

"In a camp in the Sarthe district for 20,000 prisoners, inmates receive 900 calories a day; thus 12 die every day in the hospital. Four to five thousand are unable to work at all any more. Recently trains with new prisoners arrived in the camp: several prisoners had died during the trip, several others had tried to stay alive by eating coal that had been lying in the freight train by which they came. "In an Orleans camp, the commander received 16 francs a day per head or prisoner to buy food, but he spent only nine francs, so that the prisoners were starving. In the Charentes district, 2,500 of the 12,000 camp inmates are sick."

After we had delivered the first 320,000 prisoners, the French returned 2,474 of them to us, claiming that we had given them weaklings. Correspondents described them as "a beggar army of pale, thin men clad in vermine infested tatters." All were pronounced unfit for work - three-fourths of them on account of malnutrition - and 19 per cent had to be hospitalized. Associated Press photographer Henry Griffin, who had taken pictures of the corpses piled in all German concentration camps, including Buchenwald and Dachau, said of the men: "The only difference I can see between these men and those corpses is that here they are still breathing." Asked to investigate, the Red Cross reported the prisoners were receiving inhuman treatment.

On December, 5, 1946, it was announced that the American Government had requested the repatriation by October 1, 1947, of the 674,000 German POW's it had turned over to France, Belgium, The Netherlands, and Luxemburg. France had agreed to release its 620,000 of this number but gave no definite pledge of when they would be freed. The French Government also disclosed that the United States, in a Dec. 21, 1945, memorandum, expressly stipulated that the Germans captured by the American Army and handed over to France were chattels to be used indefinitely for forced labor as part of France's war reparations from Germany. Meanwhile reports continued to pour into the press that conditions in the French slave camps remained as bad or worse than before - starvation diets, little protection from the elements or disease, in filthy, vermin-infested quarters.

Great Britain in August, 1946, according to the International Red Cross, had 460,000 German prisoners slaving for her, and as in the case of France bringing in a handsome profit to the War Office. Upon embarking from our ports the prisoners were given to understand that they were being sent home; when they learned upon arrival in British or French ports that they were to be worked indefinitely as slaves, they became sullen. As

one British officer said, "It takes us several weeks to bring them around where they will work hard." A British contractor employing German slaves for skilled work is reported to have remarked:

"When you see how well they do things and how awful our own Ministry of Works - we call the Ministry the O.C., short for organized chaos - messes things up, it makes you wonder how we ever won the war."

According to revelations by members of the British House of Commons, about 130,000 former German officers and men were held during the winter of 1945-46 in British camps in Belgium under conditions British officers have described as: "Not much better than Belsen." The prisoners lived through the winter in tents and slept on the bare ground under one blanket each. They say they are underfed and beaten and kicked by the guards. Many have no underclothes or boots. The official International Red Cross report in August 1946 showed that our own government, through its military branch in the German zone, was exacting forced labor from 284,000 captives, 140,000 of them in the occupation zone, 100,000 in France, 30,000 in Italy, and 14,000 in Belgium.

Slave holdings of other countries, as reported by the Red Cross, were: Yugoslavia 80,000; Belgium 48,000; Czechoslovakia 45,000; Luxemburg 4,000; Holland 1,300.

An attempt is made by British officials to justify the enslavement on the grounds that the men are prisoners of war, and that as such they can be forced to work under the Geneva Convention rules. It is said that the war is not yet legally ended, that the prisoners are still soldiers of the German Government, and that when they return to Germany it will be the responsibility of the German Government to give them their pay accumulated as soldiers and prisoners. This argument rests on the assumption that there is a German government. But they also argue that repatriation of the prisoners cannot take place, as called for by the Geneva Convention as soon as hostilities are over, because there has been no armistice or peace treaty signed with Germany, and that none can be signed at present, because there is no German Government. By similar double-talk they justify feeding the prisoners rations well below army standards on the pretext that the Geneva Convention which requires standard army rations has expired with World War II; yet, when press representatives ask to examine the prison camps, the British loudly refuse, with the excuse that the Geneva Convention bars such visits to prisoner-of-war camps.

The International Red Cross, the highest authority on the subject, roundly condemns the slave system. As related from Geneva:

"The United States, Britain, and France, nearly a year after peace, are violating International Red Cross agreements they solemnly signed in 1929. "Investigation at Geneva headquarters today disclosed that the transfer of German war prisoners captured by the American army to French and British authorities for forced labor is nowhere permitted in the statutes of the International Red Cross, which is the highest authority on the subject in the world. "Although thousands of the former German soldiers are being used in the hazardous work of clearing mine fields, sweeping sea mines, destroying

surplus ammunition and razing shattered buildings, the Geneva Convention expressly forbids employing prisoners 'in any dangerous labor or in the transport of any material used in warfare.' "Russia refused to attend the 1929 conference of the International Red Cross and Japan never ratified that convention, so neither Moscow nor Tokyo was bound by the provisions regulating war prisoners. "'The American delivery of German prisoners to the French and British for forced labor already is being cited by the Russians as justification for them to retain German army captives for as long as they are able to work,' an International Red Cross official admitted. 'The bartering of captured enemy soldiers by the victors throws the world back to the dark ages - when feudal barons raided adjoining duchies to replenish their human live stock.'"

It must be emphasized, moreover, that many of the slaves were never German soldiers. Many were civilian Germans held in America during the war, including seamen picked up before we entered the war, former legal residents of the United States, and persons brought here by force from Latin America for having pro- German sentiments. Even anti-Nazi Germans who have voluntarily returned to Germany from America to help the military government rebuild the destroyed countries and to help families and friends in dire need have been nabbed for enslavement. In sharp contrast with our treatment of German war prisoners was German treatment of American war prisoners. Allan Wood, war front correspondent of the London Express, in summarizing German treatment of their prisoners said:

"The most amazing thing about the atrocities in this war is that there have been so few of them. I have come up against few instances where the Germans have not treated prisoners according to the rules, and respected the Red Cross."

Lieutenant Newton L. Marguiles, Assistant Judge Advocate of Jefferson Barracks, said in St. Louis, Mo., April 27, 1945:

"The Germans even in their greatest moments of despair obeyed the Convention in most respects. True it is that there were front line atrocities - passions run high up there - but they were incidents, not practices; and maladministration of their American prison camps was very uncommon."

Chief of Staff Gen. George C. Marshall, on Jan. 5, 1945, wrote to the National Commander of the American Legion:

"Our treatment of them" (prisoners of war) "is governed by the Geneva convention which, among other provisions, requires them to be furnished rations equal in quality and quantity to those of American troops at base camps in this country. This is done as a matter of treaty obligation and our soldiers in German hands receive generally reciprocal treatment."

The American Red Cross in 1945 reported officially that "99 per cent of the American prisoners of war in Germany have survived and are on their way home."

German treatment of Russian war prisoners was on a par with Russian treatment of

German war prisoners. Since **Russia had not signed the Geneva Convention**, neither it nor Germany was bound by its provisions. And it must be remembered that the atrocities in German concentration camps did not involve war prisoners, but people supposed to be German, people who now proudly admit, those who have survived, that they were members of the German underground, saboteurs, doing their best to obstruct and defeat the German war effort. The treatment they received, while deplorable and inhuman in the extreme, is on a par with Russian treatment of her political prisoners.

Denazification

By placing sole blame for the war on Germany and therefore the Nazi party, by declaring the war to be one of aggression, and by outlawing aggression as a crime against humanity, Germany's conquerors have condemned the Nazi party, its affiliates, and its millions of members as criminal. The punishment meted out at Potsdam, if carried out to the letter, would mean the virtual liquidation of Germany's middle and upper classes. The blanket incrimination rests upon an infirm base, as revealed in the Potsdam denazification decrees. In one breath they order that all "discrimination on grounds of . . . political opinion shall be abolished"; yet in the next breath they permanently dissolve the Nazi party and its affiliated organizations and institutions, ban propagation of Nazi political opinion, without identifying it in particular, and call for severe punishment of all Nazis simply for being Nazis. Potsdam commands that "Nazi leaders, influential Nazi supporters and high officials of Nazi organizations and institutions . . . shall be arrested and interned" and that all lesser Nazis "shall be removed from public and semi-public office and former positions of responsibility in private undertakings." In attempting to carry out these unusual edicts, which were looked upon as a purge order "to throw the rascals out," the American military government issued "Law Number Eight" to denazify business and various mandatory removal edicts, the exact provisions of which were military secrets, to purge government of all Nazis. Approximately 3,000,000 German men were affected in our zone out of a total population of 16,682,000. Our occupation authorities jailed 75,000 and earmarked another 80,000 unreturned war prisoners for internment for being important Nazis; ousted more than 100,000 from public office; and denuded business of managerial and technical talent by firing and demoting hundreds of thousands of others.

In other words, we set out to ruin the lives and reputations of three million men in our zone alone because, as they see it, they made a "political mistake." In consequence, the Germans are afraid to identify themselves with any political party or to express any political views, for fear of being punished later on, just as the Nazis are being punished now. Most important of all, the zone and its people have been denied the economic benefits which would accrue if these men were permitted to do the work which they alone by talent, training, and experience are capable of performing. Putting the zone's most productive men in pick and shovel gangs and filling their places with incapables has been one of the chief contributing causes to the zone's economic paralysis.

The law turning the job of denazification in our zone over to the Germans was largely formulated by one Heinrich Schmitt, a corpulent Communist Quisling serving under AMG as Bavarian Denazification Minister. The execution of the law was also partly placed in his hands.[44] This sort of thing is a logical outgrowth of the program which automatically places political responsibility on former political neutrals or active anti-Nazis, including Communists, who, with Communist Russia signing the Potsdam Declaration, must be accepted as "democratic."

The law is designed to permit some Nazis, otherwise condemned, to prove their innocence or pay the penalties and be restored to citizenship. It sets up five categories of war criminals and potentially dangerous persons, namely: 1) Major offenders, 2) offenders broadly described as Nazi activists, militarists, and profiteers, 3) lesser offenders, 4) followers, constituting the broad membership of the party and affiliates, and 5) persons exonerated after a tribunal finds them innocent.

Penalties for those in the first category range from death or life imprisonment to imprisonment for five or more years with or without hard labor. Those in the second category may be imprisoned for a period up to ten years. Those in lower categories are subject to a variety of "sanctions," including loss of citizenship and the right to vote, debarment from public office, loss of personal rights such as the privilege to own an automobile, demotion in position with heavy cut in compensation, discharge from position, confiscation of property, and employment only at ordinary labor. To make matters easier, we granted an amnesty to all Nazis in our zone under 27 years of age who had no special charges against them. Unfortunately, most of those pardoned under the blanket order were in France, Britain, Belgium, Holland, Russia or elsewhere for indefinite terms performing forced labor in the manner of convicts.

In the autumn of 1946 the Allied Control Council's Coordinating Committee passed general denazification laws for the whole of Germany patterned after the American zonal law, with enforcement, however, left entirely to each zonal authority. This loophole permits the other occupation governments to continue to denazify as they see fit, which thus far has been with greater reasonableness and leniency than have been exercised in the American zone where enforcement, in other words, has been far more rigid and drastic than elsewhere. At Stuttgart Mr. Byrnes was able to boast that denazification in the American zone had been completed.

The denazification program in general and the Nuernberg trial in particular violates our traditional ideas of justice; on the contrary, they embody the Nazi and Communist concept of jurisprudence - the liquidation of ideological opponents. As Barron's weekly says:

". . . the punishment is being meted out one-sidedly to the vanquished. After all, except that they did not commit the same spectacular atrocities on the spot, the Russians did just about the same things in Poland that the Nazis did. Thus a combination of excusably fanatic Nazi-haters and purposeful fellow-travelers has provided a Roman holiday by exploiting our legitimate desire for a new international law. "In the eyes of the

world we have adopted the Communist view of justice."

Denazification in the Russian zone has been far more enlightened and less economically disruptive. The strong men of the Kremlin could hardly take seriously the condemnation of all Nazis as criminals when they know full well that their own party, which rules Russia much as the Nazi party ruled Germany and which demands the same blind obedience of its members, is guilty of every act for which we so strongly condemn the Nazis: wars of aggression against peaceful neighbors, wars of nerves, confiscation of property of whole classes without compensation to the owners, violation of treaties and agreements, hostility toward religion, concentration camp atrocities, slave labor, looting and abusing conquered countries, the use of fifth columns and Quislings, one-party rule by terror with the aid of civilian informers and a brutal secret police system, stifling of human rights and individual liberties of all kinds, and even the aim to conquer the world.

By eliminating the "bourgeoisie" in our zone we have played into the Kremlin's hands, for the action has removed the principle barrier to the establishment of the "dictatorship of the proletariat," and ultimate absorption of the zone into the Soviet Union - the Kremlin's own United Nations. Our entire denazification procedure has been highly satisfactory to Moscow, for the greater the chaos, despair, and disgust we create, and the greater the resentment of the German people becomes, the stronger becomes the grip of Communism, and the closer we come to losing everything for which we fought the war.

Looting

The sacking of Germany after her unconditional surrender will go down in history as one of the most monstrous acts of modern times. Its excess beggars description and its magnitude defies condemnation. Allied armies that swept into Germany came with blood in their eyes and the conviction born of propaganda that the Germans had lost caste as members of the human race, were unworthy of protection afforded by human law and civilized institutions such as property rights and security of person. It was not thought of as looting, but simply as helping one's self to property the Germans had forfeited by being German. Russian soldiers were particularly ravenous, their appetites for loot being restrained only by the limitation placed on their own rights to hold property. Things the individual Russian soldier could keep, such as wrist watches, they snatched on sight, even from the arms of Yankees.

The serious looting by the Russians was conducted officially, systematically and thoroughly. Every house and apartment was entered, searched, and stripped of everything at once valuable and movable - jewelry, silverware, works of art, clothing, household appliances, money. Stores, shops, warehouses were ransacked. Farms were denuded of farm animals, machinery, seed reserves, fodder, wine and food stocks. Telephones were removed from residences, telephone and telegraph lines and equipment were dismantled. Automobiles, motor trucks, even fire engines, were seized. Everything not nailed down was hauled away. For the German standard of living must be lowered to the average of

Europe. (In 2016, one gets the feeling that “lowering to the average of the World“ might be the German governments agenda.)

All of the Allies have issued huge amounts of military currency which the Germans are forced to accept in “payment.“ It is conservatively estimated that altogether they have pumped into the country between 15 billion and 20 billion occupation marks as against a normal currency circulation of between 7 and 9 billion. This means that the four powers have obtained between 2 and 4 billion dollars worth of German property for the mere cost of printing money issued in payment.

Just as there was a preponderance of American forces in the armies that struck against the west and south of Germany, so in these sectors was the preponderance of the looting American. Chicago Daily News foreign correspondent William H. Stoneman, stationed with the U.S. 3rd Army, wrote in May, 1945, when Germany was surrendering:

“I have been impressed by the careless manner in which the booty has been handled and the way in which great stocks of foodstuffs have been left to the reckless inroads of looters.“

In one case looting resulted in arrests and trials. A WAC Captain and a Colonel were arrested in America and tried in Frankfurt, Germany, for taking \$1,500,000 worth of jewels, mostly of the House of Hesse, from a castle owned by Princess Margaret of Hesse, granddaughter of Queen Victoria. Defense attorneys at the trials made clear the extent of looting which had been done and the philosophy behind it. An on the scene account reads as follows:

“The princess scored heavily against the defense contention that the owners of the jewels were just a bunch of Nazis whose loss was a misfortune of war which should not be singled out for prosecution from among hundreds of thousands of thefts from Germans by the American army personnel.“

American Provost Marshall Lt. Col. Gerald F. Beane, whose duty it is to deal with crimes committed by our soldiers, in an official report released in Berlin late in 1945 on the nature and extent of criminality in our army of occupation stated that larceny and robbery are the crimes most frequently committed by our soldiers. A leading daily comments:

“As to the crimes against property, the explanation is fairly obvious. No effective steps were taken to discourage looting by the invading armies during the war. Officers and men alike committed this crime and for much the most part went unpunished. It was tolerated under some such euphemism as souvenir collecting. The habit of stealing, once formed, is difficult to break. The fault, of course, lies with the high command which permitted the abuse. Col. Beane’s pronouncement suggests that the army is tardily seeking to correct its error.“

The type of looting just discussed, although it has run in value into hundreds of millions of dollars and robbed the German people of comforts and necessities they have sorely needed

during the dreadful days through which they are having to pass, is but petty larceny as compared to the gigantic program of industrial sacking authorized at Potsdam.

Economic Cannibalism

Potsdam decrees that future German production shall be so limited by the Allied Control Council that the average German standard of living will not exceed the average of the standards of living of other European countries, exclusive of Britain and Russia, and that "productive capacity not needed for permitted production" shall be taken by the conquerors as plunder or destroyed. The prostrated German economy must be drawn and quartered and its flesh fed to other economies, a project which has aptly been called "economic cannibalism."

In carrying out the Potsdam mandate calling for the "elimination or control of all German industry that could be used for military production" and emphasis on "the development of agriculture and peaceful domestic industries," many ordinarily peaceful industries are entirely prohibited. These include shipbuilding, manufacture and operation of airplanes, ball and taper roller bearings, nearly all types of heavy machine tools, heavy materials, aluminum, magnesium, beryllium, vanadium, radioactive materials, hydrogen peroxide, and synthetic oil, gasoline and ammonia. Exports and imports are rigidly controlled and drastically restricted. Payments for necessary imports are given first call on proceeds from exports. Imports are confined mostly to a small amount of food and nitrates for fertilizer; exports are limited largely to coal, potash, and lumber. Foreign trade in the ordinary sense has been impossible, however, and will remain so, as long as the mark is given no value in terms of other currencies.

Future production of a large number of domestic industries is drastically restricted. Electrical engineering is cut in half; mechanical engineering by two-thirds. Synthetic textiles are sharply curtailed. Over-all chemical production is reduced to 45 per cent of the old level. Steel production may not surpass 5,800,000 ingot tons a year, against the former 54,000,000 ton capacity. Britain had argued that such a level would turn the Reich into an economic desert and had fought for a 7,500,000 ton level. Since Russia had held out for a much lower figure, however, the 5,800,000 ton ceiling was reached as a compromise. All during the negotiations Russia had fought for extremely low production ceilings. She had even asked for a sharp reduction in permitted food imports, to reduce the volume of necessary exports, and thus to free more industrial booty in which she was to share. When a little later shipment of reparations to her from the western zones was halted, she suddenly reversed her stand, however, and asked for higher ceilings. Molotov specifically demanded higher coal production and said, "The Reich must be permitted more steel, greater industry and foreign trade."

Apart from generating bitter despair through closing the door to any hope of achieving prosperity, the ceilings have had little practical significance, because actual German output has remained far below the permitted levels. Our military authorities have asserted

that it will require years for German recovery to reach the ceilings which have been set. The current effect of the program has been largely confined to repression of power to produce thorough destruction and removal of productive capacity and other measures, such as the banning of scientific research. German science, upon which German industry depended heavily, has been dealt a lethal blow, partly by direct prohibitions and partly by the operations of the denazification decrees which automatically ended the careers of the great majority of German scientists, at least within the Reich. Potsdam has ordered control of "all German public or private scientific bodies, research and experimental institutions, laboratories, etc., connected with economic activities." In harmony with this decree, German science has been suppressed by orders from the Control Council.

Research (in Germany) by scientists who had been Nazis or had contributed to the development of German weapons, secret or otherwise, has been banned. Others, and they are very few, are forbidden to probe into a long list of specific, comprehensive subjects, 10 general categories of chemicals, and anything of military value or nature. Pure or theoretical science - explorations into the basic laws of nature and the like - may be conducted by the few eligibles, but only under military government surveillance. In other words, German science has been destroyed, and with it German ability to compete commercially with the war victors. German scientists, as a matter of fact, have become a highly esteemed form of war plunder. Russia, the first to recognize their value, was unable to hide her anxiety and frantic efforts to grab as many as she could. Britain, France, and the United States were not slow in following her example, entering the competition with marked success. We even managed to kidnap a large number from the western Russian zone when we retired to let the Russians take over.

In addition we have sent into Germany teams of experts to scour the country and search out all German patents, designs, and secret processes, privately owned, or otherwise. According to Assistant Secretary of State William L. Clayton, in testimony before a U.S. Senate committee in June 1945:

"We intend to secure the full disclosure of an existing German technology and invention for the benefit of the United Nations. . . . This Government and other governments with which Germany has been at war have reduced to their control inventions and designs both patented and unpatented which were owned and controlled by German nationals at the time of the outbreak of war It is probable that no steps will be taken by either the legislative or executive branch of this government which would have the effect of returning such rights to the former German owners."

Mr. Morgenthau called for the industrial sacking of Germany by proposing that, instead of repeating the mistake made after the last war by demanding "reparations in the form of future payments and deliveries," requiring production and sale of exports, this time

"reparations shall be effected by the transfer of existing resources and territories, e.g. . . . by transfer of German territory and German private rights in industrial property situated in such territory to invaded countries. . . .; by the removal and distribution among

devastated countries of industrial plants and equipment . . . ; by forced German labor outside Germany; and by confiscation of all German assets of any character whatsoever outside of Germany."

The deindustrialization program would automatically limit the amount of reparation to the amount to plant and equipment not ruined by war, less whatever amount would be left to the Germans. For the sake of harmony, however, the 20 billion dollar figure was accepted "as a basis for discussion." At Potsdam Russia was apportioned the lion's share of the reparation. She was to receive all from her own zone, plus 25 per cent from the other zones. Of the latter, two-fifths was to go to Russia outright and three-fifths was to be given to her "in exchange for an equivalent value of food, coal, potash, zinc, timber, day products, petroleum products, and such other commodities as may be agreed upon," presumably to be taken from her zone. The value of Germany's bombed and battered plant and equipment remaining at the end of the war has been officially estimated at between 5 and 10 billion dollars, of which 45 per cent was located in the Russian zone where Russia was given a free hand. Under the "level of industry plan" 40 per cent of this was to be available for removal as reparation or destroyed. Total reparation, therefore, could not be more than 2 to 4 billions, and if Russia were to adhere to the general plan in her zone her total share from all Germany could not exceed 2.4 billion dollars.

America, which from the beginning had been the most zealous in carrying out deindustrialization in its own zone, made no protest to Russia until it was learned that two establishments owned by American concerns, the United Shoe Machinery Co. and the Corn Products Refining Co., had been among those seized. We then offered the suggestion that Allied owned property should be exempted from seizure and added the pious thought that plants producing civilian goods should be kept in Germany. Since Britain had come forward with a scheme to nationalize the Ruhr and other industries in her zone, potentially worth billions of dollars, in a manner that would place title to much of it in her own hands as "custodian" without one cent of compensation to the former owners, she had lost all moral ground on which to base a protest against the Russian action. Nor could the French object, in view of their avaricious, vengeful treatment of their own zone, where looting has been just as thorough as in the Russian, but far less intelligent; where, for example, they demand most of the crops to be harvested and at the same time requisition draft animals in July just when most needed to help gather the harvest.

Although America went about the business of dismantling and dynamiting German plants with more fervor than was at first exhibited in any other zone, our motive was quite different from the motives of our allies. Russia is anxious to get as much loot as possible from Germany and yet to make it produce abundantly for Russia to help make her new five year plan successful, and ultimately to absorb the Reich into the Soviet Union. France is ravenous for loot, has been anxious to destroy Germany forever and to annex as much of her territory as possible. Britain has found uses for large amounts of German booty, wants to get rid of Germany as a trade competitor, while retaining her as a market for British goods. The United States has no use for German plant and equipment as booty,

and has often said so. We consider our own abundant production equipment superior. Apart from one or two special cases, **our primary interest in German assets has been in those located outside Germany, to eliminate German competition in world trade.** We are willing to permit the German people to subsist on their own little plot of land, if they can, but we are determined that they never again shall engage in foreign commerce on an important scale. In partnership with Britain we have carried out a systematic campaign to root out all German contacts and assets located abroad and have put our own traders in their place.

We have confiscated nearly a billion dollars of property in this country believed by our Justice Department to be owned by Germans, although held in the name of citizens of neutral countries such as Sweden and Switzerland. Attorney General Clark says the Justice Department contends these holdings now belong to the United States Government. The external operation of the program has been illustrated by our forcing Switzerland, Sweden, Spain and other countries to hand over their German owned assets. Sweden, for example, held German wealth valued at 104 million dollars. At the same time we held 200 million dollars of Swedish assets which we had "blocked," that is, cut off from Swedish control during the war. We used these blocked funds as a club to compel Sweden to turn the assets over to us. After long negotiations, she finally did deliver 77 million dollars worth of the German resources and we in turn unblocked the 200 million dollars in Swedish funds in America. After obtaining the funds we confiscated them and divided the loot with Britain and France.

That we officially recognize that the program will also destroy Germany and exterminate the German people was made perfectly clear by Mr. Clayton in his testimony before the Kilgore Committee. Dr. Schimmel, chief investigator, had inquired of the Under-Secretary of State if it were not true that the Germans had made their successful penetration of South American trade for the purpose of acquiring superior information facilities. Mr. Clayton replied:

"With the Germans it was not a matter of information, it was largely a matter of necessity. I mean they had to have foreign trade, they had to export in order to live. The country has, as you know, very little natural resources. The only natural resources of any consequence that they have are coal and potash, and they had to export manufactured goods in order to acquire the raw materials that they needed in their economic life, in their industry, and foreign trade was an absolute necessity for the Germans."

Taking their foreign trade away from them, and making it impossible for them to export manufactured goods, the program advocated by Mr. Clayton and embodied in the Potsdam agreements, was tantamount, therefore, to pronouncing the death sentence on the German people.

Bastardizing the German Race

Not only have the conquerors set out to destroy Germany economically by pulling down the three pillars of production but they have launched an assault against the German race itself by an attack against its mothers. From the record it appears that the men who met at Yalta deliberately formulated a diabolical program of racial bastardization which they considered an appropriate response to the claim of racial superiority. A Russian General told General Ira Eaker, Commander of the Mediterranean air forces: "We've decided just to kill all the German men, take 17,000,000 German women and that will solve it." Something on this order was obviously the intent. The millions of German men of marriageable age not killed or disabled in war were marched off into slavery where they could not protect their wives, sweethearts, daughters and sisters. And then the attack began. From the east came the Bolshevized Mongolian and Slavic hordes, repeatedly raping every captured woman and girl, contaminating them with venereal diseases and impregnating them with a future race of Russo-German bastards. In the west the British used colonial troops, the French Sengalese and Moroccans, the Americans an excessively high percentage of negroes. Our own method was not so direct as the Russian: instead of using physical force, we compelled the German women to yield their virtue in order to live - to get food to eat, beds to sleep in, soap to bathe with, roofs to shelter them.

Senator Eastland of Mississippi, after a European tour of observation, told his colleagues in the U.S. Senate early in December, 1945: "The virtue of womanhood and the value of human life are civilized man's most sacred possessions, yet they are the very cheapest thing in Russian-occupied Germany today." He had learned first-hand of such incidents as the following, told by a priest in a letter smuggled out of Breslau, Germany, September 3, 1945:

"In unending succession were girls, women and nuns violated. . . . Not merely in secret, in hidden corners, but in the sight of everybody, even in churches, in the streets and in public places were nuns, women and even eight-year-old girls attacked again and again. Mothers were violated before the eyes of their children; girls in the presence of their brothers; nuns, in the sight of pupils, were outraged again and again to their very death and even as corpses."

Meanwhile newspaper headlines assured us that "Ivan and Joe Are Brothers Under the Skin." Prime Minister Churchill had told the Germans in January, 1945, just before they surrendered unconditionally:

"We Allies are no monsters. This, at least, I can say on behalf of the United Nations. . . . Peace, though based on unconditional surrender, will bring to Germany and Japan immense and immediate alleviation of suffering and agony."

When our Russian Allies "liberated" Danzig they promptly liberated all the women of their virtue and chastity - by raping all - from small girls to ladies as much as 83 years of age. A 50-year-old teacher says that her niece, 15, was violated seven times the day after

the Russians arrived, while her other niece, 22, was raped 15 times the same day. When women of the city pleaded for protection, a Russian officer told them to seek shelter in the Catholic Cathedral. After hundreds of women and girls were securely inside, the brave sons of mother Russia entered and "playing the organ and ringing the bells, kept up a foul orgy through the night, raping all the women, some more than 30 times. A Catholic pastor of Danzig states: "They even violated eight-year-old girls and shot boys who tried to shield their mothers."

It was the same in all regions overrun by the Communist Armies. When Berlin fell the Commander told his Russian soldiers the women of the city were theirs, to help themselves. They did! The only escape the women had was suicide. The following is an eye-witness account of what the Russians did in eastern Germany written by a veteran American newspaperman who had been taken prisoner by the Germans in Paris and later freed by the Russians with whom he stayed for nearly three months as they swept over eastern Germany and on to Berlin and beyond:

"REDS TERRORIZE CONQUERED WITH RAPE AND DEATH "London, August 4, 1945 - As our long line of British Army lorries (trucks) carrying American, British, and French liberated prisoners of war from the Russian to the main Anglo-American zone of Germany rolled through the main street of Brahlisdorf, the last Russian occupied-town, a pretty blond girl darted from the crowd of Germans watching us and made a dash for our truck. "Clinging with both hands to the tailboard, she made a desperate effort to climb in. But we were driving too fast and the board was too high. After being dragged several hundred yards she had to let go and fell on the cobblestone street. "That scene was a dramatic illustration of the state of terror in which women in Russian-occupied eastern Germany were living. All these women, Germans, Polish, Jewish, and even Russian girls 'freed' from Nazi slave camps were dominated by one desperate desire - to escape from the Red zone." "In the district around our internment camp - the territory comprising the towns of Schlawe, Lauenburg, and Buckow and hundreds of larger villages - Red soldiers during the first weeks of their occupation raped every woman and girl between the ages of 12 and 60. That sounds exaggerated but it is the simple truth."(emphasis added) "The only exceptions were girls who managed to remain in hiding in the woods or who had the presence of mind to feign illness - typhoid, dyptheria or some other infectious disease. Flushed with victory - and often with wine found in the cellars of rich Pomeranian land owners - the Reds searched every house for women, cowing them with pistols or tommy guns, and carried them into their tanks or trucks. "Husbands and fathers who attempted to protect their women folk were shot down and girls offering extreme resistance were murdered. "Some weeks after the invasion, Red 'political commissions' began a tour of the countryside ostensibly in search of members of the Nazi party. In every village the woman were told to report for examination of papers to these commissions, which looked them over and detained those with sex appeal. The youngest and prettiest were taken by the officers and the rest left to the mercy of the privates. "This reign of terror lasted as long as I was with the Reds in Pomerania. Several girls whom I had known during my captivity

committed suicide. Others died after having been raped by ten soldiers in succession. "In an isolated farmhouse where my French comrade and myself spent three months after joining the Reds, there were eight young girls from neighboring villages hiding from the Reds. One was always on watch and when the Russians were seen approaching they scampered off into a nearby woods and hid in the dense underbrush. This sometimes happened several times daily and the girls never had a quiet moment but while we were there the Reds never discovered them. "All of these girls already had been raped and three of them - one a little girl of 13 - were pregnant. "Inevitably the Red occupation is having a disastrous effect on the morality of the inhabitants and the existing conditions of anarchy will exert an evil influence for years. Many woman have been infected with venereal diseases and now a very few youthful girls have joined the Reds for pleasure and food and are helping them spot their compatriots. "Whenever possible, girls attach themselves to liberated Anglo-American or French prisoners of war for protection against the Russians. Curiously, the Reds seemed to have a special code of honor in this respect - they will take an Allied prisoner's watch but won't touch his girl. "When the Red Army starts a big offensive its commanders held out prospects of unrestricted rape and pillage as encouragement to the troops, but later they try to stem the tide of lust - not on grounds of humanity but because it threatens to undermine discipline. "Squadrons of Cossacks, used by the Reds as they were by the Tsar, as mounted police, periodically surrounded villages in Pomerania and searched all the houses for deserters and stragglers who had remained behind with women. The Cossacks mercilessly drove the soldiers off to jail with their 'nagaikas' - Cossack whips - but they kept the women for their own pleasure."

The Russians were not alone in violating these principles. Police records of Stuttgart show that during the French occupation, 1,198 women were raped and eight men violated by French troops, mostly Moroccans. Dr. Karl Hartenstein, prelate of the Evangelical church in the city estimated the number at 5,000. Frau Schumacher, secretary of the police woman's section, in submitting a documented report on numerous rapings, said that on the night the French evacuated the city a child of 9 was raped and killed, her mother also raped and shot, and her father killed by Moroccans. In the town of Vailhingen, with a population of 12,000, for example, 500 cases of rape were reported. So it went in areas occupied by the French. While a good number of American troops have resisted the example of others and deported themselves in a manner becoming their Christian backgrounds, the record for our occupation forces as a whole is dark.

An Associated Press dispatch from Nuernberg, Germany, quotes a letter which appeared in STARS AND STRIPES written by Capt. Frederick B. Eutsler, Chaplain of the 478th United States port battalion, charging that public behavior of American troops in Germany had become deplorable. He urged that the newspaper "launch a crusade against this disgraceful conduct which is earning a bad name for our army," and added, "I refer particularly to the assumption of many GI's that every German woman is immoral and it is their privilege to force their attentions on these women and insult them with indecent

proposals. In April, 1946, the military authorities found it necessary to “crack down” and ordered stricter adherence to soldierly standards so as not to “discredit” the “fine performance of our troops in general.” That same month an anonymous staff sergeant wrote in STARS AND STRIPES a charge that married men in the army were afraid to bring their wives to Germany because many American soldiers behaved like “supercharged wolves” toward women in public. He wrote: “Wise up, men. The hardest part of the war is now being fought, not with tommy guns, but with personalities. Let’s show the Germans that we are men, not pigs.”

One of the consequences of the immoralities of howling G.I. wolf packs is an upsurge in venereal diseases which has reached epidemic proportions. Before we arrived, although the rate had increased with the return of German soldiers from France and North Africa, it was still moderate and well under control. After our arrival, contamination soared. In December, 1945, only 7 per cent of German civilians receiving venereal disease treatment were men; by August, 1946, however, men constituted 41 per cent of the patients. In other words, contamination had spread from our troops to the German women and finally to German men. A large proportion of the contamination has originated with colored American troops which we have stationed in great numbers in Germany and among whom the rate of venereal infection is many times greater than among white troops. In July, 1946, the current rate of infections among white soldiers was 190 per 1,000 men per annum, meaning that slightly less than one in five would be infected in the course of a year. In contrast the rate among negro troops stationed in the American zone of Germany was 771 per thousand!

That the German women do not accept advances from American troops out of choice but rather out of sternest necessity is shown by the close connection between the venereal disease rate and availability of food. As one correspondent writes:

“Statistics show that the venereal rate is related to the food supply of the German civilians during our occupation. After the winter’s supply of potatoes was issued to the Germans last fall, there was a drop in the number of soldiers infected. As frauleins became more hungry, more soldiers were infected. Ration cuts last spring also were reflected in higher venereal figures.”

Dr. George N. Schuster, President of Hunter College, charged, after a visit to the American zone:

“You have said it all when you say that Europe is now a place where woman has lost her perennial fight for decency because the indecent alone live.” “Except for those who can establish contacts with members of the armed forces, Germans can get nothing from soap to shoes.”

L.F. Filewood, writing in the WEEKLY REVIEW, London, Oct. 5, 1945, stated: “Young girls, unattached, wander about and freely offer themselves, for food or bed . . . Very simply they have one thing left to sell, and they sell it . . . As a way of dying it may be worse than starvation, but it will put off dying for months - or even years.”

Significantly, the Potsdam Declaration declares:

“The Allied armies are in occupation of the whole of Germany and the German people have begun to atone for the terrible crimes committed under the leadership of those whom in the hour of their success, they openly approved and blindly obeyed.”

It fails to declare that the crimes to be committed by the Allied armies of occupation would eclipse those of which the Nazi armies have been accused. Now that the war is over and the heat of combat has died down enough to enable us to view the cold facts again, it must be brought home to the American people that much of what they have been led to believe was born of propaganda, that the German army, for example, actually behaved itself very correctly toward the people of occupied territories whose governments were signatories of the Hague and Geneva Conventions. The facts are now well known, and are beyond dispute, despite the opposite picture previously painted in the press as part of the horrendous business of war. William L. Shirer, in his *Berlin Diary* (p. 412), on June 17, 1940, in the first flush of German occupation, described how many French women had fled Paris for fear of what the German armies might do to them.

“It seems,” he wrote, “the Parisians actually believe the Germans would rape the women and do worse to the men . . . The ones who stayed are all the more amazed at the very correct behavior of the troops - so far.”

And their behavior never changed. Frederick C. Crawford, President of Thompson Products, after a tour of inspection in which he, with others of the War Department, visited areas where the Germans had been in occupation for four years, in his “REPORT FROM THE WAR FRONT”, said:

“The Germans tried to be careful in their dealings with the people . . . We were told that if a citizen attended strictly to business and took no political or underground action against the occupying army, he was treated with correctness.”

The People hunger

Months after the war had ended and the conquerors had assumed complete control of the German government and therefore responsibility for the German people and their future, the Bishop of Chichester, quoting a noted German pastor, said:

“Thousands of bodies are hanging in the trees in the woods around Berlin and nobody bothers to cut them down. Thousands of corpses are carried into the sea by the Oder and Elbe Rivers - one doesn't notice it any longer. Thousands and thousands are starving in the highways. . . Children roam the highways alone, their parents shot, dead, lost.”

Despite conditions, the German people are putting up a brave struggle for existence. After a five-week tour of Europe, including Germany, Malcolm Muir, publisher of *BUSINESS WEEK*, told the Union League Club of Chicago:

“The Germans are making every effort to help themselves . . . It is not unusual to

see a milk cow hitched to a plow, a woman leading the cow and a small boy guiding the plow."

What harvesting machinery remains is mostly small, old fashioned and run down, often useless for want of parts. Draught work is supplied by animals and men. Oxen are used where available, and a horse and cow hitched together are common. Crop yields have been reduced by the five year fertilizer famine, which continues and the fact, that the soil for the most part has been worked for 1,000 to 2,000 years.

Food reserves which were ample when the war ended were soon depleted, thanks in part to deliberate destruction by invading armies, and, in the case of the Russians and French, to armies of occupation living off the land. When we first invaded Normandy we were surprised by the large stores of food we found. It was the same elsewhere. Although his statement contrasted sharply with the current propaganda which had all Europe starving, Prof. Theodore Shultz of the University of Chicago, in November, 1943, had said that continental Europe that year had harvested good crops, that "farm production had been so well maintained despite the war that Europe will meet 90 to 95 per cent of her food requirements in the year after peace is declared." Although distribution was disrupted at the end of the war, aggregate food stocks were large. But under Allied management they were soon dissipated. The situation, worsened by the loss of the eastern "bread basket" and the large number of displaced persons and evacuees from the east, became critical and then catastrophic.

For six months our military government refused to supply any food from the outside to supplement the vanishing German stocks; however, the terrible consequences of this policy ultimately got under the tough hides of the occupation authorities to such an extent that by December they appealed to the U.S. Government to send sufficient food to prevent universal starvation. Relief was finally promised, and after many heartbreaking delays, a dribble arrived. The intensity of the famine through which Germany is passing can be gauged by comparing the German diet with our own and with what experiments prove to be the minimum to maintain life. Herbert Hoover in April, 1946, in commenting on the European situation in general called the 1,550 calorie level a "grim and dangerous base" and said: "At this level we believe most of the adults can come through the short period of four months until the next harvest. The children's health will become susceptible to disease. Many of the children and aged will fall by the wayside." The consequences of keeping the base German rations at or below the 1,500 calorie level since V-E Day are not difficult to imagine. Although some of the German workers, such as farmers and miners, are allowed somewhat higher rations, the base ration applies to the great majority, including housewives and children. Such reports as the following made by an official of the food branch of the American Military Government should therefore cause no surprise.

Karl Brandt wrote in Berlin in March 18, 1946:

"The greatest famine catastrophe of recent centuries is upon us in central Europe. Our

Government is letting down our military government in the food deliveries it promised, although what Generals Clay, Draper, and Hester asked for and were promised was the barest minimum for survival of the people. We will be forced to reduce the rations from 1,550 calories to 1,000 or less calories. "The few buds of democracy will be burned out in the agony of death of the aged, the women, and the children. "The British and we are going on record as the ones who let the Germans starve. The Russians will release at the height of the famine substantial food stores they have locked up (300,000 to 400,000 tons of sugar, large quantities of potatoes). "Aside from the inhumanity involved, it is so criminally stupid to give such a performance of incredible fumbling before the eyes of the world. It makes all the many hard-working officers of the Office of Military Government, Food and Agricultural Branch, ashamed."

The following is taken from a report prepared by the German Central Administration for Health, a German agency created by the Russian occupation authorities:

"There is growing as though by psychological compulsion, a mass hysteria, with a thousand different symptoms of drug addiction, drunkenness, perversities, sadism, murder and infantilism. . . . The situation is reaching a generally psychopathological state, through chronic hunger. We are seeing aberrations such as were previously known only among stranded and starving sailors in lifeboats, or thirsting persons forgotten by caravans in desert sands. It is increasingly impossible to discover in the masses of the people opinions. They have only animal urges. "The explanation of this mass phenomenon, this mental and spiritual paralysis, is physical. They are emaciated to the bone. Their clothes hang loose on their bodies, the lower extremities are like the bones of a skeleton, their hands shake as though with palsy, the muscles of the arms are withered, the skin lies in folds, and is without elasticity, the joints spring out as though broken. "The weight of the women of average height and build has fallen way below 110 pounds. Often women of child-bearing age weigh no more than 65 pounds. The number of still-born children is approaching the number of those born alive, and an increasing proportion of these die in a few days. Even if they come into the world of normal weight, they start immediately to lose weight and die shortly. Very often the mothers cannot stand the loss of blood in childbirth and perish. Infant mortality has reached the horrifying height of 90 per cent."

After giving Herbert Hoover, serving as Chairman of President Truman's Famine Investigating Commission, a grim report of Germany's food situation on April 13, 1946, Generals Joseph T. McNarney and Lucius Clay said in a formal statement:

"Political stability cannot develop under conditions which create political apathy. Political apathy can be overcome in a population which must devote its full effort to the daily search for food. Political stability in Germany is closely related to political stability in the rest of Europe. "German transport facilities are required to move relief supplies and exports across Europe. German workmen must be used to man available transport facilities. "German coal is vital to Europe. German potash, salt, lumber, spare parts, and other products are needed throughout Europe. Coal production in the Ruhr has declined substantially since the recent food cut. Without food Germany cannot produce coal.

Without coal Germany cannot produce fertilizer and unless it produces fertilizer it cannot improve its food supply."

The statement went on to point out that the American zone even in normal times had been a deficit area with regard to food, requiring 2,000,000 tons of imports in 1943-44. It said that the German economic pump must be primed with food imports, because the American zone and other western areas cannot produce enough to sustain life even at starvation levels. Ten months after V-E Day, only 600,000 tons of food had been imported into our zone by AMG, or about one ounce per person per meal. Yet AMG officers asked GI's to remind the Germans they owe America a debt of gratitude for feeding them.

Evidence that the German Famine is Deliberate

Senator Homer E. Capehart of Indiana in an address before the United States Senate February 5, 1946, said in part:

"The fact can no longer be suppressed, namely, the fact that it has been and continues to be, the deliberate policy of a confidential and conspirational clique within the policy-making circles of this government to draw and quarter a nation now reduced to abject misery. "In this process this clique, like a pack of hyenas struggling over the bloody entrails of a corpse, and inspired by a sadistic and fanatical hatred, are determined to destroy the German nation and the German people, no matter what the consequences. "At Potsdam the representatives of the United States, the United Kingdom, and the Union of Soviet Socialist Republics solemnly signed the following declaration of principles and purposes:

"It is not the intention of the Allies to destroy or enslave the German people.' "Mr. President, the cynical and savage repudiation of these solemn declarations which has resulted in a major catastrophe, cannot be explained in terms of ignorance or incompetence. This repudiation, not only of the Potsdam Declaration, but also of every law of God and men, has been deliberately engineered with such a malevolent cunning, and with such diabolical skill, that the American people themselves have been caught in an international death trap. "For nine months now this administration has been carrying on a deliberate policy of mass starvation without any distinction between the innocent and the helpless and the guilty alike. "The first issue has been and continues to be purely humanitarian. This vicious clique within this administration that has been responsible for the policies and practices which have made a madhouse of central Europe has not only betrayed our American principles, but they have betrayed the GI's who have suffered and died, and they continue to betray the American GI's who have to continue their dirty work for them. "The second issue that is involved is the effect this tragedy in Germany has already had on the other European countries. Those who have been responsible for this deliberate destruction of the German state and this criminal mass starvation of the German people have been so zealous in their hatred that all other interests and concerns have been subordinated to this one obsession of revenge. In order to accomplish this it mattered not if the liberated countries in Europe suffered and starved. To this point this

clique of conspirators have addressed themselves: 'Germany is to be destroyed. What happens to other countries of Europe in the process is of secondary importance.'"

These remarks were interspersed with a mass of supporting evidence.

There can be no question that there has been a deliberate attempt to keep the facts from the American public. Senator Eastland of Mississippi, for example, in a stirring address to the United States Senate December 3, 1945, exposing the chaotic conditions in Germany, told of the great difficulty he had encountered in gaining access to the official report on conditions in the Reich made by Calvin Hoover. He said the State Department at first refused to furnish him a copy of the report, but that through the intercession of a high official in the department he had been able to obtain it, but only "with the understanding and the promise received from me first that the information therein would be made available to the people of this country." Senator Eastland continued:

"There appears to be a conspiracy of silence to conceal from our people the true picture of conditions in Europe, to secrete from us the fact regarding conditions of the continent and information as to our policies toward the German people . . . Are the real facts withheld because our policies are so cruel that the American people would not endorse them? "What have we to hide, Mr. President? Why should these facts be withheld from the people of the United States?"

Victor Gollancz, influential left-wing British publisher and pamphleteer, in his book "Leaving Them to Their Fate - the Ethics of Starvation," after marshalling voluminous proof explains the starvation in these words:

"The plain fact is when Spring is in the English air we are starving the German people, and we are starving them not deliberately in the sense we prefer their death to our own inconvenience. "Others, including ourselves, are to keep or be given comforts while the Germans lack the bare necessities of existence. If it is a choice between discomfort for another and suffering for the German, the German must suffer; if between suffering for another and death for the German, the German must die."

He describes the ample British diet and stocks of food while the Germans starve and says:

"Stocks of food and feeding stuffs in this country owned and controlled by the minister of food, exclusive of stocks on farms or held by secondary wholesalers and manufacturers, were estimated to total on the last day of March no less than 4,000,000 tons."

He rejects the thesis that we should starve the Germans because they would have starved us had they won, on the ground that those who reason as the Nazis are no better than the Nazis. He could have added that starvation of children of an enemy country is to admit having enemy children. One leading daily thinks Mr. Gollancz fails to plumb the depths of the infamy:

"On the contrary it [the starvation] is the product of foresight. It was deliberately planned at Yalta by Roosevelt, Stalin, and Churchill, and the program in all its brutality

was later confirmed by Truman, Attlee, and Stalin . . . The intent to starve the German people to death is being carried out with a remorselessness unknown in the western world since the Mongol conquest."

Ample food stocks nearer to Germany even than those in England existed while the Germans starved. On the same page of a newspaper in the autumn of 1945 two articles appeared under the following headlines:

(1) "WEST GERMANS FACE HARD FIGHT AGAINST FAMINE"

(2) "COME AND GET IT, DENMARK TELLS HUNGRY EUROPE"

The article under the latter reads: "The exhausted Danish farming industry succeeded in increasing pigs to nearly two million, 60 per cent of the prewar stock, and last week 45,000 live cattle were offered to slaughtering, of which 32,000 had to be refused as the warehouses are filled to capacity and no shipping was available. "Denmark has, in vain, drawn the attention of Britain, the United States, and UNRRA to the facts, at the same time forwarding proposals, but no reply has been received so far. "The huge cold storage facilities in north Germany are not being utilized, and refrigerator ships are lying idle in north German harbors. At the same time slaughtering houses are forced to return live cattle to farmers, the cattle now consuming fodder that otherwise would be available to further increase production, as a result of the failure of distribution machinery.

An Associated Press dispatch from Copenhagen a month earlier had told the same story:

"While the rest of Europe hungers for meat, Denmark has 3,000 to 4,000 tons of surplus beef weekly which cannot be exported for lack of shipping space. Hoegsbro Holm, permanent secretary of the agricultural council of Denmark, said today that for the last six weeks farmers have had as many as 16,000 head of cattle ready for slaughter, but Denmark has been able to use and export only 10,000. Holm said, 'We have been trying to get transport for at least two months but to date nothing is ready to take the meat.'"

Senator Albert W. Hawkes, of New Jersey had made a strong appeal to the President urging that private relief packages be permitted to prevent mass starvation of the German people. In his reply, dated December 21, 1945, President Truman professed that "there is as yet no possibility of making deliveries of individual packages in Germany," because "the postal system and the communications and transportation systems of Germany are in the state of total collapse." He then said:

"Our efforts have been directed particularly toward taking care of those who fought with us rather than against us - Norwegians, Belgians, the Dutch, the Greeks, the Poles, the French. Eventually the enemy countries will be given some attention. "While we have no desire to be unduly cruel to Germany, I cannot feel any great sympathy for those who caused the death of so many human beings by starvation, disease, and outright murder, in addition to all the destruction and death of war. Perhaps eventually a decent government can be established in Germany so that Germany can again take its place in the family of nations. I think that in the meantime no one should be called upon to pay

for Germany's misfortune except Germany itself. "Until the misfortunes of those whom Germany oppressed and tortured are obliterated [sic], it does not seem right to divert our efforts to Germany itself. I admit that there are, of course, many innocent people in Germany who had little to do with the Nazi terror. However, the administrative burden of trying to locate these people and treat them differently for the rest is one which is almost insuperable."

Economic Prostration

It is difficult to imagine the depth of German depression. When the United States reached the bottom of 1932, industrial production had fallen to 60 per cent of normal. The depression was so severe - the losses so enormous, the unemployment so widespread - that it almost brought a revolution. Industrial production in Germany a year after V-E Day was 10 per cent of what used to be normal. Production in our zone has gradually risen until it reached a high of about 12 per cent of the old normal, or about 20 per cent of the new permitted levels. With the cut in rations, however, the index began a steady decline.

On May 4, Brig. Gen. William H. Draper, AMG director of economics, reported that output in our zone was "far below that necessary to maintain the minimum standard of living." The report went on to give production figures for individual industries as percentages of capacity. Here are a few samples: chemicals 25 per cent; electric power 20 per cent; building materials 20 per cent; steel products 13 per cent; ceramics 5 per cent; farm machinery 22 per cent; electrical equipment 15 per cent; automotive and industrial machinery 10 per cent. The following summer it was reported that less than 30 per cent of available industry in our zone was in operation.

Deputy Military Governor Clay at the end of August declared that it will take at least four more years for Germany to recover sufficiently to bring production up to the bare subsistence levels set under the deindustrialization program. War destruction plus the Allied program of repression have created thorough disorganization. Of the plants not bombed out completely, many were obsolete, others located in areas where residential destruction was so complete that there was no room for workers, or where available transportation and communications could serve only a fraction of production.

Bottlenecks and shortages permeate the whole German economy as the inevitable consequence of war destruction and the production prohibitions enforced under the level of industry plan. In July, 1946, for example, it was reported that the metal shortage had halted the production of plows, while the supply of horseshoes and nails was about exhausted. The number of motor trucks in Berlin, with its 3,000,000 inhabitants and area five times that of Chicago, was down to 8,000. Solder was not available even for mending pots and pans. Shoe cobblers were using old portfolios, dice boxes, helmet liners, any piece of salvage leather they could find to repair shoes. Although 50,000 school children were out of shoes, the supply of shoe nails was about exhausted. Because of lack of per-

manganate of potash, caused by dismantlement of I.G. Farben plants, the manufacture of saccharine, vitally needed on account of the sugar famine as well as by diabetics, was threatened. Manufacture of adhesive tape, muslin, bandages, and surgical dressings was halted in Thuringia because cotton mills appropriated by the Russians would not furnish raw materials. Cement production, sorely needed for reconstruction, was low because of dismantlements and shortage of machinery and tools.

Desperation for money to buy food on the black markets to supplement the starvation rations, has led the Germans to sell their assets, disposing first of what they need the least. Their rings have gone, then watches, bracelets, that other pair of shoes, dresses, jackets, suits. As one Berlin reporter put it:

“Last winter there was no coal, and Berliners burned every tree in town and for several miles around. Cold is the most miserable of all living conditions, and as people get closer and closer to the primitive, it’s natural that they look to the future. At first I was amazed to see girls walking down Berlin streets in summerclad in long coats of fox, or squirrel, or sheep. Then I realized. Remembering last winter; looking toward another winter without fuel - they’ve sold the clothing least needed. And I’m not kidding when I say a lot of these frauleins are down to their last fur coat.”

Associated Press bulletin from Hereford, Germany, dated September 9, 1946 reads: “The British officially informed Germans in their zone today they could expect no coal for heating this winter.”

In the face of this grim prospect, the best that could be hoped for in the way of food by the population living on the very edge of starvation, suffering from famine edema, swelling of joints, and all the other terrors of gradual starvation, as stated before, was an increase in rations to the “grim and dangerous” 1,500 calorie level throughout the 1946-47 winter. In June, 1946, Col. H.B. Hester, in charge of the American military government food branch, predicted a disastrous famine in Germany the next winter unless the ration level was raised by October. In the French zone 5,000 have died weekly of starvation.[20] In mid-summer of 1946, in Berlin, 19,000 very serious tuberculosis cases for whom no beds were available were reported officially by American authorities. The Senate of Hamburg issued an appeal to England and the entire world to send food and medicines to “avert terrible epidemics and mass deaths.” Hamburg motormen and conductors were imperiling safety of public transport by “fainting from hunger” and dropping at their posts from long undernourishment and weakness while on duty. The Medical Council of Cologne informed the British military authorities that the population there “is facing catastrophe” unless food was quickly provided, adding that “resistance to infectious diseases, especially tuberculosis, is vanishing.” Authorities in the Rhineland sent an appeal from Düsseldorf to the British military government to “close the murderous food gap,” in order to check rapidly spreading disease and epidemics caused by hunger.” A medical authority said:

“Many thousands of men, women, and children, who, with what reserves in strength and vitality they still possessed, managed to live through the rigors, cold and hunger of

last winter, will not survive this winter, after another year's depletion in their power of resistance to diseases fostered by starvation and semistarvation. Death's harvest indeed may be appalling."

Economic Dismemberment

Big Four officials have laid all the blame for Germany's distress on the war and zonal separation. In their view Potsdam would afford the best possible solution to all difficulties if only zonal division could be corrected. German territory west of the Oder-Neisse line was divided into four zones to be occupied and administered by the military forces of Russia, Great Britain, the United States, and France.

Russia's zone, comprising the eastern half of Prussia west of the Oder-Neisse river line is the best balanced of the four zones. In addition to containing some 45 per cent of Germany's manufacturing during the war, it produced more than enough food for its own consumption and mines brown coal and other minerals. Other sections of the Reich had been heavily dependent upon it for many key raw materials and manufactures. Stripped as it has been, it nevertheless supplies Russia with a sizable flow of goods taken as reparation.

Britain's zone comprises the western half of Prussia. Within it is the Ruhr District which contains the continent's most valuable natural resources, especially large deposits of high grade coal close to Europe's best iron ores, and lies in the midst of Europe's densest concentration of population in a region served by excellent rail and water transportation. Molotov rightly called it "Europe's workshop." Despite intensive cultivation the zone suffers a heavy food deficit, and even coal production has been at a low ebb since V-E Day. Administration costs are 320 million dollars a year above revenues.

The American zone lies in the central and southern sections of the Reich. Most of it is mountainous and largely scenic. It is not and cannot become self-sufficient in food production and is highly dependent upon various imports. It perfectly illustrates the essential interdependence of all sections of German economy. All of its hard coal requirements must be imported from the Ruhr or Saar regions, and 83 per cent of the steel required by its many manufacturing establishments must come from the outside. Lack of coal has forced partial or total closing of many industries; for example, the pharmaceutical industry, which needs coal tar; the tire business, which needs buna made from coal; and various fabricating, processing and finishing establishments. Because of the steel shortage, the largest tin can manufacturer in Bavaria closed so that some 10 million tins badly needed to put up the 1946 crop of peas, beans, and fruit, were not made. Large numbers are unemployed and administration is costing the American taxpayers 200 million dollars a year.

France's zone consists mostly of provincial fragments of former Germany bordering on France and contains no complete political or economic entities. Its chief asset is the Saar

Basin, rich in coal and steel. Although intensively cultivated, the zone is not self-sufficient in food, because of heavy specialization in vineyards and orchards. It must import its potatoes from Bavaria, for example, and other zones rely upon its food specialties.

One of the outstanding facts about Germany is the dependence of each section, and now each zone, upon all the others - for food, steel, coal, timber, and other essentials. The peace settlements did not anticipate economic separation of Germany's highly interdependent regions. Since the zones were set up strictly for administrative purposes and were not supposed to exert any divisive influence upon Germany economy, zonal boundary lines were laid out promiscuously across political and economic subdivisions. The belief that the zones would remain one thing and German economy another is clearly shown in the early statements and declarations of policy.

Although such economic dismemberment would alone guarantee economic disorganization, it cannot rightly be made to serve as a scape-goat for all the sins of Potsdam, nor for the British and American zonal deficits. Even in the absence of zonal separation the other harsh and repressive measures ordered at Potsdam would assure German economic paralysis. Disregarding this manifest fact, many officials find it convenient to lay all the blame on the zonal barriers and to argue that if they could be eliminated Potsdam would be transformed from a dismal failure into a dazzling success. The thesis may enable them to avoid admitting the colossal blunder Potsdam really is, but it also serves as a bar to taking the steps necessary to meet the trouble fundamentally. Put forward as a general panacea for all German administrative ills, economic Anschluss of as many zones as possible has become the chief objective of our zonal authorities. In the attempt to break down French and Russian objections, they offered to divide the Reich into a number of federated states and to guarantee German disarmament for 25 or even 40 years. After this proposal was rejected on the ground that it was wholly inadequate and would lead to war, they offered to merge the American zone economically "with one, two, or three other zones."

Teaching Democracy in Reverse

We first eliminated the German government, the only instrumentality through which the German people might take collective self-preservative action and then substituted a system of military absolutism, born not of free American institutions or ideals, but of the absolutisms dominant at Potsdam.

Set up to function under the heads of this alien military dictatorship is a complicated bureaucracy headed by a hierarchy of descending Caesars, forming a neat replica of the authoritarian apparatus employed by both the Soviets and Nazis. This dictatorship, as we have seen, has as its purpose not the resuscitation and rehabilitation of the fallen Reich, but rather its repression and the erection of barriers to recovery. With hundreds of thousands of heavily armed occupation troops behind it, the alien dictatorship was also prepared to prevent resistance by the Germans as they saw the ground prepared for their

extermination by their being thrown on their own, and forbidden outside assistance while the necessary means for their survival were destroyed. It has dropped a soundproof iron curtain down around its victims, virtually cutting off intercourse with the outside world, ostensibly to prevent contamination of other nations by Nazi ideas, but also to prevent the anguished cries of the German women and children from reaching and disturbing others while the gruesome program was carried into effect.

As the death noose tightened about them, the Germans were to be made to believe they are entirely to blame for their dilemma. Even the inevitable economic collapse must be laid at the door of German administrators. They must be made to spring their own trap door.

This was the craven way we were to bring self government to the Germans. We no doubt hoped, for example, that by turning denazification over to so-called "German" prosecutors and courts set up and operating under our mandate we could make the Germans blame themselves for the deleterious effects. We have said it is democratic to make the Germans conduct their own purge, which is tantamount to accepting the Russian purges as democratic. But those purges were at least Russian affairs. The German purge machinery is operated by Communists and radical Marxist Socialists placed in office by an alien dictatorship and no more representative of the Germans than Quisling's Nazi government was of the Norwegians. The Germans know full well that whatever our puppets do reflects our will and dicta. If we should by any chance convince them that this is what we mean by the democracy we came to force upon them, we could hardly blame them if they rejected it at the first opportunity.

Our military government is anything but democratic, except in the Russian sense. It is headed by well-trained military men, competent to carry out military tasks and orders received from Washington prepared by politicians and behind-the-scenes operators. Instead of a democratic body representative of free Americans, they are order takers, willing to carry out without question whatever directive they receive from above. They are identical in this respect with Hitler's loyal hierarchy of lord high executioners. Our troops of occupation have been splendid young American boys, but for the most part raw, inexperienced, teenage draftees who could be expected neither to relish their job nor to comprehend its exacting nature. The whole experience has tended to corrupt and brutalize them. As mentioned before, our use of a disproportionate number of negro troops has helped alienate the Germans and disgust our own personnel.

Zonal rule over the economic, political, and cultural life of the German people, as commanded at Potsdam, could be handled with a modicum of success only by men with long experience in totalitarian philosophy and methodology. And in this respect the Russian zonal authorities enjoy a great advantage. Whereas the rule which Potsdam orders is alien to our background, training, and philosophy, it conforms perfectly to Russian practice at home. Such rule cannot bring free enterprise to Germany; only some form of collectivist society could grow up under it.

“Re-education“

Many ardent supporters of Potsdam have become greatly upset about Communist plans for taking over the Reich. They have no right to be, because the very first signature affixed to the document is that of Joseph Stalin. The Russians, therefore, have just as much right as we to lay down the meaning of its loose provisions and undefined terms. When Potsdam calls for democratization of the Reich without specifying exactly what is meant by “democracy,” the Soviets have a perfect right to insist that the order calls for German communization. And this is but one of the pernicious features of its “re-education“ program. Potsdam, in connection with denazification, decrees that ousted Nazis “shall be replaced by persons who by their political and moral qualities, are deemed capable of assisting in developing genuine democratic institutions in Germany.“ But no hint is given as to what “genuine democratic institutions“ might be. It prohibits propagation of national socialist ideas, without stating what they are, and then provides that “German education shall be so controlled as completely to eliminate Nazi and militarist doctrines and to make possible the successful development of democratic ideas,“ again without definition.

But forbidding propagation and discussion of one political philosophy and forcing the public to accept a different one held by those in the seats of power is Nazi doctrine. It is also Communist doctrine (And obviously also Democratic doctrine....). And the Communists claim theirs is the one and only genuine democracy.

Political democracy, say the Bolsheviks, is impossible over the long run without “economic democracy,“ by which they mean abolition of private ownership of property, the foundation of free enterprise. But they call free enterprise fascism, and defenders of the American system fascists. And Nazism is a form of fascism. Denazification, in Russian eyes, therefore, is tantamount to rooting out our own system, along with all other private property systems. The Bolsheviks call any country or party fascist or Nazi if it takes or advocates measures to curb the activities of Communist parties; those which permit the Communists to go freely about their business of destroying them and building a world soviet union are denominated “democratic.“ Thus, Potsdam qualifies as a “democratic“ document. These facts were known, or should have been known, by all the principals at Potsdam. When Russia was permitted to sign the agreements without a clear definition of what was meant by “democracy,“ we were falling into a dangerous trap from which we cannot escape, unless we simply repudiate the agreements we signed. The whole thing makes us look very stupid.

If by democracy we meant our way of life - free enterprise, private property, individual liberties, the protections guaranteed in the Bill of Rights, and government of, by, and for the people - it should have been obvious to us from the beginning that the program to establish democracy by force was foredoomed to failure. We might logically have hoped to wipe out Hitlerism by Hitlerite methods, but we certainly could never hope to establish our way of life that way. Our intolerance of Nazi political opinion, however

justified it may seem, is nevertheless the opposite of democratic in the American sense. Our determination to wipe out ideas by force is a repudiation of democracy's most sacred tenets. People who really believe in freedom of thought and opinion do not use clubs on the debating platform. We despised Hitler for burning books proscribed by the Nazis, not because we were necessarily partial toward the particular books involved, but as a matter of principle. Yet we have ourselves violated the principle, and adopted Hitlers, by burning the Nazi books. In words we denounce Hitlerism; in deeds we exonerate it! (Note: The Allied book burning of "Nazi books" was the largest destruction of books in human history)

The impression has been given by prolonged propaganda that national socialist tenets were obviously evil and criminal, that they openly called for aggressive war, for example, and conquest of the world. This is not true. Like the platform of any political party seeking support at the polls, its planks appeared to be quite innocuous. In fact, Nazism and its works were praised by many foreign notables such as Lloyd George and Winston Churchill. When polled, 51 per cent of our own GI's, stationed in Germany, said they believed Hitler "did the Reich a lot of good before 1939," and 19 per cent of those questioned believed "the Germans had some or a good deal of justification for starting the war." - "It showed large percentages of the soldiers ready to accept German explanations and willing to absolve the mass of Germans from responsibility for concentration camp atrocities." - "29 per cent conceded they had grown 'more favorable' toward their former enemies since they had been in the country."

It was perfectly possible for honest, intelligent, conscientious German citizens to be party members and even enthusiasts. For us to assume differently is merely to exhibit our ignorance and gullibility for propaganda. Nazism was wrong in many fundamental respects, and these features should be exposed. The Germans should be shown in principle where these ideas were wrong and dangerous. They should be stated as general principles to be opposed no matter who advances them, even if they are communists. And the operation should be discussion by free, uncensored debate. Certainly, nothing can be gained by treating the subjects as undiscussable. The Nazis were wrong in their invasion of the schools and forcing elimination of certain ideas and texts and acceptance of certain others. They were wrong in principle. So are we, when we impose our ideas and textbooks on the Germans. We are even more so for being outsiders, whereas the Nazis were at least German. The Nazis were wrong in their strict censorship of the German press. And so are we. We cannot create a free press in Germany through rigid censorship and we look very foolish when we try it.

The German leaders applied the hideous and indefensible doctrine of collective guilt against a whole people whom they looked upon as deadly enemies. This was one of their greatest crimes. We have committed the same crime by applying the same doctrine against all the people of Germany, including unborn babies. Perhaps the reason we forbid discussion of Nazism, fail to list its features, and try to destroy it by force, goes back to our having unconsciously accepted most of its worst features since 1932, without knowing

their identity.

And so we go blithely on our way trying to stamp out Nazism while practicing it ourselves. The very stamping is Nazi like. We came as liberators to teach the Germans how to enjoy self-government and political freedom. Yet we have imposed our denazification decrees which so frighten them that they refuse to take part in politics for fear of the possible consequences under our “democratic” control. We are trying to teach them democracy, and yet we have so circumscribed what they may teach that their teachers, unless they are Communists, are afraid to say anything. Politically, German leaders are not permitted to speak freely, and even those in our military government are afraid to say what they think, for fear of the consequences. Because of our undemocratic policies regarding freedom of the press, which we preach while violating in practice, the German press is operating in a vacuum. Intellectual hunger in Germany is almost as acute as physical hunger. (Note: This text was written in 1947, and it seems that this still holds true in 2016)

While preaching democracy we have installed ourselves as an alien plutocracy, many of whose members have found blackmarket operations and other shady deals not beneath them. While the Germans around them starve, wear rags, and live in hovels, the American aristocrats live in often unaccustomed ease and luxury. Their wives must be specially marked to protect them from licentious advances; they live in the finest homes from which they drove the Germans; they swagger about in fine liveries and gorge themselves on diets three times as great as they allow the Germans, and allow “displaced persons” diets twice as great. When we tell the Germans their low rations are necessary because food is so short, they naturally either think we are lying to them or regard us as inhuman for taking the lion’s share of the short supplies while they and their children starve.

This is the way to teach democracy in reverse. If what we are doing in Germany against Nazism is right, then what we are doing here at home about Communism is wrong. If we must stamp out Nazism there, we must stamp out Communism here; if in the name of democracy and freedom of opinion we can tolerate dissemination of Communist doctrine and treasonable Communist fifth column activities here, we should treat Nazism with equal kindness over there. For the one is just as bad as the other.

Allied deletion of German History, Culture and Traditional Spirit

It is estimated that 11,075,000 volumes and patents, which is over a third of all German books, had already been destroyed by the Allied barbarous aerial bombing in West Germany alone; and this does not include those in the areas taken from Germany after the war. Added to the millions of German books destroyed worldwide during the anti-German hysteria of WWI, far more German books were destroyed in the twentieth century than likely exist today.

Until the advent of the printing press, books were hand-scribed and existed in only one or a few copies. Burning them ensured that no one would ever read them... needless

to say, thought control was simple pre-printing days. However, citing rhetoric such as 'Preventing corruption of the young' (ironically a concept often cited in the German censorship laws today), the likes of Henry VIII required printers to submit all manuscripts to the Church for approval and imported publications were outlawed in 1529. French king Francis I prohibited printing in 1535 and in 1559, the Catholic Church issued the *Librorum Prohibitorum* to guide censors as to which publications to allow. Their approved index listed only 5,000 titles which existed until 1966. Germany however, still had much of the hand-scribed books from its historical culture, but through the atrocious terror bombing of civilian cities by allied forces, they are lost forever; But it didn't stop there. We might think those days were long behind a progressive society, but not under certain circumstances, and 'Re-education' of Germans was one such circumstance. The Allied consensus upon victory was the doctrine of collective guilt: all Germans, young or old, shared the blame for the war.

All German literature found in both the Soviet and Western Occupation Zones was subjected to censorship. In the U.S. zone, it was regulated by occupation directive JCS 1067 (The Morgenthau Plan) until July 1947, and in May 1946, the order was valid for all zones. Allied Control Authority Order No. 4 stated: "Confiscation of Literature and Material of a Nazi and Militarist Nature" dictated that all confiscated literature was reduced to pulp instead of burning to avoid accusations of 'Book-Burning!' Unfortunately, those in charge of disposal often didn't know Michael Angelo from Mickey Mouse, and thousands of innocuous, even rare books were Pulped. A list of 35,000 books were banned as well as all textbooks published from 1933 to 1945. All publications and materials were ordered by the Allied 'Re-Education' teams to be "Released to the Commanders of each Zone to be destroyed." They were removed from all libraries, schools, universities, research institutes, academies, technical or academic societies, book-stores, publishing houses and even from private homes... then destroyed. This massive, haphazard vandalism was carried out by unqualified people from 1946 to 1952, and many books were lost forever due to careless storage and handling, all under the battle cry of making the world a safer place.

This was the greatest campaign of book destruction of all time and ended up being applied not only to the offending books, but to poetry, philosophy, musical verse, calendars, horse books, books about trade and agriculture, driving manuals, books about flowers, home building, barns, astronomy, plumbing, poets, tennis and books about gardening. Hundreds of years of German history and culture were lost due to this arrogant abuse of authority, brazen incompetence and total ignorance. Books about birds made the list, as well as books by Friedrich the Great, Bismarck and antique European military history books. Popular children's books, including rare editions of the Brothers Grimm, were pulped on the grounds that they "Provoked violence." Everything about the Olympic Games of 1936 was banned. Books by the ancient poets were pulped. Even books once banned (not burned) by the National Socialists were destroyed!? Sloppy handling caused the loss of the entire musical works of Richard Strauss and several Gutenberg bibles were

fried in this orgy of stupidity.

Of Morgenthau's Plan for 'Re-Education' titled, "Education and Propaganda" stated:

(a) All schools and universities will be closed until an Allied Commission of Education has formulated an effective reorganization program. It is contemplated that it may require a considerable period of time before any institutions of higher education are reopened. Meanwhile the education of German students in foreign universities will not be prohibited. Elementary schools will be reopened as quickly as appropriate teachers and textbooks are available.

(b) All German radio stations and newspapers, magazines, weeklies, etc. shall be discontinued until adequate controls are established and an appropriate program formulated."

Beginning with 'Re-Education' at the end of the War, Germany has continued the strict censorship imposed by the Soviet and the Allied occupiers. Even today, using the 'Special history' excuse, 'Nationalistic' books, songs and symbols are illegal even in private in Austria and Germany and, Occupational Germany has been aggressive in trying to expand its own strict laws beyond its borders. Almost all prosecutions of censorship violations have taken place in connection with what they term holocaust 'Revisionism' or 'Denial.' Merely questioning an aspect, re-analyzing data, expressing a maverick theory or trying to revise a statistic pertaining to this subject is lumped under 'Holocaust Denial' and 'Hate Speech' which is illegal not only in Germany and Austria, but in most of Europe. "To have failed to write about a particular historical event in a balanced manner" (Hypocrisy?) is a crime that can send an amateur historian to jail and he will often serve a longer sentence than a child molester or serial rapist. Thousands of people have been convicted of violating European 'Denial' laws and they are currently languishing in European dungeons. Cases prosecuted under these laws go unchallenged even when the convicted parties were pacifists and never proposed violence, but were simply expressing their opinion. In the cases of scientists, artists, singers or writers convicted of this offence, their homes and businesses are raided and their work is destroyed by the state. Worse, the definition of 'Denial' is being broadened and is defined today as 'Hard-Core' and 'Soft-Core' Denial, the latter including discussion of the Allied War-Crimes of the Terror-Bombing Campaign against Germany, as well as the Expulsions of ethnic German civilians after the war. Even liberal writers extremely critical of the Third Reich have been tarnished as 'Soft-Core Deniers' when they came out with books discussing the heavy toll of Allied bombing upon the German civilian population during the war.

13.2 The International Military Tribunal (IMT): Nuremberg

From "Nuremberg: The Last Battle", the story of "Jackson" continues (he was already mentioned in the chapter about the Morgenthau Plan).

War finished, Germans captured

Rapidly staking out his own territory, Jackson persuaded General George C. Marshall to send a telegram to Europe instructing his commanders that there must be no more suicides by their prize prisoners - the Sudeten German leader Konrad Henlein had just swallowed poison - and that there were to be no more press interviews of suspected war criminals like Hermann Goering, since these might 'seriously prejudice [the] trial.' After his first talks with the other lawyers, Jackson was especially sensitive to the danger that the Nazi defendants might turn the tables on their victors during the coming trial, pointing the finger at their prosecutors and accusing the victorious powers of having committed crimes that were equal to, if not worse than, those of which they were accused.

On May 14 1945 army officers at the Pentagon showed Jackson for the first time leaflets which their bombers had dropped in millions over Japan with a picture of a Japanese family being consumed in flames; the Japanese text threatened more terror-bombing if they did not surrender. It was, noted Jackson, who was naively unaware of the millions of such leaflets dropped by the British and American air forces for five years over Germany, 'the boldest kind of violation of the Hague convention.' Jackson pointed out to these officers that in his opinion dropping such a leaflet would 'warrant the Japanese executing any American soldier' caught carrying out such a policy. (To his horror, the U.S. Army then sent a message to the Philippine theatre, quoting him as an authority; in his view this message increased the risk of such executions.)

Later in May, Brigadier-General John M. Weir, of the judge-advocate general's office, revealed to him that they had evidence of an order issued by Hitler for the killing of Allied commandos and paratroopers. The snag was, said Weir, that there were several well-documented cases where Americans had done exactly the same. An American officer in Italy had issued an order to 'take no prisoners,' and a U.S. Army sergeant had thereupon killed thirty-five German soldiers in his hands; the sergeant - but not General Patton, the officer involved - had been put on trial and, said Weir, 'narrowly escaped death,' and had recently even been restored to duty. Jackson, shocked by this revelation, recorded it in his diary and anticipated problems if the Germans should put up the defence known in Latin as *tu quoque*, roughly 'you did it too.'

There was already a subtle Cold War element involved. Jackson was conscious of the need to prevent the trials taking an 'anti-German' shape which would drive the German population into the arms of the Russians. Regardless of Stalin's personal stand on precisely this issue, Soviet newspapers now began attacking the Allies for not having executed Reichsmarschall Hermann Goering, Germany's highest-ranking soldier, immediately upon capture; this kind of lawlessness made Jackson uncomfortable about any future participation of the Russians in a trial. It seems that the Kremlin had suddenly been stricken with the same kind of misgiving as had beset Churchill since 1942 - the Russians evidently fearing that if Germany were now to be charged with preparing an aggressive war against Russia, the defence would establish from German and captured

Soviet documents that Moscow had been making much more extensive preparations to attack Germany than the world was yet aware of.

Before General Donovan departed for Europe on May 17, Jackson therefore asked him to question Goering on the following topics: the Soviet preparations for war (or, failing that, the real reasons why Hitler had attacked Russia); information that might be of use to Jackson if and when Goering took the witness stand; and 'any positions he might be taking in defense.' General Donovan warned Jackson in confidence that the Russians had had 'the code of the British Foreign Office' all the time; in consequence many communications which the British had thought secure were really known to the Russians, and this might also prove an embarrassment during the coming trials. Suddenly the whole thing did not seem such an open-and-shut case to Jackson after all.

At this time the secret row about 'slave labour' boiled over again in Washington. On May 15, 1945 Jackson told President Truman that he refused to support any such provisions in the reparation instructions, except for Germans properly tried and convicted, and even then only under rigorously controlled conditions. 'I fully agree with you,' said Truman.??? Not to be outwitted so easily, Henry Morgenthau struck back. He called a second meeting between his henchmen and the judge at four o'clock on May 18, this time on home ground in his Treasury building. Justice Jackson found Morgenthau and many of his staff among the score or so officials crowded into the chamber. Morgenthau immediately pointed out the snag in Jackson's objections - supplying Russia only with those Germans duly tried and convicted would yield perhaps a couple of hundred thousand workers, whereas Stalin was thinking in terms of five million.

When John J. McCloy, a later military governor of Germany, suggested that the late president had surely been thinking of a proper trial as the only basis for the supply of forced labour, Morgenthau angrily rounded on him, protesting that this was the first time that he had heard such a limitation suggested. One of his aides, Joseph Dubois, chimed in that in view of the Yalta decision there did not appear to be any need for trials at all. Besides, a Gallup poll had shown a large percentage of Americans in favour of using the Germans for slave labour. Jackson thumped the desk with his fist. 'Just watch the Gallup poll ratings change when the first slave-labour horror stories start coming out of Russia!' Quietening, he prophesied, 'The problem of sending labour to Russia is that I don't think it would ever come back.' More pertinently he pointed out that the Geneva Convention provided no basis for holding prisoners-of-war as reparations once peace had been concluded. Morgenthau's man Dubois protested at such legalisms. 'We already know that the S.S. and Gestapo are guilty - a trial would be farcical!' 'How do you know?' challenged the justice. 'This city is full of people who tell me there's no doubt about it. But when I ask for specific evidence I can't get a single item.'

Since Truman had already signed the executive order giving Jackson his warrant for the task, Morgenthau had no option but to climb down. He did so with poor grace. 'I bet you won't have your trials through by Labour Day' - the first Monday in September - he mocked. Heading for the door, Jackson told him that Christmas 1945 was a better bet.

As the judge walked out into the Washington spring sunshine with Ralph Bard, a U.S. Navy officer who had been at Yalta, he heard still more details of the behind-the-scenes discussions there. The Russians, Bard told him, had seriously aired a proposal to deport to the Soviet Union millions of ordinary Germans - people who had not belonged to any of the organisations - sterilising the men, and breeding the women with Russians.

To the end of his days, Jackson refused to believe that the President Franklin D. Roosevelt whom he knew could have advocated the slavelabour proposal. (He kept an open mind on the castration.) 'I can't believe that a man who knew history as well as he did, and knew the American people, ever had believed that proposal was a wise thing,' he confidentially recorded. 'I think myself that it was Morgenthau's emotional reaction - I don't know about the motives of some of the men with him.' On May 22, 1945, he set off for Europe to inspect what had to be done. Where were the war criminals at this time? For diplomatic reasons, the idea of putting Italy's wartime leaders on trial seemed to have been abandoned; Benito Mussolini and his principal ministers and aides had in consequence by this time been dead already for three weeks - lynched and machine-gunned in the back shortly after their capture by communist partisans.??? It now appears possible that, pursuing his own long-held beliefs, Churchill had issued instructions to the directors of his Special Operations Executive (S.O.E.) for the murder of Mussolini and his henchmen as soon as they were captured. The S.O.E. and the O.S.S. had duly passed these instructions on to their contacts amongst the partisans, and the bloody events at Lake Garda in northern Italy at the end of April 1945 were the outcome.

As for the German leaders, Adolf Hitler, Dr Joseph Goebbels, Martin Bormann and a host of others, acting wholly without consideration for Jackson and the needs of international justice, had taken their own lives before they could be put on trial. The remnants of Germany's Nazi government, including Grand- Admiral Karl Doenitz, whom Hitler had appointed Reich president, and Field-Marshal Wilhelm Keitel, chief of staff of the Oberkommando der Wehrmacht (the supreme high command), had withdrawn to an enclave in and around Flensburg, just below the Danish frontier, where they were penned in by British troops under Field-Marshal Bernard Law Montgomery, pending the receipt of further instructions from London. Among several career moves dictated by Hitler in his final will and testament, he had dismissed Heinrich Himmler as Reichsfuehrer S.S., and replaced Ribbentrop as foreign minister by Count Schwerin von Krosigk. Later - awaiting the gallows at Nuremberg - Keitel described these last days at Flensburg to his son. One day Himmler had come in for an hour-long talk with him and had asked Keitel to place himself at his disposal, as he was going to have to take over. The contents of Hitler's political testament however soon made clear that Himmler had been sacked as Reichsfuehrer S.S., and that Doenitz had been appointed head of state. Doenitz had asked Keitel, 'What do you make of Himmler's being here?' Keitel had replied that he'd have to go, and agreed to tell Himmler as much - that he should put on some civvies and get out of there. Dismissed from all his offices on May ?, Himmler had hung around long enough to give Keitel a letter addressed to General Eisenhower, offering his services

once the war was over. Keitel had read the letter and torn it up.

One by one the future actors in the Nuremberg drama were taken into custody. Those whom the international media had long portrayed as major criminals were not treated with kid gloves. After first beating him savagely, the GIs transported Hans Frank, the hated Nazi governor of occupied Poland, to the municipal prison at Miesbach. They flung a tarpaulin over the prisoner to hide the worst weals left by the beating. Under cover of the tarpaulin, Frank tried unsuccessfully to open an artery in his left arm. They gave the gauleiter of Franconia and newspaper publisher Julius Streicher an even rougher ride after an American army officer, Major Henry Blitt, found him at a house in Waidbruck in the Tyrol on May ?? . Challenged as to his identity, the former gauleiter admitted: 'Julius Streicher.' He was driven off to the prison at Salzburg. There he was handcuffed - the manacles were not removed for the next five days. Still manacled and dressed only in a shirt and pants he was driven on May 23 to Freising in Bavaria, where he was thrown into a windowless cell without either a bed or chair. 'Two or three times a day,' he wrote a few days later, 'I was made to stand against a wall with my handcuffed hands above my head while a Black or a military police officer beat me around the genitalia for up to one minute at a time with a leather whip. If I attempted to ward off the blows with my handcuffed hands they kicked me in the testicles. My private parts and testicles were badly swollen.'

Scarcely more pleasant was to have 'the white police officer' and the GIs order him to open his mouth two or three times a day so they could spit into it. If he kept his mouth shut, they forced it open with a wooden baton. They forced him to drink out of the urinal. When he once refused to, they beat him with the whip. 'Each time he visited my cell the white police officer ripped hairs out of my nipples and eyebrows.' Once when Streicher refused to eat the putrid leftovers that were dished out to him they threw him to the ground and forced him to lick the (Black) soldiers' feet. On May 26 they finally told him to get ready for the drive to Wiesbaden. A couple of hours before that one of the GIs said to him with a smirk, 'Now you get " kill, kill "' - and he made the appropriate cut-throat motion across his neck. Then a Black soldier marched Streicher into the lavatories, tossed his clothing into the toilet and told him to get dressed - which was easier said than done, given his handcuffed condition. The manacles were removed only after he arrived at Wiesbaden. 'Since then,' wrote Streicher, 'I have been under medical care. The prison commandant at Wiesbaden (who says he is a Jew) has behaved with complete propriety.'

It rapidly became plain to Jackson, and he remarked upon it in his diary, that Paris had suffered little or not at all under the Nazi occupation, and was suffering rather more under the American. They were housed at the Ritz Hotel, and drove over the next morning to the old Hotel Majestic which had once housed the headquarters of Field- Marshal Gerd von Rundstedt as Hitler's commander-in-chief, west. Here Betts filled him in on the latest titbits, for example that the Polish ambassador in Brussels had told him that the Russians were filling seventeen new concentration camps in Poland with those who

opposed the puppet government that they had set up in Warsaw. He said they had about six hundred war crimes cases on file, most of them little more than witness statements. About twenty cases had been tried by common law, and most of the defendants had been convicted and executed. Apart from two cases currently being tried, however, they had no others ready; and they were certainly were not prepared to mount a prosecution along the lines envisaged by Jackson - trying the conspiracy to make war as a crime in itself.

The irksome joint chiefs of staff directive 1067 was already causing major problems. Bedell Smith told Jackson that while the Americans troops were forbidden to 'fraternise' the Russians were cultivating the workers and peasants in their occupation zones to further the spread of communism. The Russians, said Bedell Smith, were refusing to cooperate in setting up the Allied Control Council as agreed. They were stripping eastern Europe bare, having rounded up and shot 'all leaders, intellectuals, lawyers, civil officials, scholars - any who might be a rallying point for opposition.' Mass shootings? Even lawyers? Jackson took note of all that Bedell Smith told him. A few days later, back in Washington, he would listen equally dispassionately to the American ambassador in Belgrade, Richard Patterson, reporting on the mass executions of intellectuals and businessmen beginning in that country on the orders of Marshal Tito, or rather of his Soviet puppet masters: 'Members of the Yugoslav government informed him that they had just executed the brother of a young woman employed in the American Embassy as a translator. He was not tried, no charges were placed against him, but they were of a family of bankers.'

6 Million?

After Paris, Jackson flew on to London. Driving into the empire's capital he found the effects of the bombing far less dramatic than he had expected, 'hardly noticeable in comparison with the total destruction visited upon the German cities.' He and his little advance party were billeted at Claridge's, the hotel where visiting kings and queens were housed, in a suite overlooking, he noted, the American embassy - several buildings in between having been removed by the German bombers. There they were talking about who was to be put officially on trial. When discussion turned to the list of names, it was Maxwell Fyfe who named Goering, Ley, Rosenberg, and Ribbentrop, to which he later added as an afterthought the name of Admiral Karl Doenitz, the German Navy's commander-in-chief and Hitler's successor as head of state; he stipulated that the British public would measure the trial's success or failure by what he called 'the disposition of Goering's case.' It was at General Donovan's suggestion that the names of Rudolf Hess and Franz von Papen were added. Jackson also had a few names jotted down, including Franz Xaver Schwarz, the Nazi party's treasurer; Wilhelm Frick, the minister of the interior; Hans Frank; Hjalmar Schacht, the former governor of the Reich Bank; and an enigmatic 'Woolf' - perhaps Karl Wolff, chief of staff of the now unavailable Heinrich Himmler. But these names were already too lowly for the Londoners' taste: they swiftly objected that the list must be restricted to the most senior officers and ministers, in order

to obviate the defence of 'superior orders' that more subordinate officers were bound to employ.

A public opinion poll conducted by the Gallup organisation revealed that sixty-seven percent of the American public wanted Hermann Goering executed without trial, and that forty-five percent would like to see the Gestapo agents and Nazi stormtroopers liquidated the same way. 'Kill them ... Hang them ... Wipe them off the face of the earth,' were typical reactions. The war department informed Eisenhower: 'Dr Gallup's overall impression is that American people want no fooling around about punishing war criminals. The people want no delay in meting out of punishment.'

A few days before leaving for London Jackson visited F.B.I. officials in New York on June 11, 1945. Here he had, probably not at his own wish, his first meeting with several powerful Jewish organisations who had already made quite clear to him they wanted a hand in running the trial. They handed him a copy of the Treaty of Sevres in which the Allies had laid down penalties on the Turks for their atrocities against the Armenians during World War One. This might serve as a useful precedent. Robinson also suggested that the tribunal prosecute Alfred Rosenberg in his capacity as chief Nazi philosopher: they were not seeking vengeance, swore Robinson, 'nor, of course, compensation for Jewish losses.'

How great were those losses? inquired Jackson, seeking a figure to use at the coming trial. 'Six million,' responded Dr Robinson, and indicated that the figure included Jews in all Nazi-occupied lands 'from the Channel to Stalingrad.' Jackson noted that day:

"I was particularly interested in knowing the source and reliability of his estimate as I know no authentic data on it."

Robinson said that he had arrived at his figure by extrapolation from the known statistics for the Jewish population in 1929 and those believed to be surviving now. In other words his figure was somewhere between a hopeful estimate and an educated guess. 'The differences are assumed to be killed or in hiding,' he said. Given the turmoils and tragedies of a war-torn Europe ravaged by bombs and plagues, it was not a data basis on which a statistician would properly have relied. Where were the shifting frontiers? Who, indeed, was a Jew? These were questions about which cartographers, ethnographers, religious fanatics, and politicians are still at each other's throats. Six million? By sad but extraordinary coincidence, the American Jewish community had raised a similar outcry about a 'holocaust' a quarter of a century earlier, after World War One. In a 1919 speech the governor of New York, Martin Glynn, had claimed that 'six million' Jews were being exterminated.

The delegation expressed to Jackson their fears that the Allies would choose the less onerous course, of merely prosecuting the Nazis for lesser offences. These men wanted a decision based on the persecution of the Jews which, they averred, all the post-war trials so far conducted had side-stepped. They even asked for a separate court to try these charges, and failing that they asked for the right to have an *amicus curiae* in Jackson's

courtroom to 'represent the six million slaughtered.' Foreseeing inevitable problems, Jackson demurred. All the other persecuted minorities would then feel entitled to the same rights. He gave the delegation no encouragement, but promised to think about it. Having obviously failed in that mission, they then asked him at least to appoint an officer on his staff specifically to handle their angle.

While in New York Jackson visited Herbert Bayard Swope, who was angling for a position in directing a publicity campaign around the trial. Swope reminded Jackson that if the Nazis had killed 'six million Jews' - it was amazing how rapidly that figure had taken hold - it would mean that the Nazis had acquired 'at least' six billion dollars of Jewish property. In mid-June a committee of American psychiatrists and neurologists contacted Jackson, asking permission to examine the prisoners and to make sound recordings of the interviews. Their premise was almost racist in its implications: 'Aggressive leaders have been recurrently produced by the German people, who then follow them blindly. Detailed knowledge of the personalities of these leaders would add to our information concerning the character and habitual desires of the German people, and would be valuable as a guide to those concerned with the reorganisation and re-education of Germany.' Rather unfairly, the writer proposed that these examinations should 'not be utilized to support pleas of insanity' - the results should remain secret until after the sentences had been executed. And, as for that, the doctors urgently recommended that 'the convicted be shot in the chest, not in the head,' as it would be desirable to have a detailed autopsy, especially of an undamaged brain.

Eventually Jackson would write to the New York committee giving its experts the go-ahead - authorising the secret examination of the defendants by qualified psychiatrists as soon as the Tribunal went into recess to consider its judgement; but again he ruled that the findings were not to be published until after any sentences had been carried out, and he was to have immediate access to them and the right to make such use of them before the Tribunal as he might 'deem desirable.'

Architect of a New International Law

The Russians insisted on several niggling changes to the trial's draft protocol. The American ambassador Winant advised Jackson to put up a strong stand against the Russians. President Truman had offered the same advice earlier, saying that the Russians only respected people who stood up to them. It soon became clear, particularly from their meeting on June 29, that the Russians had not abandoned the idea of a swift trial and even swifter execution of all the war criminals. Their argument had the benefit of simplicity. General Nikitchenko - who was to figure both as the Soviet chief prosecutor and negotiator at the London talks and as the Soviet judge at the Nuremberg trial - said with refreshing candour: 'We are dealing here with the chief war criminals who have already been convicted and whose conviction has already been announced by both the Moscow and the Yalta declarations and by the heads of the governments.' He objected, he said, to

the 'fiction' that the Tribunal's judges were disinterested parties - they would have read the newspapers like the rest of the world, and the guilt of these criminals was perfectly clear. The judges should merely decide the just punishment of the criminals without time-wasting preliminaries; as for the prosecutors, their job would be, in Nikitchenko's view, merely to assist the judges. That was the Russian way of doing things.

The greatest problem that Jackson found was the conflict between the differing legal systems employed by the four powers. A compromise in this respect would have to be struck. From the very outset he had nourished an unhealthy mistrust of the Russians. For all his bluster at the London conferences about going it alone, he preferred the Russians to have a prosecutor of their own at the trials since, the Russian record in this war hardly seemed less black than the German. This was of course a conference of the victors; their purpose was to choose the defendants, and to draft the new laws they were to be accused of having broken, and the rules of the court which was retroactively to apply those laws.

The Germans were not represented at these sessions, so the trial would start with the dice already loaded against the defendants. But to Jackson it was of paramount importance to get an agreement - any agreement - between the four powers. Bit by bit he chiselled the concessions out of the others: he secured from the other prosecutors agreement to a concrete declaration that individuals who led their nations into aggressive wars should in future (and in the past, if they were Germans) be held accountable. When the final text was announced, the justice declared: 'The definitions under which we will try the Germans are general definitions. They impose liability upon war-making statesmen of all countries alike.' They were brave words, but they had not the slightest effect on the statesmen who would wage one hundred wars, large and small, in the half-century after he uttered them.

The 'all countries alike' referred only to the future. The final indictments resulting from these London conferences would narrowly state the crime to have been 'aggression or domination over other nations carried out by the European Axis in violation of international laws and treaties' - a definition that saved the Russians particularly from embarrassment (the Russian representative had insisted that the Tribunal limit the charge even more narrowly to 'aggressions started by the Nazis in this war'.) The Soviet conscience was troubled by its own actions against Poland and Finland in the first years of the war, while British consciences were no less exercised by the knowledge of Churchill's 1940 plans for the invasion of neutral Norway and Sweden.

The British and U.S. armies had begun to concentrate the prisoners most likely to be required for trial as war criminals in a requisitioned four-star hotel, the Grand Hotel, at Bad Mondorf or Mondorf-les-Bains in the duchy of Luxembourg. Eventually there would be seventy or more elite prisoners in this camp. They found that their camp commandant was a stiff-backed, crusty American cavalry colonel, Burton C. Andrus; he would move with them, and they were to remain on his charge until they left him for liberty, jail, or the gallows. Among the first prisoners to arrive at the Mondorf cage was Field-Marshal Keitel, together with Arthur Seyss-Inquart, who had been Hitler's Reich commissar in

Holland. 'One by one the others arrived,' recalled Keitel later. 'Some of them had been taken into captivity in the most humiliating manner. Stripped naked, men on one side, women on the other, though with their backs to each other.' With time, all the remaining high ranking German officers arrived at the camp.

Shortly prisoners at Mondorf were joined by Joachim von Ribbentrop. He had been captured in Hamburg on June ?? after a long search. He would spend the remaining weeks here at the Grand Hotel writing his memoirs. When he invited Goering to run his eye over eighty-five pages he had just written, the former aviator told him without undue politeness where he could file them. With the drug intake now halted completely, the Reichsmarschall had regained his old fight and joie de vivre. Ribbentrop spoke a wooden but intelligible English, having spent some time in Canada in earlier years. A British officer interviewed the ex-foreign minister on August ?, assuring him that their conversation was in secret (in fact every word was picked up and recorded.) Despite these assurances, both now and later Ribbentrop refused to talk about the non-aggression pact he had signed in Moscow in August 1939 between Germany and Russia, invoking diplomatic secrecy. The British officer changed to another, by implication more menacing, tack.

'You've seen, of course, what has happened in these concentration camps,' he began.

'I never knew,' confessed Ribbentrop, 'whether it is really true what has been published on the concentration camps.'

'It is true.'

'I only learned of all these things through the papers in Hamburg when I was not yet a prisoner. We all had not the slightest idea of it.' 'That astonishes us.'

'Would it possibly astonish you, I wonder,' questioned Ribbentrop, 'if you knew our system? If anyone had asked Himmler to visit a concentration camp, the result would have been that he would have ended up there but would never come back from there.'

'He was responsible for them?'

'Of course.'

'Who built them up?'

'He did.'

'But he alone couldn't have had the full responsibility: he must have had a staff under him. Did Bormann work on this?'

'Bormann is a man who worked a lot with Himmler. About concentration camps. You see, we knew there were concentration camps but we didn't know what was going on. Nobody knew. All these people in Mondorf - not one of them knew. Also the Jewish question.'

'You mean about the persecution?'

'We knew that there were concentration camps but we didn't know what was in them.'

'Do you think Hitler knew?'

After a long, painful pause, Ribbentrop replied: 'I have so often thought about that. It would absolutely ruin my picture of Hitler if I thought this. I know one thing, that after

the Russians [in September 1944] had taken the concentration camp in Poland, Majdanek I think it was called, that was the first time I heard of these persecutions in concentration camps, misdeeds, atrocities. This was the first thing I heard when our representatives from abroad sent telegrams that Russian propaganda was making a tremendous row in neutral countries. I got these telegrams and placed them before the Fuehrer. I said that if this were true in any respect it would be quite impossible to make foreign policy. So he took the matter in hand and said it was not my business to discuss this. That's the only thing I ever heard.' The British officer asked if he had seen any pamphlets. Ribbentrop replied: 'I have seen one film in Mondorf. It was shown to us. It was a terrible film. There is no doubt about that. There was some propaganda. You see, we saw on a number of pictures where it was quite evident that it was done after bombardment. If you ask me about Himmler,' he concluded, 'in the last years he was very touchy - sehr boese.' The adjective actually translates as wicked.

Preparing the Trials and examining Evidence

The Americans had just released 450 tons of German foreign ministry documents to the British, since the O.S.S. did not have adequate microfilming capacity. Jackson was annoyed to hear this, since he felt he had a prior claim, as he would be needing the original documents as exhibits in court. Among the documents carried to England by a Colonel R. C. Thompson of the British C.I.O.S. (Combined Intelligence Objectives Sub-Committee of the foreign office) were some that contained political dynamite - the microfilmed papers of Carl von Loesch, of Ribbentrop's staff, which Thompson and Loesch had jointly retrieved on May 19 from a house at Schoeneberg in the Soviet Zone, near Berlin. On these films were the entire surviving records of Hitler's dealings with Mussolini, Franco, Laval, and other foreign potentates (as well as, incidentally, the only surviving copy of the Ribbentrop-Molotov Pact of August 1939). cable to the State department from Jefferson Caffery, the American ambassador in Paris, dated June 15, stated that the British had so far failed to return copies of these microfilms to the American authorities in Germany. Murphy had heard that the British ambassador Lord Halifax had been instructed by London to put pressure on Washington not to insist - it seemed that there were some embarrassing items in those Nazi files which the British were not keen to see aired in public now or at any time in the future. Among the items which the British seized and never returned to Germany were interpreter Paul Schmidt's transcripts of Hitler's meetings with leading members of the British aristocracy.

With an eye to ensuring that the Americans kept the upper hand the U.S. Army had provided Jackson with his own C-?? transport plane and crew. This proved a good investment. He used it to ferry his team briefly across to Nuremberg that afternoon to make a flying inspection of the courthouse and jail. It was his first visit to the city. Over eighty-five percent of the buildings had been damaged by Allied bombing - the worst destruction Jackson had seen so far. There were few people in sight, and a sickly smell

of decaying flesh hung over the ruins. In Nuremberg, he found the Palace of Justice and the building next door could hold 1200 Prisoners, so he gave Nuremberg the go-ahead and the army began the necessary rebuilding for the coming trials.

He flew back to London. While the case that the army lawyers and O.S.S. officers were preparing was turning out to be stronger than he had dared to hope, over the next two weeks it was again the Russians who dragged their feet on the procedural preparations for the trial. 'Their whole background is so different,' sighed Jackson in a private letter. The Russians still wanted the trial to be in Berlin; but now that Jackson had seen Nuremberg he was not going to let go of that. Playing his trump card - the U.S. Army plane and crew placed at his permanent disposal - he invited the Russian, French, and British delegations to fly over from London to Nuremberg for a better look at the courthouse that weekend. The Russians, after consulting their central authorities in Moscow, cordially but firmly declined his invitation. 'So we are off for a weekend amid unbelievable destruction and desolation,' he wrote to his wife Irene.

The entire Jackson circus flew to Nuremberg on Saturday July ?? - without the Russians but this time taking along several British lawyers, including the attorney-general Sir David Maxwell Fyfe, Mr G. D. Roberts, KC, and Lord Bridgeman, as well as Professor Gros and Robert Falco, a judge at the Cour de Cassation, France's supreme court. Falco was Gallic and diminutive but a man of immense charm, shrewdness, and patience. Jackson's party on this junket included Alderman, Shea, Bernays, and Dean. It is clear from Maxwell Fyfe's memoirs that it was only now that he realised what the German civilian population had been through under Allied bombing, although he never once in the trial admitted the relevance of this ordeal. General Clay warned the visitors that there were still so many corpses buried beneath the rubble that he feared the city's water supply must be contaminated.

Everybody now agreed that this city's courthouse provided the right setting for the trial of the century. The negotiations in London had become bogged down even more inextricably in small print - the actual definition of 'war crimes.' Perhaps it was hardly surprising, given that all the negotiating parties were judges or advocates.

The three power summit conference formally terminating World War Two had just begun at Potsdam, outside Berlin. On July 26 Jackson's advance party landed in Berlin after a four-hour flight from England. 'We drove through an odor of death to Potsdam,' the judge wrote. That scent seemed all pervasive in Germany, even now. Russian women acting as traffic control officers flagged them snappily through, as Jackson's convoy found its way out to the 'White House' in the Potsdam suburb of Babelsberg where Harry Truman and his new secretary of state Jimmy Byrnes, a former judge, were holding court. A small and execrable band was playing in the garden. The news from Britain was that Winston Churchill's party had lost the general election, and that Labour had swept into power in a landslide victory. As for their Russian allies, things were getting sticky. Byrnes told Judge Jackson of the problems that the Allies were already facing. The Soviet behaviour in eastern Europe was such, he said, that they could no longer sit next

to the Russians and hold court over the Germans for offences like looting a conquered country's wealth. Nor did Byrnes think much of Jackson's pious legal endeavours to get to the root of how the war began.

On the following day, Jackson tried to penetrate to the heart of the matter, driving with his party twenty miles into the centre of Berlin. The capital city had crumpled into shapeless heaps of rubble, the stinking remains of former palaces, museums, churches, and apartment buildings under which thousands of bodies still lay buried. Like Murphy, he noticed that there seemed to be no young men; everywhere were lines of women toiling through the ruins like ants in an anthill, clearing away the rubble, hammering and cleaning bricks and masonry, and passing pails of bricks in endless human bucket-chains. 'The streets were lined with dumb-looking people,' described the judge, 'most of them moving their possessions, some going in one direction, some in another.' There were horse-drawn vehicles too - but a colonel called his attention to the fact that nearly every cart had a Russian at the reins. The systematic plundering and stripping of the country was continuing apace. Hitler's Reich Chancellery, built by Albert Speer in 1939, was still a magnificent building, and although the long hall seemed neither very high nor wide to Jackson, it had a strange capacity even in its current down-at-heel condition to make him feel very insignificant inside: such was the architectural ability of Speer, now being questioned by the leisurely Allied experts in Versailles. Much of the chancellery building was still in the disordered state that Hitler's staff had left it. 'The Russians apparently had not examined with much care the papers,' observed Jackson, who wished that he could read German or indeed any language other than American. 'Hitler's overturned desk was in his room. Miss [Caroline] Fite [of the state department] picked up a number of original letters addressed to Goering, and I gathered up some typewritten documents which may or may not be important. The floor was strewn with wreckage and much motion picture film.' He reflected that if the Russians had done no better job than this in collecting evidence here, at the very fountainhead of Hitler's evil, the trial would not be getting much from them.

Down the road at Potsdam, the Big Three - Stalin, Truman, and now the mousy and unprepossessing Prime Minister Clement Attlee on behalf of the British - made no proper attempt to ventilate the topic of the enemy war criminals until the last day of July 1945. Again we have a precise transcript of what was said. 'The next item,' announced President Truman, first raising the matter, 'relates to the war criminals.' Molotov said, 'The Soviet delegation agrees to accept the British draft with one amendment. The amendment is in the last sentence after the words, " War Criminals. " We wish to add specific names, such as Goering, Hess, Rosenberg, Ribbentrop, etc.' 'It is not wise,' Attlee suggested, 'to put in names.'

Stalin explained, 'We merely suggest that such people as Goering and Ribbentrop be tried. If we remain silent it will cast a shadow on our prestige. If we name persons as an example we don't leave out the others. It is no offense to the prosecution. It will be helpful politically.' Byrnes also felt that it was unwise to name names. 'Every country

has its favorite criminal. It will be difficult to explain to each country why its pet criminal was not named.'

Back in London, Jackson discussed with treasury solicitor Sir Thomas Barnes what changes might become likely in the British prosecution line-up now that Labour had won the election. Jackson found the British to be process-oriented, still haggling over definitions. More goal-oriented, the Americans had prepared a film to educate the American public on the background to the trials; Jackson thought it terrible - it showed a particularly gruesome hanging, which he felt should be excised right away. Everybody suspected that hanging was an uncomfortable end, but there was no need to say so out loud. On the last day of July 1945 the widely respected Zionist leader Dr Chaim Weizmann lunched with Robert Jackson at the Dorchester, to plead once more for the special right of the Jews to make a presentation of their case at the trial, given that they were the only people against whom, in their view, a systematic policy of extermination had been followed. Jackson advised 'rather strongly' against any idea of having Weizmann himself appear as an advocate.

His attitude to the Jews was ambivalent. Although his private papers displayed none of the antisemitism that was widely prevalent in New England and fashionable among people of his class at the time, neither did he want them muscling in on 'his' trial. He felt that his prosecuting staff was already overloaded with Jews. In fact he had set himself one perhaps surprising guideline in selecting staff, deliberately deciding to employ no Jews. Coming from a country where a substantial proportion of the legal profession was already Jewish, a percentage which would multiply over the next decades, he recognised the risk he ran, but as he explained in his most intimate post-war reminiscences: 'I had a great deal of argument and difficulty about the staff, particularly with the Jewish people and politicians.' Whenever they came individually or in committees to clamour for prominent roles in the prosecution he had to educate them about the damage this would do. 'We are prosecuting these Nazis not because they killed Jews, but because they killed men and women' - that is, for Innocenticide.

Ultimately and in order not to be accused of shunning them entirely or worse, he did relent and employ one Jew, Dr Robert Kempner, in the courtroom presentation of the prosecution case. Kempner was a lawyer of the former German ministry of the interior who had been obliged to emigrate from Nazi Germany. Robert Max Wasili Kempner, born in Freiburg on October 17, 1899, was a thoroughly embittered and rather nasty piece of work. Although a Jew, he had worked from 1928 to 1933 for the Prussian police force, so there was no doubting his intellectual qualifications. Soured by his experiences at the hands of the Nazis, he had fled Germany in 1935 and become a professor at the University of Pennsylvania. He never lost his personal hatred of Hermann Goering, whom Hitler had appointed prime minister of Prussia, and whom Kempner blamed for his expulsion.

Returning now to Nuremberg in 1945, Kempner swore revenge - revenge at any price. In doing so he put behind him the strict ethics by which he had been brought up in

the law in Weimar, Germany. Preparing the prosecution case, he frequently resorted to threats and coercion to get witnesses to change or withdraw inconvenient evidence: Dr Friedrich Gaus, Ribbentrop's legal adviser, was one witness thus intimidated: he would be suddenly stricken with 'amnesia' about the Ribbentrop-Molotov Pact, the signing of which he had actually witnessed in Moscow. Gaus later testified that Kempner had threatened to turn him over to the Russians. In the files there is also a memorandum from Colonel Telford Taylor warning Kempner that he was not to promise inmates early release as an inducement during interrogation.

Kempner's behaviour with evidence was also highly questionable. He would later turn up in German foreign ministry files the original Copy No. 16 of the Wannsee Protocol, and bestow upon it a wholly undeserved reputation as a key document in the Final Solution of the Jewish problem - despite the aura which now surrounds it, the document contains no explicit reference to the killing of Jews. Mysteriously, a second ostensibly original 'Copy No. 16' of this document, complete with GEHEIME KOMMANDOSACHE rubber stamps, began to circulate, whose existence naturally cast doubt upon the authenticity of the first. Not only did the R.H.S.A., the agency supposedly originating the document, use the civilian classification GEHEIME REICHSSACHE on its documents, but the statistics contained in the document bore little relation either to each other or to reality. Moreover one would assume that the R.S.H.A. would have possessed at least one typewriter furnished with the special SS-runes key used by all the other S.S. offices; yet the document manifested no such runes.

There is further evidence of skulduggery in the documents collected by Kempner's office on the Final Solution. The Nuremberg document experts routinely produced 'staff evidence analysis sheets' on the documents that came into their hands, indicating where they were found, and which individuals were mentioned or incriminated by them. The sheet on document 4055-PS, a photostat of parts of the German ministry of the interior file on the Final Solution (Note: From video footage of the Trial itself one finds that the word "Gesamtloesung" was incorrectly translated into "final solution". Re-translated to "Endloesung", this word is also used in Germany till this day), shows that when first analysed by the experts it contained four important items relating to discussions on definitions of Jews; one of these four documents, originating in the spring of 1942, showed Staatssekretaer Franz Schlegelberger informing his staff at the justice ministry that Dr Hans Lammers, chief of the Reich chancellery, had phoned to inform him that the Fuehrer, Adolf Hitler, had 'repeatedly' ordered the solution of the Jewish problem 'postponed until after the war was over.' This did not suit Kempner at all, and when the file was returned to the document centre this particular photostat was missing.

For years the only evidence that it had ever existed was the brief summary in the 'staff evidence analysis sheet. Dr Kempner, challenged by this author to explain the gap, did not; at this author's prompting, the German historian Professor Eberhard Jaeckel located the missing original page, still in its Reich ministry of the interior file, buried deep in the German federal archives to which it had eventually been restituted. Jaeckel thereby

rendered a service to the revisionist cause for which he has never been appropriately rewarded. Another high-ranking Nazi, Dr Wilhelm Stuckart, would later succeed in turning the tables on Kempner: hinting in 1947 that he had incriminating evidence against him, a pre-war document stored safely away, he would bring Kempner, who was by then prosecuting in his own right at the subsequent war crimes proceedings, to his knees.

Stuckart, it must be stated, had attended the Wannsee Conference in his capacity as Staatssekretär in the ministry of the interior. Nonetheless, when he was indicted in the 'Wilhelmstrasse trial,' Stuckart boasted to his fellow inmates at Nuremberg that he was going to walk - and walk he did, sentenced to the time already served 'in view of his failing health.' Two years after the trial, Allen Dulles would reveal to the Jacksons that Kempner, by now working for some far-left group in Germany, was trying to extort information from various Germans in an attempt to blackmail both him and his brother John Foster Dulles, the secretary of state; in exchange for such 'testimony' Kempner had released a certain war criminal suspect, said Dulles. Allen Dulles was by then chief of the new C.I.A.

London Agreement

The Allies had undertaken in Point VII of the Potsdam Agreement to bring the German war criminals to a swift and sure justice. The document had expressed the hope that the London negotiations would rapidly lead to a consensus and emphasised the view that the trial of the principal war criminals should begin at the earliest possible opportunity. Under Jowitt's chairmanship, the London conference proceeded during July and August 1945 more briskly than under the Conservatives. The Russians swallowed the Anglo-American programme 'hook, line, and sinker,' as Barnes put it privately to Jackson afterwards. The four powers signed the London Agreement with much fanfare at Church House, Westminster, at eleven A.M. on Wednesday, August 8, 1945. Later that day the chief prosecutors held their first joint meeting to discuss once more which names should finally go onto the list of defendants.

The British representative, G. D. Roberts, wanted a 'small list,' and added dismissively: 'Everybody knows that these ten or twelve leaders of the Nazi Government are guilty.' 'In my view,' the English barrister continued, 'we ought to have a very prompt trial. The public demands it.' The Russian, Nikitchenko, agreed: 'We should hasten the first trial. Just pick out a few names which are household words and try them.' 'We would expect the first trial,' chimed in Sir Thomas Barnes, 'to kill as many of the big birds as possible.' (They were meeting in secret, so there was no need to mince their words.)

Later that day the Russian prosecutor Nikitchenko stunned them all by baldly announcing that Stalin had now appointed him as the Soviet judge for the trial, and that he would be flying to Moscow immediately to organise his staff. Lieutenant-General Roman A. Rudenko would take his place as prosecutor at these consultations. Even Jackson raised his eyebrows at this. 'The Russians did a strange stunt,' he observed in a letter to his

wife. 'Replaced Nikitchenko as prosecutor with one Rudenko, and made Nikitchenko a judge.' In case Mrs Jackson did not get the point he explained: 'He picked out the men to be prosecuted, so it is hard to see how he can be an impartial judge.'

What right for that matter had the Americans now to sit in impartial judgement on their enemies? Two days before the London Agreement was signed, they had detonated their first atomic bomb over Hiroshima. Releasing this revolutionary new killing-weapon with the foreknowledge and agreement of their British allies, they had vaporised in a nanosecond one hundred thousand human beings, nearly all of them non-combatants protected by the international laws of warfare. In an even more questionable act, on the day after signing the agreement, the Americans repeated this feat, dropping a plutonium bomb on Nagasaki. In his contemporary diary, Jackson made no reference to the atomic bombs. Truman had not told him about them. From his private writings, it is obvious that America's chief prosecution counsel was beginning to feel he had been trapped, but he resolutely addressed his mind to the narrow target he had set himself - the definition of a law to end wars, and its sanctification in blood when the time came.

The final structure, which was agreed on the fourteenth, favoured Jackson's plan, with four four-power committees: one on aggressive war and the violation of treaties, chaired by the British; two committees to prosecute war crimes and crimes against humanity on the eastern and western front, under Russian and French chairmanship respectively; with the Americans chairing the planning committees on organisations and on the conspiracy to wage aggressive war. These prosecution planning conferences in London would continue, on and off, throughout August. Jackson's secretary took detailed verbatim notes on them, and these revealed many of the twists and turns that the prosecution introduced to try to protect their case, and to shield their governments too from embarrassment. The German naval judge advocate Captain Otto Kranzbuehler, who would defend Grand Admiral Doenitz, would later point out that it was only after the publication of these transcripts, long after the death sentences had been handed down, that the world had learned of the very real concerns expressed by the British representatives lest the British plans against Norway in 1940 be publicly ventilated in the course of the trial.

Taking care of the Prisoners

Again using his private plane, on August 17 Jackson took another party across to Nuremberg, including Sir Hartley Shawcross and Colonel Harry J. Phillimore, secretary of the British delegation, with General Nikitchenko and his interpreter Mr Troyanovsky as the Russian guests, and a number of French lawyers whose names he did not catch. Displaying the kind of xenophobia that gets nations into trouble with their neighbours, his son Bill cheerfully described his father's other guests as 'a toad-faced slimy desinee of the French' and other members.

The Palace of Justice was a large, rambling building with endless cold stone corridors and innumerable offices. Reconstruction and remodelling for the coming trial were proceeding

at speed. 'The army,' reported Bill Jackson, 'has sent a whole regiment in there to take care of us - drivers, telephone operators, mimeograph operators, guards, post office, post exchange, tailor shop, barber shop, etc. - everything you could possibly think of, including night club!' They had torn out one wall of the courtroom, and erected public galleries in the next room. They were building a bench for the four judges and their four 'alternates' (non-voting deputy judges) along the west wall, and a thirtysix-foot-long wooden dock along the wall facing them; there was an elevator in the wall right behind the dock, through which the prisoners could be brought in from the adjacent jailhouse.

The main defendants were housed in low-ceilinged cells barely seven feet wide by thirteen; they slept on metal cots bolted to the floor along the left-hand wall. To one side of each cell's narrow steel door was a porcelain toilet bowl, set back slightly in an alcove. It was the one place which the sentinels, permanently watching their prisoner through the door's peephole, could not see. As at Mondorf, every glass window had been ripped out and replaced with Perspex. All electric wiring had also gone. Security and anti-suicide measures were paramount. While meetings with the prosecution officers were conducted across open tables, those with defence lawyers were confined to rooms where lawyer and client were separated by thick glass partitions, and a sentinel had to sniff all documents passed through the slide to make sure they had not been steeped in poison.

At seven A.M. each day a prison trusty handed each prisoner breakfast and a spoon through the Judas hole in the steel door. Water was poured through the peephole from a watering-can into a tin mug off which the handle had been ripped - another security precaution. The barber then came and shaved him. A truncheon-toting sentinel stood by to ensure that nobody spoke. 'Sentinels moving back and forth on the catwalks view the prisoners every half-minute,' reported Andrus to Jackson. At six P.M. each evening the prisoner's eye-glasses, pen, and wristwatch were removed, and the dim cell light was switched off at nine-thirty P.M.; a spotlight glared through the Judas hole all night long onto the prisoner's face, the only concession being that the current flowing through the lamps was reduced at night time from 210 to 110 volts.

Colonel Andrus had the visiting lawyers conducted through the adjoining jailhouse and they were allowed a peep at the Nazi bigwigs who had just arrived from Mondorf - Jackson, who had his son with him, recognised Hitler's haughty foreign minister among them. 'The real thrill of the trip,' wrote Bill, 'was going through the jail, where I gazed into the cell of von Ribbentrop, seated not six feet from me.' Ribbentrop was annoyed to be interrupted, as he was writing furiously, covering scores of pages in his large, jagged handwriting like Captain Nemo in the closing scenes of *Twenty Thousand Leagues Under the Sea*. 'Probably,' surmised the younger Jackson, 'he was preparing his defense. It was a strange sensation to see him caged there, and he was obviously very unhappy.' Further down the corridor, they found 'Field-Marshal Jodl' just staring glassily into nowhere; the next day Bill Jackson sat in on an interrogation of Wilhelm Keitel. Keitel seemed anxious to talk: 'Give those boys another month of solitary confinement,' opined the young American lawyer, 'and they will all be telling on each other or, as the District Attorneys

say, 'singing.'" Before leaving Nuremberg, the visiting lawyers were royally wined and dined by the U.S. Army, consoling themselves that it was all at German expense (Jackson intended to present the entire bill for these proceedings as an occupation cost.)

On the flimsy table in Hermann Goering's cell stood precious photos of his first wife Carin, of Emmy, and of his parents - his father in full plumed finery as governor of German South-West Africa. There was a snapshot of Edda too; she had just turned seven. 'Dear Daddy,' she had carefully written on the back, 'come back to me again soon. I have such longing for you. Many thousand kisses from your Edda!!!!' 'His health is probably not very good,' an American officer warned higher authorities on August 15, 'and on two recent occasions he was to be found in his dressing gown and pajamas in bed, as a result first of a slight heart attack ... and bronchitis.'

The prisoners were allowed pencils and paper to write private letters; but these, Andrus admitted, were 'promptly sent to the chief of interrogation,' Colonel Amen, leaving the prisoners puzzled and disconsolate when they got no replies. 'We've been permitted to write letters and postcards for two months,' Keitel would note in October, 'but no replies have been received.' This, along with the meagre rations and lack of exercise, was part of the prosecution's programme of psychological warfare, designed to wear the prisoners down. By the end of August, the general health and morale of all the prisoners were declining. Concerned, Andrus asked the German prison doctor Ludwig Pfluecker for an explanation; Pfluecker blamed the poor food and lack of human contact. Andrus allowed an improvement in the food, and relaxed the ban on Pfluecker speaking to the prisoners. Pfluecker would later testify that Goering was suffering repeated heart attacks at this time; but he was a urologist, not a heart specialist, and he had no heart instruments to make a proper examination. On August 21 American officers marched Goering up three flights of stairs to an interrogation and to perform the meaningless ritual of 'discharging' him from the German armed forces. Short of breath and suffering stabbing heart pains when he returned to his cell, he suffered a severe heart attack that night. An American doctor ordered him to bed for two days, and confidentially warned Colonel Andrus that unless the man was permitted thirty minutes of outside exercise each day, the next heart attack might be his last.

More Documents

Under Soviet pressure at Potsdam, the victors had undertaken to publish the actual list of defendants by the first day of September. The final cast of the victors was taking shape, but still there was no agreement on precisely whom to prosecute and hang among the vanquished. Back in London on August 23, Jackson found that the British idea of committee meetings seemed to consist of debating individual items of evidence - on this particular day they were reading through an entire speech by Hitler.

As for the documentary exhibits, it seemed likely that Eisenhower's armies had seized the pick of the bunch. In Paris, Colonel Storey had begun exploring these mountains

of documents - quarrying from them the collection of trial exhibits that generations of historians have come to recognise by the initials PS, or Paris-Storey. The case was already assuming staggering proportions: 'We have just uncovered 250 tons of documents in Germany,' wrote Bill Jackson. 'In addition, we have also come across 3,000 frames of German microfilm, each frame consisting of a whole document.' He now doubted very much that they would be ready to go to trial before the end of October.

The records had indeed survived in abundance, although since they were collected only for the purposes of prosecuting war criminals it would be foolish to attempt to write a history from these alone. There is anecdotal evidence that in the forests outside Nuremberg the prosecutors made a bonfire one day of all the mitigating documents which would have aided the defence case. Volumes of private papers - among them Hitler's private correspondence with Eva Braun, her private diaries, and the diaries of Hans Lammers, Heinrich Himmler, and Hermann Goering - had however vanished into the hands of American and French looters and plunderers who had descended on the valleys around Berchtesgaden. The British had seized General Alfred Jodl's diaries at Flensburg, but many of these too had vanished into unknown hands. Robert Kempner illicitly came into possession of the entire diaries of Alfred Rosenberg; these Kempner would retain hidden until his death, making them unavailable to Rosenberg for his defence; even now only the iceberg's tip of them has ever been published.

Among the documents retrieved by the Americans were the entire war diaries kept for the governor-general of occupied Poland, Dr Hans Frank - who had earlier been Hitler's lawyer. Lieutenant Walter F. Stein, an Intelligence officer attached to the U.S. Seventh Army, found these forty typescript volumes at the Pension Berghof at Neuhaus, near Schliersee in Bavaria; Frank had used the hostelry as an office, and he himself voluntarily handed over the diaries, believing, like Speer, that such forthrightness would curry much needed favours from the prosecutors.??? The Hans Frank diaries were taken to the Document Center which the Seventh Army had established in the library of Heidelberg University; here Lieutenant Gerhard Schaefer, an Intelligence officer attached to Jackson's office, would find them and order them removed to the courthouse at Nuremberg on September 20.

To each of these Nuremberg documents was affixed a document number, from which cognoscenti can deduce its provenance. Those prefixed with a 'C' (for Crimes), namely C-1 to C-460, came from the British admiralty; those with a 'D' from the British prosecution team at Nuremberg; the 'EC' prefix went onto economic documents used by the Americans ('ECH' coming from the Heidelberg Document Center, and 'ECR' from that at Rosenheim.) 'L' signified a document from London, like the now notorious forgery 003-L, the report on Hitler's speech to his generals on August 22, 1939 which the anti-Nazi opposition had fed to Associated Press journalist Louis Lochner in Berlin. 'M', rarely used, were further documents from the British prosecution, while the 'PS' collection, from the Paris office of Colonel Storey, was the largest (4,021 items, occupying thirty feet of shelfspace) and most authoritative. A small collection of 'R' documents consisted

of 589 items screened by Lieutenant Walter Rothschild of the London Branch of the O.S.S., and finally 'TC' was a series of documents from the British foreign office's Treaty Committee dealing with international treaties like Versailles, the Hague Convention on Land Warfare, and the Kellogg-Briand Pact that had purported to outlaw wars.

To match these resources, the defence lawyers would have nothing but their wits and whatever papers they could dig up by their laborious researches.

The Final Lineup

To be put on trial were:

Reichsmarschall Hermann Goering, commander-in-chief of the Luftwaffe and chief of the four-year plan;

Grand-Admiral Karl Doenitz, commander-in-chief of the German Navy from January 1942, and designated by Hitler in his political testament as his successor as Reich president (not 'Fuehrer');

Grand-Admiral Erich Raeder, his predecessor;

Dr Hans Frank (governor-general of occupied Poland);

Dr Wilhelm Frick, Reich minister of the interior;

Hans Fritzsche (chief radio commentator);

Dr Walter Funk (Reich minister of economics and Reichsbank president);

Rudolf Hess (until May 1941 the Fuehrer's deputy as chairman of the Nazi party);

S.S. Obergruppenfuehrer Dr Ernst Kaltenbrunner (from June 1942 chief of the Reich Main Security Office, R.S.H.A.);

Field-Marshal Wilhelm Keitel (chief of staff, High Command of the Armed Forces, O.K.W.);

General Alfred Jodl (chief of the O.K.W. operations staff);

Dr Robert Ley, leader of the German labour front, D.A.F.;

Constantin von Neurath (Reich foreign minister until February 1945, later Reich protector of Bohemia and Moravia);

Franz von Papen (until July 1934 vice-chancellor; thereafter Hitler's Special plenipotentiary in Austria and ambassador in Turkey);

Joachim von Ribbentrop (Reich foreign minister from February 1939);

Reichsleiter Alfred Rosenberg (Reich minister for the occupied eastern territories from July 1941);

Gauleiter Fritz Sauckel (the Fuehrer's general plenipotentiary for manpower);

Dr Hjalmar Schacht (Reich minister of economics until 1937, Reichsbank president until 1939);

Baldur von Schirach, Hitler Youth leader and gauleiter of Vienna;

Dr Arthur Seyss-Inquart (Reich commissar of the Netherlands);

Albert Speer (Reich minister of munitions from February 1942);

Gauleiter Julius Streicher (gauleiter of Franconia; publisher of the *Stuermer*.)

At the time the list was finalised, Jackson was out of the country. He spent the end of August 1945 touring southern Europe with his pretty secretary and son. True, he might have used some of the time more usefully to sit in on interrogations and soak up some of the history of the case which he was about to prosecute.

Those Boys Are Out for Blood

After the four powers signed the London Agreement on August 8, 1945, with its Statute setting up the first 'Inter national Military Tribunal' at Nuremberg, diplomatic pressure was brought to bear on other countries to associate themselves with it. Altogether nineteen of Germany's enemies, representing nine hundred million people, would join their signatures to the London Agreement. The fact that four-power agreement was secured at all was due primarily to the diplomacy and bargaining tactics of Justice Jackson. He would write privately a year later,

"Our Agreement of London of August 8, 1945 went beyond anything in history in its explicitness in outlawing aggressive war. But conditions which made for the success of those negotiations do not exist today. All governments had recently pledged to their own peoples that they would punish the Nazi war criminals. The only thing unsettled was the procedure and charges. On these matters the United States held all the aces, and we played them for all they were worth. The Americans had most of the highranking prisoners and we had captured the important evidence. Nobody else could conduct a really impressive trial without us. On the other hand we were in a position to conduct such a trial without the help of any other nation. Repeatedly during the negotiations I took the position that the United States would proceed alone to deal with its own prisoners if we could not come to an agreement. This was very persuasive in obtaining agreement on principles and methods. But even with these aces in my hand I was unable to get a definition of 'aggressive warfare' written into the Agreement, although I proposed the one which, in substance, had previously been agreed to by Soviet Russia in treaties with the Baltic States.

It was unfortunate, as he himself admitted, that the Tribunal itself was purely a four-power court, and that the victors must thus seem to be sitting in judgement on the vanquished; but he argued, 'The scale of their attack leaves no neutrals in the world' - a view with which many countries other than the Big Four would emphatically have

disagreed.

In the United States, as details of the Statute were announced during that second week of August 1945, strong legal doubts were voiced. Jackson's mail began to contain letters of condemnation from colleagues of the American Bar, who felt that he had degraded the Supreme Court by accepting the role of chief prosecutor in a political show-trial; but Jackson was convinced he could both uphold the integrity of his judicial status and push out the frontiers of international law. The chief justice of the United States disagreed, becoming quite outspoken in his criticism: Harlan F. Stone wrote that while he personally would not be disturbed if the victors put the vanquished to the sword as was customary in days of old, he was disturbed to have this action 'dressed up in the habiliments of common law.'

The plan to indict entire organisations found little favour either. In August 1945 the popular American magazine Saturday Evening Post published a finger-wagging article entitled, 'We Try Criminals - Not Classes.' In September the New Yorker added its weight with a call for frankness: 'It would be a tremendous help if the lawyers and judges entrusted with the trials would state the matter candidly and tack a big ex post facto sign over the courtroom door. It would be a help for instance if people were to grasp that the trial of a [Vidkun] Quisling or a Petain differs essentially from the trial of a Goering or a Keitel. Quisling stood trial in Norway, on Norwegian law, charged with betraying his country. This was a matter of law and order. Goering will stand trial in no man's land, on no man's law, charged with befouling the earth.'

In November the New York Times took up the assault on Jackson, quoting some of the U.S. Army's more outstanding combat generals as being wholly opposed to the prosecution of soldiers for obeying orders issued by politicians; in Germany, the newspaper pointed out, in a reference to the hated Morgenthau directive 1067 issued by the joint chiefs of staff, American officers were being ordered to accept responsibility for political measures they privately condemned as un-American, of which the worst were the 'so-called Gestapo methods used in handling Germans' employed by refugees hurriedly drafted into the U.S. Army during the war.

The cataract of criticism showed no signs of abating. In December ????, the Army and Navy Journal would bluntly describe the Nuremberg indictment of the German High Command as Jackson's attempt to discredit the military profession as such. Jackson hoped that when they saw the evidence unfold these writers would change their tune. Not only were the Allies seeking to convict their enemies under laws which had not existed at the time of the alleged offences, but under the London Statute they were specifically ruling out a number of obvious defences which would have immediately been raised: the German defendants might not plead that as soldiers in a Fuehrer state they were bound to obey the orders that were issued to them; nor could they point out that on more than one occasion each of the prosecuting powers had committed precisely the same crimes as they were alleging against the Germans. 'As far as crimes against the peace are concerned,' they declared, 'the current proceedings have no lawful basis in international

law, but are a trial based on new criminal law, a law drawn up only after the actions complained of.'

They argued further that the cast-iron principle of *nullum crimen sine lege, nulla poene sine lege* (in the absence of a law there can be neither crime nor punishment) was a general rule, which in normal circumstances would militate against the punishment of people for acts which were not against the law at the time committed. Nuremberg, said the Tribunal simply, was an exception. 'In so far as this is an appeal against the jurisdiction of the Tribunal,' ruled Lord Justice Lawrence, rejecting the defence application, 'it conflicts with Article 3 of the Statute and it can not be entertained.' The retroactive nature of the Nuremberg legislation nonetheless troubled many legal minds, and few greater than that of the Justice of the U.S. Supreme Court William O. Douglas. 'In our view of the law,' he would write,

"nobody can be convicted on the basis of having broken an *ex post facto* law. In my view the Nuremberg trials applied this kind of law against the defendants. Hitler and his ilk were guilty of multiple murders and under common law deserved the death penalty. But they were not indicted under the relevant national laws. Before the Nuremberg trials the crime of which the Nazis were convicted was never considered to have been such an act under our criminal laws, nor was it held by the international community to be under threat of the death penalty."

As already mentioned the lawyers who had drafted the London Statute had taken good care to exclude in advance the defence of 'higher orders.' Article 7 of the Statute had laid down that the official position of a defendant whether as a head of state or as a responsible official of a government department would not be accepted either in exculpation or in mitigation of punishment. Under Article 8 moreover it was allowed that where a defendant could prove he had acted on the orders of his government or a superior officer this would not be accepted as exculpation, but could be used in mitigation of sentence if this appeared proper in the opinion of the Tribunal. This rule conflicted with the manuals of military law existing at the outbreak of World War Two on both the German and the Anglo-American side. Article 47 of the German *Militaerstrafgesetzbuch* provided: 'If a criminal law is violated in the execution of an order the superior issuing that order is alone responsible. But the subordinate obeying that order is liable to punishment as an accomplice, firstly if he exceeds the terms of the order issued to him, or secondly if it was known to him that his superior's order meant committing an act which would be a crime or misdemeanour under civil or military law.' After the Moscow Declaration of October 1943 the Allied legal authorities had their attention drawn to the fact that if there were plans to put as many Axis war criminals on trial as possible, the principle of 'superior orders' could prove 'very troublesome.' The clause was therefore surreptitiously changed in the British manual in April 1944 and in the American manual seven months later to strike this potential weapon out of any enemy defence counsel's hands after an Allied victory.

At Nuremberg, the defence attorneys would also be prohibited from referring in mitigation

to illegal acts committed during the war by the victors. Lord Justice Lawrence would interrupt the lawyer defending the High Command to say, 'We are not trying whether any other powers have committed breaches of international law, or crimes against humanity, or war crimes, but whether these defendants have.'

Thus lawyers were refused permission to introduce a captured British official Handbook of Instruction on How to Conduct Irregular Warfare, instructing commandos on how to treat German prisoners: 'Adopt some of the methods of gangsters.' 'Remember, you are not a wrestler trying to render your enemy helpless, you have to kill.' 'Kick him or knee him as hard as you can in the groin. While he is doubled up in pain get him on the ground and stamp his head in.' Following diagrams in this booklet, German prisoners taken during the Dieppe raid of August 1942 were trussed in such a way that every movement would result in slow strangulation, the so-called 'death slings.'

As for Allied saboteurs, the German High Command knew that these men parachuted into occupied Europe with revolvers strapped under their armpits designed to fire forwards when the arms were raised in apparent surrender; German records contained at least one such proof, where the saboteur's parachute had failed to open and circumstances allowed the internal device to be inspected at close quarters. Any properly constituted British or American court would have considered this to be information of material value in assessing the background of Hitler's orders for the ruthless execution of commandos and saboteurs falling into German hands.

A paralysing regime of psycho-terror had been enforced on the defendants even before the indictment was served on them. They were held in solitary confinement in the Nuremberg jailhouse. Like the millions of ordinary German prisoners in American hands, they were kept on a near-starvation diet. Field-Marshal Keitel, sixty-three years old, lost thirty-three pounds between May and October, eighteen of them during the eight weeks after his arrival at Nuremberg. Hess was an empty husk of his former robust self. Ribbentrop was gaunt, hollow-cheeked and frail. It was self-evident that all of these factors were not without effect on the prisoners' health, morale, nerves, and powers of resistance. 'The conditions we are living under here,' wrote Keitel in his private papers, 'are not enviable given the last five months of uncertainty about the fate of our people, our family, and our own person. Apart from the interrogations we hear nothing whatever about what is going on in the world outside the prison and even then only by chance. We have been allowed to write letters and postcards for two months now; no replies have been received.'

From five-thirty P.M., as dusk fell, the older inmates could only sit and brood in the dark in their cells, because after their eye-glasses were taken away it was impossible to read in the light coming in from outside. Every evening on Andrus' orders the tables and chairs were removed from the cells. As there was nothing to hang clothing and underwear on, the prisoners were forced to lay the clothes on the dirty stone floors. 'The needs of personal hygiene which are provided for with soap, toothpaste, and a once-weekly shower are incapable of keeping pace with the unhygienic side of life in a prison cell - the filthy mattress, blankets, towels etcetera.' Exercise in the open air or outside in the gangway

was limited to ten minutes a day.

The IMT wasn't even military either. Jackson said 'He would let them sit as civilians.' While in Washington Jackson also warned John J. McCloy, undersecretary of war, that General Betts, the judge advocate-general in Europe, had shown him the latest instructions issued under the joint chiefs of staff directive 'XXXX', whereby as many as two million Germans were to be rounded up as criminals. Jackson had urged that the instructions be regarded as authority rather than an obligation. The Pentagon confirmed his suspicions, that the treasury officials of Henry Morgenthau had pressed the 'severe and sweeping' terms of the directive on them.

Under article 2 of the London Statute there were to be four judges, one for each of the four powers, each provided with an alternate without voting rights. There was still some feeling that the judges on the Tribunal should have military rank. In fact three of them were civilians. Only the Soviet judge was a soldier - the same General I. T. Nikitchenko who had left London as the chief prosecutor early in August. The French and British prosecuting teams arrived at Nuremberg on the morning of September 21. Jackson detailed his son to show them over the jailhouse. 'Those boys are out for blood,' wrote Bill privately later that day. 'They've even suggested we use a guillotine!!'

As the expert on international law Dr Alfred-Maurice de Zayas has pointed out, although the tribunal regarded itself as a court of international law, in reality it was an inter-Allied occupation court as Germany had not agreed to the establishment of such an extra-national authority. The make-up of the Tribunal flew in the face of the separation of powers which democracies had preached ever since the French revolution as the sole guarantee for the individual against the excesses of the state. 'If legislator, judge, and prosecutor are one and the same person,' naval judge advocate Otto Kranzbuehler, Doenitz's attorney, later argued, 'this fact alone will be enough to entertain powerful misgivings as to the outcome of their activity.'

Jackson, Maxwell Fyfe, Falco, and Nikitchenko had all participated in the negotiations on the London Statute: together these jurists had drafted the retroactive laws to be applied and had even compiled the list of defendants. Jackson and Fyfe would now surface in Nuremberg as chief prosecutors; Nikitchenko first as chief prosecutor and then as the Soviet judge, and Falco as the French alternate judge. On top of this was the fact that Francis Biddle, who would appear here as judge, had drafted a memorandum in his capacity as U.S. attorney-general at the time of the Yalta conference in which he had set out basic propositions for the Statute and added the declaration that in his view certain Nazi organisations were criminal. 'It would be turning a blind eye on harsh reality,' said Kranzbuehler, 'if one were to argue that under these circumstances the judges were independent and unprejudiced.' In any other legal system it would have been possible to reject such judges because of their evident bias. At Nuremberg however this relief was, said Kranzbuehler, denied to the defence attorneys by the Statute itself.

While Jackson was warmly surprised by the high calibre of the Soviet jurists he was to meet

here at Nuremberg, as a team they remained an enigma to him - they were from a different world. The Americans had equipped the Russians, like the other prosecutors, with Hitler's automobiles to drive around in. With their secret-police commissar, Rasunova, they were however a law unto themselves. Counter-Intelligence Corps officers reported to Jackson that they had traced the source of a flood of counterfeit Deutschmarks in Nuremberg back to members of the Soviet prosecution team. These Russians feigned complete ignorance of the English language until untoward incidents occurred, and of these there were several. In Nuremberg the driver of the Russian chief prosecutor, General Roman Rudenko, would be shot and fatally injured while sitting in his car outside the Grand Hotel late on December ?; he said an American soldier had opened the door and shot him. There were immediate rumours of an attempt on Rudenko's life; but more likely the intended victim was Likhatchev, a chief examining magistrate attached to the Soviet prosecution team. Likhatchev, a former interrogator at Moscow's notorious Lubyanka jailhouse, had conducted Russian pre-trial interrogations of Hans Frank among others.

The Soviet communist party organ Pravda published an angry article, and Jackson wrote to Rudenko apologising and promising an investigation. ??? Nothing came of it. In 1953 Likhatchev's career came to an untimely end when he and three others were shot by firing squad for falsifying evidence.

Discussions how to frame the indictment had continued all summer. In its final form it ran to 25,000 words, composed in a language that was often lurid and emotional. It contained allegations which no serious historian would now unblushingly venture to sustain, but which were designed to feed the appetite of the mass media. Life magazine summarised some of the main points. For instance, Hitler had forged a Hindenburg last testament in his own favour. Keitel had conspired to assassinate Germany's own envoy to Czechoslovakia to create an 'incident.' Goering, it continued, had suggested that Nazi hoodlums kill more Jews instead of wrecking property. He had dictated over the telephone a fake telegram of Austrian capitulation. Hitler had threatened to kick Chamberlain in the belly before the eyes of all the photographers. Keitel had ordered in ???? that Japan be drawn into the war. Most outrageously, on General Rudenko's insistence at the very last meeting of the prosecuting staffs the indictment was amended to include the murder in the Katyn forest of 11,000 Polish officers. Point 3, paragraph C of the indictment would read: 'In September 1941 eleven thousand Polish prisoners-of-war were killed in the Katyn forest, near Smolensk.' The Russians were fully aware at that time - as Mikhail Gorbachev would formally confirm on April 15, 000 - that Stalin had personally ordered his secret service, the N.K.V.D., to massacre altogether fifteen thousand Polish officers and intellectuals in April 1940. The former N.K.V.D. officer Pyotr Soprunenko, who signed the death warrant, still lives (1996) in Moscow as an old-age pensioner.

Jackson was aghast at this Russian effrontery. The exiled Polish leaders strongly advised the prosecution against any mention of Katyn. For several days Jackson argued with the Russian prosecution team; but the omission of Katyn would, conversely, have pointed an accusing finger at Stalin, and adamant as Rudenko was that the British should not refer

to the Stalin-Hitler pact, he was equally insistent that Katyn must be charged to the Nazi account. In the event, the other three prosecutors left it entirely to the Russians to state the Katyn charge in the trial, and the Tribunal was notably silent about the murders in its judgement.

Deportations, Slave-Labour and Slave-Trade

On the count accusing the Germans of deporting populations, the indictment also displayed a troubling double-standard, branding this without hesitation as a 'crime against humanity' - when committed by the Germans. When the trial began, the French and Russian prosecutors would not mince their language as they described the deportations of one hundred thousand French Alsations to Vichy France, and of a million Poles from Hitler 'Warthegau' into the Generalgouvernement of Poland. Thus the French chief prosecutor Francois de Menthon would charge in January 1946: 'Within a few hours the Alsations were hounded out of their homes with scarcely any baggage and robbed of their possessions.' 'This inhuman transportation of entire populations,' he continued, 'will remain one of the horrors of our century.' And referring to the deportation of Poles the Soviet deputy prosecutor L. N. Smirnov would allege, a few weeks further into the trial, 'In the occupied Polish territories village after village, town after town, city after city was evacuated of its Polish inhabitants. This process began in October 1939 as the village of Orlowo was purged of all the Poles who lived and worked there. Next came the turn of the Polish port of Gdingen. In February 1940 the forty thousand inhabitants of the city of Poznan were driven out. Thirty-six thousand Baltic Germans took their place.'

At the same time as these thunderous words were echoing in the courtroom at Nuremberg about the deportation crimes of the Nazis, the Poles were doing precisely the same in their newly acquired territories, driving the native Germans out of East Prussia, Pomerania, and Silesia, relying on the Allied decision announced in Article XII of the Potsdam agreement of August 2, 1945. The German government now accepts that in the course of this chaotic, brutal, mindless 'population transfer' of fourteen million civilians more than two million lost their lives.

The Allied indictment of the Nazis for the use of slave labour was even more cynical. Roosevelt himself had indeed approved at Yalta the deportation to the Soviet Union of hundreds of thousands of able-bodied Germans as slave labourers. With an eye to the coming trial, Jackson had been able to hinder the worst excesses, but pursuant to the Allied Control Council Proclamation No. 2 of September 1945, two hundred thousand German prisoners had been shipped to the Soviet Union. In April 1947 it was estimated that the Russians still held two-and-a-half million prisoners-of-war, while no estimate was possible of the number of civilians who had been deported for forced labour from the Russian Zone of Germany. The Americans were not entirely innocent of this charge either; they were not only supplying Italian prisoners to Belgian coal mines but demanding

three marks per man, five marks per N.C.O., and nine marks for each officer; a few weeks later the Americans had to halt the similar 'slave trade' in German prisoners- of war with France until they were better fed.

These looked like flagrant infractions of international conventions willingly entered into, and solemnly signed and ratified. The Geneva Convention on the treatment of prisoners-of-war prohibited any country from transferring its captives to the custody of any other country. Yet when the British war minister warned the cabinet that there were 'obvious political reasons' why Britain could not give any of her 160,000 German prisoners to the Soviet Union, Lord Cherwell - famous for his role in advocating the unrestricted bombing of civilians in 1942 - discounted this and wrote to Churchill a week after the war ended recommending that 'the Germans can be used in gangs and the ardent Nazis transferred to the Russians, who, I am sure, will be able to alter their views.'

Monetary considerations - the adjustment of the reparations balance- sheet to Britain's advantage - underlay this proposal too. In official British files is a cabinet-level memorandum on reparations, in which the transfer of two million German prisoners 'as slaves' to Russia was to be reckoned in the final settlement at 200 British Pounds per head. The cabinet's basic agreement to such deportations was communicated to Washington a week later, on May 27, 1945. A copy of the TOP SECRET memorandum is in Jackson's private files: the British cabinet would raise no objection to 'the use of German labour as reparation,' and recommended that fresh 'impressment of German labour' should continue for six months. As a sop to the moralists, the cabinet expressed the pious hope that countries using this labour would sign a declaration laying down 'certain minimum standards as to food, lodging, medical treatment, work, pay and period of service.' Under this agreement, the British and American administrations transferred to France hundreds of thousands of German prisoners. As stated, the French treated them so abominably that the other Allies finally had to protest.

With the Nuremberg trial only half over, the Allied Control Council would promulgate a new law in the western zones in February 1946, under which all German males aged fourteen to sixty-five and all women aged fifteen to fifty were subject to forced labour. Refusal to work would lead to the confiscation of ration cards - a penalty declared to be 'inhuman' by the Tribunal when applied by the Germans.

In the Prison

While the lawyers thus bargained and haggled, the prisoners languished in Nuremberg jailhouse under conditions of considerable discomfort. Neither age nor rank nor former eminence sufficed to excuse a prisoner from harassment by Andrus' bored sentinels and NCOs, most of whom nourished grievances that because of these prisoners they were being retained in Europe long after their comrades had been returned home and demobilised. The prisoners were at first not permitted to approach within ten yards of each other. For a time it was mooted that the prisoners be handcuffed even in the dock. An-

drus refused to permit the International Red Cross access to the prisoners; the Red Cross Christmas packets were confiscated when they arrived. The elderly Hjalmar Schacht was forbidden to sleep on his side; Field-Marshal Keitel, aged sixty-three years, of which he had been a soldier for forty-three, was plagued by boils on his neck, which went untreated for there were no medicines. 'In the absence of a chair with a back-rest,' wrote Keitel, 'the permanent back pains are a physical torment for a man of sixty years and more.' Most of the prisoners suffered agonies of hunger and cold, for the cell windows were unglazed and the Perspex sheeting ill-fitting and draughty.

Field-Marshal Werner von Blomberg was dying a slow and agonising death from an untreated cancer. On February 13, the first anniversary of the devastating Allied air raids on Dresden, Field-Marshal Milch learned that Blomberg had not eaten anything for days, and that he was growing weak and apathetic; Milch told the German doctor that the field-marshal must be taken out to a hospital. 'The American doctor says the same thing,' Milch wrote that evening in his diary, 'but he's frightened that'out of general hatred'Andrus won't allow it.' 'It's terrible,' Milch continued, 'to see these people suffering so badly and not be able to help them!' That afternoon Blomberg was evacuated from the prison, and he died of cancer on March 13 - on the Ides of March, the very day that Reichsmarschall Goering opened his last major counter-offensive for his country in this trial.

Only Speer found his conditions suddenly alleviated. After the first week or two of solitary confinement in a filthy cell with a straw palliasse and stinking, ragged blankets, directly across the gangway from Goering's cell, he was transferred to the sunny side of the prison and given a room with a proper bed. Here he was visited for the first time by Colonel Andrus. In part the uncomfortable conditions were a result of the necessarily stringent anti-suicide precautions enforced by Colonel Andrus. A chair was permitted in the cells only during the day time and the table was of flimsy cardboard; neither was allowed within four feet of the windows. When the Tribunal later ordered that prisoners were to be allowed the use of eye-glasses, pens, and pencils in their cells to work on their cases, a sentinel was posted over each prisoner throughout the time he possessed these instruments. They were allowed to use the eye-glasses in court in case they had to read any documents. Knives were forbidden. All meals were chopped up fine to enable them to be eaten with a spoon. A prison barber shaved each prisoner with a safety razor in the presence of a GI.

Despite all their security measures, there were occurrences that gave Andrus nightmares. A five-inch blade from a butcher's knife was found in the lining of witness Walter Buch's suitcase. The sharp, wafer-thin metal diaphragm from one of Goering's earphone headsets in the courtroom was found to have been removed. Each episode resulted in fresh strain on the prison guards, a strain which they then took out on their prisoners. Andrus later recorded that he had particularly felt the stress after the first of his prisoners committed suicide; two of his chief prison officers suffered breakdowns and had to be hospitalised. The prisoners inevitably protested at this treatment, and more than one wrote letters

addressed to the protecting power (they were not forwarded); Andrus nipped further protests in the bud by stoutly and unilaterally declaring the Geneva Convention suspended - an impropriety which only the prevailing conditions and atmosphere of mutual hatred can explain.

Higher authority had evidently enforced new regulations during the intervening weeks since they had left the ASHCAN camp at Mondorf. In rules and regulations issued there in May 1942, Andrus had stated: 'All persons incarcerated within CCPWE#32 [ASHCAN] are considered to be PWs.' After warning that any prisoner-of-war attempting to escape would be shot, Andrus concluded: 'Violations will be punished in accordance with the Geneva Convention and Rules and Articles of War.' Here at Nuremberg there was no more talk of Geneva or prisoner- of-war status. The number of showers per week had however been raised from one to two; and Andrus ruled that, though saluting between prisoners and Allied personnel had been forbidden, bowing was still appropriate. Since this Tribunal had been set up to conserve and further the rule of international law, it deserves more than a passing comment that the Geneva Convention to which the Allied nations and Nazi Germany were parties provided expressly that no signatory could suspend its provisions for one full year after the cessation of hostilities, precisely in order to prevent such excesses. Moreover, far from repudiating the Geneva Convention, as Hitler had been invited to do by his minister Dr Goebbels after the fire-bombing of Dresden, he had refused (after representations made by, among others, Doenitz and Ribbentrop, two of the defendants at Nuremberg); he had also refrained from making use of his huge stocks of nerve-gases because of the conventions forbidding their use. In short, the status of prisoner-of-war, with all the rights accruing to it, was protected by the Convention, and in law it was not within the gift of either Eisenhower or his superiors or his junior officers like Colonel Andrus to abrogate it.

Evidence?

During October and November 1945 the O.S.S. had laboured alongside the army lawyers to perfect the case against the accused. Their methods were often more foul than fair. The private files of Justice Jackson provide disturbing evidence of tampering with and distortion of evidence. After the main film, *The Nazi Plan*, prepared by the O.S.S. to illustrate the conspiracy charge in count I of the indictment, was shown secretly to Jackson's staff on November 14 they warned him that there was probably little the defendants would seriously wish to deny, and there was much that would benefit the defence which should be cut. 'I would,' wrote one expert to Jackson, 'in the cutting process eliminate the scenes which follow the [German] movement across the border in Austria, Sudetenland, and the Rhine, in all of which flag-waving, smiling faces and the presentation of flowers help to nullify our notion that by these acts the people were planning or waging a war against their neighbors.'

A German film on the Warsaw Ghetto was also going to be shown. A major on Jackson's

staff viewed it and was taken aback by the shots of mental defectives and of the ghetto police collaborating with the Nazis. He recommended that the film be totally suppressed for that reason. This was certainly the fate of another film, specially made to illustrate 'Reichsbank loot' at Frankfurt, since at the last moment it was found that there was no proof that the loot really had come, as claimed, from concentration camp victims. Naturally there were many among the prosecution team who continued, or wanted, to believe the more far-fetched atrocity legends. One American lawyer on Kempner's team wrote home at this time from Nuremberg: 'Imagine making dentists pull out all the gold dental work from the teeth of victims before they were killed and while still conscious! We have pictures of a soap factory where they hit the victims, mostly Poles, with a blunt instrument, and the heads are cut off and boiled in one vat and the bodies in other vats. Three hundred heads were found in one vat at the time of discovery.' All of this was fiction.

So was much else that was sworn at Nuremberg. The Polish member of the United Nations War Crimes Commission had sworn an affidavit that human beings had been killed by steam in the Treblinka and Belzec extermination camps. Three members of Jackson's own staff had provided a sworn affidavit testifying to the existence of lethal gas chambers at Dachau concentration camp - James B. Donovan, Lieutenant-Colonel Calvin A. Behle, of the judge-advocate general's department, and Lieutenant Hugh Daly, of the 32nd U.S. Rainbow Division. The Czech prisoner Dr Franz Blaha had sworn to the same chamber's existence. (The German government has long since certified that no lethal gas chamber was ever operated at Dachau.)

Similarly the Tribunal readily accepted the propaganda legend first inspired by the brilliant Soviet propagandist Ilya Ehrenburg to the effect that the Nazis had fabricated soap from the remains of their victims, and even stamped the soap with the initials RJF, 'pure Jewish fat.' The Russians submitted to the Tribunal exhibits USSR-196 ('recipe for making soap from human bodies'), 197 ('statement of Zyg and Mazur'), and 393 ('samples of soap made from human bodies') to support this contention. For years since, such bars of soap have been part of an unwholesome trade among curiosity-collectors in Israel, and occasionally some are even ceremonially buried to the chants of the khaddish. Why the Nazis should have wanted to rub their faces in the boiled-down detritus of their sworn enemies remains an imponderable mystery. Although it is fixed in the final judgement of Nuremberg - and hence a criminal offence in modern France to contest the historical existence of such soap - Israeli archival experts publicly announced once more in 1990 that this 'soap story' too was and always had been a propaganda lie.

As the German saying has it, 'Lies have long legs,' however. As late as May 1995 the soap legend was once more being obediently touted around by authoritative newspapers in Germany.

Preparations continue

Pre-trial interrogations of the Nazi generals were in full spate. It never occurred to these men who regarded themselves as upright Prussian soldiers to demand to have a lawyer of their own present. The prisoners were prize booty just like the Nazi medals and Mausers, and nobody read any Miranda formula to them: they were never cautioned as to their rights, because they had none. Bill Jackson sat in on some of the sessions, watching Colonel Amen's technique of extracting information from the more prominent witnesses. The prisoners had their own views of the interrogators. 'There wasn't one single Jew among the British,' the obsessive Julius Streicher was pleased to note. 'Nothing but Jews among the Americans . . . and only one of the Russians.' To the former gauleiter, a veritable plague of them seemed to be infesting the jail building. 'Twice a day a uniformed female lieutenant (a Jewess) walks past and smirks into my cell as though to say, "There he is. He's not getting away from us this time!"' 'The interpreter with the pince-nez is a J., a professor at Columbia University. He often comes into my cell. He thinks I haven't spotted he's a J.' Streicher was impressed by the Russians, however: They radiated an enormous energy. It was just a question of time before all of Europe belonged to them.

The indictments, some spanning more than 100 pages, were given to the prisoners with varying reactions. The deepest insight was shown in the private reaction of General Alfred Jodl, former chief of the operations staff. He wrote: 'I am seething with rage now that I have read the indictment. It's 1918 all over again. If this war is to have any meaning for the advance of mankind, then it has got to be that it leads eventually to a lasting peace for Europe, if not the whole world. But in that case, instead of the brute force that led to the war and brought final victory, there has to be an international system of justice that is recognised by all sides. Otherwise the nations of this world will not have advanced one step. – Well,' he added, betraying the still flickering flame of hope within him, 'the prosecution is not the same thing as the Tribunal.' And: 'What has particularly infuriated me is the summary allegation that all the defendants enriched themselves from the occupied territories.'

Soon first prisoners cracked under the pressure. Only a few hours later Robert Ley scattered suicide notes around his cell, tore rags from his clothing and stuffed them into his mouth, then twisted a sodden army towel round his neck and waited until it strangled him. It cannot have been a pleasant death. The Americans buried him like a dog in an unmarked grave. They found in his cell a bulky folder containing hundreds of pages of partly demented writings – it included letters penned by him to his beautiful wife, who had killed herself during the war. Jackson locked it away and it was never forwarded to the next-of-kin; it is still among his private files. Embarrassed by this further proof that his defendants were going out of their mind, he instructed his staff: 'I do not think we should release [the Ley file] because of the effect on the case.' The simple fact of Ley's suicide was announced to the twenty-one surviving defendants and each was ordered to sign the announcement as having been read to them.

Hjalmar Schacht scrutinised the column of signatures. He added his own, then laconically offered to the American sergeant: 'If you wanted me to, I'd make an "X" after each one you ought to shoot.' Streicher too seems to have toyed with the idea of hanging himself, but then he decided it was worth seeing this fight through. 'I think L. hanged himself,' he mused in his diary, 'because we aren't getting anything whatever from outside, not even shirts. I'm writing on a table which consists of a cardboard on a few strips of wood.'

On the day of Ley's suicide Judge Biddle went down to Rome, following in Jackson's footsteps, for a vacation. Stringy as a dried-up fruit, the pope gave him a fifteen-minute audience, for which the judge dressed in striped trousers and a black jacket. His Holiness mentioned that Mrs von Papen had been in touch with him, and he asked the American judge to do what he could to see that the former vice-chancellor of Germany was given a fair trial. He mentioned too his distress that Robert Ley, another of his flock, had been driven to suicide. Biddle lunched with Eisenhower at his villa at Bad Homburg – sipping the first fresh milk since arriving in Germany. 'He told us many interesting things,' noted Biddle, adding without further comment: 'He had to take back from the French prison camps 100,000 prisoners-of-war because the French had stolen their coats, clothes, and food. Many were litter [stretcher] cases.' The French were not however alone in such excesses. Wilfully misinterpreting the terms of joint chiefs of staff directive 1067, many of Eisenhower's officers had begun the systematic starvation of prisoners who had entered American captivity at the end of the war. Up to one million of them died of malnutrition, hypothermia, and disease. In the eastern territories too, something like the Morgenthau Plan was being implemented with mindless savagery: seeking revenge, the officers of some camps in what had now become Poland had begun the systematic murder of their German prisoner-of-war internees.

Intimidatory American tactics appear to have been routine. Years later the former S.S. judge-advocate Konrad Morgen, whose fearless investigations had led to the wartime arrest and execution of the commandant of Buchenwald camp, rendered to the American Pulitzer prize-winning author John Toland a similar account of his experiences at the hands of the interrogators at Nuremberg. 'The officers in the [Auschwitz] camp made it easy for themselves,' reported Morgen, referring to his own wartime investigation of S.S. wrongdoing under Rudolf Höss, the commandant at Auschwitz. 'When new inmates arrived and he had no room, they took out the last batch, put them up against the wall and shot them, and made room for the new batch.' Asked however about the Six Million figure, Morgen told Toland: 'It is hard to believe such a figure.' He recalled that the Jews had 'helped to kill their own people.' But he refused to give perjured testimony at Nuremberg to the effect that Ilse Koch, widow of the commandant hanged by the S.S., had made lampshades out of human skin. That was a legend, he said: totally untrue. 'The Americans almost killed me,' recalled Morgen. 'They threatened three times to turn me over to the Russians or French or Poles.'

Garnering usable documentary evidence became a mounting nightmare for Jackson. He had become disenchanted with the productivity and intelligence of General Donovan's

O.S.S. They had promised much but had delivered little. What Donovan regarded as evidence, he certainly would not: 'I never had any feeling that anybody had trapped me into the thing,' Jackson commented later. 'But I was in the trap!' It soon became clear that the O.S.S. had intended all along to stagemanage the whole trial along the lines of an N.K.V.D. show-trial, with Jackson little more than a professional actor. As part of the stage-management they proposed to run a pre-trial propaganda campaign in the United States, with 'increasing emphasis on the publication of atrocity stories to keep the public in the proper frame of mind.' To this end the O.S.S. devised and scripted for the education of the American public a two-reel film on war crimes, called *Crime and Punishment*; it was designed to put the case against the leading Nazis. Jackson declined to participate. He refused even to read the speech that the O.S.S. had scripted for him to read into the cameras. 'As you know,' he wrote to the O.S.S. officer concerned, 'the British are particularly sensitive about lawyers trying their cases in the newspapers and other vehicles of communication.' The film proposal was followed by an explicit O.S.S. suggestion for launching a 'black propaganda' campaign during the course of the trial, with agents in selected foreign countries starting rumours designed to influence public opinion in favour of the trial and against the defendants. This would be far more effective, they pointed out, than mounting a straightforward public relations campaign which would obviously be seen as emanating from the powers conducting the trials. One of Jackson's staff secretly notified him that the suggestion was 'fantastic, if not extremely dangerous,' and the justice himself pencilled a pithy comment on the letter: 'The scheme is cock-eyed. Give them no encouragement.'

Vestiges of the unsavoury methods of the O.S.S. can still be seen among the earlier Nuremberg records – for instance, at the pre-trial interrogations the defendants were not accompanied by lawyers, and were frequently persuaded by trickery or intimidation to subscribe to testimonies incriminating others which we now know to have been false. The files are full of curiosities – for instance anonymous typed extracts of documents instead of the originals, and sworn statements by witnesses like Höss, commandant of Auschwitz, in which all the 'witnesses to his signature' have signed, but not Höss himself. The Americans also submitted as exhibit 1553-PS a file of invoices for substantial monthly consignments of Zyklon (hydrogen cyanide pellets) supplied to the pest-control office at Auschwitz; they concealed the fact that the same file contained invoices for identical quantities of Zyklon delivered to the camp at Oranienburg, outside Berlin, where it was never alleged there had been any gas chambers.

The defendants were sometimes first interrogated under circumstances designed to make them believe the trial had already begun. Thus Keitel referred in one private note at this time to 'interrogations by the officers (judges) of the Allied military tribunal.' The transcript shows that in one August interrogation Göring challenged the interrogator: 'I would like to know if this is only a questioning, or if this is already a regular trial.' The interrogator, Colonel Amen, evaded direct reply.

Judge Jackson's squabble with Donovan came to a head in the autumn of 1945 after the

general returned from a long absence in China on O.S.S. business. By this time Jackson's team was well on the way to establishing on the basis of documents alone a cast-iron case against the Nazis. But Donovan was a showman and he wanted the case to rest principally on the public testimony of witnesses like Schacht and Gisevius – a documentary trial was less likely to sustain the public imagination. He had even established with Göring relations that seemed to Jackson altogether too chummy. Interrogated on the day following the service of the indictments about the truth of the sordid affair resulting in the dismissals of Field-Marshal Werner von Blomberg and General Werner von Fritsch in 1938, Göring had said he would discuss it only in privacy. This intimate special interrogation duly took place on November 6 with General Donovan but no reporter present; Göring gave testimony broadly in accordance with the now well-known facts, but 'requested that [it] be kept a secret.'

Relations between Jackson and Donovan now touched bottom. an abrupt letter to Jackson Donovan had set out his contrary ideas on stage-managing the trial. The justice replied the next day, no less abruptly. The general then tried to push through his own concept by issuing orders to the predominantly military personnel on Jackson's staff. He also ordered the prison commandant Colonel Andrus not to permit any further interrogations of Göring, causing great difficulties for Jackson since the French and Russian prosecutors were naturally clamouring for the same interrogation rights as the Americans were enjoying. 'From the beginning,' Jackson huffed in a letter to Donovan, informing him he had overruled the general's instructions, 'control of these prisoners has been in the hands of Colonel Amen who has controlled the time, place of interrogation, who could be present, etc.' As the trial opening approached, General Donovan became increasingly disaffected, because he was not in the centre of things. Three days later the prisoner Schacht wrote an oily letter to Donovan offering assistance. Receiving a copy of this from the general's secretary, Jackson was furious. This was not what he was planning for the banker at all. On the same date Jackson received a letter from Donovan renewing his suggestion that they give Schacht 'the opportunity to fight his way out' by testifying as prosecution witness against Göring. Jackson had already once turned this idea down: to him, Schacht was one of the worst criminals, and he did not propose to let him save his own skin. He now learned that Donovan had entertained one of the senior prisoners-of-war, Lieutenant-General Erwin Lahousen, one of his opposite numbers in Nazi Intelligence, as a guest at his Nuremberg mansion; Colonel Amen had questioned Lahousen there with the German lawyer Leverkühn of Hamburg as intermediary.

For Jackson this was the last straw. The integrity of the trial in the eyes of history was at stake. He issued an order putting a stop to the entertainment of and negotiations with the Nazi prisoners. When the general wrote him formally requesting permission to confer with Göring, Jackson sent a blunt refusal, and informed him: 'I won't be able to use you in any position of prominence when the trial begins. Donovan had all the fury of the woman scorned; he had hoped to be in charge of the fiery and spectacular trial examination of witnesses. For a few days he intrigued with Jackson's enemies, and

tried to win them round to his point of view. Over dinner with Colonel Andrus and Judge Biddle on November 27 – in itself an impropriety on a scale worth noting here – Donovan stated that Jackson's case was 'confused and flat' from relying on so much paper evidence (the trial had by then begun, but no witnesses had been called.) '[He] is eager,' noted Biddle, 'to get Jackson to put on Göring, who he thinks would come through.'

Jackson would have none of it, and the O.S.S. general stormed out of Germany. He took vital documents with him, threatening to discredit Jackson in Washington if he could. His departure forced the justice to rush a long letter to explain to President Truman on December 1, 1945 his position. 'When I asked him to work with me,' wrote Jackson, explaining Donovan's motivations, 'I was repeatedly told that he would not work in second place with anybody... But he was the head of O.S.S. and I needed what help that organization could give.' A letter came from the United States at the end of March 1946 warning Justice Jackson that Donovan was now searching New York for a suitable public relations expert whom he could hire to sabotage the Nuremberg trial.

The Russians were particularly conscious of the risk to their persons if at any time the Ribbentrop–Molotov Pact became the subject of open debate during the trial. After this meeting the Soviet deputy prosecutor Colonel Yuri V. Pokrovsky assured Vyshinsky, his Soviet controller, formally by telephone, 'The chief prosecutors are determined to avoid awkward questions and to give the defendants no opportunity of starting debates or dragging the tribunal into discussions. In this connection it has been mentioned as desirable to exchange a list, before the trial begins, of all topics which are not to be mentioned before this tribunal, so that we have the opportunity to slap these questions down immediately during the proceedings.' The local Soviet prosecutors, Rudenko and Pokrovsky, were not their own masters. Behind closed doors there was a Soviet body remotecontrolling all their decisions, identified as the 'Supervisory Commission for the Nuremberg Trial.' Among its less appetising members were the chief prosecutor of the Soviet Union K. P. Gorschenin, the minister of justice I. T. Golyakov, and the president of the Soviet Supreme Court Rytschkov, who had signed many a death sentence in his time; as well as even uglier creatures like Kobulov, Merkulov, and Abakumov (who would go before a firing squad at the same time as Likhatchev in 1953.)

On Gustav Krupp, Jackson was in agonies: he had personally promised President Truman that he would prosecute the industrialists, influenced, as he secretly admitted to his fellow chief prosecutors, by the campaign at home against U.S. munitions manufacturers like DuPont, who were rumoured to have sent a certain Mr Scherrer to Europe pre-war to break up the disarmament conferences. Industrialists everywhere had to get a warning. 'There is more dynamite in this question than Krupp ever produced out of his plant!' he said on November 12, 1945, a few days before the trial began. Therefore a Krupp, any Krupp, had to go on trial – he would have preferred Alfried, but Gustav was good enough in default. At the Tribunal's first session, behind closed doors in Nuremberg on November 14, Gustav Krupp's lawyers moved to dismiss him from the case on the ground

that he was too ill to understand what was going on. Jackson rather weakly contended that absent-mindedness was no defence – that the London Charter would allow even this Krupp to be tried in absentia, or that in the alternative they should replace him with his son Alfried. Sir Hartley Shawcross objected that this was a court of justice, not a game where they could substitute one man for another.

Lord Justice Lawrence reserved a decision, but clearly disagreed with Jackson. One member of the American prosecution team wrote privately: 'My guess is that the elder Krupp will be dismissed, and the younger Krupp substituted, as he was head of the firm since 1943. The Krupps were unscrupulous in their dealings with forced labor, and such men and women were inhumanly treated, worse than any Georgia chain gang one used to read about.' That the British and Americans had gone to very great lengths with their air forces to burn and blast to death those selfsame workers was the irony of such 'war crimes' trials as this. Ultimately the British united front – Shawcross and Lawrence – refused to have Alfried stand in for his father, earning a grudging tribute from an unexpected quarter, Julius Streicher, who wrote in his diary: 'The British carried the day with their opinion that although one might be able to replace one NCO with another, it was just not done to have one defendant who was unfit to plead or dead replaced in the dock by his son as successor. This episode shows that the British judges at least have the good intention not to put their morals entirely on one side in the events now beginning to unroll.' There were other signs of problems to come. When defence counsel applied for one particular witness to prove that the Russians had deported slave labour from Latvia, just as the Nazis were now accused of having done, the Russian alternate judge Lieutenant-Colonel Volchkov flew into a temper and called it libellous. 'We postpone a decision,' noted Biddle, 'till a full meeting.'

The world's press was informed that the show would begin on the morning of November 20, 1945. Jackson's opening speech was already a masterpiece. He had reviewed it a dozen times, Elsie had worked on it every night for weeks, and Bill had been up until five A.M. seeing it through the duplicating machine. On the nineteenth however news arrived from Moscow which threatened the entire opening performance. The Russian chief prosecutor, General Rudenko, had been stricken by malaria, so Moscow now claimed; the Russians were demanding at least ten days' postponement, failing which they would pull out of the trial completely. Justice Jackson, who had now experienced Russian methods for five months, suddenly sensed that the Russians had got cold feet – for some reason they were trying to stop the trial. The French deputy chief prosecutor, Monsieur Dubost – piqued by the Tribunal's refusal to allow old Alfried Krupp to be included among the defendants – supported the Russian demand for a postponement, adding that if the Soviets pulled out so would the French. 'He has orders,' Biddle recorded, 'to absent himself if the Russians are not present. The French and Russians have particularly suffered.' 'It was generally believed,' Jackson privately recorded, 'that he [Dubost] was a Communist and it looked as though their position had been settled in advance.'

Unexpectedly Rudenko's deputy Colonel Yuri V. Pokrovsky arrived and announced with

a completely deadpan face that he had just telephoned Moscow, and that 'due to a marvellous new medical discovery' Rudenko's malaria had been cured and he was on his way to Nuremberg where he would arrive five days from now. (Moscow called all the shots: In an eloquent little scene, Pokrovsky, an elegant hand-kissing former officer of the Imperial Russian Army, once wrapped his wrists in the latest ticker-tape instructions from Moscow, like a pair of manacles, and apologised to Maxwell Fyfe, 'That's how I am.') 'The trial will open,' Biddle recorded the Russian as saying, 'in a high solemn moment, of extreme importance.' Pokrovsky insisted that Rudenko must be present personally, and was refusing to delegate that function. The trial could begin next day.

From the records of the Soviet government's Supervisory Commission for the Nuremberg Trial it is possible to speculate on the reasons for the Soviet agonising over the opening of the trial. Once again they were terrified of an undisciplined defence lawyer lifting the lid off politically delicate matters. The possibility of effective counter-attacks by the defence lawyers against the Soviet Union continued to worry Vyshinsky, who was ultimately answerable to Stalin himself. On November 26, he would preside over another such secret meeting. This time the minutes read:

Subject: List of questions to be avoided during the trial examinations (Comrade Vyshinsky):

1. Confirmation of the list of questions provided by Comrade Vyshinsky which are to be regarded as not permissible for discussion before the Tribunal.
2. Demand to Comrade Rudenko that he reaches agreement with the other chief prosecutors that a series of topics should not be addressed, to avoid the USSR, the United States, Britain, France and other Allied nations becoming the butt of defence criticisms.

Those present additionally insisted that for each document introduced by the other prosecution teams Comrades Rudenko and Nikitchenko – the Soviet prosecutor and judge respectively – should be required to render opinions on their admissibility with regard to the protection of Soviet interests and if necessary prevent the defence from submitting or even reading out in open court those documents ruled as 'undesirable.'

Showtime

The International Military Tribunal at long last held its first session in the Palace of Justice at Nuremberg at ten A.M. on Tuesday, November 20, 1945. The twenty defendants sat in two rows in the dock, with their backs to the wall. Göring took the most prominent place, at the right-hand end of the front row. Three defendants, in addition to Kaltenbrunner, were missing. The seventy-five-year old Gustav Krupp von Bohlen und Halbach had been formally found unfit to plead; Robert Ley was dead; Martin Bormann could not be found. The Nuremberg lawyer Dr Friedrich Bergold had been appointed at the dictate of British deputy prosecutor Airey Neave* to represent the absent (and in fact dead) Reichsleiter.

A question-mark hung over the fitness of several other defendants. Streicher's lawyer Dr Hans Marx appealed to the Tribunal to examine his client's sanity, but three of the prosecuting powers' medical experts pronounced him fit to stand trial. Kaltenbrunner had been rushed to hospital two days before with a subarachnoid hæmorrhage; during the next few months the former S.S. Obergruppenführer attended court only a few hours at a time. Göring remarked, 'If he's fit, then I'm an Atlas.' Hess' fitness to plead was no less open to question.

Three hundred press and radio correspondents crowded the courtroom for this first day. A newsreel camera whirred, recording every minute, and powerful floodlights bathed the tables crowded with prosecutors, interpreters, and German defence counsel in their traditional gowns and caps. On the bench sat the judges of the four powers together with their alternates, in chairs now of equal height, in front of their national flags – the British in wing collars, the Americans like rather anxious New York businessmen, Professor Henri Donnedieu sporting his magnificent moustache, and the two Russians in full uniform, as befitted a military tribunal. Julius Streicher was impressed by these Russians – they had a soldierly bearing which was quite in keeping with their uniforms, which were designed on the old Tsarist model.

The chief Russian prosecutor General Rudenko was absent in Moscow, his malaria having ostensibly returned despite the earlier miracle cure; he had authorised the trial to open this day on the understanding that the Tribunal would not tolerate the German defendants making any statement in his absence. Jackson studied the prisoners' faces intently. He wondered if Göring would try to challenge the court's jurisdiction. If he did not, the others would follow his lead. Judge Lawrence asked him how he pleaded to the charges. Göring took the microphone and began, 'Before I answer – ' Lawrence interrupted him. Jackson was in suspense. Göring repeated his opening words, and was again stopped by the judge. Göring then muttered, 'Not Guilty,' adding: 'In the sense of the indictment.' Clutched in Göring's hand, unread, was a one-page declaration. In it, he refused to recognise the jurisdiction of the Tribunal. There is no reason not to record for posterity what he had wanted to say:

“As Reichsmarschall of the Greater German Reich, I assume political responsibility for my own acts. Although answerable for these acts only to the German people and to the German courts, I am nevertheless willing, without recognising the jurisdiction of this Tribunal, to provide it with any explanations that are desired and to speak the whole truth. I do however refuse to accept responsibility for acts committed by others – acts of which I was unaware and of which I would not have approved or been able to prevent if I had known of them. Hermann Göring.”

The Tribunal passed on to Rudolf Hess. To the excruciating irritation of the solemn-faced prosecution lawyers, Hess, called upon to plead, merely sprang to his feet (in a temper, as he admitted in his diary) and shouted 'Nein!' The hundreds of spectators packing the galleries roared with laughter. Jackson was furious, feeling that Hess had 'stolen the show' – and a show it indeed was. The Tribunal president Lord Justice Lawrence, with

his half-moon reading glasses every inch the Hollywood fuddy-duddy of an English judge, articulated: 'That will be entered as a plea of Not Guilty.'

With his son Bill at his side at the table still checking the pages, Robert H. Jackson began his opening speech. His speech was later praised as one of the world's great pieces of legal literature; The speech was a brave attempt at laying the foundations for the indictment on the conspiracy to wage aggressive war; it was well received, and Jackson was greatly relieved. He said that the Nazis had killed an estimated 5.7 million Jews (that sounded more precise than the popular figure of Six Million.) Asked during the adjournment who had ordered this, Göring was overhead saying, 'Himmler, I suppose.' He had not confronted this issue at all in his own mind until now. JACKSON INTENDED to make little use of live witnesses, preferring to have the documentary evidence speak for itself. At a private meeting after the trial began, Jackson offered this additional interesting explanation to the other chief prosecutors: 'Though the United States has the largest collection of potential witnesses – a whole jail full, in fact – most of them would do us more harm than good.'

We shall perhaps use four more witnesses in addition to [Lieutenant-General Erwin] Lahousen [chief of the Abwehr's sabotage and counter-espionage Section II], particularly on concentration-camp matters, but we shall make the bulk of our case on documents.' At one such closed session on the twenty-fourth Lawrence asked Jackson to state the political purpose of the trial. Jackson replied to the question in this sense: 'We want to prove to Germany and to the world that the Nazi regime was as wicked and as criminal as we have always maintained.' (so to prove Allied propaganda is truth) Moreover, 'We want to make clear to the Germans why our policies toward them will have to be very harsh indeed for many years to come.'

This motivation for the trial must never be forgotten in contemplating the printed record. The Nuremberg archives are a historical source to be used only with caution: the published volumes contain only the prosecution's documents, and none of the defence. In the course of the trial Dr Hans Laternser, defence counsel for the General Staff and the O.K.W., would submit to the Tribunal no fewer than 3,186 affidavits sworn by field-m Marshals, generals and other key witnesses. Not one would be published in the blue IMT volumes.

The reading of the documents into the record began. On November 29 the court was in fits of laughter over Göring's cheeky telephone conversations with Ribbentrop (in London) and Prince Philipp of Hesse during the Austria crisis of March 1938; he had ordered his Forschungsamt to monitor and transcribe these telephone conversations. This put the Reichsmarschall in a boisterous mood, but it was dashed when Jackson called that afternoon for the showing of the first film exhibits prepared by the O.S.S. and by his own staff. The most effective was the film on Nazi concentration camps, a grim record made by military photographers who had accompanied the Allied armies advancing through Germany. Now the defendants knew there was little hope for any of them – the last vestige of public sympathy was dispelled by the horrors that the films portrayed.

From his private writings it is clear that Jackson by now regarded the participation of the Russian judges in the trial which he had staged as a mixed blessing at best, and as a mockery of international justice at worst. The shorthand notes of his last secret conferences with the Russians before the trial began revealed him bluntly reminding them of their own sins and warning that the United States would not identify itself with Soviet misdeeds: if the defence counsel succeeded in making capital from the secret Ribbentrop–Molotov Pact of August 1939, the Russians had only themselves to blame. He himself proposed to make no reference to it in his opening speech. As a lawyer, he was uneasy about this suppression of the truth, but he saw no alternative.

THE NIGHTMARE of awkward documents lurking in the captured German records continued to beset the Allied prosecutors throughout the trial. Fortunately the British had captured the most incriminating files, those of the German admiralty and foreign ministry, and had whisked them out of the country; they had released portions of these only with the utmost reluctance to Nuremberg. At one secret meeting of the chief prosecutors at Nuremberg we find the British representatives insisting, on instructions from London, that the archives of the German admiralty and foreign ministry be returned as soon as possible to their safes in London, because of the 'embarrassment' that their publication would cause to the British government if they should fall into the wrong hands.

The dice were heavily loaded against the defendants in other ways, too. A basic difficulty for the defence lawyers was their unfamiliarity with the Anglo-American trial procedure adopted at Nuremberg: German lawyers were wholly inexperienced in the techniques of examination and cross-examination, and they were profoundly surprised by the latitude to object and interrupt shown to counsel under the Anglo-American system. A more fundamental distinction was that even during the Third Reich the German trial procedures had been conducted with the primary objective of ascertaining truth, and all parties had united with that aim – the judges conducting the principal examination of witnesses, the opposing counsel being there to underline aspects that favoured the defence or prosecution. As Otto Kranzbühler, Dönitz's young attorney, would later comment. it was an essential feature of the Anglo- American criminal trial that it was confrontational, with each side introducing only the evidence which benefited its own case. Unlike the German custom, there was practically no obligation on the court to investigate the truth for itself. When the defence made their desiderata known to Jackson, he robustly turned them down, stating that he had no intention of 'serving two masters.'

Were the scales not loaded in advance against one side or the other, this would not normally cause an injustice. In Nuremberg, it was as though the scales had only one scale-pan, on the side of the victorious powers. 'When the German defence attorneys arrived in Nuremberg in September 1945,' observed Kranzbühler, 'they had literally nothing. The prosecution on the other hand had already seized all available archives and documents and they were screening them with a huge army of experts for incriminating evidence.' Only this incriminating material was then made available to the defence attorneys; they were allowed no opportunity to look in the captured archives for defence documents in

mitigation or exoneration. The foreign archives were also inaccessible to them.

In a German court it would be unthinkable – and illegal – for one party to withhold part of a document which might tend to aid the other party's case. But here at Nuremberg documents which might aid the defence were routinely concealed from them, or even destroyed. (It is quite wrong for Sir David Maxwell Fyfe to claim in his memoirs that 'all the documents were available to the Defence.') Dr Alfred- Maurice de Zayas has expressed the view that the verdict on many of the points charged against the High Command (O.K.W.) would probably have been very different if the German defence lawyers had been allowed access to the captured records of the O.K.W.'s Office of Special Investigations into Violations of International Law (Wehrmachts- Untersuchungsstelle für Verletzungen des Völkerrechts) and permitted to select documents from those files in mitigation of the High Command's actions: 'But these files were "classified" and they were not finally released to the public domain until the seventies.'

If the robust, devious, and confrontational atmosphere of British and American court-rooms was unfamiliar to the German lawyers, they had one great advantage: they spoke the language of the documents, and they were familiar through their clients with the real facts of the case, while the Allies were forced to learn the facts for themselves and to grope their way through often highly inadequate translations and interpreters. Against that, the Allies monopolised the captured documents and libraries, and the Germans could get no access to books and documents from abroad except through the offices of the prosecution. A vital book by Romania's former foreign minister Gafencu was on sale throughout Switzerland, but was denied to the defence lawyers in Nuremberg, as was the published war dispatch of the U.S. Army chief of staff, in which General George C. Marshall confirmed that no concerted plan had existed between Germany and Italy prior to Pearl Harbor – refuting one important point of the indictment. When Göring's lawyer invited the Polish exile general Wladyslaw Anders to supply his evidence that the Russians themselves were the murderers of thousands of Poles at Katyn, Anders' Allied superiors forbade him to comply. Documents which Sir David Maxwell Fyfe had printed in three hundred copies for the press were virtually unavailable to the German lawyers. On January 11, 1946, Hans Frank's lawyer Alfred Seidl would apply to the court for the former governor-general of Poland to be allowed to use his own diaries, of which he had voluntarily turned over forty volumes to the Seventh Army. Those volumes were now in the courthouse document room, but he too was allowed to use only those extracts that had been picked by the prosecution. Permission was refused.

There was too a marked difference in the treatment of defence and prosecution witnesses. Hostile witnesses found they were housed in the main jailhouse under conditions no better than the defendants' – unless they had to be kept out of sight of the more inquisitive, in which case they were moved into a 'detention home' nearby under somewhat better conditions. If they were friendly witnesses, they were treated to luxury accommodation and special rations. The latter practice stopped only after this first trial, when U.S. prosecutor Walter Rapp circulated a notice warning that they were not to be coddled

even if they chose to 'sing.' Key witnesses applied for by the defence were routinely declared to be untraceable. The Americans accused Keitel of involvement in the murder of a French general – S.S. Gruppenführer Hans Jüttner was said to have acted on Keitel's orders. His lawyer Dr Nelte demanded that Jüttner be called as a witness; the Americans claimed they did not know where he was. 'Nelte announced he would drive up to see Jüttner immediately,' Keitel told his son months later, 'and only then did the Americans admit that Jüttner had been interrogated months earlier.' Jüttner confirmed that he had never received any order whatever from Keitel in this connection. The same thing happened to one of General Jodl's key witnesses. Needing expert evidence of British plans to invade neutral Norway in 1940, they contacted Colonel Soltmann of the O.K.W.'s intelligence branch Fremde Heere West. The German naval High Command had deciphered Britain's naval signals; and Britain's own operational plans had been captured during WESERÜBUNG, Hitler's invasion of Norway. Subsequently Britain's aggressive intentions had been laid bare by the records of the 1940 Supreme War Council meetings, captured by the Germans in a boxcar in railroad sidings at Le Charité outside Paris. Soltmann cabled his willingness to testify – and was immediately arrested by the Americans. In February 1946 Göring's lawyers asked for General Karl Koller, the last chief of air staff, as a witness; the Americans made out that the general could not be traced, although their interrogator Ernst Engländer had himself questioned him at a C.S.D.I.C. (Combined Services Detailed Interrogation Centre) in England. Those defence witnesses that did arrive at Nuremberg were softened up by the prosecution interrogators before being turned over to the defence. Some ended up in solitary confinement in the prison wing. S.S. Obergruppenführer Karl Wolff, who volunteered to defend Kaltenbrunner and the S.S., was whisked away by the Americans to a lunatic asylum until, summoned to give evidence at a subsequent trial (the Milch Case) a year later, he was able to establish his sanity and released on the trial judge's orders to a normal prison.

True, the defence lawyers were usually well treated by their colleagues of the prosecution: they were provided with accommodation, American rations, and transportation. But they were outnumbered and outgunned. The American prosecution team now employed hundreds of men and women. Dr Nelte wrote sorrowfully to the wife of his client Field-Marshal Keitel: 'The trial effort being mounted by the victors is colossal. The evidence that has been amassed by the prosecution is a crippling burden for us, because we have no documents of comparable quality on the German side to put in against them. All we can do is to try to piece together opposing evidence by an intricate process of mosaic work.'

What loaded the scales of justice most heavily against the defence however was the London Statute itself, which had established the trial procedure. Most of the usual devices open to a capable defence counsel had been smitten from his hands in advance by the skilful advance planning of their opponents the prosecutors, meeting in London to draw up the Statute. The writ of habeas corpus was not available. The Statute ruled inadmissible in advance many defences which would have been open to the Germans. The lawyers

were not allowed to challenge the jurisdiction of the Tribunal or the judges' impartiality. Streicher commented in his diary: 'The usual court practice is that a defendant can challenge a judge for lack of impartiality. That would be the case if for instance the judge was related to a trial adversary. In this show trial the victors are the prosecutors and the judges of the vanquished and inevitably prejudiced. Because they are fully aware of this, they have laid down an appropriate rule denying to the defendants in advance the opportunity of challenging them.' 'And that is the purpose of the whole farce,' continued this unusually articulate gauleiter. 'In this trial there is no question of according to the defendant a blind and impartial justice; the trial has been set the task of giving to an injustice a veneer of legality by cloaking it in the language of the law.'

The Tribunal also squelched every attempt by the prisoners to raise the question of their conditions of imprisonment. When Streicher tried to protest from the witness box about the beatings he had received, Jackson had the allegation struck from the record. The mood was one of revenge: an eye for an eye. A letter reached the justice from a rich New York merchant, Ernest Schoenfeld, begging him: 'If it would be permissible [sic], if and when Julius Streicher is doomed to die, my most ardent wish would be to not only witness his execution, but participate in it.'

The biggest surprise for the defence came after the trial began. In a section titled 'A Fair Trial' the London Statute provided for the prosecution to make an 'opening statement'; in the event, this lasted for many weeks, while day after day press and radio accorded to the statement the widest publicity. When defence counsel then also asked to deliver an opening statement they were told there was no such provision in the Statute. At the end of the trial the process would be repeated: the defence lawyers were each allowed to make only a brief speech, followed by a lengthy closing argument by the prosecution to which the defence could make no reply. The defendants were allowed to make a brief speech, a 'final statement' before judgement was passed, but Justice Jackson bitterly begrudged them even this; surprisingly, the Russians insisted on allowing it, since the last word was a fundamental right of the defendant in Russian procedure. (In a private letter to President Truman, Jackson predicted: 'I anticipate that this privilege will be used for propaganda purposes' – as though this were not the Allied purpose in staging the whole trial.)

In the course of the trial, as they were entitled to under their Statute, the judges rejected every attempt by the defendants and their counsel to challenge the jurisdiction of the Tribunal. Professor Hermann Jahrreiss, the eminent Cologne expert on international law, did however devote his closing speech – the first defence speech and as such bound to attract some publicity – to a comprehensive attack on the new laws that underlay this trial. The British prosecution were more apprehensive about Jahrreiss' speech than the American, who knew that at home the trial had long vanished from newspapers' front pages.

The faces gaunt and eyes hollow as once those of their own prisoners had been, the Nuremberg defendants languished in solitary confinement in their cells awaiting the re-

sumption of the trial. The Red Cross packages mailed to them had been seized by the Americans. There were still no letters from their families. On what was to prove his final birthday, January 12, Göring wrote to the president of the Tribunal to complain that he had received only three letters from his wife and daughter, Emmy and Edda, since his capture. He asked the international Tribunal to order the U.S. Army to allow the letters through. 'Before my voluntary surrender to American custody,' he protested, 'I wrote asking General Eisenhower to take care of my family. Upon arrival at Seventh Army headquarters (General Patch) I was expressly promised that my request would be honoured. My wife, daughter, relatives, and next of kin were taken to Veldenstein Castle, my family property north of Nuremberg, and interned there. They were able to move around the castle freely, though isolated from the outside world, which was very satisfactory to me.' There was a reason why Emmy's letters were not reaching Göring and the others. In mid-October Counter-Intelligence Corps agent Paul H. Goldenberg had arbitrarily arrested her and her little daughter; the mother had been thrown into Straubing prison (now designated a 'civilian internment camp') and Edda had been snatched away from her and put in an orphanage. On November 24 Edda had been locked up in Straubing with her mother. The C.I.C. had also arrested Emmy's niece, sister, and nurse. The other Nuremberg prisoners' children had also been taken away and put in foster homes, while their womenfolk were sent to prison.

Hans Frank was subjected to the same kind of psychological blackmail. He learned that his sister Elisabeth had been held in Straubing since September. 'My sister is completely innocent of any involvement in the accusations levelled against me,' he protested in a letter to Biddle – it never reached the judge. 'She has never been politically active and was not even a member of the Nazi Party.' Their seventyyear- old mother, he wrote, was now quite defenceless. 'Please be so good as to attend to this case,' Frank pleaded. 'God will reward you!' These cases were not exceptions. Dr Schacht heard that his two children had been taken away from his wife. Baldur von Schirach, who had been ready to denounce Hitler and the whole Nazi ideology before the trial started, learned that his wife Henriette had been arrested on December 22 and taken to prison at Bad Tölz; under Göring's influence Schirach now wavered, and began to harden against the Americans (even though his mother was an American.) IT HAS to be said on Andrus' behalf that when he learned that the Counter-Intelligence Corps had begun this vindictive round-up of the prisoners' wives and families his blood boiled and he wrote a furious official letter to higher headquarters to protest. The colonel demanded to know the reasons for these arrests, failing which he asked for the release of the womenfolk and children. 'Otherwise,' he predicted, 'during progress of the defense, testimony would be offered in the trial which would place the Americans on the defensive.' 'You see,' Dr Gustave M. Gilbert, Jackson's resident army psychiatrist, a Jew who had fled Germany before the war, overheard Göring telling the others, 'they are just as bad as the Gestapo themselves. Don't let them pretend that they are democratic. The Americans are still our enemies. What have women and children got to do with this?' A few days later the U.S. Army ordered Henry F. Gerecke, the fiftyfour- year-old Lutheran pastor, to visit Emmy at Straubing prison, and he returned

with greetings for her embattled husband. 'Now I am feeling calmer,' Göring wrote in reply. 'It's obvious why you're all in custody – just because you are mine. As the Führer is dead, I am the No. 1 principal war criminal, and you are my relatives. The hatred and the thirst for revenge – you can imagine whose – are boundless... But I am not going to let them bend or break me... How often I go to you in my thoughts and try to imagine the life you are leading! Have you enough books? My treasure, I cannot express how much I love you. You and Edda have always been my pride and joy. I am filled with gratitude to you both.' Why on earth, he added, had they arrested his nurse Christa?

The trial reopened on January 2, 1946. There was immediate unpleasantness for the defence on the third, as S.S. Obergruppenführer Otto Ohlendorf, an officer with a clever but criminal brain, testified about the mass shootings of Jews which he had himself directed on the eastern front. Worse followed that afternoon. Albert Speer's defence lawyer rose to his feet and asked Ohlendorf whether he was aware that his client had plotted in 1945 to assassinate the Führer. Speer and Ohlendorf had been close friends. Göring spluttered with rage when he realised what Speer was up to. He stormed over to Speer as soon as the court adjourned, but the former minister turned away from him. In direct testimony later, Speer would boast of how he had sabotaged Hitler's instruction for the scorched-earth defence of the Reich, vetoed Hitler's instructions to destroy strategic bridges, and plotted with General Gotthard Heinrici to countermand Hitler's orders for the relief of Berlin. When the trial ended Speer would admit in a wry letter to his wife: 'Most of the other defendants made things as tough as they could for me after they had heard details of my activities in the final phase of the war. It wasn't hard to imagine what they would have done if they had found out about them before the war was over. There wouldn't have been much left of my family.' Questioned in open court about his plan to assassinate Hitler and his staff, Speer feigned shyness. 'I'd prefer not to go into further details on this,' he replied, which obliged the Tribunal, after consultation, to insist: 'The Tribunal would very much like to hear the details.' After the recess which then followed Speer said alluringly: 'I am divulging these details only with the utmost reluctance, because there is a lot that is unattractive about such things. I am going to do so only because the Tribunal insists... It is not my intention that my own case should profit from this episode.' 'Gott im Himmel!' roared Göring to Dr Gilbert afterward. 'I nearly died of shame. To think that a German could be so rotten, just to prolong his wretched life – to put it crudely, to piss in front and crap behind a little longer. Herrgott! Donnerwetter! For myself,' he added, 'I don't care if I get executed... But there is still such a thing as honour.' Several of the American officers took quite a liking to him after this – particularly one six-foot-two Texan officer, Lieutenant Jack G. Wheelis, whom Göring befriended upon finding that they had much in common: a love of hunting, and of the freedom of the outdoors.

The Allied military circles had been uneasy all along about putting on trial the admirals and generals who had opposed them, unless clearly specified war crimes of the old-fashioned kind could be laid against them. Grand-Admiral Karl Dönitz, the German navy's

commander-in-chief, had surrendered to them in Flensburg; but the British and American experts had then found from the captured records that he was virtually blameless of any crimes. Nevertheless Dönitz was indicted and the British lawyers – in whose hands the case against him lay – solemnly put to him the very documents which their own admiralty had secretly declared in August 1945 to be insufficient to procure a conviction. The case boiled down to trying to implicate him in the so-called Peleus incident: one of his U-boats, U-852, had torpedoed a Greek freighter of that name, and the submarine's commander Kapitänleutnant Heinz Eck had ordered the survivors machine-gunned; he and his two senior officers were eventually court-martialled and shot by a British firing squad in Hamburg. Jackson had been shown the entry in the diary of the commander of the Submarine Force (B.d.U.) for September 17, 1942, reading: 'The attention of all commanding officers is again drawn to the fact that all efforts to rescue members of the crews of ships which have been sunk contradict the most primitive requirements for the conduct of warfare by annihilating enemy ships and their crews. Orders concerning the bringing-in of the Captains and Chief Engineers still stand.' Dönitz had signed this volume at the end in pencil, as was the custom.

Against the burden of this entry however the defence could set several entries from his diary for 1945 which showed him ordering crews to adhere strictly to the Geneva Convention 'even in the present circumstances,' and to resist efforts by the S.S. to trespass on naval affairs. Dönitz was one of those who had persuaded Hitler to abandon the plan to repudiate the Geneva Convention after the violation of Dresden by R.A.F. Bomber Command in February 1945. The record of the British interrogations of Dönitz's chief of staff Admiral Eberhard Godt and his staff officer Fregattenkapitän Hessler states: 'Both men categorically denied that Dönitz ever countenanced the killing of survivors in cold blood.' Since the documents on the Peleus incident were 'insufficient' against Dönitz the prosecution interrogators made spirited efforts to procure adequate oral evidence. Their methods were not edifying. An American army captain of Czech origin using the name 'Dr Korda' interrogated Godt at a camp code-named Fort Washington. When Godt turned down the specific demand that he testify against Dönitz he was told: 'Think about it, if you would. We've got so much against you that things could get quite nasty for you too. Your situation is extremely simple. Either you testify against Dönitz – and then we'll leave you in peace. Or you don't – and then we'll string you up alongside Dönitz.' Finally the large and by now well-known War Crimes Commission bluntly confronted Godt with the question: 'Are you willing to testify against Dönitz: yes or no?' Since the admiral stood by his refusal, they left him with the parting words: 'You're going to regret this.' The British tried similar methods on the submarine crews in their captivity.

In the Nuremberg courtroom Dönitz's witnesses found themselves confronted by Colonel Phillimore. English trial observers disapproved of the 'cavalier fashion' in which Phillimore treated the witnesses. As an American historian would comment, Dönitz had to go before the court 'to show, if he could, that he had waged war according to rules that England herself was not always ready to follow.' Had not the British themselves machine-gunned

the unarmed German seamen fleeing across the ice from the freighter *Altmark* in 1940, and had they not shot at the drowning seamen from the minesweeper *Ulm* after she went down in 1942? The American submarine crews, it turned out moreover, had operated under precisely the same rules and instructions as the German. This line of defence ultimately impressed the Tribunal, as will be seen: alone of all the defendants, Dönitz was tacitly allowed the defence of *tu quoque* and he was exonerated over his conduct of submarine warfare. He was convicted on what was seemingly a technicality, of having failed to question Hitler's order for the execution of Allied saboteurs and commandos. Scores of Allied naval officers later wrote to Admiral Dönitz, disowning the Tribunal's verdict. Judge Biddle drafted a dissenting verdict with regard to Counts Two and Three against the admiral, but was dissuaded from putting it in.

Hitler's 1940 invasion of Norway, Operation *WESERÜBUNG*, produced a classic example of how unresponsive the victorious governments were to the needs of justice. Field-Marshal Wilhelm Keitel's lawyers challenged the British government in March 1946 to produce certain foreign office and cabinet documents relating to Churchill's identical plans for the invasion of neutral Scandinavia. The request caused a mild panic in Whitehall. Cabinet secretary Sir Norman Brooke warned the foreign office that when he took the stand Keitel was expected to claim that Hitler's invasion of Norway had been undertaken to anticipate a Franco-British plan to go into Norway. The embarrassing thing, said Brooke, was that this defence claim was true – it would 'be supported by documents captured by the Germans in France including records of the meetings of the Supreme War Council.'

Foreign secretary Ernest Bevin took the matter up with Attlee, his prime minister. 'I spoke to you the other day,' he wrote, 'about the likelihood that the Germans at the Nuremberg trial would use various documents which they captured in France to justify their invasion of Norway on the ground that they thereby forestalled an Allied invasion and I mentioned that the attorney-general wishes to have authority to put in at Nuremberg certain Foreign Office telegrams and a cabinet document to refute this defence.' Although no partisan of Churchill, Bevin was flatly opposed to allowing such documents to be produced. Like the Russians, he feared that the Nuremberg trial might open up a can of worms. 'If we once begin,' he argued, 'it might be very difficult to know where we could call a halt as one telegram refers to another and we might bring up embarrassing references to the Finnish phase of our war plans.' (In 1940 both Churchill and his predecessor Neville Chamberlain had planned to join the Finnish war against the Soviet Union.) Sir Norman Brooke advised the prime minister candidly, 'It would be very much better not to be drawn at all into the business of establishing arguments by the production of documents – especially when we do not know precisely what captured documents the other side may have.' Thus real history went by the board. Britain's name was protected, and Keitel and Jodl, denied the documents they asked for, could hang.

Note: I think this gives already enough insight about what went on at the trials. Should the reader be interested in more information, they are to be found in the last 250 pages

of "Nuremberg: The Last Battle" by Irving.

Summary

"The Tribunal shall not be bound by technical rules of evidence. It shall adopt and apply to the greatest possible extent expeditious and nontechnical procedure, and shall admit any evidence which it deems to have probative value." Article 19. of the so-called "tribunal".

"The Tribunal shall not require proof of facts of common knowledge but shall take judicial notice thereof [...]" Article 21. of the "tribunal".

The Nuremberg show trials refers to a series of orchestrated lynchings held after World War II, in which the prominent members of the political, military and economic leadership of National Socialist Germany were tried for the purpose of public amusement, to make it look like Allied/Soviet propaganda was the truth and to justify Allied/Soviet war crimes. The USSR commonly held show trials of the same nature for its citizens. According to the victors' opinion, the "courts" had to judge sins against humanity, unbelievable vicious sins, that never-ever occurred before. No wonder, that serving such a majestic purpose, the "courts" had no time and energy for petty, unimportant details like lawfulness, correct evidence procedure, impartial court and judges. The "laws" according to which they "judged", were inaugurated after the 'sins' happened, on a completely other place, than where the 'sins' happened. Certain key evidence did not need any kind of proof, and the "court" decided, which evidence fell into the "apparent" category. To "prove" such "apparent facts" any confession was a proof, also such ones, that were extorted from tortured defendants.

In summary, the courts were highly-politicized kangaroo courts, who usually gave the death penalty or lengthy prison sentences for activities, that were not under penalty, when they were committed and where they were committed. Therefore these "courts" turned law upside down, and were completely illegal. Defendants were tortured before the process, especially Julius Streicher, who was kept four days long naked in Freising in a prison cell in February, with the windows opened, chained, negroes and whites spew into his mouth, he was not given water to drink, and was forced to drink from the latrine. He lost 40% of his hearing capability due to the torture. After he mentioned his tortures at the 'court', they ordered to exclude his report from the records due to 'contravention' of the 'court'. With this they implicitly acknowledged, that they ordered the tortures. The trials were held in the city of Nuremberg, Germany, from 1945 to 1949, at the Nuremberg Palace of "Justice". The first and best known of these trials was the "Trial of the Major War Criminals Before the International Military Tribunal (IMT)", which tried 24 of the most important captured leaders of Germany. It was held from November 20, 1945 to October 1, 1946. The second set of trials of lesser "war criminals" was conducted under Control Council Law No. 10 at the U.S. Nuremberg Military Tribunals (NMT), among them included the Doctors' Trial and the Judges' Trial.

Papers released on January 2, 2006 from the British War Cabinet in London have shown that as early as December 1942, the Cabinet had discussed their policy for the punishment of the leading Germans, if captured. British Prime Minister Winston Churchill had then advocated a policy of summary execution with the use of an Act of Attainder to circumvent legal obstacles, and was only dissuaded from this by pressure from the U.S. later in the war. In late 1943, during the Tripartite Dinner Meeting at the Tehran Conference, the Soviet leader, Joseph Stalin, proposed executing 50,000-100,000 German staff officers. Not realizing that Stalin was serious, U.S. President Franklin D. Roosevelt? joked that perhaps 49,000 would do. Churchill denounced the idea of “the cold blooded execution of soldiers who fought for their country.” However, he also stated that “war criminals” must pay for their crimes, and that in accordance with the Moscow Document which he himself had written, they should be tried at the places where the crimes were committed. Churchill was vigorously opposed to executions “for political purposes.”

U.S. Treasury Secretary, Henry Morgenthau, Jr., suggested a plan for the total denazification of Germany; this was known as the Morgenthau Plan. The plan advocated the forced de-industrialization of Germany, along with forced labour and other draconian measures similar to those that allegedly the Germans themselves had planned for Jews. Both Churchill? and Roosevelt? supported this plan, and went as far as attempting its authorization at the Quebec Conference in September 1944. However, the Soviet Union announced its preference for a judicial process. Later, details were leaked to the public, generating widespread protest. Roosevelt, seeing strong public disapproval, abandoned the plan, but did not proceed to adopt support for another position on the matter. The demise of the Morgenthau Plan created the need for an alternative method of dealing with the National socialist leadership. The plan for the “Trial of European War Criminals” was drafted by Secretary of War Henry L. Stimson and the War Department. Roosevelt died in April 1945. The new president, Harry S. Truman, gave strong approval for a judicial process. After a series of negotiations between the U.S., Britain, the Soviet Union, and France, details of the trial were worked out. The trials were set to commence on November 20, 1945, in the city of Nuremberg.

At the meetings in Tehran (1943), Yalta (1945) and Potsdam (1945), the three major wartime powers, the United States, Soviet Union and the United Kingdom, agreed on the format of punishment for those responsible for by the victors defined “war-crimes” during World War II. France was also awarded a place on the tribunal. The legal basis for the trial was established by the London Charter, issued on August 8, 1945, which restricted the trial to “punishment of the major war criminals of the European Axis countries”. Some 200 German “war crimes” defendants were tried at Nuremberg, and 1,600 others were tried under the traditional channels of military justice. The legal basis for the jurisdiction of the court was that defined by the Instrument of Surrender of Germany, political authority for Germany had been transferred to the Allied Control Council, which according to its own opinion having sovereign power over Germany could choose to punish violations of international law and the laws of war. Because the court was limited to violations of the

self defined laws of war, it did not have jurisdiction over crimes that took place before the outbreak of war on September 1, 1939.

The restriction of trial and punishment by the international tribunal to personnel of the Axis countries has led to accusations of victor's justice and that Allied war crimes could not be tried. It is, however, usual that the armed forces of a "civilized" country issue their forces with detailed guidance on what is and is not permitted under their military code. These are drafted to include any international treaty obligations and the customary laws of war. For example at the trial of Otto Skorzeny his defence was in part based on the Field Manual published by the War Department of the United States Army, on 1 October 1940, and the American Soldiers' Handbook. If a member of the armed forces breaks their own military code then they can expect to face a court martial. When members of the Allied armed forces broke their military codes, they could be and were tried, as, for example, at the Biscari Massacre trials. The by terror forced unconditional surrender of the Axis powers was unusual and led directly to the formation of the "international" tribunals. Usually international wars end conditionally and the treatment of suspected war criminals makes up part of the peace treaty. In most cases those who are not prisoners of war are tried under their own judicial system if they are suspected of committing war crimes – as happened the end of the concurrent Continuation War. In restricting the international tribunal to trying suspected Axis war crimes, the Allies were acting within their self defined "international" law.

The main Nuremberg Trial had 24 accused. They were mostly widely unknown lower officers of the third Empire, since Hitler and Goebbels committed suicide, Bormann disappeared, and Himmler was presumably murdered by Britons. The only accused high national socialist officer was Hermann Göring.

Martin Bormann, Successor to Hess as Party Secretary. Sentenced to death in absentia, remains found in 1972: Sentenced to death.

Karl Dönitz, Leader of the Kriegsmarine from 1943, succeeded Raeder. Initiator of the U-boat campaign. Became President of Germany following Hitler's death. In evidence presented at the trial of Karl Dönitz on his orders to the U-boat fleet to breach the London Rules, Admiral Chester Nimitz stated that unrestricted submarine warfare was carried on in the Pacific Ocean by the United States from the first day that nation entered the war. Dönitz was found guilty of breaching the 1936 Second London Naval Treaty, but his sentence was not assessed on the ground of his breaches of the international law of submarine warfare: 10 years imprisonment.

Hans Frank, Reich Law Leader 1933-1945 and Governor-General of the General Government in occupied Poland 1939-1945. Expressed repentance: Sentenced to death.

Wilhelm Frick, Hitler's Minister of the Interior 1933-1943 and Reich Protector of Bohemia-Moravia 1943-1946. Authored the Nuremberg Race Laws: Sentenced to death.

Hans Fritzsche, Popular radio commentator, and head of the news division of the Pro-

paganda Ministry. Tried in place of Joseph Goebbels: Acquitted.

Walther Funk, Hitler's Minister of Economics. Succeeded Schacht as head of the Reichsbank. Released due to ill health on May 16, 1957: Life imprisonment.

Hermann Göring, Reichsmarschall, Commander of the Luftwaffe 1935-1945, Chief of the 4-Year Plan 1936-1945, and several departments of the SS. Committed suicide the night before his execution: Sentenced to death.

Rudolf Hess, Hitler's deputy, flew to Scotland in 1941 in attempt to broker peace with Great Britain. After trial, committed to Spandau Prison; died in 1987, murdered in prison at the age of 93: Life imprisonment.

Alfred Jodl, Wehrmacht Generaloberst, Keitel's subordinate and Chief of the O.K.W.'s Operations Division 1938-1945. Subsequently exonerated by German court in 1953: Sentenced to death.

Ernst Kaltenbrunner, Highest surviving SS-leader. Chief of RSHA 1943-45, the central intelligence organ. Also, commanded many of the Einsatzgruppen and several labour camps: Sentenced to death.

Gustav Krupp von Bohlen und Halbach, Major industrialist. C.E.O of Krupp A.G 1912-45. Medically unfit for trial. The prosecutors attempted to substitute his son Alfried (who ran Krupp for his father during most of the war) in the indictment, but the judges rejected this as being too close to trial. Alfried was tried in a separate Nuremberg trial for his use of slave labor, thus escaping the worst notoriety and possibly death: Unfit for trial.

Baron Konstantin von Neurath, Minister of Foreign Affairs 1932-1938, succeeded by Ribbentrop. Later, Protector of Bohemia and Moravia 1939-43. Resigned in 1943 due to dispute with Hitler. Released (ill health) November 6, 1954: 15 years imprisonment.

Franz von Papen, Chancellor of Germany in 1932 and Vice-Chancellor under Hitler in 1933-1934. Ambassador to Austria 1934-38 and ambassador to Turkey 1939-1944. Although acquitted at Nuremberg, von Papen was reclassified as a war criminal in 1947 by a German de-Nazification court, and sentenced to eight years' hard labour. He was acquitted following appeal after serving two years: Acquitted.

Erich Raeder, Commander In Chief of the Kriegsmarine from 1928 until his retirement in 1943, succeeded by Dönitz. Released (ill health) September 26, 1955: Life imprisonment.

Joachim von Ribbentrop, Ambassador-Plenipotentiary 1935-1936. Ambassador to the United Kingdom 1936-1938. Minister of Foreign Affairs 1938-1945: Sentenced to death.

Alfred Rosenberg, Racial theory ideologist. Later, Minister of the Eastern Occupied Territories 1941-1945: Sentenced to death.

Fritz Sauckel, Gauleiter of Thuringia 1927-1945. Plenipotentiary of the labor program

1942-1945, that also used concentration camp inmates: Sentenced to death.

Hjalmar Schacht, Prominent banker and economist. Pre-war president of the Reichsbank 1923-1930 & 1933-1938 and Economics Minister 1934-1937. Admitted to violating the Treaty of Versailles: Acquitted.

Baldur von Schirach, Head of the Hitlerjugend from 1933 to 1940, Gauleiter of Vienna 1940-1943. Expressed repentance: 20 years imprisonment.

Arthur Seyss-Inquart, Instrumental in the Anschluss and briefly Austrian Chancellor 1938. Deputy to Frank in Poland 1939-1940. Later, Reich Commissioner of the occupied Netherlands 1940-1945. Expressed repentance: Sentenced to death.

Albert Speer, Hitler's favorite architect and personal friend, and Minister of Armaments from 1942. In this capacity, he was ultimately responsible for the use of so called slave labourers from the occupied territories in armaments production. Expressed repentance: 20 years imprisonment.

Julius Streicher, Gauleiter of Franconia 1922-1945. According to the court, he incited hatred against the Jews through his weekly newspaper, *Der Stürmer*: Sentenced to death.

The Chief Justice of the United States Harlan Fiske Stone called the Nuremberg trials a fraud. He said "Chief US prosecutor Jackson is away conducting his high-grade lynching party in Nuremberg," he wrote. "I don't mind what he does to the Nazis, but I hate to see the pretense that he is running a court and proceeding according to common law. This is a little too sanctimonious a fraud to meet my old-fashioned ideas." Associate Supreme Court Justice William O. Douglas charged that the Allies were guilty of "substituting power for principle" at Nuremberg. "I thought at the time and still think that the Nuremberg trials were unprincipled," he wrote. "Law was created ex post facto to suit the passion and clamor of the time."

- The main Soviet judge, Nikitchenko, had taken part in Stalin's show trials of 1936-1938.

- One of the charges, brought against Keitel, Jodl, and Ribbentrop included conspiracy to commit aggression against Poland in 1939. Poland's belligerent and provocative activities towards Germany between 1919 - 1939 were disregarded. The Secret Protocols of the German-Soviet Non-Aggression Pact German-Soviet Non-Aggression Pact of 23 August 1939, proposed the partition of Poland between the Germans and the Soviets (which was subsequently executed in September 1939); however, Soviet leaders were not tried for being part of the same conspiracy. Instead, the Tribunal outrageously and falsely proclaimed the Secret Protocols of the Non-Aggression Pact to be a "forgery". Moreover, Allied Powers Britain and Soviet Union were not tried for preparing and conducting the Anglo-Soviet invasion of Iran and the Winter War, respectively.

- The court agreed to relieve the Soviet leadership from attending these trials as war criminals in order to hide their crimes against war civilians, crimes that were committed by their army that included "carving up Poland in 1939, subsuming the Baltic States, and attacking Finland three months later." This "exclusion request" was initiated by the

Soviets and subsequently approved by the court's administration.

- The trials were conducted under their own rules of evidence; the indictments were created ex post facto and were not based on any nation's law; the tu quoque defense was removed; and some claim the entire spirit of the assembly was "victors' justice". The Charter of the International Military Tribunal permitted the use of normally inadmissible "evidence". Article 19 specified that "The Tribunal shall not be bound by technical rules of evidence... and shall admit any evidence which it deems to have probative value". Article 21 of the Nuremberg International Military Tribunal (IMT) Charter stipulated that:

- "The Tribunal shall not require proof of facts of common knowledge but shall take judicial notice thereof. It shall also take judicial notice of official governmental documents and reports of the United [Allied] Nations, including acts and documents of the committees set up in the various allied countries for the investigation of war crimes, and the records and findings of military and other Tribunals of any of the United [Allied] Nations"

- The chief Soviet prosecutor submitted false documentation in an attempt to indict defendants for the murder of thousands of Polish officers in the Katyn forest near Smolensk. However, the other Allied prosecutors refused to support the indictment and German lawyers promised to mount an embarrassing defence. No-one was charged nor found guilty at Nuremberg for the Katyn Forest massacre. In 1990, the Soviet government acknowledged that the Katyn massacre was carried out, not by the Germans, but by the Soviet secret police.

According to British Field-Marshal Montgomery, the Germans had one sin: They lost the war. Maurice Bardeche wrote in his book, that a judgement signed by victors cannot be acceptable. U.S. Senator Robert Taft condemned the postwar Nuremberg Trials as "victors' justice" in which the people who won the war were the prosecutors, the judges and the alleged victims, all at the same time. Taft condemned the trials as a violation of the most basic principles of American justice and internationally accepted standards of justice. Senator John F. Kennedy in his best-selling Profiles in Courage, applauded Taft's principled stand, even in the face of great criticism.

Indicative of the largely political nature of the Nuremberg process was the important Jewish role in organizing these trials. Nahum Goldmann, one-time president of both the World Jewish Congress and the World Zionist Organization, reported in his memoir that the Nuremberg Tribunal was the brain-child of World Jewish Congress officials. Only after persistent effort were WJC officials able to persuade Allied leaders to accept the idea, he added. The World Jewish Congress also played an important but less obvious role in the day to day proceedings. Above all, the powerful but secretive organization made sure that Germany's persecution of the Jews was a primary focus of the trials, and that the defendants were punished for their involvement in that process.

Two Jewish officers in the US Army: Lieutenant Colonel Murray Bernays and Colonel David "Mickey" Marcus, played key roles in the Nuremberg enterprise. In the words of

historian Robert Conot, Bernays was “the guiding spirit leading the way to Nuremberg.” Bernays, a successful New York attorney, persuaded US War Secretary Henry Stimson and others to accept the idea of putting the defeated German leaders on trial. /10 Marcus, a fervent Zionist, became the “number three man in making American policy” in occupied Germany. As chief of the US government’s War Crimes Branch in 1946 and 1947, he selected almost all of the judges, prosecutors and lawyers for the Nuremberg NMT Trials. (He later became a commander of Zionist “Haganah” military forces in Palestine.)

Dodd, the second judge at Nuremberg, had his private letters published by his son, Senator Dodd. In it, Dodd sen. stated that IMT staffers were 75% jewish and will be accused later of undue manipulation since they will not hold back influencing the trial. An also interesting read is the 55 page book “Not guilty at Nuremberg” by Carlos Porter which can be found as PDF with a quick online search.

13.3 The Marshall Plan

When establishment historians consider the Marshall Plan, its intents and purposes and alleged successes, they typically make at least two errors—one in logic and the other in history. First, they assume that since Europe began to revive at about the time the Marshall Plan was implemented then that revival must have been because of the plan, not in spite of it. Second, they fail to make any mention of the forces in the background that had a much different purpose in mind: specifically, how to use the Marshall Plan to further their internationalist agenda. One example of a “court historian” providing his readers with the accepted view of the Marshall Plan is Robert V. Remini, professor emeritus at the University of Chicago, and author of numerous books on the American republic’s early figures, such as Andrew Jackson, Henry Clay, John Quincy Adams and Daniel Webster. In 2005 Remini was appointed the Historian of the U.S. House of Representatives. Remini thus serves as the perfect example of someone who knows his history but fails to tell all he knows, especially when it comes to the Marshall Plan. In his “A Short History of the United States” Remini had this to say about the Marshall Plan:

“Secretary of State, George C. Marshall, then devised a plan, which he outlined in a speech at Harvard University on June 5, 1947, by which the United States would assist European nations to rebuild their shattered economies. . . . Between April 1948 and December 1951, the United States contributed a little over \$12 billion to Europe... By 1951 Europe had not only achieved its prewar level of production but its level of industrial production rose to virtually guarantee prosperity for the future.”

There it is: the United States, out of the goodness of its heart, gave five percent of its gross national product with no strings attached to European nations to help them get back on their feet. And it worked! Look! By 1951 Europe had fully recovered!

It is tempting to ascribe malevolent intentions to Remini. But that does not preclude asking some questions and pointing out some errors of commission and omission in

his establishment view. For instance, who wrote Marshall's speech? What was that ghost writer's intentions? Did he have connections to others behind the scenes who had differing purposes? And did Europe begin to recover because of Marshall Plan aid, or had that recovery begun long before any aid arrived? And what about the miracle of Germany—known as *Wirtschaftswunder*, or “economic miracle”—that began on Sunday, June 20th, 1948? (This was the day that Germany's economic director, Ludwig Erhard, eliminated all price controls which unleashed Germany's economy, entirely independently of any Marshall Plan aid.) And what about the Marshall Plan's alleged success as creating the justification for decades of additional foreign aid because it had been so successful in reviving Europe? Let's get some perspective. VE (Victory in Europe) Day was May 7, 1945. VJ (Victory over Japan) Day was August 14, 1945. President Franklin Roosevelt had died on April 12, 1945 and the new president, Harry Truman was sworn into office that same day. The national elections in November 1946 shifted control of the House of Representatives to the Republicans, gaining 55 seats compared to the previous Congress. The nation was weary of war. 418,000 Americans had died in that conflict and had cost the nation \$288 billion. In today's money, that's nearly \$5 trillion! The very last thing Americans wanted was any further involvement in world affairs. It just wanted to get back to whatever normal used to be.

It was not to be. The Soviet Union began to flex its muscles when it refused to withdraw its troops from Iran under the terms of the Potsdam Agreement. Truman had sent his Secretary of State, James Byrnes, to the Moscow Conference in December of 1945 asking him to confront Soviet Premier Joseph Stalin on the matter, and when Byrnes returned he told Truman of his “success.” It turned out that there had been no discussion about Iran after all, and Truman blew up. In a letter to Byrnes, Truman wrote:

“Without these supplies furnished by the United States, Russia would have been ignominiously defeated. Yet now Russia stirs up rebellion and keeps troops on the soil of her friend and ally—Iran. . . Unless Russia is faced with an iron fist and strong language another war is in the making. Only one language do they understand: “how many divisions do you have?” I do not think we should play compromise any longer. . . I am tired of babying the Soviets.”

James Byrnes is the first in a long list of characters who were heavily involved in setting post-war foreign policy under the new president. Byrnes had deep ties to the Progressive movement dating back to the Wilson administration. In fact, Byrnes had become so close to Wilson that the president would often entrust important political tasks to him rather than to older, more experienced individuals. Years later Byrnes supported President Roosevelt in his efforts to pack the Supreme Court in 1937, and Roosevelt returned the favor by appointing Byrnes to that court in 1941. The next on that list involved in influencing American foreign policy was George Kennan, Deputy Chief of the Mission of the United States to the USSR. It was his mission to confirm Truman's suspicions that the Soviets weren't to be trusted, and that only a policy of “containment” would serve American interests best. In his long telegram to the U.S. Treasury Department in

February, 1946, he noted that relations with the Soviets

“involve questions so intricate, so delicate, so strange to our form of thought, and so important to analysis of our international environment that I cannot compress answers into [a] single brief message without yielding to what I feel would be a dangerous degree of oversimplification. I hope, therefore, [that you] will bear with me if I submit an answer [in] five parts“

Among those “five parts” were Kennan’s perceptions that the USSR “perceived itself [to be] at perpetual war with capitalism,” that the USSR would use friendly Marxists residing in the west as allies in that war, that Soviet aggression was rooted in “historic Russian nationalism and neurosis,” and that its governmental structure “prohibited objective or accurate pictures of internal and external reality.” In other words, it was going to be impossible to deal rationally with them and so the United States would have to “contain” their aggressions by building up nation states around them as a protective shield. Not surprisingly, Kennan’s long telegram was published in the July 1947 issue of *Foreign Affairs* magazine, the print mouthpiece for the now well-known internationalist Council on Foreign Relations. Kennan’s influence in cementing America’s rejection of non-interventionism was noted by historian John Lewis Gaddis who said that Kennan supported the notion that “only the prospect of an undifferentiated global threat could shake Americans out of their isolationist tendencies that remained latent among them.”

Kennan was certainly up to the task of removing those latent isolationist tendencies. Near the end of his life (he died in March 2005 at age 101), establishment journal *Foreign Policy* (part of the liberal Washington Post empire) called Kennan “the most influential diplomat of the 20th century,” while internationalist Henry Kissinger said that Kennan “came as close to authoring the diplomatic doctrine of his era as any diplomat in our history.” Kennan was one of the six insiders exposed in the 1986 book “*The Wise Men: Six Friends and the World They Made*” which included Truman’s Secretary of State Dean Acheson, FDR’s “special envoy” W. Averill Harriman, Truman’s Secretary of Defense Robert Lovett, US High Commissioner to Germany John J. McCloy and Soviet ambassador Charles “Chip” Bohlen. Authors Walter Isaacson and Evan Thomas described them as the hidden architects behind the Truman Doctrine, the Marshall Plan and the entire concept of Soviet power “containment” which ruled America’s foreign policy for 40 years. The authors’ favorable treatment of these “hidden architects” earned high praise (once again from the Council on Foreign Relations) which called it

“a sober and straight-forward account of what actually happened and why. . . In this context the book does a great service. It restores balance to our recent history, and some sheen to its heroes. It may generate a much-needed movement to correct revisionist history. It should be read.“

The first step towards the yet to be formalized Marshall Plan was the Truman Doctrine, officially announced by the president in March 1947 to the Congress. At that moment in time both Greece and Turkey were allegedly being threatened by communist insurgents

supported directly and indirectly by Stalin. The Greek Civil War of 1946 was raging, and Truman was told that if Greece went communist, then Turkey would be next. These two countries controlled both the Bosphorus and Dardanelles straits, gateways from the Black Sea to the Mediterranean. Truman saw this as a “pincer” movement that could threaten the west’s access to the Middle East’s oil, and so it was therefore in the national interest of the United States to intervene. In his speech to Congress Truman echoed the sentiments of Kennan and said that it was now “the policy of the United States to support free people who are resisting attempted subjugation by armed minorities or by outside pressures.”

Support by Joseph Stalin of the local communist bands would later be questioned but by that time the die had been cast: it was now in America’s interests to intervene in other countries’ affairs in the name of fighting Soviet communism. Some \$400 million in technical and military aid was approved by Congress to Greece and Turkey which was enough to neutralize the unproved communist threat and the Greek Civil War ended in 1949. But to implement the border of states “containing” the Soviet threat would take huge amounts of money and none of the war-devastated economies of France, Germany, Italy or England were in a position to help. That left the United States as the funding mechanism. With the help of two of the “Wise Men,” George Kennan and Charles Bohlen, George C. Marshall designed and then formally announced his plan in a speech (written by Bohlen) at Harvard University on June 5, 1947. Bohlen was an insider and a “specialist” in Soviet affairs almost from the moment he graduated from Harvard in 1927. He joined the State department in 1929, learning Russian and joining the staff of the American embassy in Moscow in 1934. He worked on Soviet “issues” in the State Department, accompanying Soviet spy Harry Hopkins on numerous trips to visit with Joseph Stalin. Unfavorable attention was focused on him by Senator Joseph McCarthy in 1953 when President Eisenhower named him as ambassador to the Soviet Union.

Once Bohlen’s speech was given by General Marshall, formally launching the plan to aid Europe, representatives from 16 countries lined up at the trough, putting forth budgets for reconstruction that would require between *16 billion and 22 billion* of American money to accomplish. Initially called the Economic Cooperation Act (ECA), but later renamed the European Recovery Program (ERP), the plan ran into stiff resistance in Congress which debated the matter for ten months. This was enough time for the “Wise Men” and the heads of major corporate and union interests to persuade the newly-elected and firmly isolationist Congress to change their minds. President Truman enlisted the help of Hiland Vatcheller (president of Allegheny-Ludlum Steel), W. Randolph Burgess (vice-chairman of National City Bank of New York), Paul G. Hoffman (president of Studebaker Corporation) and Will Clayton (partner in Anderson, Clayton and Company, the world’s largest cotton trading company). When the idea of the Marshall Plan began to develop in the minds of Kennan and Bohlen, Clayton and his business cohorts saw an opportunity. With potentially billions of dollars of taxpayer monies in the offing, Clayton said: “Let us admit right off, we need markets—big markets—in which to buy and sell.” And so

Clayton led the charge to change Congress' mind, support the budding Marshall Plan and in so doing, also implement the "Wise Men's" plan to implement the new internationalist American foreign policy.

In what stands as one of the most convenient and coincidental accidents of history, Czechoslovakia was seized by the communists in February of 1948—thus "proving" the need for American intervention through the Marshall Plan—and Congress caved in, passing ERP—the Marshall Plan—overwhelmingly, on March 31st. President Truman signed it into law three days later, committing the U. S. government to "invest" \$13 billion of taxpayer monies in "rebuilding" Europe as part of Kennan's plan to defend the United States against Soviet aggression. In effect, the Marshall Plan, as Tucker put it, "was a political maneuver to loot American taxpayers to keep influential American corporations on the government dole. The plan's legacy was the egregious and perpetual use of foreign aid for domestic [political] and economic purposes."

Seen then in the light of the "revisionist history" decried by Foreign Affairs, it is clear what the Marshall Plan was really all about. The plan's official intentions included 1) meeting the immediate needs of citizens of those countries ravaged by the recent war for food, medicine and housing, 2) rebuilding infrastructure such as factories, railroads and bridges and 3) establishing financial stability in the ravaged economies. But buried in the language was its primary purpose: "create a common market free of national trade barriers," the birth of the now increasingly discredited and devolving European Union. Modern historians have not only failed to see the real purposes behind the Marshall Plan but have lauded its perceived successes. In his highly entertaining book, "The Politically Incorrect Guide to American History," noted revisionist historian Thomas Woods explained what really happened:

"The fact is that this program worked no better than any other government giveaway program. France, Germany and Italy began their economic recoveries before any Marshall Plan aid was disbursed. Austria and Greece, which received sizable amounts of Marshall Plan aid. . . began to recover only as it was being phased out."

Some economists saw through the sham. Henry Hazlitt, writing in his weekly column for Newsweek magazine in November, 1947, warned that what Europe needed was not foreign aid dumped onto governments to be dispersed according to some grand central plan developed by government "experts." The problem Europe faced in rebuilding its economies was that the governments were themselves strangling the economy with controls, limits, regulations and price controls left over from Hitler's domination of those countries.

Myth 1: The Marshall Plan was a significant factor in West European recovery.

"In nearly every country occupied by Germany during the war, the stringent system of Nazi economic controls was continued even after the country was liberated. And in each case, rapid economic growth occurred only after the controls were lifted and sound economic policy [was] established. This happened irrespective of the timing [or the]

extent of Marshall Plan aid.”

In fact, the German economic recovery had nothing to do with any such aid. It had to do with a radical and abrupt return to sound economic principles, and sanity. That return took place on Sunday, June 20th, 1948, when Germany’s economic director, Ludwig Erhard (following the advice of his mentor, Wilhelm Röpke) replaced the Reichsmark with the Deutschemark which effectively reduced the money supply by 93 percent, and eliminated the deadly price controls that had inflicted inevitable shortages on the German people. When American advisor U.S. General Lucius Clay learned about Erhard’s unilateral decision, the following conversation took place:

Clay: Herr Erhard, my advisers tell me what you have done is a terrible mistake. What do you say to that?

Erhard: Herr General, pay no attention to them! My advisers tell me the same thing!

A few days later Erhard was confronted by U.S Army Colonel Oberst:

Oberst: How dare you relax our rationing system, when there is a widespread food shortage?

Erhard: But, Herr Oberst, I have relaxed nothing. I have abolished it! Henceforth, the only rationing ticket people will need will be the [new] Deutschemark. And they will work hard to get those Deutschemarks, just wait and see.

Within days the German economy began to revive. Within the first month production increased by an estimated 50 percent, and monthly gains exceeded many later yearly gains, according to Cowen.

Myth 2: The Marshall Plan encouraged the development of free enterprise and sound economic policy.

“The truth is that those directing postwar U.S. foreign economic policy had strong interventionist sympathies: when faced with any problem, their instinct was to see a governmental solution. . . . Example: for every dollar that the ECA [Economic Cooperation Administration] gave a foreign government, that government had to set aside on equivalent amount. . . . to be used for public works, public investments, and similar state projects. As a result, every US dollar sent to a foreign government [forced] that government to take another from its own private sector.”

The Marshall Plan disrupted and sometimes severely damaged local economies. For instance, prior to the war half of Greece’s export earnings came from tobacco. But as Cowen pointed out, during the first year:

“The Marshall Plan funded the export of 40,000 tons of American tobacco to Europe [and] Greek exports fell to 2,500 tons a year and never recovered.”

And as far as “sound economic policy” was concerned, the Marshall Plan funds were simply government-to-government transfers which encouraged political chicanery. Noted Cowen:

“As more American aid was funneled through the Greek government, graft and corruption increased. Major scandals were being uncovered monthly. It was only in 1953 that Greece began to recover—the year when U.S. aid was cut to \$25 million.”

Myth 3: The Marshall Plan boosted the American economy.

“The \$13 billion given to the Marshall Plan resulted in the loss of \$13 billion worth of goods and services to the U.S. domestic economy.”

Actually the losses to the American taxpayer were much greater due to slippage, overcharging, fraud, and the failure to account for aid given prior to the enactment of the Marshall Plan. Current estimates of American aid to Europe approach *44 billion, or about 420 billion* in today’s money. Cowen further noted that “a year after the Marshall Plan began sucking private capital out of the economy, the U.S. fell into recession, precisely the opposite of what its proponents predicted.”

Myth 4: The operation of the Marshall Plan was not strongly influenced by domestic U.S. special interests.

“The very conception of the Marshall Plan implied that it was partially designed to serve special business interests. . . All of the aid channeled through the ECA was linked to purchases of particular U.S. goods and services. In this regard, the Marshall Plan subsidized some U.S. businesses at the expense of the U.S. taxpayer. The original Marshall Plan legislation, for instance, required that at least half of all U.S.-financed ECA goods be shipped in vessels of American registry with American insurance. Even Paul Hoffman, head of the ECA, admitted that this stipulation cost “millions of dollars” because American vessels were not always the cheapest available. . . This period also saw the shipment of 65,000 trucks to Europe, despite the dreadful condition of Western Europe’s roads and the serious gas shortage.”

Even American oil companies got in on the act. Said Cowen:

“When U.S. companies started selling Mideast oil through the ECA, it was sold at the higher price of Texas Gulf oil plus the transport price of shipping the oil from the Texas Gulf across the Atlantic. . . If the Europeans tried to buy their oil elsewhere. . . they would lose the ECA subsidy...”

Myth 5: American postwar foreign economic policy was one of free trade and the “Open Door.”

“During this time, only 55 percent of U.S. imports [from Europe] were duty-free, and most of the tariffs were not trivial. . . On manufactured items, the tariff ranged as high as 30 to 40 percent [while] tariffs on minerals and raw materials were [only] slightly lower. . . Contrary to popular belief, U.S. trade policy was dominated by restrictive, bilateral trading agreements, not “Open Door” multilateralism.”

The Marshall Plan failed, then, to bring the publicly stated relief that was used to sell the plan to the United States Congress, but succeeded greatly in furthering the goals of

the “Wise Men” and their crony capitalist accomplices. In sum, the Marshall Plan worked against the interests of those who needed help the most, the citizens of the war-torn European continent as well as against the U.S. taxpayer. But through their close ties to the “Wise Men,” people like Vatcheller, Burgess, Hoffman and Clayton turned Marshall Plan aid into their own private chocolate waterfall of government aid, and leaving, as Tucker noted:

“the actual legacy of the Marshall Plan [as] a vast expansion of government at home, the beginnings of the Cold War rhetoric that would sustain the welfare-warfare state for 40 years, a permanent global troop presence, and an entire business class on the take from Washington. It also created a belief on the part of the ruling elite in D.C. that it could trick the public into backing anything, including the idea that government and its connected interest groups should run the world at taxpayer expense.”

Now that the Marshall Plan can be seen for what it was, it can accurately be claimed to have been a success: for the crony capitalists and their enablers, the internationalists. (Note: Estimates regarding the total damage done to Germany’s economy (plunder of patents, de-industrialization, removal of labor etc) reach as high as 300 billion Deutschmark (Germany’s currency after WW2). Germany received around 15 billion Deutschmark through the Marshall Plan.)

13.4 Light in the Darkness

General George S. Patton, Junior, was born 11th November 1885. His homeschooling concentrated on classical literature. Later he went to Virginia Military Academy and a year later was admitted to United States Military Academy at West Point, entering in 1904. Apart from his athletic achievements, he was a member of the riding, fencing, rifle and track teams. In 1909, he was commissioned 2nd Lieutenant in the 15th Cavalry Regiment. In 1912, George Patton represented the United States in Pentathlon, in the Olympic Games, in Stockholm, Sweden. The Pentathlon included 5 classic military skills: horse riding, running, swimming, marksmanship and fencing. In fencing he came first, in riding, third, and he rated overall 5th of the 43 international contestants.

After touring Europe, he returned to the USA as a Weapons Instructor at the Cavalry School. He designed a new sabre, which was adopted for service. In 1916, he was posted to Texas and took part in the Mexican War as aide-de-camp to General Pershing. It is at this time that Patton began to wear two revolvers on his belt. On 14th May 1916, he encountered three mounted bandits and shot two of them dead. Patton returned to HQ with their bodies draped across the bonnet of his car. One of the dead bandits turned out to be General Cardenas, Chief of Pancho Villa’s bodyguard.

In May 1917, Patton sailed to France in command of Pershing’s Head Quarters detachment. Requesting a transfer to a combat post, Patton was assigned by Pershing to establish the tank corp. The US did not have any tanks at this time, and it was Lieutenant

Patton who obtained the first two-man Renault tanks from the French, learnt to operate them and trained other Americans in this new martial art. When Patton accepted the posting, he did not join the Tank Corp, he was the Tank Corp. Overcoming tremendous logistical complications, and now a Major, Patton managed to field 144 Renault tanks in the Battle of Saint-Mihiel, September 1918. He was wounded in action and hospitalised for the last days of the war. Between the war years, Patton continued to pioneer Tank Warfare in the U.S. Army. General Patton thought so highly of Field Marshall Erwin Rommel, that he kept a copy of Rommel's book on Infantry Tactics near his bedside for night time reading.

General George S. Patton was recognised as the most ferocious General on the Allied side. Known as the man who had never lost a battle, the hero of North Africa and Sicily, Patton was temporarily relieved of command for slapping two uninjured privates convalescing in military hospitals. After distinguishing himself in North Africa, he engaged in a contest against his arch-rival, British General Bernard Law Montgomery. In the race across Sicily to be the first to take Messina, Patton took dangerous tactical chances and pushed his men to the limit. Visiting a field hospital in the crags of Sicily's central highlands, he went from stretcher to stretcher, encouraging the wounded soldiers being treated. He then encountered a Private Charles Kuhl, who was sitting, apparently, uninjured, on a stool.

"Why are you here?", the General demanded. "I guess I can't take it, Sir." The General was furious. "You coward!" he bellowed. "Leave this tent at once!" As Kuhl remained motionless, the General slapped him hard across the face with his gloves. He then lifted the man off the stool by the collar of his uniform and shoved him towards the exit and kicked him in the rear. "You hear me, you yellow bastard, you are going back to the front!" In his Journal, Patton wrote: "If men shirk their duty, they should be tried for cowardice and shot." Two days later, the General wrote a Memo to each of his commanders, Cowards are not to be Tolerated Smallordering them not to allow men suffering from "so-called combat fatigue" to receive medical care. "Such men are cowards and bring disgrace to their comrades, whom they heartlessly leave to endure the dangers of battle, while they themselves use the hospital as a means of escape. You will see that such cases are not sent to the hospital."

On 10th August 1943, Patton encountered a 21-year old, Private Paul Bennett, who was shaking from convulsions and in tears, but apparently uninjured, in a field hospital. "It's my nerves, Sir, I can't stand the shelling anymore." Patton roared: "Your nerves! Hell! You are just a God-damned coward!" As Bennett began sobbing the General slapped him. "Shut-up! I won't have these brave men here who have been shot, see a yellow-bastard sitting here crying!" As the General hit him again, Bennett's helmet fell to the floor. "You are a disgrace to the Army and you are going back to the front to fight. You ought to be lined up against the wall and shot. In fact, I ought to shoot you right now." Patton pulled out his ivory-handled revolver from its holster, with his right hand, as he back-handed Bennett across the face. The medical staff rushed in to intervene and usher the private

out of the tent for his own safety.

When word reached General Eisenhower, he wrote a stern rebuke to General Patton who personally apologised to both soldiers and to the medical staff who had witnessed his actions. A media campaign in the U.S.A. led to such public outrage, that the American Congress called for Patton's immediate dismissal, despite his tremendous achievements on the battlefield. Patton wrote in his journal: "It is sad and shocking to think that victory and the lives of thousands of men are pawns to the writings of a group of unprincipled reporters and weak-kneed congressman, but so it is."

American President Franklin Delano Roosevelt, turned to one of his classmates from Columbia Law School, Wild Bill Donovan, to establish the Office of Strategic Services (OSS), which became the precursor to the CIA. The OSS did the dirty work of assassinations on FDR's instructions. Donovan ensured that Tito's Communist partisans waging guerrilla warfare in Yugoslavia received lavish quantities of American tanks, trucks and jeeps, hundreds of tonnes of armaments and ammunition, landmines and heavy machine guns. This undercover battle, led by Donovan and the OSS, ensured that Eastern Europe fell into the hands of the Soviet Union. General Walter Bedell Smith, wrote to Winston Churchill that Donovan was "out of control" with "a predilection for political intrigue". Donovan reported only to the president of the United States. FDR authorised Donovan to set up the Central Intelligence Agency (CIA). Donovan had no moral, or ethical, qualms about dealing with communists. He channelled millions of Dollars to the Chinese communists of Mao Tse Tung, to fight against America's official ally, Nationalist China, under General Chiang Kai-Shek. Donovan operated a secret slush fund provided by congress and its War Agencies Appropriations Act 1944. Donovan spent it anyway he liked, without any regard to oversight, or legality. The money was meant to cover his far-flung spy and sabotage operations throughout Europe and Asia. Under the authority of FDR, Wild Bill ordered many political assassinations.

General Dwight Eisenhower ordered the 4 million Allied soldiers in Germany to halt on the West bank of the Elbe River, 60 miles short of Berlin, to enable the Red Army to seize the German capital. General Patton was seized with fury: "Some of our leaders are just damn fools who have no idea of Russian history. Hell, I doubt if they even knew that Russia, just less than 100 years ago, owned Finland, sucked the blood out of Poland and were using Siberia as a prison for their own people. How Stalin must have sneered when he got through with them at all those phony conferences." "Letting the Russians take Berlin is folly" declared Patton, "We should push on as far to the East as possible. We shouldn't stop before Moscow." The Soviets maintained a strangle-hold on Eastern Europe for 45 years. Millions of civilian refugees fleeing towards the American lines were turned back at bayonet point. Millions ended up as slave labour in Soviet Concentration camps.

On 17th April, Patton's single engine L5 Sentinel propeller plane was attacked head on, by a Spitfire bearing British Royal Air Force markings. Despite Patton's Spitfire attack SmallL5 being an unarmed American staff plane with American markings, the Spitfire

fired the whole nine yards, tracers flying past the sides of Patton's aircraft as his pilot took evasive action. During the manoeuvres, the British fighter plane crashed into the ground. The General was nagged by a question: Was this Spitfire attack an accident? Or a deliberate assassination attempt?

It was only in the final days of the war and during his tenure as military governor of Germany – after he had gotten to know both the Germans and America's "gallant Soviet allies" – that Patton's understanding of the true situation grew and his opinions changed. In his diary and in many letters to his family, friends, various military colleagues, and government officials, he expressed his new understanding and his apprehensions for the future. His diary and his letters were published in 1974 by the Houghton Mifflin Company under the title *The Patton Papers*. Several months before the end of the war, General Patton had recognized the fearful danger to the West posed by the Soviet Union, and he had disagreed bitterly with the orders which he had been given to hold back his army and wait for the Red Army to occupy vast stretches of German, Czech, Rumanian, Hungarian, and Yugoslav territory, which the Americans could have easily taken instead.

On May 7, 1945, just before the German capitulation, Patton had a conference in Austria with U.S. Secretary of War Robert Patterson. Patton was gravely concerned over the Soviet failure to respect the demarcation lines separating the Soviet and American occupation zones. He was also alarmed by plans in Washington for the immediate partial demobilization of the U.S. Army. Patton said to Patterson: "Let's keep our boots polished, bayonets sharpened, and present a picture of force and strength to the Red Army. This is the only language they understand and respect." Patterson replied, "Oh, George, you have been so close to this thing so long, you have lost sight of the big picture."

Patton rejoined:

"I understand the situation. Their (the Soviet) supply system is inadequate to maintain them in a serious action such as I could put to them. They have chickens in the coop and cattle on the hoof – that's their supply system. They could probably maintain themselves in the type of fighting I could give them for five days. After that it would make no difference how many million men they have, and if you wanted Moscow I could give it to you. They lived on the land coming down. There is insufficient left for them to maintain themselves going back. Let's not give them time to build up their supplies. If we do, then . . . we have had a victory over the Germans and disarmed them, but we have failed in the liberation of Europe; we have lost the war!"

Patton's urgent and prophetic advice went unheeded by Patterson and the other politicians and only served to give warning about Patton's feelings to the alien conspirators behind the scenes in New York, Washington, and Moscow. The more he saw of the Soviets, the stronger Patton's conviction grew that the proper course of action would be to stifle communism then and there, while the chance existed. Later in May 1945 he attended several meetings and social affairs with top Red Army officers, and he evaluated them carefully. He noted in his diary on May 14:

"I have never seen in any army at any time, including the German Imperial Army of 1912, as severe discipline as exists in the Russian army. The officers, with few exceptions, give the appearance of recently civilized Mongolian bandits."

And Patton's aide, General Hobart Gay, noted in his own journal for May 14: "Everything they (the Russians) did impressed one with the idea of virility and cruelty." Nevertheless, Patton knew that the Americans could whip the Reds then – but perhaps not later. On May 18 he noted in his diary:

"In my opinion, the American Army as it now exists could beat the Russians with the greatest of ease, because, while the Russians have good infantry, they are lacking in artillery, air, tanks, and in the knowledge of the use of the combined arms, whereas we excel in all three of these. If it should be necessary to fight the Russians, the sooner we do it the better."

Two days later he repeated his concern when he wrote his wife: "If we have to fight them, now is the time. From now on we will get weaker and they stronger." Having immediately recognized the Soviet danger and urged a course of action which would have freed all of eastern Europe from the communist yoke with the expenditure of far less American blood than was spilled in Korea and Vietnam and would have obviated both those later wars not to mention World War III – Patton next came to appreciate the true nature of the people for whom World War II was fought: the Jews.

Most of the Jews swarming over Germany immediately after the war came from Poland and Russia, and Patton found their personal habits shockingly uncivilized. He was disgusted by their behavior in the camps for Displaced Persons (DP's) which the Americans built for them and even more disgusted by the way they behaved when they were housed in German hospitals and private homes. He observed with horror that "these people do not understand toilets and refuse to use them except as repositories for tin cans, garbage, and refuse . . . They decline, where practicable, to use latrines, preferring to relieve themselves on the floor."

He described in his diary one DP camp,

"where, although room existed, the Jews were crowded together to an appalling extent, and in practically every room there was a pile of garbage in one corner which was also used as a latrine. The Jews were only forced to desist from their nastiness and clean up the mess by the threat of the butt ends of rifles. Of course, I know the expression 'lost tribes of Israel' applied to the tribes which disappeared – not to the tribe of Judah from which the current sons of bitches are descended. However, it is my personal opinion that this too is a lost tribe – lost to all decency."

Patton's initial impressions of the Jews were not improved when he attended a Jewish religious service at Eisenhower's insistence. His diary entry for September 17, 1945, reads in part:

"This happened to be the feast of Yom Kippur, so they were all collected in a large,

wooden building, which they called a synagogue. It behooved General Eisenhower to make a speech to them. We entered the synagogue, which was packed with the greatest stinking bunch of humanity I have ever seen. When we got about halfway up, the head rabbi, who was dressed in a fur hat similar to that worn by Henry VIII of England and in a surplice heavily embroidered and very filthy, came down and met the General . . . The smell was so terrible that I almost fainted and actually about three hours later lost my lunch as the result of remembering it."

These experiences and a great many others firmly convinced Patton that the Jews were an especially unsavory variety of creature and hardly deserving of all the official concern the American government was bestowing on them. Another September diary entry, following a demand from Washington that more German housing be turned over to Jews, summed up his feelings:

"Evidently the virus started by Morgenthau and Baruch of a Semitic revenge against all Germans is still working. Harrison (a U.S. State Department official) and his associates indicate that they feel German civilians should be removed from houses for the purpose of housing Displaced Persons. There are two errors in this assumption. First, when we remove an individual German we punish an individual German, while the punishment is – not intended for the individual but for the race. Furthermore, it is against my Anglo-Saxon conscience to remove a person from a house, which is a punishment, without due process of law. In the second place, Harrison and his ilk believe that the Displaced Person is a human being, which he is not, and this applies particularly to the Jews, who are lower than animals."

One of the strongest factors in straightening out General Patton's thinking on the conquered Germans was the behavior of America's controlled news media toward them. At a press conference in Regensburg, Germany, on May 8, 1945, immediately after Germany's surrender, Patton was asked whether he planned to treat captured SS troops differently from other German POW's. His answer was:

"No. SS means no more in Germany than being a Democrat in America – that is not to be quoted. I mean by that that initially the SS people were special sons of bitches, but as the war progressed they ran out of sons of bitches and then they put anybody in there. Some of the top SS men will be treated as criminals, but there is no reason for trying someone who was drafted into this outfit..."

Despite Patton's request that his remark not be quoted, the press eagerly seized on it, and Jews and their front men in America screamed in outrage over Patton's comparison of the SS and the Democratic Party as well as over his announced intention of treating most SS prisoners humanely. With great reluctance, and only after repeated promptings from Eisenhower, he had thrown German families out of their homes to make room for more than a million Jewish DP's but he balked when ordered to begin blowing up German factories, in accord with the infamous Morgenthau Plan to destroy Germany's economic basis forever. In his diary he wrote:

"I doubted the expediency of blowing up factories, because the ends for which the factories are being blown up – that is, preventing Germany from preparing for war – can be equally well attained through the destruction of their machinery, while the buildings can be used to house thousands of homeless persons."

Similarly, he expressed his doubts to his military colleagues about the overwhelming emphasis being placed on the persecution of every German who had formerly been a member of the National Socialist party. In a letter to his wife of September 14, 1945, he said:

"I am frankly opposed to this war criminal stuff. It is not cricket and is Semitic. I am also opposed to sending POW's to work as slaves in foreign lands (i.e., the Soviet Union's Gulags), where many will be starved to death."

Despite his disagreement with official policy, Patton followed the rules laid down by Morgenthau and others back in Washington as closely as his conscience would allow, but he tried to moderate the effect, and this brought him into increasing conflict with Eisenhower and the other politically ambitious generals. In another letter to his wife he commented:

I have been at Frankfurt for a civil government conference. If what we are doing (to the Germans) is 'Liberty, then give me death.' I can't see how Americans can sink so low. It is Semitic, and I am sure of it."

And in his diary he noted:

"Today we received orders . . . in which we were told to give the Jews special accommodations. If for Jews, why not Catholics, Mormons, etc? . . . We are also turning over to the French several hundred thousand prisoners of war to be used as slave labor in France. It is amusing to recall that we fought the Revolution in defense of the rights of man and the Civil War to abolish slavery and have now gone back on both principles."

His duties as military governor took Patton to all parts of Germany and intimately acquainted him with the German people and their condition. He could not help but compare them with the French, the Italians, the Belgians, and even the British. This comparison gradually forced him to the conclusion that World War II had been fought against the wrong people. After a visit to ruined Berlin, he wrote his wife on July 21, 1945: "Berlin gave me the blues. We have destroyed what could have been a good race, and we are about to replace them with Mongolian savages. And all Europe will be communist. It's said that for the first week after they took it (Berlin), all women who ran were shot and those who did not were raped. I could have taken it (instead of the Soviets) had I been allowed."

This conviction, that the politicians had used him and the U.S. Army for a criminal purpose, grew in the following weeks. During a dinner with French General Alphonse Juin in August, Patton was surprised to find the Frenchman in agreement with him. His

diary entry for August 18 quotes Gen. Juin: "It is indeed unfortunate, mon General, that the English and the Americans have destroyed in Europe the only sound country – and I do not mean France. Therefore, the road is now open for the advent of Russian communism." Later diary entries and letters to his wife reiterate this same conclusion. On August 31 he wrote: "Actually, the Germans are the only decent people left in Europe. It's a choice between them and the Russians. I prefer the Germans." And on September 2: "What we are doing is to destroy the only semi-modern state in Europe, so that Russia can swallow the whole."

By this time the Morgenthauists and media monopolists had decided that Patton was incorrigible and must be discredited. So they began a non-stop hounding of him in the press, a la Watergate, accusing him of being "soft on Nazis" and continually recalling an incident in which he had slapped a shirker two years previously, during the Sicily campaign. A New York newspaper printed the completely false claim that when Patton had slapped the soldier who was Jewish, he had called him a "yellow-bellied Jew." Then, in a press conference on September 22, reporters hatched a scheme to needle Patton into losing his temper and making statements which could be used against him. The scheme worked. The press interpreted one of Patton's answers to their insistent questions as to why he was not pressing the Nazi-hunt hard enough as: "The Nazi thing is just like a Democrat-Republican fight." The New York Times headlined this quote, and other papers all across America picked it up. The unmistakable hatred which had been directed at him during this press conference finally opened Patton's eyes fully as to what was afoot. In his diary that night he wrote:

"There is a very apparent Semitic influence in the press. They are trying to do two things: first, implement communism, and second, see that all businessmen of German ancestry and non-Jewish antecedents are thrown out of their jobs... "They have utterly lost the Anglo-Saxon conception of justice and feel that a man can be kicked out because somebody else says he is a Nazi. They were evidently quite shocked when I told them I would kick nobody out without the successful proof of guilt before a court of law... "Another point which the press harped on was the fact that we were doing too much for the Germans to the detriment of the DP's, most of whom are Jews. I could not give the answer to that one, because the answer is that, in my opinion and that of most nonpolitical officers, it is vitally necessary for us to build Germany up now as a buffer state against Russia. In fact, I am afraid we have waited too long."

And in a letter of the same date to his wife: "I will probably be in the headlines before you get this, as the press is trying to quote me as being more interested in restoring order in Germany than in catching Nazis. I can't tell them the truth that unless we restore Germany we will insure that communism takes America."

Eisenhower responded immediately to the press outcry against Patton and made the decision to relieve him of his duties as military governor and "kick him upstairs" as the commander of the Fifteenth Army. In a letter to his wife on September 29, Patton indicated that he was, in a way, not unhappy with his new assignment, because "I would

like it much better than being a sort of executioner to the best race in Europe." On October 22 he wrote a long letter to Maj. Gen. James G. Harbord, who was back in the States. In the letter Patton bitterly condemned the Morgenthau policy; Eisenhower's pusillanimous behavior in the face of Jewish demands; the strong pro-Soviet bias in the press; and the politicization, corruption, degradation, and demoralization of the U.S. Army which these things were causing. He saw the demoralization of the Army as a deliberate goal of America's enemies:

"I have been just as furious as you at the compilation of lies which the communist and Semitic elements of our government have leveled against me and practically every other commander. In my opinion it is a deliberate attempt to alienate the soldier vote from the commanders, because the communists know that soldiers are not communistic, and they fear what eleven million votes (of veterans) would do."

In his letter to Harbord, Patton also revealed his own plans to fight those who were destroying the morale and integrity of the Army and endangering America's future by not opposing the growing Soviet might:

"It is my present thought . . . that when I finish this job, which will be around the first of the year, I shall resign, not retire, because if I retire I will still have a gag in my mouth . . . I should not start a limited counter attack, which would be contrary to my military theories, but should wait until I can start an all-out offensive..."

General Marshall ordered that Patton's phones to be tapped and requested a psychoanalyst, from the Navys's Medical Corp, to observe General Patton. Eisenhower wrote scathingly of Patton, regarding him as a "loose cannon" because of how he distrusted the Soviets. Will Bill Donovan, who had travelled in and out of Moscow and had direct access to Marshall Stalin, loathed Patton. The OSS and NKVD exchanged information, helping one another in espionage projects, including spying on General Patton. Army Intelligence warned General Patton that his life was in danger from the NKVD. Marshall Stalin had ordered Patton to be assassinated.

OSS agent, Duncan Lee, was assigned to spy on General Patton when he was military governor of the US occupation zone in Southern Germany, providing regular reports on Patton's movements and recordings of wire-taps of his phone and office. Duncan Lee was a double agent, also working for the Soviet's spy agency, the NKVD. Duncan Lee had provided the Soviets with advance warning of the D-Day landings date and the exact location of the atomic bomb research in the US. On 16 May, Ukrainian Nationalist Leader, Stepan Bandera, defected to the Americans and informed Stephen Skubik, of the U.S. Army Counter Intelligence Corp, that "Soviet High Command has been ordered by Marshall Stalin to kill U.S. Army General George Patton." Rather than being shocked by Skubik's news, Donovan ordered Bandera returned to the Russians, thereby silencing the man who was warning about an attempt on General Patton's life!

Ukrainian Diplomat Professor Roman Smal-Stocki said that "The NKVD will soon attempt to kill General George Patton. Stalin wants him dead." Professor Smal-Stocki

was expelled by the Americans from Germany and sent back to the NKVD in Russia. Ukrainian General Pavlo Shandruk informed Special Agent Skubik, that he had vital intelligence. "Please tell General Patton to be on guard. He is at the top of the NKVD list to be killed." The Americans betrayed General Shandruk into the hands of the NKVD to be killed.

In Berlin, Patton learned that more than 20,000 American prisoners of war who fell into Russian hands at the end of the war, were being used as leverage in negotiations with the Allies to ensure that all 3 million Russians, Ukrainians and other East Europeans in Western Europe be forced across the border into Soviet hands. This included women and children. The Russians denied the Americans and British access to the Prisoner of War Camps, where their own men were being held, and the Allied governments suppressed the information that their men were being held hostage by their "ally" Marshall Stalin. All 3 million Russians and Ukrainians in Western Europe were betrayed into the hands of the Soviets. General Patton insulted Soviet Marshall Zhukov. Patton publically stated that the Soviets were the real enemy. Patton became convinced that the only way he could speak freely about these issues was to retire from the military "So that I can go home and say what I have to say." Patton saw his battlefield as changing. He was still a warrior but now the podium and the pen would be his main weapons to expose the treachery of the US government and the danger of their Soviet allies.

The collision on 9th December 1945, occurred when a two and a half tonne GMC Army truck, which had been parked facing the General's car, roared into life and violently collided with the Small General's staff car, by suddenly and inexplicably careening directly into the opposite lane and into Patton's vehicle (On the Autobahn between Mannheim and Heidelberg). The actions of the truck driver seemed designed to intentionally injure, or kill, the General. Both the driver of the truck and his two passengers quickly vanished. No criminal charges were ever filed. No accountability was ever recorded. The official accident reports and key-witnesses went missing.

Despite General Patton's rank and fame as America's most audacious and successful combat general, there was no formal inquest, and all official reports on the incident vanished. The MP who first arrived on the scene of the car accident, Lieutenant Peter Babalas, treated the incident like a fender bender. Although Patton's driver testified that the truck driver and his passengers were drunk, Sergeant Robert Thompson's blood levels were never tested and he was never charged with driving under the influence. Thompson's illegal possession of the Signals company truck also went unquestioned, despite the fact that he was 60 miles North of his duty station, with no apparent reason for being in Mannheim. Thompson's drunkenness, negligence and apparent larceny, went unquestioned. Numerous investigators and authors have attempted to find the official Accident Reports, unsuccessfully. Sergeant Robert Thompson and his two friends who were responsible for ploughing the truck into Patton's car were flown to England by Army Intelligence. However, just four days after the collision, Thompson mysteriously reappeared in Germany where he spoke to American journalist, Howard Smith, claiming

that he was alone in the truck when it struck Patton's vehicle. However, General Hobart Gay and PFC Horace Woodring swear there were two other people in the truck with Thompson.

PFC Horace Woodring, a 19 year-old son of a dairy farmer in Kentucky, grew up racing cars and flying stunt planes. Patton spoke highly of him as his trusted driver. Woodring was driving just 20 miles per hour when Robert Thompson swerved the military truck hard to the left, driving his vehicle directly into the path of Patton's Cadillac. As there was no turning on the road in the direction he was pointing the heavy army truck and as he did not signal before taking action, the action seemed deliberate. Woodring testified "I was not more than 20 feet from the truck when he began to turn." Thompson made no attempt to break, instead he accelerated directly into the Cadillac. General Patton was flung forward from his back seat, his head slamming violently into the steel partition behind Woodring's drivers compartment. His nose broke and he felt a sharp pain in the back of his neck and no sensation in his lower body. Instantly George Patton knew that he was paralysed. He was the only person injured in the collision. General Patton was paralysed in the vehicle collision on 9th December 1945 at 11:45am. He arrived at the U.S. Army 130th station hospital in Heidelberg at 12:43pm.

There was no medical staff waiting at the hospital to rush Patton into surgery. No team of spinal specialists assembled to deal with this life-threatening traumatic injury. Two days later his wife, Beatrice, and a spinal cord specialist, arrived to be at his side. The doctors were confident that the General would survive his injury. Hope of recovery Smallles and might be able to regain some mobility. They were also convinced that he would be able to travel soon. General Patton urged his wife to get him out of the hospital: "They are going to kill me here!" he said to her emphatically. He did not recover and on 21st December 1945, General Patton's body was wheeled down to the makeshift morgue in the hospital basement and it was announced to the journalists that had descended on the tiny military hospital, that General George Patton had died.

There was no autopsy and although Beatrice wanted him buried at West Point, the Army insisted that he be buried at the American Military cemetery in Hamm, Luxemburg. Neither General Dwight Eisenhower, nor President Harry Truman, attended the military funeral for General George Patton, America's most famous and successful combat General. General Patton had made many high ranking enemies in Moscow, Berlin, London and Washington D.C.: Patton's fiery determination to speak the truth had made many powerful men squirm, not only during the war, but afterwards. His public statements praising the German Army for their matchless skills as fighting men, while criticizing the Soviet Union as the real enemy of freedom led some to see Patton as a threat to the New World Order.

From the beginning, many did not believe that Patton's death was accidental. He had already survived several remarkable accidents, including when his personal aircraft had almost been shot down by British Spitfire in April 1945. Sergeant Robert Thompson's military records were burned 12th July 1973, when fire swept through the National Personnel

Records Centre in St. Louis, Missouri, destroying 18 million official military personnel files. Lieutenant Babala's accident report also vanished. A 1953 request for a copy of the report received the official response noting Report of Investigation is not on file. Casualty branch has no papers on file regarding the accident and there is no information on the accident in Patton's Aide, General Hobart Gay's, personnel file. The report organised by General Geoffrey Keys, Commander of the 7th Army, also went missing.

In fact, the only report that remained in circulation was a document allegedly written in 1952 and signed by P.F.C. Horace Woodring, Patton's driver. However, when asked about it, in 1979, Woodring swore that he had never made any such statement, or signed his name, to any such report. He believed the paperwork was fabricated. The vehicle on display at the Patton Museum at Fort Knox, Kentucky, has been proven to not be the vehicle in which General Patton was driving on that fateful day, and the serial number has been scratched out!

In 1979, OSS Agent, Major Douglas Bazata, asserted that he had been part of a hit team that was tasked to assassinate General Patton. He had fired a low velocity projectile into the back of the General's neck, in order to snap it and cause him paralysis. When Patton failed to die and was showing signs of recovery, he was murdered in the hospital by Soviet NKVD agents. Bazata swore that Wild Bill Donovan (the head of the Officers Secret Service - OSS) paid him 10,000 *plus another* 800 in expenses, for his role in Patton's death.

Douglas Bazata, who left the Army as a Major in 1947, had been awarded the Distinguished Service Cross, 4 Purple Hearts and France's Croix de Guerre, with two palms. He was later hired to work for the US government as Special Assistant to the Secretary of the Navy. OSS Agent, Douglas Bazata later wrote of his meeting at Claridges Hotel, in London, with Wild Bill Donovan: "Douglas, I do indeed have a problem, it is the extreme disobedience of General George Patton, and of his very serious disregard of orders for the common cause." "Shall I kill him Sir?" Bazata asked. "Yes, Douglas, you do exactly what you must." Later William Colby, a former OSS agent who went on to become head of the Central Intelligence Agency, praised Bazata in his 1978 book, Honourable Men. Some have come to recognise General Patton as the first casualty of the Cold War. Patton's insights and convictions were considered a threat to the New World Order. (What you will learn about in the last chapter of this book).

13.5 A Jewish Defector warns America

by Benjamin H. Freedman

The following speech can also be listened to by looking on Youtube for "Benjamin Freedman 1961", it should be a video roughly 45 minutes in length.

Mr. Freedman, born in 1890, was a successful Jewish businessman of New York City who

was at one time the principal owner of the Woodbury Soap Company. He broke with organized Jewry after the Judeo-Communist victory of 1945, and spent the remainder of his life and the great preponderance of his considerable fortune, at least 2.5 million dollars, exposing the Jewish tyranny which has enveloped the United States. Mr. Freedman knew what he was talking about because he had been an insider at the highest levels of Jewish organizations and Jewish machinations to gain power over our nation. Mr. Freedman was personally acquainted with Bernard Baruch, Samuel Untermyer, Woodrow Wilson, Franklin Roosevelt, Joseph Kennedy, and John F. Kennedy, and many more movers and shakers of our times.

This speech was given before a patriotic audience in 1961 at the Willard Hotel in Washington, D.C., on behalf of Conde McGinley's patriotic newspaper of that time, Common Sense. Though in some minor ways this wide-ranging and extemporaneous speech has become dated, Mr. Freedman's essential message to us – his warning to the West – is more urgent than ever before. – K.A.S. —

[Freedman's speech]

What I intend to tell you tonight is something that you have never been able to learn from any other source, and what I tell you now concerns not only you, but your children and the survival of this country and Christianity. I'm not here just to dish up a few facts to send up your blood pressure, but I'm here to tell you things that will help you preserve what you consider the most sacred things in the world: the liberty, and the freedom, and the right to live as Christians, where you have a little dignity, and a little right to pursue the things that your conscience tells you are the right things, as Christians.

Now, first of all, I'd like to tell you that on August 25th 1960 – that was shortly before elections – Senator Kennedy, who is now the President of the United States, went to New York, and delivered an address to the Zionist Organization of America. In that address, to reduce it to its briefest form, he stated that he would use the armed forces of the United States to preserve the existence of the regime set up in Palestine by the Zionists who are now in occupation of that area. In other words, Christian boys are going to be yanked out of their homes, away from their families, and sent abroad to fight in Palestine against the Christian and Moslem Arabs who merely want to return to their homes. And these Christian boys are going to be asked to shoot to kill these innocent [Arab Palestinians] people who only want to follow out fifteen resolutions passed by the United Nations in the last twelve years calling upon the Zionists to allow these people to return to their homes.

Now, when United States troops appear in the Middle East to fight with the Zionists as their allies to prevent the return of these people who were evicted from their homes in the 1948 armed insurrection by the Zionists who were transplanted there from Eastern Europe... when that happens, the United States will trigger World War III. You say, when will that take place? The answer is, as soon as the difficulty between France and Algeria has been settled, that will take place. As soon as France and Algeria have been settled,

that will take place. As soon as France and Algeria have settled their difficulty, and the Arab world, or the Moslem world, has no more war on their hands with France, they are going to move these people back into their homes, and when they do that and President Kennedy sends your sons to fight over there to help the crooks hold on to what they stole from innocent men, women and children, we will trigger World War III; and when that starts you can be sure we cannot emerge from that war a victor. We are going to lose that war because there is not one nation in the world that will let one of their sons fight with us for such a cause. I know and speak to these ambassadors in Washington and the United Nations – and of the ninety-nine nations there, I've consulted with maybe seventy of them – and when we go to war in Palestine to help the thieves retain possession of what they have stolen from these innocent people we're not going to have a man there to fight with us as our ally.

And who will these people have supporting them, you ask. Well, four days after President Kennedy – or he was then Senator Kennedy – made that statement on August 28, 1960, the Arab nations called a meeting in Lebanon and there they decided to resurrect, or reactivate, the government of Palestine, which has been dormant more or less, since the 1948 armed insurrection by the Zionists. Not only that... they ordered the creation of the Palestine Army, and they are now drilling maybe a half a million soldiers in that area of the world to lead these people back to their homeland. With them, they have as their allies all the nations of what is termed the Bandung Conference Group. That includes the Soviet Union and every Soviet Union satellite. It includes Red China; it includes every independent country in Asia and Africa; or eighty percent of the world's total population. Eighty percent of the world's population. Four out of five human beings on the face of the earth will be our enemies at war with us. And not alone are they four out of five human beings now on the face of this earth, but they are the non-Christian population of the world and they are the non-Caucasians... the non-white nations of the world, and that's what we face. And what is the reason? The reason is that here in the United States, the Zionists and their co-religionists have complete control of our government. For many reasons too many and too complex to go into here at this – time I'll be glad to answer questions, however, to support that statement – the Zionists and their co-religionists rule this United States as though they were the absolute monarchs of this country.

Now, you say, 'well, that's a very broad statement to make', but let me show what happened while you were – I don't want to wear that out — let me show what happened while WE were all asleep. I'm including myself with you. We were all asleep. What happened? World War I broke out in the summer of 1914. Nineteen-hundred and fourteen was the year in which World War One broke out. There are few people here my age who remember that. Now that war was waged on one side by Great Britain, France, and Russia; and on the other side by Germany, Austria-Hungary, and Turkey. What happened? Within two years Germany had won that war: not alone won it nominally, but won it actually. The German submarines, which were a surprise to the world, had swept all the convoys from the Atlantic Ocean, and Great Britain stood there without

ammunition for her soldiers, stood there with one week's food supply facing her – and after that, starvation. At that time, the French army had mutinied. They lost 600,000 of the flower of French youth in the defense of Verdun on the Somme. The Russian army was defecting. They were picking up their toys and going home, they didn't want to play war anymore, they didn't like the Czar. And the Italian army had collapsed. Now Germany – not a shot had been fired on the German soil. Not an enemy soldier had crossed the border into Germany. And yet, here was Germany offering England peace terms. They offered England a negotiated peace on what the lawyers call a status quo ante basis. That means: "Let's call the war off, and let everything be as it was before the war started."

Well, England, in the summer of 1916 was considering that. Seriously! They had no choice. It was either accepting this negotiated peace that Germany was magnanimously offering them, or going on with the war and being totally defeated. While that was going on, the Zionists in Germany, who represented the Zionists from Eastern Europe, went to the British War Cabinet and – I am going to be brief because this is a long story, but I have all the documents to prove any statement that I make if anyone here is curious, or doesn't believe what I'm saying is at all possible – the Zionists in London went to the British war cabinet and they said: "Look here. You can yet win this war. You don't have to give up. You don't have to accept the negotiated peace offered to you now by Germany. You can win this war if the United States will come in as your ally." The United States was not in the war at that time. We were fresh; we were young; we were rich; we were powerful. They [Zionists] told England: "We will guarantee to bring the United States into the war as your ally, to fight with you on your side, if you will promise us Palestine after you win the war." In other words, they made this deal: "We will get the United States into this war as your ally. The price you must pay us is Palestine after you have won the war and defeated Germany, Austria-Hungary, and Turkey."

Now England had as much right to promise Palestine to anybody, as the United States would have to promise Japan to Ireland for any reason whatsoever. It's absolutely absurd that Great Britain – that never had any connection or any interest or any right in what is known as Palestine – should offer it as coin of the realm to pay the Zionists for bringing the United States into the war. However, they made that promise, in October of 1916. October, nineteen hundred and sixteen. And shortly after that – I don't know how many here remember it – the United States, which was almost totally pro-German – totally pro-German – because the newspapers here were controlled by Jews, the bankers were Jews, all the media of mass communications in this country were controlled by Jews, and they were pro-German because their people, in the majority of cases came from Germany, and they wanted to see Germany lick the Czar. The Jews didn't like the Czar, and they didn't want Russia to win this war. So the German bankers – the German-Jews – Kuhn Loeb and the other big banking firms in the United States refused to finance France or England to the extent of one dollar. They stood aside and they said: "As long as France and England are tied up with Russia, not one cent!" But they poured money into

Germany, they fought with Germany against Russia, trying to lick the Czarist regime.

Now those same Jews, when they saw the possibility of getting Palestine, they went to England and they made this deal. At that time, everything changed, like the traffic light that changes from red to green. Where the newspapers had been all pro-German, where they'd been telling the people of the difficulties that Germany was having fighting Great Britain commercially and in other respects, all of a sudden the Germans were no good. They were villains. They were Huns. They were shooting Red Cross nurses. They were cutting off babies' hands. And they were no good. Well, shortly after that, Mr. Wilson declared war on Germany.

The Zionists in London sent these cables to the United States, to Justice Brandeis: "Go to work on President Wilson. We're getting from England what we want. Now you go to work, and you go to work on President Wilson and get the United States into the war." And that did happen. That's how the United States got into the war. We had no more interest in it; we had no more right to be in it than we have to be on the moon tonight instead of in this room. Now the war – World War One – in which the United States participated had absolutely no reason to be our war. We went in there – we were railroaded into it – if I can be vulgar, we were suckered into – that war merely so that the Zionists of the world could obtain Palestine. Now, that is something that the people in the United States have never been told. They never knew why we went into World War One. Now, what happened?

After we got into the war, the Zionists went to Great Britain and they said: "Well, we performed our part of the agreement. Let's have something in writing that shows that you are going to keep your bargain and give us Palestine after you win the war." Because they didn't know whether the war would last another year or another ten years. So they started to work out a receipt. The receipt took the form of a letter, and it was worded in very cryptic language so that the world at large wouldn't know what it was all about. And that was called the Balfour Declaration. The Balfour Declaration was merely Great Britain's promise to pay the Zionists what they had agreed upon as a consideration for getting the United States into the war. So this great Balfour Declaration, that you hear so much about, is just as phony as a three dollar bill. And I don't think I could make it more emphatic than that. Now, that is where all the trouble started. The United States went in the war. The United States crushed Germany. We went in there, and it's history. You know what happened. Now, when the war was ended, and the Germans went to Paris, to the Paris Peace Conference in 1919, there were 117 Jews there, as a delegation representing the Jews, headed by Bernard Baruch. I was there: I ought to know. Now what happened?

The Jews at that peace conference, when they were cutting up Germany and parceling out Europe to all these nations that claimed a right to a certain part of European territory, the Jews said, "How about Palestine for us?" And they produced, for the first time to the knowledge of the Germans, this Balfour Declaration. So the Germans, for the first time realized, "Oh, that was the game! That's why the United States came into the war."

And the Germans for the first time realized that they were defeated, they suffered this terrific reparation that was slapped onto them, because the Zionists wanted Palestine and they were determined to get it at any cost. Now, that brings us to another very interesting point. When the Germans realized this, they naturally resented it. Up to that time, the Jews had never been better off in any country in the world than they had been in Germany. You had Mr. Rathenau there, who was maybe 100 times as important in industry and finance as is Bernard Baruch in this country. You had Mr. Balin, who owned the two big steamship lines, the North German Lloyd's and the Hamburg-American Lines. You had Mr. Bleichroder, who was the banker for the Hohenzollern family. You had the Warburgs in Hamburg, who were the big merchant bankers – the biggest in the world. The Jews were doing very well in Germany. No question about that. Now, the Germans felt: "Well, that was quite a sellout."

It was a sellout that I can best compare – suppose the United States was at war today with the Soviet Union. And we were winning. And we told the Soviet Union: "Well, let's quit. We offer you peace terms. Let's forget the whole thing." And all of a sudden Red China came into the war as an ally of the Soviet Union. And throwing them into the war brought about our defeat. A crushing defeat, with reparations the likes of which man's imagination cannot encompass. Imagine, then, after that defeat, if we found out that it was the Chinese in this country, our Chinese citizens, who all the time we thought they were loyal citizens working with us, were selling us out to the Soviet Union and that it was through them that Red China was brought into the war against us. How would we feel, in the United States against Chinese? I don't think that one of them would dare show his face on any street. There wouldn't be lampposts enough, convenient, to take care of them. Imagine how we would feel. Well, that's how the Germans felt towards these Jews. "We've been so nice to them"; and from 1905 on, when the first Communist revolution in Russia failed, and the Jews had to scramble out of Russia, they all went to Germany. And Germany gave them refuge. And they were treated very nicely. And here they sold Germany down the river for no reason at all other than they wanted Palestine as a so-called "Jewish commonwealth."

Now, Nahum Sokolow – all the great leaders, the big names that you read about in connection with Zionism today – they, in 1919, 1920, '21, '22, and '23, they wrote in all their papers – and the press was filled with their statements – that "the feeling against the Jews in Germany is due to the fact that they realized that this great defeat was brought about by our intercession and bringing the United States into the war against them." The Jews themselves admitted that. It wasn't that the Germans in 1919 discovered that a glass of Jewish blood tasted better than Coca-Cola or Muenschner Beer. There was no religious feeling. There was no sentiment against those people merely on account of their religious belief. It was all political. It was economic. It was anything but religious. Nobody cared in Germany whether a Jew went home and pulled down the shades and said "Shema' Yisrael" or "Our Father." No one cared in Germany any more than they do in the United States. Now this feeling that developed later in Germany was due to one

thing: that the Germans held the Jews responsible for their crushing defeat, for no reason at all, because World War One was started against Germany for no reason for which they [Germans] were responsible. They were guilty of nothing. Only of being successful. They built up a big navy. They built up world trade.

You must remember, Germany, at the time of Napoleon, at the time of the French Revolution, what was the German Reich consisted of 300 – three hundred! – small city-states, principalities, dukedoms, and so forth. Three hundred little separate political entities. And between that time, between the period of . . . between Napoleon and Bismarck, they were consolidated into one state. And within 50 years after that time they became one of the world's great powers. Their navy was rivalling Great Britain's, they were doing business all over the world, they could undersell anybody and make better products. And what happened? What happened as a result of that? There was a conspiracy between England, France, and Russia that: "We must slap down Germany", because there isn't one historian in the world that can find a valid reason why those three countries decided to wipe Germany off the map politically. Now, what happened after that? When Germany realized that the Jews were responsible for her defeat, they naturally resented it. But not a hair on the head of any Jew was harmed. Not a single hair. Professor Tansill, of Georgetown University, who had access to all the secret papers of the State Department, wrote in his book, and quoted from a State Department document written by Hugo Schoenfelt, a Jew who Cordell Hull sent to Europe in 1933 to investigate the so-called camps of political prisoners. And he wrote back that he found them in very fine condition.

They were in excellent shape; everybody treated well. And they were filled with Communists. Well, a lot of them were Jews, because the Jews happened to be maybe 98 per cent of the Communists in Europe at that time. And there were some priests there, and ministers, and labor leaders, Masons, and others who had international affiliations. Now, the Jews sort of tried to keep the lid on this fact. They didn't want the world to really understand that they had sold out Germany, and that the Germans resented that. So they did take appropriate action against them [against the Jews]. They. . . shall I say, discriminated against them wherever they could? They shunned them. The same as we would the Chinese, or the Negroes, or the Catholics, or anyone in this country who had sold us out to an enemy and brought about our defeat. Now, after a while, the Jews of the world didn't know what to do, so they called a meeting in Amsterdam. Jews from every country in the world attended in July 1933. And they said to Germany: "You fire Hitler! And you put every Jew back into his former position, whether he was a Communist, no matter what he was. You can't treat us that way! And we, the Jews of the world, are calling upon you, and serving this ultimatum upon you." Well, the Germans told them. . . you can imagine. So what did they [the Jews] do?

They broke up, and Samuel Untermyer, if the name means anything to people here. . . (You want to ask a question? — Uh, there were no Communists in Germany at that time. they were called 'Social Democrats.) Well, I don't want to go by what they were

called. We're now using English words, and what they were called in Germany is not very material. . . but they were Communists, because in 1917, the Communists took over Germany for a few days. Rosa Luxembourg and Karl Liebknecht, and a group of Jews in Germany took over the government for three days. In fact, when the Kaiser ended the war, he fled to Holland because he thought the Communists were going to take over Germany as they did Russia, and that he was going to meet the same fate that the Czar did in Russia. So he left and went to Holland for safety and for security. Now, at that time, when the Communist threat in Germany was quashed, it was quiet, the Jews were working, still trying to get back into their former – their status – and the Germans fought them in every way they could, without hurting a hair on anyone's head. The same as one group, the Prohibitionists, fought the people who were interested in liquor, and they didn't fight one another with pistols, they did it every way they could. Well, that's the way they were fighting the Jews in Germany. And, at that time, mind you, there were 80 to 90 million Germans and there were only 460,000 Jews. . . less than one half of one percent of Germany were Jews. And yet, they controlled all of the press, they controlled most of the economy, because they had come in and with cheap money – you know the way the Mark was devalued – they bought up practically everything.

Well, in 1933 when Germany refused to surrender, mind you, to the World Conference of Jews in Amsterdam, they broke up and Mr. Untermeyer came back to the United States – who was the head of the American delegation and the president of the whole conference – and he went from the steamer to ABC and made a radio broadcast throughout the United States in which he said: "The Jews of the world now declare a Holy War against Germany. We are now engaged in a sacred conflict against the Germans. And we are going to starve them into surrender. We are going to use a world-wide boycott against them, that will destroy them because they are dependent upon their export business."

And it is a fact that two thirds of Germany's food supply had to be imported, and it could only be imported with the proceeds of what they exported. Their labor. So if Germany could not export, two thirds of Germany's population would have to starve. There just was not enough food for more than one third of the population. Now in this declaration, which I have here, it was printed on page – a whole page – in the New York Times on August 7, 1933, Mr. Samuel Untermeyer boldly stated that: "this economic boycott is our means of self-defense. President Roosevelt has advocated its use in the NRA" . [National Recovery Administration] – which some of you may remember, where everybody was to be boycotted unless they followed the rules laid down by the New Deal, which of course was declared unconstitutional by the Supreme Court at that time. Nevertheless, the Jews of the world declared a boycott against Germany, and it was so effective that you couldn't find one thing in any store anywhere in the world with the words "made in Germany" on it.

In fact, an executive of the Woolworth Company told me that they had to dump millions of dollars worth of crockery and dishes into the river; that their stores were boycotted. If anyone came in and found a dish marked "made in Germany," they were picketed with

signs: "Hitler", "murderer", and so forth, and like – something like these sit-ins that are taking place in the South. R. H. Macy, which is controlled by a family called Strauss who also happen to be Jews. . . . a woman found stockings there which came from Chemnitz, marked "made in Germany". Well, they were cotton stockings. They may have been there 20 years, because since I've been observing women's legs in the last twenty years, I haven't seen a pair with cotton stockings on them. So Macy! I saw Macy boycotted, with hundreds of people walking around with signs saying "MURDERS" and "HITLERITES", and so forth. Now up to that time, not one hair on the head of any Jew had been hurt in Germany. There was no suffering, there was no starvation, there was no murder, there was nothing.

Now, that. . . naturally, the Germans said, "Why, who are these people to declare a boycott against us and throw all our people out of work, and our industries come to a standstill? Who are they to do that to us?" They naturally resented it. Certainly they painted swastikas on stores owned by Jews. Why should a German go in and give their money to a storekeeper who was part of a boycott who was going to starve Germany into surrender into the Jews of the world, who were going to dictate who their premier or chancellor was to be? Well, it was ridiculous. That continued for some time, and it wasn't until 1938, when a young Jew from Poland walked into the German embassy in Paris and shot one of the officials [a German official] that the Germans really started to get rough with the Jews in Germany. And you found them then breaking windows and having street fights and so forth.

Now, for anyone to say that – I don't like to use the word 'anti-Semitism' because it's meaningless, but it means something to you still, so I'll have to use it – the only reason that there was any feeling in Germany against Jews was that they were responsible: number one, for World War One; number two, for this world-wide boycott, and number three – did I say for World War One, they were responsible? For the boycott – and also for World War II, because after this thing got out of hand, it was absolutely necessary for the Jews and Germany to lock horns in a war to see which one was going to survive. In the meanwhile, I had lived in Germany, and I knew that the Germans had decided [that] Europe is going to be Christian or Communist: there is no in between. It's going to be Christian or it's going to be Communist. And the Germans decided: "We're going to keep it Christian if possible". And they started to re-arm. And their intention was – by that time the United States had recognized the Soviet Union, which they did in November, 1933 – the Soviet Union was becoming very powerful, and Germany realized: "Well, our turn is going to come soon, unless we are strong." The same as we in this country are saying today, "Our turn is going to come soon, unless we are strong."

And our government is spending 83 or 84 billion dollars of your money for defense, they say. Defense against whom? Defense against 40,000 little Jews in Moscow that took over Russia, and then, in their devious ways, took over control of many other governments of the world. Now, for this country to now be on the verge of a Third World War, from which we cannot emerge a victor, is something that staggers my imagination. I know

that nuclear bombs are measured in terms of megatons. A megaton is a term used to describe one million tons of TNT. One million tons of TNT is a megaton. Now, our nuclear bombs have a capacity of 10 megatons, or 10 million tons of TNT. That was when they were first developed five or six years ago. Now, the nuclear bombs that are being developed have a capacity of 200 megatons, and God knows how many megatons the nuclear bombs of the Soviet Union have. So, what do we face now? If we trigger a world war that may develop into a nuclear war, humanity is finished. And why will it take place? It will take place because Act III. . . the curtain goes up on Act III. Act I was World War I. Act II was World War II. Act III is going to be World War III.

The Jews of the world, the Zionists and their co-religionists everywhere, are determined that they are going to again use the United States to help them permanently retain Palestine as their foothold for their world government. Now, that is just as true as I am standing here, because not alone have I read it, but many here have read it, and it's known all over the world. Now, what are we going to do? The life you save may be your son's. Your boys may be on their way to that war tonight; and you you don't know it any more than you knew that in 1916 in London the Zionists made a deal with the British War Cabinet to send your sons to war in Europe. Did you know it at that time? Not a person in the United States knew it. You weren't permitted to know it. Who knew it? President Wilson knew it. Colonel House knew it. Other 's knew it. Did I know it? I had a pretty good idea of what was going on: I was liaison to Henry Morgenthau, Sr., in the 1912 campaign when President Wilson was elected, and there was talk around the office there.

I was 'confidential man' to Henry Morgenthau, Sr., who was chairman of the Finance Committee, and I was liaison between him and Rollo Wells, the treasurer. So I sat in these meetings with President Wilson at the head of the table, and all the others, and I heard them drum into President Wilson's brain the graduated income tax and what has become the Federal Reserve, and also indoctrinate him with the Zionist movement. Justice Brandeis and President Wilson were just as close as the two fingers on this hand, and President Woodrow Wilson was just as incompetent when it came to determining what was going on as a newborn baby. And that's how they got us into World War I, while we all slept. Now, at this moment... at this moment they may be planning this World War III, in which we don't stand a chance even if they don't use nuclear bombs. How can the United States – about five percent of the world – go out and fight eighty to ninety percent of the world on their home ground? How can we do it... send our boys over there to be slaughtered? For what? So the Jews can have Palestine as their 'commonwealth'? They've fooled you so much that you don't know whether you're coming or going.

Now any judge, when he charges a jury, says, "Gentlemen, any witness that you find has told a single lie, you can disregard all his testimony." That is correct. I don't know from what state you come, but in New York state that is the way a judge addresses a jury. If that witness said one lie, disregard his testimony. Now, what are the facts about the

Jews? The Jews – I call them Jews to you, because they are known as Jews. I don't call them Jews. I refer to them as so-called Jews, because I know what they are. If Jesus was a Jew, there isn't a Jew in the world today, and if those people are Jews, certainly our Lord and Savior was not one of them, and I can prove that. Now what happened? The eastern European Jews, who form 92 per cent of the world's population of those people who call themselves Jews, were originally Khazars. They were a warlike tribe that lived deep in the heart of Asia. And they were so warlike that even the Asiatics drove them out of Asia into eastern Europe – and to reduce this so you don't get too confused about the history of Eastern Europe – they set up this big Khazar kingdom: 800,000 square miles. Only, there was no Russia, there were no other countries, and the Khazar kingdom was the biggest country in all Europe – so big and so powerful that when the other monarchs wanted to go to war, the Khazars would lend them 40,000 soldiers. That's how big and powerful they were.

Now, they were phallic worshippers, which is filthy. I don't want to go into the details of that now. It was their religion the way it was the religion of many other Pagans or Barbarians elsewhere in the world. Now, the [Khazar] king became so disgusted with the degeneracy of his kingdom that he decided to adopt a so-called monotheistic faith – either Christianity, Islam – the Moslem faith – or what is known today as Judaism – really Talmudism. So, like spinning a top and calling out “eeny, meeny, miney, moe,” he picked out so-called Judaism. And that became the state religion. He sent down to the Talmudic schools of Pumbedita and Sura and brought up thousands of these rabbis with their teachings, and opened up synagogues and schools in his kingdom of 800,000 people – 800,000 thousand square miles – and maybe ten to twenty million people; and they became what we call Jews. There wasn't one of them that had an ancestor that ever put a toe in the Holy Land, not only in Old Testament history, but back to the beginning of time. Not one of them! And yet they come to the Christians and they ask us to support their armed insurrection in Palestine by saying:

“Well, you want to certainly help repatriate God's chosen people to their Promised Land, their ancestral homeland, It's your Christian duty. We gave you one of our boys as your Lord and Savior. You now go to church on Sunday, and kneel and you worship a Jew, and we're Jews.”

Well, they were pagan Khazars who were converted just the same as the Irish [were converted]. And it's just as ridiculous to call them “people of the Holy Land,” as it would be. . . there are 54 million Chinese Moslems. Fifty four million! And, Mohammed only died in 620 A.D., so in that time, 54 million Chinese have accepted Islam as their religious belief. Now imagine, in China, 2,000 miles away from Arabia, where the city of Mecca is located, where Mohammed was born. . . imagine if the 54 million Chinese called themselves 'Arabs'. Imagine! Why, you'd say they're lunatics. Anyone who believes that those 54 million Chinese are Arabs must be crazy. All they did was adopt as a religious faith; a belief that had its origin in Mecca, in Arabia. The same as the Irish. When the Irish became Christians, nobody dumped them in the ocean and imported from the

Holy Land a new crop of inhabitants that were Christians. They weren't different people. They were the same people, but they had accepted Christianity as a religious faith.

Now, these Pagans, these Asiatics, these Turko-Finns. . . they were a Mongoloid race who were forced out of Asia into eastern Europe. They likewise, because their king took the faith – Talmudic faith – they had no choice. Just the same as in Spain: If the king was Catholic, everybody had to be a Catholic. If not, you had to get out of Spain. So everybody – they lived on the land just like the trees and the bushes; a human being belonged to the land under their feudal system – so they [Khazars] all became what we call today, Jews! Now imagine how silly it was for the Christians. . . for the great Christian countries of the world to say, "We're going to use our power, our prestige to repatriate God's chosen people to their ancestral homeland, their Promised Land." Now, could there be a bigger lie than that? Could there be a bigger lie than that? And because they control the newspapers, the magazines, the radio, the television, the book publishing business, they have the ministers in the pulpit, they have the politicians on the soap boxes talking the same language . . . so naturally you'd believe black is white if you heard it often enough. You wouldn't call black black anymore – you'd start to call black white. And nobody could blame you.

Now, that is one of the great lies. . . that is the foundation of all the misery that has befallen the world. Because after two wars fought in Europe – World War I and World War II – if it wasn't possible for them to live in peace and harmony with the people in Europe, like their brethren are living in the United States, what were the two wars fought for? Did they have to – like you flush the toilet – because they couldn't get along, did they have to say, "Well, we're going back to our homeland and you Christians can help us"? I can't understand yet how the Christians in Europe could have been that dumb because every theologian, every history teacher, knew the things that I'm telling you. But, they naturally bribed them, shut them up with money, stuffed their mouths with money, and now. . . I don't care whether you know all this or not. It doesn't make any difference to me whether you know all these facts or not, but it does make a difference to me. I've got, in my family, boys that will have to be in the next war, and I don't want them to go and fight and die... like they died in Korea. Like they died in Japan. Like they've died all over the world. For what? To help crooks hold on to what they stole from innocent people who had been in peaceful possession of that land, those farms, those homes for hundreds and maybe thousands of years? Is that why the United States must go to war? Because the Democratic Party wants New York State – the electoral vote? Illinois, the electoral vote? And Pennsylvania, the electoral vote?... which are controlled by the Zionists and their co-religionists?. . . the balance of power?

In New York City there are 400,000 members of the liberal party, all Zionists and their co-religionists. And New York State went for Kennedy by 400,000 votes. Now, I don't blame Mr. Kennedy. I'm fond of Mr. Kennedy. I think he's a great man. I think he can really pull us out of this trouble if we get the facts to him. And I believe he knows a great deal more than his appointments indicate he knows. He's playing with the enemy.

Like when you go fishing, you've got to play with the fish. Let 'em out and pull 'em in. Let 'em out and pull 'em in. But knowing Mr. Kennedy's father, and how well informed he is on this whole subject, and how close Kennedy is to his father, I don't think Mr. Kennedy is totally in the dark. But I do think that it is the duty of every mother, every loyal Christian, every person that regards the defense of this country as a sacred right, that they communicate – not with their congressman, not with their senator, but with President Kennedy. And tell him, "I do not think you should send my boy, or our boys, wearing the uniform of the United States of America, and under the flag that you see here, our red, white and blue, to fight there to help keep in the hands of these that which they have stolen". I think everyone should not alone write once, but keep writing and get your friends to write.

Now, I could go on endlessly, and tell you these things to support what I have just asked you to do. But I don't think it's necessary to do that. You're above the average group in intelligence and I don't think it's necessary to impress this any more. But. . . I want to tell you one more thing. You talk about... "Oh, the Jews. Why the Jews? Christianity. Why, we got Christianity from the Jews and the Jews gave us Jesus, and the Jews gave us our religion". But do you know that on the day of atonement that you think is so sacred to them, that on that day... and I was one of them! This is not hearsay. I'm not here to be a rabble-rouser. I'm here to give you facts. When, on the Day of Atonement, you walk into a synagogue, the very first prayer that you recite, you stand – and it's the only prayer for which you stand – and you repeat three times a short prayer. The Kol Nidre. In that prayer, you enter into an agreement with God Almighty that any oath, vow, or pledge that you may make during the next twelve months – any oath, vow or pledge that you may take during the next twelve months shall be null and void. The oath shall not be an oath; the vow shall not be a vow; the pledge shall not be a pledge. They shall have no force and effect, and so forth and so on.

And further than that, the Talmud teaches: "Don't forget – whenever you take an oath, vow, and pledge – remember the Kol Nidre prayer that you recited on the Day of Atonement, and that exempts you from fulfilling that". How much can you depend on their loyalty? You can depend upon their loyalty as much as the Germans depended upon it in 1916. And we're going to suffer the same fate as Germany suffered, and for the same reason. You can't depend upon something as insecure as the leadership that is not obliged to respect an oath, vow or pledge. Now I could go on and recite many other things to you, but I would have a little respect for your time, and you want to really, uh, get through with all of this. Tomorrow's going to be a long day. Now I want to say one thing. You ask me. . . well, you think to yourself: "well how did this fellow get mixed up in this the way he got mixed up in it." Well, I opened my mouth in 1945, and I took big pages in newspapers and tried to tell the American people what I'm telling you. And one newspaper after another refused the advertisement. And when I couldn't find a newspaper to take them – I paid cash, not credit – what happened? My lawyer told me, "There's an editor over in Jersey with a paper who will take your announcement". So, I

was brought together with Mr. McGinley, and that's how I met him.

So somebody told me the lawyer who introduced me, who was the son of the Dean of the Methodist Bishop, he said: "Well, I think he's a little anti-Semitic. I don't know whether I can get him over here. So he brought him over to my apartment and we hit it off wonderfully, and have since then. Now, I say this, and I say it without any qualifications. I say it without any reservations. And I say it without any hesitation. . . if it wasn't for the work that Mr. Conley McGinley did with "Common Sense" – he's been sending out from 1,800,000 to 2,000,000 every year – if it wasn't for the work he's been doing sending those out for fifteen years now, we would already be a communist country. Nobody has done what he did to light fires. Many of the other active persons in this fight learned all about it for the first time through "Common Sense". Now, I have been very active in helping him all I could. I'm not as flush as I was. I cannot go on spending the money. . . I'm not going to take up a collection. Don't worry. I see five people getting up to leave. (laughter)

I haven't got the money that I used to spend. I used to print a quarter of a million of them out of my own pocket and send them out. Mr. McGinley, when I first met him, had maybe 5,000 printed and circulated them locally. So I said, "With what you know and what I know, we can really do a good job". So I started printing in outside shops of big newspaper companies, a quarter of a million, and paid for them. Well, there's always a bottom to the barrel. I suppose we've all reached that at times. I'm not so poor that I can't live without working and that's what worries the Anti-Defamation League. I can just get by without going and asking for a job or getting on the bread line. But Mr. McGinley is working. He's sick and he's going at this stronger than ever. And all I want to say is that they want to close up "Common Sense" more than any other single thing in the whole world, as a death-blow to the fight Christians are making to survive. So I just want to tell you this. All they do is circulate rumors: "Mr. Benjamin H. Freedman is the wealthy backer of 'Common Sense'." The reason they do that is to discourage the people in the United States: don't send any money to Common Sense. They don't need it. They've got the wealthy Mr. Freedman as a backer. That all has strategy. They don't want to advertise me so that people that have real estate or securities to sell will come and call on me. They just want people to lay off "Common Sense". And all I'm telling you is, I do try to help him, but I haven't been able to. And I will be very honest. One thing I won't do is lie. In the last year I've had so much sickness in my family that I could not give him one dollar.

How he's managed to survive, I don't know. God alone knows. And he must be in God's care because how he's pulled through his sickness and with his financial troubles, I don't know. But that press is working. . . and every two weeks about a hundred or a hundred-fifty-thousand of "Common Sense" go out with a new message. And if that information could be multiplied. . . if people that now get it could buy ten or twenty five, or fifty, give them around. Plow that field. Sow those seeds, you don't know which will take root, but for God's sake, this is our last chance. [Freedman then discusses the

importance of people forgoing unnecessary purchases to 'buy more stuff', play golf, etc., and use the money to keep "Common Sense" going. He explains that the paper is going in debt; could be closed down and he (Freedman) no longer has the funds, having spent some \$2,400,000 in his attempt to bring the information to the American public and elected officials. He then asks for questions from the audience.)

Question inaudible] Freedman: All right, I'll comment on that. This is rather deep, but you all have a very high degree of intelligence, so I'm going to make an attempt. In the time of Bible history, there was a geographic area known as Judea. Judea was a province of the Roman Empire. Now, a person who lived in Judea was known as a Judean, and in Latin it was Judaeus; in Greek it was Judaius. Those are the two words, in Greek and Latin, for a Judean. Now, in Latin and Greek there is no such letter as 'j', and the first syllable of Judaeus and Judaius starts 'ghu'. Now, when the Bible was written, it was first written in Greek, Latin, Panantic, Syriac, Aramaic... all those languages. Never Was the word Jew in any of them because the word didn't exist. Judea was the country, and the people were Judeans, and Jesus was referred to only as a Judean. I've seen those early... the earliest scripts available. In 1345, a man by the name of Wycliffe in England thought that it was time to translate the Bible into English. There was no English edition of the Bible because who the Devil could read? It was only the educated church people who could read Latin and Greek, Syriac, Aramaic and the other languages. Anyhow, Wycliffe translated the Bible into English. But in it, he had to look around for some words for Judaeas and Judaius.

There was no English word because Judea had passed out of existence. There was no Judea. People had long ago forgotten that. So in the first translation he used the word, in referring to Jesus, as 'gyu', "jew". At the time, there was no printing press. Then, between 1345 and the 17th century, when the press came into use, that word passed through so many changes... I have them all here. If you want I can read them to you. I will. That word 'gyu' which was in the Wycliffe Bible became. . . first it was 'gyu', then 'giu', then 'iu' (because the 'i' in Latin is pronounced like the 'j'. Julius Caesar is 'lul' because there is no 'j' in Latin) then 'iuw', then 'ieuu', then 'ieuy', then 'iwe', then 'iow', then 'iewe', all in Bibles as time went on. Then 'ieue', then 'iue', then 'ive', and then 'ivw', and finally in the 18th century... 'jew'. Jew. All the corrupt and contracted forms for Judaius, and Judaeas in Latin. Now, there was no such thing as 'Jew', and any theologian – I've lectured in maybe 20 of the most prominent theological seminaries in this country, and two in Europe – there was no such word as Jew. There only was Judea, and Jesus was a Judean and the first English use of a word in an English bible to describe him was 'gyu' – Jew. A contracted and shortened form of Judaeus, just the same as we call a laboratory a 'lab', and gasoline 'gas'... a tendency to short up.

So, in England there were no public schools; people didn't know how to read; it looked like a scrambled alphabet so they made a short word out of it. Now for a theologian to say that you can't harm the Jews, is just ridiculous. I'd like to know where in the

scriptures it says that. I'd like to know the text. Look at what happened to Germany for touching Jews. What would you, as a citizen of the United States, do to people who did to you what the so-called Jews – the Pollacks and Litvaks and Litzianers – they weren't Jews, as I just explained to you. They were Eastern Europeans who'd been converted to Talmudism. There was no such thing as Judaism. Judaism was a name given in recent years to this religion known in Bible history as Torah [inaudible]. No Jew or no educated person ever heard of Judaism. It didn't exist. They pulled it out of the air. . . a meaningless word. Just like 'anti-Semitic'. The Arab is a Semite. And the Christians talk about people who don't like Jews as anti-Semites, and they call all the Arabs anti-Semites. The only Semites in the world are the Arabs. There isn't one Jew who's a Semite. They're all Turkothean Mongoloids. The Eastern european Jews. So, they brainwashed the public, and if you will invite me to meet this reverend who told you these things, I'll convince him and it'll be one step in the right direction. I'll go wherever I have to go to meet him.

—Next Question— Yes, ma'am. Well... I can answer that. First of all, your first premise is wrong. Your first premise that all the Jews are loyal to each other is wrong. Because, the Eastern European Jews outnumber all the rest by so many that they create the impression that they are the Jewish 'race'; that they are the Jewish nation; that they are the Jewish people. . . and the Christians swallow it like a cream puff. But in 1844 the German rabbis called a conference of rabbis from all over the world for the purpose of abolishing the Kol Nidre from the Day of Atonement religious ceremony. In Brunswick, Germany, where that conference was held in 1844, there was almost a terrific riot. A civil war. The Eastern Europeans said, "What the hell. We should give up Kol Nidre? That gives us our grip on our people. We give them a franchise so they can tell the Christians, 'Go to hell. We'll make any deal you want', but they don't have to carry it out. That gives us our grip on our people". So, they're not so united, and if you knew the feeling that exists. . .

Now, I'll also show you from an official document by the man responsible for. . . uh, who baptized this race. Here is a paper that we obtained from the archives of the Zionist organization in New York City, and in it is the manuscript by Sir James A. Malcolm, who – on behalf of the British Cabinet – negotiated the deal with these Zionists. And in here he says that all the jews in England were against it. The Jews who had been there for years, the [inaudible - probably Sephardim], those who had Portuguese and Spanish ad Dutch ancestry... who were monotheists and believed in that religious belief. That was while the Eastern European Jews were still running around in the heart of Asia and then came into Europe. But they had no more to do with them than. . . can we talk about a Christian 'race'? or a Christian religion?... or are the Christians united? So the same disunity is among the Jews. And I'll show you in this same document that when they went to France to try and get the French government to back that Zionist venture, there was only one Jew in France who was for it. That was Rothschild, and they did it because they were interested in the oil and the Suez Canal.

—Next Question— [Question inaudible] Freedman: You know why? Because if they don't, they're decked up. They come around and they tell you how much you must give, and if you don't . . . oh, you're anti-Semitic. Then none of their friends will have anything to do with them, and they start a smear campaign. . . and you have got to give. In New York city, in the garment center, there are twelve manufacturers in the building. And when the drive is on to sell Israel Bonds, the United Jewish Drive, they put a big scoreboard with the names of the firms and opposite them, as you make the amount they put you down for, they put a gold star after the name. Then, the buyers are told, "When you come into that building to call on someone and they haven't got a gold star, tell them that you won't buy from them until they have the gold star". BLACKMAIL. I don't know what else you can call it. Then what do they do? They tell you it's for 'humanitarian purposes' and they send maybe \$8 billion dollars to Israel, tax exempt, tax deductible. So if they hadn't sent that eight billion dollars to Israel, seven billion of it would have gone into the U.S. Treasury as income tax. So what happens? That seven billion dollars deficit – that air pocket – the gullible Christians have to make up.

They put a bigger tax on gas or bread or corporation tax. Somebody has to pay the housekeeping expenses for the government. So why do you let these people send their money over there to buy guns to drive people out of their ancient homeland? And you say, "Oh, well. The poor Jews. They have no place to go and they've been persecuted all their lives". They've never been persecuted for their religion. And I wish I had two rows of Rabbis here to challenge me. Never once, in all of history, have they been persecuted for their religion. Do you know why the Jews were driven out of England? King Edward the First in 1285 drove them out, and they never came back until the Cromwell Revolution which was financed by the Rothschilds. For four-hundred years there wasn't a Jew. But do you know why they were driven out? Because in the Christian faith and the Moslem faith it's a sin to charge 'rent' for the use of money. In other words - what we call interest [usury] is a sin.

So the Jews had a monopoly in England and they charged so much interest, and when the Lords and Dukes couldn't pay, they [Jews] foreclosed. And they were creating so much trouble that the king of England finally made himself their partner, because when they they came to foreclose, some of these dukes bumped off the Jews. . . the money-lenders. So the king finally said – and this is all in history, look up Tianson [Tennyson?] or Rourke, the History of the Jews in England; two books you can find in your library. When the king found out what the trouble was all about, and how much money they were making, he declared himself a fifty-percent partner of the money lenders. Edward the First. And for many years, one-third of the revenues of the British Treasury came from the fifty-percent interest in money-lending by the Jews. But it got worse and worse. So much worse that when the Lords and Dukes kept killing the money-lenders, the King then said, "I declare myself the heir of all the money-lenders. If they're killed you have to pay me, because I'm his sole heir". That made so much trouble, because the King had to go out and collect the money with an army, so he told the Jews to get out. There were

15,000 of them, and they had to get out, and they went across to Ireland, and that's how Ireland got to be part of the United Kingdom.

When King Edward found out what they were doing, he decided to take Ireland for himself before someone else did. He sent Robert Southgard with a mercenary army and conquered Ireland. So, show me one time where a Jew was persecuted in any country because of his religion. It has never happened. It's always their impact on the political, social, or economic customs and traditions of the community in which they settle.

——Next Question—— [Question inaudible] Freedman: Yes, sir. Well, they say most of those things themselves. It was unnecessary for Benjamin Franklin to say it. Most of those things they say themselves. But Benjamin Franklin observed, and by hearsay understood, what was happening in Europe. When Russia, in 920 was formed, and gradually surrounded the Khazar Kingdom, and absorbed them, most of the well-to-do Khazars fled to Western Europe and brought with them the very things to which you object and I object and a lot of other people object. The customs, the habits, the instincts with which they were endowed. When Benjamin Franklin referred to them as Jews because that's the name that they went by, and when the Christians first heard that these people who were fleeing from Russia – who they were – that they had practiced this Talmudic faith – the Christians in Western Europe said, "They must be the remnants of the lost ten tribes!" And Mr. Grutz, the greatest historian amongst the Jews, said that – and he's probably as good an authority on that subject as there is. So when Ben Franklin came to Europe in the 18th century, he already saw the results of what these people had done after they left their homeland. And every word of it is true... they say it themselves. I can give you half a dozen books they've written in which they say the same thing: When they have money they become tyrants. And when they become defeated, they become ruthless. They're only barbarians. They're the descendants of Asiatic Mongols and they will do anything to accomplish their purpose. What right did they have to take over Russia the way they did? The Czar had abdicated nine or ten months before that. There was no need for them. . . . they were going to have a constitutional monarchy. But they didn't want that. When the constitutional monarchy was to assemble in November, they mowed them all down and established the Soviet Union.

There was no need for that. But they thought, "Now is the time", and if you will look in the Encyclopedia Britannica under the word 'Bolshevism', you'll find the five laws there that Lenin put down for a successful revolution. One of them is, "Wait for the right time, and then give them everything you've got". It would pay you to read that. You'd also find that Mr. Harold Blacktree, who wrote the article for the Encyclopedia Britannica states that the Jews conceived and created and cultivated the Communist movement. And that their energy made them the spearhead of the movement. Harold Blacktree wrote it and no one knew more about Communism than he. And the Encyclopedia Britannica for 25 years has been printing it.

——Next Question—— [Question inaudible] Freedman: Well, I can't advocate that you do anything that's criminal, but I can tell you this. You can start what I call an

endless chain. If you can get your friends to write, objectively, here is the statement: Mr. Kennedy's office gave me this himself. Mr. Smith, who succeeded Mr. Kennedy, took over his office – was in his office – and gave me this. He delivered this on the 25th, and it says here: "For release to AM (that means morning papers), August 25th". "Israel is here to stay. It is a national commitment, special obligation of the Democratic Party. The White House must take the lead. American intervention. We will act promptly and decisively against any nation in the Middle East which attacks its neighbor. I propose that we make clear to both Israel and the Arab states our guarantee that we will act with whatever force and speed are necessary to halt any aggression by any nation".

Well, do you call the return of people to their homeland [the Arab Palestinians] aggression? Is Mr. Kennedy going to do that? Suppose three million Mexicans came into Texas and drove the six million Texans into the deserts of Arizona and New Mexico. Suppose these Mexicans were slipped in there armed – the Texans were disarmed – and one night they drove them all out of Texas and declared themselves the Republic of the Alamo. What would the United States say? Would we say it's aggression for these Texans to try to get their homes back from the Mexican thieves? Suppose the Negroes in Alabama were secretly armed by the Soviets and overnight they rose up and drove all the whites into the swamps of Mississippi and Georgia and Florida. . . . drove them out completely, and declared themselves the Republic of Ham, or the Republic of something-or-other. Would we call it aggression if these people, the whites of Alabama, tried to go back to their homes? Would we. . . . what would we think if the soviet Union said, "No, those Negroes now occupy them! Leave them there!", or "No, those Mexicans are in Texas. they declared themselves a sovereign state. Leave them there. You have plenty of room in Utah and Nevada. Settle somewhere else".

Would we call it aggression if the Alabama whites or the Texans wanted to go back to their homes? So now, you've got to write to President Kennedy and say, "We do not consider it aggression in the sense that you use the word, if these people want to return to their homes as the United Nations – fifteen times in the last twelve years – called upon the Zionists in occupation of Palestine to allow the Arab Palestinians to return to their former homes and farms".

[End of transcript of Benjamin Freedman speech, given in 1961 at the Willard Hotel in Washington, D.C.]

14. Subverting Western Civilization

This chapter is a summary of the relevant points in “The Culture of Critique” which focuses on Jewish influence trying to subvert traditional western culture with “intellectual” methods.

14.1 Jews and the Radical Critique of Gentile Culture: Introduction

For 1,500 years Jewish society had been designed to produce intellectuals. . . Jewish society was geared to support them. . . Rich merchants married sages’ daughters; . . . Quite suddenly, around the year 1800, this ancient and highly efficient social machine for the production of intellectuals began to shift its output. Instead of pouring all its products into the closed circuit of rabbinical studies, . . . it unleashed a significant and evergrowing proportion of them into secular life. This was an event of shattering importance in world history.

There is no implication here of a unified Jewish “conspiracy” to undermine gentile culture, as portrayed in the notorious Protocols of the Elders of Zion. Since the Enlightenment, Judaism has never been a unified, monolithic movement, and there has clearly been a great deal of disagreement among Jews as to how to protect themselves and attain their interests during this period.

The movements discussed in this volume (Boasian anthropology, political radicalism, psychoanalysis, the Frankfurt School of Social Research, and the New York Intellectuals) were advanced by relatively few individuals whose views may not have been known or understood by the majority of the Jewish community. The argument is that Jews dominated these intellectual movements, that a strong sense of Jewish identity was characteristic of the great majority of these individuals, and that these individuals were pursuing a Jewish agenda in and participating in these movements. Thus there is no implication that Judaism constitutes a unified movement or that all segments of the Jewish community participated in these movements. Jews may constitute a predominant or necessary element in radical political movements or movements in the social sciences, and Jewish identification may be highly compatible with or even facilitate these movements without most Jews being involved in these movements. As a result, the question of the overall effects of Jewish influences on gentile culture is independent of the question of whether most or all Jews supported the movements to alter gentile culture. This distinction is important because on the one hand anti-Semites have often implicitly or explicitly assumed that Jewish involvement in radical political movements was part of an overarching Jewish strategy that also included wealthy Jewish capitalists, as well as Jewish involve-

ment in the media, the academy, and other areas of public life. On the other hand, Jews attempting to defuse the anti-Semitism resulting from the fact that Jews have played a predominant role in many radical political movements have often pointed to the fact that only a minority of Jews are involved and that gentiles are also involved in the movements.

Similarly, the fact that most Jews prior to the 1930s were not Zionists, at least overtly, surely does not imply that Jewish identification was irrelevant to Zionism, or that Jews did not in fact constitute a predominant influence on Zionism, or that Zionism did not have effects on gentile societies, or that some gentiles did not become ardent Zionists. Political radicalism has been one choice among many available to Jews in the post-Enlightenment world, and there is no implication here that Judaism constitutes a monolithic unified group in the post-Enlightenment world. That Jews have been more likely than gentiles to choose radical political alternatives and that Jews have been a predominant influence in some radical political movements are therefore facts highly relevant to the present project. That some gentiles were involved in these movements is not surprising either. Judaism may come to be viewed as subversive when Jews attempt to inculcate negative perceptions of gentile culture among gentiles. The association of Judaism with subversive ideologies has a long history. Noting the association between Jews and subversive ideas in Muslim countries, Lewis (1984, 104) states that the theme of Jewish subversion is also familiar in "other times and places." Johnson (1988, 214-215) finds that beginning in the Middle Ages converted Jews, especially those forced to convert, were "a critical, questing, disturbing element within the intelligentsia. . . [Thus] the claim that they were intellectually subversive had an element of truth." The title of a recent book on Jewish art in the Middle Ages expresses this theme well: *Dreams of Subversion in Medieval Jewish Art and Literature* (M. M. Epstein 1997). Epstein comments that "One can sense the anger Jews of the late Middle Ages must have felt when they called for the destruction of Christendom".

This association of Jews with subversive ideologies continued during and after the Enlightenment as Jews were able to participate in public intellectual debate in Western Europe. Paul Johnson (1988, 291-292), writing of Baruch Spinoza, terms him "the first major example of the sheer destructive power of Jewish rationalism once it escaped the restraints of the traditional community." Similarly, Heinrich Heine is "both the prototype and the archetype of a new figure in European literature: the Jewish radical man of letters, using his skill, reputation and popularity to undermine the intellectual confidence of the established order". his "sheer destructive power" of the Jewish intellect was an important aspect of the pre-National Socialist era in Germany. A prominent feature of anti-Semitism among the Social Conservatives and racial anti-Semites in Germany from 1870 to 1933 was their belief that Jews were instrumental in developing ideas that subverted traditional German attitudes and beliefs. Jews were vastly overrepresented as editors and writers during the 1920s in Germany, and "a more general cause of increased anti-Semitism was the very strong and unfortunate propensity of dissident Jews to attack national institutions and customs in both socialist and non-socialist publications"

Jews were not simply overrepresented among radical journalists, intellectuals, and “producers of culture” in Weimar Germany, they essentially created these movements. “They violently attacked everything about German society. They despised the military, the judiciary, and the middle class in general”. Anti-Semitism among university professors during the Weimar period was partially fueled by the perception that “the Jew represented the critical or ‘negative’ aspects of modern thought, the acids of analysis and skepticism that helped to dissolve the moral certainties, patriotic commitment, and social cohesion of modern states”.

Reflecting this perception, National Socialist propaganda during the period claimed that Jews attempted to undermine the social cohesion of gentile society while remaining committed to a highly cohesive group themselves—an intellectual double standard in which the basis of social cohesion among gentiles was subjected to intense criticism while the Jews “would retain their international cohesiveness, blood ties, and spiritual unity” (Aschheim 1985, 239). Viewed from this perspective, an important goal of Jewish intellectual effort may be understood as attempting to undermine cohesive gentile group strategies while continuing to engage in their own highly cohesive group strategy.

Jews have also been at the forefront of the adversarial culture in the United States, England, and France since the mid-1960s, especially as defenders of the adversary culture in the media and the academic world. Stein (1979, 28; see also Lichter et al. 1994; Powers et al. 1996) shows that his sample of predominantly Jewish writers and producers of television shows in the 1970s had very negative attitudes toward what they viewed as a gentile-dominated cultural establishment, although their most negative comments were elicited in informal conversation rather than during formal interviews. Television portrayals of gentile establishment figures in business and the military tended to be very negative. For example, “the writers clearly thought of military men as clean-shaven, blond, and of completely WASP background. In the minds of a few of the people I interviewed, these blond officers were always a hair’s breadth away from becoming National Socialists. They were thought of as part of an Aryan ruling class that actually or potentially repressed those of different ethnic backgrounds”

Indeed, Glazer and Moynihan (1963/1970) credit the emergence of the adversary culture in the United States as a triumph of the New York Jewish cultural-political perspective. Jewish writers and visual artists (including E. L. Doctorow, Norman Mailer, Joseph Heller,⁵¹ Frederick Wiseman, and Norman Lear) were disproportionately involved in attempts to portray American society as “sick” (Rothman & Lichter 1982, 120). A common technique of cultural subversion “involves an attack upon genuine inequities or irrationalities. Since all societies abound in both, there is never an absence of targets. However, the attack is generally not directed at the particular inequity or irrationality per se. Rather, such inequities or irrationalities are used as a means for achieving a larger purpose: the general weakening of the social order itself”.

In this volume I will concentrate on Jewish involvement in movements opposed to evolutionary, biological, and genetic findings in the social sciences, radical political ideology,

psychoanalysis, the Frankfurt School of Social Research, and the New York Intellectuals. In several of the movements discussed in the following chapters it is of considerable importance that their propagators have attempted to clothe their rhetoric in the garb of science—the modern arbiter of truth and intellectual respectability. As White (1966, 2) notes with respect to the Boasian school of anthropology, the aura of science is deceptive: “They would make it appear and would have everyone believe that their choice of premises and goals has been determined by scientific considerations. This is definitely not the case. . . . They are obviously sincere. Their sincerity and group loyalty tend, however, to persuade and consequently to deceive.”

Conceptualizing the Jewish Radical Criticism of Gentile Society

The foregoing has documented a general tendency for Jewish intellectuals in a variety of periods to be involved with social criticism, and I have hinted at an analysis in terms of social identity theory. More formally, two quite different types of reasons explain why Jews might be expected to advocate ideologies and political movements aimed at undermining the existing gentile social order.

First, such ideologies and movements may be directed at benefiting Jews economically or socially. Clearly one of the themes of post-Enlightenment Judaism has been the rapid upward mobility of Jews and attempts by gentile power structures to limit Jewish access to power and social status. Given this rather conspicuous reality, practical reasons of economic and political selfinterest would result in Jews being attracted to movements that criticized the gentile power structure or even advocated overthrowing it entirely. Thus the czarist government of Russia enforced restrictions on Jews mainly out of fear that Jews would overwhelm gentile Russians in free economic competition. These czarist restrictions on Jews were a prominent rallying point for Jews around the world, and it is not at all unreasonable to suppose that Jewish participation in radical movements in Russia was motivated by perceived Jewish interest in overthrowing the czarist regime. Indeed, Arthur Liebman (1979, 29ff) notes that Jewish political radicalism in czarist Russia must be understood as resulting from economic restrictions on Jews that were enforced by the government in the context of considerable Jewish poverty and a very rapid Jewish demographic increase. Similarly, well into the 1930s the Jewish socialist labor movement in the United States aimed at bettering the working conditions of its predominantly Jewish membership.

Another practical goal of Jewish political and intellectual movements has been to combat anti-Semitism. For example, Jewish attraction to socialism in many countries in the 1930s was motivated partly by communist opposition to fascism and anti-Semitism. The general association between anti-Semitism and conservative political views has often been advanced as an explanation for Jewish involvement with the left, including the leftist tendencies of many wealthy Jews. Combating anti-Semitism also became a prime goal of Jewish radicals in the United States after Jews had predominantly moved into the middle

class Rising anti-Semitism and consequent restrictions on Jewish upward mobility during the 1930s also resulted in an attraction of Jews to the left.

Jewish involvement in social criticism may be influenced by social identity processes independent of any practical goal such as ending anti-Semitism. From the social identity perspective, the Jewish tendency to subvert the social order is thus expected to extend beyond developing ideologies and social programs that satisfy specific Jewish economic and social interests and extend to a general devaluation and critique of gentile culture—"the sheer destructive power of Jewish rationalism once it escaped the restraints of the traditional community".

Social identity processes would therefore be intensified by Jewish perceptions that gentile culture was hostile to Jews and that Jews had often been persecuted by gentiles. Thus Feldman finds very robust tendencies toward heightened Jewish identification and rejection of gentile culture consequent to anti-Semitism at the very beginnings of Judaism in the ancient world and throughout Jewish history. In *Lord George Bentinck: A Political Biography* (1852, 489), the nineteenth-century racial theorist Benjamin Disraeli, who had a very strong Jewish identity despite being a baptized Christian, stated that "persecution. . . although unjust may have reduced the modern Jews to a state almost justifying malignant vengeance. They may have become so odious and so hostile to mankind as to merit for their present conduct, no matter how occasioned, the obloquy and ill-treatment of the communities in which they dwell and with which they are scarcely permitted to mingle." The result, according to Disraeli, is that Jews would perceive gentile society in extremely negative terms and may attempt to overthrow the existing social order:

But existing society has chosen to persecute this race which should furnish its choice allies, and what have been the consequences? They may be traced in the last outbreak of the destructive principle in Europe. An insurrection takes place against tradition and aristocracy, against religion and property. . . 52 The people of God co-operate with atheists; the most skillful accumulators of property ally themselves with communists; the peculiar and chosen race touch the hand of all the scum and low castes of Europe! And all this because they wish to destroy that ungrateful Christendom which owes to them even its name, and whose tyranny they can no longer endure.

Indeed, Theodore Herzl espoused socialism in the 1890s as a Jewish response to continuing anti-Semitism, not because of its political goal of economic leveling, but because it would destroy the anti-Semitic gentile power structure: "From outcasts of society they [Jews] will become enemies of society. Ah, they are not protected in their civic honor, they are permitted to be insulted, scorned and on occasion also a bit plundered and maimed—what prevents them from going over to the side of anarchy?" Jews "no longer have a stake in the state. They will join the revolutionary parties, supplying or sharpening their weapons. They want to turn the Jews over to the mob—good, they themselves will go over to the people. Beware, they are at their limit; do not go too far".

The suggestion, consistent with social identity theory, is that a fundamental motivation

of Jewish intellectuals involved in social criticism has simply been hatred of the gentile-dominated power structure perceived as anti-Semitic. This deep antipathy toward the non-Jewish world can also be seen in sociologist and New York Intellectual Michael Walzer's (1994, 6-7) comment on the "pathologies of Jewish life," particularly "the sense that 'all the world is against us,' the resulting fear, resentment, and hatred of the goy, the secret dreams of reversal and triumph.

Indeed, intense hatred of perceived enemies appears to be an important psychological characteristic of Jews. It is remarkable that Schatz finds that while all Polish communists in the interwar period hated their enemies, Jewish communists had more perceived enemies and hated them more intensely. Jewish communists had more intensely negative feelings toward their enemies, indicating that Jews may be viewed as having hypertrophied social identity systems and an exaggerated proneness toward collectivist social structures. The greater intensity of Jewish hatred toward outgroups and perceived enemies may be simply an affective manifestation of these tendencies. There is evidence that Jews were highly compartmentalized in their emotional lives prone to alterations between positive social interactions (paradigmatically directed toward members of a perceived ingroup) and intense interpersonal hostility (paradigmatically directed toward members of a perceived outgroup). Social identity theory also predicts that Jewish intellectual activity will be directed at developing ideologies that affirm their own social identity in the face of the social categories developed by anti-Semites.

The other side of the coin is that Jews have often reacted quite negatively to Jewish writers who portray Jewish characters as having negative or disapproved traits. For example, Philip Roth has been extensively criticized by Jews and Jewish organizations for portraying such characters, or at least for portraying such characters in America, where his work could be read by anti-Semites.

The importance of social identity processes in Jewish intellectual activity was recognized some time ago by Thorstein Veblen (1934). Veblen described the preeminence of Jewish scholars and scientists in Europe and noted their tendency to be iconoclasts. He noted that the Enlightenment had destroyed the ability of Jewish intellectuals to find comfort in the identity provided by religion, but they do not therefore simply accept uncritically the intellectual structures of gentile society. By engaging in iconoclasm, Veblen suggests, Jews are in fact subjecting to criticism the basic social categorization system of the gentile world—a categorization system with which the gentile, but not the Jew, is comfortable. The Jew "is not... invested with the gentile's peculiar heritage of conventional preconceptions which have stood over, by inertia of habit, out of the gentile past, which go, on the one hand, to make the safe and sane gentile conservative and complacent, and which conduce also, on the other hand, to blur the safe and sane gentile's intellectual vision, and to leave him intellectually sessile".

Indeed, Jewish social scientists have at least sometimes been aware of these linkages: Peter Gay quotes the following from a 1926 letter written by Sigmund Freud, whose antipathy to Western culture is described in Chapter 4:

“Because I was a Jew, I found myself free from many prejudices which limited others in the employment of their intellects, and as a Jew I was prepared to go into opposition and to do without the agreement of the ‘compact majority.’” In a later letter, Freud stated that to accept psychoanalysis “called for a certain measure of readiness to accept a situation of solitary opposition—a situation with which nobody is more familiar than a Jew” There is a sense of alienation vis-à-vis the surrounding society. The Jewish intellectual, in the words of New York Intellectual and political radical Irving Howe, tends “to feel at some distance from society; to assume, almost as a birthright, a critical stance toward received dogmas, to recognize oneself as not quite at home in the world”.

“Because I was a Jew, I found myself free from many prejudices which limited others in the employment of their intellects, and as a Jew I was prepared to go into opposition and to do without the agreement of the ‘compact majority.’” In a later letter, Freud stated that to accept psychoanalysis “called for a certain measure of readiness to accept a situation of solitary opposition—a situation with which nobody is more familiar than a Jew” There is a sense of alienation vis-à-vis the surrounding society. The Jewish intellectual, in the words of New York Intellectual and political radical Irving Howe, tends “to feel at some distance from society; to assume, almost as a birthright, a critical stance toward received dogmas, to recognize oneself as not quite at home in the world”.

A critical component of minority group influence is intellectual consistency, and an important theme in the following will be that Jewishdominated intellectual movements have had a high degree of internal group cohesion and have often been typified by high levels of ingroup-outgroup thinking—a traditional aspect of Judaism. However, because these movements were intended to appeal to gentiles, they were forced to minimize any overt indication that Jewish group identity or Jewish group interests were important to the participants.

Such a result is also highly compatible with social identity theory: The extent to which individuals are willing to be influenced depends on their willingness to accept the social category from which the divergent opinion derives. For Jews intent on influencing the wider society, overt Jewish group identity and overtly stated Jewish interests could only detract from the ability of these movements to influence their intended targets. As a result, Jewish involvement in these movements was often actively concealed, and the intellectual structures themselves were phrased in universalist terms to minimize the importance of the social category of Jew-gentile.

14.2 The Boasian School of Anthropology and the Decline of Darwinism in the Social Sciences

Several writers have commented on the “radical changes” that occurred in the goals and methods of the social sciences consequent to the entry of Jews to these fields (Liebman 1973, 213; see also Degler 1991; Hollinger 1996; Horowitz 1993, 75; Rothman & Lichter

1982). Degler (1991, 188ff) notes that the shift away from Darwinism as the fundamental paradigm of the social sciences resulted from an ideological shift rather than from the emergence of any new empirical data. He also notes that Jewish intellectuals have been instrumental in the decline of Darwinism and other biological perspectives in American social science since the 1930s. The opposition of Jewish intellectuals to Darwinism has long been noticed.

In sociology, the advent of Jewish intellectuals in the pre-World War II period resulted in “a level of politicization unknown to sociology’s founding fathers. It is not only that the names of Marx, Weber, and Durkheim replaced those of Charles Darwin and Herbert Spencer, but also that the sense of America as a consensual experience gave way to a sense of America as a series of conflicting definitions“. In the post-World War II period, sociology “became populated by Jews to such a degree that jokes abounded: one did not need the synagogue, the minyan [i.e., the minimum number of Jews required for a communal religious service] was to be found in sociology departments; or, one did not need a sociology of Jewish life, since the two had become synonymous“.

Indeed, the ethnic conflict within American sociology parallels to a remarkable degree the ethnic conflict in American anthropology that is a theme of this chapter. Here the conflict was played out between leftist Jewish social scientists and an old-line, empirically oriented Protestant establishment that was eventually eclipsed:

American sociology has struggled with the contrary claims of those afflicted with physics envy and researchers... more engaged in the dilemmas of society. In that struggle, midwestern Protestant mandarins of positivist science often came into conflict with East Coast Jews who in turn wrestled with their own Marxist commitments; great quantitative researchers from abroad, like Paul Lazarsfeld at Columbia, sought to disrupt the complacency of native bean counters.

Degler emphasizes the role of Franz Boas (1858-1942) in the anti-Darwinian transformation of American social science: “Boas’ influence upon American social scientists in matters of race can hardly be exaggerated.“ Boas engaged in a “life-long assault on the idea that race was a primary source of the differences to be found in the mental or social capabilities of human groups. He accomplished his mission largely through his ceaseless, almost relentless articulation of the concept of culture“ . “Boas, almost single-handedly, developed in America the concept of culture, which, like a powerful solvent, would in time expunge race from the literature of social science“.

As Frank points out, “The preponderance of Jewish intellectuals in the early years of Boasian anthropology and the Jewish identities of anthropologists in subsequent generations has been downplayed in standard histories of the discipline.“ Jewish identifications and the pursuit of perceived Jewish interests, particularly in advocating an ideology of cultural pluralism as a model for Western societies, has been the “invisible subject“ of American anthropology - invisible because the ethnic identifications and ethnic interests of its advocates have been masked by a language of science in which such identifications

and interests were publicly illegitimate.

Boas was reared in a “Jewish-liberal” family in which the revolutionary ideals of 1848 remained influential.⁵⁹ He developed a “left-liberal posture which . . . is at once scientific and political”. Boas married within his ethnic group and was intensely concerned with anti-Semitism from an early period in his life . Alfred Kroeber recounted a story “which [Boas] is said to have revealed confidentially but which cannot be vouched for, . . . that on hearing an anti-Semitic insult in a public cafe, he threw the speaker out of doors, and was challenged. Next morning his adversary offered to apologize; but Boas insisted that the duel be gone through with. Apocryphal or not, the tale absolutely fits the character of the man as we know him in America.” In a comment that says much about Boas’s Jewish identification as well as his view of gentiles, Boas stated in response to a question regarding how he could have professional dealings with anti-Semites such as Charles Davenport, “If we Jews had to choose to work only with Gentiles certified to be a hundred percent free of anti-Semitism, who could we ever really work with?”

Moreover, as has been common among Jewish intellectuals in several historical eras, Boas was deeply alienated from and hostile toward gentile culture, particularly the cultural ideal of the Prussian aristocracy. I conclude that Boas had a strong Jewish identification and that he was deeply concerned about anti-Semitism. On the basis of the following, it is reasonable to suppose that his concern with anti-Semitism was a major influence in the development of American anthropology.

Boas’s theories were also meant to counter the racist theories of Houston Stewart Chamberlain and American eugenicists like Madison Grant, whose book, *The Passing of the Great Race*, was highly critical of Boas’s research on environmental influences on skull size. The result was that “in message and purpose, [Boas’s anthropology] was an explicitly antiracist science”. Grant characterized Jewish immigrants as ruthlessly self-interested whereas American Nordics were committing racial suicide and allowing themselves to be “elbowed out” of their own land (1921). Grant also believed Jews were engaged in a campaign to discredit racial research:

It is well-nigh impossible to publish in the American newspapers any reflection upon certain religions or races which are hysterically sensitive even when mentioned by name. . . . Abroad, conditions are fully as bad, and we have the authority of one of the most eminent anthropologists in France that the collection of anthropological measurements and data among French recruits at the outbreak of the Great War was prevented by Jewish influence, which aimed to suppress any suggestion of racial differentiation in France.

An important technique of the Boasian school was to cast doubt on general theories of human evolution, such as those implying developmental sequences, by emphasizing the vast diversity and chaotic minutiae of human behavior, as well as the relativism of standards of cultural evaluation. The Boasians argued that general theories of cultural evolution must await a detailed cataloguing of cultural diversity, but in fact no general theories emerged from this body of research in the ensuing half century of its dominance

of the profession.

Boas and his students were intensely concerned with pushing an ideological agenda within the American anthropological profession. Boas and his associates had a sense of group identity, a commitment to a common viewpoint, and an agenda to dominate the institutional structure of anthropology. They were a compact group with a clear intellectual and political agenda rather than individualist seekers of disinterested truth. The defeat of the Darwinians “had not happened without considerable exhortation of ‘every mother’s son’ standing for the ‘Right.’”

By 1915 the Boasians controlled the American Anthropological Association and held a two-thirds majority on its Executive Board. In 1919 Boas could state that “most of the anthropological work done at the present time in the United States” was done by his students at Columbia. By 1926 every major department of anthropology was headed by Boas’s students, the majority of whom were Jewish. His protégé Melville Herskovits noted that the four decades of the tenure of [Boas’s] professorship at Columbia gave a continuity to his teaching that permitted him to develop students who eventually made up the greater part of the significant professional core of American anthropologists, and who came to man and direct most of the major departments of anthropology in the United States. In their turn, they trained the students who... have continued the tradition in which their teachers were trained.

According to Leslie White, Boas’s most influential students were Ruth Benedict, Alexander Goldenweiser, Melville Herskovits, Alfred Kroeber, Robert Lowie, Margaret Mead, Paul Radin, Edward Sapir, and Leslie Spier. All of this “small, compact group of scholars... gathered about their leader” were Jews with the exception of Kroeber, Benedict, and Mead. Frank also mentions several other prominent first-generation Jewish students of Boas (Alexander Lesser, Ruth Bunzel, Gene [Regina] Weltfish, Esther Schiff Goldfrank, and Ruth Landes). Montagu, whose original name was Israel Ehrenberg, was a highly visible crusader in the battle against the idea of racial differences in mental capacities. He was also highly conscious of being Jewish, stating on one occasion that “if you are brought up a Jew, you know that all non-Jews are anti-Semitic... I think it is a good working hypothesis”.

Montagu asserted that race is a socially constructed myth. Humans are innately cooperative (but not innately aggressive) and there is a universal brotherhood among humans—a highly problematic idea for many in the wake of World War II. Mention also should be made of Otto Klineberg, a professor of psychology at Columbia. Klineberg was “tireless” and “ingenious” in his arguments against the reality of racial differences. He came under the influence of Boas at Columbia and dedicated his 1935 book *Race Differences* to him. Klineberg “made it his business to do for psychology what his friend and colleague at Columbia [Boas] had done for anthropology: to rid his discipline of racial explanations for human social differences”.

It is interesting in this regard that the members of the Boasian school who achieved the

greatest public renown were two gentiles, Benedict and Mead. As in several other prominent historical cases, gentiles became the publicly visible spokespersons for a movement dominated by Jews. Indeed, like Freud, Boas recruited gentiles into his movement out of concern “that his Jewishness would make his science appear partisan and thus compromised”. Boas devised Margaret Mead’s classic study on adolescence in Samoa with an eye to its usefulness in the nature-nurture debate raging at the time. The result of this research was *Coming of Age in Samoa* – a book that revolutionized American anthropology in the direction of radical environmentalism. Its success stemmed ultimately from its promotion by Boas’s students in departments of anthropology at prominent American universities. This work and Ruth Benedict’s *Patterns of Culture* were also widely influential among other social scientists, psychiatrists, and the public at large, so that “by the middle of the twentieth century, it was a commonplace for educated Americans to refer to human differences in cultural terms, and to say that ‘modern science has shown that all human races are equal’”.

The Boasian school of anthropology thus came to resemble in a microcosm key features of Judaism as a highly collectivist group evolutionary strategy: a high level of ingroup identification, exclusionary policies, and cohesiveness in pursuit of common interests. Boasian anthropology, at least during Boas’s lifetime, also resembled traditional Judaism in another critical manner: It was highly authoritarian and intolerant of dissent. As in the case of Freud, Boas was a patriarchal father figure, strongly supporting those who agreed with him and excluding those who did not. As in the case of Freud, in the eyes of his disciples virtually everything Boas did was of monumental importance and justified placing him among the intellectual giants of all time. Like Freud, Boas did not tolerate theoretical or ideological differences with his students. Individuals who disagreed with the leader or had personality clashes with him, such as Clark Wissler and Ralph Linton, were simply excluded from the movement.

The entire enterprise may thus be characterized as a highly authoritarian political movement centered around a charismatic leader. The results were extraordinarily successful: “The profession as a whole was united within a single national organization of academically oriented anthropologists. By and large, they shared a common understanding of the fundamental significance of the historically conditioned variety of human cultures in the determination of human behavior”. Research on racial differences ceased, and the profession completely excluded eugenicists and racial theorists like Madison Grant and Charles Davenport. By the mid-1930s the Boasian view of the cultural determination of human behavior had a strong influence on social scientists generally. The followers of Boas also eventually became some of the most influential academic supporters of psychoanalysis. Marvin Harris notes that psychoanalysis was adopted by the Boasian school because of its utility as a critique of Euro-American culture, and, indeed, as we shall see in later chapters, psychoanalysis is an ideal vehicle of cultural critique. In the hands of the Boasian school, psychoanalysis was completely stripped of its evolutionary associations and there was a much greater accommodation to the importance of cultural variables.

Cultural critique was also an important aspect of the Boasian school. Stocking shows that several prominent Boasians, including Robert Lowie and Edward Sapir, were involved in the cultural criticism of the 1920s which centered around the perception of American culture as overly homogeneous, hypocritical, and emotionally and esthetically repressive (especially with regard to sexuality). Central to this program was creating ethnographies of idyllic cultures that were free of the negatively perceived traits that were attributed to Western culture. Cultural criticism was a central feature of the two most prominent Boasian ethnographies, *Coming of Age in Samoa* and *Patterns of Culture*. These works are not only erroneous but systematically misrepresent key issues related to evolutionary perspectives on human behavior. For example, Benedict's Zuni were described as being free of war, homicide, and concern with accumulation of wealth. Children were not disciplined. Sex was casual, with little concern for virginity, sexual possessiveness, or paternity confidence. Contemporary Western societies are, of course, the opposite of these idyllic paradises, and Benedict suggests that we should study such cultures in order "to pass judgment on the dominant traits of our own civilization". Mead's similar portrayal of the Samoans ignored her own evidence contrary to her thesis. Negatively perceived behaviors of Mead's Samoans, such as rape and concern for virginity, were attributed to Western influence.

Indeed, one consequence of the triumph of the Boasians was that there was almost no research on warfare and violence among the peoples studied by anthropologists. Warfare and warriors were ignored, and cultures were conceived as consisting of myth-makers and gift-givers. (Orans shows that Mead systematically ignored cases of rape, violence, revolution, and competition in her account of Samoa.) Only five articles on the anthropology of war appeared during the 1950s. Revealingly, when Harry Turney-High published his volume *Primitive Warfare* in 1949 documenting the universality of warfare and its oftentimes awesome savagery, the book was completely ignored by the anthropological profession - another example of the exclusionary tactics used against dissenters among the Boasians and characteristic of the other intellectual movements reviewed in this volume as well. Turney-High's massive data on non-Western peoples conflicted with the image of them favored by a highly politicized profession whose members simply excluded these data entirely from intellectual discourse.

The result was a "pacified past" and an "attitude of self-reproach" in which the behavior of primitive peoples was bowdlerized while the behavior of European peoples was not only excoriated as uniquely evil but also as responsible for all extant examples of warfare among primitive peoples. From this perspective, it is only the fundamental inadequacy of European culture that prevents an idyllic world free from between-group conflict. The reality, of course, is far different. Warfare was and remains a recurrent phenomenon among prestate societies. Surveys indicate over 90 percent of societies engage in warfare, the great majority engaging in military activities at least once per year.

Beyond Boas: Recent examples

Jewish influence on the social sciences has extended far beyond Boas and the American Anthropological Association. Hollinger notes “the transformation of the ethno-religious demography of American academic life by Jews” in the period from the 1930s to the 1960s, as well as the Jewish influence on trends toward the secularization of American society and in advancing an ideal of cosmopolitanism. As early as the early 1940s, this transformation resulted in “a secular, increasingly Jewish, decidedly left-of-center intelligentsia based largely but not exclusively in the disciplinary communities of philosophy and the social sciences” By 1968, Jews constituted 20 percent of the faculty of elite American colleges and universities and constituted 30 percent of the “most liberal” faculty. At this time, Jews, representing less than 3 percent of the population, constituted 25 percent of the social science faculty at elite universities and 40 percent of liberal faculty who published most. Jewish academics were also far more likely to support “progressive” or communist parties from the 1930s to the 1950s. In 1948 30 percent of Jewish faculty voted for the Progressive Party, compared to less than 5 percent for gentile faculty.

The attraction of Jewish intellectuals to the left is a general phenomenon and has typically co-occurred with a strong Jewish identity and sense of pursuing specifically Jewish interests. Stephen Jay Gould and Leon Kamin are good examples of these trends. Gould himself would appear to be a prime example of this conflation of personal and ethno-political interests in the construction of science. Gould (1992) has been an ardent, highly publicized opponent of evolutionary approaches to human behavior. Like many of the other prominent critics of sociobiology, Gould is Jewish, and Michael Ruse notes that a very prominent theme of Gould’s *The Mismeasure of Man* was how hereditarian views on intelligence had been used by “Teutonic supremacists” to discriminate against Jews early in the century. Gould’s views on the IQ debates of the 1920s and their link to the immigration issue and eventually the Holocaust bear scrutiny. They illustrate how skill as a propagandist and ethnic activist can be combined with a highly visible and prestigious academic position to have a major influence on public attitudes in an area of research with great implications for public policy. Ruse points out that Gould’s book was very passionately written and was “widely criticized” by historians of psychology, suggesting that Gould had allowed his feelings about anti-Semitism to color his scientific writings on genetic influences on individual differences in intelligence. Ruse goes on as follows:

It does not seem to me entirely implausible to suggest that Gould’s passion against human sociobiology was linked to the fear that it was yet another tool which could be used for antisemitic purposes. I did ask Gould about this once. . . . He did not entirely repudiate the idea, but inclined to think that the opposition stemmed more from Marxism, and as it so contingently happens, most American Marxists are from Eastern European Jewish families. Perhaps both factors were involved.

Gould’s comments highlight the fact that the role of Jewish academics in opposing Darwinian approaches to human behavior has often co-occurred with a strong commitment

to a leftist political agenda. Indeed, Gould has acknowledged that his theory of evolution as punctuated equilibria was attractive to him as a Marxist because it posited periodic revolutionary upheavals in evolution rather than conservative, gradualist change. Gould learned his Marxism “at his Daddy’s knee“, indicating that he grew up as part of the Jewish- Marxist subculture. In a recent article Gould (1996c) reminisces fondly about the Forward, a politically radical but also ethnically conscious Yiddish newspaper (see Ch. 3), stating that he recalls that many of his relatives bought the newspaper daily. As Arthur Hertzberg notes, “Those who read the Forward knew that the commitment of Jews to remain Jewish was beyond question and discussion.”

Kamin, the son of an immigrant rabbi from Poland, acknowledges that “the experience growing up Jewish in a small and predominantly Christian town strongly sensitized him to the power of the social environment in shaping personality” - a comment that also suggests that Kamin grew up with a strong Jewish identity. While at Harvard, Kamin joined the Communist Party and became the New England editor of the party’s newspaper. After resigning from the party, he became a target of Joseph McCarthy’s Senate Subcommittee Hearings in 1953. Kamin was charged and acquitted on technical grounds of charges of criminal contempt of Congress for failing to answer all the questions of the subcommittee. Fancher describes Kamin’s work on IQ as having “little pretense to ‘objectivity’” and suggests a link between Kamin’s background and his position on IQ: “No doubt reflecting that his own middle-European family [and, I suppose, other Jews] could have been excluded by the restrictive immigration laws, Kamin concluded that an arrogant and unfounded assumption of IQ heritability had helped produce an unjust social policy in the 1920s“.

Kamin and Gould have been in the forefront of spreading disinformation about the role of IQ testing in the immigration debates of the 1920s. Moreover, Kamin and Gould present a highly exaggerated and largely false account of the general attitudes of the testing community on the subject of ethnic group differences in intelligence as well as the role of IQ testing in the congressional debates of the period. This false picture of the 1920s debates was then used by Gould, Kamin, and others to argue that the “overtly racist immigration act” of 1924 (was passed because of racist bias emanating from the IQ-testing community and that this law was a primary cause of the death of Jews in the Holocaust. Thus Kamin (1974, 27) concluded that “the law, for which the science of mental testing may claim substantial credit, resulted in the deaths of literally hundreds of thousands of victims of the Nazi biological theorists. The victims were denied admission to the United States because the ‘German quota’ was filled.“

Similarly, Gould proposes a link between hereditarian views on IQ and the 1924 U.S. immigration law that restricted immigration from Eastern and Southern Europe and biased immigration in favor of the peoples of Northwestern Europe. The 1924 immigration law is then linked to the Holocaust:

The quotas...slowed immigration from southern and eastern Europe to a trickle. Throughout the 1930s, Jewish refugees, anticipating the holocaust, sought to emigrate,

but were not admitted. The legal quotas, and continuing eugenical propaganda, barred them even in years when inflated quotas for western and northern European nations were not filled. Chase (1977) has estimated that the quotas barred up to 6 million southern, central, and eastern Europeans between 1924 and the outbreak of World War II (assuming that immigration had continued at its pre-1924 rate). We know what happened to many who wished to leave but had nowhere to go. The paths to destruction are often indirect, but ideas can be agents as sure as guns and bombs.

Indeed, although there is no evidence that IQ testing or eugenic theories had anything more than a trivial influence on the 1924 immigration law, there is evidence that the law was perceived by Jews as directed against them. Perhaps most egregiously of all, Gould makes the amazing argument that he will continue to ignore all recent scholarship on IQ in favor of the older "classical" research because of the "transient and ephemeral" nature of contemporary scholarship (1996a, 22). The argument is that there is no progress in IQ research but only a recurrence of the same bad arguments—a comment that I doubt Gould would apply to any other area of science. Thus Gould continues to denigrate studies linking brain size with IQ despite a great deal of contrary research both prior to and especially since his 1981 edition. Using Magnetic Resonance Imaging to get a more accurate measure of brain size, modern research thus vindicates the discoveries of nineteenth-century pioneers like Paul Broca, Francis Galton, and Samuel George Morton who are systematically defamed by Gould.

In an article entitled "Homo deceptus: Never trust Stephen Jay Gould," journalist Robert Wright (1996), author of *The Moral Animal* (Basic Books, 1994), makes the same charge (that Gould takes credit for the work of others) in a debate over a flagrantly dishonest interpretation by Gould (1996b) of the evolutionary psychology of sex differences. Wright notes that Gould "has convinced the public he is not merely a great writer, but a great theorist of evolution. Yet among top-flight evolutionary biologists, Gould is considered a pest—not just a lightweight but an actively muddled man who has warped the public's understanding of Darwinism." A false picture perhaps, but one that is not without its usefulness in satisfying political and, I suppose, ethnic agendas.

Another prominent biologist, John Alcock (1997), provides an extended and, I think, accurate analysis of several aspects of Gould's rhetorical style: demonstrations of erudition - foreign phrases, poetry - irrelevant to the intellectual arguments but widely regarded even by his critics; branding the opposition with denigrating labels, such as "pop science," "pop psychology," "cardboard Darwinism," or "fundamentalist Darwinians" (similarly, Pinker [1997,] decries Gould's hyperbolic rhetoric, including his description of the ideas of evolutionary psychology as "'fatuous,' 'pathetic,' and 'egregiously simplistic' and his use of some twenty-five synonyms for 'fanatical' "); oversimplifying his opponents' positions in order to set up straw-man arguments, the classic being labeling his opponents as "genetic determinists"; protecting his own position by making illusory concessions to give the appearance of fairmindedness in the attempt to restrict debate; claiming the moral high ground; ignoring relevant data known to all in the scientific community; proposing non-

adaptationist alternatives without attempting to test them and ignoring data supporting adaptationist interpretations; arguing that proximate explanations (i.e., explanations of how a trait works at the neurophysiological level) render ultimate explanations (i.e., the adaptive function of the trait) unnecessary.

Richard Lerner (1992) in his *Final Solutions: Biology, Prejudice, and Genocide* is perhaps the most egregious example of a scientist motivated to discredit evolutionary-biological thinking because of putative links with anti-Semitism. Lerner is a prominent developmental psychologist, and his volume indicates an intense personal involvement directed at combating anti-Semitism by influencing theory in the behavioral sciences. Prior to discussing the explicit links between Lerner's theoretical perspective and his attempt to combat anti-Semitism, I will describe his theory and illustrate the type of strained thinking with which he has attempted to discredit the application of evolutionary thinking to human behavior. Central to this program is Lerner's rejection of biological determinism in favor of a dynamic, contextualist approach to human development. Lerner also rejects environmental determinism, but there is little discussion of the latter view because environmental determinism is "perhaps less often socially pernicious". In this regard, Lerner is surely wrong. A theory that there is no human nature would imply that humans could easily be programmed to accept all manner of exploitation, including slavery.

From a radical environmentalist perspective, it should not matter how societies are constructed, since people should be able to learn to accept any type of social structure. Women could easily be programmed to accept rape, and ethnic groups could be programmed to accept their own domination by other ethnic groups. The view that radical environmentalism is not socially pernicious also ignores the fact that the communist government of the Soviet Union murdered millions of its citizens and later engaged in officially sponsored anti-Semitism while committed to an ideology of radical environmentalism.

Lerner's dynamic contextualism pays lip service to biological influences while actually rendering them inconsequential and unanalyzable. This theory has strong roots in the developmental psychobiological tradition described above, and there are numerous references to these writers. The dynamic contextualist perspective conceptualizes development as a dialectical interaction between organism and environment. Biological influences are viewed as a reality, but they are ultimately unanalyzable, since they are viewed as being inextricably fused with environmental influences. The most notable conclusion is that any attempt to study genetic variation as an independently analyzable influence on individual differences (the program of the science of quantitative behavior genetics) is rejected. Many of the critics of sociobiology have also been strong opponents of behavior genetic research (e.g., S. J. Gould, J. Hirsch, L. Kamin, R. C. Lewontin, and S. Rose). For a particularly egregious example embodying practically every possible misunderstanding of basic behavior genetic concepts, see Gould (1998).

In his foreword to Lerner's book, Lewontin states that developmental contextualism is "the alternative to biological and cultural determinism. It is the statement of the developmental contextual view that is the important central point of *Final Solutions*, and it

is the full elaboration of that point of view that is a pressing program for social theory. Nowhere has this world view been put more succinctly than in Marx's third Thesis on Feurbach". Lewontin goes on to quote a passage from Marx that does indeed express something like the fundamental idea of developmental contextualism. Gould has also endorsed a Marxist dialectical perspective in the social sciences.

Lerner devotes much of his book to showing that dynamic contextualism, because of its emphasis on plasticity, provides a politically acceptable perspective on racial and sexual differences, as well as promising a hope for ending anti-Semitism. This type of messianic, redemptionist attempt to develop a universalist theoretical framework within which Jewish-gentile group differences are submerged in importance is a common feature of other predominantly Jewish movements in the twentieth century, including radical political theories and psychoanalysis. The common theme is that these ideologies have been consistently promoted by individuals who, like Lerner, are self-consciously pursuing a Jewish ethnic and political agenda. There is no question that Lerner strongly believes in the moral imperative of his position, but his moral crusade has led him well beyond science in his attempts to discredit biological theories in the interests of combating anti-Semitism.

The point here is that there is every reason to suppose that a major impetus for these attacks is an attempt to combat anti-Semitism. Lerner begins his preface to *Final Solutions: Biology, Prejudice, and Genocide* with an emotionally wrenching portrait of his childhood surrounded by stories of Nazi atrocities. "As a Jewish boy growing up in Brooklyn in the late 1940's and early 1950's I could not escape Hitler. He, Nazis, the Gestapo, Auschwitz were everywhere" Lerner re-creates a conversation with his grandmother describing the fate of some of his relatives at the hands of the Nazis. He asks why the Nazis hated the Jews, and his grandmother responds by saying, "Just because." Lerner states, "In the time that has passed since that afternoon in my grandmother's apartment I have learned—and increasingly so as the years go by—how deeply I was affected by these early lessons about Nazi genocide. I now understand that much of my life has been shaped by my attempts to go beyond the answer of 'Just because'".

The central message of Lerner's book is that there is a possible causal chain linking Darwinism to an ideology of genetic determinism, to the legitimization of the status quo as a biological imperative, to negatively evaluating individuals with "inferior" genotypes, to eugenics, and finally to destruction of those with inferior genes. This story line is said to have been played out in several historical instances, including the massacres of Native Americans and the Ottoman genocide of Armenians, and most particularly in the Holocaust. It is nowhere mentioned that an ideology of genetic determinism is hardly a necessary condition for genocide, since there are a great many historical examples of genocide in societies where Darwin was unknown, including the annihilation of the Amorites and Midianites by the Israelites described in the Tanakh - examples that are ignored by Lerner.

Lerner's agenda is to discredit evolutionary thinking because of its association with

Nazism. Lerner correctly describes Nazi ideology as essentially an ideology of group impermeability, "the belief that the world... may be divided unequivocally into two major groups: an ingroup comprising those possessing the best features of human existence, and an outgroup comprising the worst features of human existence. There can be no crossing-over between these groups, because blood, or genes, divides them". Similarly, Lewontin, in his foreword to Lerner's book, states that "whatever the generating forces that keep nationalism alive... they must, in the end, assert the unchanging and unchangeable nature of social identity... Exploiters and exploited alike share in the consciousness of a cultural and biological heritage that marks out indelible group boundaries that transcend human historical development".

Conclusion

A common thread of this chapter has been that scientific skepticism and what one might term "scientific obscurantism" have been useful tools in combating scientific theories one dislikes for deeper reasons. Thus, the Boasian demand for the highest standards of proof for generalizations about culture and for establishing a role for genetic variation in the development of individual differences coincided with the acceptance of an "anti-theory" of culture that was fundamentally in opposition to attempts to develop classifications and generalizations in the field.

Scientific skepticism regarding politically sensitive issues has also been a powerful trend in the writings of S. J. Gould. Jensen states of Gould's work on intelligence testing, "I believe that he has succeeded brilliantly in obfuscating all the important open questions that actually concern today's scientists." We have seen how R. C. Lewontin has linked theories of behavioral development with Marxist political ideology. As do Lerner and Gould, Lewontin advocates theories proposing that nature consists of extremely complex dialectical interactions between organism and environment. Lewontin rejects reductionistic scientific methods, such as quantitative behavioral genetics or the use of analysis of variance procedures, because they inevitably oversimplify real processes in their use of averages (Seegerstråle 1986). The result is a hyperpurism that settles for nothing less than absolute certainty and absolutely correct methodology, epistemology, and ontology. In developmental psychology such a program would ultimately lead to rejection of all generalizations, including those relating to the average effects of environments. By adopting this philosophy of science, Lewontin is able to discredit attempts by scientists to develop theories and generalizations and thus, in the name of scientific rigor, avoid the possibility of any politically unacceptable scientific findings.

Scientific skepticism is a powerful approach, since a very basic feature of science is an openness to criticism and a requirement that arguments be supported with evidence. As E. O. Wilson notes, "By adopting a narrow criterion of publishable research, Lewontin freed himself to pursue a political agenda unencumbered by science. He adopted the relativist view that accepted truth, unless based on ineluctable fact, is no more than a

reflection of dominant ideology and political power." Nevertheless, Lewontin portrays his ideologically inspired efforts as deriving from a concern for scientific rigor: "We demand certain canons of evidence and argument that are formal and without reference to empirical content... the logic of statistical inference; the power of replicating experiments; the distinction between observations and causal claims." Similarly, Gould rejects all accounts of the empirical data in the area of intelligence testing but provides no alternatives.

As with Boas, Lewontin holds biologically oriented research on humans to an extremely rigorous standard but is remarkably lenient in the standards required to prove biology has very little influence. Lewontin claims, for example, that "nearly all the biology of gender is bad science". And Lewontin states without argument or reference that "no one has ever found a correlation between cognitive ability and brain size". At this writing there have been at least 26 published studies on 39 independent samples showing a correlation of approximately 0.20 between head circumference and IQ (see Wickett et al. 1994); there have also been at least 6 published studies showing a correlation of approximately 0.40 between brain size and IQ using the more accurate technique of magnetic resonance imaging to directly scan the brain.

Given this body of findings, it is at least misleading to make such a statement, although Lewontin would presumably argue that none of these studies reach acceptable levels of scientific proof. Franz Boas would be proud.

14.3 Jews and the Left

The association between Jews and the political left has been widely noticed and commented on beginning in the nineteenth century. "Whatever their situation... in almost every country about which we have information, a segment of the Jewish community played a very vital role in movements designed to undermine the existing order" On the surface at least, Jewish involvement in radical political activity may seem surprising. Marxism, at least as envisaged by Marx, is the very antithesis of Judaism. Marxism is an exemplar of a universalist ideology in which ethnic and nationalist barriers within the society and indeed between societies are eventually removed in the interests of social harmony and a sense of communal interest. Moreover, Marx himself, though born of two ethnically Jewish parents, has been viewed by many as an anti-Semite.⁷¹ His critique of Judaism (*On the Jewish Question*) conceptualized Judaism as fundamentally concerned with egoistic money seeking; it had achieved world domination by making both man and nature into salable objects. Marx viewed Judaism as an abstract principle of human greed that would end in the communist society of the future. However, Marx argued against the idea that Jews must give up their Jewishness to be German citizens, and he envisioned that Judaism, freed from the principle of greed, would continue to exist in the transformed society after the revolution.

The Soviet Union and Communist Poland

The hypothesis that Jewish radicalism is compatible with Judaism as a group evolutionary strategy implies that radical Jews continue to identify as Jews. There is little doubt that the vast majority of the Jews who advocated leftist causes beginning in the late nineteenth century were strongly self-identified as Jews and saw no conflict between Judaism and radicalism. Indeed, the largest Jewish radical movements in both Russia and Poland were the Jewish Bunds which had an exclusively Jewish membership and a very clear program of pursuing specifically Jewish interests. The proletarianism of the Polish Bund was really part of an attempt to preserve their national identity as Jews.

Moreover, many Jewish members of the Communist Party of the Soviet Union appear to have been intent on establishing a form of secular Judaism rather than ending Jewish group continuity. The postrevolutionary Soviet government and the Jewish socialist movements struggled over the issue of the preservation of national identity. Despite an official ideology in which nationalism and ethnic separatism were viewed as reactionary, the Soviet government was forced to come to grips with the reality of very strong ethnic and national identifications within the Soviet Union. As a result, a Jewish Section of the Communist Party (Evseksiya) was created. This section “fought hard against the Zionist-Socialist Parties, against democratic Jewish communities, against the Jewish faith and against Hebrew culture. It had, however, succeeded in shaping a secular life pattern based on Yiddish as the recognized national language of the Jewish nationality; in fighting for Jewish national survival in the 1920s; and in working in the 1930s to slow down the assimilatory process of the Sovietization of Jewish language and culture”.

The result of these efforts was the development of a state-sponsored separatist Yiddish subculture, including Yiddish schools and even Yiddish soviets. This separatist culture was very aggressively sponsored by the Evseksiya. Reluctant Jewish parents were forced “by terror” to send their children to these culturally separatist schools rather than schools where the children would not have to relearn their subjects in the Russian language in order to pass entrance examinations. Despite their complete lack of identification with Judaism as a religion and despite their battles against some of the more salient signs of Jewish group separatism, membership in the Soviet Communist Party by these Jewish activists was not incompatible with developing mechanisms designed to ensure Jewish group continuity as a secular entity. In the event, apart from the offspring of interethnic marriages, very few Jews lost their Jewish identity during the entire Soviet era and the post-World War II years saw a powerful strengthening of Jewish culture and Zionism in the Soviet Union.

The conflict in the 1920s between Stalin and the Left Opposition, led by Trotsky, Grigory Zinoviev, Lev Kamenev, and Grigory Solkolnikov (all of whom were ethnic Jews), had strong overtones of a Jewishgentile group conflict: “The obvious ‘alienness’ allegedly uniting an entire bloc of candidates was a glaring circumstance”. For all of the participants, the Jewish or gentile backgrounds of their adversaries was highly salient, and indeed

Sidney Hook (1949, 464) notes that non-Jewish Stalinists used anti-Semitic arguments against the Trotskyists. Throughout this period into the 1930s “for the Kremlin and the Lubyanka [the Russian secret police] it was not religion but blood that determined Jewishness“. Indeed, the secret police used ethnic outsiders (e.g., Jews in the traditionally anti-Semitic Ukraine) as agents because they would have less sympathy with the natives - a policy that makes excellent evolutionary sense. Jewish ethnic background was thus important not only to gentiles but was subjectively important to Jews as well.

In terms of social identity theory, anti-Semitism would make it difficult to adopt the identity of the surrounding culture. Traditional Jewish separatist practices combined with economic competition tend to result in anti-Semitism, but anti-Semitism in turn makes Jewish assimilation more difficult because it becomes more difficult for Jews to accept a non-Jewish identity. Thus in the interwar period in Poland Jewish cultural assimilation increased substantially; by 1939 one half of Jewish high school students called Polish their native language. However, the continuation of traditional Jewish culture among a substantial proportion of Jews and its correlative anti-Semitism resulted in a barrier for Jews in adopting a Polish identification.

From the standpoint of gentiles, however, anti-Semitic reactions to individuals like Luxemburg and other outwardly assimilating Jews may be viewed as resulting from an attempt to prevent deception by erring on the side of exaggerating the extent to which people who are ethnically Jews identify as Jews and are consciously attempting to advance specifically Jewish interests. Such perceptions of secular Jews and Jews who converted to Christianity have been a common feature of anti-Semitism in the post- Enlightenment world, and indeed, such Jews often maintained informal social and business networks that resulted in marriages with other baptized Jews and Jewish families who had not changed their surface religion.

Several factors favor our supposing that Jewish identification occurred in a substantial percentage of ethnic Jews: (1) People were classified as Jews depending on their ethnic background at least partly because of residual anti-Semitism; this would tend to impose a Jewish identity on these individuals and make it difficult to assume an exclusive identity as a member of a larger, more inclusive political group. (2) Many Jewish Bolsheviks, such as those in Evsektsiya and the JAC, aggressively sought to establish a secular Jewish subculture. (3) Very few Jews on the left envisioned a postrevolutionary society without a continuation of Judaism as a group; indeed, the predominant ideology among Jewish leftists was that postrevolutionary society would end anti-Semitism because it would end class conflict and the peculiar Jewish occupational profile. (4) The behavior of American communists shows that Jewish identity and the primacy of Jewish interests over communist interests were commonplace among individuals who were ethnically Jewish communists (see below). (5) The existence of Jewish crypsis in other times and places combined with the possibility that self-deception, identificatory flexibility, and identificatory ambivalence are important components of Judaism as a group evolutionary strategy.

Schatz's (1991) work on the group of Jewish communists who came to power in Poland

after World War II (termed by Schatz “the generation”) is important because it sheds light on the identificatory processes of an entire generation of communist Jews in Eastern Europe. Unlike the situation in the Soviet Union where the predominantly Jewish faction led by Trotsky was defeated, it is possible to trace the activities and identifications of a Jewish communist elite who actually obtained political power and held it for a significant period. The great majority of this group were socialized in very traditional Jewish families whose inner life, customs and folklore“, religious traditions, leisure time, contacts between generations, and ways of socializing were, despite variations, essentially permeated by traditional Jewish values and norms of conduct. . . . The core of cultural heritage was handed down to them through formal religious education and practice, through holiday celebrations, tales, and songs, through the stories told by parents and grandparents, through listening to discussions among their elders. . . . The result was a deep core of their identity, values, norms, and attitudes with which they entered the rebellious period of their youth and adulthood. This core was to be transformed in the processes of acculturation, secularization, and radicalization sometimes even to the point of explicit denial. However, it was through this deep layer that all later perceptions were filtered.

Note the implication that self-deceptive processes were at work here: Members of the generation denied the effects of a pervasive socialization experience that colored all of their subsequent perceptions, so that in a very real sense, they did not know how Jewish they were. Most of these individuals spoke Yiddish in their daily lives and had only a poor command of Polish even after joining the party. They socialized entirely with other Jews whom they met in the Jewish world of work, neighborhood, and Jewish social and political organizations. After they became communists, they dated and married among themselves and their social gatherings were conducted in Yiddish.

Jews who joined the communist movement did not first reject their ethnic identity, and there were many who “cherished Jewish culture. . . [and] dreamed of a society in which Jews would be equal as Jews“ (p. 48). Indeed, it was common for individuals to combine a strong Jewish identity with Marxism as well as various combinations of Zionism and Bundism. Moreover, the attraction of Polish Jews to communism was greatly facilitated by their knowledge that Jews had attained high-level positions of power and influence in the Soviet Union and that the Soviet government had established a system of Jewish education and culture.

In both the Soviet Union and Poland, communism was seen as opposing anti-Semitism. In marked contrast, during the 1930s the Polish government developed policies in which Jews were excluded from public-sector employment, quotas were placed on Jewish representation in universities and the professions, and government-organized boycotts of Jewish businesses and artisans were staged. Clearly, Jews perceived communism as good for Jews: It was a movement that did not threaten Jewish group continuity, and it held the promise of power and influence for Jews and the end of state-sponsored anti-Semitism.

While Jewish members saw the KPP (Polish Communist Party) as beneficial to Jewish interests, the party was perceived by gentile Poles even before the war as “pro-Soviet,

antipatriotic, and ethnically 'not truly Polish'". The KPP backed the Soviet Union in the Polish-Soviet war of 1919-1920 and in the Soviet invasion of 1939. It also accepted the 1939 border with the USSR and was relatively unconcerned with the Soviet massacre of Polish prisoners of war during World War II, whereas the Polish government in exile in London held nationalist views of these matters. The Soviet army and its Polish allies "led by cold-blooded political calculation, military necessities, or both" allowed the uprising of the Home Army, faithful to the noncommunist Polish government-in-exile, to be defeated by the Germans resulting in 200,000 dead, thus wiping out "the cream of the anti- and noncommunist activist elite". The Soviets also arrested surviving non-communist resistance leaders immediately after the war.

Moreover, as was the case with the CPUSA, actual Jewish leadership and involvement in Polish Communism was much greater than surface appearances; ethnic Poles were recruited and promoted to high positions in order to lessen the perception that the KPP was a Jewish movement. This attempt to deceptively lower the Jewish profile of the communist movement was also apparent in the ZPP. (The ZPP refers to the Union of Polish Patriots—an Orwellian-named communist front organization created by the Soviet Union to occupy Poland after the war.) Apart from members of the generation whose political loyalties could be counted on and who formed the leadership core of the group, Jews were often discouraged from joining the movement out of fear that the movement would appear too Jewish. However, Jews who could physically pass as Poles were allowed to join and were encouraged to state they were ethnic Poles and to change their names to Polish-sounding names.

When this group came to power after the war, they advanced Soviet political, economic, and cultural interests in Poland while aggressively pursuing specifically Jewish interests, including the destruction of the nationalist political opposition whose openly expressed anti-Semitism derived at least partly from the fact that Jews were perceived as favoring Soviet domination.

The Jewish-dominated communist government actively sought to revive and perpetuate Jewish life in Poland so that, as in the case of the Soviet Union, there was no expectation that Judaism would wither away under a communist regime. Jewish activists had an "ethnopolitical vision" in which Jewish secular culture would continue in Poland with the cooperation and approval of the government. Thus while the government campaigned actively against the political and cultural power of the Catholic Church, collective Jewish life flourished in the postwar period. Yiddish and Hebrew language schools and publications were established, as well as a great variety of cultural and social welfare organizations for Jews. A substantial percentage of the Jewish population was employed in Jewish economic cooperatives. Advancing communism went hand in hand with increasing Jewish influence and removing the traditional values of the host nation.

Moreover, the Jewish-dominated government regarded the Jewish population, many of whom had not previously been communists, as "a reservoir that could be trusted and enlisted in its efforts to rebuild the country." Jewish ethnic background was particularly

important in recruiting for the internal security service: The generation of Jewish communists realized that their power derived entirely from the Soviet Union and that they would have to resort to coercion in order to control a fundamentally hostile noncommunist society. The core members of the security service came from the Jewish communists who had been communists before the establishment of the Polish communist government.

As in the case of post-World War II Hungary (see below), Poland became polarized between a predominantly Jewish ruling and administrative class supported by the rest of the Jewish population and by Soviet military power, arrayed against the great majority of the native gentile population. The situation was exactly analogous to the many instances in traditional societies where Jews formed a middle layer between an alien ruling elite, in this case the Soviets, and the gentile native population. However, this intermediary role made the former outsiders into an elite group in Poland. Although attempts were made to place a Polish face on what was in reality a Jewish-dominated government, such attempts were limited by the lack of trustworthy Poles able to fill positions in the Communist Party. Jews who had severed formal ties with the Jewish community, or who had changed their names to Polish-sounding names, or who could pass as Poles because of their physical appearance or lack of a Jewish accent were favored in promotions.

It is revealing that when Jewish economic and political domination gradually decreased in the mid- to late-1950s, many of these individuals began working in the Jewish economic cooperatives, and Jews purged from the internal security service were aided by Jewish organizations funded ultimately by American Jews. There can be little doubt of their continuing Jewish identity and the continuation of Jewish economic and cultural separatism. Indeed, after the collapse of the communist regime in Poland, “numerous Jews, some of them children and grandchildren of former communists, came ‘out of the closet’”, openly adopting a Jewish identity and reinforcing the idea that many Jewish communists were in fact crypto-Jews.

In conclusion, Schatz’s treatment shows that the generation of Jewish communists and their ethnically Jewish supporters must be considered as an historic Jewish group. The evidence indicates that this group pursued specifically Jewish interests, including especially their interest in securing Jewish group continuity in Poland while at the same time attempting to destroy institutions like the Catholic Church and other manifestations of Polish nationalism that promoted social cohesion among Poles.

United States and England

From the origins of the movement in the late nineteenth century, a strong sense of Jewish identification also characterized American Jewish radicals (e.g., the Union of Hebrew Trades and the Jewish Socialist Federation). In Sorin’s (1985) study of Jewish radicals who immigrated to the United States early in the twentieth century, only 7 percent were hostile to any form of Jewish separatism. Over 70 percent “were imbued with positive Jewish consciousness. The great majority were significantly caught up in a

web of overlapping institutions, affiliations, and Jewish social formations“.

Twentieth-century American Jewish radicalism was a specifically Jewish subculture. The American Jewish left never removed itself from the wider Jewish community, and, indeed, membership of Jews in the movement fluctuated depending on whether these movements clashed with specifically Jewish interests. Fundamentally, the Jewish Old Left, including the unions, the leftist press, and the leftist fraternal orders (which were often associated with a synagogue, were part of the wider Jewish community, and when the Jewish working class declined, specifically Jewish concerns and identity gained increasing prominence as the importance of radical political beliefs declined.

This tendency for Jewish members of leftist organizations to concern themselves with specifically Jewish affairs increased after 1930 primarily because of recurring gaps between specific Jewish interests and universalist leftist causes at that time. This phenomenon occurred within the entire spectrum of leftist organizations, including organizations such as the Communist Party and the Socialist Party, whose membership also included gentiles. Jewish separatism in leftist movements was facilitated by a very traditional aspect of Jewish separatism - the use of an ingroup language. Yiddish eventually became highly valued for its unifying effect on the Jewish labor movement and its ability to cement ties to the wider Jewish community, the Yiddish press and theatre, East Side socialist cafés, literary societies and fereyns, which were so much a part of Jewish socialist culture, created an unmistakable Jewish milieu, which the shop, union, or Socialist party could not possibly duplicate. Even the class enemy - the Jewish employer, spoke Yiddish“.

the communist-oriented Jewish subculture, including organizations such as the International Workers Order (IWO), included Yiddish-speaking sections. One such section, the Jewish Peoples Fraternal Order (JPFO), was an affiliate of the American Jewish Congress (AJCongress) and was listed as a subversive organization by the U.S. Attorney General. The JPFO had 50,000 members and was the financial and organizational “bulwark“ to advance their cause. Consistent with the present emphasis on the compatibility of communism-radicalism and Jewish identity, it funded children’s educational programs that promulgated a strong relationship between Jewish identity and radical concerns. The IWO Yiddish schools and summer camps, which continued into the 1960s, stressed Jewish culture and even reinterpreted Marxism not as a theory of class struggle but as a theory of struggle for Jewish freedom from oppression.

A strong sense of Jewish peoplehood was also characteristic of the leftist Yiddish press. The Freiheit, which was an unofficial organ of the Communist Party from the 1920s to the 1950s, “stood at the center of Yiddish proletarian institutions and subculture. . . [which offered] identity, meaning, friendship, and understanding“. The newspaper lost considerable support in the Jewish community in 1929 when it took the Communist Party position in opposition to Zionism, and by the 1950s it essentially had to choose between satisfying its Jewish soul or its status as a communist organ.

The relationship of Jews and the CPUSA (Communist Party USA) is particularly interest-

ing because the party often adopted anti-Jewish positions, especially because of its close association with the Soviet Union. From 1921 to 1961, Jews constituted 33.5 percent of the Central Committee members, and the representation of Jews was often above 40 percent. Jews were the only native-born ethnic group from which the party was able to recruit. At least half of the CPUSA membership of around 50,000 were Jews into the 1950s and that the rate of turnover was very high; thus perhaps ten times that number of individuals were involved in the party and there were “an equal or larger number who were Socialists of one kind or another.”

As in the case of the Soviet Union in the early years, the CPUSA had separate sections for different ethnic groups, including a Yiddish-speaking Jewish Federation. In the following years Jewish support for the CPUSA rose and fell depending on party support for specific Jewish issues. During the 1930s the CPUSA changed its position and took great pains to appeal to specific Jewish interests, including a primary focus against anti-Semitism, supporting Zionism and eventually Israel, and advocating the importance of maintaining Jewish cultural traditions. As in Poland during this period, “The American radical movement glorified the development of Jewish life in the Soviet Union. . . . The Soviet Union was living proof that under socialism the Jewish question could be solved”. Communism was thus perceived as “good for Jews.” Despite temporary problems caused by the Soviet-German nonaggression pact of 1939, the result was an end to the CPUSA’s isolation from the Jewish community during World War II and the immediate postwar years.

At the time of the creation of Israel in 1948, part of the CPUSA’s appeal to Jews was due to its support for Israel at a time when Truman was waffling on the issue. In 1946 the CPUSA even adopted a resolution advocating the continuation of the Jewish people as an ethnic entity within socialist societies. Arthur Liebman describes CPUSA members during the period as being elated because of the congruity of their Jewish interests and membership in the party. Feelings of commonality with the wider Jewish community were expressed, and there was an enhanced feeling of Jewishness resulting from interactions with other Jews within the CPUSA: During the postwar period “Communist Jews were expected and encouraged to be Jews, to relate to Jews, and to think of the Jewish people and the Jewish culture in a positive light. At the same time, non-Communist Jews, with some notable exceptions [in the non-communist Jewish left]. . . . accepted their Jewish credentials and agreed to work with them in an all-Jewish context”.

This period of easy compatibility of Jewish interests with CPUSA interests evaporated after 1948, especially because of the altered Soviet position on Israel and revelations of state-sponsored anti-Semitism in the Soviet Union and Eastern Europe. Many Jews abandoned the CPUSA as a result. As in the case of Poland, there is every reason to suppose that American Jewish Communists regarded the USSR as generally satisfying Jewish interests at least until well into the post-World War II era. Beginning in the 1920s the CPUSA was financially supported by the Soviet Union, adhered closely to its positions, and engaged in a successful espionage effort against the United States

on behalf of the Soviet Union, including stealing atomic secrets. In the 1930s Jews “constituted a substantial majority of known members of the Soviet underground in the United States” and almost half of the individuals prosecuted under the Smith Act of 1947. The CPUSA had important effects on U.S. history. Without excusing the excesses of the anti-communist movement, they note that “the peculiar and particular edge to American anticommunism cannot be severed from the CPUSA’s allegiance to the Soviet Union; the belief that American communists were disloyal is what made the communist issue so powerful and at times poisonous.”

The liberal defense of communism during the Cold War era also raises issues related to this volume. Nicholas von Hoffman (1996) notes the role of the liberal defenders of communism during this period, such as the editors of *The New Republic* and Harvard historian Richard Hofstadter (1965) who attributed the contemporary concern with communist infiltration of the U.S. government to the “paranoid style of American politics.” (Rothman and Lichter [1982, 105] include *The New Republic* as among a group of liberal and radical publications with a large presence of Jewish writers and editors.) The liberals had seized the intellectual and moral high ground during this period. Supporters of McCarthy were viewed as intellectual and cultural primitives: “In the ongoing kulturkampf dividing the society, the elites of Hollywood, Cambridge and liberal thank-tankery had little sympathy for bow-legged men with their American Legion caps and their fat wives, their yapping about Yalta and the Katyn Forest. Catholic and kitsch, looking out of their picture windows at their flock of pink plastic flamingos, the lower middles and their foreign policy anguish were too infra dig to be taken seriously”

However, besides poisoning the atmosphere of domestic politics, communist espionage had effects on foreign policy as well:

It is difficult to overstate the importance of Soviet atomic espionage in shaping the history of the Cold War. World War II had ended with Americans confident that the atomic bomb gave them a monopoly on the ultimate weapon, a monopoly expected to last ten to twenty years. The Soviet explosion of a nuclear bomb in 1949 destroyed this sense of physical security. America had fought in two world wars without suffering serious civilian deaths or destruction. Now it faced an enemy led by a ruthless dictator who could wipe out any American city with a single bomb. Had the American nuclear monopoly lasted longer, Stalin might have refused to allow North Korean Communists to launch the Korean War, or the Chinese Communists might have hesitated to intervene in the war. Had the American nuclear monopoly lasted until Stalin’s death, the restraint on Soviet aggressiveness might have alleviated the most dangerous years of the Cold War.

The original impetus of the 1960s student protest movement (The University of Chicago sit-ins were a series of nonviolent protests at the University of Chicago in Chicago, Illinois in 1962. The protests were called to end the reported segregation of students in the university.) “almost necessarily began with the scions of the relatively well-to-do, liberal-to-left, disproportionately Jewish intelligentsia—the largest pool of those ideologically disposed to sympathize with radical student action in the population” found that 45

percent of students involved in a protest at the University of Chicago were Jewish, but his original sample was “‘adjusted’ to obtain better balance“.

Jews constituted 80 percent of the students signing a petition to end ROTC (Reserve Officer Training Corpse) at Harvard and 30-50 percent of the Students for a Democratic Society (SDS)—the central organization of student radicals. 90 percent of his sample of radical students at the University of Michigan were Jewish, and it would appear that a similar rate of participation is likely to have occurred at other schools, such as Wisconsin and Minnesota. 43 percent of the SDS membership in his sample of ten universities had at least one Jewish parent and an additional 20 percent had no religious affiliation. The latter are most likely to be predominantly Jewish: Rothman and Lichter (1982, 82) found that the “overwhelming majority“ of the radical students who claimed that their parents were atheists had Jewish backgrounds. Jews also tended to be the most publicized leaders of campus protests.

As a group, radical students came from relatively well-to-do families, whereas conservative students tended to come from less affluent families. Liberal movements were therefore initiated and led by an elite, but it was not aimed at advancing the interests of the unionized lower middle class. Indeed, the New Left regarded the working class as “fat, contented, and conservative, and their trade unions reflected them“. Moreover, although mild forms of Jewish anti-Semitism and rebellion against parental hypocrisy did occur among Jewish New Left radicals, the predominant pattern was a continuity with parental ideology. (Similarly, during the Weimar period the Frankfurt School radicals rejected their parents’ commercial values but did not personally reject their family. Indeed, their families tended to provide moral and financial support for them in their radical political activities.)

Many of these “red diaper babies“ came from “families which around the breakfast table, day after day, in Scarsdale, Newton, Great Neck, and Beverly Hills have discussed what an awful, corrupt, immoral, undemocratic, racist society the United States is. (Note from author of this copy paste book: Sounds a bit like the USA today, but with the difference that all these liberals now occupy most of the mainstream media in the US, still crying about immorality and racism. Yet, corruption and being undemocratic “suddenly“ isn’t an issue anymore. Really makes you think...). Many Jewish parents live in the lily-white suburbs, go to Miami Beach in the winter, belong to expensive country clubs, arrange Bar Mitzvahs costing thousands of dollars - all the while espousing a left-liberal ideology“. 1 million Jews were members of the CPUSA or were socialists prior to 1950. The result was that among Jews there was “a substantial reservoir of present-day parents for whose children to be radical is not something shocking and strange but may well be seen as a means of fulfilling the best drives of their parents“.

The New Left lost Jewish members when it advocated positions incompatible with specific Jewish interests (especially regarding Israel) and attracted members when its positions coincided with these interests. Leaders often spent time at Kibbutzim in Israel, and there is some indication that New Leftists consciously attempted to minimize the more overt

signs of Jewish identity and to minimize discussion of issues on which Jewish and non-Jewish New Leftists would disagree, particularly Israel. Eventually the incompatibility of Jewish interests and the New Left resulted in most Jews abandoning the New Left, with many going to Israel to join kibbutzim, becoming involved in more traditional Jewish religious observances, or becoming involved in leftist organizations with a specifically Jewish identity.

Jews were also a critical component of the public acceptance of the New Left. Jews were overrepresented among radicals and their supporters in the media, the university, and the wider intellectual community, and Jewish leftist social scientists were instrumental in conducting research that portrayed student radicalism in a positive light. However, in their recent review of the literature on the New Left, Rothman and Lichter (1996) note a continuing tendency to ignore the role of Jews in the movement and that when the Jewish role is mentioned, it is attributed to Jewish idealism or other positively valued traits. The media almost completely ignored the Jewish infighting that occurred during the Chicago Seven trial. He also describes several evaluations of the trial written by Jews in the media (New York Times, New York Post, Village Voice) that excused the behavior of the defendants and praised their radical Jewish lawyer, William Kunstler.

Finally, a similar ebb and flow of Jewish attraction to communism depending on its convergence with specifically Jewish interests occurred also in England. During the 1930s the Communist Party appealed to Jews partly because it was the only political movement that was stridently anti-fascist. There was no conflict at all between a strong Jewish ethnic identity and being a member of the Communist Party: "Communist sympathy among Jews of that generation had about it some of the qualities of a group identification, a means, perhaps, of ethnic self-assertion". In the post-World War II period, virtually all the successful communist political candidates represented Jewish wards. However, Jewish support for communism declined with the revelation of Stalin's anti-Semitism, and many Jews left the Communist Party after the Middle East crisis of 1967 when the USSR broke off diplomatic relations with Israel. The conclusion must be that Jewish identity was generally perceived to be highly compatible with radical politics. When radical politics came in conflict with specific Jewish interests, Jews eventually ceased being radical, although there were often instances of ambivalence and rationalization.

Conclusion

It is of some interest to attempt to understand the ultimate fate of Judaism in situations where society became organized according to a politically radical universalist ideology. In the Soviet Union, individual Jews "played an important and sometimes decisive part in the leadership of the three main socialist parties," including the Bolsheviks. Jews "dominated" Lenin's first Politburo. Jews made up a greater percentage of other Russian revolutionary parties than they did the Bolsheviks. Nevertheless, Jews were prominently represented as leaders of the Bolsheviks and within the Bolshevik movement "citing the

absolute numbers of Jews, or their percentage of the whole, fails to recognize certain key if intangible factors: the assertiveness and often dazzling verbal skills of Jewish Bolsheviks, their energy, and their strength of conviction". Five of the top seven leaders were ethnic Jews, as were approximately one-third of the top fifty.

Among gentile Russians there was a widespread perception that "whereas everybody else had lost from the Revolution, the Jews, and they alone, had benefited from it", as indicated, for example, by official Soviet government efforts against anti-Semitism. As in the case of post-World War II Poland, Jews were considered trustworthy supporters of the regime because of the very great change in their status brought about by the revolution. As a result, the immediate postrevolutionary period was characterized by intense anti-Semitism, including the numerous pogroms carried out by the White Army. However, Stalin "decided to destroy the 'myth' of the decisive role of the Jews in the planning, organization, and realization of the revolution" and to emphasize the role of Russians.

Jews were highly overrepresented among the political and cultural elite in the Soviet Union throughout the 1920s and, indeed, into the 1950s era of the purges of Jews from the economic and cultural elite. Stalin was an anti-Semite from very early on, but that because of the powerful presence of Jews at the top reaches of the government and other areas of Soviet society as well as the need to appeal to Western governments, his efforts to remove Jews from top levels of government developed only slowly, and he was forced to engage in considerable deception. Thus Stalin mixed his measures against Jews with overt expressions of philo-Semitism and often included a few non-Jews to mask the anti-Jewish intent. The campaign to remove Jews from administrative positions in the cultural establishment began as early as 1942, again accompanied by prizes and awards to prominent Jewish scientists and artists to deflect charges of anti-Semitism. Fullblown state-sponsored anti-Semitism emerged in the post-World War II era, complete with quotas on Jewish admission to universities that were harsher than in czarist times.

Jews were also highly overrepresented as leaders among the other communist governments in Eastern Europe as well as in communist revolutionary movements in Germany and Austria from 1918 to 1923. In the short-lived communist government in Hungary in 1919, 95 percent of the leading figures of Bela Kun's government were Jews. This government energetically liquidated predominantly gentile counterrevolutionaries and the ensuing struggle led by Admiral Horthy eventuated in the execution of most of the Jewish leadership of the communist government—a struggle with clear anti-Semitic overtones. Moreover, Jewish agents in the service of the Soviet Union featured prominently in Western communist parties: "Even within the various and often violently contending factions of the nascent communist parties of the West, 'foreign Jews, taking orders from Moscow' became a hot issue. It remained mostly taboo in socialist ranks to refer openly to Moscow's agents as Jewish, but the implication was often that such foreign Jews were destroying western socialism".

Anti-Semitism increased dramatically toward the end of the 1960s in Poland . Jews

were gradually downgraded in status and Jewish communists were blamed for Poland's misfortunes. The Protocols of the Elders of Zion circulated widely among party activists, students, and army personnel. The security force, which had been dominated by Jews and directed toward suppressing Polish nationalism, was now dominated by Poles who viewed Jews "as a group in need of close and constant surveillance". Jews were removed from important positions in the government, the military, and the media. Elaborate files were maintained on Jews, including the crypto-Jews who had changed their names and adopted non-Jewish external identities.

In the long run, radical individualism among gentiles and the fragmentation of gentile culture offer a superior environment for Judaism as a group evolutionary strategy, and this is indeed an important direction of current Jewish intellectual and political activity.

In this regard it is interesting that many neoconservative Jewish intellectuals in the contemporary United States have rejected corporate, statist ideologies as a direct consequence of the recognition that these ideologies have resulted in corporate, state-sponsored anti-Semitism. Indeed, the beginnings of the neoconservative movement can be traced to the Moscow Trials of the 1930s in which many of the old Jewish Bolsheviks, including Trotsky, were convicted of treason. The result was the development of the New York Intellectuals as an anti-Stalinist leftist movement, parts of which gradually evolved into neoconservatism.

The neoconservative movement has been fervently anti-communist and has opposed ethnic quotas and affirmative action policies in the United States—policies that would clearly preclude free competition between Jews and gentiles. Part of the attraction neoconservatism held for Jewish intellectuals was its compatibility with support for Israel at a time when Third World countries supported by most American leftists were strongly anti-Zionist. Many neoconservative intellectuals had previously been ardent leftists, and the split between these previous allies resulted in an intense internecine feud.

When an experiment in ideology and political structure fails, another experiment is launched. Since the Enlightenment, Judaism has not been a unified, monolithic movement. Judaism is a series of experiments in living, and since the Enlightenment there have been a variety of Jewish experiments in living. There has clearly been a great deal of disagreement among Jews as how best to attain their interests during this period, and certainly the interests of Jewish radicals conflicted at times with the interests of wealthy Jews.

14.4 Jewish Involvement in the Psychoanalytic Movement

The thesis of this chapter is that it is impossible to understand psychoanalysis as a "science," or more properly as a political movement, without taking into account the role of Judaism. Sigmund Freud is a prime example of a Jewish social scientist whose writings were influenced by his Jewish identity and his negative attributions regarding

gentile culture as the source of anti-Semitism.

The Jewish involvement in psychoanalysis, the “Jewish science“, has been apparent to those inside and outside the movement since its inception:

History made psychoanalysis a “Jewish science.“ It continued to be attacked as such. It was destroyed in Germany, Italy, and Austria and exiled to the four winds, as such. It continues even now to be perceived as such by enemies and friends alike. Of course there are by now distinguished analysts who are not Jews... But the vanguard of the movement over the last fifty years has remained predominantly Jewish as it was from the beginning. (Yerushalmi 1991)

In addition to constituting the core of the leadership and the intellectual vanguard of the movement, Jews have also constituted the majority of the movement’s members. In 1906 all 17 members of the movement were Jewish, and they strongly identified as Jews. In a 1971 study, Henry, Sims and Spray found that 62.1 percent of their sample of American psychoanalysts identified themselves as having a Jewish cultural affinity, compared with only 16.7 percent indicating a Protestant affinity and 2.6 percent a Catholic affinity. An additional 18.6 percent indicated no cultural affinity, a percentage considerably higher than the other categories of mental health professional and suggesting that the percentage of psychoanalysts with a Jewish background was even higher than 62 percent.

We have seen that a common component of Jewish intellectual activity since the Enlightenment has been to criticize gentile culture. Freud’s ideas have often been labeled as subversive. Indeed, “[Freud] was convinced that it was in the very nature of psychoanalytic doctrine to appear shocking and subversive. On board ship to America he did not feel that he was bringing that country a new panacea. With his typically dry wit he told his traveling companions, ‘We are bringing them the plague’“.

Peter Gay labels Freud’s work generally as “subversive“, his sexual ideology in particular as “deeply subversive for his time“, and he describes his Totem and Taboo as containing “subversive conjectures“ in its analysis of culture. “While the implications of Darwin’s views were threatening and unsettling, they were not quite so directly abrasive, not quite so unrespectable, as Freud’s views on infantile sexuality, the ubiquity of perversions, and the dynamic power of unconscious urges“.

There was a general perception among many anti-Semites that Jewish intellectuals were subverting German culture in the period prior to 1933 and psychoanalysis was one aspect of this concern. A great deal of hostility to psychoanalysis centered around the perceived threat of psychoanalysis to Christian sexual ethics, including the acceptance of masturbation and premarital sex. Psychoanalysis became a target of gentiles decrying the Jewish subversion of culture—“the decadent influence of Judaism,“ as one writer termed it. In 1928 Carl Christian Clemen, a professor of ethnology at the University of Bonn, reacted strongly to *The Future of an Illusion*, Freud’s analysis of religious belief in terms of infantile needs. Clemen decried the psychoanalytic tendency to find sex everywhere, a tendency he attributed to the Jewish composition of the movement.

Freud's books were burned in the May 1933 book burnings in Germany, and when the Nazis entered Vienna in 1938, they ordered Freud to leave and abolished the Internationaler Psychoanalytischer Verlag. In the United States, by the second decade of the twentieth century Freud was firmly associated with the movement for sexual freedom and social reform, and had become the target of social conservatives. As late as 1956 a psychiatrist writing in the *American Journal of Psychiatry* complained, "Is it possible that we are developing the equivalent of a secular church, supported by government monies, staffed by a genital-level apostolate unwittingly dispensing a broth of existential atheism, hedonism, and other dubious religio-philosophical ingredients?"

Although he rejected religion, Freud himself had a very strong Jewish identity. In a 1931 letter he described himself as "a fanatical Jew," and on another occasion he wrote that he found "the attraction of Judaism and of Jews so irresistible, many dark emotional powers, all the mightier the less they let themselves be grasped in words, as well as the clear consciousness of inner identity, the secrecy of the same mental construction". In a revealing comment, Freud stated "I have often felt as though I inherited all the obstinacy and all the passions of our ancestors when they defended their temple, as though I could throw away my life with joy for a great moment".

His identity as a Jew was thus associated with a self-concept in which he selflessly does battle with the enemies of the group, dying in an act of heroic altruism defending group interests—a mirror-image Jewish version of the grand finale of Wagner's *Nibelungenlied* that was an ingredient in Nazi ideology.

Freud's sense of Jewish superiority can also be seen in a diary entry by Joseph Wortis based on an interview with Freud in 1935: Freud commented that he viewed gentiles as prone to "ruthless egoism," whereas Jews had a superior family and intellectual life. Wortis then asked Freud if he viewed Jews as a superior people. Freud replied: "I think nowadays they are. . . . When one thinks that 10 or 12 of the Nobel winners are Jews, and when one thinks of their other great achievements in the sciences and in the arts, one has every reason to think them superior".

The psychoanalytic movement was an important example of these tendencies. It was characterized by ideas of Jewish intellectual superiority, racial consciousness, national pride, and Jewish solidarity (see Klein 1981, 143). Freud and his colleagues felt a sense of "racial kinship" with their Jewish colleagues and a "racial strangeness" to others. Freud and other early psychoanalysts frequently distinguished themselves as Jews on the basis of race and referred to non-Jews as Aryans, instead of as Germans or Christians.

During the 1920s Jones was viewed as a gentile outsider even by the other members of the secret Committee of Freud's loyalists and even though he had married a Jewish woman. "In the eyes of all of [the Jewish members of the committee], Jones was a Gentile. . . . [T]he others always seized every opportunity to make him aware that he could never belong. His fantasy of penetrating the inner circle by creating the Committee was an illusion, because he would forever be an unattractive little man with his ferret face

pressed imploringly against the glass". Early in their relationship Freud also had suspicions about Jung, the result of "worries about Jung's inherited Christian and even anti-Jewish biases, indeed his very ability as a non-Jew to fully understand and accept psychoanalysis itself".

Freud's powerful racial sense of ingroup-outgroup barriers between Jews and gentiles may also be seen in the personal dynamics of the psychoanalytic movement. We have seen that Jews were numerically dominant within psychoanalysis, especially in the early stages when all the members were Jews. Freud himself noted in his letters that "from all sides and places, the Jews have enthusiastically seized me for themselves." "He was embarrassed by the way they treated him as if he were 'a God-fearing Chief Rabbi,' or 'a national hero,'" and by the way they viewed his work as "genuinely Jewish".

As in the case of several Jewish movements and political activities reviewed in Chapters 2 and 3, Freud took great pains to ensure that a gentile, Jung, would be the head of his psychoanalytic movement—a move that infuriated his Jewish colleagues in Vienna, but one that was clearly intended to deemphasize the very large overrepresentation of Jews in the movement during this period. To persuade his Jewish colleagues of the need for Jung to head the society, he argued, "Most of you are Jews, and therefore you are incompetent to win friends for the new teaching. Jews must be content with the modest role of preparing the ground. It is absolutely essential that I should form ties in the world of science". "To put it very crudely, Freud needed a goy, and not just any goy but one of genuine intellectual stature and influence." Later, when the movement was reconstituted after World War I, another gentile, the sycophantic and submissive Ernest Jones, became president of the International Psychoanalytic Association.

Deception is also indicated by the evidence that Freud felt that one reason psychoanalysis needed highly visible gentiles was because he viewed psychoanalysis as subverting gentile culture. After publishing *Little Hans* in 1908, he wrote to Karl Abraham that the book would create an uproar: "German ideals threatened again! Our Aryan comrades are really completely indispensable to us, otherwise psychoanalysis would succumb to anti-Semitism".

Freud's powerful sense of Jewish group identity resulted in negative stereotypical thinking regarding the gentile outgroup. Gentile society, and particularly the most salient institutions of gentile culture, were viewed stereotypically as evil. These institutions were not only viewed negatively, but the accentuation effect (see SAID, Ch. 1) came into play and resulted in a general attribution of homogeneity to the outgroup, so that these institutions are seen as much less divided than they actually were.

Attesting to the intensity of Freud's Jewish identification and his self-concept as a Jewish hero, all of Freud's childhood heroes were related to Judaism: Hannibal, the Semitic combatant against Rome; Cromwell, who allowed the Jews to enter England; and Napoleon, who gave Jews civil rights. Early on he described himself as a "conquistador" rather than as a man of science. This type of messianic thought was common in *fin de siècle*

Vienna among Jewish intellectuals who were attempting to bring about a “supranational, supraethnic world”, a characterization that, would also apply to Jewish involvement in radical political movements.

Responsible for the fate of humanity in the twentieth century” (p. 31). Many early proponents viewed psychoanalysis as a redemptive messianic movement that would end anti-Semitism by freeing the world of neuroses produced by sexually repressive Western civilization. Klein shows that some of Freud’s closest associates had a very clearly articulated conception of psychoanalysis as a Jewish mission to the gentiles—what one might view as a uniquely modern version of the ancient “light of the nations” theme of Jewish religious thought very common among intellectual apologists of Reform Judaism during the same period.

The cure for the aggression characteristic of anti-Semitism was therefore believed to lie in freeing gentiles from their sexual repressions. Although Freud himself eventually developed the idea of a death instinct to explain aggression, a consistent theme of the Freudian critique of Western culture, as exemplified for example by Norman O. Brown, Herbert Marcuse, and Wilhelm Reich, has been that the liberation of sexual repressions would lead to lowered aggression and usher in an era of universal love. It is therefore of interest that when Jung and Alfred Adler were expelled from the movement for heresy, the issue that appears to have been most important to Freud was their rejection of the interrelated ideas of the sexual etiology of neurosis, the Oedipal complex, and childhood sexuality.

Western societies during this period was highly salient and undeniable. Freud’s theory may thus be viewed as an invention whose utility in the assault on Western culture derived from the intuitive plausibility of supposing that the suppression of sexual urges would result in major changes in behavior that could possibly have psychotherapeutic effects. Moreover, the Oedipal complex idea proved to be critical to Freud’s thesis for the centrality of sexual repression. This belief in the curative powers of sexual freedom coincided with a leftist political agenda common to the vast majority of Jewish intellectuals of the period and reviewed throughout this book. This leftist political agenda proved to be a recurrent theme throughout the history of psychoanalysis. Support of radical and Marxist ideals was common among Freud’s early followers, and leftist attitudes were common in later years among psychoanalysts. The apex of the association between Marxism and psychoanalysis came in the 1920s in the Soviet Union, where all the top psychoanalysts were Bolsheviks, Trotsky supporters, and among the most powerful political figures in the country.

This group organized a government-sponsored State Psychoanalytical Institute and developed a program of “pedology” aimed at producing the “new Soviet man” on the basis of psychoanalytic principles applied to the education of children. The program, which encouraged sexual precocity in children, was put into practice in state-run schools. There is also evidence that Freud conceptualized himself as a leader in a war on gentile culture. We have seen that Freud had a great deal of hostility to Western culture, especially the Catholic Church and its ally, the Austrian Habsburg monarchy. In a remarkable passage

from the Interpretation of Dreams, Freud, in attempting to understand why he has been unable to set foot in Rome, proposes that he has been retracing the footsteps of Hannibal, the Semitic leader of Carthage against Rome during the Punic wars:

“Hannibal. . . had been the favourite hero of my later school days. . . And when in the higher classes I began to understand for the first time what it meant to belong to an alien race. . . the figure of the semitic general rose still higher in my esteem. To my youthful mind Hannibal and Rome symbolized the conflict between the tenacity of Jewry and the organisation of the Catholic Church.” The passage clearly indicates that Freud was self-identified as a member of “an alien race” at war with Rome and its daughter institution, the Catholic Church, a central institution of Western culture.

All religions may be symptoms of neurosis, but Freud clearly believed that Judaism is an ethically and intellectually superior form of neurosis: According to Freud, the Jewish religion “formed their [the Jews’] character for good through the disdaining of magic and mysticism and encouraging them to progress in spirituality and sublimations. The people, happy in their conviction of possessing the truth, overcome by the consciousness of being the chosen, came to value highly all intellectual and ethical achievements”. In contrast, “The Christian religion did not keep to the lofty heights of spirituality to which the Jewish religion had soared”.

Freud’s theory of anti-Semitism in *Moses and Monotheism* contains several assertions that anti-Semitism is fundamentally a pathological gentile reaction to Jewish ethical superiority. But *Moses and Monotheism* traces the deeper causes of anti-Semitism to the unconscious: “The jealousy which the Jews evoked in other peoples by maintaining that they were the first-born, favourite child of God the Father has not yet been overcome by those others, just as if the latter had given credence to the assumption” Further, the Jewish ceremony of circumcision is said to remind gentiles of “the dreaded castration idea and of things in their primeval past which they would fain forget”. And finally, anti-Semitism is said to result from the fact that many Christians have become Christians only recently as the result of forced conversion from even more barbarically polytheistic folk religions than Christianity itself is. Because of the violence of their forced conversions, these barbarians “have not yet overcome their grudge against the new religion which was forced upon them, and they have projected it on to the source from which Christianity came to them [i.e., the Jews]”

As was the case with some of Freud’s close associates described above, Freud viewed himself as a sexual reformer against this most Western of cultural practices, the suppression of sexuality. Freud wrote in 1915: “Sexual morality, as society, in its extreme form, the American, defines it, seems to me very contemptible. I advocate an incomparably freer sexual life”.

The Scientific Status of Psychoanalysis

There is a long history of well-argued claims that psychoanalysis is a pseudoscience. Even ignoring the long-standing objections of experimentally inclined researchers in mainstream psychology, there is a distinguished pedigree of highly critical accounts of psychoanalysis that began appearing in the 1970s by scholars such as Henri Ellenberger (1970), Frank Sulloway (1979a), Adolph Grünbaum (1984), Frank Cioffi (1969, 1970, 1972), Hans Eysenck (1990), Malcolm Macmillan (1991), E. Fuller Torrey (1992), and perhaps most famously, Frederick Crews (1993; Crews et al. 1995). The following passages sum up this tradition of scholarship:

Should we therefore conclude that psychoanalysis is a science? My evaluation shows that at none of the different stages through which it evolved was Freud's theory one from which adequate explanations could be generated. From the beginning, much of what passed as theory was found to be description, and poor description at that. . . . In every one of the later key developmental theses, Freud assumed what had to be explained. . . . None of his followers, including his revisionist critics who are themselves psychoanalysts, have probed any deeper than did Freud into the assumptions underlying their practice, particularly the assumptions underlying "the basic method"—free association. None question whether those assumptions hold in the therapeutic situation; none has attempted to break out of the circle. What passes today for Freud bashing is simply the longpostponed exposure of Freudian ideas to the same standards of noncontradiction, clarity, testability, cogency, and parsimonious explanatory power that prevail in empirical discourse at large. Step by step, we are learning that Freud has been the most overrated figure in the entire history of science and medicine—one who wrought immense harm through the propagation of false etiologies, mistaken diagnoses, and fruitless lines of inquiry. Still the legend dies hard, and those who challenge it continue to be greeted like rabid dogs.

Even those within the psychoanalytic camp have often noted the lack of scientific rigor of the early psychoanalysts, and indeed, lack of scientific rigor is a continuing concern even in psychoanalytic circles. Gay (1988, 235), who clearly regards psychoanalysis as a science, states of the first-generation psychoanalysts that they "fearlessly interpreted one another's dreams; fell on the others' slips of the tongue or pen; freely, much too freely, employed diagnostic terms like 'paranoid' and 'homosexual' to characterize their associates and indeed themselves. They all practiced in their circle the kind of wild analysis they decried in outsiders as tactless, unscientific, and counterproductive." However, by means of these speculative leaps, Freud managed to diagnose Western culture as essentially neurotic while apparently, on the basis of the argument in *Moses and Monotheism*, holding the view that Judaism represents the epitome of mental health and moral and intellectual superiority. Freud appears to have been well aware that his highly subversive conjectures in *Totem and Taboo* were entirely speculative. When the book was called a "just so" story by a British anthropologist in 1920, Freud was "amused" and stated only that his

critic “was deficient in phantasy”.

The theory of the Oedipal complex, childhood sexuality, and the sexual etiology of the neuroses—the three central doctrines that underlie Freud’s radical critique of gentile culture—play absolutely no role in contemporary mainstream developmental psychology. From the standpoint of evolutionary theory, the idea that children would have a specifically sexual attraction to their opposite sex parent is highly implausible, since such an incestuous relationship would result in inbreeding depression and be more likely to result in disorders caused by recessive genes (see MacDonald 1986). The proposal that boys desire to kill their fathers conflicts with the general importance of paternal provisioning of resources in understanding the evolution of the family: Boys who had succeeded in killing their fathers and having sex with their mothers would not only be left with genetically inferior offspring, but also be deprived of paternal support and protection. Modern developmental studies indicate that many fathers and sons have very close, reciprocated affectional relationships beginning in infancy, and the normative pattern is for mothers and sons to have very intimate and affectionate, but decidedly nonsexual, relationships.

The continued life of these concepts in psychoanalytic circles is testimony to the continuing unscientific nature of the entire enterprise. Research inspired by these basic Freudian tenets ceased long ago and in a sense never started: Fundamentally, psychoanalysis has not inspired any significant research on these three basic Freudian constructs. Interestingly, there is evidence that Freud fraudulently portrayed the data underlying these concepts.

The seduction stories that provide the empirical basis of the Oedipal complex were a construction by Freud, who then interpreted his patients’ distress on hearing his constructions as proof of the theory. Freud then engaged in deception to obscure the fact that his patients’ stories were reconstructions and interpretations based on an a priori theory. Freud also retroactively changed the identity of the fancied seducers from nonfamily members (such as servants) because the Oedipal story required fathers. Any theorist on the contemporary scientific scene who proposed that children are normally sexually attracted to their opposite sex parent would be ostracized for providing a psychological basis for supposing that children would seek such contact. Modern approaches support instead a discrete systems perspective in which sexual desire and affection (and other sources of pleasure) involve quite separate, independent systems. From an evolutionary perspective, the powerful affectional (love) relationships between spouses and between parents and children function as a source of social cohesiveness whose ultimate purpose is to provide a high level of support for children.

Finally, another general mistake, and one that illustrates the political nature of Freud’s entire agenda, is that sexual urges are viewed as having a powerful biological basis (the id), while traits such as responsibility, dependability, orderliness, guilt, and delay of gratification (i.e., the conscientiousness system of personality theory) are imposed by a repressive, pathology-inducing society.

In a comment indicating the usefulness of these psychoanalytic notions in the war on gentile culture, James Q. Wilson (1993a, 104) correctly states that the belief that conscience “is the result of repression is a useful thing to believe if you would like to free yourself of the constraints of conscience—conscience becomes a ‘hang-up’ that prevents you from ‘realizing yourself.’” In fact, conscientiousness is a critical biological system which has been under intensive eugenic selection within the Jewish community. An evolutionary perspective implies, rather, that both systems have a powerful biological basis and both serve critical adaptive functions. No animal and certainly no human has ever been able to be devoted entirely to self-gratification, and there is no reason whatever to suppose that our biology would solely be directed toward obtaining immediate gratification and pleasure. In the real world, achieving evolutionary goals demands that attention be paid to details, careful plans be made, and gratification be deferred.

The continued life of these notions within the psychoanalytic community testifies to the vitality of psychoanalysis as a political movement. The continued self-imposed separation of psychoanalysis from the mainstream science of developmental psychology, as indicated by separate organizations, separate journals, and a largely nonoverlapping membership, is a further indication that the fundamental structure of psychoanalysis as a closed intellectual movement continues into the present era.

Psychoanalysis as a Tool in the Radical Criticism of Western Culture

Because Freud’s ideology was self-consciously subversive and, in particular, because it tended to undermine Western institutions surrounding sex and marriage, it is of some interest to consider the effects of these practices from an evolutionary perspective. Western marriage has long been monogamous and exogamous, and these features contrast strongly with features of other stratified societies, especially societies from the Near East, such as ancient Israel. Freud’s views in *Totem and Taboo and Civilization and Its Discontents* represent a failure to grasp the uniqueness of Roman and later Christian institutions of marriage and the role of Christian religious practices in producing the uniquely egalitarian mating systems characteristic of Western Europe.

In Western Europe the repression of sexual behavior has fundamentally served to support socially imposed monogamy, a mating system in which differences in male wealth are much less associated with access to females and reproductive success than in traditional non-Western civilizations where polygyny has been the norm. Polygyny implies sexual competition among males, with wealthy males having access to vastly disproportionate numbers of women and lower-status men often being unable to mate at all. This type of marriage system is very common among the traditional stratified human societies of the world, such as classical China, India, the Muslim societies, and ancient Israel. While poor males cannot find a mate in such a system, women are reduced to chattel and are typically purchased as concubines by wealthy males. Socially imposed monogamy thus represents a relatively egalitarian mating system for men.

Moreover, because of higher levels of sexual competition among males, the status of women in non-Western societies is immeasurably lower than in Western societies where monogamy has developed. It is no accident that the recent movement toward women's rights developed in Western societies rather than in the other stratified societies of the world. The massive confusion characteristic of psychoanalysis is also apparent in Freud's close colleague, Fritz Wittels. Wittels expected an era of liberation and sexual freedom to be ushered in by a group of Jewish psychoanalytic messianists, but his expectation was based on a profound misunderstanding of sex and human psychology. Wittels condemned "our contemporary goddamned culture" for forcing women into "the cage of monogamy", a comment that completely misunderstands the effects of inter-male sexual competition as represented by polygyny.

There are sound reasons for supposing that monogamy was a necessary condition for the peculiarly European "low-pressure" demographic profile described by Wrigley and Schofield (1981). This demographic profile results from late marriage and celibacy of large percentages of females during times of economic scarcity. The theoretical connection with monogamy is that monogamous marriage results in a situation where the poor of both sexes are unable to mate, whereas in polygynous systems an excess of poor females merely lowers the price of concubines for wealthy males. Thus, for example, at the end of the seventeenth century approximately 23 percent of individuals of both sexes remained unmarried between ages 40 to 44, but, as a result of altered economic opportunities, this percentage dropped at the beginning of the eighteenth century to 9 percent, and there was a corresponding decline in age of marriage. Like monogamy, this pattern was unique among the stratified societies of Eurasia.

In turn, the low pressure demographic profile appears to have had economic consequences. Not only was marriage rate the main damper on population growth, but, especially in England, this response had a tendency to lag well behind favorable economic changes so that there was a tendency for capital accumulation during good times rather than a constant pressure of population on food supply. There is thus some reason to suppose that monogamy, by resulting in a low pressure demographic profile, was a necessary condition for industrialization. This argument suggests that socially imposed monogamy—embedded in the religious and cultural framework of Western societies—may indeed be a central aspect of the architecture of Western modernization. Another important effect of Western institutions of sex and marriage was to facilitate high-investment parenting. As already indicated, perhaps the most basic mistake Freud made was the systematic conflation of sex and love. This was also his most subversive mistake, and one cannot overemphasize the absolutely disastrous consequences of accepting the Freudian view that sexual liberation would have salutary effects on society.

The psychoanalytic emphasis on legitimizing sexuality and premarital sex is fundamentally a program that promotes low-investment parenting styles. Low-investment parenting is associated with precocious sexuality, early reproduction, lack of impulse control, and unstable pair bonds. Ecologically, high-investment parenting is associated with the need

to produce competitive offspring, and we have seen that one aspect of Judaism as a group evolutionary strategy has been a strong emphasis on high-investment parenting. Applied to gentile culture, the subversive program of psychoanalysis would have the expected effect of resulting in less-competitive children; in the long term, gentile culture would be increasingly characterized by low-investment parenting, and, as indicated below, there is evidence that the sexual revolution inaugurated, or at least greatly facilitated, by psychoanalysis has indeed had this effect.

In this regard, it is interesting to note that an important aspect of the social imposition of monogamy in Western Europe has been the development of companionate marriage. One of the peculiar features of Western marriage is that there has been a trend toward companionate marriage based on affection and consent between partners. In view of Freud's animosity toward Western culture and the Catholic Church in particular, it is interesting that the Church's policy on marriage included a largely successful attempt to emphasize consent and affection between partners as normative features of marriage. Anti-hedonism and the idealization of romantic love as the basis of monogamous marriage have also periodically characterized Western secular intellectual movements.

Indeed, one sees in these findings a fundamental difference between Judaism as a collectivist group strategy, in which individual decisions are submerged to the interests of the group. Until after World War I arranged marriages were the rule among Jews because the economic basis of marriage was too important to leave to the vagaries of romantic love. Jews also continued to practice consanguineous marriages—a practice that highlights the fundamentally biological agenda of Judaism well into the twentieth century whereas, as we have seen, the Church successfully countered consanguinity as a basis of marriage beginning in the Middle Ages. Judaism thus continued to emphasize the collectivist mechanism of the social control of individual behavior in conformity to family and group interests centuries after the control of marriage in the West passed from family and clan to individuals. In contrast to Jewish emphasis on group mechanisms, Western culture has thus uniquely emphasized individualist mechanisms of personal attraction and free consent.

I conclude that Western religious and secular institutions have resulted in a highly egalitarian mating system that is associated with high-investment parenting. These institutions provided a central role for pair bonding, conjugality, and companionship as the basis of marriage. However, when these institutions were subjected to the radical critique presented by psychoanalysis, they came to be seen as engendering neurosis, and Western society itself was viewed as pathogenic. Freud's writings on this issue are replete with assertions on the need for greater sexual freedom to overcome debilitating neurosis. As we shall see, later psychoanalytic critiques of gentile culture pointed to the repression of sexuality as leading to anti-Semitism and a host of other modern ills.

Psychoanalysis and the Criticism of Western Culture

Psychoanalysis influenced thought in a wide range of areas, including sociology, child rearing, criminology, anthropology, literary criticism, art, literature, and the popular media. Kurzweil (1989, 102) notes that “something like a culture of psychoanalysis was being established.” Torrey (1992) describes in some detail the spread of the movement in the United States, originally through the actions of a small group of predominantly Jewish activists with access to the popular media, the academic world, and the arts, to a pervasive influence in the 1950s: “It is a long road from a beachhead among New York intellectuals to a widespread influence in almost every phase of American life”.

The vast majority of the New York Intellectuals not only had Jewish backgrounds but also strongly identified as Jews: “The surprising thing about the Jewish intellectuals is not that their expressions of Jewish identity were so pale but that they rejected the easy path of assimilation. That supposedly ‘cosmopolitan’ intellectuals should concern themselves with such a parochial matter as Jewish identity reveals the hold which Jewishness has had on even the most acculturated.” As indicated in Chapter 6, the New York Intellectuals were politically radical and deeply alienated from American political and cultural institutions.

Psychoanalysis was a major component of the *Weltanschauung* of these intellectuals. Torrey’s (1992) study indicates a strong overlap among psychoanalysis, liberal-radical politics, and Jewish identification among the American intellectual elite since the 1930s.

Moreover, the material reviewed by Torrey indicates that the preponderance of psychoanalytically inclined Jews among the intellectual elite continued in the post-World War II era. Torrey studied 21 elite American intellectuals identified originally by Kadushin (1974) on the basis of peer ratings as being the most influential. Of the 21, 15 were Jewish, and questionnaires and analysis of the writings of these 15 indicated that 11 had been “significantly influenced by Freudian theory at some point in their careers”. In addition, 10 of these 11 were identified as having liberal or radical political beliefs at some period of their career.

The link between psychoanalysis and the political left, as well as the critical role of Jewish-controlled media in the propagation of psychoanalysis, can be seen in the recent uproar of Frederick Crews’s critiques of the culture of psychoanalysis. Publication in the NYRB (New York Review of Books), as Crews notes, is “almost like pet owners who had negligently or maliciously consigned their parakeet to the mercies of an ever-lurking cat”. The implication is that publications like the NYRB and the other journals associated with the New York Intellectuals have been instrumental in propagating psychoanalytic and similar doctrines as scientifically and intellectually reputable for decades, and it also suggests that had Crews published his articles in a less visible and less-politicized medium, they could have been safely ignored, as has commonly been the practice over the long history of psychoanalysis.

Several prominent Freudian critiques of culture remained fairly true to Freud's original premises. Herbert Marcuse, a countercultural guru of the 1960s, was a member of the first generation of the Frankfurt School. In *Eros and Civilization* Marcuse accepts Freud's theory that Western culture is pathogenic as a result of the repression of sexual urges, paying homage to Freud, who "recognized the work of repression in the highest values of Western civilization, which presuppose and perpetuate unfreedom and suffering". Like Freud, Marcuse points the way to a nonexploitative utopian civilization that would result from the complete end of sexual repression, but Marcuse goes beyond Freud's ideas in *Civilization and Its Discontents* only in his even greater optimism regarding the beneficial effects of ending sexual repression.

Indeed, Marcuse ends the book with a ringing defense of the fundamental importance of sexual repression in opposition to several "neo-Freudian revisionist" theorists such as Erich Fromm, Karen Horney, and Henry Stack Sullivan. These neo-Freudian revisionists must thus be seen as continuing the psychoanalytic critique of culture, but in a manner that deemphasizes the exclusive concern with sexual repression. These theorists—and particularly Erich Fromm, who had a very strong Jewish identity and very selfconsciously attempted to use psychoanalysis to further a radical political agenda—can be viewed as optimistic-utopian.

Like Marcuse, Fromm was a member of the first generation of the Frankfurt School. A cornerstone of this approach is to view contemporary society as pathogenic and the development of socialism as ushering in a new era of loving human relationships. These writers were highly influential: For example, "A whole generation of college-educated Americans was deeply influenced by Erich Fromm's argument, in *Escape From Freedom*, that National Socialism was the natural outcome of the interplay between a Protestant sensibility and the contradictions inherent in capitalism".

Fromm (1941) essentially viewed authoritarianism as resulting from an unconscious fear of freedom and a consequent need to seek certainty by joining fascist movements—an example of the tendency among Jewish intellectuals to develop theories in which anti-Semitism is fundamentally the result of the individual or social pathology of gentiles. Fromm, like the other Frankfurt School theorists reviewed in Chapter 5, developed a view in which psychological health was epitomized by individualists who achieved their potentials without relying on membership in collectivist groups: "Progress for democracy lies in enhancing the actual freedom, initiative, and spontaneity of the individual, not only in certain private and spiritual matters, but above all in the activity fundamental to every man's existence, his work". Radical individualism among gentiles is an excellent prescription for the continuation of Judaism as a cohesive group. The irony (hypocrisy?) is that Fromm and the other members of the Frankfurt School, as individuals who strongly identified with a highly collectivist group (Judaism), advocated radical individualism for the society as a whole.

The central role of psychoanalysis as cultural criticism can also be seen in its role in Germany after World War II. T. W. Adorno, an author of *The Authoritarian Personality*,

is an excellent example of a social scientist who utilized the language of social science in the service of combating anti-Semitism, pathologizing gentile culture, and rationalizing Jewish separatism. Returning to Germany after World War II, Adorno expressed his fears that psychoanalysis would become “a beauty no longer able to disturb the sleep of humanity”.

Eventually psychoanalysis became state supported in Germany, with every German citizen eligible for up to 300 hours of psychoanalysis (more in severe cases). In 1983 the government of Hesse sought empirical data on the success of psychoanalysis in return for funding a psychoanalytic institute. The response of the offended analysts is a revealing reminder of two central aspects of the psychoanalytic agenda, the pathologization of enemies and the centrality of social criticism: “They rose to the defense of psychoanalysis as a social critique. . . [They attacked the] unconscious lies of (unnamed but recognizable) psychoanalysts, their unhappy relationship to power, and their frequent neglect of the countertransference.” The result was a reinvigoration of psychoanalysis as a social critique and the production of a book that “enlarged their critiques to every political topic”. Psychoanalysis can be justified solely by its usefulness in cultural criticism independent of data on its effectiveness in therapy.

The most influential psychoanalyst in post-World War II Germany was the leftist Alexander Mitscherlich, who viewed psychoanalysis as necessary to humanize Germans and “defend against the inhumanities of civilization”. Regarding the necessity to transform Germans in the wake of the Nazi era, Mitscherlich believed that only psychoanalysis held out the hope of redemption for the German people: “Each German had to face this past individually via a more or less ‘pragmatic’ Freudian analysis”). His journal *Psyche* adopted a generally adversarial stance toward German culture, combining Marxist and psychoanalytic perspectives in an attempt to further “antifascist thinking”.

As is typical of the field generally, these psychoanalysts also produced a plethora of theories of anti-Semitism with no way to decide among them. In 1962 Mitscherlich organized a conference entitled “The Psychological and Social Assumptions of Anti-Semitism: Analysis of the Psychodynamics of a Prejudice,” which offered several highly imaginative psychoanalytic theories in which anti-Semitism was analyzed as essentially a social and individual pathology of gentiles. For example, in his contribution Mitscherlich proposed that children developed hostility when required to obey teachers, and that this then led to identification with the aggressor and ultimately to a glorification of war. Mitscherlich believed that German anti-Semitism was “just one more manifestation of German infantile authoritarianism”.

Conclusion

I conclude that psychoanalysis has fundamentally been a political movement that has been dominated throughout its history by individuals who strongly identified as Jews. A consistent theme has been that psychoanalysis has been characterized by intense personal

involvement. The intense level of emotional commitment to psychoanalytic doctrines and the intense personal identification with Freud himself as well as with others in the direct line of descent from Freud suggest that for many of its practitioners, participation in the psychoanalytic movement satisfied deep psychological needs related to being a member of a highly cohesive, authoritarian movement. It is also not surprising, given the clear sense of Jewish intellectual, moral, and, indeed, racial superiority to gentiles that pervaded the early phases of the movement, that outsiders have proposed that psychoanalysis not only had powerful religious overtones but also was directed at achieving specific Jewish interests.

I have noted that Jewish intellectual activity involving the radical criticism of gentile culture need not be conceptualized as directed at attaining specific economic or social goals of Judaism. From this perspective, the psychoanalytic subversion of the moral and intellectual basis of Western culture may simply result from social identity processes in which the culture of the outgroup is negatively valued. This does not appear to be the whole story, however.

One way in which psychoanalysis has served specific Jewish interests is the development of theories of anti-Semitism that bear the mantle of science but deemphasize the importance of conflicts of interest between Jews and gentiles. Although these theories vary greatly in detail—and, as typical of psychoanalytic theories generally, there is no way to empirically decide among them—within this body of theory anti-Semitism is viewed as a form of gentile psychopathology resulting from projections, repressions, and reaction formations stemming ultimately from a pathology-inducing society. The psychoanalysts who emigrated from Europe to the United States during the Nazi era expected to make psychoanalysis “into the ultimate weapon against fascism, anti-Semitism, and every other antiliberal bias”.

However, beyond this overt agenda in pathologizing anti-Semitism, it is noteworthy that within psychoanalytic theory, Jewish identity is irrelevant to understanding human behavior. As in the case of radical political ideology, psychoanalysis is a messianic universalist ideology that attempts to subvert traditional gentile social categories as well as the Jewish-gentile distinction itself, yet it allows for the possibility of a continuation of Jewish group cohesion, though in a cryptic or semi-cryptic state. As with radical political ideology, the Jew-gentile social categorization is of diminished salience and of no theoretical significance. As in the case of psychoanalytic theories of anti-Semitism, to the extent that psychoanalysis becomes part of the worldview of gentiles, social identity theory predicts that anti-Semitism would be minimized.

Freud himself believed that Jewish intellectual and moral superiority resulted from Lamarckian inheritance and were thus genetically based, psychoanalysis officially denied the importance of biologically based ethnic differences or indeed the theoretical primacy of ethnic differences or ethnic conflict of any kind. Ethnic conflict came to be viewed within psychoanalytic theory as a secondary phenomenon resulting from irrational repressions, projections, and reaction formations and as an indication of gentile pathology rather than

as a reflection of actual Jewish behavior.

I have noted that there was often an overlap between psychoanalysis and radical political beliefs among Jews. This is not at all surprising. Both phenomena are essentially Jewish responses to the Enlightenment and its denigrating effect on religious ideology as the basis for developing an intellectually legitimate sense of group or individual identity. Both movements are compatible with a strong personal sense of Jewish identity and with some form of group continuity of Judaism; indeed, Yerushalmi (1991, 81ff) argues persuasively that Freud saw himself as a leader of the Jewish people and that his “science” provided a secular interpretation of fundamental Jewish religious themes.

The similarities between these movements is far deeper, however. Both psychoanalysis and radical political ideology present critiques in which the traditional institutions and socio-religious categorizations of gentile society are negatively evaluated. Both movements, and especially psychoanalysis, present their intellectual critiques in the language of science and rationality, the lingua franca of post-Enlightenment intellectual discourse. However, both movements have a pronounced political atmosphere despite the scientific veneer. Such a result is perhaps scarcely surprising in the case of Marxist political ideology, although even Marxism has often been touted by its proponents as “scientific” socialism. Psychoanalysis has from the beginning been burdened in its quest for scientific respectability by the clear overtones of its being a sectarian political movement masquerading as science.

Both psychoanalysis and radical political ideology often resulted in a sense of a personal messianic mission to gentile society promising a utopian world free of class struggle, ethnic conflict, and debilitating neuroses. Both movements characteristically developed conceptions of Jewish group identity as leading gentiles to a utopian society of the future, the familiar “light of the nations” concept represented here in completely secular and “scientific” terms. The social categorizations advocated by these movements completely obliterated the social categorization of Jew-gentile, and both movements developed ideologies in which anti-Semitism was fundamentally the result of factors entirely extraneous to Jewish identity, Jewish group continuity, and Jewish-gentile resource competition. In the promised utopian societies of the future, the category of Jewgentile would be of no theoretical importance, but Jews could continue to identify as Jews and there could be continuation of Jewish group identity while at the same time a principle source of gentile identity—religion and its concomitant supports for high-investment parenting—would be conceptualized as an infantile aberration. The universalist ideologies of Marxism and psychoanalysis thus were highly compatible with the continuation of Jewish particularism.

Although other factors are undoubtedly involved, it is remarkable that the increasing trend toward low-investment parenting in the United States largely coincides with the triumph of the psychoanalytic and radical critiques of American culture represented by the political and cultural success of the countercultural movement of the 1960s. Since 1970 the rate of single-parenting has increased from one in ten families to one in three families, and there have been dramatic increases in teenage sexual activity and teenage childbearing

without marriage. There is excellent evidence for an association among teenage single-parenting, poverty, lack of education, and poor developmental outcomes for children (e.g., Dornbusch & Gray 1988; Furstenberg & Brooks-Gunn 1989; McLanahan & Booth 1989; J. Q. Wilson 1993b).

Indeed, all the negative trends related to the family show very large increases that developed in the mid-1960s including increases in trends toward lower levels of marriage, “cataclysmic” increases in divorce rates, and rates of illegitimacy. The sexual revolution is “the most obvious culprit” underlying the decline in the importance of marriage and its concomitant increase in low-investment parenting:

What is striking about the 1960s “sexual revolution,” as it has properly been called, is how revolutionary it was, in sensibility as well as reality. In 1965, 69 percent of American women and 65 percent of men under the age of thirty said that premarital sex was always or almost always wrong; by 1972, these figures had plummeted to 24 percent and 21 percent. . . . In 1990, only 6 percent of British men and women under the age of thirty-four believed that it was always or almost always wrong.

Although there is little reason to suppose that the battle for sexual freedom so central to psychoanalysis had the intention of benefiting the average resource competition ability of Jews vis-à-vis gentiles, the psychoanalytic intellectual war on gentile culture may indeed have resulted in an increased competitive advantage for Jews beyond merely lessening the theoretical importance of the Jew-gentile distinction and providing a “scientific” rationale for pathologizing anti-Semitism. It is also a war that has resulted in a society increasingly split between a disproportionately Jewish “cognitive elite” and a growing mass of individuals who are intellectually incompetent, irresponsible as parents, prone to requiring public assistance, and prone to criminal behavior, psychiatric disorders, and substance abuse.

14.5 The Frankfurt School of Social Research

The Political Agenda

The Authoritarian Personality, a classic work in social psychology was sponsored by the Department of Scientific Research of the American Jewish Committee (hereafter, AJ-Committee) in a series entitled Studies in Prejudice. Studies in Prejudice was closely connected with the so-called Frankfurt School of predominantly Jewish intellectuals associated with the Institute for Social Research originating during the Weimar period in Germany. The first generation of the Frankfurt School were all Jews by ethnic background and the Institute of Social Research itself was funded by a Jewish millionaire, Felix Weil.

Weil’s efforts as a “patron of the left” were extraordinarily successful: By the early 1930s the University of Frankfurt had become a bastion of the academic left and “the place

where all the thinking of interest in the area of social theory was concentrated". During this period sociology was referred to as a "Jewish science," and the Nazis came to view Frankfurt itself as a "New Jerusalem on the Franconian Jordan". The Nazis perceived the Institute of Social Research as a communist organization and closed it within six weeks of Hitler's ascent to power because it had "encouraged activities hostile to the state". Even after the emigration of the Institute to the United States, it was widely perceived as a communist front organization with a dogmatic and biased Marxist perspective, and there was a constant balancing act to attempt not to betray the left "while simultaneously defending themselves against corresponding suspicions".

Gershom Scholem, the Israeli theologian and religious historian, termed the Frankfurt School a "Jewish sect," and there is good evidence for very strong Jewish identifications of many members of the school. *Studies in Prejudice* was under the general editorship of Max Horkheimer, a director of the Institute. Horkheimer was a highly charismatic "'managerial scholar' who constantly reminded his associates of the fact that they belonged to a chosen few in whose hands the further development of 'Theory' lay". Horkheimer had a strong Jewish identity that became increasingly apparent in his later writings. However, Horkheimer's commitment to Judaism, as evidenced by the presence of specifically Jewish religious themes, was apparent even in his writings as an adolescent and as a young adult. At the end of his life Horkheimer completely accepted his Jewish identification and achieved a grand synthesis between Judaism and Critical Theory. (Critical Theory is the name applied to the theoretical perspective of the Frankfurt School.) As an indication of his profound sense of Jewish identity, Horkheimer (1947, 161) stated that the goal of philosophy must be to vindicate Jewish history: "The anonymous martyrs of the concentration camps are the symbols of humanity that is striving to be born. The task of philosophy is to translate what they have done into language that will be heard, even though their finite voices have been silenced by tyranny."

T. W. Adorno, first author of the famous Berkeley studies of authoritarian personality reviewed here, was also a director of the Institute, and he had a very close professional relationship with Horkheimer to the point that Horkheimer wrote of their work, "It would be difficult to say which of the ideas originated in his mind and which in my own; our philosophy is one". Jewish themes became increasingly prominent in Adorno's writings beginning in 1940 as a reaction to Nazi anti-Semitism. Indeed, much of Adorno's later work may be viewed as a reaction to the Holocaust, as typified by his famous comment that "to write poetry after Auschwitz is barbaric".

A consistent theme of Horkheimer and Adorno's Critical Theory was the transformation of society according to moral principles. From the beginning there was a rejection of value-free social science research ("the fetishism of facts") in favor of the fundamental priority of a moral perspective in which present societies, including capitalist, fascist, and eventually Stalinist societies, were to be transformed into utopias of cultural pluralism. Indeed, long before *Studies in Prejudice* Critical Theory developed the idea that positivistic (i.e., empirically oriented) social science was an aspect of domination and oppression.

Horkheimer wrote in 1937 that “if science as a whole follows the lead of empiricism and the intellect renounces its insistent and confident probing of the tangled brush of observations in order to unearth more about the world than even our well-meaning daily press, it will be participating passively in the maintenance of universal injustice”.

The social scientist must therefore be a critic of culture and adopt an attitude of resistance toward contemporary societies. The unscientific nature of the enterprise can also be seen in its handling of dissent within the ranks of the Institute. Writing approvingly of Walter Benjamin’s work, Adorno stated, “I have come to be convinced that his work will contain nothing which could not be defended from the point of view of dialectical materialism”.

Erich Fromm was excised from the movement in the 1930s because his leftist humanism (which indicted the authoritarian nature of the psychoanalyst-patient relationship) was not compatible with the leftist authoritarianism that was an integral part of the current Horkheimer-Adorno line: “[Fromm] takes the easy way out with the concept of authority, without which, after all, neither Lenin’s avant-garde nor dictatorship can be conceived of. I would strongly advise him to read Lenin. . . . I must tell you that I see a real threat in this article to the line which the journal takes”.

Fromm was excised from the Institute despite the fact that his position was among the most radically leftist to emerge from the psychoanalytic camp. Throughout his career, Fromm remained the embodiment of the psychoanalytic left and its view that bourgeois-capitalist society and fascism resulted from (and reliably reproduced) gross distortions of human nature. Similarly, Herbert Marcuse was excluded when his orthodox Marxist views began to diverge from the evolving ideology of Adorno and Horkheimer. These exclusionary trends are also apparent in the aborted plans to reinstitute the Institute’s journal in the 1950s. It was decided that there were too few contributors with the Horkheimer-Adorno line to support a journal and the plans foundered. Throughout its history, to be a member of the Institute was to adopt a certain view and to submit to heavy editing and even censorship of one’s works to ensure conformity to a clearly articulated ideological position.

As might be expected from a highly authoritarian political movement, the result was a speculative, philosophical body of work that ultimately had no influence on empirically oriented sociology, although, as indicated below, it has had a profound influence on theory in the humanities. (The *Authoritarian Personality* is not included in this statement; it was very influential but had an empirical basis of sorts.) This body of work does not qualify as science because of its rejection of experimentation, quantification, and verification, and because of the priority of moral and political concerns over the investigation of the nature of human social psychology.

The priority of the moral and political agenda of Critical Theory is essential to understanding the Frankfurt School and its influence. Horkheimer and Adorno eventually rejected the classical Marxist perspective on the importance of class struggle for the development of fascism in favor of a perspective in which both fascism and capitalism were funda-

mentally conceptualized as involving domination and authoritarianism. Further, they developed the theory that disturbed parent-child relations involving the suppression of human nature were a necessary condition for domination and authoritarianism.

Obviously, this is a perspective that is highly compatible with psychoanalytic theory, and indeed psychoanalysis was a basic influence on their thinking. Virtually from the beginning, psychoanalysis had a respected position within the Institute for Social Research, particularly under the influence of Erich Fromm. Fromm held positions at the Frankfurt Psychoanalytic Institute as well as at the Institute for Social Research, and along with other "left-Freudians" such as Wilhelm Reich and eventually Marcuse, he developed theories that incorporated both Marxism and psychoanalysis essentially by developing a theoretical link between the repression of instincts in the context of family relationships (or, as in the case of Fromm, the development of sado-masochistic and anal personality traits within the family) and the development of oppressive social and economic structures. It is interesting that although the Horkheimer group developed a very strong hostility to empirical science and the positivistic philosophy of science, they felt no need to abandon psychoanalysis. Indeed, psychoanalysis was "a central factor in giving Horkheimer and the most important of his fellow theoreticians the sense that important insights could also be achieved.

We shall see that psychoanalysis as a nonempirically based hermeneutic structure (which nevertheless masqueraded as a science) turned out to be an infinitely plastic tool in the hands of those constructing a theory aimed at achieving purely political objectives. For Horkheimer and Adorno, the fundamental shift from the sociological to the psychological level that occurred during the 1940s was motivated by the fact that in Germany the proletariat had succumbed to fascism and in the Soviet Union socialism had not prevented the development of an authoritarian government that failed to guarantee individual autonomy or Jewish group interests. The formal outline of the theory can be seen in philosophical form in the earlier work *Studies on Authority and the Family* of 1936, a work that presented Fromm's psychoanalytic theory of authoritarian "sado-masochistic" family relationships and their putative linkages with bourgeois capitalism and fascism.

This philosophical-speculative approach to anti-Semitism was refined in the chapter on anti-Semitism in Horkheimer and Adorno's (1944/1990) *Dialectic of Enlightenment*. In addition to being highly abstract and written in what might be termed a Hegelian manner, the style of writing is assertional: Statements about anti-Semitism are simply asserted with no attempt to provide any empirical justification. The non-empirical nature of the theory of anti-Semitism was quite clear to Adorno as well: "[W]e never regarded the theory simply as a set of hypotheses but as in some sense standing on its own feet, and therefore did not intend to prove or disprove the theory through our findings but only to derive from it concrete questions for investigation, which must then be judged on their own merit and demonstrate certain prevalent socio-psychological structures".

Fundamentally *The Authoritarian Personality* studies resulted from a felt need to develop an empirical program of research that would support a politically and intellectually

satisfying a priori theory of anti-Semitism in order to influence an American academic audience. As Horkheimer stated in 1943, "When we became aware that a few of our American friends expected of an Institute of Social Sciences that it engage in studies on pertinent social problems, fieldwork, and other empirical investigations, we tried to satisfy these demands as well as we could, but our heart was set on individual studies in the sense of *Geisteswissenschaften* [i.e., the humanities] and the philosophical analysis of culture".

Indeed, the goal of producing political propaganda by using the methods of social science was self-consciously articulated by Horkheimer. Thus Horkheimer reacted with enthusiasm to the idea of including criminals in the study: "Research would be able here to transform itself directly into propaganda, i.e., if it could be reliably established that a particularly high percentage of criminals were extreme anti-Semites, the result would as such already be propaganda. I would also like to try to examine psychopaths in mental hospitals". Both groups were eventually included in the study.

A general theme in *Dialectic of Enlightenment* is that anti-Semitism is the result of "the will to destroy born of a false social order" (p. 168). The ideology that Jews possess a variety of negative traits is simply a projection resulting in a self-portrait of the anti-Semite: Anti-Semites accuse the Jews of wanting power, but in reality the anti-Semites "long for total possession and unlimited power, at any price. They transfer their guilt for this to the Jews". There is a recognition that anti-Semitism is associated with gentile movements for national cohesiveness (pp. 169-170). The anti-Semitism arising along with such movements is interpreted as resulting from the "urge to destroy" carried out by "covetous mobs" that are ultimately manipulated by ruling gentile elites to conceal their own economic domination. Anti-Semitism is without function except to serve as a means of discharging the anger of those who are frustrated economically and sexually.

Horkheimer and Adorno propose that modern fascism is basically the same as traditional Christianity because both involve opposition to and subjugation of nature. While Judaism remained a "natural religion" concerned with national life and self-preservation, Christianity turned toward domination and a rejection of all that is natural. This tendency to interpret anti-Semitism as fundamentally deriving from suppressing nature is central to *Studies in Prejudice*, and particularly *The Authoritarian Personality*. Suppression of nature results in projection of qualities of self onto the environment and particularly onto the Jews. "Impulses which the subject will not admit as his own even though they are most assuredly so, are attributed to the object—the prospective victim". Particularly important for this projection process are sexual impulses: "The same sexual impulses which the human species suppressed have survived and prevailed—in individuals and in nations—by way of the mental conversion of the ambient world into a diabolical system". Christian self-denial and, in particular, the suppression of sex result in evil and anti-Semitism via projection.

Psychoanalytic theory is invoked as an explanation of this process in a manner that,

in its emphasis on suppressed hatred for the father, also anticipates the theory utilized in *The Authoritarian Personality*. Psychoanalytic theory is invoked as an explanation of this process in a manner that, in its emphasis on suppressed hatred for the father, also anticipates the theory utilized in *The Authoritarian Personality*. Aggressive urges originating in the id are projected onto the external world by actions of the superego. "The forbidden action which is converted into aggression is generally homosexual in nature. Through fear of castration, obedience to the father is taken to the extreme of an anticipation of castration in conscious emotional approximation to the nature of a small girl, and actual hatred to the father is suppressed" Forbidden actions underlain by powerful instincts are thus turned into aggression, which is then projected onto victims in the external world, with the result that "he attacks other individuals in envy or persecution just as the repressed bestialist hunts or torments an animal". A later passage decries the "suppression of animal nature into scientific methods of controlling nature". Domination of nature, viewed as central to Christianity and fascism, thus derives ultimately from suppressing our animal nature.

Horkheimer and Adorno then attempt to explain the role of conformity in fascism. They argue that cohesive gentile group strategies are fundamentally based on a distortion of human nature central theme of *The Authoritarian Personality*. They posit a natural, non-conforming, reflective self in opposition to society that has been corrupted by capitalism or fascism. The development of large industrial interests and the culture industry of late capitalism have destroyed in most people the inner-directed, reflective power that can produce "self-comprehending guilt", which could oppose the forces leading to anti-Semitism. This inner directed reflection was "emancipated" from society and even directed against society, but under the above-mentioned forces, it conforms blindly to the values of the external society. Thus humans are portrayed as naturally opposed to the conformity demanded by a highly cohesive society. As indicated below, a consistent theme of *The Authoritarian Personality* is the idea that gentile participation in cohesive groups with high levels of social conformity is pathological, whereas similar behavior of Jews with respect to the group cohesiveness characteristic of Judaism is ignored: Indeed, we have seen that Judaism is portrayed in *The Dialectic of Enlightenment* as morally superior to Christianity.

The end of anti-Semitism is thus viewed as a precondition for the development of a utopian society and the liberation of humanity perhaps the closest that the Frankfurt School ever came to defining utopia.¹¹⁸ The envisioned utopian society is one in which Judaism can continue as a cohesive group but in which cohesive, nationalistic, corporate gentile groups based on conformity to group norms have been abolished as manifestations of psychopathology. Horkheimer and Adorno developed the view that the unique role of Judaism in world history was to vindicate the concept of difference against the homogenizing forces thought to represent the essence of Western civilization: "The Jews became the metaphoric equivalent of that remnant of society preserving negation and the non-identical" (Jay 1980, 148). Judaism thus represents the antithesis of Western univer-

salism. The continuation and acceptance of Jewish particularism becomes a precondition for the development of a utopian society of the future.

Within this perspective, the roots of anti-Semitism are therefore to be sought in individual psychopathology, not in the behavior of Jews. Nevertheless, there is some acknowledgment that the actual characteristics of Jews may be involved in historical anti-Semitism, but Horkheimer and Adorno theorize that the Jewish characteristics that have led to anti-Semitism were forced on Jews. Jews are said to have incurred the wrath of the lower classes because Jews were the originators of capitalism: "For the sake of economic progress which is now proving their downfall, the Jews were always a thorn in the side of the craftsmen and peasants who were declassed by capitalism. They are now experiencing to their own cost the exclusive, particularist character of capitalism". (Note from Author: There are some serious mental gymnastics going on here. Marking themselves as the eternal victim, saying that Gentiles way of suppressing nature (i.e. A Philosophy probably aligned with Nietzsche's *Übermensch*) leads to anti-semitism...).

However, this Jewish role is viewed as forced on the Jews who were completely dependent on gentile elites for their rights even into the nineteenth century. Under these circumstances, "Commerce is not their vocation, it is their fate" (p. 175). The success of the Jews then constituted a trauma to the gentile bourgeoisie, "who had to pretend to be creative"; their anti-Semitism is thus "self-hatred, the bad conscience of the parasite".

I have noted that a powerful tendency in both radical politics and psychoanalysis has been a thoroughgoing critique of gentile society. An important theme here is that *Studies in Prejudice* and, especially, *The Authoritarian Personality* attempt to show that gentile group affiliations, and particularly membership in Christian religious sects, gentile nationalism, and close family relationships, are an indication of psychiatric disorder. At a deep level the work of the Frankfurt School is addressed to altering Western societies in an attempt to make them resistant to anti-Semitism by pathologizing gentile group affiliations. And because this effort ultimately eschews the leftist solutions that have attracted so many twentieth-century Jewish intellectuals, it is an effort that remains highly relevant to the current post-Communist intellectual and political context.

The opposition of Jewish intellectuals to cohesive gentile groups and a homogeneous gentile culture has perhaps not been sufficiently emphasized. I have noted in Chapter 1 that the Conversos were vastly overrepresented among the humanist thinkers in fifteenth- and sixteenth-century Spain who opposed the corporate nature of Spanish society centered around the Christian religion. I have also noted that a central thrust of Freud's work was to continue to strongly identify as a Jew while at the same time developing a theory of Christian religious affiliation in which the latter is conceptualized as fulfilling infantile needs. Similarly, another way of conceptualizing the Jewish advocacy of radical political movements consistent with the material in Chapter 3 is that these political movements may be understood as simultaneously undermining gentile intrasocietal group affiliations, such as Christianity and nationalism, at the same time allowing for the continuation of Jewish identification. For example, Jewish Communists consistently opposed

Polish nationalist aspirations, and after they came to power in the post-World War II era they liquidated Polish nationalists and undermined the role of the Catholic Church while simultaneously establishing secular Jewish economic and social structures.

It is of some historical interest to note that an important feature of the rhetoric of German anti-Semites throughout the nineteenth century into the Weimar period was that Jews advocated political forms such as liberalism, which opposed structuring society as a highly cohesive group, at the same time they themselves retained an extraordinary group cohesiveness that enabled them to dominate Germans. During the Weimar period the Nazi propagandist Alfred Rosenberg complained that Jews advocated a completely atomized society while at the same time exempting themselves from this process. Whereas the rest of society was to be prevented from participating in highly cohesive groups, the Jews “would retain their international cohesiveness, blood ties, and spiritual unity”.

In *Mein Kampf*, Hitler clearly believed that Jewish advocacy of liberal attitudes was a deception overlaying a commitment to racialism and a highly cohesive group strategy: “While he [the Jew] seems to overflow with ‘enlightenment,’ ‘progress,’ ‘freedom,’ ‘humanity,’ etc., he himself practices the severest segregation of his race”. The conflict between Jewish advocacy of Enlightenment ideals and actual Jewish behavior was noted by Klein (1981, 146): “Annoyed by the parochial attachments of other people, and unresponsive to the idea of a pluralistic state, many non-Jews interpreted the Jewish assertion of pride as a subversion of the ‘enlightened’ or egalitarian state. The Jewish stress on national or racial pride reinforced the non-Jewish perception of the Jew as a disruptive social force.”

In the event, National Socialism developed as a cohesive gentile group strategy in opposition to Judaism, a strategy that completely rejected the Enlightenment ideal of an atomized society based on individual rights in opposition to the state. In this regard National Socialism was very much like Judaism, which has been throughout its history fundamentally a group phenomenon in which the rights of the individual have been submerged in the interests of the group. As evident in the material reviewed here and in the previous chapters, at least some influential Jewish social scientists and intellectuals have attempted to undermine gentile group strategies while leaving open the possibility that Judaism continue as a highly cohesive group strategy. This theme is highly compatible with the Frankfurt School’s consistent rejection of all forms of nationalism. The result is that in the end the ideology of the Frankfurt School may be described as a form of radical individualism that nevertheless despised capitalism—an individualism in which all forms of gentile collectivism are condemned as an indication of social or individual pathology.

Thus in Horkheimer’s essay on German Jews (see Horkheimer 1974), the true enemy of the Jews is gentile collectivities of any kind, and especially nationalism. Although no mention is made of the collectivist nature of Judaism, Zionism, or Israeli nationalism, the collectivist tendencies of modern gentile society are deplored, especially fascism and communism. The prescription for gentile society is radical individualism and the acceptance of pluralism. People have an inherent right to be different from others and to

be accepted by others as different. Indeed, to become differentiated from others is to achieve the highest level of humanity.

Congruent with this stress on individualism and the glorification of difference, Adorno embraced a radical form of philosophical skepticism which is completely incompatible with the entire social science enterprise of The Authoritarian Personality. Indeed, Adorno rejected even the possibility of ontology (“reification”) because he viewed the contrary positions as ultimately supporting totalitarianism. Given Adorno’s preoccupation with Jewish issues and strong Jewish identity, it is reasonable to suppose that these ideological structures are intended to serve as a justification of Jewish particularism. In this view, Judaism, like any other historically particular entity, must remain beyond the reach of science, forever incomprehensible in its uniqueness and ever in opposition to all attempts to develop homogeneous social structures in the society as a whole. The prescription that gentile society adopt a social organization based on radical individualism would indeed be an excellent strategy for the continuation of Judaism as a cohesive, collectivist group strategy. Research summarized by Triandis (1990, 1991) on cross-cultural differences in individualism and collectivism indicates that anti-Semitism would be lowest in individualist societies rather than societies that are collectivist and homogeneous apart from Jews.

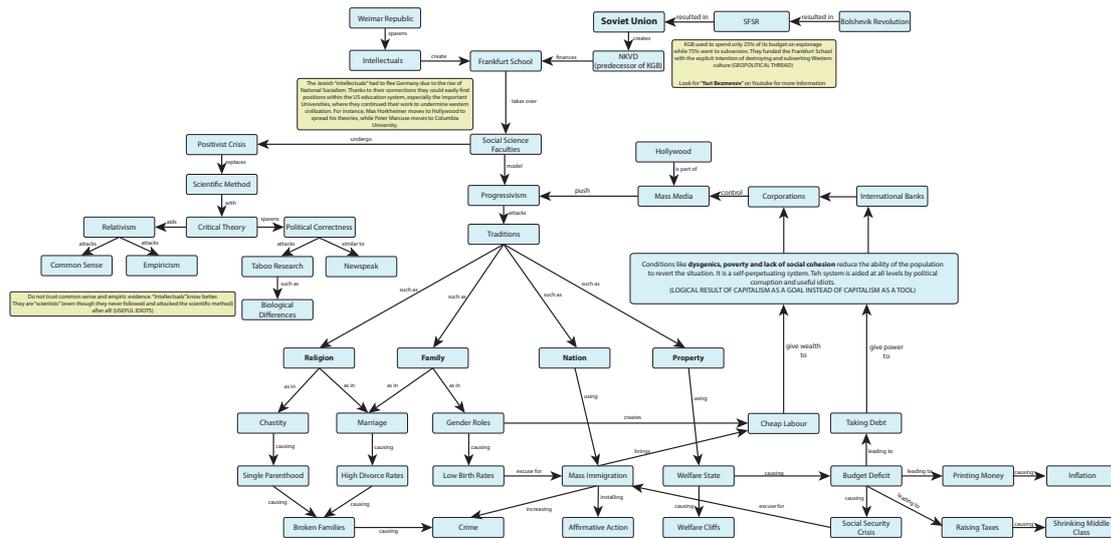

Figure 14.1: The agenda of the Frankfurt School spread to to the United States and created a wide network of “convinced academia” who further pushed to dissolve western traditions in the name of “progress”. This movement is labeled as “Cultural Marxism” and was subject in literature in the 1940s and 1950s and then “suddenly” disappeared from the public eye.

Collectivist cultures explicitly includes Judaism in this category) place a much greater emphasis on the goals and needs of the ingroup rather than on individual rights and interests. Collectivist cultures develop an “unquestioned attachment” to the ingroup, including “the perception that ingroup norms are universally valid (a form of ethnocentrism), automatic obedience to ingroup authorities, and willingness to fight and die for the ingroup. These characteristics are usually associated with distrust of and unwillingness to cooperate with

outgroups". In collectivist cultures morality is conceptualized as that which benefits the group, and aggression and exploitation of outgroups are acceptable (Triandis 1990, 90).

People in individualist cultures, in contrast, show little emotional attachment to ingroups. Personal goals are paramount, and socialization emphasizes the importance of self-reliance, independence, individual responsibility, and "finding yourself". Individualists have more positive attitudes toward strangers and outgroup members and are more likely to behave in a prosocial, altruistic manner to strangers. Because they are less aware of ingroup-outgroup boundaries, people in individualist cultures are less likely to have negative attitudes toward outgroup members. They often disagree with ingroup policy, show little emotional commitment or loyalty to ingroups, and do not have a sense of common fate with other ingroup members. Opposition to outgroups occurs in individualist societies, but the opposition is more "rational" in the sense that there is less of a tendency to suppose that all of the outgroup members are culpable for the misdeeds of a few. Individualists form mild attachments to many groups, whereas collectivists have an intense attachment and identification to a few ingroups.

The expectation is that individualists will tend to be less predisposed to anti-Semitism and more likely to blame any offensive Jewish behavior as resulting from transgressions by individual Jews rather than stereotypically true of all Jews. However Jews, as members of a collectivist subculture living in an individualistic society, are themselves more likely to view the Jewish-gentile distinction as extremely salient and to develop stereotypically negative views about gentiles.

In Triandis's terms, then, the fundamental intellectual difficulty presented by *The Authoritarian Personality* is that Judaism itself is a highly collectivist subculture in which authoritarianism and obedience to ingroup norms and the suppression of individual interests for the common good have been of vital importance throughout its history. Such attributes in gentiles tend to result in anti-Semitism because of social identity processes. Jews may, as a result, perceive themselves to have a vital interest in advocating a highly individualist, atomized gentile culture while simultaneously maintaining their own highly elaborated collectivist subculture. This is the perspective developed by the Frankfurt School and apparent throughout *Studies in Prejudice*.

The Influence of the Frankfurt School

Although it is difficult to assess the effect of works like *The Authoritarian Personality* on gentile culture, there can be little question that the thrust of the radical critique of gentile culture in this work, as well as other works inspired by psychoanalysis and its derivatives, was to pathologize high-investment parenting and upward social mobility, as well as pride in family, religion, and country, among gentiles. Certainly many of the central attitudes of the largely successful 1960s countercultural revolution find expression in *The Authoritarian Personality*, including idealizing rebellion against parents, low-investment sexual relationships, and scorn for upward social mobility, social status, family pride, the

Christian religion, and patriotism.

We have seen that despite this antagonistic perspective on gentile culture, Jewish 1960s radicals continued to identify with their parents and with Judaism. The countercultural revolution was in a very deep sense a mission to the gentiles in which adaptive behavior and group-identifications of gentiles were pathologized while Jewish group identification, ingroup pride, family pride, upward social mobility, and group continuity retained their psychological importance and positive moral evaluation. In this regard, the behavior of these radicals was exactly analogous to that of the authors of *The Authoritarian Personality* and Jewish involvement in psychoanalysis and radical politics generally: Gentile culture and gentile group strategies are fundamentally pathological and are to be anathemized in the interests of making the world safe for Judaism as a group evolutionary strategy. As with political radicalism, only a rarified cultural elite could attain the extremely high level of mental health epitomized by the true liberal.

Stated goals of the Frankfurt School

1. The creation of racism offences
2. Continual change to create confusion
3. The teaching of sex and homosexuality to children
4. The undermining of schools' and teachers' authority
5. Huge immigration to destroy identity
6. Promotion of excessive drinking
7. Emptying of churches
8. An unreliable legal system with bias against victims of crime
9. Dependency on the state or state benefits (welfare and/or socialism)
10. Control and dumbing down of media
11. Encouraging the breakdown of the family

"The revolution won't happen with guns, rather it will happen incrementally, year by year, generation by generation. We will gradually infiltrate their educational institutions and their political offices, transforming them slowly into Marxist entities as we move towards universal egalitarianism."

- Max Horkheimer

One of the main ideas of the Frankfurt School was to exploit Freud's idea of "pansexualism" - the search for pleasure, the exploitation of the differences between the sexes, the overthrowing of traditional relationships between men and women. To further their aims they would:

- attack the authority of the father, deny the specific roles of father and mother, and wrest away from families their rights as primary educators of their children
- abolish differences in the education of boys and girls
- abolish all forms of male dominance - hence the presence of women in the armed forces
- declare women to be an oppressed class and men as oppressors

Munzberg summed up the Frankfurt School's long-term operation thus: "We will make the West so corrupt it stinks."

The School believed there were two types of revolution: (a) political and (b) cultural. Cultural revolution demolishes from within. "Modern forms of subjection are marked by mildness". They saw it as a long-term project and kept their sights clearly focused on the family, education, media, sex and popular culture.

In the post-World War II era *The Authoritarian Personality* became an ideological weapon against historical American populist movements, especially McCarthyism. These trends are exemplified in *The Politics of Unreason*, a volume in the *Patterns of American Prejudice Series* funded by the ADL and written by Seymour Martin Lipset and Earl Raab (1970). As indicated by the title, *The Politics of Unreason* analyses political and ideological expressions of ethnocentrism by Europe-derived peoples as irrational and as being unrelated to legitimate ethnic interests in retaining political power. "Right-wing extremist" movements aim at retaining or restoring the power of the European-derived majority of the United States, but "Extremist politics is the politics of despair". For Lipset and Raab, tolerance of cultural and ethnic pluralism is a defining feature of democracy, so that groups that oppose cultural and ethnic pluralism are by definition extremist and anti-democratic. Indeed, citing Edward A. Shils (1956, 154), they conceptualize pluralism as implying multiple centers of power without domination by any one group—a view in which the self-interest of ethnic groups in retaining and expanding their power is

conceptualized as fundamentally antidemocratic.

Attempts by majorities to resist the increase in the power and influence of other groups are therefore contrary to “the fixed spiritual center of the democratic political process”. “Extremism is anti-pluralism. . . . And the operational heart of extremism is the repression of difference and dissent”. Right-wing extremism is condemned for its moralism, an ironic move given the centrality of a sense of moral superiority that pervades the Jewish-dominated intellectual movements reviewed here, not to mention Lipset and Raab’s own analysis in which right-wing extremism is labeled “an absolute political evil” because of its links with authoritarianism and totalitarianism. Right-wing extremism is also condemned for its tendency to advocate simple solutions to complex problems, which, as noted by Lasch (1991), is a plea that solutions to social problems should be formulated by an intellectual elite.

And finally, rightwing extremism is condemned because of its tendency to distrust institutions that intervene between the people and their direct exercise of power, another plea for the power of elites: “Populism identifies the will of the people with justice and morality”. **The conclusion of this analysis is that democracy is identified not with the power of the people to pursue their perceived interests. Rather, democracy is conceptualized as guaranteeing that majorities will not resist the expansion of power of minorities even if that means a decline in their own power.**

Another good example of this intellectual onslaught on the lower middleclass associated with the Frankfurt School is Erich Fromm’s (1941) *Escape from Freedom*, in which the lower middle-class is regarded as highly prone to developing “sado-masochistic” reaction formations (as indicated by participating in authoritarian groups!) as a response to their economic and social status frustrations. It is not surprising that the lower middle-class target of this intellectual onslaught—including, one might add, the mittlestand of Wilhelminian German politics—has historically been prone to anti-Semitism as an explanation of their downward social mobility and their frustrated attempts to achieve upward social mobility. This group has also been prone to joining cohesive authoritarian groups as a means of attaining their political goals. But within the context of *The Authoritarian Personality*, the desire for upward social mobility and the concern with downward social mobility characteristic of many supporters of populist movements is a sign of a specific psychiatric disorder, a pathetic result of inappropriate socialization that would disappear in the liberalized utopian society of the future.

Although Critical Theory ceased to be a guide for protest movements by the early 1970s, it has retained a very large influence in the intellectual world generally. In the 1970s, the Frankfurt School intellectuals continued to draw the fire of German conservatives who characterized them as the “intellectual foster-parents of terrorists” and as fomenters of “cultural revolution to destroy the Christian West”. “The inseparability of concepts such as Frankfurt School, Critical Theory, and neo-Marxism indicates that, from the 1930’s onwards, theoretically productive leftwing ideas in German-speaking countries had focused

on Horkheimer, Adorno and the Institute of Social Research". The Institute of Social Research" (Wiggershaus 1994, 658). However, the influence of the Frankfurt School has gone well beyond the German-speaking world, and not only with The Authoritarian Personality studies, the writings of Erich Fromm, and the enormously influential work of Herbert Marcuse as a countercultural guru to the New Left. In the contemporary intellectual world, there are several journals devoted to this legacy, including *New German Critique*, *Cultural Critique*, and *Theory, Culture, and Society: Explorations in Critical Social Science*. The influence of the Frankfurt School increased greatly following the success of the New Left countercultural movement of the 1960s.

Reflecting its current influence in the humanities, the Frankfurt School retains pride of place as a major inspiration at the meetings of the notoriously postmodern Modern Language Association held in December 1994. Kramer and Kimball (1995) describe the large number of laudatory references to Adorno, Horkheimer, and especially Walter Benjamin, who had the honor of being the most-referred-to scholar at the convention. Marxism and psychoanalysis were also major influences at the conference. One bright spot occurred when the radical Marxist Richard Ohmann acknowledged that the humanities had been revolutionized by the "critical legacy of the Sixties". The strategy of the Frankfurt School was to deconstruct universalist, scientific thinking by the use of "critical reason," postmodernism has opted for complete relativism and the lack of objective standards of any kind in the interests of preventing any general theories of society or universally valid philosophical or moral systems.

Contemporary postmodernism and multiculturalist ideology have adopted several central pillars of the Frankfurt School: the fundamental priority of ethics and values in approaching education and the social sciences; empirical science as oppressive and an aspect of social domination; a rejection of the possibility of shared values or any sense of universalism or national culture a "hermeneutics of suspicion" in which any attempt to construct such universals or a national culture is energetically resisted and "deconstructed", essentially the same activity termed by Adorno "negative dialectics."

It is immensely ironic that this onslaught against Western universalism effectively rationalizes minority group ethnocentrism while undercutting the intellectual basis of ethnocentrism. Intellectually one wonders how one could be a postmodernist and a committed Jew at the same time. Intellectual consistency would seem to require that all personal identifications be subjected to the same deconstructing logic, unless, of course, personal identity itself involves deep ambiguities, deception, and self-deception. This in fact appears to be the case for Jacques Derrida, the premier philosopher of deconstruction, whose philosophy shows the deep connections between the intellectual agendas of postmodernism and the Frankfurt School.

14.6 The Jewish Criticism of Gentile Culture: A Reprise

The material in the previous four chapters indicates that individuals who strongly identified as Jews have been the main motivating force behind several highly influential intellectual movements that have simultaneously subjected gentile culture to radical criticism and allowed for the continuity of Jewish identification. Together these movements comprise the intellectual and political left in this century, and they are the direct intellectual ancestors of current leftist intellectual and political movements, particularly postmodernism and multiculturalism.

Collectively, these movements have called into question the fundamental moral, political, and economic foundations of Western society. A critical feature of these movements is that they have been, at least in the United States, top-down movements in the sense that they were originated and dominated by members of a highly intelligent and highly educated group. These movements have been advocated with great intellectual passion and moral fervor and with a very high level of theoretical sophistication. Each movement promised its own often overlapping and complementary version of utopia: a society composed of people with the same biological potential for accomplishment and able to be easily molded by culture into ideal citizens as imagined by a morally and intellectually superior elite; a classless society in which there would be no conflicts of interest and people would altruistically work for the good of the group; a society in which people would be free of neuroses and aggression toward outgroups and in tune with their biological urges; a multicultural paradise in which different racial and ethnic groups would live in harmony and cooperation—a utopian dream that also occupies center stage in the discussion of Jewish involvement in shaping U.S. immigration policy.

The originators of these movements were all vitally concerned with anti-Semitism, and all of the utopias envisioned by these intellectual and political movements would end anti-Semitism while allowing for Jewish group continuity. A generation of Jewish radicals looked to the Soviet Union as an idyllic place where Jews could rise to positions of preeminence and where anti-Semitism was officially outlawed while Jewish national life flourished. The psychoanalytic movement and the Frankfurt School looked forward to the day when gentiles would be inoculated against anti-Semitism by a clinical priesthood that could heal the personal inadequacies and the frustrations at loss of status that gentiles murderously projected onto the Jews. And the Boasians and the Frankfurt School and their descendants would prevent the development of anti-Semitic ideologies of majoritarian ethnocentrism.

A palpable sense of intellectual and moral superiority of those participating in these movements is another characteristic feature. This sense of intellectual superiority and hostility to gentiles and their culture was a recurrent theme of the leftist movements. Documented is also a profound sense of intellectual superiority and estrangement from gentile culture that characterized not only Freud but also the entire psychoanalytic movement. Regarding moral superiority, the central pose of post-Enlightenment Jewish intellectuals

is a sense that Judaism represents a moral beacon to the rest of humanity. Moral indictments of their opponents are a prominent theme in the writings of political radicals and those opposing biological perspectives on individual and group differences in IQ. A sense of moral superiority was also prevalent in the psychoanalytic movement, and we have seen that the Frankfurt School developed a moral perspective in which the existence of Judaism was viewed as an a priori moral absolute and in which social science was to be judged by moral criteria.

Current psychological theory and data are highly compatible with supposing that viewpoints advocated by minorities are able to influence attitudes held by the majority, especially when possessing a high degree of internal consistency and especially when they are disseminated from the most prestigious academic and media institutions in the society. Several features of these intellectual movements can be viewed as serving Jewish interests. The greatest danger for a minority group strategy is the development of a highly cohesive, sectarian majority group that views the minority group as a negatively evaluated outgroup. In combating this potential threat, one type of strategy has been to actively promote universalist ideologies within the larger society in which the Jewish-gentile social categorization is of minimal importance. Judaism as a cohesive, ethnically based group strategy continues to exist, but in a cryptic or semi-cryptic state. The exemplar of this strategy is leftist political ideology; however psychoanalysis and even forms of Judaism that minimize phenotypic differentiation between Jews and gentiles, adopt a similar strategy.

Jewish interests are also served by facilitating radical individualism (social atomization) among gentiles while retaining a powerful sense of group cohesion among Jews—the agenda of the Frankfurt School. Gentile group identifications are regarded as an indication of psychopathology. An important component of this strategy is the deconstruction of majoritarian intellectual movements that are incompatible with the continuation of Judaism. These majoritarian intellectual movements may range from radical assimilationism (e.g., the forced conversions to Christianity) to exclusivist majority group strategies based on majority group ethnocentrism (e.g., National Socialism).

Jewish interests are also served by the Frankfurt School ideology that gentile concerns about losing social status and being eclipsed economically, socially, and demographically by other groups are an indication of psychopathology. As an exceptionally upwardly mobile group, this ideology serves Jewish interests by defusing gentile concerns about their downward mobility, and we shall see in the next chapter that Jewish organizations and Jewish intellectuals have been at the forefront of the movement to eclipse the demographic and cultural dominance of European-derived peoples in Western societies. Several themes common to these Jewish intellectual movements bear mentioning. An important thread apparent in the discussions of psychoanalysis, Boasian anthropology, the Frankfurt School, and radical intellectual and political circles has been that Jewish intellectuals have formed highly cohesive groups whose influence derives to great extent from the solidarity and cohesiveness of the group. Intellectual activity is like any other

human endeavor: Cohesive groups outcompete individualist strategies. Indeed, the fundamental truth of this axiom has been central to the success of Judaism throughout its history.

Indeed, Jewish associational patterns in science go well beyond the cohesive intellectual movements discussed here. Recently Greenwald and Schuh (1994) demonstrated a pattern of ethnic discrimination in scientific citations whereby Jewish authors were 40 percent more likely to cite Jewish authors than were non-Jewish authors. Jewish first authors of scientific papers were also approximately three times more likely to have Jewish coauthors than were non-Jewish first authors. Although the methods used in the study did not allow determination of the direction of discrimination, the findings reported throughout this volume strongly suggest that a large proportion of the discrimination originates with Jewish scientists. This is also suggested by the disproportionate representation of Jewish coauthors, presumably the result of Jewish ingroup associational patterns both as mentors and colleagues. Moreover, where there are proportionate differences in group size, individuals in minority groups are generally more prone to ingroup bias than are majority group members (Mullen 1991), suggesting that Jews would be more strongly inclined toward ethnic discrimination than gentiles.

Jews have also been greatly overrepresented as editors, publishers and contributors to a variety of radical and liberal periodicals, including *The Nation*, *The New Republic*, and *The Progressive*. In 1974 *The New Republic* (TNR) was purchased by Martin Peretz, son of a "devoted Labor Zionist and right-wing Jabotinskyist" and himself a leftist student activist before moving in the direction of neoconservatism. The only consistent theme in Peretz's career is a devotion to Jewish causes, particularly Israel. He reflects a major theme of Chapter 3 in that he abandoned the New Left when some in the movement condemned Israel as racist and imperialist. During the 1967 Arab-Israeli war, he told Henry Kissinger that his "dovishness stopped at the delicatessen door", and many among his staff feared that all issues would be decided on the basis of what was "good for the Jews".

Similarly, in the literary world, the highly influential left-wing journal *Partisan Review* (PR) was a principle showcase of "the New York Intellectuals," a group dominated by editors and contributors with a Jewish ethnic identity and a deep alienation from American political and cultural institutions. Clement Greenberg, the highly influential art critic whose work helped establish the Abstract Expressionist movement in the 1940s, is a prototypical member of this group. He made his reputation entirely within what one might term a Jewish intellectual milieu. Greenberg was a writer for PR, managing editor of *Contemporary Jewish Record* (the forerunner of *Commentary*), long-time editor of *Commentary* under Elliot Cohen, as well as art critic for *The Nation*. Because of the overlap among several contributors and editors, the following are considered the magazines associated with the New York Intellectuals: PR, *Commentary*, *Menorah Journal*, *Dissent*, *The Nation*, *Politics*, *Encounter*, *The New Leader*, *The New York Review of Books*, *The Public Interest*, *The New Criterion*, *The National Interest*, and *Tikkun*.

PR originated as an offshoot of the Communist Party, its central figures all Marxists and admirers of Trotsky. There was, however, an increasingly heavy dose of psychoanalysis beginning in the 1940s. The New York Intellectuals gradually evolved away from advocacy of socialist revolution toward a shared commitment to anti-nationalism and cosmopolitanism, “a broad and inclusive culture” in which cultural differences were esteemed. It would be difficult to overestimate the New York Intellectuals’ influence on American high culture in the 1940s and 1950s, particularly in the areas of literary criticism, art criticism, sociology, and “intellectual high journalism”.

ving Kristol writes of PR’s “intimidating presence” among his college friends. In the words of art critic Hilton Kramer:

For certain writers and intellectuals of my generation. . . drawn to PR in the late forties and early fifties. . . it was more than a magazine, it was an essential part of our education, as much a part of that education as the books we read, the visits we made to the museums, the concerts we attended, and the records we bought. It gave us an entrée to modern cultural life—to its gravity and complexity and combative character—that few of our teachers could match. . .

Philosopher Sidney Hook also had a strong Jewish identification; he was a Zionist, a strong supporter of Israel, and an advocate of Jewish education for Jewish children. Hook played a decisive leadership role in the group, and, as indicated above, he had an editorial position at *Commentary*. In his “Reflections on the Jewish Question” he wrote, “the causes of antisemitism are not to be found in the behavior of Jews”. Rather, the sources of anti-Semitism are to be found “in the beliefs and habits and culture of the non-Jews” (p. 468), particularly Christianity. Anti-Semitism “is endemic to every Christian culture whose religions made Jews the eternal villain in the Christian drama of salvation”. (Jews, the eternal victim) Hook felt that one had a moral obligation to remain a Jew:

[For most Jews] escape [from being Jewish] was practically impossible, that where it was possible the psychological costs were usually too burdensome, and that morally it was intrinsically degrading to capitulate to irrational prejudice and deny kinship with their own fathers and mothers who, often against heroic odds, had courageously kept their integrity and faith whatever it was.

Like many leftists, Hook approved of the dream of human universalism, but the dream “overlooks the fact that human beings live as Jews and non-Jews here and now and will continue to do so for a long time to come; that the dream itself is based upon the acceptance of differences among men and not on the hope of an undifferentiated unity. Jews would thus continue to exist as Jews long after Hook’s utopia of democratic socialism had been created. For Hook, leftist universalism properly understood implies an acceptance of cultural diversity as not only central to a philosophy of Judaism but central to the idea of democracy itself.

The New York Intellectuals included the following prominent Jewish participants, clas-

sified roughly according to main area of involvement, although they tended to be generalists rather than specialists: Elliot Cohen (editor of *Menorah Journal* and founding editor of *Commentary*); Sidney Hook, Hannah Arendt (political philosophy, political and intellectual journalism); William Phillips and Philip Rahv (editors of *PR*; literary criticism, intellectual journalism); Lionel Trilling, Diana Trilling, Leslie Fiedler, Alfred Kazin, and Susan Sontag (literary criticism); Robert Warshow (film criticism and cultural criticism); Isaac Rosenfeld, Delmore Schwartz, Paul Goodman, Saul Bellow, and Norman Mailer (fiction and poetry, literary criticism); Irving Howe (political journalism, literary criticism); Melvin J. Lasky, Norman Podhoretz, and Irving Kristol (political journalism); Nathan Glazer, Seymour Martin Lipset, Daniel Bell, Edward Shils, David Riesman, and Michael Walzer (sociology); Lionel Abel, Clement Greenberg, George L. K. Morris, Meyer Schapiro, and Harold Rosenberg (art criticism).

The New York Intellectuals spent their careers entirely within a Jewish social and intellectual milieu. Cultural critique was central to the work of the New York Intellectuals. To Rahv, modernist culture was important because of its potential for cultural critique. Modernism encouraged “the creation of moral and aesthetic values running counter to and often violently critical of the bourgeois spirit.” “What is modern literature if not a vindictive, neurotic, and continually renewed dispute with the modern world?” Such pronouncements on the critical potential of even the most abstract art reflected the views of Frankfurt School theorists Adorno and Horkheimer, the latter of whom noted that “An element of resistance is inherent in the most aloof art”.

This condescension and failure to respect others’ ideas are particularly obvious in the New York Intellectuals’ attitudes toward traditional American culture, especially the culture of rural America. There is a large overlap between the New York Intellectuals and the anti-populist forces who, as discussed in Chapter 5, used *The Authoritarian Personality* to pathologize the behavior of gentile Americans and particularly the lower middle class. The New York Intellectuals were cultural elitists who abhorred cultural democracy and feared the masses while nevertheless remaining consistently left-of-center politically. The movement was “a leftist elitism—a leftist conservatism, we might say—that slowly evolved into . . . neoconservatism.

Intellectuals associated rural America with “nativism, anti-Semitism, nationalism, and fascism as well as with anti-intellectualism and provincialism; the urban was associated antithetically with ethnic and cultural tolerance, with internationalism, and with advanced ideas. . . . The New York Intellectuals simply began with the assumption that the rural—with which they associated much of American tradition and most of the territory beyond New York—had little to contribute to a cosmopolitan culture. . . . By interpreting cultural and political issues through the urban-rural lens, writers could even mask assertions of superiority and expressions of anti-democratic sentiments as the judgments of an objective expertise”.

Once an organization becomes dominated by a particular intellectual perspective, there is enormous intellectual inertia created by the fact that the informal networks dominat-

ing elite universities serve as gatekeepers for the next generation of scholars. Aspiring intellectuals, whether Jewish or gentile, are subjected to a high level of indoctrination at the undergraduate and graduate levels; there is tremendous psychological pressure to adopt the fundamental intellectual assumptions that lie at the center of the power hierarchy of the discipline. As discussed in Chapter 1, once a Jewish-dominated intellectual movement attains intellectual predominance, it is not surprising that gentiles would be attracted to Jewish intellectuals as members of a socially dominant and prestigious group and as dispensers of valued resources.

It is interesting to note other examples of cohesive groups of Jewish intellectuals besides those considered in the previous chapters. In sixteenth-century Spain a concentrated group of Converso intellectuals were intimately involved in making the University of Alcalá into a bastion of nominalism—a doctrine widely viewed as subversive of religion.

George Mosse describes a group of predominantly Jewish leftist intellectuals in the Weimar period that “attained a certain cohesion through the journals it made its own.” Similarly, Irving Louis Horowitz describes an “organic group” of Austrian Marxist intellectuals during the pre-World War II period who “shared in common Jewish ancestry if not Zionist persuasions.” Horowitz notes that the Austrian Marxist group and the Frankfurt School had “shared ethnic and religious backgrounds. . . not to mention overlapping networks and cohorts” resulting ultimately from the unity of prewar European German Jewish life.

Another interesting example is a highly cohesive group of neo-Kantian Jewish intellectuals centered at the University of Marburg under the leadership of Hermann Cohen in late-nineteenth-century Germany (Schwarzchild 1979, 136). Cohen (1842-1918), who ended his career teaching at a rabbinical seminary, rejected the historicism of the Volkisch thinkers and the Hegelians in favor of an idealistic version of Kantian rationalism. A primary intellectual goal was to suppose that the ideal Germany must be defined in universal moral terms that rationalized the continued existence of Jewish particularism: “A Germanism that might demand of me that I surrender my religion and my religious inheritance, I would not acknowledge as an ideal peoplehood in which the power and dignity of the state inhere. . . [A] Germanism that might demand such a surrender of religious selfhood, or that could even approve of and project it, simply contradicts the world-historical impulsion of Germanism”.

During the 1920s, there was “a distinct coterie” of Jewish intellectuals (Lionel Trilling, Herbert Solow, Henry Rosenthal, Tess Slesinger, Felix Morrow, Clifton Fadiman, Anita Brenner) centered around the *Menorah Journal* under the leadership of Elliot Cohen (later the founding editor of *Commentary*). This group, which later overlapped a great deal with the New York Intellectual group described above, was devoted to promoting the ideas of cultural pluralism. Reflecting its fundamentally Jewish political agenda, during the 1930s this group gravitated to the Communist Party and its auxiliary organizations, believing that, in the words of one observer, “the socialist revolution and its extension held out the only realistic hope of saving the Jews. Further, while adopting an ideology of revolutionary internationalism, the group “shared with cultural pluralism a hostility to

assimilation by the dominant culture“, another indication of the compatibility of leftist universalism and Jewish non-assimilation.

In the cases of psychoanalysis and the Frankfurt School, and to a lesser extent Boasian anthropology, we have seen that these cohesive groups typically had strong overtones of authoritarianism, and like traditional Judaism itself, they were highly exclusionary and intolerant of dissent. These movements tended to center around a charismatic leader (Boas, Freud, or Horkheimer) with a powerful moral, intellectual, and social vision, and the followers of these leaders had an intense devotion toward them. There was an intense psychological sense of missionary zeal and, as we have seen, moral fervor. This phenomenon occurred in the case of psychoanalysis and the Boasian movement, and (with massive irony) this was also the case with Critical Theory: “The theory which filled Adorno and Marcuse with a sense of mission both before and after the war was a theory of a special sort: in the midst of doubts it was still inspiring, in the midst of pessimism it still spurred them on towards a kind of salvation through knowledge and discovery. The promise was neither fulfilled nor betrayed—it was kept alive“.

Like Freud, Horkheimer inspired intense loyalty combined with personal insecurity (at least partly because of his control over the Institute’s budget, so that his underlings at the Institute, like Adorno, became fixated on him and intensely jealous of their rivals for their master’s favors. Adorno “was prepared to identify himself completely with the great cause of the Institute, measuring everything by that standard“.

Moreover, Jewish influence in the popular media was an important source of favorable coverage of Jewish intellectual movements, particularly psychoanalysis and 1960s political radicalism (Rothman & Lichter 1982). Favorable media depictions of psychoanalysis were common during the 1950s, peaking in the midsixties when psychoanalysis was at the apex of its influence in the United States. “Popular images of Freud revealed him as a painstaking observer, a tenacious worker, a great healer, a truly original explorer, a paragon of domestic virtue, the discover of personal energy, and a genius“. Psychiatrists were portrayed in movies as “humane and effective. The number of Hollywood stars, directors, and producers who were ‘in analysis’ was legion“.

It is thus not surprising that although these theories were directed at achieving specific Jewish interests in the manipulation of culture, they “could not tell their name“; that is, they were forced to minimize any overt indication that Jewish group identity or Jewish group interests were involved, and they could not develop a specific rationale for Judaism acceptable within a post-Enlightenment intellectual context. In the case of the Frankfurt School, “What strikes the current observer is the intensity with which many of the Institute’s members denied, and in some cases still deny, any meaning at all to their Jewish identities“. The originators and practitioners of these theories attempted to conceal their Jewish identities, as in the case of Freud, and to engage in massive self-deception, as appears to have been common among many Jewish political radicals. Recall the Jewish radicals who believed in their own invisibility as Jews while nevertheless appearing as the quintessential ethnics to outside observers and at the same time taking steps to ensure

that gentiles would have highly visible positions in the movement.

The technique of having gentiles as highly visible exemplars of Jewish-dominated movements has been commonly used by Jewish groups attempting to appeal to gentiles on a wide range of Jewish issues and is apparent in the discussion of Jewish involvement in influencing immigration policy in the following chapter.

14.7 Jewish Involvement in Shaping U.S. Immigration Policy

Immigration policy is a paradigmatic example of conflicts of interest between ethnic groups because immigration policy determines the future demographic composition of the nation. Ethnic groups unable to influence immigration policy in their own interests will eventually be displaced by groups able to accomplish this goal. Immigration policy is thus of fundamental interest to an evolutionist. Immigration policy is, however, only one aspect of conflicts of interest between Jews and gentiles in the United States. The skirmishes between Jews and the gentile power structure beginning in the late nineteenth century always had strong overtones of anti-Semitism. These battles involved issues of Jewish upward mobility, quotas on Jewish representation in elite schools beginning in the nineteenth century and peaking in the 1920s and 1930s, the anti-communist crusades in the post-World War II era, as well as the very powerful concern with the cultural influences of the major media extending from Henry Ford's writings in the 1920s to the Hollywood inquisitions of the McCarthy era and into the contemporary era.

The Jewish involvement in influencing immigration policy in the United States is especially noteworthy as an aspect of ethnic conflict. Jewish involvement in influencing immigration policy has had certain unique qualities that have distinguished Jewish interests from the interests of other groups favoring liberal immigration policies. Throughout much of the period from 1881 to 1965, one Jewish interest in liberal immigration policies stemmed from a desire to provide a sanctuary for Jews fleeing from anti-Semitic persecutions in Europe and elsewhere. Anti-Semitic persecutions have been a recurrent phenomenon in the modern world beginning with the Russian pogroms of 1881 and continuing into the post-World War II era in the Soviet Union and Eastern Europe. As a result, liberal immigration has been a Jewish interest because "survival often dictated that Jews seek refuge in other lands". For a similar reason, Jews have consistently advocated an internationalist foreign policy because "an internationally-minded America was likely to be more sensitive to the problems of foreign Jewries".

There is also evidence that Jews, much more than any other Europe-derived ethnic group in the United States, have viewed liberal immigration policies as a mechanism of ensuring that the United States would be a pluralistic rather than a unitary, homogeneous society. Pluralism serves both internal (within-group) and external (between-group) Jewish interests. Pluralism serves internal Jewish interests because it legitimates the internal Jewish interest in rationalizing and openly advocating an interest in overt rather than

semi-cryptic Jewish group commitment and nonassimilation, what Howard Sachar terms its function in “legitimizing the preservation of a minority culture in the midst of a majority’s host society.”

Ethnic and religious pluralism also serves external Jewish interests because Jews become just one of many ethnic groups. This results in the diffusion of political and cultural influence among the various ethnic and religious groups, and it becomes difficult or impossible to develop unified, cohesive groups of gentiles united in their opposition to Judaism. Historically, major anti-Semitic movements have tended to erupt in societies that have been, apart from the Jews, religiously or ethnically homogeneous.

Although ethnic and cultural pluralism are certainly not guaranteed to satisfy Jewish interests, it is nonetheless the case that ethnically and religiously pluralistic societies have been perceived by Jews as more likely to satisfy Jewish interests than are societies characterized by ethnic and religious homogeneity among gentiles. Indeed, at a basic level, the motivation for all the Jewish political and intellectual activity reviewed throughout this volume is intimately linked to fears of anti-Semitism.

Explicit statements linking immigration policy to a Jewish interest in cultural pluralism can be found among prominent Jewish social scientists and political activists. In his review of Horace Kallen’s (1956) *Cultural Pluralism and the American Idea* appearing in *Congress Weekly* (published by the AJCongress), Joseph L. Blau noted that “Kallen’s view is needed to serve the cause of minority groups and minority cultures in this nation without a permanent majority”—the implication being that Kallen’s ideology of multiculturalism opposes the interests of any ethnic group in dominating the United States. The well-known author and prominent Zionist Maurice Samuel, writing partly as a negative reaction to the immigration law of 1924, wrote, “If, then, the struggle between us [i.e., Jews and gentiles] is ever to be lifted beyond the physical, your democracies will have to alter their demands for racial, spiritual and cultural homogeneity with the State. But it would be foolish to regard this as a possibility, for the tendency of this civilization is in the opposite direction. There is a steady approach toward the identification of government with race, instead of with the political State.”

A congruent opinion is expressed by prominent Jewish social scientist and ethnic activist Earl Raab, who remarks very positively on the success of American immigration policy in altering the ethnic composition of the United States since 1965. Raab notes that the Jewish community has taken a leadership role in changing the Northwestern European bias of American immigration policy (1993a, 17), and he has also maintained that one factor inhibiting anti-Semitism in the contemporary United States is that “an increasing ethnic heterogeneity, as a result of immigration, has made it even more difficult for a political party or mass movement of bigotry to develop”. Or more colorfully:

The Census Bureau has just reported that about half of the American population will soon be non-white or non-European. And they will all be American citizens. We have tipped beyond the point where a Nazi-Aryan party will be able to prevail in this country.

We [Jews] have been nourishing the American climate of opposition to bigotry for about half a century. That climate has not yet been perfected, but the heterogeneous nature of our population tends to make it irreversible—and makes our constitutional constraints against bigotry more practical than ever.

Positive attitudes toward cultural diversity have also appeared in other statements on immigration by Jewish authors and leaders. Charles Silberman (1985, 350) notes, “American Jews are committed to cultural tolerance because of their belief—one firmly rooted in history—that Jews are safe only in a society acceptant of a wide range of attitudes and behaviors, as well as a diversity of religious and ethnic groups. It is this belief, for example, not approval of homosexuality, that leads an overwhelming majority of U.S. Jews to endorse ‘gay rights’ and to take a liberal stance on most other so-called ‘social’ issues.”

Similarly, in listing the positive benefits of immigration, the director of the Washington Action Office of the Council of Jewish Federations stated that immigration “is about diversity, cultural enrichment and economic opportunity for the immigrants”. Because liberal immigration policies are a vital Jewish interest, it is not surprising that support for liberal immigration policies spans the Jewish political spectrum. We have seen that Sidney Hook, who along with the other New York Intellectuals may be viewed as an intellectual precursor of neoconservatism, identified democracy with the equality of differences and with the maximization of cultural diversity.

Neoconservatives have been strong advocates of liberal immigration policies, and there has been a conflict between predominantly Jewish neoconservatives and predominantly gentile paleoconservatives over the issue of Third World immigration into the United States. Neoconservatives Norman Podhoretz and Richard John Neuhaus reacted very negatively to an article by a paleo-Conservative concerned that such immigration would eventually lead to the United States being dominated by such immigrants. Other examples are neoconservatives Julian Simon (1990) and Ben Wattenberg (1991) both of whom advocate very high levels of immigration from all parts of the world, so that the United States will become what Wattenberg describes as the world’s first “Universal Nation.” Based on recent data, Fetzer (1996) reports that Jews remain far more favorable to immigration to the United States than any other ethnic group or religion.

It should be noted as a general point that the effectiveness of Jewish organizations in influencing U.S. immigration policy has been facilitated by certain characteristics of American Jewry that are directly linked with Judaism as a group evolutionary strategy, and particularly an IQ that is at least one standard deviation above the Caucasian mean. High IQ is associated with success in a broad range of activities in contemporary societies, including especially wealth and social status. As Neuringer (1971) notes, Jewish influence on immigration policy was facilitated by Jewish wealth, education, and social status. Reflecting its general disproportionate representation in markers of economic success and political influence, Jewish organizations have been able to have a vastly disproportionate effect on U.S. immigration policy because Jews as a group are highly organized, highly intelligent and politically astute, and they were able to command a high level of financial,

political, and intellectual resources in pursuing their political aims.

Similarly, Hollinger (1996, 19) notes that Jews were more influential in the decline of a homogeneous Protestant Christian culture in the United States than Catholics because of their greater wealth, social standing, and technical skill in the intellectual arena. In the area of immigration policy, the main Jewish activist organization influencing immigration policy, the AJCommittee, was characterized by “strong leadership [particularly Louis Marshall], internal cohesion, well-funded programs, sophisticated lobbying techniques, well-chosen non-Jewish allies, and good timing”.

Goldberg (1996) notes that presently there are approximately 300 national Jewish organizations in the United States with a combined budget estimated in the range of \$6 billion—a sum, Goldberg notes, greater than the gross national product of half the members of the United Nations. The Jewish effort toward transforming the United States into a pluralistic society has been waged on several fronts.

If you want to further investigate the Jewish involvement in shaping the United States in detail, I suggest looking directly into the book “The Culture of Critique” itself. The author gives another 50 pages of details information on this.

Jewish Pro-Immigration Efforts in other Western Countries

Jewish organizations have pursued similar policies regarding immigration in other Western societies. In France, the official Jewish community has consistently been in favor of immigration by non-Europeans. Recently the French Jewish community reacted strongly to pronouncements by actress Bridgette Bardot that “my country, France, has been invaded again by a foreign population, notably Muslims”. Chaim Musiquant, executive director of CRIF, the umbrella organization for French Jewry, stated that Bardot’s statement “skirt[ed] at the edge of racism.”

Jewish attitudes toward anti-immigrant sentiment in Germany can be seen by the following incident. A common (presumably self-deceptive) aspect of contemporary Jewish self-conceptualization is that Israel is an ethnically and culturally diverse society as a result of large scale immigration of Jews from different parts of the world, so much so that it should be held up as a model of ethnic relations and pro-immigrant attitudes for the rest of the world. Recently B’nai B’rith, acting in response to what it viewed as indications of a resurgence of neo-Nazism and anti-immigration sentiment in Germany, received a grant from the United Nations Educational, Scientific, and Cultural Organization to bring German representatives to Israel because Israel is “a diverse, formative society, which, under strains of war, terrorism and massive, deprived, immigration, has strived to develop a just, democratic and tolerant society”. “Our view was that the multicultural, multi-ethnic, multireligious and multi-fissured, democratic society of Israel. . . could provide a credible and worthwhile point of comparison for others coming from a similarly highly-charged society.”

In England, as in the United States, there was an ethnic battle beginning around 1900 in response to the influx of Eastern European Jews fleeing czarist anti-Semitism. Jewish political activity was instrumental in defeating an immigration restriction bill introduced by the Conservative government in 1904. In this case, the Anglo-Jewish political establishment represented by the Board of Deputies took a moderate stance, presumably because of fears that further immigration of Eastern European Jews would fan the flames of anti-Semitism. However, by this time the majority of the British Jewish community consisted of recent immigrants, and the Jewish Chronicle, the principle newspaper of the British Jewish community, campaigned vigorously against the bill. The anti-restrictionist forces won when Nathan Laski, president of the Manchester Old Hebrew Congregation, got Winston Churchill to oppose the bill. "Later Churchill freely admitted that, in the Grand Committee of the House of Commons, he had 'wrecked the Bill.' Led by Churchill, the Liberals, Evans- Gordon [a restrictionist Conservative MP] asserted, 'choked it [the Bill] with words until the time-limit was reached.' . . . A jubilant Laski wrote to Churchill: 'I have had over 20 years experience in elections in Manchester, & without flattery I tell you candidly, there has not been a single man able to arouse the interest that you have already done, thus I am sure of your future success'". In the following month Churchill won election from West Manchester, a district with a large Jewish electorate. This might already show just how Churchill's agenda might play out in the future.

Alderman shows that restrictionist legislation was popular except among the recent immigrants who had quickly become a numerical majority of the Jewish community, and, as indicated above, were already able to have a decisive influence on immigration legislation. However, a more moderate bill passed in 1905 despite Jewish opposition. In this case Jewish pressure succeeded in securing exemptions for victims of "prosecution" on religious or political grounds, but not "persecution". Again the Board of Deputies failed to make a major effort in opposition to the legislation, and Jewish Ministers of Parliament did not rise in opposition. However, for the recent immigrants, many of whom were on the electoral registers illegally, this was a major issue, and "at the general election of January 1906 these electorates wreaked a terrible vengeance upon those politicians who had supported the passage of the Aliens' Immigration Act"

Jews overwhelmingly supported candidates who opposed the legislation, and in at least two districts their votes were decisive, including the West Manchester district that returned Winston Churchill. The new Liberal government did not repeal the legislation, but enforced it more leniently. Since the law was directed against "undesirables," there is considerable doubt that it prevented any significant number of Jews from entering, although it probably did encourage many Jews to go to the United States rather than England. It is noteworthy that in 1908 Churchill lost an election in his Manchester district when there were defections among his Jewish supporters displeased about his opposition to repealing the law as a prospective member of the cabinet and attracted to the Conservative position on support for religious schools. Churchill nonetheless remained a staunch supporter of Jewish interests.

As in the case of America, there are also indications that Jewish support for immigration extended beyond advocating Jewish immigration into England. The Jewish Chronicle, the principle Jewish newspaper in England, opposed restriction on Commonwealth immigration in an editorial in the October 20, 1961 edition. The editorial noted that Jews perceived the 1905 legislation as directed against them and stated, "all restrictions on immigration are in principle retrogressive steps, particularly for this country, and a disappointment to those throughout the world who would like to see the limitations on the freedom of movement reduced rather than increased. The issue is one of moral principle."

During the 1970s the Conservative Party opposed immigration into Britain because, in the words of Prime Minister Margaret Thatcher, Britain was in danger of being "swamped" by peoples who lacked "fundamental British characteristics". Conservative politicians attempted to obtain Jewish support on this issue, but the anti-immigration policy was condemned by official Jewish organizations, including the Board of Deputies, on the basis that "Since all British Jews are, or are descended from, immigrants, it was unethical—even immoral, for a Jew to support immigration control, or at least tighter immigration control". the Jewish Chronicle supported a non-restrictionist immigration policy, but was careful to avoid framing the issue as a Jewish issue, presumably because a Conservative Jewish Minister of Parliament, Keith Joseph, had appealed to Jews as Jews to support restriction. The Chronicle was most concerned to deny the existence of a Jewish vote.) Jews who did support the government policy did so out of fear that increased immigration would lead to a fascist backlash and therefore increased anti-Semitism.

In the case of Canada, Abella (1990, 234-235) notes the important contribution of Jews in bringing about a multicultural Canada and, in particular, in lobbying for more liberal immigration policies. Reflecting this attitude, Arthur Roebuck, attorney general of Ontario, was greeted "with thunderous applause" at a 1935 convention for the Zionist Organization of Canada when he stated that he looked "forward to the time when our economic conditions will be less severe than they are today and when we may open wide the gates, throw down the restrictions and make of Canada a Mecca for all the oppressed peoples of the world".

Earlier in the century, there were conflicts between Jews and gentiles over immigration that were entirely analogous to the situation in England and the United States, including the anti-Semitic motivation of many attempting to restrict immigration. As in the United States, Jews have strongly opposed majoritarian ethnocentric and nationalist movements, such as the Parti Quebecois, while remaining strong supporters of Zionism. Indeed, in the very close 1995 vote on Quebec separatism, the overwhelming support of Jews and other minorities for preserving links with Canada was blamed by separatist leader Jaques Parizeau for their defeat. It is remarkable that the sea change in immigration policy in the Western world occurred at approximately the same time (1962-1973), and in all countries the changes reflected the attitudes of elites rather than the great mass of citizens. In the United States, Britain, Canada, and Australia public opinion polls of European-derived peoples have consistently shown overwhelming rejection of immigration

by non-European-derived peoples (Betts 1988; Brimelow 1995; Hawkins 1989; Layton-Henry 1992). A consistent theme has been that immigration policy has been formulated by elites with control of the media and that efforts have been made by political leaders of all major parties to keep fear of immigration off the political agenda (e.g., Betts 1988; Layton-Henry 1992, 82).

In Canada the decision to abandon a "White Canada" policy came from government officials, not from elected politicians. The White Canada policy was effectively killed by regulations announced in 1962, and Hawkins (1989, 39) comments, "This important policy change was made not as a result of parliamentary or popular demand, but because some senior officials in Canada, including Dr. [George] Davidson [Deputy Minister of Citizenship and Immigration and later a senior administrator at the United Nations] rightly saw that Canada could not operate effectively within the United Nations, or in the multiracial Commonwealth, with the millstone of a racially discriminatory immigration policy round her neck." In neither Australia nor Canada was there ever any popular sentiment to end the older European bias of immigration policy.

Given the elite origins of the non-European immigration policies that emerged throughout the West during this period despite popular opposition, it is of considerable interest that very little publicity was given to certain critical events. In Canada, the Report of the Special Joint Committee of 1975 was a critical event in shaping non-European immigration policy of the 1978 immigration law, but "sad to say, since the press failed to comment on the report and the electronic media had remained uninvolved, the Canadian public heard little of it". Only after the 1978 law was in effect did the government embark on a public information campaign to inform Canadians of their new immigration policy. Hawkins (1989) and Betts (1988) make similar points about the changes in Australian immigration policy. In Australia the impetus for change in immigration policy came from small groups of reformers that began appearing in some Australian universities in the 1960s. Betts in particular emphasizes the idea that the intellectual, academic, and media elite "trained in the humanities and social sciences" (p. 100) developed a sense of being a member of a morally and intellectually superior ingroup battling against Australian parochial nonintellectuals as an outgroup. As in the United States, there is a perception among Jews that a multicultural society will be a bulwark against anti-Semitism: Miriam Faine, an editorial committee member of the Australian Jewish Democrat stated, "The strengthening of multicultural or diverse Australia is also our most effective insurance policy against antisemitism. The day Australia has a Chinese Australian Governor General I would feel more confident of my freedom to live as a Jewish Australian".

As in the United States, family unification became a centerpiece of immigration policy in Canada and Australia and led to the "chaining" phenomenon mentioned above. Hawkins shows that in Canada, family reunion was the policy of liberal Ministers of Parliament desiring higher levels of Third World immigration. In Australia, family reunion became increasingly important during the 1980s, which also saw a declining importance of Australian development as a criterion for immigration policy. Reflecting these trends, the

Executive Council of Australian Jewry passed a resolution at its December 1, 1996, meeting to express “its support for the proposition that Australia’s long term interests are best served by a non-discriminatory immigration policy which adopts a benevolent attitude to refugees and family reunion and gives priority to humanitarian considerations.” The main Jewish publication, the *Australia/Israel Review*, has consistently editorialized in favor of high levels of immigration of all racial and ethnic groups. It has published unflattering portraits of anti-restrictionists and, in an effort at punishment and intimidation, published a list of 2000 people associated with Pauline Hanson’s anti-immigration One Nation party. It seems fair to conclude that Jewish organizations have uniformly advocated high levels of immigration of all racial and ethnic groups into Western societies and have also advocated a multicultural model for these societies.

14.8 Conclusion: Whither Judaism and the West?

One conclusion of this volume is that Jews have played a decisive role in developing highly influential intellectual and political movements that serve their interests in contemporary Western societies. These movements are only part of the story however. There has been an enormous growth in Jewish power and influence in Western societies generally, particularly the United States. Ginsberg (1993) notes that Jewish economic status and cultural influence have increased dramatically in the United States since 1960. Shapiro (1992, 116) shows that Jews are overrepresented by at least a factor of nine on indexes of wealth, but that this is a conservative estimate, because much Jewish wealth is in real estate, which is difficult to determine and easy to hide. While constituting approximately 2.4 percent of the population of the United States, Jews represented half of the top one hundred Wall Street executives and about 40 percent of admissions to Ivy League colleges. Lipset and Raab (1995) note that Jews contribute between one-quarter and one-third of all political contributions in the United States, including one-half of Democratic Party contributions and one-fourth of Republican contributions.

The general message of Goldberg’s (1996) book *Jewish Power: Inside the American Jewish Establishment*, is that American Judaism is well organized and lavishly funded. It has achieved a great deal of power, and it has been successful in achieving its interests. There is a great deal of consensus on broad Jewish issues, particularly in the areas of Israel and the welfare of other foreign Jewries, immigration and refugee policy, church-state separation, abortion rights, and civil liberties. Indeed, the consensus on these issues among Jewish activist organizations and the Jewish intellectual movements reviewed here despite a great deal of disagreement on other issues is striking. Massive changes in public policy on these issues beginning with the counter-cultural revolution of the 1960s coincide with the period of increasing Jewish power and influence in the United States.

While specifically ethnic organizations devoted to the ethnic interests of gentile European Americans are essentially political fringe groups with meager funding and little influence

on the mainstream political process, Salter notes that the America-Israel Public Affairs Committee ranked second out the 120 most powerful lobbies as rated by members of Congress and professional lobbyists, with no other ethnic organization rated in the top 25. Furthermore, AIPAC is one of the few lobbies that relies heavily on campaign contributions to win allies. As indicated above, Jews contribute between one-third and one-half of all campaign money in federal elections, the donations motivated by "Israel and the broader Jewish agenda".

Jews are thus overrepresented in campaign contributions by a factor of at least 13 based on their percentage of the population and are overrepresented by a factor of approximately 6.5 if adjustment is made for their higher average income. In overseas donations, the Jewish lead is even greater. For example, in the 1920s, before the post-World War II explosion of Jewish giving to Israel, Jewish Americans may have given as much as 24 times more per capita to assist overseas Jews than did Irish Americans to assist Ireland in its struggle for independence from Great Britain. Yet this was the period of peak Irish ethnic philanthropy (Carroll 1978). The disparity has become much greater since World War II. Salter has adopted a preliminary conservative estimate of Jewish ethnic mobilization as four times that of white gentiles, based on comparison of per capita donations to non-religious ethnic causes.

n the Blalock equation influence is affected not only by mobilization but also by the resources held by the group. Salter estimates that Jews control approximately 26 percent of the "cybernetic resources" of the United States (i.e., resources as measured by representation in key areas such as government, media, finance, academia, corporations, and entertainment). This average level of resource control reflects both areas of high (> 40 percent) Jewish representation (e.g., mass media, high finance, the legal profession, the intellectual elite, entertainment) and low (\leq 10 percent) Jewish representation (e.g., corporate elite, military leaders, religious leaders, legislators).

There is a broad Jewish consensus on such issues as Israel and the welfare of other foreign Jewries, immigration and refugee policy, church-state separation, abortion rights, and civil liberties. This implies that Jewish influence and Jewish interests dominate these issues—a result that is highly compatible with the discussion of Jewish influence on immigration policy discussed Chapter 7 as well as the fact that all of these areas have seen enormous swings in public policy in accordance with Jewish interests that coincide with the rise of Jewish influence in the United States.

The movement toward ethnic separatism is of considerable interest from an evolutionary point of view. Between-group competition and monitoring of outgroups have been a characteristic of Jewish-gentile interactions not only in the West but also in Muslim societies, and there are examples of between-group competition and conflict too numerous to mention in other parts of the world. Historically, ethnic separatism, as seen in the history of Judaism, has been a divisive force within societies. It has on several occasions unleashed enormous intra-societal hatred and distrust, ethnically based warfare, expulsions, pogroms, and attempts at genocide. Moreover, there is little reason to suppose that the

future will be much different. At the present time there are ethnically based conflicts on every continent, and clearly the establishment of Israel has not ended ethnically based conflict for Jews returning from the diaspora.

Given the assumption of ethnic separatism, it is instructive to think of the circumstances that would, from an evolutionary perspective, minimize group conflict. Theorists of cultural pluralism such as Horace Kallen (1924) envision a scenario in which different ethnic groups retain their distinctive identity in the context of complete political equality and economic opportunity. The difficulty with this scenario from an evolutionary perspective (or even a common sense perspective) is that no provision is made for the results of competition for resources and reproductive success within the society.

Extraordinary efforts would have to be made to attain this steady state of ethnic balance of power and resources. Interestingly, the ideology of Jewish-gentile coexistence has sometimes included the idea that the different ethnic groups develop a similar occupational profile and implicitly control resources in proportion to their numbers. If one adopts a cultural pluralism model involving free competition for resources and reproductive success, differences between ethnic groups are inevitable; from an evolutionary perspective, there is the very strong prediction that such differences will result in animosity from the losing groups. After emancipation there was a powerful tendency for upward mobility among Jews in Western societies, including a large overrepresentation in the professions as well as in business, politics, and the production of culture. Concomitantly there were outbreaks of anti-Semitism originating often among groups that felt left behind in this resource competition or who felt that the culture being created did not meet their interests. If the history of Judaism tells us anything, it is that self-imposed ethnic separatism tends to lead to resource competition based on group membership, and consequent hatred, expulsions, and persecutions. Assuming that ethnic differences in talents and abilities exist, the supposition that ethnic separatism could be a stable situation without ethnic animosity requires either a balance of power situation maintained with intense social controls, as described above, or it requires that at least some ethnic groups be unconcerned that they are losing in the competition.

Although multiculturalist ideology was invented by Jewish intellectuals to rationalize the continuation of separatism and minority-group ethnocentrism in a modern Western state, several of the recent instantiations of multiculturalism may eventually produce a monster with negative consequences for Judaism. It has been noted here that Jews have played a prominent role in the political left in this century. We have also seen that as a result of anti-Semitism among gentiles on the left and on the part of Communist governments, eventually Jews either abandoned the left or they developed their own brand of leftism in which leftist universalism was compatible with the primacy of Jewish identity and interests.

Gore Vidal (1986) is a prominent example of a gentile leftist intellectual who has been highly critical of the role of neoconservative Jews in facilitating the U.S. military buildup of the 1980s and allying themselves with conservative political forces to aid Israel—charges

interpreted as implying anti-Semitism because of the implication that American Jews place the interests of Israel above American interests. Vidal also suggests that neoconservatism is motivated by the desire of Jews to make an alliance with gentile elites as a defense against possible anti-Semitic movements emerging during times of economic crisis.

As anti-Semitism develops, Jews begin to abandon the very movements for which they originally provided the intellectual impetus. This phenomenon may also occur in the case of multiculturalism. Indeed, many of the most prominent opponents of multiculturalism are Jewish neoconservatives, as well as organizations such as the National Association of Scholars (NAS), which have a large Jewish membership. (The NAS is an organization of academics opposed to some of the more egregious excesses of feminism and multiculturalism in the university.) It may well be the case, therefore, that the Jewish attempt to link up with secular political ideologies that appeal to gentiles is doomed in the long run.

The present tendencies lead one to predict that unless the ideology of individualism is abandoned not only by the multicultural minorities (who have been encouraged to pursue their group interests by a generation of American intellectuals) but also by the European-derived peoples of Europe, North America, New Zealand, and Australia, the end result will be a substantial diminution of the genetic, political, and cultural influence of these peoples. It would be an unprecedented unilateral abdication of such power and certainly an evolutionist would expect no such abdication without at least a phase of resistance by a significant segment of the population. As indicated above, European-derived peoples are expected to ultimately exhibit some of the great flexibility that Jews have shown throughout the ages in advocating particular political forms that best suit their current interests. The prediction is that segments of the European-derived peoples of the world will eventually realize that they have been ill-served and are being ill-served both by the ideology of multiculturalism and by the ideology of de-ethnicized individualism.

14.9 Ideological Subversion

The following chapter the book "Love Letter to America" written Yuri Bezmenov (search this name on Youtube and you get an interview with the author of "The Creature of Jekyll Island"), also known as Thomas Schuman.

TOMAS SCHUMAN has been personally involved with the world-wide propaganda efforts of the Soviet regime. Like a true-life Winston Smith, from George Orwell's "1984", Tomas Schuman worked for for the communist equivalent of Orwell's Ministry of Truth -The Novosti Press Agency. Novosti, which means "News" in Russian, exists to produce slanted and false stories to plant in the foreign media. The term for this K.G.B. effort is "disinformation". Mr. Schuman was born under the name of Yuri Bezmenov in Moscow in 1939, the son of a senior officer in the Red Army. Consequently, he went to good schools. At the age of 17 he entered the Institute of Oriental Languages of Moscow

State University.

After graduating, he worked for Novosti, then spent two years in India as an interpreter and public relations officer with Soviet Refineries Constructions. He returned to Moscow in 1965 to work for Novosti, serving as Economic Editor for the Hindi, Urdu and English Editions of Sovietland Magazine. In 1969 he went back to India and continued propaganda efforts for Novosti in New Delhi, working out of the Soviet Embassy in a department called Research and Counter-Propaganda. Due to his growing disgust, he began to plan defection. In February of 1970 he disguised himself as a hippie complete with beads and wig and joined a tour group to escape to Athens. He contacted the United States Embassy and, after a long debriefing by U.S. Intelligence, was granted asylum and went to Canada. In Canada, he studied political science at the University of Toronto for two years, taught Russian language and literature and in 1972 was hired by the Canadian Broadcasting Corporation's International Service as a Producer/Announcer, broadcasting to the Soviet Union. The K.G.B. forced him out of the job in 1976, so he began free-lance journalism and worked on a variety of projects. Here are his words:

As a war-time child. I survived partly thanks to such "decadent capitalist" (as the Soviets say) things as "Spam" "meat, condensed milk and egg powder that were supplied to my country by the USA through the lend-lease program of World War II. In the Soviet Union we secretly but proudly called ourselves "the Spam generation". Too prosaic? Who cares about "Spam" "in today's USA, apart from "underprivileged" "welfare recipients? Well, for me these foods are not merely the nostalgic delight of my troubled childhood, but rather, a symbol of love from a friend when I was in need. No amount of communist propaganda against America has ever been able to convince me that the United States out to "colonize and exploit". I will tell you — many people have been more than willing to be "exploited" "the American way. For what other reason have thousands risked their lives, gone to unimaginable troubles, left behind their families their motherland and traditional ways of life to come to America? Have you ever heard of "illegal aliens" "risking their lives crossing the border at midnight into Socialist USSR? Or the "boat people" "swimming oceans and drowning by the thousands just to reach the shores of Communist China? Or defectors like me, leaving behind relative affluence and risking bullets in the back in order to join the "progressive workers paradise" "in Russia? No, we all come here to America, obviously willing to be "exploited by capitalists" "and enjoy "oppression" "together with you. Because we believe and KNOW — America IS A BETTER place.

I am writing this not to please you with words you want to hear. The rest of my message may be more unpleasant to you than even Communist propaganda, or more offensive than the speeches of "leaders" "in Kremlin. But as a true friend of America, I want to help. My dear friends, I think you are in big trouble. Whether you believe it or not, YOU ARE AT WAR. And you may lose this war very soon, together with all your affluence and freedoms, unless you start defending yourselves. I hope you have noticed on your color televisions that there is in fact war going on right now all over the planet. This war has many faces, but it's all the same — it's war. Some call it "national liberation

“, some title it “class struggle “or “political terrorism “. Others call it “anticolonialism “or “struggle for majority rule “. Some even come up with such fancy names as “war of patriotic forces “or “peace movement “. I call it World Communist Aggression. I know what I am talking about, because I was on the side of the aggressor before I decided to take YOUR side. I do not believe — I KNOW — that in this war no one is being “liberated, decolonised or made equal “, as Soviet doctrine proclaims. You may notice, if you give yourselves the trouble to observe, that the only “equality “and “liberation “this war produces is the equality of death and the “liberation “from freedom. Look at Russia, Poland, Hungary, Afghanistan — would you say the people of those countries celebrated and rejoiced when the Soviets brought them equality and liberation? Of course not. We must take a clear and honest look at what Soviet “liberation “actually means. This war of Communist World Aggression is not fought against some mythological “capitalists “as Communist propaganda claims. No, my dear friends, this war is fought against YOU — personally.

Communist wars of world aggression are not fought for liberty and equality. We have thousands of unequivocal examples of the horrendous human suffering, torture and mass death that occur after a Soviet “liberation “. The final stage of Communist aggression — military confrontation — has very little to do with rivalry for territorial or geopolitical gains in order to free and liberate. Communist world aggression is a total war against humanity and human civilization. In Communist propaganda terms, this is “the final struggle for the victory of Communism “. The driving force of this war has very little to do with natural aspirations of people for better lives and greater freedoms. If at all, these aspirations are being used and taken advantage of by the manipulators and progenitors of the war. The real driving force of this war of aggression is IDEOLOGY — something you cannot eat, wear or store for a “rainy day “. An integral part of this war of ideology is IDEOLOGICAL SUBVERSION — the process of changing the perception of reality in the minds of millions of peoples all over the world. The late comrade Andropov, the former head of the Soviet KGB called this war of Communist aggression, “the final struggle for the MINDS and hearts of the people “. The reason that I am so certain of the real goal of Communist aggression is that I was actually a part and an unwilling instrument of Soviet subversion tactics. Having been trained and used by the KGB for their global ideological subversion campaign, I have some firsthand knowledge about the people behind this war and the methods they use. I know very well the way the Communists, whom the Western media call “freedom fighters “and “rebels “, operate. I know their mentality and their methods, I know their ultimate goals, which are very far from the liberty, equality and freedom they verbally espouse. “What’s in it for Tomas Schuman, “you may ask. Well, I’ve asked myself. What do I get for defecting from the winning side (the Soviets) ... and joining the losers? (I hope I don’t have to tell you, that at least a dozen countries have succumbed to the Communists since my defection.) In reality, dear friends, I have gained nothing materially from my defection. What I have gained is a firm commitment to the United States as the last real frontier of freedom. This is it, dear Americans, your country (and mine now) will be the last to be “liberated “by Marxists, socialists,

and domestic “do-gooders “. If the “liberationists “succeed in bringing their “New Order “to America, chances are you and I will meet in front of a firing squad — or worse in a “re-education “forced labor camp in the Alaskan Peoples Democratic Republic.

My Life Story

I was born in Moscow in 1939 under the name of Yuri Bezmenov. My father was an officer of the Soviet Army General Staff. As inspector of the Land Forces, he was stationed in “fraternal countries “such as Mongolia, Cuba and East Germany. Were he alive today, he would most likely be checking the status of Soviet troops in Angola, Ethiopia, Yemen, Syria, Vietnam, Cambodia, Nicaragua and the ever-growing number of other “liberated “countries of the world. I was brought up under the shadow of comrade Stalin, to the echo of the World War II. As a loyal and patriotically-minded young Communist, I loved my country, good or bad. However, unlike certain Western intellectuals and liberals, I did not require half a century to realize that the “leaders “of my country are self-imposed dictators — mass murderers, and that the ideology of Marxism- Leninism is an absolutely false system that produces none of the advantages or benefits of the “worker’s paradise “that it promises. It was a simple matter for me to compare the Soviet propaganda claims given to all Russian citizens of glorious “socialist achievements “with the surrounding realities — early morning bread lines, because we had so little to eat; the frequent arrests of “enemies of the people “and the omnipresent fear of the KGB.

Because of my war-time childhood spent in the Asian section of the USSR, I developed an early affection for the oriental way of life and at the age of 17 after graduating from elementary school, I entered the Institute of Oriental Languages, an affiliate of Moscow State University. The Institute was actually under the direct control of KGB and Communist Central Committee — an elitist nest for future Soviet diplomats, foreign correspondents and spies. At the Institute, while studying several foreign language and mass media, I was required to also take compulsory military training. During training, we students were taught how to play “strategic war games “using the maps of foreign countries. Civil Defense and anti-nuclear training were also essential parts of our education. In addition, we took “interrogation classes “which were designed to teach us how to interrogate prisoners of war. In particular, we were instructed to interrogate prisoners as to their reaction to a Soviet nuclear strike aimed at their country — it was for me a bizarre experience. Upon graduating, I was sent to India as a translator for the Soviet Economic Aid Group which was building oil refineries in two Indian states. Here, during my first foreign assignment, I realized the great discrepancy between my country’s proclaimed goals of “selfless fraternal cooperation “and the actual ruthless exploitation of India by Soviet neo-colonialists. As an example of this exploitation, the Soviets, in purchasing Indian manufactured goods, would pay the Indians only in rubles.

Unfortunately, rubles are non-convertible currency on the international market, meaning that the Indian manufacturer would be unable to purchase anything on the international

market with his Soviet rubles. On the other hand, the Soviets would take the Indian manufactured goods and sell them at a substantial profit on the international market for "hard currency" such as dollars or pounds which are easily negotiable. So basically, the Indian manufacturer received only a fraction of the actual worth of his product, while the Soviets reaped the rewards of their duplicity. Is it that the Indians are stupid, ignorant people, that they allow the Soviets to deceive them in this manner? On the contrary — for the most part, they are innocent victims of one of the world's most sophisticated con games — Ideological Subversion. They have been psychologically manipulated through media, politics, etc. into believing that the Soviets are their friends who are protecting them from the "Western imperialists." This same subversion game is being played all over the world — even in America, KGB influence in our media, politics and nearly every phase of our life has produced a growing conviction on the part of many Americans that we are the "bad guys" — again I have to remind you that to date, there has never been a single defection from the United States. The Soviets have produced an absolutely ludicrous global lie that people are believing — why? Because the tactics of ideological subversion work.

Even after witnessing the ruthless tactics used by my country I still naively hoped that things would turn out for the better eventually. After all, I was a product of the post-Stalin era of "thaw" and liberalization started by Krushchev. I believed in "Socialism with a human face". That faith was shattered irreparably only five years later, when I witnessed the brutal Soviet military intervention into "fraternal" Czechoslovakia in 1968. After completing my first assignment in India, in 1965 I was recalled to Moscow and immediately joined the "Novosti Press Agency (Novosti means "news" in Russian) — the biggest and most powerful propaganda, espionage and ideological front of the KGB. I was employed by Novosti as an apprentice for their classified department of 'Political Publications' (GRPP) under comrade Norman Borodin. After working a short time I discovered that about 75% of the Novosti's staffers were actually KGB officers; the other 25% were "co-optees", or KGB freelance writers / P.R. officers / informers like myself. The other interesting fact I discovered was that there was no "news" at Novosti. My main job, apart from writing, editing and translating propaganda materials to be planted in foreign media, was accompanying delegations of Novosti's guests — journalists, editors, publishers, writers, politicians and businessmen from foreign countries on tours of the USSR or to international conferences held in the Soviet Union. In actuality, as a freelance journalist, I did absolutely no writing or news coverage at all. After several months I was formally recruited by the KGB as an informer, while still maintaining my position as a Novosti journalist. My work with the KGB entailed combining my journalistic duties with the collection of intelligence data, and the spreading of "disinformation" to foreign countries for the purposes of Soviet propaganda and subversion. It was only a matter of time before the KGB realized that my personal friendships with guests of Novosti Press Agency could also be utilized for their operations.

Why did I allow myself to be recruited? There really is no simple answer. For one thing,

a Soviet journalist cannot simply say “no” to the KGB. If he wants to remain alive, free, pursue his career and travel abroad, he simply must cooperate with the KGB, or suffer the consequences. Secondly, apart from monetary and material gains, a Soviet journalist co-opted (hired) by the KGB has a rare chance to become IMPORTANT in his own country, and in 1965, the USSR was still my country. Many of my colleagues, both cynicists and true patriots, joined the KGB, naively believing that they could promote themselves to the higher positions of power, while maintaining their secretly kept moral principles and disguising their actual disgust of the system. By the time most of them realized that ‘power corrupts’ and that allegiance with the Soviet Communist power corrupts absolutely — it was too late. The majority of my former colleagues are now firmly entrenched in the ‘privileged class’ and their humanistic ideals have all been traded one by one for small comforts such as a private car (a rare thing in the USSR), a free apartment, a country house (“dacha “), free trips abroad and freedom to socialize with foreigners, none of which would be possible or available to the average Russian worker.

So despite my early dislike of the Soviet Communist system, I joined the KGB, hoping in some way to ‘outsmart them’, to play the game until I could see more clearly how to proceed. My rapid promotion followed. I was once again assigned to India, this time as a USSR press-officer and a ‘P. R.’ agent for the KGB. Because of my knowledge of India and her languages — Hindi and Urdu, I became deeply involved in the KGB operations in India. I was directed by my superiors to slowly but surely establish the Soviet ‘sphere of influence’ in India. In addition to the bribery and corruption of Indian officials, blackmail and intrusion into the internal affairs of India, the Soviets went one step further in their ‘brotherly assistance’ to India. In 1969 by a secret directive of the Central Committee of the CPSU (Communist Party of the Soviet Union), all embassies of the USSR all over the world, including India, opened a new secret department innocently titled “Research and Counter-Propaganda Group “. I became a deputy chief of that department, working under a KGB officer, comrade. Valeri Neyev.

It did not take me long to discover that our group was engaged in , neither “research “nor “counter-propaganda “: behind locked doors we accumulated intelligence from various sources, including Indian informers and agents, regarding virtually EVERY important and politically significant citizen of India — members of Parliament, civil servicemen, military and public figures, media people, businessmen, university professors, radical or otherwise students and writers — in other words EVERYONE instrumental in shaping the PUBLIC OPINION and policies of the nation. Those who were “friendly “and ready to invite the Soviet expansionist policy into their own country were promoted to higher positions of power, affluence and prestige through various operations by KGB-Novosti. Large groups, of the so-called “progressive and sober-thinking “Indians were on a regular basis, generously supplied with duty-free booze from the embassy stocks. Soviet sympathizers were invited to the USSR for free trips and numerous “international conferences “where they not only received substantial sums of money in the form of “literary awards “or “Nehru Peace and Friendship “prizes, but were also medically treated for VD or hernias

acquired in the perpetual “class struggle “against “American imperialism “. Those who refused to be “flexible “and take a voluntary role in this cruel farce were thoroughly character-assassinated in the sensation-hungry media and press.

Let me give you an example of how the KGB uses the information it collects. One day in 1968, I was routinely scanning through the backlog of USA Information Service releases and classified documentation, generously supplied to us by our Indian and American “friends “. In one of the dispatches I read that the South Vietnamese city of Hue had been captured by the Hanoi Communists. When it was re-captured by the US Army and allied forces, only two days later, the CIA discovered to their horror that several thousand Vietnamese teachers, priests, Buddhists, businessmen, and educated citizens everyone who was “pro-American “, had been rounded up by the invaders and IN ONE NIGHT, taken out of the city limits and executed collectively. Some were shot. Others, with their hands tied by electric wire, were found with their skulls crushed-in by shovels and iron bars. “How could they possibly have located all of these people within only a few hours in a large city? “— the Americans wondered. I thought I knew the answer. Long before the invasion there was an extensive network of Communist informers working under the guidance of the Soviet embassy in Hanoi — that is under the KGB. The Communists filed every bit of information: addresses, personal habits, political affiliations, expressed ideas, unexpressed thoughts revealed in informal and private conversations, even the names and addresses of relatives, friends, even lovers and mistresses of the future victims of “liberation “. After reading the news release I was sick, physically, with the realization that the department I was working for in New Delhi was engaged in exactly the same activity that had been used in the city of Hue. I realized fully that I was a part of a heinous crime against our host country. Adding to my nausea, I discovered that some of our files contained data of a personal nature; intimate information such as “sexual preferences “e.g. homosexuality, of certain Indian VIPs — even radicals and Communists openly sympathetic to Soviet policies. Were they also listed for execution if a Soviet-backed revolution in India should occur?

My frustration was compounded by my KGB supervisor who coached me in a fatherly tone: “Don’t bother with these prostitutes, the Indian Communists Don’t waste your time with them. There is nothing more dangerous than disillusioned “true believers “in Communism. They turn into the most bitter enemies and counter-revolutionaries — aim higher - at respectable “conservative “well-established “capitalists “and pro-American elements! “So, as you can see, the KGB/ Soviets have absolutely no respect for the majority of their new “converts “. One event in particular that solidified my increasing horror of KGB tactics concerned one of my closest Indian friends, a journalist who represented one of the most influential newspapers in India. When I discovered that my friend had been targeted for a KGB character assassination campaign I felt a tremendous desire to escape from the USSR embassy immediately and to confide to my Indian friend the situation confronting him, and also my desire to break my ties with the KGB — which meant defection. However, such an impulse scheme could have hardly succeeded. The Indian

government, under strong pressure from the Soviet embassy, had adopted a law which stated that no defector from any country has a right of political asylum in ANY embassy in the territory of the Republic of India. This masterpiece of political hypocrisy had been created by Mrs. Indira Gandhi after Stalin's daughter Svetlana, defected to the West while residing in India. Because of this situation I knew full well that my defection would not be a simple matter, and as a result, it required a carefully thought-out plan. To be caught by the KGB while attempting defection would mean that I would be forcefully returned to Russia and imprisoned — perhaps worse. I therefore resolved to wait until I had formed a definite plan for my escape.

However my patience was running thin. One of the last straws for me was a story I heard from one of my KGB colleagues: I learned that the Soviet Union was importing Soviet trained subversives to East Pakistan in preparation for a revolution there. My colleague further informed me that Soviet cases marked "printed matter — to Dacca University "stored in the basement of the USSR consulate in Calcutta were accidentally discovered to contain, not university texts, but rather Kalashnikov guns (AK-47s) and ammunition for the anticipated communist revolution in Pakistan. This incident occurred in December of 1969. Two months later I "disappeared "from the USSR embassy in New Delhi. In order to avoid detection by the Indian Police and the KGB, I had disguised myself as an American "hippie ". This method of defection was actually a guaranteed success — no -KGB detective in his "right mind "would have thought to look for a missing Soviet diplomat among the crowds of long-haired, bearded, barefoot, hashishsmoking Americans who had invaded India in search of 'enlightenment'. And so I escaped to the West. I landed successfully in Canada in July 1970. There, I studied history and political science, taught Russian language and literature, and worked for the Canadian Broadcasting Corporation as an announcer/ producer for RadioCanada International (an equivalent of the 'Voice of America'). I was later forced to resign from my position with the Canadian Broadcasting Corporation due to a complaint made by the USSR ambassador to Canada to the Canadian government stating that I was anti-Soviet. Realizing that I did not have the support of the Canadian government for having made my choice not to perform acts for the KGB and Soviet Russia that violated my sense of justice and right action; I came to America.

Presently I am a freelance writer and political analyst, trying, though not always successfully, to awaken the Western populace to the realities of life under the Soviet system and to the IDEOLOGICAL SUBVERSION that is being practiced upon them daily. It is my hope that this booklet, and the follow-up booklets that I am now writing will make clear to all who read them, the real facts behind the barrage of false media, ideas and information from the Soviet Union that represent the Communist state as a "workers paradise ". Believe me when I say, having lived through it — it was no paradise.

Prelude to Subversion

The art of duping the masses into doing things to their own disadvantage and making them believe it is “the will of people” is as ancient as mankind itself. The essence of subversion is best expressed in the famous Marxist slogan, (if you substitute “proletarians” for a more appropriate word): “Useful idiots of the world — UNITE! To achieve the desired effect, the subverter must first — make idiots out of normal people, and DIVIDE them, before turning the people into a homogenized mass of useful and united idiots. Tanks and missiles may or may not be needed at final stage. For the time being they are simply the means of terrorising people into inaction and submission. 500 years before Christ, the Chinese military strategist Sun Tzu formulated the principle of subversion this way:

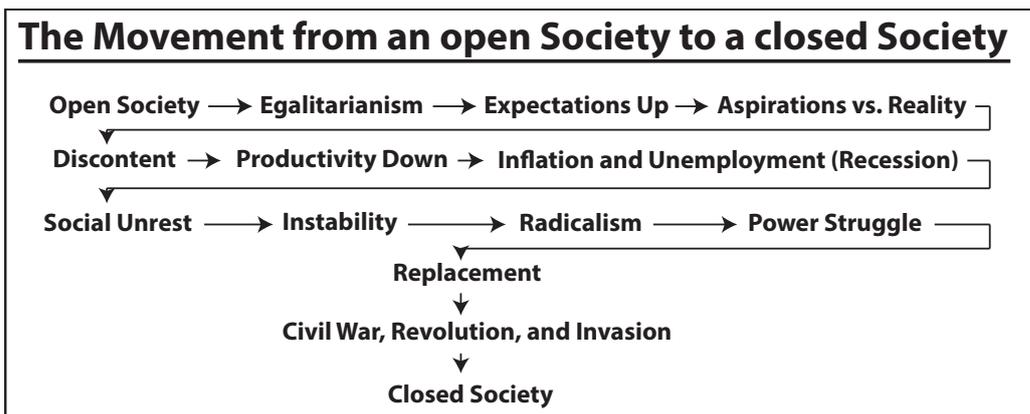

1. Cover with ridicule all of the valid traditions in your opponent’s country.
2. Implicate their leaders in criminal affairs and turn them over to the scorn of their populace at the right time;
3. Disrupt the work of their government by every means;
4. Do not shun the aid of the lowest and most despicable individuals of your enemy’s country.
5. Spread disunity and dispute among the citizens.
6. Turn the young against the old.
7. Be generous with promises and rewards to collaborators and accomplices.

Sound familiar? About 2500 years later we can read this very same instruction in a secret document, allegedly authored by the Communist International for their “young revolutionaries”. The document is titled “Rules of Revolution”:

1. Corrupt the young, get them interested in sex, take them away from religion. Make them superficial and enfeebled.
2. Divide the people into hostile groups by constantly harping on controversial issues of no importance.
3. Destroy people’s faith in their national leaders by holding the latter up for contempt, ridicule and disgrace.
4. Always preach democracy, but seize power as fast and as ruthlessly as possible.
5. By encouraging government extravagances, destroy its credit, produce years of inflation with rising prices and general discontent.
6. Incite unnecessary strikes in vital industries, encourage civil disorders and foster a lenient and soft attitude on the part of the government towards such disorders.
7. Cause breakdown of the old moral virtues: honesty, sobriety, self-restraint, faith in the

pledged word.

I can not vouch for authenticity of this document, which, according to American conservative media was captured by the Allied forces after WW II in defeated Germany, in Dusseldorf. But I can assure you, that these “rules “are almost a literal interpretation of those “theories and practices “which I learned from my KGB superiors and colleagues within the ‘Novosti’ Press Agency. Yes, I am well aware of the possibility, that nothing I write here is a “sensational revelation “to many of you. What I did was simply to structure my knowledge and experience with the Soviet subversion system into a simple and graphic record. To help you to get an overall picture of the SUBVERSION process, let me first outline for you the movement of a target nation from the state of “open society “to a “closed “one. This outline is taken from secret, not so secret and absolutely non-secret Marxist literature: An “open society “is the one you are living now. You can work in it, or choose not to work, have private property or have nothing at all, love it or leave it, criticize it without fear of being declared an “enemy of people. “It is a society, based on free individual initiative and the free market system.

All you have to do to “screw up “the status quo of a free nation, is to borrow ON E false idea from the ideology of a communist or totalitarian government. For the sake of simplicity, I have chosen the idea of “egalitarianism “. “People born equal therefore must be equal “. Sounds great. But look at yourselves. Were you born equal? Some of you weighed 7 pounds at birth, others 6 or 5 . . . Are you NOW equal? In any way? Physically, mentally, emotionally, racially, spiritually? Some are tall and dumb, others — short, bald and clever. Now, let’s figure out what will happen if we LEGISLATE EQUALITY, and make the concept of “equality “a cornerstone and pillar of socioeconomical and political system. All right? You don’t have to be a great economist or sociologist to foresee that some of the people who are “less equal “would demand as much as those who are “more equal “BY LAW!

Aha, now you’ve got it. There will be some who get more for GIVING less and take advantage of those, who are even “less equal “, say, in the art of TAKING. And to avoid the squabble for “equal redistribution “you will have to introduce a THIRD FORCE — the State. Why? Because people were never equal, are not equal and if God wanted us

to be equal He would probably have made us equal. No. He provided a difference. “Vive la Difference! “— said the French before the French Revolution. And they were right.

The beauty of the best, most successful political/ economic system, created by the Fathers of America has nothing to do with LEGISLATED or enforced equality. The American Republic is based on the principle of EQUAL OPPORTUNITIES for UNEQUAL and very much DIFFERENT and diverse individuals to develop their abilities and to coexist in mutually beneficial cooperation. And that is entirely different story. That much I knew even from the Soviet textbooks of American history. Now let's move faster. People who have declared themselves to be equal will inevitably come to expect more for their individual needs, which sooner or later will tragically come to conflict with the “unequal “reality. That will automatically produce discontent. Unhappy and discontent masses are less productive than those who are happy being what they are and making the best of it. Decreased productivity, as we all know, leads to such unpleasant things as inflation, unemployment and recession. These, in turn, cause social unrest and instability, both economical and political.

Chronic instability breeds radicalism as a means of solving problems. Radicalism is the precondition of a power struggle which may (and has often) resulted in violent and forceful replacements of power structures. If the situation deteriorates badly, this replacement takes ugly forms of internal civil war, or revolution, or invasion of a “friendly and fraternal “neighbor, and finally ends up in the traditional way — namely, state control. Depending on maturity of a nation, and the amount (or absence) of common sense, this control will manifest itself in the creation of a “closed society “— the opposite of what we had in the beginning. Borders are closed, censorship of the media is established, “irritants “and “enemies “of the state are executed, etc. This is my 'simplistic' and highly 'unscientific' outline of the events which have happened in many countries of the world. Any nation is able to do this to herself without any help from comrades Andropov and Brezhnev and their numerous KGB agents. Any one of you can easily observe this vicious chain of events by simply reading your newspapers regularly or even watching the TV.

The four Stages of Subversion

What many of you do not see, is the second “chain “of events which I graphically represent in the following chart of the FOUR STAGES OF SUBVERSION: 1) DEMORALIZATION, 2) DESTABILIZATION, 3) CRISIS , 4) “NORMALIZATION “.

What has all this to do with the KGB? Very simple: these are the 'most favourable conditions' listed in any Marxist textbook of revolutionary struggle. I have simply placed them in chronological order and divided them into three vertical columns: the areas of application, the methods of subversion and the expected (or achieved) results. In the context of the USA, most of these nasty things are done to America by Americans . . . with the IDEOLOGICAL help of the Communist subverters. Most of the actions are overt, legitimate, and easily identifiable. The only trouble is — they are “stretched

in time “. In other words, the process of subversion is such a long-term process that an average individual, due to the short time-span of his historical memory, is unable to perceive the process of subversion as a CONSISTENT and willful effort. That is exactly how it is intended to be: like the small hand of your watch. You know it moves, but you CAN NOT SEE it moving.

The main principle of ideological subversion is TURNING A STRONGER FORCE AGAINST ITSELF. Just like in the Japanese martial arts: you do not stop the blow of a heavier more powerful enemy with an equally forceful blow. You may simply hurt your hand. Instead you catch the striking fist with your hand and PULL the enemy in the direction of his blow until he crashes into a wall or any other heavy object in his way. America is obviously a “stronger force “that Communism is unable to defeat. But it is possible to conquer this nation using the preconditions I have described, created by Americans themselves, and diverting America’s attention away from these mortally dangerous preconditions. The situation is similar to a house, the owners of which have stored explosives and inflammable materials INSIDE. To destroy this house the enemy does not have to intrude physically into it. It is enough to start a fire next door and wait till the wind blows in the right direction. Meanwhile the enemy may “throw in some great ideas “for the owners to argue about in order to take their attention off the actual fire: environmental protection, gay liberation or emancipation of house pets are the types of non-critical arguments that divert America’s attention from the real danger. Smart people would notice the fire and remove the inflammable objects and materials BEFORE the house catches the fire. Useful idiots will keep arguing about whether it is constitutional or not to pay firefighters, or the equality of husband and wife in domestic chores (who should remove the combustibles), until the actual explosion blows their enfeebled brains all over the neighbourhood.

Now, let us get back to my chart. I know it is going to be somewhat boring. But my purpose is not to entertain you but to explain what my former KGB bosses consider important for your “liberation “.

STAGE ONE: DEMORALIZATION

This process has many names: psychological warfare, ideological aggression, propaganda warfare etc. The KGB calls it “Active Measures “. Since my defection from the USSR embassy in 1970, I have been trying desperately to explain to the Western media, politicians, “intelligence community “and your “academic-sovietologists “that Active Measures are more important and dangerous than classic espionage — James Bond style. At long last, in 1983, in his new book “KGB Today “John Barron accurately and excellently described the process of demoralization, basing some of his analysis on the data supplied by another KGB defector, KGB official, Stanislav Levchenko — incidentally, my former schoolmate from the Oriental Studies Institute who was later stationed in Tokyo, Japan under the guise of correspondent with “New Time “magazine.

Stanislav Levchenko succeeded where I failed: he brought the Active Measures to the

attention of American public. The purpose of this process is to change your perception of reality to such an extent, that even despite an abundance of information and evidence about the danger of Communism, you are unable to come to sensible conclusions in your own interests and in the interests of your nation. John Barron ominously titled one chapter of his book, dedicated to analysis of the Active Measures, "Reality Upside Down". Excellent title! This is exactly what my KGB gurus of subversion in 'Novosti' Press Agency taught me. One of the main tactics in this process is to develop, establish and consistently enforce a set of 'double standards': one in relation to the USSR, another to the USA.

Western analysts have already pointed out the diverse tactics of "Active Measures. "Some of these were exactly the ones I was trained to use while working with foreign delegations in Moscow and the USSR embassy in New Delhi: overt and covert propaganda; use of "Agents of Influence, "faked 'International Forums' created by KGB/ Novosti to bring the atmosphere of legitimacy and respectability to Soviet operations; . provoking and manipulating mass demonstrations and assemblies; spreading rumours and 'reliable information from circles close to Politbureau'; forgeries of USA Information Service press-releases; planting phony stories in local media; creating hundreds of tabloid newspapers subsidized by the USSR embassy through front organizations and fake 'advertising' companies for the purpose of 'legally' financing groups of subversives and radicals, etc. Other tactics, such as sabotage, character assassination of 'stubborn' Indians resisting Soviet subversion, terrorism and even occasional killings of 'reactionaries and counterrevolutionaries' for the psychological effect of 'paralyzing with fear' — these also were used by my KGB colleagues from other departments of the USSR embassy.

I am less familiar with these aspects of the subversion process. My role as a 'legitimate' and overt public relations man and a 'charismatic' socializer was directed by the KGB mainly at the initial stage of subversion. After a certain period of befriending and 'cultivating' foreigners, I had to provide my KGB supervisor with my 'psychological assessment' of the target individual (or group) and pass them over to the "professionals" for further 'processing' and recruitment. Nevertheless, I was able to reconstruct the overall picture of the process rather accurately, and, unlike the Western 'sovietologists', come to more systematic and logical description of subversion. What I offer you now is a chart as simple as a multiplication table and as complex as calculus. This is the first time this chart has ever been published, in its entirety.

Let us start with the first stage of DEMORALIZATION. It takes about 15 to 20 years to demoralize a nation. Why that many (or few)? Simple: this is the minimum number of years needed to 'educate' ONE GENERATION of students in a target country (America, for example) and expose them to the ideology of the subverter. It is imperative that any sufficient challenge and counter-balance by the basic moral values and ideology of this country be eliminated. In absence of ANY cohesive and consistent national ideology, the task of the subverter becomes even easier. In the USA, as we all know, there is MULTIPLICITY of ideas and ideologies today, without proper emphasis on the main

The Subversion Process		
Areas	Methods	Results
Ideas 1. Religion 2. Education 3. Media 4. Culture	Demoralization (15 to 20 Years) Politicize, Commercialize, Entertainment Permissiveness, Relativity Monopolize, Manipulate, Discredit, Non-Issues False Heroes and Role Models	Death Wish Ignorance Uninformed Myopia Addictive Fads, "Mass"
Structure 1. Law and Order 2. Social Relations 3. Security 4. Internal Politics 5. Foreign	Legislative, not Moral Rights vs. Obligations Intelligence, Police, Military Party, Antagonisms Salt. . . Friends	Mistrust "Justice" Less Individual Response Defenselessness Disunity Isolation
Life 1. Family, Society 2. Health 3. Race 4. Population 5. Labor	Break Up Sports, Medicare, Junk Food Lower the Uppers, Bible? Genetics vs. Environment De-Land, Urbanize Unions vs. Society	No Loyalty (State) Enfeebled Masses Hatred, Division Alienation Victimization
1. Power Struggle 2. Economy 3. Society Fiber, Law 4. Foreign	Destabilization (2 to 5 Years) Populism, Irresponsible Power Struggle Destruction of Bargaining Process Grass Roots Participation Isolation, Multi-Nations, and Central Comm.	Big Brother Yield to Big Brother Mobocracy Prestige, Belligerent, Encirclement
Crisis (2 to 6 Months)		
Normalization		By Tomas Schuman

Figure 14.2: This chart shows the four stages of Soviet ideological subversion: demoralization, destabilization, crisis, and normalization. The methods used by the subverter in the different areas of life produce their desired results in a country that does not resist the subversion process.

and basic American ideology of the original republic and the free market system. It is not even considered 'intellectual' or fashionable these days to subscribe entirely to this 'outmoded' set of ideas. To be successful, the process of subversion at the stage of DEMORALIZATION must be always and only a TWO-WAY street which means that the target nation MUST be made a RECIPIENT — passive or active — of the IDEAS of the subverter. Democracy is by definition a RECIPIENT of a multiplicity of ideologies and values, whether good or bad. Unfortunately 'bad' ideas are often proven and revealed only after a long period of time, during which many have absorbed them and allowed them to change their nation's attitudes and behaviour. Ancient Japanese rulers understood this principle very well when they virtually ISOLATED their nation from ANY foreign influence — good, bad or neutral. Imperial Japan was 'preserved' in its own set of historical values long enough to bring up a mature and morally stable nation able to make the change to an entirely new technological civilization with negligible damage to national fibre. More than

that: the Japanese, although reluctantly, opened up to Western values and surpassed the West in the shortest possible historical span since the World War II, becoming one of the greatest industrialized and technologically advanced powers in the world. Without such 'maturity' a nation may illconceive even the most favourable foreign influence which is clearly demonstrated by; a number of 'decolonized' Third World countries prematurely embracing parliamentary democracy.

But if and when an outside influence is purposely ill-intended, an immature nation — or a nation with a neglected indigenous ideology (America) — automatically becomes a recipient of SUBVERSION in its early stage of DEMORALIZATION. The successful demoralization is an IRREVOCABLE process, at least for another generation. Why? Let us take an example: the semiliterate and unstable American generation of the 'crazy' 1960's is now approaching the age of 40. These people, who were too preoccupied with protesting the Vietnam war, the drug/ rock music scene, taking part in 'love-ins' etc., to study and prepare for assuming their civil responsibilities, are now in positions of power and decision-making in government, business, media, social life, entertainment (Hollywood), military, and intelligence services. Not all of them? OK, some of them are. You are STUCK with them, until they retire or resign. You can not fire them — it's against union regulations. You cannot, unlike the USSR, send them to Alaska, after declaring them 'enemies of people'. You can not even openly and effectively criticize them — they have invaded the media and control public opinion. Unless you want to be called 'McCarthyist', you cannot change their attitudes and mores. At this age people are usually 'set' in their ways as individuals. YOU ARE STUCK with them. THEY change your attitudes and opinions, they navigate the domestic and foreign affairs, they are making decisions and choices for YOU, whether you like it or not.

To change the direction of America's future and to return to the basic American values, proven to be efficient and productive for almost 200 years of historically unprecedented freedom and affluence, you have to educate a NEW generation of Americans, this time in the spirit of patriotism and CAPITALISM. All right, you don't want to 'return'. You'd rather have something new and progressive AND constructive, to make America once again respected and loved all over the world, so that the recipients of the U.S. aid no longer shout 'Yankee Go Home'? In any case, even if you start the education of a NEW generation of Americans RIGHT THIS MINUTE, it will take you the next 15 to 20 years to raise this new generation to the levels of power and authority. You may reduce this period of time if you can make an enormous ALL-NATION effort in an atmosphere of prevailing UNITY and CONSENSUS. It will take a miracle (or another national disaster, such as a new world war, God forbid) to make Americans embrace ONE American ideology and to act in ONE direction after decades of disunity, dispute, partisan antagonisms and self-castigation. Therefore, let's be realistic: the DEMORALIZATION, whether self-inflicted or imported, is usually an IRREVERSIBLE — for one generation at least — process.

The three Levels of Demoralization

Now, let us see the same stage of demoralization from the standpoint of the SUBVERTER. Communist manipulators divide the areas of APPLICATION of their efforts into THREE LEVELS. The process of demoralization operates simultaneously on all three levels, which I call for the sake of simplicity: 1) the level of IDEAS (consciousness); 2) the level of STRUCTURES (socio-political set up of a nation); and 3) the level of LIFE (which includes all the areas of MATERIAL existence of a nation, the 'fibre of life' so to say). Level One: Ideas Rule The World. The level of IDEAS, the highest level of subversion, affects such vital areas as religion, education, media, and culture, to name just a few of the most important ones. If we look back in history of mankind, we may notice that the greatest upheavals and changes were caused by IDEAS, by faiths and beliefs, not by KNOWLEDGE or THINGS. Few people sacrifice their comforts and lives for such trivial things as a new car. Scientific knowledge seldom generates strong collective emotions. Many scientists have preferred life and affluence to death for scientific truth. I have never heard of a man who would staunchly face a firing squad for the sake of defending the truth of the Law of Gravity or $2 \times 2 = 4$. But FAITH in the seemingly irrelevant (at the time) and immaterial teachings of Jesus Christ generated such tremendous MORAL FORCE in MILLIONS of human beings for the past TWO THOUSAND YEARS, that people willingly and happily accept violent death and tortures rather than deny their belief in Christ!

Communism and its Marxist- Leninist dogma, according to some thinkers (Dr. George Steiner for one), is another distorted form of FAITH, able to inspire martyrdom in millions. Substituting the traditional values of the Judeo-Christian heritage with this Marxist-Satanic faith is one of the basic principles of subversion at the stage of DEMORALIZATION — the highest and most effective level of IDEAS. The methods are as primitive as they are predictable. You do not have to be a graduate of a KGB school or Harvard University to figure out what kind of INTERACTION between the subverter (KGB) and target (American brains) occurs on this level. All the SUBVERTER — be it Andropov's KGB or any other purposeful group or organization hell-bent on the idea of a "New World Order"— has to do is to study the areas where your nation's IDEAS could be eroded and substituted, and then slowly but consistently affect these areas by sending infiltrating Agents of Influence to inject new ideas, disseminate propagandist literature, and encourage self-destructive tendencies. All subverter has to do to remove the spiritual backbone of America is to help you to POLITICIZE, COMMERCIALIZE and 'ENTERTAINMENT-ALIZE' the dominant religions. There are many other contributing factors the subverter can also take advantage of, such as the development and spreading of various religious cults, including Satanic and Death cults; preaching moral relativity and removing religion (and prayer, ANY prayer) from schools; creating 'personality cults' in religion whereby the preacher becomes the center and object of divine worship, not God (often your religious charlatans claims to be 'incarnations' of God, or even God Himself) etc.

I have selected the above three main methods because I am most familiar with them. These methods were used by myself and my KGB-Novosti colleagues and these methods have proven to be sufficiently efficient. We did not have to bother with such silliness for example as recruiting Billy Graham and forcing him to tell outrageous lies about “the existence of religious freedom in the Soviet Union“ in state-run churches in Moscow. Let’s start with the most ‘innocent’ method of destroying religion, namely, making it ENTERTAINING. To attract people AND MONEY to ‘established’ religious organizations some churches have literally become theaters conducting variety shows featuring celebrities from the entertainment ‘industry’ who perform for ‘fees’. The KGB Agents of Influence may or may not have to physically manipulate these entertainment arrangements. The indiscriminate choice of the ‘celebrities’ for these church ‘performances’ is usually quite pleasing to the KGB. A group of rock or pop-musicians with a message of ‘social-justice’ sugar-coated in popular ‘spiritual’ tunes can be actually more helpful to the KGB than someone standing in the pulpit preaching Marxist-Leninist doctrine. The sugar-sweet messages of social equality from the crooning mouths of the entertainers is quite enough to accomplish the aims of the KGB without any overt activity on their part.

COMMERCIALIZATION of religion does the same thing. If the church has to SOLICIT your money and remind you over and over again in every TV show to contribute (with telephone numbers to pledge donations), that only means and infers that there is something basically wrong with your faith. Faithful people do not have to be ASKED for money, they tithe to their churches voluntarily and eagerly. Unhealthy competition for donations between various ‘electronic churches’ does two things beneficial to the subverter: (KGB): 1) it makes religion dependent on the most successful ‘salesmen’ of God (and these salesman may not necessarily be, they DONT HAVE to be, of the highest moral standards) thus, truly moral, God -centered people are turned off by organized religion and 2) it EMPTIES regular churches, where you have to practice your religion by personal physical presence and participation and involvement. All the subverter has to do now is to keep on further discrediting the main body of the church, by harping at religion in general as “just another means of the capitalist exploitation of masses, and a profit-oriented opiate of the people“. And the Soviet propaganda, and its fronts such as ‘Novosti’ Press Agency does exactly that, and quite successfully, through thousands of ‘liberal’ and ‘leftist’ media establishments in the USA.

Politicizing religion is the most efficient method of demoralizing a target nation. Once a nation starts giving to Caesar what belongs to God, and getting God involved in such things as ‘social justice’ and partisan political squabbles, it predictably loses what religion calls mercy and the grace of God. To put it in ‘atheistic’ terms, a target country allows the subverter to use the area of moral values for dissemination and enforcement of amoral ideas and policies. The most powerful instrument of this process is an organization called World Council of Churches, infiltrated by the KGB to such extent, that it is hard to distinguish, these days, a priest from a spy. Being a public relations officer for Novosti, I accompanied many foreign members of the WCC during their visits to the USSR. Some

of them struck me as individuals pathologically unable to say or hear truth. They were simply allergic to any facts or opinions which would 'undermine' their 'spiritual' affiliation with the Soviet manipulators. Archbishop and president (!) Macarios of Cyprus was one such 'religious' visitor. Skillfully combining both God's and Caesar's things, Macarios was extremely effective in bringing the desperately needed air of legitimacy and 'holiness' to the junta of the Soviet mass murderers and oppressors of religion. His photogenic presence at various 'international forums' in Moscow greatly promoted ACCEPTABILITY of the Soviet influence in the 'non-aligned' and 'developing' countries.

When, after my defection to the West, I find Trotskyite publications in a United Church of Canada, or see Nicaraguan Catholic Church 'fathers' with Soviet-made Kalashnikov machine guns hung over their church robes, or read about 'humanitarian' aid from the American Council of Churches given to African mass-murderers and terrorists, who were trained in my old country by the KGB, I do not 'suspect' I KNOW these things to be what they are — direct results of the Communist SUBVERSION of religion. I do not need any 'evidence' of 'links' between the KGB and the church. The complete confusion of God-related and politically subverted related goals are obvious. In the extreme left column of my chart you can see the RESULTS of DEMORALIZATION in each individual area on each level of subversion. The result of the demoralization of religion is a phenomenon referred to as the "death wish". This expression is borrowed from a book by a Soviet dissident writer, Igor Shafarevich, titled "Socialism as a Historical Phenomenon". (YMCA Press, Paris, 1977) Dr. Shafarevich in analyzing the 'dead' civilizations of Egypt, Maya, Mohenjo-Dara, Babylon, etc., comes to an ominous conclusion: EVERY ONE OF THESE CIVILIZATIONS DIED WHEN PEOPLE REJECTED RELIGION AND GOD, AND TRIED TO CREATE 'SOCIAL JUSTICE' ALONG THE SOCIALIST PRINCIPLES. Thus, Socialism, according to Shafarevich, may be a manifestation of an inborn human instinct of SELF-DESTRUCTION, if unrestrained — leading ultimately to PHYSICAL DEATH OF ALL MANKIND.

'Mass' education

This is another area of subversion at the stage of demoralization. The Marxist-Leninist concept of education emphasizes 'environment' and 'mass' character of education over individual abilities and quality. When American media enthusiastically reports (repeating Soviet propaganda cliches) about 'achievements of Soviet science', they usually obscure the IDEOLOGICAL aspects and purposes of the Communist system of education. 'Massiveness' and 'universality' of education attracts Western sociologists and governmental bureaucracies alike. For the 'developing' nations this seems to be the easiest short-cut to many contemporary problems. The Western public seldom receives the explanation of THE PRICE of the state-controlled Socialist-type education: political conformity to dictatorship, ideological brainwashing, lack of individual initiative in 'educated masses', lagging behind in development of science and technology. It is a commonly known fact that most of the Soviet 'technological marvels' are stolen, bought or 'borrowed' from the West. Most of the scientific and technological research in the USSR is 'productive' only

and always in the most destructive area: the military. My motherland is still, after more than half century of 'victorious Socialism', a country without even common household refrigerators, and yet boasts of their 'space exploration' and tremendous military might, which have done absolutely nothing to improve the day to day life of Soviet citizens.

The American romance with state-run education as encouraged by KGB subverters has already produced generations of graduates who cannot spell, cannot find Nicaragua on a world map, cannot THINK creatively and independently. I wonder if Albert Einstein would have arrived at his Theory of Relativity if he had been educated in one of today's American public schools. Most likely he would have 'discovered' marijuana and variant methods of sexual intercourse instead. Wouldn't you agree that KGB sponsored demoralization is no? going to produce the dynamic, talented and fruitful young Americans of the future? Contemporary American permissiveness and moral relativity in education have greatly facilitated Soviet ideological subversion tactics. The main methods of Soviet DEMORALIZATION of American education are:

1. Student Exchanges whereby American students and professors go to Moscow and are exposed to ideological brainwashing sometimes lacking the proper education that would allow them to assess the Soviet information they receive objectively.
2. Flooding of campus bookstores with Marxist and Socialist literature published both in the USSR and by domestic 'fellow travellers';
3. International seminars and conferences with Soviet participation, where Soviet propaganda seldom is balanced by opposing viewpoints;
4. Infiltration of schools and universities by radicals, leftists, and simply 'disturbers', often functioning unknowingly under the direct guidance of KGB Agents of Influence.
5. Establishing numerous 'student' newspapers and magazines, staffed with Communists and sympathizers;
6. Organizing 'study groups' and 'circles' for dissemination of Soviet propaganda and Communist ideology.

The eventual result is very predictable: ignorance combined with anti-Americanism. That's good enough for the KGB at this stage of subversion.

Lords of Public Opinion

The American media is a willing recipient of Soviet subversion. I know this, because I worked with American journalists and correspondents in Moscow while on the Soviet side, and after my defection to the West. People habitually refer to the American media as 'free', ignoring the obvious and commonly known fact that most of the most powerful media in the USA, is already MONOPOLIZED both financially and ideologically by what are referred to as 'liberals'. American media 'chains' BELONG to fewer and fewer owners, who, do not seem to mind that the media is being almost totally 'liberalized'. Liberalism,

in its old classical sense, means above all, respect to individual opinion and tolerance to opposing views. However, in my own experience, communist defectors who have requested and sometimes literally begged, to have stories of their life in the Soviet Union told to the American people via the major American media have been completely ignored.

One of the most devastating methods of Soviet subversion in American media is the DISCREDITING of authors like myself and the information and opinion of those who come up with clear evidence of Communist crimes against mankind. This method is well described in my forthcoming book entirely dedicated to the activity of the 'Novosti' Press Agency. Introduction of NON-ISSUES is another powerful method of demoralizing at the level of IDEAS. It will take another full size book to describe in detail this method. Suffice it will be here to give a brief definition of NON-ISSUES. An issue, the solution of which creates more and bigger problems for majority of a nation, even though it may benefit a few, is a non-issue (civil rights of homosexuals is not an issue; defending sexual morality is the larger, real issue).

The main purpose of non-issues and the devastating result of their introduction is the SIDE-TRACKING of public opinion, energy (both mental and physical), money and TIME from the constructive solutions. Soviet propaganda elevated the art of infiltrating and emphasizing non-issues in American public life to the level of actual state policy.

Addictive 'mass culture'

Years ago, when I was scanning through a pile of Western newspapers in Novosti's Moscow headquarters, I came across a column written by a Canadian writer, Gregory Clark in the "Toronto Star". Here it is in full. I have saved it for my files;

"If I were a Communist agent in America with millions of dollars to spend annually I would not waste it in bribing public servants to give away state secrets. But I would lavish and encourage the sleazy tune-smiths of that region to turn out more and more garbage 'culture' . . . Gaggled-headed and obscure musicians would be helped to prominence. I would seek out the more questionable publishers of the dirtier paperbacks and slip them a few hundred thousand so they could set up more respectable head offices. Wherever trend shows towards the beat generation I would offer it a helping hand. Anything that prompted the insubordination of teenagers, anything that contributes to the confusion and exasperation of parents would be most liberally endowed. The basic intention of my spending would be to break down the discipline, encourage relaxation of authority of every kind so as to build up, in as short time as possible, an adult generation that could easily go out of control. America would look desperately around for any kind of discipline to rescue them and THERE — pretty as a picture, would be Communism, the most iron-fisted discipline since Sparta. The victory would be bloodless . . . Except of course in concentration camps, torture, prisons, and few things like that. But nobody would know about that because of censorship of the press."

This was written in 1959! The accuracy of this description of OUR activity stunned me. We had just completed 'helping a gaggled-headed' Communist entertainer, Yves Montand

to 'prominence' in Moscow and were halfway through with publicly elevating 'obscure' Indian filmmaker — Raj Kapoor to 'fame'. The editorial offices of Novosti were teaming with 'sleazy' foreign singers, poets, writers, artists, musicians and 'intellectuals' coming to my country for support in their 'progressive struggle' against their own 'decadent capitalist' societies ... There is not much I can add to that statement of a wise Canadian columnist today. Yes, KGB encourages DEMORALIZATION of America through the 'mass culture' by relying upon the help of the "useful idiots" of the entertainment business. No, the Beatles, Punks and Michael Jackson are not on the KGB payroll. They are on YOUR payroll. All the KGB had to do is to slowly and gradually CHANGE YOUR ATTITUDES and kill your RESISTANCE to the demoralizing addiction your kids call 'music', make it acceptable, NORMAL; make it a part of 'American culture' where it does not belong and never did.

The second Level of Demoralization: Structures

There is a Russian proverb which says: "The sly head gives no rest to the arms". Let us see what Communist subversion does to your "arms" — the socio/ political/ economical STRUCTURES of America. The areas of application for demoralizing American structures are: 1. Judicial and Law-enforcement system; 2. Public organizations and institutions dealing with RELATIONS between individuals, groups and classes of the society; 3. Security and defense organs; 4. Internal political parties and groups; 5. Foreign policy formulating bodies both governmental and non-governmental ("think-tanks", academia, "sovietology advisors" etc.) In the area of "Law and Order", the method of demoralization is to promote and enforce the prevalence of the "legalistic" approach over the "moral" one. Several generations of American lawyers and law-makers, graduating from the 'liberal' (that is LEFTIST, Socialist- oriented) schools, after long-time exposure to the Socialist IDEOLOGY, have already created an atmosphere in the U.S. judicial system whereby "underprivileged" criminals are treated as a "victims" of the "cruel American society", and the real victim (the law-abiding society) is turned into defenseless and very underprivileged citizens and taxpayers, PAYING for a comparatively comfortable life of the criminal in or outside prison. The result is as predictable as it is desirable for the subverter: MISTRUST of the American population towards their own judicial and law-enforcement system, and people demanding harsher punishments and stricter CONTROLS in order to fight crime. And what could be better than Soviet or Communist-type control? Even your 'liberal' media claims that there is no street crime in Moscow and no drug problem in the USSR.

Similarly, in the area of social life, by encouraging you to put your individual RIGHTS over your OBLIGATIONS (any obligations — private, financial, moral, patriotic etc.) the subverter achieves the desired effect: a society composed of IRRESPONSIBLE INDIVIDUALS, each one "doing his own thing", and acting according to the "law of jungle". Such subversion of society is the first step to tyranny. To demoralize America's PROTEC-

TIVE FORCES it is enough to make your kids call the police “pigs” and “fascists” for a decade, disband police agencies watching over subverters and radicals by calling them “spies” (that is exactly what American Union of Civil Liberties did), stage campaign after campaign of discreditation and “investigation” of the wrongdoings” of the police, and in 20 years you arrive at the present situation, when the majority of civilian population of this nation is virtually without civil laws or protection from murderers, lunatics, criminals, etc. Can you now expect your police and civil authorities to protect you and your family in case of terrorist attack or a major civil disturbance?

The American FBI and CIA have had no better treatment. Americans are MADE to believe that your own security agencies pose more danger than the Soviet KGB. There were dozens of “revelations” and exposes on the CIA during the last 10 to 15 years. But there was not a SINGLE public trial of any Soviet agent of the KGB caught in the USA “red-handed”. There were numerous expulsions of Soviet ‘diplomats’ yes. But an equal or greater number of them came to America to replace their ‘fallen comrades’. There is not a SINGLE law in America which could be used to legally persecute KGB agents for ideological subversion. But there is a law that prevents your CIA from using YOUR media to vindicate their acts to protect YOU against the KGB subversion. Your media and your Hollywood entertainers lovingly repeat every fabrication of Soviet propaganda regarding the CIA ‘atrocities’, mixing it with truth, half-truth and blatant lie. Demoralizers like Larry Flint regularly entertain the public with juicy stories about ‘CIA assassinations’ sandwiched between pornographic pictures in his magazine. Do you remember when you saw an American film or read a book about the ‘good CIA’? I do not imply that pornographer Flint or members of Rockefeller commission on CIA are on the KGB payroll. But obviously pornography, as well as political prostitution pays. It sells ‘Hustler’ magazine, it sells politicians . . . and it kills the security of America. Criticism of the KGB does not pay. In fact, critics of KGB subverters may get killed in the process. What are you, my dear Americans? A nation of masochists and cowards? When you read and listen to all this dirt poured upon your security agencies by the media and politicians, can’t you realize, that the most just and factual criticism of the CIA is wrongly addressed? Security agencies of America (unlike the KGB) are INSTRUMENTS in the hands of a nation and her elected POLITICIANS. One should not blame an instrument, when it is the OPERATOR’S fault. If the instrument malfunctions — CORRECT it, and don’t use a hammer where a fine screwdriver is needed.

Very often American media presents a picture of CIA and FBI as a ‘mirror reflection’ of the KGB and its ‘fraternal services’. False. The KGB is a POWER which systematically and ruthlessly MURDERED about SIXTY MILLION of my countrymen, and still engages in the killing of innocent defenseless people all over the world. How many were killed by the CIA? Do numbers (and ‘quality’ too) matter at all to you? Or was comrade Stalin right, when he said that ONE person shot is a tragedy, but 1 million is statistics Now let’s look at how you treat your military. What is the image of the military presented to you and the rest of the world in the American press and the electronic media? If there is

a U.S. general, he is called a trigger-happy 'warmonger', a 'hawk' and 'aggressor'. One of the most popular TV series — M.A.S.H. — presents your military as a bunch of very humorous, hysterically funny bunch of psychotics, queers, alcoholics and otherwise rather unruly characters. Recently I saw a film titled "Rage", where the Pentagon is depicted as a cruel experimenter, testing chemical weapons on unsuspecting American farmers. And it is shown on TV exactly at the very same time when Soviets are using chemical weapons in Afghanistan, Cambodia and Laos, and provide the same to their Iraqi 'brothers' for their fraternal genocide in Persian Gulf. Have you EVER seen a movie or a TV series about THAT? Every American student knows the name of the Vietnamese village Mi-Lai and what it stands for, namely, - an "American war crime." Do you remember the name of the Soviet pilot who shot down the Korean passenger airliner with 269 passengers aboard, including some 60 Americans and a US senator? Do you remember the name of that senator? Does anybody in America EVER learn from American media the names of thousands of Cambodian and Afghani villages TOTALLY EXTERMINATED by the Soviet military? Where is Jane Fonda and Dr. Spock, who used to express so much concern and love for Vietnamese and Cambodians when the US military was there?

The 'double standard' applied and enforced and LEGITIMIZED by the manipulators of public opinion in the USA is a direct result of the long-term process of the DEMORALIZATION of the IMAGE of the US MILITARY in the minds of millions all over the world. The result? Study the chart...

'Quiet Diplomacy' or surrender?

There are hundreds of volumes written about the ways Communists use foreign relations for their purposes. There are NONE which reveal the link between the failures of American diplomacy and the process of demoralization. From time to time defectors from the Communist side, such as Arkady Shevchenko, the USSR representative in the UN, give breath-taking accounts on how the Communists are using 'diplomacy' for subversion. And yet all the crowds of "experts" and "kremlinologists" are seemingly unable to put the pieces together and to raise their voices AGAINST dealing with the Communists in a 'diplomatic' way. Many public figures have noted that most of Americans do not want to hear unpleasant things. Politicians in the USA know this. So does the KGB. Every American administration has contributed to the process of DEMORALIZATION of their own foreign policy by continuously negotiating and SIGNING "peace treaties" From the "Lend Lease" to the "Helsinki Accord" to the "SALT" treaties, creating false expectations and voter complacency and NEVER openly and honestly admitting that NONE of those agreements and treaties EVER WORKED — for America that is — They ALL benefited the USSR however. In the process America has lost MOST of her foreign friends to the 'Socialist camp' — Concentration camp, to be precise. Presently the USA is rapidly nearing a situation of TOTAL ISOLATION from the rest of the world. Even our long-time friend Great Britain did not support America, even verbally, on the liberation of Grenada, despite the obvious fact that America was on the British side in the ridiculous war over the Falkland Islands.

What could be more amoral than the 'peace with honor' signed by Kissinger with Hanoi Communists? — ask the Vietnamese 'boat people'. When someone makes a deal with a murderer we call him 'accomplice in crime', we don't award him with 'Nobel Peace Prize'. Or do we? What should we call this kind of foreign policy which is both amoral AND hurts America?

Level Three: Unhealthy Body — Unhealthy Mind

Demoralization in such areas as family life, health services, interracial relations, population control and distribution and labor relations I call the 'LIFE' level. Marxist-Leninist ideology coated in various indigenous "social theories" have greatly contributed to the process of American family break-up. The trend recently is changing in the opposite direction, but many generations of Americans, brought up in broken families, are already adults lacking one of the most vital qualities for the survival of a nation —LOYALTY. A child who has not learned to be loyal to his family will hardly make a loyal citizen. Such child may grow into adult who is loyal to the State though. The USSR example is rather revealing in this case. In the struggle for the 'final victory of Communism', the goal of the subverter is to substitute, as slowly and painlessly as possible, the concept of loyalty for NATION with loyalty to the "Big Brother" welfare state, who gives everything and is able to TAKE everything, including personal freedom — from every citizen. If that objective is successfully achieved, the subverter does not need any nuclear warheads and tanks and may not even need the physical military INVASION. All that will be needed is to 'elect' a 'progressive thinking' president who will be voted to power by Americans, who have been addicted to welfare and 'security' as defined by Soviet subverters.

Very similar methods are being used in the area of medical and health services and sports, (as part of an activity meant to keep the population healthy). By encouraging 'professionalism' in spectator sports 'rather than encouraging individual sports participation, America enfeebles herself as a nation. Most American adults who 'love sports' watch TV sports programs, while munching pretzels with their beer, and NOT taking physical participation in sports activity. Unlike in the USSR, sports is not a COMPULSORY part of elementary education in America. Impressive victories of Soviet athletes at international competitions further facilitate the IDEAS OF THE SUPREMACY of SOCIALISM in the area of public health, thus convincing more and more Americans of the need to emulate the Soviet system and introduce it into the American schools. What many Americans do not realize, is that what they see on their TV screens is not REAL Soviet sport. The majority of the USSR population is not 'athletic' at all; they are sick from the lack of correct nutrition and alcoholism. Soviet athletes are state-created exceptions to the general national deterioration in the USSR.

A similar myth is being promoted in the U.S. about 'free health care' in the USSR. While working in Moscow, accompanying numerous foreign delegations and showing them 'regular' medical facilities in clinics and kolkhos hospitalsr-my guests did not all realize that I was taking them to specially prepared 'exclusive' medical establishments, 'only for the eyes of foreigners'. When I arranged interviews with Soviet doctors, telling my

guests about the 'glorious achievements' of Soviet surgery, some of them had no way of checking if these 'achievements' were available to USSR collective farmers or workers in Siberia. They are not. And many Americans know about this, although they have never visited my old country. Yet the tendency of U.S. bureaucrats is to enlarge the state-run medicare, despite the fact that, as shown in the USSR and elsewhere, socialized medicine is sub-standard, less efficient, and most definitely less progressive than privately owned and operated medical facilities within a properly functioning free market system. Demoralization in the area of food CONSUMPTION patterns is also effective in the introduction of such things as 'junk foods'. No, KGB agents do not put chemicals into American food and drink. It is done by some American mega-monopolies who operate along the same principles as Soviet 'Obshchepit' (Public Food Service): they look at consumers as 'units of consumers', not individuals. Abolishing freely competing SMALL food companies, who HAD TO TREAT YOU INDIVIDUALLY to survive economically, these giants of indigestion artificially CREATE consumers' tastes and demands which may not be in the interests of your health but surely in the interests of the monopoly profit. And here I tend to agree, at least in part, with America's Ralph Naders, and consumer protection groups, although I do not share their ideas on the solution of the problem.

Racial and ethnic interrelations is one of the most vulnerable areas for demoralization. There is not a single Communist country where racial groups are 'equal' and enjoy as much freedom to develop themselves culturally and economically as in America. Actually, there are not too many "capitalist" countries where ethnic minorities have it as good as in the U S A. I have been to many countries of the world and I can state to you, my dear Americans, that your society is the least discriminatory. The Communist 'solution' for racial problem is 'final': they simply murder those who are different AND stubbornly insist on remaining different. Stalin played with whole populations of 'ethnics' — 'resettling' Estonians, Latvians and Lithuanians in Siberia, relocating Crimean Tartars from the tropics to permafrost and Koreans from the Far East to the Kazakhstan deserts. But unfortunately, an 'average' American never recalls these commonly known facts when his attention is drawn to domestic 'racial discrimination' issues by those who profess 'racial harmony' along the socialist principle guidelines. Why? Simple: because American 'race discrimination fighters' NEVER MENTION these facts. If the USA were located on a separate planet from the Communists, I would probably agree with Martin Luther King when he said that "America is a racist country'. But when these statements are made on THIS planet and in THE MOST INTEGRATED NATION IN THE WORLD, I say to your 'fighters for racial equality': you are hypocrites and instruments (even if unwilling) of DEMORALIZATION.

The American traditional solution of racial and ethnic problems is slow but efficient: the 'melting pot' which raises the less developed groups to a HIGHER level. It has worked for more than a century of American history and created the most harmonious and productive nation on Earth. The present day 'solution' to racial inequality is borrowed from Communist mythology: EQUALITY of all racial and ethnic groups LEGISLATED

by the government and ENFORCED by state bureaucracies. We know perfectly well that neither races nor INDIVIDUALS are equal, in every respect. We know that every nation and race has its peculiar character, abilities, traditions, mentality, and ability to learn and its individual PACE OF DEVELOPMENT. By mimicking the Soviet 'national policy' of equality America simply erases the distinct racial characteristics that have made this country great. Very briefly on population distribution: urbanization and "delandization" (the taking away of private land) is the greatest threat to American nationhood. Why? Because the poor farmer often is a greater PATRIOT than an affluent dweller of a large congested American city. Communists know this very well. The Soviets keep a very tight control over the size of their cities by the system of 'police registration of residence' called 'propiska'. They know perfectly well that the farmer will fight an invader until last bullet ON HIS LAND. "Underprivileged" or urbanized masses on the other hand, may feel like meeting an invader with flowers and red banners. ALIENATION of people from privately-owned land is one of the very important methods of DEMORALIZATION.

And, finally, we have come to the last but not least important area: labor relations. I don't think I have to tell you about ideological infiltration of some labour unions in the USA. This is a well documented part of your history. Moscow 'International Trade-Union School', a KGB incubator for agents, takes care of physical infiltration of labor unions. And that is also well known (even to the CIA) in fact. What I would like you to think about today is this: what sort of MORALITY it takes to make medical nurses leave sick and dying patients in hospital beds and walk out to strike for fifty cents an hour more in pay? OK, for a full DOLLAR more? What makes unionized electricians leave a city without power in the middle of a severe winter and let several children in "under privileged" slums freeze to DEATH? How desperate for money must a unionized truck driver be to SHOOT TO DEATH a strike-breaking colleague, father of five? Surely, each individual American, who commits these outrageously AMORAL acts is not that cruel and egocentric. And, let's face it, not THAT broke. So, why? My answer is — IDEOLOGICAL DEMORALIZATION.

The bargaining process in American labor in many instances is no longer motivated by the desire to IMPROVE working conditions and wages. In many cases it is not bargaining at all — it's blackmail. And in the process of the unlimited growth of union POWER, the American worker loses the only relevant and real freedom he has in this country: the freedom to choose, to work or not to work, and for how much. If an individual prefers to work for LOWER pay (and it must be his free individual choice), he often is no longer able to do so. I have just mentioned what happens to strike-breakers in America.

Stage Two of the four Stages of Subversion: Destabilization

Here the efforts of subverter narrow down to the "essentials": the internal power structures of a target nation; the nation's foreign relations; economy and "social fiber". If the preceding stage of DEMORALIZATION is successful, the subverter no longer has to

bother about your IDEAS and your LIFE. Now he gets to the 'spinal cord' of your country and helps YOU to bring your own society into the state of DESTABILIZATION. That may take from 2 to 5 years, depending on the maturity of a nation and its ability to mobilize for resistance.

Power Struggle

The first symptom of instability is expressed as the desire of the population to bring to power those politicians and parties who are charismatic, act like good "caretakers" and promise more "security" — not from external and foreign enemies, but rather, job "security", "free" social services and other "pleasure strokes" provided by "Big Brother". By concentrating the attention of a nation on short-term solutions and "improvements", such irresponsible politicians simply procrastinate on facing "the moment of truth", when the nation will have to pay a much higher price for the main and basic problem — bringing country back to stability and restoring the moral fiber. A compounding factor at this stage is the so-called "grass root" participation of the 'masses' in the political process. Demoralized and enfeebled 'masses' tend to grab the 'easiest' short-cut solution to social ills and socialism seems to them to be the best answer. Traditional national institutions no longer appear efficient. They are gradually replaced by artificially created 'citizen's committees' and 'boards' which acquire more and more political power. These bodies which are in essence, mirror reflections of the totalitarian structures of power, are more and more 'responsive' to mob-ocracy, the rule of of the crowd of radicalized CONSUMERS. At the same time, the backbone of the economy — the free bargaining process — gradually yields to the principle of 'planned economy' and 'centralization'.

With the final destruction of the free bargaining process the predominant economic power moves into the hands of "Big Brother", the State, which functions more and more 'in cahoots' with mega-mono- polies and monopolized labor unions. The famous 'division of powers' no longer governs the judicial, legislative and executive lines, but rather is replaced by bureaucracy in goverment, bureaucracy in business and bureaucracy in labor. In the area of foreign relations America is being pushed further and further into isolationism and defeatism. Few remaining friends look with horror at the destiny of those nations who were betrayed and abandoned by the USA and try to find 'their own solutions', which often comes as 'establishing friendly relations' with the USSR and its Communist empire. The belligerent encirclement of America proceeds with an ever-increasing pace and demoralized politicians are no longer able or willing to face the inevitable reality. Soviet and Cuban military supplies and direct intervention seem to the US legis- lators to be less dangerous, than America's 'losing face' by 'violating international laws' by mining Nicaraguan ports to prevent the export of Communist revolution to the region. The majority of Americans are made to believe that it is their country — America — who 'violates' international law, not the USSR and its surrogates. The average American may not even realize that the 'International Court' is nothing but an artificial creature of the Soviet-controlled General Assembly of the UN.

All through this stage of DESTABILIZATION, Western 'multinational' monopolies con-

tinue to trade, extend credits, supply technology and 'diplomatically' appease the SUBVERTER — the Central Committee of the USSR. In total disregard of the interests of the peoples of America and the USSR, these two giants continue to extend aid to each other. American media keeps talking about 'frictions' between the NATIONS (USA—USSR)! What 'frictions'? Comrade Petrov in Omsk has NO FRICTIONS with Mr. Smith in Pittsburg. In fact, they never had a chance to meet each other thanks to Helsinki Accord. Comrade Petrov, though HAS FRICTIONS with his oppressors — the Kremlin junta, which sends him to make war on Afghanistan, Vietnam, Angola and Nicaragua. Comrade Petrov does not want war with America. Neither does Mr. Smith want to fight 'Russia'. But they may have to if the DESTABILIZATION process is successful in America. Once it is, the situation inevitably slides into...

Crisis: Stage Three

It may take only 2 to 6 months, to bring America to the same situation which now exists South of the border in Central America. At this third stage of subversion you will have all your American 'radicals' and Soviet 'sleeper' agents springing into action, trying to 'seize power as quickly and ruthlessly as possible' (see the 'Rules of Revolution' in the beginning of this booklet). If all the previous stages of Soviet subversion have been successfully completed by that time, the majority of Americans will be so totally confused that they may even WELCOME some "strong' leaders who 'know how to talk to the Russians'. Chances are these leaders will be elected and given almost unlimited 'emergency powers'. A forceful change of the U.S. system may or may not be accomplished through a civil war or internal revolution, and a physical MILITARY invasion by the USSR may not even have to take place at all. But change it will be, and rather a drastic one, with all the familiar attributes of Soviet 'progress' being instituted such as NATIONALIZATION of vital industries, the reduction of the 'private sector' of the economy to the bare minimum, the redistribution of wealth and a massive propaganda campaign by the newly 'elected' government to 'explain' and justify the reforms.

No — no concentration camps and executions. Not yet. That will come later at the stage of...

Normalization: The fourth and last Stage

Any normal nation would definitely resist such a 'progressive change'. As I have just described. And according to the 'classics of Marxism-Leninism' there will arise pockets of resistance, shortly after the takeover consisting of the 'enemy classes and counter-revolutionaries' who will physically resist the new system. Some Americans may take to arms and flee to the mountains (as in Afghanistan). Reforms (or DESTRUCTION to be more accurate) of the security agencies, (police and military) by the new government may lead to a situation of 'split loyalties' among law enforcement officers and render

the majority of the population defenseless. At this point, to avoid 'the bloodshed', the subverter moves to NORMALIZATION, a term borrowed from the Soviet propaganda of 1968 — from the time of the Soviet 'fraternal' invasion of Czechoslovakia. Comrade Brezhnev called that 'NORMALIZATION'. And he was right: the vanquished country was brought BY FORCE into the NORMAL state of SOCIALISM: namely, subjugation.

This is when my dear friends, you will start seeing 'friendly' Soviet soldiers in the streets of our cities working together with American soldiers and the 'new' police force to 'restore law and order'. Very soon your yesterday's American socialist radicals and 'do-gooders' who were working so hard to bring 'progress' to their own country will find themselves IN PRISONS and hastily-built concentration camps. Many of them will be EXECUTED, quietly or publicly. Why? Simple: the Soviet 'liberators' will have no further use for the 'disturbers'. The 'useful idiots' will have completed their work. From then on the New Order will need STABILITY and NEW MORALITY. No more 'grass roots' movements. No more criticism of the State. The Press will obediently censor itself. In fact, this censorship is already existing NOW, imposed by the so-called U.S.'liberals' and socialist do-gooders. You will now have the opportunity to 'enjoy' exactly the same life as the Vietnamese, Cambodians, Angolans and Nicaraguans, betrayed by you enjoy NOW. This state of social 'NORMALIZATION' may last forever, that is — your life-time and life-times of you children and grandchildren...

IT WILL NEVER HAPPEN HERE!

What if it does happen here? Why take chances? What are the SOLUTIONS? There are different solutions for different stages of subversion. If a nation has enough common sense to STOP subversion at the very beginning of the DEMORALIZATION stage, you may never need the painful and drastic solutions needed to deal with the CRISIS stage. The most general solution I can offer — for the whole process of SUBVERSION — is to STOP AIDING THE SUBVERTER. You are still living in a free society and you are able to force your elected politicians to change their policies toward the Communist world if you so choose. But if YOU, personally do not see anything wrong in dealing with the Communists and HELPING them in their global expansion, I feel that you should begin learning more about the reality of the Communist/ Socialist situation, not from your monopolized media, but from the independent media and press who have no vested interest in making out the Soviet Union to be the 'good guys,' and from people like myself, who have experienced Communism first-hand for many years. There are numerous American patriotic groups and organizations who are well informed and who already have many SOLUTIONS, to combat the damage done by ideological subversion some of which are as good or even better than mine. Seek these groups, join them and DO something.

This booklet is my love letter to America. I did not write it to frighten or threaten the nation that I love for its freedom, its principles, its ideals. But if you were walking across the street with a friend and saw a car barreling down upon you both that your friend did not see, would you say nothing to your friend and move out of the way, leaving

him to be hit? Of course not and I do not intend to do that to you. Un my next booklet, I will cover the full solutions to the problem of ideological subversion. I sincerely hope you will be reading it.

Love,

Tomas Schuman

If one is interested to find more recent information about Communism/Socialism in modern times, one just has do to a serious online search about "Saul Alinsky", his works and his connections to "Hillary Clinton". Some insight:

From a Newspaper article called "Beware the Useful Idiots" by Garret Geer, we learn:

Recall that Hillary did her college thesis on his writings and Obama writes about him in his books. Saul Alinsky died about 43 years ago, but his writings influenced those in political control of our nation today. Died: June 12, 1972, Carmel-by-the-Sea, CA; Education: University of Chicago; Books: Rules for Radicals, Reveille for Radicals.

Anyone out there think that this stuff isn't happening today in the U.S.? All eight rules are currently in play. How to create a social state by Saul Alinsky: There are eight levels of control that must be obtained before you are able to create a social state. The first is the most important.

- 1) Healthcare - Control healthcare and you control the people.
- 2) Poverty - Increase the Poverty level as high as possible; poor people are easier to control and will not fight back if you are providing everything for them to live.
- 3) Debt - Increase the debt to an unsustainable level. That way you are able to increase taxes and this will produce more poverty.
- 4) Gun Control - Remove the ability to defend themselves from the government. That way you are able to create a police state.
- 5) Welfare - Take control of every aspect of their lives (Food, Housing and Income)
- 6) Education - Take control of what people read and listen to - take control of what children learn in school.
- 7) Religion - Remove the belief in the God from the government and schools.
- 8) Class Warfare - Divide the people into the wealthy and the poor. This will cause more discontent, and it will be easier to take (tax) the wealthy with the support of the poor.

Does any of this sound like what is happening to the United States? Alinsky merely simplified Vladimir Lenin's original scheme for world conquest by communism, under Russian rule. Stalin described his converts as "Useful Idiots". The Useful Idiots have destroyed every nation in which they have seized power and control. It is presently happening at an alarming rate in the U.S.

"It is difficult to free fools from the chains they revere."

15. The New World Order

The term New World Order (NWO) has been used by numerous politicians through the ages, and is a generic term used to refer to a worldwide conspiracy being orchestrated by an extremely powerful and influential group of genetically-related individuals (at least at the highest echelons) which include many of the world's wealthiest people, top political leaders, and corporate elite, as well as members of the so-called Black Nobility of Europe (dominated by the British Crown) whose goal is to create a One World (fascist) Government, stripped of nationalistic and regional boundaries, that is obedient to their agenda. The Zionist banker, Paul Warburg, who was involved in World war 1 and 2 and the Federal Reserve (among other things):

“We will have a world government whether you like it or not. The only question is whether that government will be achieved by conquest or consent.” (February 17, 1950, as he testified before the US Senate).

Their intention is to effect complete and total control over every human being on the planet and to dramatically reduce the world's population by two thirds. While the name New World Order is the term most frequently used today to loosely refer to anyone involved in this conspiracy. In 1992, Dr John Coleman published *Conspirators Hierarchy: The Story of the Committee of 300*. With laudable scholarship and meticulous research, Dr Coleman identifies the players and carefully details the New World Order agenda of worldwide domination and control. On page 161 of the *Conspirators Hierarchy*, Dr Coleman accurately summarizes the intent and purpose of the Committee of 300 as follows:

“A One World Government and one-unit monetary system, under permanent non-elected hereditary oligarchists who self-select from among their numbers in the form of a feudal system as it was in the Middle Ages. In this One World entity, population will be limited by restrictions on the number of children per family, diseases, wars, famines, until 1 billion people who are useful to the ruling class, in areas which will be strictly and clearly defined, remain as the total world population. There will be no middle class, only rulers and the servants. All laws will be uniform under a legal system of world courts practicing the same unified code of laws, backed up by a One World Government police force and a One World unified military to enforce laws in all former countries where no national boundaries shall exist. The system will be on the basis of a welfare state; those who are obedient and subservient to the One World Government will be rewarded with the means to live; those who are rebellious will simply be starved to death or be declared outlaws, thus a target for anyone who wishes to kill them. Privately owned firearms or weapons of any kind will be prohibited.”

The sheer magnitude and complex web of deceit surrounding the individuals and orga-

nizations involved in this conspiracy is mind boggling, even for the most astute among us. Most people react with disbelief and skepticism towards the topic, unaware that they have been conditioned (brainwashed) to react with skepticism by institutional and media influences. Author and de-programmer Fritz Springmeier (The Top 13 Illuminati Bloodlines) says that most people have built in "slides" that short circuit the mind's critical examination process when it comes to certain sensitive topics. "Slides", Springmeier reports, is a CIA term for a conditioned type of response which dead ends a person's thinking and terminates debate or examination of the topic at hand. For example, the mention of the word "conspiracy" often solicits a slide response with many people. What most people believe to be "Public Opinion" is in reality carefully crafted and scripted propaganda designed to elicit a desired behavioral response from the public. Public opinion polls are really taken with the intent of gauging the public's acceptance of the New World Order's planned programs. A strong showing in the polls tells them that the programming is "taking", while a poor showing tells the NWO manipulators that they have to recast or "tweak" the programming until the desired response is achieved.

The NWO Modus Operandi

The NWO global conspirators manifest their agenda through the skilful manipulation of human emotions, especially fear. In the past centuries, they have repeatedly utilized a contrivance that NWO researcher and author David Icke has characterized in his latest book, *The Biggest Secret*, as Problem, Reaction, and Solution. The technique is as follows: NWO strategists create the Problem - by funding, assembling, and training an "opposition" group to stimulate turmoil in an established political power (sovereign country, region, continent, etc.) that they wish to impinge upon and thus create opposing factions in a conflict that the NWO themselves maneuvered into existence. In recent decades, so called opposition groups are usually identified in the media as 'freedom fighters' or 'liberators'.

At the same time, the leader of the established political power where the conflict is being orchestrated is demonized and, on cue, referred to as 'another Hitler' (take your pick: Saddam Hussein, Milosevic, Kadaffi, etc.). The 'freedom fighters' are not infrequently assembled from a local criminal element (i.e. KLA, drug traffickers). In the spirit of true Machiavellian deceit, the same NWO strategists are equally involved in covertly arming and advising the leader of the established power as well (the NWO always profits from any armed conflict by loaning money, arming, and supplying all parties involved in a war). The conflict is drawn to the world stage by the controlled media outlets with a barrage of photos and video tape reports of horrific and bloody atrocities suffered by innocent civilians. The cry goes up "Something has to be done!" And that is the desired Reaction.

The NWO puppeteers then provide the Solution by sending in UN 'Peace Keepers' (Bosnia) or a UN 'Coalition Force' (Gulf War) or NATO Bombers and then ground troops (Kosovo), or the military to 'search for Weapons of Mass Destruction', which of

course are never found. Once installed, the 'peace keepers' never leave. The idea is to have NWO controlled ground troops in all major countries or strategic areas where significant resistance to the New World Order takeover is likely to be encountered.

15.1 Who is the NWO?

The corporate portion of the NWO is dominated by international bankers, oil barons and pharmaceutical cartels, as well as other major multinational corporations. Also possibly the Royal Family of England, namely Queen Elizabeth II and the House of Windsor, (who are, in fact, descendants of the German arm of European Royalty - the Saxe-Coburg-Gotha family - changed the name to Windsor in 1914), are high level players in the oligarchy which controls the upper strata of the NWO. The decision making nerve centers of this effort are in London (especially the City of London), Basel Switzerland, and Brussels (NATO headquarters). The United Nations, along with all the agencies working under the UN umbrella, such as the World Health Organization (WHO), are full time players in this scheme. Similarly, NATO is a military tool of the NWO.

The leaders of all major industrial countries like the United States, England, Germany, Italy, Australia, New Zealand, etc. (members of the "G7/G8") are active and fully cooperative participants in this conspiracy. In this century, the degree of control exerted by the NWO has advanced to the point that only certain hand-picked individuals, who are groomed and selected are even eligible to become the prime minister or president of countries like England, Germany, or The United States. It didn't matter whether Bill Clinton or Bob Dole won the Presidency in 1996, the results would have been the same. Both men are playing on the same team for the same ball club. Anyone who isn't a team player is taken out: i.e. President Kennedy, Ali Bhutto (Pakistan) and Aldo Moro (Italy).

As shown in this book, the NWO, the Money Lenders, the men behind the curtain, the bankers, the globalists, whatever you want to call them, play a scheme to fool the masses and the end goal is world domination.

Timeline of the NWO

1912 – Colonel Edward M. House, a close advisor of President Woodrow Wilson, publishes Phillip Dru: Administrator in which he promotes "socialism as dreamed of by Karl Marx."

1913 – The Federal Reserve (neither federal nor a reserve) is created. It was planned at a secret meeting in 1910 on Jekyll Island, Georgia by a group of bankers and politicians, including Col. House. This transferred the power to create money from the American government to a private group of bankers. It is probably the largest generator of debt in the world.

July 28, 1914 – World War I is triggered by the assassination of Archduke Francis Ferdi-

nand of Austria.

May 27, 1916 – President Woodrow Wilson proposes at the League of Nations in a speech before the League to Enforce Peace, a world needed to prevent the recurrence of a similar war was a world government.

November 11, 1918 – The end of World War I, after the signing of the Armistice at the 11th hour on the 11th day of the 11th month.

May 30, 1919 – Prominent British and American personalities establish the Royal Institute of International Affairs in England and the Institute of International Affairs in the U.S. at a meeting arranged by Col. House attended by various Fabian socialists, including noted economist John Maynard Keynes. Two years later, Col. House reorganizes the Institute of International Affairs into the Council on Foreign Relations (CFR).

December 15, 1922 – The CFR endorses World Government in its magazine Foreign Affairs. Author Philip Kerr, states:

“Obviously there is going to be no peace or prosperity for mankind as long as [the earth] remains divided into 50 or 60 independent states until some kind of international system is created...The real problem today is that of the world government.”

1928 – The Open Conspiracy: Blue Prints for a World Revolution by H.G. Wells is published. A former Fabian Socialist, Wells writes:

“The political world of the into a Open Conspiracy must weaken, efface, incorporate and supersede existing governments... The Open Conspiracy is the natural inheritor of socialist and communist enthusiasms; it may be in control of Moscow before it is in control of New York... The character of the Open Conspiracy will now be plainly displayed... It will be a world religion.”

1931 – Students at the Lenin School of Political Warfare in Moscow are taught:

“One day we shall start to spread the most theatrical peace movement the world has ever seen. The capitalist countries, stupid and decadent...will fall into the trap offered by the possibility of making new friends. Our day will come in 30 years or so... The bourgeoisie must be lulled into a false sense of security.

1932 – New books are published urging New World Order:

Toward Soviet America by William Z. Foster. Head of the Communist Party USA, Foster indicates that a National Department of Education would be one of the means used to develop a new socialist society in the U.S.

The New World Order by F.S. Marvin, describing the League of Nations as the first attempt at a New World Order. Marvin says, “nationality must rank below the claims of mankind as a whole.”

Dare the School Build a New Social Order? is published. Educator author George Counts asserts that: “...the teachers should deliberately reach for power and then make the most

of their conquest“ in order to “influence the social attitudes, ideals and behavior of the coming generation...The growth of science and technology has carried us into a new age where ignorance must be replaced by knowledge, competition by cooperation, trust in Providence by careful planning and private capitalism by some form of social economy.“

Plan for Peace by American Birth Control League founder Margaret Sanger (1921) is published. She calls for coercive sterilization, mandatory segregation, and rehabilitative concentration camps for all “dysgenic stocks“ including Blacks, Hispanics, American Indians and Catholics.

1933 – The first Humanist Manifesto is published. Co-author John Dewey, the noted philosopher and educator, calls for a synthesizing of all religions and “a socialized and cooperative economic order.“

Co-signer C.F. Potter said in 1930: “Education is thus a most powerful ally of humanism, and every American public school is a school of humanism. What can the theistic Sunday schools, meeting for an hour once a week, teaching only a fraction of the children, do to stem the tide of a five-day program of humanistic teaching?

1933 – The Shape of Things to Come by H.G. Wells is published. Wells predicts a second world war around 1940, originating from a German-Polish dispute. After 1945 there would be an increasing lack of public safety in “criminally infected“ areas. The plan for the “Modern World-State“ would succeed on its third attempt (about 1980), and come out of something that occurred in Basra, Iraq.

The book also states, “Although world government had been plainly coming for some years, although it had been endlessly feared and murmured against, it found no opposition prepared anywhere.“

1934 – The Externalization of the Hierarchy by Alice A. Bailey is published. Bailey is an occultist, whose works are channeled from a spirit guide, the Tibetan Master [demon spirit] Djwahl Kuhl. Bailey uses the phrase “points of light“ in connection with a “New Group of World Servers“ and claims that 1934 marks the beginning of “the organizing of the men and women...group work of a new order...[with] progress defined by service...the world of the Brotherhood...the Forces of Light...[and] out of the spoliation of all existing culture and civilization, the new world order must be built.“

The book is published by the Lucis Trust, incorporated originally in New York as the Lucifer Publishing Company. Lucis Trust is a United Nations NGO and has been a major player at the recent U.N. summits. Later Assistant Secretary General of the U.N. Robert Mueller would credit the creation of his World Core Curriculum for education to the underlying teachings of Djwahl Kuhl via Alice Bailey’s writings on the subject.

October 28, 1939 – In an address by John Foster Dulles, later U.S. Secretary of State, he proposes that America lead the transition to a new order of less independent, semi-sovereign states bound together by a league or federal union.

1939 – New World Order by H. G. Wells proposes a collectivist one-world state“ or “new

world order“ comprised of “socialist democracies.“ He advocates “universal conscription for service“ and declares that “nationalist individualism...is the world’s disease.“ He continues: “The manifest necessity for some collective world control to eliminate warfare and the less generally admitted necessity for a collective control of the economic and biological life of mankind, are aspects of one and the same process.“ He proposes that this be accomplished through “universal law“ and propaganda (or education).“

Wells speaks openly about his utopian dream. Some excerpts: “This new and complete Revolution we contemplate can be defined in a very few words. It is outright world-socialism; .scientifically planned and directed.”... Countless people will hate the new world order and will die protesting against it. .When we attempt to evaluate its promise, we have to bear in mind the distress of a generation or so of malcontents.The term Internationalism has been popularized in recent years to cover an interlocking financial, political, and economic world force for the purpose of establishing a World Government.”

1940 – The New World Order is published by the Carnegie Endowment for International Peace and contains a select list of references on regional and world federation, together with some special plans for world order after the war.

December 12, 1940 – In The Congressional Record an article entitled A New World Order John G. Alexander calls for a world federation.

September 11, 1941 – Construction officially began at the Pentagon. 60 years later to the day, the Pentagon was to be attacked on the fateful September 11, 2001.

1942 – The leftist Institute of Pacific Relations publishes Post War Worlds by P.E. Corbett:

“World government is the ultimate aim...It must be recognized that the law of nations takes precedence over national law...The process will have to be assisted by the deletion of the nationalistic material employed in educational textbooks and its replacement by material explaining the benefits of wiser association.“

June 28, 1945 – President Truman endorses world government in a speech:

“It will be just as easy for nations to get along in a republic of the world as it is for us to get along in a republic of the United States.“

October 24, 1945 – The United Nations Charter becomes effective. Also on October 24, Senator Glen Taylor (D-Idaho) introduces Senate Resolution 183 calling upon the U.S. Senate to go on record as favoring creation of a world republic including an international police force.

1946 – Alger Hiss is elected President of the Carnegie Endowment for International Peace. Hiss holds this office until 1949. Early in 1950, he is convicted of perjury and sentenced to prison after a sensational trial and Congressional hearing in which Whittaker Chambers, a former senior editor of Time, testifies that Hiss was a member of his Communist Party cell.

1946 – The Teacher and World Government by former editor of the NEA Journal (National Education Association) Joy Elmer Morgan is published. He says:

“In the struggle to establish an adequate world government, the teacher...can do much to prepare the hearts and minds of children for global understanding and cooperation...At the very heart of all the agencies which will assure the coming of world government must stand the school, the teacher, and the organized profession.”

1947 – The American Education Fellowship, formerly the Progressive Education Association, organized by John Dewey, calls for the:

“...establishment of a genuine world order, an order in which national sovereignty is subordinate to world authority...”

October, 1947 – NEA Associate Secretary William Carr writes in the NEA Journal that teachers should:

“...teach about the various proposals that have been made for the strengthening of the United Nations and the establishment of a world citizenship and world government.”

1948 – Walden II by behavioral psychologist B.F. Skinner proposes “a perfect society or new and more perfect order” in which children are reared by the State, rather than by their parents and are trained from birth to demonstrate only desirable behavior and characteristics. Skinner’s ideas would be widely implemented by educators in the 1960s, 70s, and 80s as Values Clarification and Outcome Based Education.

July, 1948 – Britain’s Sir Harold Butler, in the CFR’s Foreign Affairs, sees “a New World Order” taking shape:

“How far can the life of nations, which for centuries have thought of themselves as distinct and unique, be merged with the life of other nations? How far are they prepared to sacrifice a part of their sovereignty without which there can be no effective economic or political union?...Out of the prevailing confusion a new world is taking shape... which may point the way toward the new order... That will be the beginning of a real United Nations, no longer crippled by a split personality, but held together by a common faith.”

1948 – UNESCO president and Fabian Socialist, Sir Julian Huxley, calls for a radical eugenic policy in UNESCO: Its Purpose and Its Philosophy. He states:

“Thus, even though it is quite true that any radical eugenic policy of controlled human breeding will be for many years politically and psychologically impossible, it will be important for UNESCO to see that the eugenic problem is examined with the greatest care and that the public mind is informed of the issues at stake that much that is now unthinkable may at least become thinkable.”

1948 – The preliminary draft of a World Constitution is published by U.S. educators advocating regional federation on the way toward world federation or government with England incorporated into a European federation.

The Constitution provides for a "World Council" along with a "Chamber of Guardians" to enforce world law. Also included is a "Preamble" calling upon nations to surrender their arms to the world government, and includes the right of this "Federal Republic of the World" to seize private property for federal use.

J. Edgar Hoover, ex-FBI director on the New World Order conspiracy: "The individual is handicapped by coming face-to-face with a conspiracy so monstrous he cannot believe it exists."

George H.W. Bush's comment: "if the American people knew what we have done, they would string us up from the lamp posts."

February 9, 1950 – The Senate Foreign Relations Subcommittee introduces Senate Concurrent Resolution 66 which begins:

"Whereas, in order to achieve universal peace and justice, the present Charter of the United Nations should be changed to provide a true world government constitution."

The resolution was first introduced in the Senate on September 13, 1949 by Senator Glen Taylor (D-Idaho). Senator Alexander Wiley (R-Wisconsin) called it "a consummation devoutly to be wished for" and said, "I understand your proposition is either change the United Nations, or change or create, by a separate convention, a world order." Senator Taylor later stated:

"We would have to sacrifice considerable sovereignty to the world organization to enable them to levy taxes in their own right to support themselves."

April 12, 1952 – John Foster Dulles, later to become Secretary of State, says in a speech to the American Bar Association in Louisville, Kentucky, that "treaty laws can override the Constitution." He says treaties can take power away from Congress and give them to the President. They can take powers from the States and give them to the Federal Government or to some international body and they can cut across the rights given to the people by their constitutional Bill of Rights.

A Senate amendment, proposed by GOP Senator John Bricker, would have provided that no treaty could supersede the Constitution, but it fails to pass by one vote.

1954 – Prince Bernhard of the Netherlands establishes the Bilderbergers, international politicians and bankers who meet secretly on an annual basis, even to this day. The 2003 meeting took place over the weekend of 15 to 18 May in Versailles, Paris.

1958 – World Peace through World Law is published, where authors Grenville Clark and Louis Sohn advocate using the U.N. as a governing body for the world, world disarmament, a world police force and legislature.

1959 – The Council on Foreign Relations calls for a New International Order. Study Number 7, issued on November 25, advocated:

"...new international order [which] must be responsive to world aspirations for peace, for

social and economic change...an international order...including states labeling themselves as 'socialist' [communist]."

1959 – The World Constitution and Parliament Association is founded which later develops a Diagram of World Government under the Constitution for the Federation of Earth.

1959 – The Mid-Century Challenge to U.S. Foreign Policy is published, sponsored by the Rockefeller Brothers' Fund. It explains that the U.S.:

"...cannot escape, and indeed should welcome...the task which history has imposed on us. This is the task of helping to shape a new world order in all its dimensions – spiritual, economic, political, social."

September 9, 1960 – President Eisenhower signs Senate Joint Resolution 170, promoting the concept of a federal Atlantic Union. Pollster and Atlantic Union Committee treasurer, Elmo Roper, later delivers an address titled, The Goal Is Government of All the World, in which he states:

"For it becomes clear that the first step toward World Government cannot be completed until we have advanced on the four fronts: the economic, the military, the political and the social."

1961 – The U.S. State Department issues a plan to disarm all nations and arm the United Nations. State Department Document Number 7277 is entitled Freedom From War: The U.S. Program for General and Complete Disarmament in a Peaceful World. It details a three-stage plan to disarm all nations and arm the U.N. with the final stage in which "no state would have the military power to challenge the progressively strengthened U.N. Peace Force."

1962 – New Calls for World Federalism. In a study titled, A World Effectively Controlled by the United Nations, CFR member Lincoln Bloomfield states:

"...if the communist dynamic was greatly abated, the West might lose whatever incentive it has for world government."

The Future of Federalism by author Nelson Rockefeller is published. The one-time Governor of New York, claims that current events compellingly demand a "new world order," as the old order is crumbling, and there is "a new and free order struggling to be born." Rockefeller says there is:

"a fever of nationalism...[but] the nation-state is becoming less and less competent to perform its international political tasks....These are some of the reasons pressing us to lead vigorously toward the true building of a new world order... [with] voluntary service...and our dedicated faith in the brotherhood of all mankind....Sooner perhaps than we may realize...there will evolve the bases for a federal structure of the free world."

The New World Order is also mentioned in the introduction of the book "Backdoor to War", written by the Professor of American Diplomatic History Charles Tansill:

“The old followers of Woodrow Wilson had never renounced their allegiance to a one-world ideal, and they were fervent in their belief that America should take an active part in the preservation of world peace. They received strong support from many “liberals” and “intellectuals” who believed that modern science had banished the old barriers of time and space and had brought the peoples of the world into such close communion that some form of world government was an international imperative.”

1963 – J. William Fulbright, Chairman of the Senate Foreign Relations Committee speaks at a symposium sponsored by the Fund for the Republic, a left-wing project of the Ford Foundation:

“The case for government by elites is irrefutable...government by the people is possible but highly improbable.”

November 22, 1963 – President Kennedy is assassinated on November 22, 1963. He was killed according to the occult number signature of eleven [11]. He was killed in the 11th month, on the 22nd day, and on the 33rd parallel. He was also killed in the Masonic Dealey Plaza, the most powerful secret society in the world today to whom the number 11 is extremely important. See cuttingedge for details.

1964 – Taxonomy of Educational Objectives, Handbook II is published. Author Benjamin Bloom states:

“...a large part of what we call ‘good teaching’ is the teacher’s ability to attain affective objectives through challenging the students’ fixed beliefs.”

His Outcome-Based Education (OBE) method of teaching would first be tried as Mastery Learning in Chicago schools. After five years, Chicago students’ test scores had plummeted causing outrage among parents. OBE would leave a trail of wreckage wherever it would be tried and under whatever name it would be used. At the same time, it would become crucial to globalists for overhauling the education system to promote attitude changes among school students.

1964 – Visions of Order by Richard Weaver is published. He describes:

“progressive educators as a ‘revolutionary cabal’ engaged in ‘a systematic attempt to undermine society’s traditions and beliefs.’”

1967 – Richard Nixon calls for New World Order. In Asia after Vietnam, in the October issue of Foreign Affairs, Nixon writes of nations’ dispositions to evolve regional approaches to development needs and to the evolution of a “new world order.”

1968 – Joy Elmer Morgan, former editor of the NEA Journal publishes The American Citizens Handbook in which he says:

“the coming of the United Nations and the urgent necessity that it evolve into a more comprehensive form of world government places upon the citizens of the United States an increased obligation to make the most of their citizenship which now widens into active world citizenship.”

July 26, 1968 – Nelson Rockefeller pledges support of the New World Order. In an Associated Press report, Rockefeller pledges that, “as President, he would work toward international creation of a new world order.”

1970 – Education and the mass media promote world order. In *Thinking About A New World Order for the Decade 1990*, author Ian Baldwin, Jr. asserts that:

“...the World Law Fund has begun a worldwide research and educational program that will introduce a new, emerging discipline – world order – into educational curricula throughout the world...and to concentrate some of its energies on bringing basic world order concepts into the mass media again on a worldwide level.”

1972 – President Nixon visits China. In his toast to Chinese Premier Chou En-lai, former CFR member and now President, Richard Nixon, expresses “the hope that each of us has to build a new world order.”

May 18, 1972 – In speaking of the coming of world government, Roy M. Ash, director of the Office of Management and Budget, declares that:

“within two decades the institutional framework for a world economic community will be in place...[and] aspects of individual sovereignty will be given over to a supernational authority.”

September 11, 1972 – The world was introduced to terrorism at the 1972 Munich Olympic Games. There were 11 Israeli athletes killed. Exactly 29 years after this attack, another more despicable horror occurred - the September 11, 2001 terrorist attacks.

1973 – The Trilateral Commission is established. Banker David Rockefeller organizes this new private body and chooses Zbigniew Brzezinski, later National Security Advisor to President Carter, as the Commission’s first director and invites Jimmy Carter to become a founding member.

1973 – Humanist Manifesto II is published:

“The next century can be and should be the humanistic century...we stand at the dawn of a new age...a secular society on a planetary scale....As non-theists we begin with humans not God, nature not deity...we deplore the division of humankind on nationalistic grounds....Thus we look to the development of a system of world law and a world order based upon transnational federal government....The true revolution is occurring.”

September 11, 1973 – Chilean President Salvador Allende is killed in a brutal, violent military coup led by General Augusto Pinochet. Henry Kissinger was strongly implicated in this attack, and if he were to ever stand trial in an International Court, it is likely he would be charged with masterminding this coup and ordering the assassination of Allende.

April, 1974 – Former U. S. Deputy Assistant Secretary of State, Trilateralist and CFR member Richard Gardner’s article *The Hard Road to World Order* is published in the CFR’s *Foreign Affairs* where he states that:

“the ‘house of world order’ will have to be built from the bottom up rather than from the top down...but an end run around national sovereignty, eroding it piece by piece, will accomplish much more than the old-fashioned frontal assault.”

1974 – The World Conference of Religion for Peace, held in Louvain, Belgium is held. Douglas Roche presents a report entitled *We Can Achieve a New World Order*.

The U.N. calls for wealth redistribution: In a report entitled *New International Economic Order*, the U.N. General Assembly outlines a plan to redistribute the wealth from the rich to the poor nations.

1975 – A study titled, *A New World Order*, is published by the Center of International Studies, Woodrow Wilson School of Public and International Studies, Princeton University.

1975 – In Congress, 32 Senators and 92 Representatives sign A Declaration of Interdependence, written by historian Henry Steele Commager. The Declaration states that:

“we must join with others to bring forth a new world order... Narrow notions of national sovereignty must not be permitted to curtail that obligation.”

Congresswoman Marjorie Holt refuses to sign the Declaration saying:

“It calls for the surrender of our national sovereignty to international organizations. It declares that our economy should be regulated by international authorities. It proposes that we enter a ‘new world order’ that would redistribute the wealth created by the American people.”

1975 – Retired Navy Admiral Chester Ward, former Judge Advocate General of the U.S. Navy and former CFR member, writes in a critique that the goal of the CFR is the “submergence of U. S. sovereignty and national independence into an all powerful one-world government...”

1975 – *Kissinger on the Couch* is published. Authors Phyllis Schlafly and former CFR member Chester Ward state:

“Once the ruling members of the CFR have decided that the U.S. government should espouse a particular policy, the very substantial research facilities of the CFR are put to work to develop arguments, intellectual and emotional, to support the new policy and to confound, discredit, intellectually and politically, any opposition...”

1976 – *RIO: Reshaping the International Order* is published by the globalist Club of Rome, calling for a new international order, including an economic redistribution of wealth.

1977 – *The Third Try at World Order* is published. Author Harlan Cleveland of the Aspen Institute for Humanistic Studies calls for:

“changing Americans’ attitudes and institutions” for “complete disarmament (except for international soldiers)” and “for individual entitlement to food, health and education.”

[Sound like America today?]

1977 – Imperial Brain Trust by Laurence Shoup and William Minter is published. The book takes a critical look at the Council on Foreign Relations with chapters such as: Shaping a New World Order: The Council's Blueprint for Global Hegemony, 1939-1944 and Toward the 1980's: The Council's Plans for a New World Order.

1977 – The Trilateral Connection appears in the July edition of Atlantic Monthly. Written by Jeremiah Novak, it says:

“For the third time in this century, a group of American schools, businessmen, and government officials is planning to fashion a New World Order...”

1977 – Leading educator Mortimer Adler publishes *Philosopher at Large* in which he says: “...if local civil government is necessary for local civil peace, then world civil government is necessary for world peace.”

1979 – Barry Goldwater, retiring Republican Senator from Arizona, publishes his autobiography *With No Apologies*. He writes:

“In my view The Trilateral Commission represents a skillful, coordinated effort to seize control and consolidate the four centers of power – political, monetary, intellectual, and ecclesiastical. All this is to be done in the interest of creating a more peaceful, more productive world community. What the Trilateralists truly intend is the creation of a worldwide economic power superior to the political governments of the nation-states involved. They believe the abundant materialism they propose to create will overwhelm existing differences. As managers and creators of the system they will rule the future.”

1984 – *The Power to Lead* is published. Author James McGregor Burns admits:

“The framers of the U.S. constitution have simply been too shrewd for us. They have outwitted us. They designed separate institutions that cannot be unified by mechanical linkages, frail bridges, tinkering. If we are to 'turn the Founders upside down' – we must directly confront the constitutional structure they erected.”

1985 – Norman Cousins, the honorary chairman of Planetary Citizens for the World We Chose, is quoted in *Human Events*:

“World government is coming, in fact, it is inevitable. No arguments for or against it can change that fact.”

Cousins was also president of the World Federalist Association, an affiliate of the World Association for World Federation (WAWF), headquartered in Amsterdam. WAWF is a leading force for world federal government and is accredited by the U.N. as a Non-Governmental Organization.

1987 – *The Secret Constitution and the Need for Constitutional Change* is sponsored in part by the Rockefeller Foundation. Some thoughts of author Arthur S. Miller are:

“...a pervasive system of thought control exists in the United States...the citizenry is indoctrinated by employment of the mass media and the system of public education...people

are told what to think about...the old order is crumbling... Nationalism should be seen as a dangerous social disease...A new vision is required to plan and manage the future, a global vision that will transcend national boundaries and eliminate the poison of nationalistic solutions...a new Constitution is necessary."

1988 – Former Under-secretary of State and CFR member George Ball in a January 24 interview in the New York Times says:

"The Cold War should no longer be the kind of obsessive concern that it is. Neither side is going to attack the other deliberately...If we could internationalize by using the U.N. in conjunction with the Soviet Union, because we now no longer have to fear, in most cases, a Soviet veto, then we could begin to transform the shape of the world and might get the U.N. back to doing something useful...Sooner or later we are going to have to face restructuring our institutions so that they are not confined merely to the nation-states. Start first on a regional and ultimately you could move to a world basis."

December 7, 1988 – In an address to the U.N., Mikhail Gorbachev calls for mutual consensus:

"World progress is only possible through a search for universal human consensus as we move forward to a new world order."

May 12, 1989 – President Bush invites the Soviets to join World Order. Speaking to the graduating class at Texas A&M University, Mr. Bush states that the United States is ready to welcome the Soviet Union "back into the world order."

1989 – Carl Bernstein's (Woodward and Bernstein of Watergate fame) book *Loyalties: A Son's Memoir* is published. His father and mother had been members of the Communist party. Bernstein's father tells his son about the book:

"You're going to prove [Sen. Joseph] McCarthy was right, because all he was saying is that the system was loaded with Communists. And he was right...I'm worried about the kind of book you're going to write and about cleaning up McCarthy. The problem is that everybody said he was a liar; you're saying he was right...I agree that the Party was a force in the country."

November 9, 1989 – The much hated Berlin Wall comes tumbling down, completing the deliberate dissolution of the U.S.S.R. and of Communism.

1990 – The World Federalist Association faults the American press. Writing in their Summer/Fall newsletter, Deputy Director Eric Cox describes world events over the past year or two and declares:

"It's sad but true that the slow-witted American press has not grasped the significance of most of these developments. But most federalists know what is happening...And they are not frightened by the old bug-a-boo of sovereignty."

April 11, 1990 – Russian President Gorbachev announced Russia would join New World Order.

August 2, 1990 – Iraqi invasion of Kuwait.

August 17, 1990 – President Bush [Senior] announces that the Iraqi invasion “shall not stand, because it threatens the New World Order”.

September 11, 1990 – President Bush calls the Gulf War an opportunity for the New World Order. In an address to Congress entitled Toward a New World Order, Mr. Bush says:

“The crisis in the Persian Gulf offers a rare opportunity to move toward an historic period of cooperation. Out of these troubled times... a new world order can emerge in which the nations of the world, east and west, north and south, can prosper and live in harmony.... Today the new world is struggling to be born.”

September 25, 1990 – In an address to the U.N., Soviet Foreign Minister Eduard Shevardnadze describes Iraq’s invasion of Kuwait as “an act of terrorism [that] has been perpetrated against the emerging New World Order.” On December 31, Gorbachev declares that the New World Order would be ushered in by the Gulf Crisis.

October 1, 1990 – In a U.N. address, President Bush speaks of the:

“...collective strength of the world community expressed by the U.N...an historic movement towards a new world order... a new partnership of nations... a time when humankind came into its own... to bring about a revolution of the spirit and the mind and begin a journey into a... new age.”

1991 – Author Linda MacRae-Campbell publishes *How to Start a Revolution at Your School in Context*. She promotes the use of “change agents” as “self-acknowledged revolutionaries” and “co-conspirators.”

1991 – President Bush praises the New World Order in a State of Union Message:

“What is at stake is more than one small country, it is a big idea – a new world order... to achieve the universal aspirations of mankind... based on shared principles and the rule of law.... The illumination of a thousand points of light.... The winds of change are with us now.”

February 6, 1991 – President Bush tells the Economic Club of New York:

“My vision of a new world order foresees a United Nations with a revitalized peacekeeping function.”

June, 1991 – The Council on Foreign Relations co-sponsors an assembly *Rethinking America’s Security: Beyond Cold War to New World Order* which is attended by 65 prestigious members of government, labor, academia, the media, military, and the professions from nine countries. Later, several of the conference participants joined some 100 other world leaders for another closed door meeting of the Bilderberg Society in Baden Baden, Germany. The Bilderbergers also exert considerable clout in determining the foreign policies of their respective governments.

July, 1991 – The Southeastern World Affairs Institute discusses the New World Order. In a program, topics include, Legal Structures for a New World Order and The United Nations: From its Conception to a New World Order. Participants include a former director of the U.N.'s General Legal Division, and a former Secretary General of International Planned Parenthood.

Late July, 1991 – On a Cable News Network program, CFR member and former CIA director Stansfield Turner (Rhodes scholar), when asked about Iraq, responded:

“We have a much bigger objective. We’ve got to look at the long run here. This is an example – the situation between the United Nations and Iraq – where the United Nations is deliberately intruding into the sovereignty of a sovereign nation...Now this is a marvelous precedent (to be used in) all countries of the world...”

October 29, 1991 – David Funderburk, former U. S. Ambassador to Romania, tells a North Carolina audience:

“George Bush has been surrounding himself with people who believe in one-world government. They believe that the Soviet system and the American system are converging.”

The vehicle to bring this about, said Funderburk, is the United Nations, “the majority of whose 166 member states are socialist, atheist, and anti-American.” Funderburk served as ambassador in Bucharest from 1981 to 1985, when he resigned in frustration over U.S. support of the oppressive regime of the late Rumanian dictator, Nicolae Ceausescu.

October 30, 1991: – President Gorbachev at the Middle East Peace Talks in Madrid states:

“We are beginning to see practical support. And this is a very significant sign of the movement towards a new era, a new age... We see both in our country and elsewhere...ghosts of the old thinking...When we rid ourselves of their presence, we will be better able to move toward a new world order... relying on the relevant mechanisms of the United Nations.”

Elsewhere, in Alexandria, Virginia, Elena Lenskaya, Counsellor to the Minister of Education of Russia, delivers the keynote address for a program titled, Education for a New World Order.

1992 – The Twilight of Sovereignty by CFR member (and former Citicorp Chairman) Walter Wriston is published, in which he claims:

“A truly global economy will require ...compromises of national sovereignty... There is no escaping the system.”

1992 – The United Nations Conference on Environment and Development (UNCED) Earth Summit takes place in Rio de Janeiro this year, headed by Conference Secretary-General Maurice Strong. The main products of this summit are the Biodiversity Treaty and Agenda 21, which the U.S. hesitates to sign because of opposition at home due to the threat to sovereignty and economics. The summit says the first world's wealth must

be transferred to the third world.

July 20, 1992 – TIME magazine publishes *The Birth of the Global Nation* by Strobe Talbott, Rhodes Scholar, roommate of Bill Clinton at Oxford University, CFR Director, and Trilateralist, in which he writes:

“All countries are basically social arrangements... No matter how permanent or even sacred they may seem at any one time, in fact they are all artificial and temporary... Perhaps national sovereignty wasn't such a great idea after all... But it has taken the events in our own wondrous and terrible century to clinch the case for world government.”

As an editor of Time, Talbott defended Clinton during his presidential campaign. He was appointed by President Clinton as the number two person at the State Department behind Secretary of State Warren Christopher, former Trilateralist and former CFR Vice-Chairman and Director. Talbott was confirmed by about two-thirds of the U.S. Senate despite his statement about the unimportance of national sovereignty.

September 29, 1992 – At a town hall meeting in Los Angeles, Trilateralist and former CFR president Winston Lord delivers a speech titled *Changing Our Ways: America and the New World*, in which he remarks:

“To a certain extent, we are going to have to yield some of our sovereignty, which will be controversial at home... [Under] the North American Free Trade Agreement (NAFTA)... some Americans are going to be hurt as low-wage jobs are taken away.”

Lord became an Assistant Secretary of State in the Clinton administration.

Winter, 1992-93 – The CFR's *Foreign Affairs* publishes *Empowering the United Nations* by U.N. Secretary General Boutros-Boutros Ghali, who asserts:

“It is undeniable that the centuries-old doctrine of absolute and exclusive sovereignty no longer stands... Underlying the rights of the individual and the rights of peoples is a dimension of universal sovereignty that resides in all humanity... It is a sense that increasingly finds expression in the gradual expansion of international law... In this setting the significance of the United Nations should be evident and accepted.”

December 31, 1992 – Formation of Western Europe as the first nation to be formed in the global 10-Nation Reorganization Plan.

1993 – Strobe Talbott receives the Norman Cousins Global Governance Award for his 1992 TIME article, *The Birth of the Global Nation* and in appreciation for what he has done “for the cause of global governance.” President Clinton writes a letter of congratulation which states:

“Norman Cousins worked for world peace and world government... Strobe Talbott's lifetime achievements as a voice for global harmony have earned him this recognition... He will be a worthy recipient of the Norman Cousins Global Governance Award. Best wishes... for future success.”

Not only does President Clinton use the specific term, “world government,” but he also expressly wishes the WFA “future success” in pursuing world federal government. Talbott proudly accepts the award, but says the WFA should have given it to the other nominee, Mikhail Gorbachev.

July 18, 1993 – CFR member and Trilateralist Henry Kissinger writes in the Los Angeles Times concerning NAFTA:

“What Congress will have before it is not a conventional trade agreement but the architecture of a new international system... a first step toward a new world order.”

August 23, 1993 – Christopher Hitchens, Socialist friend of Bill Clinton when he was at Oxford University, says in a C-Span interview:

“...it is, of course the case that there is a ruling class in this country, and that it has allies internationally.”

October 30, 1993 – Washington Post ombudsman Richard Harwood does an op-ed piece about the role of the CFR’s media members:

“Their membership is an acknowledgment of their ascension into the American ruling class [where] they do not merely analyze and interpret foreign policy for the United States; they help make it.”

January/February, 1994 – The CFR’s Foreign Affairs prints an opening article by CFR Senior Fellow Michael Clough in which he writes that the “Wise Men” (e.g. Paul Nitze, Dean Acheson, George Kennan, and John J. McCloy) have:

“assiduously guarded it [American foreign policy] for the past 50 years...They ascended to power during World War II...This was as it should be. National security and the national interest, they argued must transcend the special interests and passions of the people who make up America... How was this small band of Atlantic-minded internationalists able to triumph?... Eastern internationalists were able to shape and staff the burgeoning foreign policy institutions... As long as the Cold War endured and nuclear Armageddon seemed only a missile away, the public was willing to tolerate such an undemocratic foreign policy making system.”

1995 – The State of the World Forum took place in the fall of this year, sponsored by the Gorbachev Foundation located at the Presidio in San Francisco. Foundation President Jim Garrison chairs the meeting of who’s-whos from around the world including Margaret Thatcher, Maurice Strong, George Bush, Mikhail Gorbachev and others. Conversation centers around the oneness of mankind and the coming global government. However, the term “global governance” is now used in place of “new world order” since the latter has become a political liability, being a lightning rod for opponents of global government.

April 19, 1995 – Oklahoma City bombing of the Federal Murrah Building.

1996 – The United Nations 420-page report Our Global Neighborhood is published. It outlines a plan for “global governance,” calling for an international Conference on Global

Governance in 1998 for the purpose of submitting to the world the necessary treaties and agreements for ratification by the year 2000.

1996 – State of the World Forum II takes place in the fall in San Francisco. Many of the sessions are closed to the press.

December 31, 1999 – Washington Monument sprays colored light into the black night sky, symbolizing the 'impregnation' of the New World Order.

September 10, 2000 – The conclusion of a 13-day summit – August 28 - September 10, 2000 – which officially gave birth to the New World Order, which was 'conceived' 9 months earlier at the Washington Obelisk in DC. See cuttingedge.org for details.

September 11, 2001 – Eleven years to the day after President Bush [Senior] delivers his speech to Congress entitled *Toward a New World Order*, and 1 year and 1 day after the official birth of the New World Order, "terrorists" attack and destroy the World Trade Center and severely damage the Pentagon.

Interestingly, the date could also have been chosen to celebrate the birth of The Knights Templar, formed by 9 European separatists who forbade new members for 9 years in 1111 AD.

September 12, 2001 – "There is a chance for the President of the United States to use this disaster to carry out what his father - a phrase his father used I think only once, and it hasn't been used since - and that is a new world order." - Senator Gary Hart, Council on Foreign Relations meeting.

September 13, 2001 – Deputy Defense Secretary Paul Wolfowitz says the retaliation [re: Sept 11] would be continued until the roots of terrorism are destroyed. "These people try to hide. They won't be able to hide forever ... They think their harbors are safe, but they won't be safe forever ... it's not simply a matter of capturing people and holding them accountable, but removing the sanctuaries, removing the support systems, ending states who sponsor terrorism."

October 11, 2001 – Tom Brokaw (popular US news anchor) announces the world now has formed into the New World Order.

October 26, 2001 – President Bush signs legislation into law that gives Federal Government dictatorial powers and severely – if not fatally – erodes individual liberties and rights.

January 29, 2002 – Bush, in his State of the Union Address, lists Iraq, Iran and North Korea as constituting an 'axis of evil, arming to threaten the peace of the world. By seeking weapons of mass destruction, these regimes pose a grave and growing danger'.

September 12, 2002 – Bush tells UN that Iraq is a "grave and gathering danger" and that the US "will not allow any terrorist or tyrant to threaten civilization with weapons of mass murder".

February 01, 2003 – Space shuttle Columbia breaks up on re-entry over Dallas, Texas.

February 2003 – First reported cases of SARS. A massive media blitz attempts to create a pandemic, but by May 2003, only 600 people worldwide have died. Compared to the Influenza Pandemic of 1917-1919 which killed 800,000 Americans and 25 million people worldwide, SARS is hardly a pandemic.

March 17, 2003 – At 8:15pm, EST, President Bush announces a 48-hour ultimatum to Saddam Hussein to leave the country with his sons, or suffer the invasion.

March 20, 2003 – US starts invasion of Iraq, exactly 555 days after September 11, 2001. The start of World War III?

February 14, 2006 – Bill is introduced in the United States House of Representatives to reinstate compulsory military service.

May 19, 2006 – Bush considering creating a North American Union. Will this replace the United States?

New World Order Goals summarized

Creation of one World Government.

Creation of a single unified monetary system which includes the abolishment of cash money.

Destruction of Religions and creation of their own.

Destruction of all national identity and national pride.

Drastic population reduction.

Merger of Capitalism and Communism.

Return to feudalism.

Dissemination of cultural norms.

Creation of a post industrial zero growth society.

Destruction of racial identities.

Removal of personal choice and destiny by the constant creation and management of crisis.

15.2 Foundations

World peace through world government and world law. It is an ancient idea that has fastened itself mightily on the minds of men in many ages. "The abolition of war and the establishment of a world government are the two main themes of contemporary

utopianism," notes philosopher Thomas Molnar in *Utopia: The Perennial Heresy*. "These objectives are as old as Utopian thought itself."² Never before, however, has our human race been so close to inaugurating this Utopian "ideal" — to establishing and empowering government on a planetary scale. Global "crises" — environmental decay, poverty, overpopulation, economic and political instability — and the still-present threat of war and nuclear holocaust demand "global solutions." Transnational problems and growing interdependence defy our antiquated "world order" of nation states. So say a growing chorus of media-designated "experts." But our planet and our age have had more than passing acquaintance with Utopias empowered. And without exception, the promises of the Utopian dream have yielded to dystopian nightmares. The tens of millions of victims of Lenin, Stalin, Hitler, Mao, Ho, Kim, Fidel, Pol Pot, Amin, Lumumba, Qaddafi, Khomeini, and dozens of other murderous despots cry out to us. They warn us against the Utopian siren call. They warn us of the fundamental truth embodied in George Washington's definition of government:

"Government is not reason; it is not eloquence; it is force! Like fire, it is a dangerous servant and a fearful master."

World government, of course, would necessitate worldwide force — unprecedented power on a global scale. Make no mistake about it, that is what the advocates of "an empowered United Nations" are really after. And what is most disturbing is that they have very nearly succeeded in grasping hold of this power, without most inhabitants of this planet having the slightest idea of the "happiness" being planned for them. A chilling insight into the kind of future we might expect under the global regime of an omnipotent, omnibenevolent United Nations is provided in a presentation on "world order" given by a high UN official to the American Association of Systems Analysts.

The official, Robert Muller, held many top UN posts over a 35-year career at the UN, including that of Secretary of the UN's Economic and Social Council (ECOSOC). In his book *New Genesis: Shaping a Global Spirituality*, Muller recounts how he explained to the systems analysts the myriad activities in which the UN was even at that time (the 1970s) deeply involved:

"Yes, the UN is concerned with our globe's climate....

Yes, the UN is concerned with the total biosphere through project Earthwatch, the Global Environment Program of UNEP and UNESCO's program, "Man and the Biosphere."

Yes the UN is dealing with our planet's seas and oceans....

Yes, the UN is dealing with the world's deserts....

Yes, the UN is dealing with the human person, that alpha and omega of our efforts....

The person's basic rights, justice, health, progress and peace are being dealt with from the fetus to the time of death.

Yes, the UN is dealing with the atom in the International Atomic Energy Agency....

Yes, the UN is dealing with art, folklore, nature, the preservation of species, germ banks, labor, handicrafts, literature, industry, trade, tourism, energy, finance, birth defects, sicknesses, pollution, politics, the prevention of accidents, of war and conflicts, the building

of peace, the eradication of armaments, atomic radiation, the settlement of disputes, the development of worldwide cooperation, the aspirations of East and West, North and South, black and white, rich and poor, etc.

Muller then records: "I went on like this for more than an hour. When I finished, I still had a bagful to say, but I was exhausted by my exaltation at the vastness of the cooperation I had seen develop.... Something gigantic was going on, a real turning point in evolution ... glorious and beautiful like Aphrodite emerging from the sea. This was the beginning of a new age.... The great hour of truth had arrived for the human race." The epiphany appears to have nearly overwhelmed him. Later upon reflection, however, Muller found to his dismay that there were vital spheres of human and planetary concern not yet brought within the UN's superintending care. "I had found several gaps," he records. Gaps? What possible "gaps" could there be? A great many, it seems. For "there was no worldwide cooperation for the globe's cold zones, the mountains, our topsoil, standardization, world safety ... the family, morality, spirituality, world psychology and sociology, the world of senses, the inner realm of the individual, his needs, values, perceptions, love and happiness ... on consumer protection ... on the world's elderly, on world law, on the ultimate meaning of human life and its objectives."

Muller fumed that "political men were still dragging their feet in antiquated, obsolete quarrels which prevented them from seeing the vast new universal scheme of evolution which was dawning upon the world." Indeed. Parochial politicians were stifling the messianic mission of Mr. Muller and his fellow UN savants, whose only desire is to "transform" the world. Much has been done to alleviate those hindrances and deficiencies, however. New United Nations treaties and conventions are rushing to fill in the "gaps" Muller was so worried about. The colossal UN bureaucracy Muller outlined in his book has been greatly augmented. One UN program alone, the massive Agenda 21, "proposes an array of actions which are intended to be implemented by every person on Earth." And the UN's newly created International Criminal Court poses the very real prospect of American citizens being delivered up for trial before international tribunals, without any of the protections guaranteed in our Constitution.

Although his name is not universally known, Mr. Muller is not some inconsequential UN bureaucrat whose Utopian rantings can be lightly dismissed. He is author of the "World Core Curriculum," now used in many schools worldwide, and is chancellor of the UN's University for Peace in Costa Rica. Muller, who is a self-professed disciple of the theosophist/satanist Alice Bailey, is revered in globalist circles and is one of the most frequently quoted "sages" and architects of the UN's new world religion. In his book *My Testament to the UN*, Muller pays tribute to the UN's New Age spiritual guru, Sri Chinmoy, and approvingly quotes Chinmoy's "prophecy" regarding the UN's ultimate destiny:

"No human force will ever be able to destroy the United Nations, for the United Nations is not a mere building or a mere idea; it is not a man-made creation. The United Nations is the vision-light of the Absolute Supreme, which is slowly, steadily and

unerringly illumining the ignorance, the night of our human life. The divine success and supreme progress of the United Nations is bound to become a reality. At his choice hour, the Absolute Supreme will ring His own victory-bell here on Earth through the loving and serving heart of the United Nations.”

Yes, for Muller and his fellow votaries of one-world paganism, who populate the higher echelons of the UN and the globalist movement, the United Nations is divine and is leading us to, as Muller says, “the apotheosis [deification] of human life on earth.”¹⁰ Human life, that is, personified by Muller and the UN’s spiritual elites, who, naturally, will lead and rule in this new world order. Professor Molnar dissects this idolatry and monumental conceit with piercing precision: “At Utopia’s roots there is defiance of God, pride unlimited, a yearning for enormous power and the assumption of divine attributes with a view to manipulating and shaping man’s fate.”

Where does this supreme arrogance invariably lead? The record of history is pitiless. Dr. Molnar continues: “In a raving moment, the story goes, Caligula wished that mankind had only one head so that he might chop it off with one blow. So, too, the Utopian: he wants to deal with one entity so as to simplify his own task of transforming indomitable human nature into a slave.” The UN’s Robert Muller fully recognizes the revolutionary nature of his mission. “As on the eve of the French Revolution,” he exclaims, “... we must outgrow the increasingly erroneous notion of good and bad as seen by a particular group ... and define new concepts of what is good or bad for the entire human family. This is absolutely essential.” Muller and other enthusiasts for a “new world order” under UN hegemonic rule invariably share this sympathetic fascination and fixation with the abominations and terror of the French Revolution.

Appeals to “empower” the United Nations are worse than foolish; they are evil and must be opposed by all honorable people. History more than amply vindicates Lord Acton’s axiom that “power tends to corrupt and absolute power corrupts absolutely.” This has proven true even when rulers have started out as relatively virtuous; even more so when already-corrupt men grasp hold of absolute power. The primary movers in the ongoing drive to “transform” the United Nations, and to transfer the powers of sovereign governments to this global monstrosity, are not misguided, well-intentioned Utopians. We will not dissuade them with facts, arguments, and debates pointing out the errors and dangers inherent in their tyrannical proposals. They are not interested in facts, arguments, and debates — except as it serves as a cover for their totalitarian agenda. We are dealing with a self-perpetuating conspiracy of immensely wealthy, utterly wicked, power-mad megalomaniacs who want to rule the world. It is that simple. During the course of the past century, this cabal of one-world insiders has gradually gained control of the levers of power in the federal government, the Democrat and Republican Parties, and many major corporations, universities, think tanks, media, and tax-exempt foundations. Operating through respectable-appearing front groups — principally the Council on Foreign Relations (CFR), the Trilateral Commission (TC), the Bilderberg Group (BG), and the Committee for Economic Development (CED) — these oneworlders have hijacked

our country. While systematically destroying our constitutional republic and gradually converting it into a socialist dictatorship, they also have been busily fomenting wars and revolutions, toppling free governments that were friendly to America, and repeatedly aiding ruthless Communist dictators and Third World thugs who are America's enemies. The blood of millions of victims is on their hands.

Now they are pressing forward with ever-increasing audacity, demanding the power to refashion the world according to their Procrustean logic. If we do not stop their megalomaniacal scheme, they will, in the words of the French Revolutionist Carrier, turn the world "into a cemetery rather than fail in her regeneration." Yes, these are very serious charges, but they reflect a very grim reality. They are, unfortunately, more than sustained by mountains of evidence. We have attempted here to clear away some of the haze that has long hidden these mountains, so that you, the reader, may make some very serious decisions based upon historical facts, perspective, and truth that previously have been denied to you. History is a very bloody and unforgiving crucible that we ignore at our own great peril. However, history need not fatalistically repeat itself. Informed, courageous, responsible individuals can and do change the course of history.

The Threat

We are talking about a revolutionary transformation that has been gathering steam since World War II (Note: More like even before World War I) and is now entering its final stages. It is a revolution that, if completed, will mean the end of the United States of America — as well as the abolition of every other sovereign, independent nation. This radical revolution is simultaneously overturning the nation-state system that has been the foundation for governance on this planet for the past several hundred years, and forging a world government with unprecedented powers. If allowed to proceed to completion, it will usher in an Orwellian global tyranny under the United Nations. We know that to many people this is an astounding statement. You, dear reader, may be among those who find such a claim to be "ridiculous," "absurd," "nutty." After all, you reason, the United States is the most powerful nation on earth, "the last superpower".

The UN has no military of its own to impose global laws or regulations upon unwilling Americans. In fact, the UN must come hat in hand to the U.S. every time it determines to send peacekeepers into some new area torn by conflict. And hasn't the UN been complaining for years about U.S. refusals to pay dues? The UN looks like a pretty helpless, toothless "threat," you say. And you would be right — except for one very important thing: You would have completely misunderstood the nature of the danger and direction from which the threat is coming. Observers who have carefully followed and analyzed international developments and the policies and institutions of the UN have never worried that UN Secretary-General Kofi Annan — or one of his predecessors or successors — would impose a UN dictatorship upon a strong and resistant United States. That is not going to happen. We are not worried that an imminent UN tyranny is about

to be militarily imposed upon Americans against the wishes of our own government. The danger is very real, nonetheless, but it emanates not so much from Kofi Annan, the UN itself, or any foreign, external source as it does from those within our own government who seek to impose a “new world order” upon us. As one of our more famous former U.S. presidents accurately noted:

“Shall we expect some transatlantic military giant, to step the ocean, and crush us at a blow? Never! All the armies of Europe, Asia and Africa combined ... could not by force, take a drink from the Ohio, or make a track on the Blue Ridge, in a trial of a thousand years. At what point, then, is the approach of danger to be expected? I answer, if it ever reach us, it must spring up amongst us. It cannot come from abroad. If destruction be our lot, we must ourselves be its author and finisher. As a nation of freemen, we must live through all time, or die by suicide.” - Abraham Lincoln, 1838

The danger has indeed sprung up amongst us. There are many who go by the name “American” who prefer to think of themselves as “global citizens” or “citizens of the world” and who consciously are leading us to national suicide. An alarming number of American citizens who hold high elective and appointive office, and who have taken oaths to defend our nation, our Constitution, and our laws, are now committed to a “new world order” which does not allow for a free, independent, sovereign United States of America. They are joined by prominent individuals holding influential positions of trust in many of our private institutions. In the new “interdependent” world order they envision, a U.S.A. with continuing superpower status is viewed as a “threat” to global peace and security.

In every case, a small circle of power-lusting conspirators used large movements of idealists and dupes to accomplish their schemes. In every instance, the danger signs were there for those who were willing to see. The opportunities were there for those with courage to stop the madness by exposing and opposing the criminals before they could seize total political power. Alas, in each case, too few citizens were willing to see and to act courageously. For this they paid a horrendous price. The signs are here for us to see today; we will have no excuse if we fail to act with responsibility and courage. Our price for failing to do so will be far more terrible than anything this planet has yet seen.

In September 2000, some 150 presidents, premiers, dictators, and potentates converged on New York City for the UN Millennium Summit, the most spectacular UN gathering ever. Serving as cochairman of the week-long political gala was Sam Nujoma, the Communist terrorist who was installed as “President” of Namibia in 1990 by the United Nations, the Soviet Union, and the U.S. State Department. The Summit attendees all received a copy of *We the Peoples: The Role of the United Nations in the 21st Century*, a report “authored” by Kofi Annan to guide the UN’s “reform agenda” at the event. Annan’s *We the Peoples* proposed nothing less than a global, socialist superstate dressed in New Deal verbiage. The Annan plan even adopted Franklin Delano Roosevelt’s Brain Trust rhetoric of “Freedom from Fear” and “Freedom from Want” as titles for the report’s sub-themes. *We the Peoples* also proposed “new forms of global governance,” “global norms,” “global rules” — all of which infer a role for the UN as global legislator. None

of this surprises us, of course; UN poohbahs like Annan are well known for their self-aggrandizing pontifications and appeals for new global powers. However, this was not a typical, run-of-the-mill summit; something new and more sinister was at work here. The Millennium

Summit showcased a frightening new level of capability for sophisticated orchestration of an intensive, worldwide, multipronged, multi-level propaganda campaign. This astonishing process is capable of mobilizing and coordinating the activities of an impressive number of politicians, UN officials, corporate leaders, major organs of the media, academic institutions, think tanks and innumerable private, special-interest groups. Thus a relatively small but noisy, lavishly funded, and incredibly well organized minority has shown that it can generate tremendous, synchronized pressure completely out of proportion to its real size. This pressure is generated by deception, by falsely presenting the appearance of irresistible, universal support for UN proposals. The concentrated pressure is aimed at intimidating, silencing, and neutralizing all active and potential opposition, among both elected officials and private citizens. And it works with frightening effect. The element of surprise, together with concerted force, overwhelms the opposition.

Meanwhile, outside the UN, crowds composed of members of various non-governmental organizations (NGOs) clamored for the creation of a Global Peoples Assembly, a sort of UN Congress to enact global legislation. A few blocks away another global confab was underway promoting the same one-world agenda. The State of the World Forum 2000, sponsored by the Gorbachev Foundation, featured a weeklong series of symposia with prominent participants from the worlds of international business and finance, labor, academe, philanthropy, religion, environmental activism, government, intergovernmental organizations, and non-governmental organizations — all beating the drums for world government under an empowered and greatly expanded UN. However, all of these meetings, symposia, demonstrations and speeches might be dismissed as bluster, globaloney, rant and cant — except for several important facts:

- They were preceded and accompanied by similar one-world endorsements from some of America's top officials and political and intellectual leaders;
- They were preceded and accompanied by concrete actions and proposals by leading U.S. political and intellectual leaders to implement these proposals;
- Very wealthy and powerful U.S. individuals, companies, and institutions have committed massive financial support to establishing "global governance";
- The UN system has been expanding dramatically in size and scope and now constitutes a huge planetary bureaucracy;
- Equally important (and dangerous) as the expanding superstructure of the UN itself is the proliferation of the UN's subordinate international organizations and institutions, such as NATO, the Organization of American States (OAS), the International Monetary Fund (IMF), the Organization for Economic Cooperation and Development (OECD), the World Trade Organization (WTO), etc.;
- A huge network of radical NGOs, financed by governments and tax-exempt foundations,

and masquerading as authentic representatives of “global civil society,” can now assemble mobs at will to “lobby” for the cause du jour;

- This drive for an empowered UN is the culmination of plans set in motion decades earlier by a power-seeking cabal

On February 18, 2000, the World Federalist Association (WFA), one of the largest and most ardent organizations promoting world government, took out a full-page advertisement in the New York Times to proclaim triumphantly that “Cronkite and Clinton make a strong case for recasting the United Nations as a world federation.” The World Federalist Association ad noted: “Last October, President Clinton applauded federalism — the basis for the U.S. Constitution — as ‘the arrangement of government most likely to give us the best of all worlds. What kind of “federalism” was Mr. Clinton predicting and endorsing? He cited “as Exhibit A the European Union,” or EU, which is rapidly subsuming its member countries in a colossal, socialist, and increasingly tyrannical superstate.

The WFA’s New York Times ad noted that in the same month that Clinton was making his above-mentioned federalism speech, former CBS anchorman Walter Cronkite received the WFA’s “Norman Cousins Global Governance Award for his promotion of world government in his autobiography *A Reporter’s Life*.” In accepting the award, Cronkite said: “Those of us who are living today can influence the future of civilization. We can influence whether our planet will drift into chaos and violence, or whether through monumental educational and political effort we will achieve a world of peace under a system of law where individual violators of that law are brought to justice.... We need a system of enforceable world law — a democratic federal world government — to deal with world problems.”

However, Bill Clinton himself had already praised an earlier recipient of the Norman Cousins Global Governance Award: his old Oxford University roommate, Strobe Talbott, whom he had appointed U.S. Ambassador at Large. That praise came in the form of a letter dated June 22, 1993, which was read at the WFA awards ceremony two days later. Mr. Clinton’s letter praised WFA founder Norman Cousins’ lifetime effort “for world peace and world government”. Specifically, the World Federalists were honoring Talbott for a pro-world government essay he had written for *Time* magazine entitled “The Birth of the Global Nation” (July 20, 1992 issue). Therein Talbott approvingly forecast that in the future “nationhood as we know it will be obsolete; all states will recognize a single, global authority.” Talbott’s advocacy of world government did not prevent President Clinton from appointing him Deputy Secretary of State. That should not surprise anyone. Clinton, like Talbott, is a member of the world-government-promoting Council on Foreign Relations (CFR), as were over 400 other members of his administration. In addition, both are also “members in public service” of the Trilateral Commission (TC), an even more exclusive establishmentarian club greasing the skids for global governance. These groups have orchestrated an outpouring of symphonic appeals for world government and have been preparing the American psyche for a major globalist push to provide the United Nations, the WTO, and other international institutions with legislative, executive, and judicial powers.

The vast majority of Americans (or rather all members of the UN) have no idea that a huge array of UN schemes — some of which we have already become officially a party to, and others which are awaiting action by the U.S. government — pose very real threats to their freedom. These include:

- The World Trade Organization
- The massive environmental manifesto, Agenda 21
- The Biodiversity Treaty
- The Global Warming Convention
- Programs for national and personal disarmament
- The Tobin Tax and global income tax
- The vast expansion of UN military operations
- Proposals for a standing UN military force
- The UN's new International Criminal Court
- The Convention on the Rights of the Child
- The UN's global Education for All program

Disarmament and Submission

“A world effectively controlled by the United Nations is one in which “world government“ would come about through the establishment of supranational institutions.... [T]he present UN Charter could theoretically be revised in order to erect such an organization equal to the task envisaged, thereby codifying a radical rearrangement of power in the world.... National disarmament is a condition sine qua non for effective UN control.... The overwhelming central fact would still be the loss of control of their military power by individual nations. - Lincoln P. Bloomfield (CFR), 1962 U.S. Department of State Study Memorandum No. 7, A World Effectively Controlled By the United Nations.

Following World War I, a powerful cabal of one-world internationalists offered humanity a “solution“ to the horrible ravages of war: world government. The League of Nations was their instrument of salvation and U.S. President Woodrow Wilson was their prophet. The U.S. Senate, however, refused to ratify the League of Nations Covenant. Americans were suspicious of entanglements with the constantly warring European powers and wanted no part of submersion in a world super-state. They saw through the sophistry and the seductive “peace“ appeals. Any League strong enough to “enforce peace“ globally would also possess the power to impose tyranny worldwide. There would be no way to limit its power. Without U.S. membership, the League of Nations was doomed. However, in the wake of the even more massive death and destruction wrought by World War II, the organized one-world forces succeeded in pulling the United States into the League's successor, the United Nations. In the decades since, these advocates of a “new world order“ have been working assiduously to invest the United Nations gradually with legislative, executive, and judicial powers that will transform it into a global government.

professor Lincoln P. Bloomfield of the Massachusetts Institute of Technology is very important to our consideration here for his revelations about this conspiracy for world conquest. Unintended revelations, we hasten to add. Dr. Bloomfield is the author of one of the most critical and damning pieces of evidence to fall into our hands concerning the conspiracy by Insiders in our own government to destroy the United States and subject the American people, along with the people of all the world, to an all-powerful United Nations. What is so astounding is that even four decades after this scheme was discovered and exposed, Dr. Bloomfield and his coconspirators are not only still free (in fact they have never even been officially investigated) but are actively pursuing the same criminal scheme. Even more extraordinary still, as the reader will soon see, the treasonous scheme Bloomfield devised is quite obviously still serving as a guiding light to official U.S. policies. We are referring to the secret 1962 study Dr. Bloomfield authored for the Kennedy State Department entitled Study Memorandum No. 7, A World Effectively Controlled By the United Nations. The title itself is startling, but the contents are absolutely shocking for their audacity and treachery. In the study's opening summary, Professor Bloomfield writes:

“A world effectively controlled by the United Nations is one in which “world government“ would come about through the establishment of supranational institutions, characterized by mandatory universal membership and some ability to employ physical force. Effective control would thus entail a preponderance of political power in the hands of a supranational organization.... [T]he present UN Charter could theoretically be revised in order to erect such an organization equal to the task envisaged, thereby codifying a radical rearrangement of power in the world..... The principal features of a model system would include the following: (1) powers sufficient to monitor and enforce disarmament, settle disputes, and keep the peace — including taxing powers ... ; (2) an international force, balanced appropriately among ground, sea, air, and space elements, consisting of 500,000 men, recruited individually, wearing a UN uniform, and controlling a nuclear force composed of 50-100 mixed land-based mobile and undersea-based missiles, averaging one megaton per weapon; (3) governmental powers distributed among three branches...; (4) compulsory jurisdiction of the International Court...”

In this blueprint for global tyranny financed by the U.S. government, Bloomfield repeatedly stated a key point, that “it is world government we are discussing here — inescapable.“ And he leaves no doubt that the scheme would mean subjecting the U.S. to this omnipotent “contemplated regime“ (his words). He emphasizes, for instance, that:

“National disarmament is a condition sine qua non for effective UN control.... The essential point is the transfer of the most vital element of sovereign power from the states to a supranational government.... The overwhelming central fact would still be the loss of control of their military power by individual nations.“

Dr. Bloomfield lamented that it would be extremely difficult to sell this program for world government to the American people. However, it would be possible, he wrote, if our national leaders utilized “a grave crisis or war to bring about a sudden transformation

in national attitudes sufficient for the purpose." The MIT professor went on to suggest that "the order we examine may be brought into existence as a result of a series of sudden, nasty, and traumatic shocks." The Bloomfield scheme is as old as tyranny itself: Create a crisis and then offer a solution. That solution always entails, of course, "temporary" seizure of total power.

Dr. Bloomfield's study was not just a professorial pipe dream destined to be unread and forgotten in some musty, dusty archive.* It describes what has become the operational policy of the U.S. government. Bloomfield, we should point out, was, and is, a member of the Council on Foreign Relations, and it was his fellow CFR members in President Kennedy's CFR-dominated State Department who initiated the official implementation of this scheme. In 1961, the Kennedy administration promulgated the nowinfamous disarmament plan entitled Freedom From War: The United States Program for General and Complete Disarmament in a Peaceful World. Also known as Department of State Publication 7277, this plan, which is very similar to the Bloomfield study, presented a three-stage program for the transfer of U.S. arms to the United Nations. During Stage II (the stage we are currently in), the document mandates: "The U.N. Peace Force shall be established and progressively strengthened." This will be accomplished "to the end that the United Nations can effectively in Stage III deter or suppress any threat or use of force in violation of the purposes and principles of the United Nations."

This incredible, treasonous policy — which has been actively but quietly brought along toward completion during successive administrations — concludes as follows:

"In Stage III progressive controlled disarmament ... would proceed to a point where no state would have the military power to challenge the progressively strengthened U.N. Peace Force."

Pause and reflect for a moment on the enormity of the audacity and treason involved in such an incredible plot. It says that under the system it envisions, "no state" (meaning no country, including the United States) would be able to challenge the UN's power. This means that the U.S., like every other nation, would become a vassal of an omnipotent UN. Who would actually be in control of this power?

Besides conspiring to deliver our nuclear arsenal to the UN, oneworld architects like Cleveland, Bloomfield, et al., also have been pushing full tilt to build a globe-straddling UN conventional army. Everyone who wasn't hibernating for the past 10 years or stranded on a desert isle has heard of Operation Desert Storm, the massive, U.S.-led, UN-sanctioned 1991 invasion of Iraq, which President George Bush (CFR) declared was necessary to liberate Kuwait, stop the "naked aggression" of Saddam Hussein, and promote "a new world order." But how many people have heard of, or remember, Operations Desert Spring, Laser Strike, Northern Watch, Southern Watch, Eagle Eye, Joint Falcon, Joint Forge, Deliberate Forge, or Determined Forge? Probably not very many. And yet these are all ongoing multinational military operations — in Iraq, Kosovo, Bosnia-Herzegovina — involving large numbers of U.S. military personnel and assets. And how many people have

heard of, or remember, Operations Shining Hope, Noble Anvil, Desert Fox, Desert Thunder, Bevel Edge, Noble Obelisk, Joint Endeavor, Deliberate Guard, Determined Guard, Decisive Enhancement, Decisive Edge, Desert Strike, Desert Focus, or any of the dozens of other UN, NATO, and other multilateral deployments of U.S. armed forces throughout the world over the past decade?

The Secret Network of Power

“We are at present working discreetly with all our might to wrest this mysterious force called sovereignty out of the clutches of the local nation states of the world.” - Arnold Toynbee, Royal Institute of International Affairs, 1931

“We shall have world government, whether or not we like it. The question is only whether world government will be achieved by consent or by conquest.” — James P. Warburg (CFR), testimony before the Senate Foreign Relations Subcommittee, 1950

“I know of the operations of this network [the international Round Table groups, including the Council on Foreign Relations] because I have studied it for twenty years and was permitted for two years, in the early 1960’s, to examine its papers and secret records.” - Professor Carroll Quigley of Georgetown University, “mentor” to Bill Clinton, 1966

The strands that are multiplying about the American people and gradually being forged into steel manacles are the work not of a single night but of decades. The network of individuals and organizations leading this effort for global conquest has worked patiently and assiduously to build a worldwide “movement” which, on the surface, appears to be a completely absurd mixture of incongruous and opposing parts. It is a fusion of radical socialists, feminists, pacifists, environmentalists, and communists together with international bankers, industrialists, and corporate CEOs, including some of the world’s wealthiest capitalists. Yet the disparate members of this odd alliance chant the one-world mantra in unison: “Global problems require global solutions.” And global solutions, they assure us, can only be provided by a world government — one with ever-increasing powers.

UN: Creature of the Council of Foreign Relations (CFR)

The United Nations, we learn as schoolchildren, represents mankind’s highest aspirations and ideals. According to textbook lore and steady propaganda in the major media, the UN is the world’s “last best hope for peace.” Following World War II, we are told, the heroic and visionary UN founders came together to save humanity from the certain annihilation that would result if a nuclear war were allowed to occur. That is a myth, a lie. The UN, as we will show, is completely a creature of the Council on Foreign Relations (CFR), and was created for purposes entirely different from the noble ones usually cited. It was created to accumulate and usurp power so that eventually it could become a vehicle for imposing totalitarian control over our entire planet. The plans for the United Nations

were drafted in 1943 by the Informal Agenda Group (IAG), a secret steering committee set up by FDR's Secretary of State Cordell Hull. At the UN's founding San Francisco Conference, 43 of the U.S. delegates — virtually our entire contingent — were, or would later become, members of the CFR, including also Nelson Rockefeller. Of course, the top man at that conference, serving as acting Secretary-General, was Soviet agent Alger Hiss, also a CFR member. Hiss not only ran the UN show at San Francisco and appointed many of the delegates and UN officers, but he also played a key role in drafting the UN Charter.

Secret Shadow Government

From FDR's administration to the present, the CFR's pernicious influence in American society and government has grown dramatically. The CFR has become in effect the secret shadow government of the United States; its members have dominated every administration since World War II. Presidents Eisenhower, Nixon, Ford, Carter, Bush, and Clinton were members, as were hundreds of their appointments. No other organization even comes close to exercising this kind of political power in the United States. Author/journalist Richard Rovere (CFR) has described the Council as "a sort of Presidium for that part of the Establishment that guides our destiny as a nation." Historian Arthur M. Schlesinger Jr. (CFR) has termed it a "front organization [for] the heart of the American Establishment."⁹ Newsweek has referred to the Pratt House* one-world coterie as "the foreign policy establishment of the U.S."

In his 1979 memoir *With No Apologies*, Senator Barry Goldwater noted that despite the heated rhetoric and change in party label from one administration to the next, the same internationalist policies continue unabated:

"When a new President comes on board, there is a great turnover in personnel but no change in policy. Example: During the Nixon years Henry Kissinger, CFR member and Nelson Rockefeller's protege, was in charge of foreign policy. When Jimmy Carter was elected, Kissinger was replaced by Zbigniew Brzezinski, CFR member and David Rockefeller's protege."

On October 30, 1993, the *Washington Post* printed one of the most candid (and rare) admissions against interest by the Establishment: a column by *Post* writer Richard Harwood, entitled "Ruling Class Journalists." Mr. Harwood openly conceded that the CFR's "members are the nearest thing we have to a ruling establishment in the United States." To illustrate his claim, Harwood pointed to the Clinton administration. "The president is a member," Harwood noted. "So is his secretary of state, the deputy secretary of state, all five of the undersecretaries...." And on and on he went, through a litany of the CFR membership roster in the Clinton regime. How can it be that an organization that has gained such incredible influence and power, that has virtually hijacked the American government, is so little known to the American public? The *Post*'s Mr. Harwood provides the answer:

"The editorial page editor, deputy editorial page editor, executive editor, managing edi-

tor, foreign editor, national affairs editor, business and financial editor and various writers as well as Katharine Graham, the paper's principal owner, represent The Washington Post in the council's membership."

Ditto for the other media giants: the New York Times, Wall Street Journal, Los Angeles Times, Newsweek, Time, US News & World Report, NBC, CBS, ABC, et al. CFR members Tom Brokaw, Dan Rather, Ted Koppel, Diane Sawyer, James Lehrer, Bernard Kalb, Irving R. Levine, David Brinkley, Barbara Walters, and Morton Kondracke, along with hundreds of other influential "journalists" and media executives, serve as propagandists for the Pratt House thought cartel.* In the words of Harlan Cleveland, they make sure the CFR's subversive operations stay "mostly below the surface of public attention."

Bilderberg Group: Power-mad Elitists

David Rockefeller gratefully acknowledged this indispensable "cloaking" service provided by the CFR/TC-dominated media at a meeting of the secretive Bilderberg Group (BG). Gathering at Sand, Germany in June 1991, this coterie of elite one-worlders had important global intrigues to plan and coordinate for the final decade of the millennium. Many top media Insiders were in attendance, but as in years past, they would reveal not a word of what they had heard at the confab to their readers or viewers. Despite the Bilderbergers' elaborate security precautions, however, the word did leak out in two French publications, Minute and Lectures Francaises. What did David Rockefeller, then the chairman emeritus of the American Establishment, have to say to the assembled aristocracy of the U.S. media? An amazing, stunning mouthful, that's what. We'll let you judge for yourself. This is part of Rockefeller's greeting to his Bilderberg boon companions:

"We are grateful to the Washington Post, the New York Times, Time magazine, and other great publications whose directors have attended our meetings and respected their promises of discretion for almost forty years. It would have been impossible for us to develop our plan for the world if we had been subject to the bright lights of publicity during these years. But the world is now more sophisticated and prepared to march towards a world government which will never again know war but only peace and prosperity for the whole of humanity. The supranational sovereignty of an intellectual elite and world bankers is surely preferable to the national autodetermination practiced in the past centuries. It is also our duty to inform the press of our convictions as to the historic future of the century."

Incredible, no? Well, what else would you expect from a cabal of power-mad elitists who consider the whole world to be their own private oyster? These "enlightened ones," these illuminati, have been busily redesigning, reshaping, and "transforming" the world according to their own desires throughout the past century. They intend to be the planetary overlords in the new world order. As Mr. Rockefeller said, it would have been "impossible" for them to have come so far with their super-subversive plot except that their coconspirators in the media kept "the bright lights of publicity" off their dark schemes. The Post's Richard Harwood noted concerning the CFR media oligarchy: "They

do not merely analyze and interpret foreign policy for the United States; they help make it." He might also have said that they smother, suppress, censor, quash, and kill much of the real news (and grossly distort the rest) in order to help make "policy."

CFR Historian Speaks Out

One of the most informative and penetrating revelations concerning the CFR power network came in 1966 with publication of *Tragedy and Hope: A History of the World in Our Time* by Professor Carroll Quigley of Georgetown University. As already pointed out in one of the entrance quotes to this chapter, Quigley was allowed for two years to examine the papers of the CFR. And what are the "aims" of this network? According to Dr. Quigley:

"[N]othing less than to create a world system of financial control in private hands able to dominate the political system of each country and the economy of the world as a whole."

The network to which Quigley referred had provided the "brain trust" and the financial impetus behind the drive for the League of Nations, the effort Mr. Cleveland referred to as the "First Try" at world order. Leading that drive for the network was Col. Edward Mandell House (the reader should remember him even from the pre World War 1 era), the key advisor and "alter ego" of President Woodrow Wilson. When the League of Nations was thwarted by the U.S. Senate, Col. House and his colleagues determined to continue their struggle by other means. House was part of a cabal called "The Inquiry," a group of 100 "forwardlooking" social engineers who created the Versailles Peace Treaty at the close of World War I.

This group formed the American nucleus of what was to become the Council on Foreign Relations. The Inquiry's British counterparts created a companion organization - the Royal Institute of International Affairs (RIIA). These groups were the product of an earlier secret society formed in February 1891 by Cecil Rhodes, the legendary "diamond king" and "colossus" of Africa, with British journalist William Stead. Rhodes, although famous as "the richest man in the world," was an ardent disciple of socialist Professor John Ruskin, under whom he had studied at Oxford. Dr. Quigley explains: "In this secret society Rhodes was to be leader; Stead, Brett (Lord Esher), and Milner were to form an executive committee; Arthur (Lord) Balfour, (Sir) Harry Johnston, Lord Rothschild, Albert (Lord) Grey, and others were listed as potential members of a 'Circle of Initiates'; while there was to be an outer circle known as the 'Association of Helpers' (later organized by Milner as the Round Table organization).... Thus the central part of the secret society was established by March 1891."

The plan developed by Rhodes and his small circle of co-conspirators was one in which "a world system of financial control in private hands" would be used to bring about world government. "This system," notes Quigley, "was to be controlled in a feudalist fashion by the central banks of the world acting in concert, by secret agreements arrived at in frequent private meetings and conferences."27 Professor Quigley explained further:

“The apex of the system was the Bank for International Settlements in Basle, Switzerland, a private bank owned and controlled by the worlds’ central banks which were themselves private corporations. Each central bank, in the hands of men like Montagu Norman of the Bank of England, Benjamin Strong of the New York Federal Reserve Bank, Charles Rist of the Bank of France, and Hjalmar Schacht of the Reichsbank (during the Weimar Republic, not under Hitler. But he was an informant to British intelligence), sought to dominate its government by its ability to control Treasury loans, to manipulate foreign exchanges, to influence the level of economic activity in the country, and to influence cooperative politicians by subsequent economic rewards in the business world.”

In January 1924, Reginald McKenna, who was then chairman of the board of the Midland Bank (and had been Britain’s Chancellor of the Exchequer in 1915-16), confirmed that the British system was completely dominated by the conspiratorial monied aristocracy. “I am afraid the ordinary citizen will not like to be told that the banks can, and do, create money,” said McKenna. “And they who control the credit of the nation direct the policy of Governments and hold in the hollow of their hands the destiny of the people.” On November 11, 1927, the Wall Street Journal called Montagu Norman, governor of the Bank of England, “the currency dictator of Europe.” Norman, a strange, furtive intriguer given to wearing disguises, using assumed names, and incessantly flitting about the world on mysterious missions, confirmed the Journal’s assertion before the Macmillan Committee on March 26, 1930.

A Higher Power

But as Professor Quigley points out, Norman answered to powers who stood in the shadows. “It must not be felt that these heads of the world’s chief central banks were themselves substantive powers in world finance,” writes Quigley. “They were not. Rather, they were the technicians and agents of the dominant investment bankers of their own countries, who had raised them up and were perfectly capable of throwing them down.” Those bankers to whom Quigley refers were members of the Rhodes-Milner network. Their immense power and influence were exercised through the Royal Institute of International Affairs, the CFR, and their many other levers of control in the government, the major political parties, academe, business, and the media. As Rhodes biographer Sarah Millin put it: “The government of the world was Rhodes’ simple desire.” The Rhodes Scholarships, like the Round Table groups, were integral to this global scheme. Part of Rhodes’ plan was to bring bright, ambitious young men to Oxford University for indoctrination and recruitment into his grand conspiracy. Co-conspirator William Stead said that Rhodes’ own words were that after 30 years there would be “between two and three thousand men [mathematically selected] in the prime of life scattered all over the world, each one of whom will have had impressed upon his mind in the most susceptible period of his life the dream of the Founder [Rhodes].” What were the qualities looked for in these specially selected “scholars”? According to Rhodes himself: “smugness, brutality, unctuous rectitude, and tact.” Which pluperfectly described the ruthless Cecil Rhodes. And just as aptly fit his most famous Rhodes Scholar and one-world acolyte: Bill Clinton.

Over the years, Round Table-style groups parallel to the CFR have been established in France, Germany, Italy, Belgium, Norway, Sweden, India, Canada, Japan and dozens of other countries. Rhodes' disciples have thus built a global network of unprecedented power, capable of influencing, manipulating, sabotaging, and controlling political and economic events on a scale previously unimaginable. "When the influence which the [Royal] Institute wields is combined with that controlled by the Milner Group in other fields — in education, in administration, in newspapers and periodicals — a really terrifying picture begins to emerge," wrote Quigley in *The Anglo-American Establishment*, which was published posthumously in 1981. He explained:

"The picture is terrifying because such power, whatever the goals at which it may be directed, is too much to be entrusted safely to any group.... No country that values its safety should allow what the Milner Group accomplished in Britain — that is, that a small number of men should be able to wield such power in administration and politics, should be given almost complete control over the publication of the documents relating to their actions, should be able to exercise such influence over the avenues of information that create public opinion, and should be able to monopolize so completely the writing and the teaching of the history of their own period."

"Capitalists" and the Communist Dimension

[T]he American Communists worked energetically and tirelessly to lay the foundations for the United Nations which we were sure would come into existence. - Earl Browder, General Secretary of the Communist Party USA

This task is the task of the world proletarian revolution, the task of the creation of the world Soviet republic. - V.I. Lenin, 1920 Congress of the Communist International

The ultimate object of the parties of the Socialist International is nothing less than world government. As a first step towards it, they seek to strengthen the United Nations.... - Declaration of the Socialist International 1962 Conference, Oslo, Norway

It is also beyond dispute that the leaders of the world Communist conspiracy were solidly behind the formation of the UN and have supported every effort to enlarge, strengthen, and empower it over the past half century. This is plainly evident from the official speeches, writings, and actions of top Soviet leaders and Communist leaders worldwide, as well as from official documents of the Communist Party of the Soviet Union (CPSU). We have also very extensive testimony to this effect from numerous top Soviet defectors and former American Communist officials. That the Communists would support an institution for world government is no mystery; the essence and substance of the whole Communist program has been the pursuit of that very object. As long ago as 1915, before the Bolshevik Revolution, Vladimir Lenin himself proposed a "United States of the World."

Soviet dictator and mass murderer Joseph Stalin, as far back as 1922, stated: "Let us

hope that by forming our confederate republic we shall be creating a reliable bulwark against international capitalism and that the new confederate state will another step towards the amalgamation of the toilers of the hole world into a single World Socialist Soviet Republic." The leader of the American Communist Party declared:

"It can be said, without exaggeration, that ever closer relations between our nation and the Soviet Union are an unconditional requirement for the United Nations as a world coalition.... The United Nations is the instrument for victory. Victory is required for the survival of our nation. The Soviet Union is an essential part of the United Nations. Mutual confidence between our country and the Soviet Union and joint work in the leadership of the United Nations are absolutely necessary."

Clearly, Communist leaders have always advocated, supported, and promoted the goal of world government generally, and the United Nations particularly, in word and deed. Dr. Bella Dodd, a former top CPUSA official, told of her role in the Communist campaign for the UN: "When the Yalta conference had ended, the Communists prepared to support the United Nations Charter which was to be adopted at the San Francisco conference to be held in May and June, 1945. For this I organized a corps of speakers and we took to the street corners and held openair meetings in the millinery and clothing sections of New York where thousands of people congregate at the lunch hour. We spoke of the need for world unity and in support of the Yalta decisions."¹⁵ Shortly after the founding of the UN, in March of 1946, Stalin declared: "I attribute great importance to U.N.O. [United Nations Organization, as it was then commonly called] since it is a serious instrument for preservation of peace and international security."

On one level, Stalin's expressed desire for "peace" and "security" is an obviously disingenuous propaganda ploy devoid of any meaning, in the sense that most people ascribe to those words. However, in the Communist sense, where "peace" and "security" are defined as an absence of resistance to Communism, Stalin's endorsement of the UN is perfectly understandable. He knew that the UN's very nature and structure would contribute to Communist advantage, since his agents had helped design it. And he knew that the UN was permeated with Communist agents who would assure that it remained a Communist instrument.

Communists Among the Founders

Of course, the Communists were not only working outside the UN to stir up support for the new global organization, they were also running things on the inside — in concert with their like-minded, one-world CFR cohorts. Keep in mind that it was Soviet agent Alger Hiss (CFR), acting director of the State Department's Office of Special Political Affairs, who served as executive secretary of the critically important 1944 Dumbarton Oaks Conference, where the UN Charter was drafted. In that "noble" endeavor, Stalin's secret agent Hiss and Stalin's open agent V. M. Molotov were the two prime players. The Communists couldn't lose: "our guy" and "their guy" were both "Stalin's guys," two hands on the same hairy body.

But it was much worse than that; Hiss was far from the only Communist agent in (not under) the UN bed. The July 1944 Bretton Woods Conference was as important for the about-to-beborn UN as was the Dumbarton Oaks Conference. Bretton Woods established the post-World War II global economic policies and architecture, including the International Monetary Fund (IMF) and World Bank group of institutions. Bretton Woods was planned and initiated by the Economic and Finance Group of the Council on Foreign Relations. The leader of the conference and the head of the U.S. delegation was Assistant Secretary of the Treasury Harry Dexter White (the guy having a hand in getting Japan towards attacking Pearl Harbor), a secret member of a Soviet espionage ring.

In his important book on the UN, *The Fearful Master*, author G. Edward Griffin wrote:

“In 1950 the State Department issued a document entitled *Postwar Foreign Policy Preparation, 1939-45*.... This and similar official records reveal that the following men were key government figures in UN planning within the U.S. State Department and Treasury Department: Alger Hiss, Harry Dexter White, Virginius Frank Coe, Dean Acheson, Noel Field, Lawrence Duggan, Henry Julian Wadleigh, John Carter Vincent, David Weintraub, Nathan Gregory Silvermaster, Harold Glasser, Victor Perlo, Irving Kaplan, Solomon Adler, Abraham George Silverman, William L. Ullman and William H. Taylor. With the single exception of Dean Acheson, all of these men have since been identified in sworn testimony as secret Communist agentsj’

UN Charter: A Marxist-Leninist Blueprint

With the pedigrees of these designers in mind, it should come as no surprise that the great UN Charter, so reverentially extolled by all internationalists, is a purely Marxist-Leninist blueprint. But you needn't take our word for it; that's the assessment of former top Communist Party member Joseph Z. Kornfeder. In his sworn testimony before Congress in 1955, 10 years after the founding of the UN, Mr. Kornfeder stated:

“I need not be a member of the United Nations Secretariat to know that the UN “blueprint“ is a Communist one. I was at the Moscow headquarters of the world Communist party for nearly three years and was acquainted with most of the top leaders.... I went to their colleges; I learned their pattern of operations, and if I see that pattern in effect anywhere, I can recognize it.... From the point of view of its master designers meeting at Dumbarton Oaks and Bretton Woods, and which included such masterful agents as Alger Hiss, Harry Dexter White, Lauchlin Currie, and others, the UN was, and is, not a failure. They and the Kremlin masterminds behind them never intended the UN as a peace-keeping organization. What they had in mind was a fancy and colossal Trojan horse.... Its [the UN's] internal setup, Communist designed, is a pattern for sociological conquest; a pattern aimed to serve the purpose of Communist penetration of the West. It is ingenious and deceptive.“

Kornfeder's evaluation of the UN is backed up by no less an authority than former UN Secretary-General U. Thant. Mr. Thant was a Marxist, winner of the Soviet Union's Lenin

Peace Prize. "Lenin was a man with a mind of great clarity and incisiveness," Thant said, "and his ideas have had a profound influence on the course of contemporary history." The Burmese Marxist continued: "[Lenin's] ideals of peace and peaceful coexistence among states have won widespread international acceptance and they are in line with the aims of the U.N. Charter." There you have it, and from an unimpeachable source: The aims of the UN Charter are "in line" with the "ideals of peace" of Lenin, the Communist dictator and butcher.

Serving Red Imperialism

The Kremlin's agents wasted no time in using the newly created UN machinery to advance global Communist imperialism. Innumerable examples have been documented of UN agencies providing concrete, material aid to Communist regimes and revolutionary efforts, and, conversely, opposing, thwarting, and destroying non-Communist and anti-Communist governments and movements.

A condensed survey of the United Nations Relief and Rehabilitation Administration (UNRRA), which was established by the CFR Insiders in our government even before the founding of the UN, provides a tragic look at what was to follow. Under the direction of Herbert H. Lehman (CFR), the UNRRA staff was turned into an international cabal of Communists from various countries who applied the billions of dollars of UNRRA's "humanitarian aid" (taken from U.S. taxpayers) to Communist revolutionary purposes. The U.S. Ambassador to Poland, Arthur Bliss Lane, told what he had witnessed of UNRRA's pro-Communist actions at the end of World War II. "Over my personal protest," said Ambassador Lane, "Lehman had appointed as director of the first UNRRA mission to Poland the Soviet member of the UNRRA council, Mr. Menshikov, whose first duty would be ... distribution of UNRRA supplies." As a result, supplies could be obtained "only by those persons holding a specified type of ration card issued solely to government employees or to members of the Workers and Socialist parties." Which greatly assisted the Red takeover of Poland.

"With a total disregard of our national interests," wrote author and investigative reporter Eugene W. Castle, "UNRRA money was unreservedly given to the Communist-ruled nations behind the Iron Curtain. It fed discontented peoples and strengthened the Red grip on their governments."

In China, millions of dollars in UNRRA funds and supplies were going to Communist Madame Sun Yat-sen and Mao Tse-tung for their ultimate triumph over General Chiang Kai-shek. This same pattern would appear again and again over the following decades through such UN institutions as UNICEF, UNESCO, WHO, UNHCR, FAO, UNFPA, IMF, the World Bank, etc.

Red Trojan Horse

Millions of lives could have been saved and untold misery, murder, terror, and destruction averted, if U.S. officials had been forced by an informed American public to heed the

warnings of credible witnesses and an incredible trail of evidence. The tragic history that has unfolded since the testimonies of Dr. Bella Dodd, Col. Bukar, Mr. Kornfeder, and others has more than vindicated their most frightening alarms. The UN has indeed proven to be a gigantic and deadly Trojan horse. The following are but a few of the many advantages that the Communists expected to realize from the creation of the UN:

- Economic assistance through the vast array of UN agencies.
- Enormous potential for expansion of espionage, subversion, and terrorism through the diplomatic immunity offered UN officials.
- Use of the UN podium for Communist propaganda purposes.
- Use of UN diplomatic and propaganda machinery to attack and undermine anti-Communist countries and to support pro-Communist regimes and organizations.
- Transfer of tremendous sums of money from the American producers to corrupt, collectivist projects and potentates throughout the world.
- Steady erosion of U.S. sovereignty through a myriad of UN treaties and agreements.
- Depletion and weakening of U.S. military resources in UN operations worldwide.
- Gradual subordination of U.S. military command to international authority (UN, NATO, SEATO, CENTO, OAS, etc.).

Who Is Really in Charge?

As our preceding chapters demonstrate, there was another force at work on this grandiose and malevolent project as well — represented by the “one-world-global-government ideologists” described by Admiral Ward. Many of these individuals obviously were not Communists; in fact they were arch-capitalists, titans of Wall Street, with names like Rockefeller, Morgan, Carnegie, Lamont, Warburg, and Schiff. And yet, they did indeed work hand in hand with the masters of the Kremlin to establish a system that they intended would supplant our own constitutional system of government and grow into a global leviathan state. And their successors have continued this subversive cooperation with both overt Communist leaders (as in China) and “ex-Communist” leaders (as in Russia), who now claim to be “democratic reformers.” Professor Carroll Quigley, the Insider historian we met in the previous chapter, conceded that anti-Communists who had pointed to this strange and diabolic Communist-capitalist symbiosis were not hallucinating:

“There does exist, and has existed for a generation, an international Anglophile network which operates, to some extent, in the way the radical Right believes the Communists act. In fact, this network, which we may identify as the Round Table Groups, has no aversion to cooperating with the Communists, or any other groups, and frequently does so.”

“It was this group of people,” said Quigley, “whose wealth and influence ... provided much of the framework of influence which the Communist sympathizers and fellow travelers took over in the United States in the 1930s. It must be recognized that the power that these energetic Left-wingers exercised was never their own power or Communist power

but was ultimately the power of the international financial coterie....“

Congressional Investigations

The treasonous workings of this elite were partially revealed, the professor noted, by congressional investigators in the 1950s who, “following backward to their source the threads which led from admitted Communists like Whittaker Chambers, through Alger Hiss and the Carnegie Endowment to Thomas Lamont and the Morgan Bank, fell into the whole complicated network of the interlocking tax-exempt foundations.” “It soon became clear,” Quigley observed, “that people of immense wealth would be unhappy if the investigation went too far and that the ‘most respected’ newspapers in the country, closely allied with these men of wealth, would not get excited enough about any revelations to make the publicity worth while....“ Here the professor sins by gross understatement and distortion. These “people of immense wealth“ and their “closely allied“ media did indeed get “excited,“ so much so that they went to incredible lengths to sabotage and stop the investigation, smear its principal players, and smother the facts it had uncovered.

Thus, it is not surprising that the Reece Committee, established by Congress in 1953 to investigate the tax-exempt foundations, fell far short of fully exposing the mounting peril. Nevertheless, the committee’s report did sound a serious alarm, warning that the major foundations (Carnegie, Ford, Rockefeller) and interlocking organizations like the CFR “have exercised a strong effect upon our foreign policy and upon public education in things international.“ The committee stated: “The net result of these combined efforts has been to promote ‘internationalism’ in a particular sense — a form directed toward ‘world government’ and derogation of American ‘nationalism.’“

The Reece Committee also charged that these foundations (which were invariably directed by CFR members) “have actively supported attacks upon our social and government system and financed the promotion of socialism and collectivist ideas.“ It declared, moreover, that the CFR had become “in essence an agency of the United States Government“ and that its “productions [books, periodicals, study guides, reports, etc.] are not objective but are directed overwhelmingly at promoting the glob-alist concept.“ A far more important revelation disclosed by the committee’s chief investigator never made it into congressional testimony or the committee’s published report. Investigator Norman Dodd recounted that during his visit to the Ford Foundation, the institution’s president, Rowan Gaither (CFR), unexpectedly admitted that he and his colleagues were operating under directives “to the effect that we should make every effort to so alter life in the United States as to make possible a comfortable merger with the Soviet Union.“

Common Ground: Power

At this point a great many readers undoubtedly are scratching their heads in bewilderment. “I don’t get it,“ they say. “Why would wealthy capitalists conspire with Communists and promote Communism? Don’t they stand to lose the most if Communism were to triumph? If you are among the bewildered head scratchers, don’t feel bad. The confusion is understandable; the idea of wealthy capitalists scheming with bloody Bolsheviks

does challenge some longaccepted and basic assumptions and definitions most of us hold concerning socio-economic-political relationships and the way the world works. We agree that all capitalists should oppose collectivism in all its forms (i.e., communism, socialism, fascism), but it is a fact that many do not. Many “capitalists,” while paying lip service to “free enterprise” and “market economics,” actually abhor the competition of the marketplace. They would much rather use government force (laws and regulations) to beat their competition than try to produce better widgets more efficiently and constantly have to come up with improvements, innovations, and better management, marketing, and production.

They realize that communism, socialism, and fascism are never the “share the wealth” schemes they pretend to be; they are inevitably and invariably “control the wealth” schemes, in which an elite oligarchy employs political power (backed up by military and police force) to control all the wealth. They realize that step one in any “share the wealth” program is to “collect the wealth” (or “collectivization,” as the Communists call it). And they realize that once “step one” is completed no collectivist regime ever proceeds to “step two”: share the wealth. The collectivized wealth remains in the hands of the ruling elite and their managerial class underlings (the privileged nomenklatura in the Soviet Union) while the toiling masses remain mired in grinding poverty, unable to escape by any amount of honest effort.

15.3 Stealth Strategies for Building the Superstate

Orchestrating the Globalist Concert

More and more, NGOs [Non-Governmental Organizations] are helping to set public policy agendas.... It is this movement ... that has such significance for governance.... What is generally proposed is the initial setting up of an assembly of parliamentarians ... and the subsequent establishment of a world assembly through direct election by the people. - Commission on Global Governance, *Our Global Neighborhood*, 1995

National governments are not simply losing autonomy in a globalizing economy. They are sharing powers - including political, social, and security roles at the core of sovereignty - with businesses, with international organizations, and with a multitude of citizen groups, known as nongovernmental organizations (NGOs).... Increasingly, NGOs are able to push around even the largest governments. - Jessica T. Mathews (CFR, TC), *Foreign Affairs*, January/February, 1997

Especially significant, of course, is the development of an NGO network worldwide and its increasing role in the development of a culture of democracy throughout the world.... Civil society, in order to be an effective partner with government and business in providing global governance in the 21st century, must develop a clear vision of basic values and a better future. - Steven C. Rockefeller, Chairman of the Earth Charter

Drafting Committee and Chairman of the Rockefeller Brothers Fund, addressing the UN Millennium Forum, May 2000

During World War II, a Soviet spy network in Nazi-occupied Europe kept Stalin supplied with first-rate intelligence on German military plans and political developments. It came to be known as the Red Orchestra (Rote Kapelle). The network sent its information to its Moscow superiors via secret radio transmitters that operated only for short bursts and moved constantly to avoid detection by the Gestapo. Nazi intelligence referred to the transmitters as “music boxes” and assigned the names of musical instruments to the distinctive, but elusive, operators. The elaborate Red Orchestra espionage operation was set up several years before the start of the war and involved agents who were military personnel, Nazi officials, clerks, janitors, and housewives, as well as “businessmen” in a network of corporations (both real and dummy companies) throughout Europe. A similar Red Orchestra was established in the United States, and, as noted in previous chapters, its agents succeeded in penetrating to the highest levels of the federal government. A few top agents were exposed in high-profile cases — Alger Hiss, Harry Dexter White, Victor Perlo, the Rosenbergs — but, according to both Communist defectors and U.S. intelligence officials, dozens of Red cells involving hundreds of high-level Soviet agents were never exposed.

Many of these agents were not engaged merely in the lower level aspects of espionage such as stealing state secrets and reporting on military plans and weapons development. They were performing a more critical role for the Kremlin as “agents of influence”: misinforming and misdirecting America’s leaders and actually influencing and formulating U.S. policies concerning the most sensitive areas of our national security. The Art of War by Sun Tzu has long served as a primary textbook for Soviet military and intelligence strategists. Written over 2,000 years ago, it is one of the most famous studies of strategy ever written. The Communists have especially focused on Sun Tzu’s lessons on strategic deception and the supreme importance of espionage and intelligence. They are completely familiar with what Sun Tzu described as the “five sorts of spies”: Native spies; internal spies; double spies; doomed spies; and surviving spies. “Native spies are those from the enemy country’s people whom we employ,” explained Sun Tzu. “Internal spies are enemy officials whom we employ. Double spies are enemy spies whom we employ. Doomed spies are those of our own spies who are deliberately given false information and told to report it to the enemy. Surviving spies are those who return from the enemy camp to report information.” “When all these five types of spies are at work and their operations are clandestine, it is called the ‘divine manipulation of threads’ and is the treasure of a sovereign,” continued China’s master strategist.

The Net That Covers the World

In 1955, British intelligence expert and author E. H. Cookridge aptly described the global Soviet apparatus as “the net that covers the world,” in his book by that title. As he pointed out, the Communists had at that time established a worldwide militant organization of tens of millions of members, operating aggressively in virtually every country toward a

centrally directed common objective — an accomplishment without parallel at any time in history. Besides controlling these millions of disciplined members, who could be ordered into coordinated global action on short notice, the Communist leaders had developed an intelligence apparatus of unparalleled, massive proportions. Cookridge noted:

“The number of men and women employed by the Soviet government on intelligence work has been estimated at about 250,000 — this quite apart from the internal political police. The number is at least ten times larger than that of agents used by all Western nations combined. But even this is only part of the Communist secret army.... A suggestion that there are 750,000 men and women in the world — semiprofessional agents, informants, fifth-columnists, fellow-travelers, and sympathizers — whom the Soviet secret service succeeded in ensnaring in some way into the spy net — is probably an underestimate. It is a formidable army, combined with a quarter of a million of full-time agents and officials, and led by an elite of 10,000 to 12,000 trained master spies.”

“No other nation,” Cookridge noted, “devotes anything approaching the proportion of its manpower and resources to secret service work as do the Soviet Union and the satellite countries.” Likewise, no other nation comes close to matching the size of the internal secret police forces required by the Communists to maintain their Total State. Through innumerable movies, documentaries, novels, articles, and history books, Hitler’s dreaded Gestapo has been cast as the epitome of evil incarnate in the long drama of human existence. It has become synonymous with totalitarian brutality and malevolence, and rightly so. Yet most Americans have never even heard of Stalin’s even more murderous and evil NKVD. Historian Martin Malia points out that German National Socialism, for all of its cruelty and viciousness, was “distinctly less murderous than Communism.”¹⁰ A major reason for this can be seen in the relative strength of the Nazi and Soviet secret police organs at the time of the Hitler/Stalin Pact: In 1939, Hitler’s Gestapo employed a total of 7,500 people; Stalin’s NKVD employed 366,000!

During the 1940s, '50s, and '60s, the U.S. Congress and many state legislatures held extensive investigative hearings into Communist penetration and subversion in the United States. These official inquiries produced a large number of important reports that included testimony from top military and intelligence authorities, as well as Communist defectors. Reports by the Committee on Un-American Activities of the House of Representatives, such as “The Communist Infiltration of the Motion Picture Industry” (1947), “Communist Political Subversion” (1956), “Soviet Total War” (1956), and “Communist Target — Youth” (1960) provided explosive, detailed information about the Soviet attack on America. As did reports of the Senate Internal Security Subcommittee (SISS), such as “The Institute of Pacific Relations” (1951), “Expose of Soviet Espionage” (1960), and “The Soviet Empire” (1965). The voluminous 1953 SISS report entitled “Interlocking Subversion in Government Departments” labeled the Communist operations in our government “a conspiracy” and concluded:

“Policies and programs laid down by members of this Soviet conspiracy are still in effect within our government and constitute a continuing hazard to our national security.”

The massive scope and insidious nature of the Communist offensive was so far beyond what most Americans imagined that FBI Director J. Edgar Hoover stated in 1956 that “the individual is handicapped by coming face to face with a conspiracy so monstrous he cannot believe it exists.”¹² That handicap, however was largely the work of the CFR-dominated media, which made sure that the American public remained largely unaware of the shocking information uncovered by the congressional investigations. The same media subversives attacked the congressional investigators and characterized proper concern over Communist and socialist advances as “right-wing paranoia.” (sounds just like 2016 where you have right-wing parties on the rise in Europe and every “useful idiot” is just parroting the official anti-conservative narrative, also just like with the US elections, where Trump vs. Clinton resembled Patriotism/Nationalism vs. Globalism/NWO)

Many Tentacles, One Brain

In 1960, the Kremlin hosted the Congress of 81 Communist Parties from around the world. Those parties boasted a collective strength of more than 40 million members. But their real strength then, as now, lay in their ability to get non-Communists to do their work for them. In the U.S., as elsewhere, the Communists created hundreds of front organizations and penetrated virtually all existing organizations and institutions, with the intent of gradually gaining significant influence, if not total control. Labor unions were especially targeted because they offered: 1) huge sources of funds, in the form of members’ dues; 2) major political clout to elect sympathetic politicians and influence legislation and policy; 3) an important conduit of propaganda for class warfare; 4) the ability to paralyze governments and economies through strikes; and 5) the ability to mobilize large numbers of non-Communists (in marches and demonstrations) to give the appearance of popular support for Communist causes.

Similarly, the Communists and their various Marxist-socialist brethren have, during the past century particularly, targeted the colleges and universities — with amazing success. They have gained such influence in academia that from the 1960s onward they have been able to generate mass demonstrations of students, and even violent riots, by exploiting emotional issues such as war, nuclear weapons, the environment, homosexual rights, feminism, civil rights, race, etc. This was precisely the message of Soviet Premier Konstantin Chernenko, when, in his June 1983 address to the Central Committee of the Communist Party of the Soviet Union (CPSU), he made this noteworthy remark:

“The battle of ideas in the international arena is going on without respite. We will continue to wage it vigorously ... our entire system of ideological work should operate as a well-arranged orchestra in which every instrument has a distinctive voice and leads its theme, while harmony is achieved by skillful conducting.”

Despite the supposed “collapse” of Communism, that global orchestra has continued playing, with the same “skillful conducting” continuing from the background.

Pressure From Above and Below

The one-world architects know that they must create the appearance of popular support for their global designs in order to pave the way for national governments to surrender political power to the UN. To accomplish this surrender, they have devised a giant pincer strategy in the form of a huge NGO network (pressure from below) on the one hand, and sympathetic political and corporate leaders (pressure from above) on the other. The NGOs clamor for “world governance,” and their orchestrated clamor is portrayed as the collective voice of the peoples of the world expressing a global consensus. The political and corporate leaders — according to plan - then “respond” to the “will of civil society.”

The use of this pincer strategy to seize power was explained by Communist Party “theoretician” Jan Kozak. In his instructions for “revolutionary parliamentarianism,” written in the early 1950s, Kozak detailed how he and his fellow Communist conspirators overthrew a democratically elected, mainly non-Communist government in Czechoslovakia and turned it into a Communist dictatorship — legally. Kozak explained how his Communist minority in parliament (in coalition with socialists and “liberals”) worked in concert with the street-level activists and grassroots revolutionaries. Utilizing demonstrations, strikes, rallies, petitions, threats, and - sometimes — sabotage, the radicals (like the NGOs today) provided “pressure from below.” Meanwhile Kozak and his coconspirators provided coordinated “pressure from above” to get parliament to institute Communism piecemeal, by centralizing power and taking over more and more functions that had previously been left to local governments and the private sector. It is important to understand that this takeover was accomplished by a small minority. But this minority was highly organized and disciplined. And it was also highly skilled in the art of deception, in creating the false appearance of having overwhelming numbers on their side.

A similar operation is underway today on a global scale. The war is on, but for the most part only one side is fighting. The UN-CFR axis is organizing NGOs, churches, educational institutions, labor unions, business groups, and other organizations into a force that it calls “global civil society.” At the UN’s World Civil Society Conference in Montreal in 1999, UN Secretary-General Kofi Annan explained to the professional NGO activists their new “partnership” with the UN. Annan explained that the NGOs must serve as “strategic partners in policy — in areas where you can persuade your Governments to work through the United Nations. You can tell them that our goals are your goals, and that you want them to give us the means to achieve those goals.” Kofi Annan is not the mastermind of this UN pincer strategy, of course; he is merely a factotum carrying out the program for the Insiders who have posted him as their front man. The magnitude of this global pincer strategy and the incredibly deceptive processes employed in the pursuit of their monstrous goals is mind-boggling.

Why This Orchestration Works!

Why do the CFR elites go through such elaborate charades, creating these multitudes of radical front groups (or co-opting existing ones) and funding them with piles of money? And why all of the orchestrated media support? The CFR elites know, of course, that they wouldn’t get very far if they were honest and straightforward about their intent:

“People of the world: Our global political, economic, and social arrangements are all wrong. However, our elite group of superior thinkers have a plan. All you have to do is relinquish all political and financial power to us so we can fix everything. Trust us.” Wouldn’t work, obviously.

However, what if they employ a different strategy? What if they fund a gaggle of radical groups, with various elements calling for the transfer of power in one area or another to international authorities? What if they also fund another gaggle of even more radical groups to make the first gaggle appear “moderate” and “reasonable”? And suppose they saturate the print and broadcast media with the antics and propaganda of these groups for a sufficient length of time. And suppose that this propaganda clamors for government to address outrageous problems while ignoring any possible danger to freedom in the new “arrangements.” Then the pressure from below will reach the point that the Insiders above can have their political agents in Congress and the White House respond to the “will of the people” with “compromise” legislation. These “compromise” solutions always move the whole political arena further leftward, toward ever bigger, more oppressive government.

In his 1968 book *The Strawberry Statement: Notes of a College Revolutionary*, radical activist/author James Kunen made an interesting admission about this process. Concerning the campus riots then rocking the nation, he wrote:

“In the evening, I went up to the U. to check out a strategy meeting. A kid was giving a report on an SDS [Students for a Democratic Society] convention. He said that... at the convention, men from Business International Round Tables ... tried to buy up a few radicals. These men are the world’s leading industrialists and they convene to decide how our lives are going to go.... They offered to finance our demonstrations in Chicago. We were also offered ESSO (Rockefeller) money. They want us to make a lot of radical commotion so they can look more in the center as they move to the left.”

Another similar revelation was provided by Jerry Kirk, who, as a student, was active in the SDS, the DuBois Club, the Black Panthers, and the Communist Party. In a 1970 interview, Kirk said:

“Young people have no conception of the conspiracy’s strategy of “pressure from above and pressure from below”.... They have no idea that they are playing into the hands of the Establishment they claim to hate.... The radicals think they are fighting the forces of the super-rich, like Rockefeller and Ford, and they don’t realize that it is precisely such forces which are behind their own revolution, financing it, and using it for their own purposes.”

Writing in 1975, retired Admiral Chester Ward, a veteran CFR member who had grown sharply critical of the organization wrote:

“Once the ruling members of CFR have decided that the U.S. Government should adopt a particular policy, the very substantial research facilities of CFR are put to work to develop arguments, intellectual and emotional, to support the new policy, and to

confound and discredit, intellectually and politically, any opposition. The most articulate theoreticians and ideologists prepare related articles, aided by the research, to sell the new policy and to make it appear inevitable and irresistible. By following the evolution of propaganda in the most prestigious scholarly journal in the world, *Foreign Affairs*, anyone can determine years in advance what the future defense and foreign policies of the United States will be."

Millennium Summit Pressure

As the UN Millennium Summit got underway, the pressure from above and below increased. Following the pattern from past Summits, it was a well-honed, multi-level, multi-pronged, multidimensional attack aimed at multiple targets. Prime targets, of course, were the heads of state in attendance; if they could be induced to sign the disarmament treaties, declarations, and resolutions, it would add to the international momentum and legitimacy of the UN disarmament agenda. Among the profusion of programs circulating at the Summit, the Middle Powers Initiative (MPI) is particularly noteworthy. Claiming to represent the non-nuclear "middle-power" countries of the world, it describes itself as "a carefully focused campaign established by a network of international citizens organizations to encourage ... leaders of the nuclear weapons states to break free from their Cold War mindset" and embrace disarmament — as defined by the MPI and the UN. But, as we shall see, MPI's "independence" is all illusion; while posing as a "citizens network," MPI is, in reality, nothing less than a front group for the one-world internationalists.

Independence Sham

MPI's primary spokesperson is New Zealand Prime Minister Helen Clark, whose Labour Party is affiliated with the Socialist International. The eloquent Mrs. Clark championed the MPI disarmament campaign both at the UN Summit and at the Gorbachev Foundation-sponsored "State of the World Forum," which ran concomitantly with the UN affair, a few blocks away at the Hilton Towers. Many UN leaders and heads of state jockeyed back and forth between the UN and the Gorbachev confab, where they shmoozed and "brainstormed" with corporate titans, academics, NGO rabble-rousers, and New Age gurus. As it turns out, Gorbachev's State of the World Forum is also one of the original eight co-sponsors of the MPI, as well as a funder of the group.

And we see the same repetitious pattern emerge in the MPI case: funding for the Initiative comes from the Rockefeller Foundation, Samuel Rubin Foundation, and the W Alton Jones Foundation. MPI's International Steering Committee includes Comrade Peter Weiss, and it included the late Senator Alan Cranston (TC, WFA), a veteran one-worlder. Other "Establishment" activists at the Initiative include General Lee Butler, General Andrew J. Goodpaster, and former Secretary of Defense Robert Strange McNamara (all CFR). The "anti-Establishment" activists at MPI include a host of revolutionary radicals. Among the MPI co-sponsors are the Parliamentarians for Global Action, the Women's International League for Peace and Freedom, the Nuclear Age Peace Foundation, and

the International Peace Bureau. All of these groups have been long connected to the KGB-created-and-controlled World Peace Council (WPC), which, since its founding in 1949 by Communist mass-murderer Joseph Stalin, has served the dual purpose of leading the drive for U.S. disarmament and providing support for terrorist groups and regimes worldwide.

Of course, the MPI does not represent the “middle power” states at all; its whole purpose (and the reason that it has been so bountifully funded and promoted) is to provide orchestrated pressure from below so that the Insiders of the “weapons states” will have the excuse to do what they have wanted to do all along. Our home-grown internationalists realize that by having the disarmament pressure appear to come from an independent citizens network, the motives and agendas of those who must implement the changes will not be seriously challenged. As a journalist covering the UN Millennium Summit, the Gorbachev State of the World Forum, and a number of additional programs that took place in New York City in September 2000, this reporter had a front-row seat to this amazing spectacle. The diabolic “manipulation of the threads” was both fascinating and frightening to behold. It was not the first time that I had observed this phenomena; I had seen it in operation at previous summits. Still, it was evident that, with practice, the Kremlin-Pratt House one-worlders are perfecting their pincer strategy. They have become very adept at managing their rangy NGO rent-a-mob, which, on cue, either chants and demonstrates in the streets, or comes inside the halls of power and negotiates like a genuine “superpower.” At the same time, they have assembled an amazing array of politicians-and-professors-for-hire, who can be counted on to spout the proper globalist slogans, and reporters who reliably retail every line of internationalist propaganda handed to them.

With the orchestra so lavishly funded and skillfully conducted, they are able to give the appearance that their position truly does “represent the will of global civil society.” Politicians who might normally do battle are completely outgunned and overwhelmed; there is no way they can match, by themselves, the intellectual firepower of the assembled think tanks and universities that have been preparing their positions for months — or even years. And when their congressional offices are besieged with an orchestrated campaign of telephone calls, e-mails, faxes, and letters; while CNN, C-Span, and the other networks are all spewing forth the same story — even the stalwart begin to crumble before such an onslaught. That is what has been happening, and what we can expect to see a great deal more of, as the advocates of “global democracy” continue to press their fraudulent and totalitarian agenda.

We hasten to add, however, that this totalitarian agenda can be stopped, and it must. In fact, the plans of this cabal have been disrupted many times through well-organized exposure of the hidden agendas and the phony orchestration. The good news is that these deceptions cannot stand the light of day. The bad news is that credible evidence to support this story will never reach sufficient numbers of Americans through disorganized action. However, the existence of strong organizational leadership opens up real

opportunities (like electing a nationalist US President).

Enviromania

“World Federalists believe that the environmental crisis facing planet earth is a global problem and therefore calls for a “global“ solution — a worldwide United Nations Environmental Agency with the power to make its decisions stick.” - World Association of World Federalists, 1972

“[T]he great enemy is not the Soviet Union but the rapid deterioration of our planet as a supporting structure for civilized life.” - George F. Kennan (CFR), Washington Post column, November 12, 1989

“We’ve got to ride the global warming issue. Even if the theory is wrong, we will be doing the right thing in terms of economic and environmental policy.” - Timothy Wirth (CFR), former U.S. Senator and Under Secretary of State, now head of Ted Turner’s UN Foundation

“In searching for a new enemy to unite us, we came up with the idea that pollution, the threat of global warming, water shortages, famine and the like would fit the bill.... All these dangers are caused by human intervention.... The real enemy, then, is humanity itself.” - The Council of the Club of Rome, 1991

Global warming, ozone depletion, deforestation, species extinction, wildlife habitat destruction, resource exhaustion, overpopulation. Since the 1960s, these and a host of other supposed environmental “crises“ have exploded onto the world scene, mobilizing millions of people in a global crusade to “save the planet.“ The environmental movement has grown into a global green juggernaut involving millions of activists and wielding enormous political, social, and economic power. Contrary to popular misconceptions, this has not been a healthy development for “Mother Earth“ or her human inhabitants. As my colleague William Norman Grigg has rightly noted, “the environmental movement is animated by a desire to regiment human society rather than ‘save the planet.’ The movement’s economic outlook is socialist, its political ambitions are totalitarian, and its religious affinities are unmistakably pagan.“

The Big Green agenda is about power and control, not clean air and saving whales. While the vast majority of pedestrian-level environmentalists may genuinely care about local ecology issues and really believe in the apocalyptic scenarios regarding the so-called “ozone hole“ and the alleged dangers from greenhouse gases, clearly the elites guiding these concerned cadres know such threats are bogus or vastly exaggerated. Certainly, the sci-entific evidence does not support the charges that these alleged “crises“ are so imminent and of such planet-threatening magnitude as to justify totalitarian solutions. In fact, the overwhelming weight of real science and the bulk of honest scientists argue that genuine environmental problems are best solved not by draconian governmental fiat but by market forces and the enforcement of private property rights. Conversely, it is

also true that the worst environmental degradation on the planet has taken place under those Communist and socialist regimes where free markets and property rights have been most ruthlessly suppressed.

Earth Summit Eyewitness

This blatant deception and censorship by the “ruling class journalists” was especially crucial to the “success” of the 1992 UN Conference on Environment and Development (UNCED), the so-called Earth Summit, in Rio de Janeiro. This writer can claim the dubious distinction of being, perhaps, the only “non-greenie” journalist amongst the thousands of reporters and media personalities who converged on this global orgy of environmental extremism. Providentially, I met up with one of the few other “contrarian” souls attending the Summit almost immediately upon exiting my plane onto the sweltering tarmac of the Rio airport. As the long passenger lines from the various airliners converged under the airport’s shade cover for the two-hour Customs process, I had the good fortune to “converge” with Dr. Dixy Lee Ray, who had just deplaned from another aircraft. Dr. Ray, who died in 1993, was one of my heroes: a genuine, eminent scientist who boldly challenged the absurd claims and dangerous proposals of the environmental fanatics and calmly disregarded the vicious, personal attacks that she received in return. As a distinguished professor of zoology, author and commentator, former chairman of the Atomic Energy Commission, former governor of the state of Washington, and recipient of many awards (including the United Nations Peace Prize), one might be forgiven for naively assuming that this woman would be mobbed by reporters seeking her learned opinion on the weighty matters under discussion at the Summit. Hardly! Dr. Ray was virtually ignored, as were other noted scientists and scholars, while the CFR Establishment press drooled over every sacred syllable uttered by the likes of Fidel Castro, Mikhail Gorbachev, Jerry “Governor Moonbeam” Brown, then-Senator Al “I invented the Internet” Gore, Jacques Cousteau, and Maurice Strong.

During the course of the Summit, I had the opportunity to meet with, interview, and compare notes with Dr. Ray several times. I noted that with her background in zoology she should be better prepared than most for the profusion of weird specimens populating the conference. “I’ve never seen a bigger zoo,” the feisty scientist responded, in a comment intended to convey both the absurdity and seriousness of what was transpiring at the UN confab. Although ignored by most of the media (and even pointedly censored and rebuked by some) at Rio, Dr. Ray did successfully expose some of the dangerous UNCED policies and proposals. Through her columns and live talk-radio interviews from the Earth Summit, and by her speeches and explosive book expose following the event, she alerted many Americans to the perils of the global green agenda. In *Environmental Overkill*, she wrote: “First, we must recognize that the environmental movement is not about facts or logic. More and more it is becoming clear that those who support the so-called ‘New World Order’ or World Government under the United Nations have adopted global environmentalism as a basis for the dissolution of independent nations and the international realignment of power.”

The opinions of other prominent scientists were also censored or suppressed by the Insider-run media. Shortly before the convening of the Earth Summit, a group of more than 250 distinguished scientists, including 27 Nobel Laureates, released a statement called the Heidelberg Appeal to Heads of States and Governments. The statement, which was subsequently signed by hundreds of additional scientists worldwide, said, in part: "We are, however, worried at the dawn of the twenty-first century, at the emergence of an irrational ideology which is opposed to scientific and industrial progress and impedes economic and social development." This private ad hoc group appealed to government officials to base ecological proscriptions "on scientific criteria and not on irrational preconceptions," and carried a warning "to the authorities in charge of our planet's destiny against decisions which are supported by pseudoscientific arguments or false and non-relevant data." Forgive the political naivete of these well-meaning scientists. But appealing to venal politicians and the prostitute press on the basis of facts is almost like trying to sell compassion to Mafia thugs or morality to the studio execs of Hollywood Babylon. What was the reaction of the CFR media cartel to the Heidelberg Appeal? Predictable: They ignored it.

The same blackout occurred later when an even larger group of scientists signed a petition opposing the half-baked "science" undergirding the incredibly dangerous UN Kyoto Protocol on global warming. Headed by Dr. Frederick Seitz, former president of the National Academy of Sciences and president emeritus of Rockefeller University, the petition was signed by more than 18,000 scientists, including thousands of meteorologists, climatologists and atmospheric scientists. The scientists' statement said, in part:

"We urge the United States government to reject the global warming agreement that was written in Kyoto, Japan in December 1997, and any other similar proposals. The proposed limits on greenhouse gases would harm the environment, hinder the advance of science and technology, and damage the health and welfare of mankind.... There is no convincing scientific evidence that human release of carbon dioxide, methane, or other greenhouse gases is causing or will, in the foreseeable future, cause catastrophic heating of the Earth's atmosphere and disruption of the Earth's climate. Moreover, there is substantial scientific evidence that increases in atmospheric carbon dioxide produce many beneficial effects upon the natural plant and animal environments of the Earth."

Nonstop Propaganda and Censorship

But the "ruling class journalists" are more than willing to play the scientist numbers game when it suits the one-world agenda. Before, during, and after Rio, the media mavens trumpeted the supposed findings of the UN's Intergovernmental Panel on Climate Change (IPCC).¹² Then-Senator Al Gore, who led the U.S. Senate delegation to Rio, repeatedly cited the "authoritative" IPCC report in his fervent pleas of support for the global warming treaty. At his major press conference at the Rio Hilton, this writer challenged his citation of the IPCC report and his repeated ludicrous claim that 98 percent of the scientific community endorsed the global warming idea as fact. The IPCC report had been fraudulently altered, I pointed out, and many of the scientists who had

worked on the project had publicly disavowed its political agenda disguised as science. This easily verified fact had been reported (albeit in “small print”) in the “mainstream” press. Gore evaded the tough question like a true politician, stating: “I don’t want to open a debate on this, but let me say that I will stay after [the press conference] if you like....”

Thanks to Senator Steve Symms (R-Idaho), who took the microphone following Al Gore, I was able to ask Gore a follow-up question, zeroing in on the well-documented IPCC fraud and pointing out that the Gallup poll of climatologists and meteorologists taken a few months earlier found that only 19 percent, not 98 percent, believed in global warming.¹³ Again Gore evaded, snidely remarking that there are a lot of people who “still argue that NASA staged the moon landing in a movie lot.” I replied that the poll I had just cited was not a survey of wild-eyed cranks, but, on the contrary, represented the vast majority of climatic scientists, including internationally recognized authorities like Hugh Ellsaesser at Lawrence Livermore Laboratory, William Reifsnyder at Yale, Nathaniel Guttman at the National Climatic Data Center, Robert Balling, director of the Arizona Climatology Laboratory, and many others. Senator Gore, who otherwise never missed an opportunity to pontificate on his favorite subject, was suddenly under great pressure to leave.

Although Gore’s evasiveness and slippery exit were frustrating, they were not surprising; it was precisely what one would have expected of him. What was harder to take (though not totally unexpected) was the reaction of the press corps. It was obvious to this correspondent — and should have been, as well, to all others present — that my questions had caught him off balance. I had refuted his claims with fact, backed up with citations and sources. I had even challenged one of his prized documents as fraudulent. He was caught in a lie and was clearly uncomfortable. This is the kind of “blood in the water” situation that normally sets off the shark sensors of journalists and sends them into a “feeding frenzy.” If Senator Symms, a conservative, had been similarly caught, you can be sure the shark pack would have been all over him in a split second. That didn’t happen with Gore, of course, because the horde of “journalists” in attendance had come not as news reporters but as advocates and propagandists. They were there to regurgitate and retail as gospel whatever globaloney the UN and its proponents dished out.

Allow us to provide a few more examples. One of the major scare stories that had received a major buildup prior to Rio, and was a key focal point of the Summit, concerned the alleged massive destruction of the Amazon rain forest. According to the militant enviro-lobby and its media allies, we could expect cataclysmic global environmental consequences unless UN authority over the world’s forests was established. So, again, one might naively think that the man of the hour would be Professor Evaristo Eduardo de Miranda, the world’s leading expert on Amazon deforestation. Dr. Miranda, an ecologist at the University of Sao Paulo, is a former consultant to the UN who heads Brazil’s center for monitoring the Amazon region by satellite. His laboratory was the only source for complete satellite data on the status of Amazon deforestation. But to the U.S. media, Dr. Miranda and his fellow scientists didn’t exist. Small wonder: His data did not

support the apocalyptic paradigm the Insider-managed media were selling. In fact, Dr. Miranda's data showed that the studies sponsored by the United Nations Food and Agriculture Organization, the World Bank, World Wildlife Fund, and the Conservation Foundation were exaggerating the rate of deforestation by 300 to 400 percent and grossly misrepresenting other data. Moreover, much of the destructive deforestation decried by the green extremists was the result of the socialist policies of Brazil's socialist government. The solution, Dr. Miranda pointed out, would not be found in international socialist policies implemented by the UN's bureaucracy. Moreover, he noted, not all deforestation is bad; converting some of the massive jungle for farming, livestock, timber harvest, and other productive uses is a good thing and necessary for food, jobs, and economic progress.

Another expert "pariah" at Rio was Dr. Alexander Bonilla of Costa Rica. A world-famous ecologist and former recipient of the United Nations' top environmental honor, the GLOBAL 500 Award, Dr. Bonilla was a natural to respond to questions about "biodiversity" and "sustainable development," which were major watchwords at the Summit. However, as with Drs. Ray and Miranda, Dr. Bonilla's science did not fit the reigning paradigm. The outspoken scientist urgently warned of the danger posed by the "greening of the Reds." Even more than in the U.S. and Europe, he noted, the Communists and "former" Communists in Latin America had poured into the environmental movement, where they exploited environmental issues to promote Marxist ideology and "class struggle." Dr. Bonilla was angry and disturbed over the usurpation of science by those who would use it for purely political purposes. "We have many poor people with very substandard living conditions," he explained. "They need jobs, decent housing, clothes, food, drinkable water, things that can be provided in a manner compatible with sound economic and ecological practices." But the environmental leftists, he said, want to stop all economic development, in the name of environmental protection. This will consign many people to lives of grinding poverty, sickness, illiteracy, and early death. "The knowledge and technology is available to enable a stewardship of natural resources that allows both prosperity and environmental integrity," Bonilla asserted. As expected, Dr. Bonilla's message was deemed unimportant by the "ruling class journalists"; instead, the American people needed to hear and see and read the blatherings of "experts" like Castro, Gorbachev, and Gore.

The New York-Moscow Green Axis

Environmentalism offers the would-be global dictators unparalleled opportunities to exercise their statist ambitions. Three of the broad primary objectives they expect to realize through their environmental agenda are:

- Abolition of private property, the keystone of every socialist political-economic system (see next chapter).
- Global regimentation, with draconian regulation, in minute detail, of (in the words of one of their favorite eco-programs) "every person on earth."

- World government, with legislative, executive, and judicial powers, including military and police to enforce “world law.”

The internationalist elite of the New York-Moscow Axis have been working in tandem to convince the peoples of the world that, in the words of the World Federalist Association, “Global Problems Require Global Governance.” Through the influence of their symbiotic power networks, this one-world slogan has become universally adopted by Communists, socialists, feminists, environmentalists, human rights activists, disarmament advocates, and others worldwide. As usual, the coordinating brain center is Pratt House, the CFR.

Previously we noted that CFR braintruster Lincoln P. Bloomfield, in his 1962 study for the CFR-dominated Kennedy State Department, *A World Effectively Controlled by the United Nations*, had conceded that it would be difficult to bring about a merger between the U.S. and the Soviet Union. Obviously, Americans would not go for union with a murderous, totalitarian system. That is why the threat of nuclear annihilation, “mutually assured destruction,” had to be built into a credible threat more to be feared than Communism itself. Then, at the critical point, the Soviets would come to their senses and realize that only “collective security,” under which national armaments were transferred to UN authority, offered a viable future. The Kremlin would mellow and democratize. However, Bloomfield saw that this scheme posed a major problem. He wrote: “if the communist dynamic were greatly abated, the West might lose whatever incentive it has for world government.”

Indeed, if the nasty, blood-soaked Reds convincingly demonstrate that they are “mellowing,” then much of the pressure for surrendering our arms evaporates. Obviously another sufficiently grave threat (or threats) must be found to substitute for, or augment the nuclear holocaust fear. As Bloomfield saw it, the drive for world government would require “a crisis, a war, or a brink-of-war situation so grave or commonly menacing that deeply rooted attitudes and practices are sufficiently shaken to open the possibility of a revolution in world political arrangements.” (Note: Are we currently in that scenario in 2016? During the US elections the threat of Civil War is mentioned, Europe has basically a domestically created migrant “crisis”, possible war between Russia and the US over Syria, war between Saudi-Arabia and Yemen, border incidents between India and Pakistan...)

Dr. Bloomfield is not alone in recognizing the utility of war and crisis in the service of totalitarianism. Another Insider strategist who has expounded on this subject is the late Herman Kahn (CFR), physicist/futurist founder of the Hudson Institute. In his essay, “World Federal Government,” co-authored with Anthony J. Wiener, Kahn acknowledges that building world government requires “intense external dangers.” Echoing Bloomfield, Kahn stated that “a world government could only be created out of war or crisis — an emergency that provided an appropriate combination of the motivations of fear and opportunity.” The Kahn/Wiener essay so impressed the leaders of the World Federalist Association that they have reprinted and promoted it.

Still another voice in the crisis choir is Brian Urquhart, a former UN under secretary-

general and now a full-time UN propagandist at the Ford Foundation. Urquhart has lamented, "There are moments when I feel that only an invasion from outer space will reintroduce into the Security Council that unanimity and spirit which the founders of the Charter were talking about." Mr. Urquhart's one-world colleagues have actually considered the feasibility of creating such a unifying extra-terrestrial "threat." That was one of the considerations pondered by the "Special Study Group" (SSG) convened in 1963 by the same Pratt House gang in the Kennedy administration who commissioned Bloomfield's study. The SSG produced a secret report that created a storm of controversy when it was anonymously released in 1967 as the Report From Iron Mountain. According to the Iron Mountain report, the SSG considered whether "such a menace would offer the 'last, best hope of peace,' etc., by uniting mankind against the danger of destruction by 'creatures' from other planets or from outer space." But the group decided such far-out scenarios lacked "credibility." Ditto for most other contrived "menaces." However, they decided, "the environmental-pollution model" offered hopeful potential. "It may be," said the Report, "... that gross pollution of the environment can eventually replace the possibility of mass destruction by nuclear weapons as the principal apparent threat to the survival of the species."

The line adopted by the CFR Establishment press was that the Report From Iron Mountain was a hoax, a "brilliant satire." But was it? At the very time that they were dismissing the report as a delightful joke, the Pratt House illuminati were implementing the game plan it proposed. Through their power and influence in government, academe, the media, tax-exempt foundations, and Wall Street, they were furiously building the threat of environmental destruction into "a credible substitute for war capable of directing human behavior patterns in behalf of social organization." 30 Three years after the publication of Iron Mountain the first Earth Day was held, launching a global crusade that has had a dramatic impact on our world — politically, economically, socially, philosophically, morally, and religiously.

We Are All One

But mere crises are not enough; they must be GLOBAL CRISES! Traditionally, war has been the ultimate crisis for mankind. During war the people yield vast powers to the government for the welfare and survival of the tribe, city, or nation. The environmental "crises" we face, say the one-world eco-saviors, are global crises, presenting a global threat as deadly as war. Obviously, handling this threat is beyond the capabilities of individual nation states. Ergo, we must have global government with global powers. This was the theme of Mikhail Gorbachev's celebrated "End of the Cold War" speech in Fulton, Missouri, in 1992. "The prospect of catastrophic climatic changes, more frequent droughts, floods, hunger, epidemics, national-ethnic conflicts, and other similar catastrophes compels governments to adopt a world perspective and seek generally applicable solutions," he declared. This could only be accomplished, said Gorbachev, through "some kind of global government." "I believe," said the CFR-approved "former" Communist, "that the new world order will not be fully realized unless the United Nations and its Security

Council create structures ... which are authorized to impose sanctions and make use of other measures of compulsion."

Amongst environmentalists and many other one-world "grievance" agitators, these slogans have become incessant mantras. "The first law of ecology tells us that 'everything is connected to everything else,'" proclaims environmental radical Jeremy Rifkin in his book *Entropy: Into the Greenhouse World*.³⁴ This thesis of global "interconnectedness," "unity," and "oneness" - a new "paradigm shift" - now permeates all discussion of things economic, political, social, environmental, moral, and spiritual - thanks to the promotion it has received from the Insider elite. School children are inculcated with this message from their textbooks. Children and adults receive daily doses of interdependence from television "news" and "nature" programs. This is a conscious, subversive effort to reorient the public to a "one-world" view.

If we "follow the money," we quickly see that the funding for the groups and individuals singing this tune comes from the usual sources: the big CFR-dominated tax-exempt foundations and corporations.³⁹ The tune is amplified in the political realm by CFR politicians like Senators John Kerry, Charles Schumer and John D. Rockefeller. And the CFR media cartel dutifully publicizes the apocalyptic scenarios of the doomsayers and praises them as courageous "prophets." Fright peddlers and one-world apostles such as Gorbachev, Rifkin, Toffler, Ferencz, et al., are favorably reviewed, sympathetically quoted, and provided with national media platforms to trumpet their nonsense and disinformation. Their twaddle is assigned as required reading to millions of students as though it is gospel. As at Rio, genuine scientists and scholars representing the authentic voice of scientific consensus are ignored or even vilified when they refute the hysterical nonsense and claptrap of the environmental gurus. Because of this blatant bias of the controlled media, these lunatic ravings and New Age mystic musings are no longer relegated to the wacky fringes of society, where they belong; they are expounded by supposedly "serious" think tanks, "respected" journals, and "mainstream" politicians, and form the basis for international treaties and federal policies and law.

The Work of Decades

This "cultural shift," as McLaughlin and Davidson put it in *Spiritual Politics*, has not happened overnight; it has been the patient work of more than a generation. Earth Day 1970 marked the launch of an ongoing offensive by an "ecology movement" that the Insiders had been building for years. 1972 marked another major watershed. In that year, the Club of Rome, an international coterie of one-world elitists (including many of the usual CFR regulars) came out with a much-heralded study, *The Limits to Growth*. This eco-socialist jeremiad proclaimed: "Entirely new approaches are required to redirect society toward goals of equilibrium rather than growth." In order to save the earth, said the Club report, "joint long-term planning will be necessary on a scale and scope without precedent." A "supreme effort" by all would be required "to organize more equitable distribution of wealth and income worldwide."

Interestingly, that same year, 1972, Gus Hall, National Chairman of the Communist Party of the United States (CPUSA), released a book entitled *Ecology* with a similar message. "Human society cannot basically stop the destruction of the environment under capitalism," said Comrade Hall. "Socialism is the only structure that makes it possible." He continued: "Socialism corrects the basic flaw of capitalism. It sets human society on a new path. The means of production, factories, mines and mills become the property of the people. They operate and produce only to fulfill human needs.... This is the foundation for a new set of priorities, for new values.... What is involved is a 'conflict of values.'"

1972 was also the year of the first "Earth Summit," the United Nations Conference on the Human Environment, held in Stockholm, Sweden. Serving as secretary-general of that event was Canadian billionaire-socialist Maurice Strong (whom we will see, later on, become a high-level Insider). The conference was hosted by Swedish Prime Minister Olof Palme, one of the many leaders of the Socialist International in attendance. An immediate outcome of that summit was the creation of the United Nations Environment Program (UNEP), with Mr. Strong as its first executive director. Other summit results included a socialist-environmentalist manifesto called the Stockholm Declaration, consisting of 26 principles, and the Stockholm Plan of Action, a set of 109 (mostly Marxist) recommendations. One of the key intellectuals advising the conference and helping write its reports was Rockefeller University microbiologist Rene Dubos. That same year, Dubos came out with the celebrated book *Only One Earth*, which was co-authored with the British Fabian Socialist Barbara Ward (Lady Jackson). Thus, in 1972, the same eco-socialist "marching orders" were given to the hard-core Communist cadres, the worldwide socialist parties, and the great global mainstream of environmentalists and concerned citizens. In the years since those reports by the Club of Rome, the Communist Party, the UN, and Dubos/Ward, a deluge of similar and increasingly militant reports and books appeared from the Communist-socialist left paralleling, and at times converging with, the themes espoused in reports, articles, and books by the CFR "capitalist" elites. Although these "opposing sides" may attack each other rhetorically, what's important is the bottom line: Both sides are advocating central planning (socialism) and internationalism (world government). The Red-Green orchestra was playing furiously.

By the mid-1980s, we see U.S.-Soviet "convergence" in full swing, with Soviet dictator Mikhail Gorbachev and U.S. leaders engaged in large-scale cooperative propaganda efforts to push the same global environmental agenda. Gorbachev's subsequent replacement by Boris Yeltsin, and then Vladimir Putin, did not derail the CFR-Kremlin cooperation in this ongoing venture; in fact, it accelerated the agenda. Comrade Gorbachev, acting ostensibly as a private citizen, launched his "global brain trust" (his words), the Gorbachev Foundation, staffed in Moscow with 150 "former" Communist apparatchiks, and with affiliated institutes in the U.S. and other nations. During the 1990s, which leading worldorder theorist Professor Richard Falk (CFR) said would be the "decade of transformation," Gorbachev was in constant motion, along with the leading lights of Pratt

House, pushing the CFRKremlin one-world line.

In his 1992 book *Voting Green*, Rifkin wrote: “[T]he new Green vision places the environment at the center of public life, making it the context for both the formulation of economic policies and political decisions.”⁵² That was penned to coincide with the UN’s Earth Summit. And the CFR media orchestra made sure that that message was delivered repeatedly to the American public, to opinion molders, and to policy makers and legislators by a gaggle of different messengers. This kind of orchestrated saturation is essential if you are going to effect a real “cultural shift” or “paradigm shift.” A cascade of enviro-Marxist offerings mushroomed out of nowhere with the same theme. On the plane to Rio de Janeiro and at the Earth Summit itself, everywhere I looked, delegates, activists, and reporters were ravenously devouring (and later parroting) the contents of a host of new books and reports. The *State of the World*, an annual environmental fright report put out by the Worldwatch Institute (WI), was everywhere cited as holy writ.

One of the most celebrated books to come out at the time of the Summit was produced by then-Senator Al Gore. In *Earth In The Balance: Ecology and the Human Spirit*, Gore insisted that “the effort to save the global environment” must become the “single shared goal [and] the central organizing principle for every institution in society.” The book is a perfervid piece of socialist ecopropaganda larded with an incredible number of errors, ludicrous claims, and blatant misrepresentations. But it was exactly what the Pratt House globalists wanted, and it was a relatively easy matter for them to provide the hype necessary to turn it into a bestseller. Gore, a protege of Communist billionaire Armand Hammer, led the U.S. Senate delegation to Rio and was launched on his way to becoming Vice President of the United States.

Gorbachev’s Toxic Globaloney

Mikhail Gorbachev, who is the darling of new world order promoters, and was one of the superstars of the Earth Summit, had also been thumping this theme for a couple of years. Addressing the 1990 Global Forum in Moscow, he called for “ecologizing” society and said: “The ecological crisis we are experiencing today — from ozone depletion to deforestation and disastrous air pollution - is tragic but convincing proof that the world we all live in is interrelated and interdependent.” “This means,” Gorbachev continued, “that we need an appropriate international policy in the field of ecology. Only if we formulate such a policy shall we be able to avert catastrophe. True, the elaboration of such a policy poses unconventional and difficult problems that will affect the sovereignty of states.” In a 1994 interview with the significant title, “From Red to Green,” in the Insider-funded Audubon magazine, Gorbachev stated: “We must change all our values.... What we are talking about is creating new forms of life on the basis of new values.” In a 1995 interview with the environmental magazine *Grassroots*, Gorbachev insisted that the only hope for saving our planet lay in “the development and implementation of an Earth Charter, a body of international ecological laws that would guide the actions of individuals, corporations and governments ... the time has come for a code of ethical and moral principles that will govern the conduct of nations and people with respect to

the environment.”

Let’s take a look at the values and principles of the “Prophet of Perestroika.” This is the same Gorbachev who, in November 1987, proclaimed: “In October 1917, we parted with the Old World, rejecting it once and for all. We are moving toward a new world, the world of Communism. We shall never turn off that road.” (Emphasis added.) “Perestroika,” he said then, “is a continuation of the October Revolution.” By which he means V. I. Lenin’s bloody, murderous Bolshevik Revolution. As we will see below, Gorbachev is an unrepentant, unregenerate, militant, atheist Communist. In 1989, Gorbachev declared: “I am a Communist, a convinced Communist, For some that may be a fantasy. But for me it is my main goal.” The following year, even as he was being hailed as the “man who ended Communism,” he reiterated this conviction, stating, “I am now, just as I’ve always been, a convinced Communist.” Are the CFR cognoscenti promoting Gorby illiterates? Are they unaware that his “ex-Communist” act is a ruse? Of course not; they are fully aware of the deception involved here. It is the Pratt House plutocracy that has been his main sponsor and the primary force assisting his deception. (In his famous book *Perestroika*, he plainly admitted: “We are not going to change Soviet power, of course, or abandon its fundamental principles, but we acknowledge the need for changes that will strengthen socialism.” (Emphasis added.) In the same revered text he explained that “according to Lenin, socialism and democracy are indivisible,” and the “essence of perestroika lies in the fact that it unites socialism with democracy and revives the Leninist concept of socialist construction both in theory and in practice.”

Agenda 21’s Terrifying Agenda

This mammoth program for global social engineering and ecotyrranny is a massive blueprint for regimenting all life on Planet Earth in the 21st century — in the name of protecting the environment. *Agenda 21: The Earth Summit Strategy to Save the Planet* (EarthPress, 1993), one of the UN-approved editions of the program, makes this brazen assertion:

“Effective execution of Agenda 21 will require a profound reorientation of all human society, unlike anything the world has ever experienced — a major shift in the priorities of both governments and individuals and an unprecedented redeployment of human and financial resources. This shift will demand that a concern for the environmental consequences of every human action be integrated into individual and collective decision-making at every level.”

With breathtaking audacity, the document continues:

“There are specific actions which are intended to be undertaken by multinational corporations and entrepreneurs, by financial institutions and individual investors, by high-tech companies and indigenous people, by workers and labor unions, by farmers and consumers, by students and schools, by governments and legislators, by scientists, by women, by children — in short, by every person on Earth.”

If Gorbachev is a “socialist,” a “Communist,” a “Leninist” — which he says he is, and

vindicates that claim with many actions — it is perfectly understandable that he would be very pleased with the direction that the United States is going with the UN environmental agenda. As a Leninist, he is comfortable with longterm strategy, and, as his idolizing biographer, Gail Sheehy, noted, he has long been known for “his emulation of Lenin’s policy of two steps forward, one step backward.”

But Comrade Mikhail, as we’ve noted, is getting plenty of help from “our” side. He and his Russian colleagues are provided with continuous tutoring and infusions of cash from world order heavyweights such as George Soros (CFR), Zbigniew Brzezinski (CFR, TC), George Shultz (CFR, TC), Henry Kissinger (CFR, TC), David Rockefeller (CFR, TC), and Richard N. Gardner* (CFR, TC). It was Professor Gardner who penned the now-famous article, “The Hard Road to World Order,” in the April 1974 issue of *Foreign Affairs*. One of the boldest calls for world government ever to appear in the CFR’s journal, it proposed building the “house of world order” through “an end run around national sovereignty, eroding it piece by piece.” What’s more, it set out the CFR Insider plans for exploiting fears about environmental calamity as a vehicle for expanding the UN’s power. In this 1974 article, Gardner wrote:

“The next few years should see a continued strengthening of the new global and regional agencies charged with protecting the world’s environment. In addition to comprehensive monitoring of the earth’s air, water and soil and of the effects of pollutants on human health, we can look forward to new procedures to implement the principle of state responsibility for national actions that have transnational environmental consequences, probably including some kind of “international environmental impact statement...”

The UN’s War on Private Property

Private land ownership is also a principal instrument of accumulation and concentration of wealth and therefore contributes to social injustice.... Public control of land use is therefore indispensable.... - United Nations “Habitat I” Conference Report, 1976

In one word, you reproach us with intending to do away with your property. Precisely so; that is just what we intend. - Karl Marx, *The Communist Manifesto*, 1848

Property is theft! - P. J. Proudhon, the “Father of Anarchy,” 1840

Property struck the first blow at Equality; ... the supporters of Governments and property are the religious and civil laws; therefore, to reinstate man in his primitive rights of Equality and Liberty, we must begin by destroying all Religion, all civil society, and finish by the destruction of all property. - Adam Weishaupt, founder of the Order of the Illuminati, 1776

According to Karl Marx, “the theory of the Communists may be summed up in the single sentence: abolition of private property.”⁵ That’s pretty plain, and it’s directly out of the *Communist Manifesto*. It has been the rallying cry of collectivists of all stripes

— communists, socialists, anarchists, fascists — and has guided the most ruthless and bloody regimes of the past century. Lenin, Stalin, Mao, Ho Chi Minh, Ceausescu, Tito, Gomulka, Castro, Pol Pot, Mengistu, Ortega, and dozens of other Communist dictators and satraps all fervently espoused that Marxian precept and applied it with a vengeance. And in so doing, they produced mountains of corpses and rivers of blood unequalled in all history.

Conversely, the champions of freedom have ever recognized that private property is essential both to human liberty and to the material well-being and economic advancement of all classes of people. “Let the people have property,” observed Noah Webster, “and they will have power — a power that will for ever be exerted to prevent a restriction of the press, and abolition of trial by jury, or the abridgement of any other privilege.” Justice Joseph Story, who was appointed to the Supreme Court by President James Madison and became one of America’s most revered jurists, put it this way: “That government can scarcely be deemed to be free when the rights of property are left solely dependent upon the will of a legislative body, without any restraint. The fundamental maxims of a free government seem to require that the rights of personal liberty and private property should be held sacred.”

In our own day, this same powerful truth was expounded clearly by the great economist Friedrich A. Hayek. “What our generation has forgotten,” he said in his 1944 Nobel Prize-winning classic, *The Road to Serfdom*, “is that the system of private property is the most important guaranty of freedom, not only for those who own property, but scarcely less for those who do not. It is only because the control of the means of production is divided among many people acting independently that nobody has complete power over us, that we as individuals can decide what to do with ourselves.”

It is easy, then, to see why those who have totalitarian ambitions always attempt to destroy private property (Note: This holds true for leftist totalitarianism, National Socialism and Fascism both promoted private property). Because, like Hayek, they understand that as long as “the control of the means of production is divided among many people acting independently,” their plans for total power will remain frustrated. The millions of farmers, homeowners, businessmen, shopkeepers, artisans, laborers, and professionals who own their own property form a natural obstacle to tyrannical aspirations. If people are allowed to own their land, grow their food, manufacture whatever products they choose, live in homes of their own, and freely exchange their goods, services, and labor — why, they just might not meekly yield to the dictates of central planners, whether of the fascist, communist, or socialist variety!

So whom do you think the folks at the United Nations and their Insider sponsors choose to follow: Adams, Webster, Leo XIII, and Hayek? Or Marx, Mao, Lenin, and Stalin? You guessed it: Time after time after time, they’ve chosen the path of power, slaughter, tyranny, and destruction, rather than liberty, morality, and justice. As we will see next, with an examination of a few of the UN’s eco-Marxist programs.

The UN Gets Into the Act

We begin with “Habitat I,” the Conference Report of the United Nations Conference on Human Settlements, held in Vancouver, Canada, during June 1976. The Preamble of this important document, endorsed by the United States and the other participating nations, declares:

“Land ... cannot be treated as an ordinary asset, controlled by individuals and subject to the pressures and inefficiencies of the market. Private land ownership is also a principal instrument of accumulation and concentration of wealth and therefore contributes to social injustice.... Public control of land use is therefore indispensable....“

The main body of the text then proposes the following Marxist policies, among others:

Recommendation D.1 Land resource management (a) Public ownership or effective control of land in the public interest is the single most important means of... achieving a more equitable distribution of the benefits of development whilst assuring that environmental impacts are considered.

(b) Land is a scarce resource whose management should be subject to public surveillance or control in the interest of the nation....

(c) ... Governments must maintain full jurisdiction and exercise complete sovereignty over such land with a view to freely planning development of human settlements....

Then there is Agenda 21, the massive environmental manifesto that came out of the 1992 UN Earth Summit. This is a monstrous socialist scheme for micromanaging every square centimeter of the planet’s surface — not to mention the air and space above it and the ground and seas below it. This green communist manifesto holds that “land must be regarded primarily as a set of essential terrestrial ecosystems and only secondly as a source of resources.” We must develop new social systems, it says, because “traditional systems have not been able to cope with the sheer scale of modern activities.” These new systems will “have as their goal both the effective management of land resources and their socially-equitable use.” Agenda 21 states further: “All countries should undertake a comprehensive national inventory of their land resources in order to establish a system in which land will be classified according to its most appropriate uses....“ Moreover: “All countries should also develop national land-management plans to guide development.“

Another frightful creature to emerge from the Rio Earth Summit (UNCED) was the Global Biodiversity Assessment (GBA). The GBA is a huge, 1,140-page instrument that claims to provide a “scientific“ basis for implementing the Convention on Biological Diversity. “Property rights are not absolute and unchanging,“ it informs us, “but rather a complex, dynamic and shifting relationship between two or more parties, over space and time.“ And the UN ecocrats are determined to make any property rights they don’t abolish outright as “complex, dynamic and shifting“ as possible. “We should accept biodiversity [i.e., plants and animals] as a legal subject, and supply it with adequate rights. This could clarify the principle that biodiversity is not available for uncontrolled human use.“

Translation: We must assign legal “rights” to animals, trees, bugs, bushes, weeds, birds, fishes, even mountains, and then appoint “custodians,” “guardians,” or “trustees” (all of whom must be watermelon Marxists, of course) to look out for and speak for these rights.

“Contrary to current custom,” says the GBA, “it would therefore become necessary to justify any interference with biodiversity, and to provide proof that human interests justify the damage caused to biodiversity.” In other words, under this socialist scheme, a “guardian” or “stakeholder” (someone claiming to represent a plant or animal species on the property) can assert a priority right over that of the actual property owner, and force the owner to “prove” that any activity he contemplates for “his” property will not adversely impact the flora and fauna which constitute the “biodiversity” in that “ecosystem.”

U.S. Pressure From Above

In 1993, President Clinton (CFR) created the President's Council on Sustainable Development (PCSD) by executive order. The PCSD joined five Cabinet members with the leaders of the Sierra Club, the Natural Resources Defense Council, the Environmental Defense Fund, and the Nature Conservancy and charged them to “develop policy recommendations for a national strategy for sustainable development that can be implemented by the public and private sectors.” They were to use as their guide the UN Convention on Biodiversity, which Clinton signed in June 1993 (but which the Senate has yet to ratify). That same year, President Clinton demonstrated how such internationalist socialist policies can play out when he brought in a team of UN bureaucrats (at U.S. taxpayer expense) from the UNESCO World Heritage Committee (WHC). Their mission was to close down a proposed gold mine on private property in the vicinity of Yellowstone National Park, which the UN lists as a World Heritage Site. Militant eco-fanatics together with the Clinton-Gore administration had been trying for years to stop the Crown Butte Mining Company from starting operations there. The company had jumped through all of the costly and convoluted state and federal environmental impact analyses and presented no risk to the park or surrounding area.

But before Crown Butte could begin operation, the UNESCOWHC “scientists” came up with a finding that allowing the project to go forward would be ecologically disastrous. That was the only pretext President Clinton needed to issue an executive order stopping all new mining permits within a 19,000-acre area of federal land near Yellowstone. The UNESCO delegation went even further, seeking to review all policies involving mining, timber, wildlife, and tourism within an area of nearly 18 million acres surrounding the park, including millions of acres of private land. They and their U.S. enviro-Leninist allies want to create the “Greater Yellowstone Ecosystem,” an enormous “biodiversity reserve.” This is part of the UN's global Wildlands Project, aimed at “re-wilding” literally half of the U.S. land area.

It's important to recognize that this U.S.-UN eco-entangle-ment didn't begin with Bill Clinton and it won't end now that he has left office. George Bush the Elder (CFR) occupied the White House in 1992, and his main representative at the Earth Summit that

year was EPA Administrator William Reilly (CFR), a militant greenie. Before coming on board the Bush team, Reilly had served as president of both the Conservation Foundation and the World Wildlife Fund-U.S. And he had served as executive director of a land-use task force chaired by Laurance S. Rockefeller, which promoted Marxist land-use controls and expropriation. Reilly's contempt for private property was evident not only from the EPA policies he promulgated, but also from his own words. In his introduction to the 1985 book *National Parks for a New Generation*, for example, he advocated "greenline parks." Under this concept, closely akin to the UN schemes, privately owned land adjacent to federal or state parks could be declared part of the park system by executive fiat and its use restricted to conform to park purposes — in blatant disregard and violation of constitutional protections against such abuse.

This "watermelon Marxism" — green on the outside, red on the inside — has been promoted and supported continuously in the highest levels of our federal government, through both Republican and Democratic administrations, by the CFR Establishment. And the same one-world coterie also has continuously provided the "pressure from below" as well.

More Establishment Radicals

Take, for instance, watermelon Marxist Jeremy Rifkin, whose book, *Entropy: Into the Greenhouse World*, we mentioned in the previous chapter. It was published by Bantam New Age Books, a division of Bantam Books, one of the largest Establishment publishing houses, and was highly praised in the CFR press. And who is Mr. Rifkin? A radical activist in the Vietnam anti-war movement, he was a founder of the Johnny Appleseed Brigades. In 1976 he headed up the Peoples Bicentennial Commission (PBC), a thoroughly Marxist operation funded by the usual taxexempt foundations and the federal government. He has lectured for the KGB-front Institute for Policy Studies (IPS) and written for the radical socialist *Mother Jones* magazine. All of which, of course, has qualified him to join the august company of savants who participate in the Gorbachev State of the World Forum palavers. It also guarantees him Insider foundation funding for his Washington, D.C.-based Foundation on Economic Trends. And what type of economics does Comrade Rifkin espouse? Because of the worsening greenhouse crisis, he says in *Entropy*, "For the first time in our country's history we will have to deal with the ultimate political and economic question — redistribution of wealth." (Though rest assured it is not his or Mr. Rockefeller's wealth he wants to redistribute.) Under the system he favors, "The long-accepted practice of private exploitation of 'natural' property is replaced with the notion of public guardianship." This is also the message of Peter Bahouth, the former head greenie at Greenpeace. Now he is director of the Turner Foundation, where he ladles out millions of dollars to his comrades at Greenpest, Fiends of the Earth, the Environmental Defense Fraud, and other eco-fascist extortionists. The Turner Foundation insists that property rights are responsible for a host of problems associated with urban and suburban sprawl and further insists that state governments must impose more restrictions on property rights. "States must insist localities determine ...defined urban growth boundaries," says

a recent Foundation statement. Indeed, says the Foundation, “politically potent bubbles about free markets and property rights must be popped.” The Turner Foundation, of course, is the eco-hobbyhorse of Citizen Ted Turner, whose multi-million dollar palatial estates on several continents are not to be counted among the private property bubbles to be popped by Turner’s Greenpest lackies. Turner, Rockefeller, and other members of the ruling elite smugly believe that their money and political clout will protect them from the Marxist programs they are foisting on us lesser folk of the middle class. As Marx pointed out in his Manifesto, his immediate target was “not the abolition of property generally, but the abolition of bourgeois property.”

Yes, it is the property of the bourgeois — the middle class — that is the principal target of Marx and his present-day disciples. We have already seen the “future” envisioned by these one-world corporate socialists. It is an Orwellian nightmare world in which Soviet Commissars luxuriate in their Black Sea villas and the upper-level Communist nomenklatura enjoy pampered, privileged lives — while the vast majority of the Russian people exist in misery and grinding poverty. But the Pratt House billionaires already possess greater wealth and enjoy more luxury than their Soviet counterparts could ever dream of, you say. True, but the Communist elite enjoy something that the top Insiders crave more than wealth and luxury: power — raw, unchallenged power. The power of the master over the slave. The power of the tyrant over the masses. Blocking their path to totalitarian power is the middle class. Thus the ongoing attack on middle class property by the would-be global overlords and their watermelon Marxist minions.

The UN’s International Court of Criminals

[The proposed International Criminal Court] repudiates the Constitution, the Bill of Rights, and the Declaration of Independence and cancels the 4th of July... What are the limits on the ICC? There are none. It’s insane! - Professor Charles Rice, Notre Dame University School of Law

With the stroke of a pen, President Bill Clinton has a last chance to safeguard humankind.... He must simply sign a treaty, finalized in Rome in 1998, to create a permanent International Criminal Court. - Robert S. McNamara (CFR, TC) and Benjamin B. Ferencz, New York Times op-ed, December 12, 2000

On December 31, 2000, David Scheffer (CFR), President Clinton’s Ambassador for the International Criminal Court, signed the ICC Rome Treaty for the United States. This was an incredibly radical, revolutionary act, which will bring devastating consequences for the American people, if they allow the U.S. Senate to ratify it. If ratified and implemented, this brazenly treasonous scheme by the CFR Insiders would rend asunder our constitutional protections and cause American citizens to be vulnerable to prosecution before international UN tribunals for alleged violations of lawless UN “laws.”

Regardless of whether one views the prospect of the ICC sympathetically or with horror

and revulsion, it must be admitted by all who are fair-minded that U.S. accession to this treaty would represent a momentous, colossal change to our judicial and constitutional system. Who but a totalitarian would argue that a change of this magnitude should be even contemplated, let alone attempted, without an informed debate and a genuine public consensus? Yet there has been no public debate of this issue.

Ask yourself: Did you see the development of the ICC covered on the evening news on NBC, ABC, CBS, and CNN? Did you see the supposed merits and real dangers debated on Face the Nation, Nightline, The Capital Gang, Hardball, 60 Minutes, Larry King Live, or 20/20? Of course you didn't, because those debates never happened. At the time that President Clinton announced the U.S. signing of the Rome Treaty, probably not one U.S. citizen in 100 had heard of the document, and not one in a thousand had any inkling of what it entailed. The organized forces for world government, however, had been intensely active for several years preparing to spring the ICC trap. Pro-ICC articles were appearing in the internationalist journals, pro-ICC studies were issued by globalist think tanks, a fortune in foundation grants was provided to pro-ICC academics and NGOs to attend international conferences and symposia — all of this was taking place on an enormous scale, while most Americans were completely in the dark.

The Campaign for an ICC

The vast majority of Americans today are blissfully ignorant of the fact that such a radical proposal is even under consideration. But the truth is that it is perilously close to becoming a reality. And unless the American public becomes sufficiently alerted, alarmed, and activated to oppose this incredibly subversive scheme, it will become reality. The formal campaign for an ICC was launched in the summer of 1998 at a United Nations summit convened in Rome. The monthlong conference concluded on July 17th with the announcement that 120 nations had voted in favor of approving the new "Rome Statute of the International Criminal Court" and that it would enter into effect and become binding upon the entire planet as soon as it was formally ratified by 60 nations. The ostensible targets of the new ICC are dictators, tyrants, and other nasty practitioners of "genocide, war crimes, aggression and crimes against humanity." But the UN membership is replete with murderous dictators, tyrants, and the worst practitioners of these and other heinous crimes. The likes of Fidel Castro, Yasir Arafat, Sam Nujoma, Mikhail Gorbachev, Li Peng, Vladimir Putin, and other bloodyhanded thugs have always been welcomed and honored at the United Nations.

The Real Targets of the ICC

Who, then, are the real targets of the ICC proponents? Those who stand in the way of their proposed "new world order," naturally. That includes, of course, so-called "right-wing dictators," like General Augusto Pinochet, who has never been forgiven by the international Socialist-Communist-Insider cabal for overthrowing the brutal Communist regime of their favored left-wing dictator: Salvador Allende in Chile. In 1998, while the 82-year-old Pinochet was visiting England for medical treatment, he was arrested and held

on a warrant issued by Baltazar Garzon, an investigative magistrate from Spain. Judge Garzon, a Marxist activist, was pursuing a revolutionary political agenda, not seeking justice for real crimes. Many legal authorities condemned Garzon's action for violating established canons of international law. Eduardo Fungarino, Spain's chief government prosecutor, filed a court motion charging that the judge had broken many legal procedures in issuing the arrest order, and that Garzon had "an absolute lack of jurisdiction" over alleged crimes committed outside of Spain against citizens of other countries.

But the phony "human rights" activists demanding Pinochet's scalp could not care less about genuine violations of human rights and real justice for bloody dictators. At the time of Pinochet's arrest in England on the Spanish warrant, Communist dictator Fidel Castro was welcomed to Spain and PLO terrorist leader Yasir Arafat was a guest of the Clinton White House. Likewise, Jiang Zemin, the butcher of Tiananmen Square, as well as the bloodyhanded Soviet tyrants Mikhail Gorbachev, Boris Yeltsin, and Vladimir Putin — and virtually every other mass-murdering despot of the left — have been conspicuously ignored by the selfrighteous frauds leading the ICC choir.

However, anti-Communist military leaders and heads of state like Pinochet are not the only — or even the chief — targets of the ICC. The primary target of the ICC architects is the United States and the American people. This was conspicuously obvious at the ICC Summit in Rome, where America-bashing was the order of the day. As one who was in Rome "at the creation," this reporter can attest firsthand to the fact that the long-standing hatred toward the United States by the vast majority of the pathetic regimes that comprise the UN menagerie is still alive and well. Day after day, throughout the ICC conference, the U.S. was subjected to tirades and condemnations — by official delegates as well as by NGOs — for supposed past and present sins. In fact, from the nonstop anti-U.S. invective one might imagine that America is the principal, if not the sole, source of evil in the world. The billions of dollars that we have ladled out over the past half-century to these countries and the UN itself have purchased us not an iota of good will.

Months before the Rome conference had even begun, the UN Commission on Human Rights had targeted the U.S. with a purely political attack alleging that this country unfairly applies the death penalty. The Insiders' White House agent Bill Clinton aided the scheme by inviting UN human rights monitor Bacre Waly Ndiaye to America to meet with U.S. officials and inspect our prisons. In September and October 1997, Mr. Ndiaye came to the U.S. and visited prisons in Florida, Texas, and California. The New York Times reported:

"For Mr. Ndiaye, the visit to the United States is important Government will show the way to other countries which have been resistant to United Nations mechanisms," he said."

Mr. Ndiaye's U.S. precedent-setting tour provided the Insiderfunded NGO radicals at Amnesty International, Human Rights Watch, the ACLU, and the Lawyers Committee for Human Rights with a propaganda bonanza. The Insider media cartel retailed all their

lurid charges of the horrors of the American justice system. In April 1998, shortly before the ICC Summit, the UN Commission on Human Rights released a report based on the Ndiaye investigation. The report charged that application of the death penalty in the United States is tainted by racism, economic discrimination, politics, and an excessive deference to victims' rights.

The Commission also accused the U.S. of being in violation of the 1966 UN Covenant on Civil and Political Rights and called on the U.S. to suspend all further executions until U.S. state and federal laws were brought into compliance with "international standards." This provided the NGO cabal with another golden opportunity for a round of media-enhanced attacks on the U.S. legal system. One of the aims of this report and its companion NGO campaign was to sow seeds of doubt and guilt in American public opinion concerning the fairness of American justice; this would make the upcoming ICC proposals for an international system seem much more reasonable. This was all a colossal, insidious charade, of course. Not to mention the epitome of hypocrisy. At the very time that Kofi Annan's Commission was denouncing the U.S. justice system, the sainted Mr. Annan was suppressing information that he had been a key silent accomplice in the Rwandan genocide. Lt.-Gen. Romeo Dallaire, the former commander of Canada's UN "peace-keeping" mission to Rwanda in 1994, revealed that he had sent a fax to Annan's office warning that Rwandan security officials had been ordered to "register" the (predominantly Christian) Tutsis as an obvious prelude to mass liquidation. Annan's office ordered Dallaire to "assist in the recovery of all weapons distributed to or illegally acquired by civilians," which, in effect, meant disarming the intended victims! So Mr. Annan, whose Commission was chastising the U.S. for gross abuses, was himself involved in one of the most atrocious genocides in world history. Likewise, many of the UN representatives at Rome who cited the Commission report in their denunciations of the U.S. were representing some of the most repressive and brutal regimes in the world.

We don't mean to imply that all of the U.S. bashing at Rome was emanating from Third World countries, Communist satrapies, or UN agencies. Canada, Norway, Britain, Germany, Italy, and other U.S. "allies" vied for top anti-U.S. honors, too. On the final day of the conference, when the very minimal objections of the U.S. to the ICC were soundly defeated, the assembled delegations erupted in a tumultuous and defiant display of anti-American jubilation — which was joined by much of the press corps, including "American" reporters. Naturally, the U.S. NGOs topped all others in attacking their homeland. As Reuters reported, "the American NGOs were the scourge of the United States," at the conference.

Shaping a Consensus

The enormity of the deception and the immense resources and coordination of this global network are amazing to behold. But even the astounding NGO-Insider spectacle at Rome fails to provide a full appreciation of the fact that it was but a part of a much larger scheme. The Rome gathering was the culmination of a multi-year program of PrepComs (Preparatory Committee meetings) that had been carefully orchestrated to arrive at the

contrived global “consensus” that is now being celebrated by the votaries of “world order.” The final PrepCom meeting, held from March 16th through April 3rd, 1998 in New York, was a minipreview of the Rome summit, with all the major actors, from UN officials and pro-ICC national delegates, to NGO activists, honing their skills, practicing their parts, and coordinating their activities with their Insider media allies. In order to get all of the cadres marching in sync, and to create the appearance of popular support, the Insiders had to set up a host of ongoing programs throughout the country before, during, and after the Rome summit. One of the major events attended by this writer was an ICC symposium at the luxurious Biltmore Hotel in Los Angeles on February 26, 1998. The CFR leadership was obvious. The moderator of the program was Dr. Edwin M. Smith (CFR), professor of international law at the University of Southern California and formerly an appointee to the U.S. Arms Control and Disarmament Agency by President Clinton (CFR). The main speaker for the program was Ambassador Scheffer (CFR), formerly an adjunct professor of international law at Georgetown University Law Center, President Clinton’s alma mater. The program was sponsored by the United Nations Association; the World Federalist Association; Amnesty International; the American Civil Liberties Union; the American Bar Association; Friends of the United Nations; B’nai Brith; and the law firms of Gibson, Dunn, and Crutcher, and Milbank, Tweed, Hadley, and McCloy. CFR members play prominent, if not dominant, leadership roles in all of these organizations.

These individuals and organizations are engaged in what Professor George C. Lodge (CFR) calls “quietly assembling global arrangements” and “shaping a consensus.” Lodge, who is a professor at the Harvard Business School and a trustee of the Carnegie Endowment for International Peace, writes in his 1995 book, *Managing Globalization in the Age of Interdependence*, that there are “energetic and creative individuals in government, interest groups, and corporations [who] are quietly assembling global arrangements to deal with crises and tensions. For the most part, they work outside of legislatures and parliaments and are screened from the glare of the media in order to find common interests, shape a consensus, and persuade those with power to change.”

The Proposed ICC

The proposed ICC has proceeded through this process, and has gone from “action recommendation” to “consensus” to (almost) full realization. The ICC is breathtakingly audacious on many counts but the most amazingly brazen claim, and one unprecedented even for so outrageous an outfit as the United Nations, is the assertion by the UN that once the Rome Statute is ratified by 60 countries (a completely arbitrarily selected number, by the way: totals ranging from 30 to 90 were considered), the newly established court will then have compulsory jurisdiction over all countries, even those that refuse to ratify it. This is, of course, a revolutionary and flagrant violation of the most fundamental principle of treaty law, namely, that a treaty is an agreement that is binding only upon those who are party to the treaty. Yet the ICC zealots had no qualms of conscience in repeatedly and piously invoking “the rule of law” to advance their totally lawless proposal. By December 31, 2000, when President Clinton signed the ICC treaty, 27 nations had

ratified the document, and the court's advocates were predicting that the requisite 60 ratifications would be obtained by 2002. The new court is to be headquartered in The Hague, Netherlands, which is already host to the World Court, the UN tribunal that was set up in 1945 to try cases between nations. The new ICC would try individuals who are accused of violating international laws.

Dr. Charles Rice, professor of law at Notre Dame University, has termed the ICC "a monster," both in concept and reality, noting that it effectively "repudiates the Constitution, the Bill of Rights, and the Declaration of Independence and cancels the 4th of July." "In our system," Professor Rice explains, "law is supposed to be a rule of reason which, in a sense, controls the state and compels the state to operate under the law." But the super-jurisdictional ICC, he points out, has no legitimate basis for its claimed authority, no protections against abuses, no accountability, and virtually no limits to its jurisdiction. "What are the limits on the ICC?" he asks, and then answers, "There are none. It's insane!"

Civilian Disarmament

I am a United Nations fighting person.... I would fire upon U.S. citizens who refuse or resist confiscation of firearms banned by the U.S. government. - from a "Combat Arms Survey" given to members of the United States Marine Corps, 1994

The incredibly audacious schemes for national disarmament set forth in Freedom From War, Blueprint for the Peace Race, the Gorbachev-CFR Global Security Project, and other programs discussed are transparent plots to subject all the nations of the world, including the United States of America, to a global military-police state under an empowered United Nations. This is perfectly clear from any reasonable reading of the documents themselves. Please understand this critically important point: These proposals do not advocate "world disarmament," as is generally supposed, based on the "peace" rhetoric used to promote them. Instead they propose to transfer world armaments from the nation states to the global superstate envisioned by the one-world Insiders and their Communist-socialist cohorts. This represents the most gigantic, naked grab for power this world has ever seen. No previous world power or dictator has ever enjoyed such vast, unchecked power.

These proposals amount to giant "trust me" schemes that are so facially fraudulent as to be ludicrous. They could be compared to the situation in which city officials get together with Mafia kingpins and announce that they are going to join forces to fight the crime and violence that are ripping the community apart. Under any circumstances, such a proposal would rightly be viewed as absurdly dangerous and a betrayal of office by those elected to uphold justice. The sanity and integrity of the officials involved would be immediately suspect. However, there would be no lingering doubts about integrity if it became known to citizens that the mayor is involved in a multimillion dollar business deal with a mafia-owned dummy corporation, the police chief's election campaign is being

financed by mob-controlled unions, the district attorney's former law firm (in which his wife and brother are still partners) is the main counsel for the chief mafia don, and all the top judges are driving Rolls Royces and springing gangsters from jail, on the flimsiest of excuses, faster than they can be apprehended.

Under such circumstances, only the most dimwitted or willfully blind would fail to see that the city is facing a campaign of systemic corruption conceived and orchestrated by a criminal conspiracy. And if the police chief appoints a notorious mob hit-man, with an arrest record as long as his arm, to head a "task force" of convicted felons to go about the city disarming all the citizens - in the interest of peace and security, of course — it should then be crystal clear that the good citizens had better organize immediately and sweep the criminals from office, if they hope to have any chance of saving themselves and their community. In the face of such overwhelming evidence, only total fools, complete cowards, or corrupt souls who had already joined the conspiracy would fail to heed the call to battle.

Who is really calling the tunes and setting the agenda for the gun control "citizens network"? As usual, if you really want to know, follow the money. Handgun Control Incorporated, the National Council for a Responsible Firearms Policy, the Center to Prevent Handgun Violence, the ACLU, the National Council of Churches, and other groups that have led this campaign have been dependent upon these Insider feed troughs for funding. And they have depended on the CFR-dominated media cartel to disseminate their disinformation, while demonizing guns, gun owners, and all organized resistance to personal disarmament. The Second Amendment to the U.S. Constitution, which guarantees "the right of the people to keep and bear arms, shall not be infringed," has to go. Free people with the means to defend themselves are viewed by the United Nations as a threat to "peace."

To cut this chapter a bit short: In 2016, gun control is a very active "every day" topic in the US media and during the presidential elections, a hidden camera video surfaced from one of the Clinton Campaign staff directly stating that taking all the guns is a major goal... which of course should not be said out loud.

The goal is "progressive controlled disarmament", i.e. restricting gun right further and further so that "no state would have the military power to challenge the progressively strengthened U.N. Peace Force.... The manufacture of armaments would be prohibited except for those agreed types and quantities to be used by the U.N. Peace Force and those required to maintain internal order. All other armaments would be destroyed or converted to peaceful purposes."

"All other armaments would be destroyed." Notice that no provision is made to exempt arms owned by private citizens. An innocent oversight? Hardly. The UN itself, as we've already seen, is hardly sympathetic to private gun ownership. That's to be expected, since the Insiders who designed it and support it, along with all of the Communist regimes and most of the non- Communist countries who make up the UN membership, share a statist

hostility toward civilian possession of arms. Anyone familiar with the UN's history in this matter, as well as the history of its legal interpretation of treaties, will recognize that private arms are targeted for destruction under the term "all other armaments." We can expect that this terminology in Freedom From War and other agreements, conventions, and treaties will be cited as legally requiring the U.S. to disarm its civilian population. All under the guise of following "the rule of law."

This "gun grabbing", the disarmament of the people is not only limited to the US, it is a UN policy to be enforced everywhere. Interestingly, supplying and arming terrorist cells to fight proxy wars is still considered "ok" for the UN.

Regionalism

We cannot leap into world government in one quick step.... [T]he precondition for eventual globalization —genuine globalization — is progressive regionalization, because thereby we move toward larger, more stable, more cooperative units. — Zbigniew Brzezinski (CFR, TC), former National Security Advisor, 1995

The globalist Insiders and their Communist partners have done precisely this throughout the course of the 20th century. From one corner of the globe to the other, the Communists have sponsored revolutions and "wars of national liberation," pitting tribe against tribe, or exploiting some other division based upon race, creed, class, nationality, or past grievances. The Insiders, operating from their positions of power in the business, financial, political, and media worlds, have repeatedly supported these ruinous tumults. They have provided financial and propaganda assistance as well as undermined the targeted governments through direct political pressure or diplomatic intrigue from Washington, D.C. and London. (The prototype for these operations was first put into operation by the secret Rhodes network in South Africa in the late 19th Century. Carroll Quigley, in *The Anglo-American Establishment* (pp. 44-47 and 107-112) and *Tragedy and Hope* (pp. 136-144), provides an important inside look at the high-level conspiracy involved in the Jameson Raid (1895) and the instigation of the Boer War (1899-1902))

Through this convulsive process of controlled chaos, nations, kingdoms, and empires have been toppled, borders erased and redrawn, stable social and political systems uprooted, and whole peoples annihilated or driven as refugees into foreign lands. The maps of Europe, Africa, and Asia, especially, have been repeatedly redrawn in this fashion, with the result that the number of nation states in the world has increased from 72 at the end of World War II to 195 today. Some of these nations were artificially created by, and had their borders drawn by, the United Nations. Others, though not officially spawned by the UN, are the illegitimate offspring of the Insiders and the Communists who created the UN. In virtually every case where these new nations have been created or reformulated, the one-worlders have assured that corrupt, socialist regimes would be placed in power — either the totalitarian, revolutionary, socialist (Communist) variety, or the evolutionary, big-business, socialist (Fascist) variety. These newly created entities have been manipulated,

with relative ease, into joining various regional organizations established, ostensibly, for the mutual benefit of the countries involved. Thus, the Organization of American States (OAS), the Organization of African Unity (OAU), the North Atlantic Treaty Organization (NATO), the Asia Pacific Economic Cooperation (APEC), the European Union (EU), the European Monetary Union (EMU), the North American Free Trade Association (NAFTA), the Middle East-North Africa economic area (MENA), and other regional organizations have sprouted and grown into sizable establishments wielding increasing power. (We cannot examine all of these groups here, but we especially direct the readers to the following articles from *The New American* for important exposes on the more recently launched APEC and MENA regional organizations. "The Free Trade Charade" (December 27, 1993) reveals the CFR-TC hands and machinations in the formation and control of APEC. "Play It Again, Uncle Sam" (December 12, 1994) tells the amazing story of the overt controlling role of the CFR in sponsoring (together with the World Economic Forum and the Socialist International!) the 1994 Casablanca conference that launched MENA. Both articles are available at www.thenewamerican.com.)

this, as in so many other areas we have already examined, we see an amazing parallelism between the plans of the Pratt House one-worlders and those of the Communist strategists. Joseph Stalin, for instance, recognized that populations will more readily merge their national loyalties with a vague regional loyalty — with which they may be able to find some sense of connection or identity — than they will for a world authority. In his 1912 essay, "Marxism and the National Question," the aspiring dictator insisted that "regional autonomy is an essential element in the solution of the national problem."⁵ (Emphasis in original.) Again and again over the decades, the Communists emphasized the necessity of creating "regional organs" to facilitate the "eradication" of nationalism. In 1936, the official program of the Communist International declared:

"This world dictatorship can be established only when the victory of socialism has been achieved in certain countries or groups of countries, when the newly established proletarian republics enter into a federative union with the already existing proletarian republics ... [and] when these federations of republics have finally grown into a World Union of Soviet Socialist Republics uniting the whole of mankind under the hegemony of the international proletariat organized as a state."

The Communists and the Insiders were (and still are) working from the same page: They are building regional blocs with structures that override national sovereignty and can later be merged into a global superstructure. Two of the main regional IGOs that currently present a real and increasing danger to the United States are NAFTA and NATO, the former being a fairly recent creation formed for economic pretexts (trade, principally), and the latter of considerably older vintage established as a military alliance under a pretext of "collective security." Each of these IGOs is serving, in the words of a top globalist operative, as an "end run around national sovereignty, eroding it bit by bit."

The North American Free Trade Agreement (NAFTA) and the campaign to secure its passage in Congress were closely modeled after the Insiders' game plan four decades earlier to

establish the Common Market, later known as the European Community (EC) and (most recently) the European Union. And it is very clear that the Pratt House one-worlders intend to “evolve” NAFTA into a full-fledged, supra-national, regional government like the EU, but on an accelerated timeline, accomplishing in one decade what it has taken them four to do in Europe. NAFTA, which was originally promoted as a tripartite “free trade” agreement that would open markets and expand trade between Canada, the U.S., and Mexico, is now being transformed into a Western Hemisphere Free Trade Association (WHFTA), with a single currency (the U.S. dollar is being proposed, for now), a hemispheric central bank, and an entire hemispheric regime of regulations to “harmonize” business, industry, labor, agriculture, transportation, immigration, environment, health, trade, and other policies “from Alaska to Tierra del Fuego.” NAFTA is not, and never was, about “free trade.” Free trade — real free trade — is a voluntary exchange between two parties, unhampered by government intervention.

But NAFTA, like the European Union, seeks to regulate and control virtually every industrial, agricultural, environmental, and labor matter. Rather than creating or permitting economic freedom by eliminating government intervention, NAFTA seeks to homogenize the plethora of socialist interventions that now hamstring the U.S., Mexican, and Canadian economies. Insider Jacques Delors, the socialist president of the European Community Commission in 1992, when the NAFTA debate was raging, clearly saw the parallels between the two regional organizations. Delors gloated that “NAFTA is a form of flattery for us Europeans. In many ways, we have shown what positive, liberating effect these regional arrangements can have.” Naturally, what a thorough socialist and internationalist like Delors considers “positive” and “liberating” tends to jarringly conflict with “negative” and “retrograde” concepts such as independence, sovereignty, free enterprise, property rights, and constitutional limitations on power.

The CFR journal *Foreign Affairs* led the way, with a continuous fusillade of pro-NAFTA articles. Some even conceded, in essence, a key point made by this author and other NAFTA opponents at the time, to wit, that NAFTA was, in reality, a stealth plan to foist an EU-type regional government scheme upon Americans. “The creation of trinational dispute-resolution mechanisms and rulemaking bodies on border and environmental issues may also be embryonic forms of more comprehensive structures” M. Delal Baer approvingly wrote in the Fall 1991 *Foreign Affairs*. “After all, international organizations and agreements like GATT and NAFTA by definition minimize assertions of sovereignty in favor of a joint rule-making authority” Dr. Baer was not telling anything new to the CFR’s top political operatives; they were already lined up behind the internationalist program. Republican President George Bush (the elder) (CFR), Democrat House Majority Leader Richard Gephardt (CFR), and Republican House Minority Leader Newt Gingrich (CFR)* played the pivotal political roles in pushing “fast track” authority for NAFTA through Congress — with massive help from their CFR confreres in the worlds of business, banking, media, and academia. And the same players campaigned furiously and continuously for final approval of the deceitful agreement.

European Union

Because it is the internationalists' template for NAFTA/WHFTA, a rudimentary understanding of the EU — how it was launched and by whom, what it has become, and what it is becoming — is absolutely essential for American patriots, in order to be successful in stopping this insidious attack on our sovereignty and independence. Our treatment here must necessarily be brief. The following points are key to an understanding of the Common Market/United Europe movement and its counterpart, NAFTA, in this hemisphere:

- While posing as a “bottom-up” popular movement, it was completely a “top-down” enterprise, conceived and run entirely by an elite coterie of one-worlders.
- While posing as a native European movement, it was largely directed by U.S. Insiders and almost totally financed by U.S. taxpayers.
- Presented to Americans as a way to defend Western Europe from Communism, it has instead been used to drive Europe into socialism. • Warnings that the Common Market would erode national sovereignty were shouted down as paranoid ravings, but they have proven true.
- The national and local governments of the EU countries are being swallowed up and increasingly overruled by unaccountable Eurocrats and Eurojudges.
- The EU currency, the euro, and the Eurobank are destroying the value of the individual national currencies and the economic sovereignty of the member states.
- The EU governing institutions, acting in coordination with their fellow one-worlders in national governments, are becoming increasingly socialistic and oppressive.

All of this was foreseen by astute observers many years ago, when the foundations for this diabolical scheme were being laid. One of the most knowledgeable historians of the Common Market/EU, and an indefatigable critic of it, is Hilaire du Berrier, a contributing editor to *The New American* (and its predecessors *American Opinion* and *The Review of the News*). For more than four decades he has published his authoritative HduB Reports from Monte Carlo, Monaco and has repeatedly exposed the machinations and plans of the European and American Insiders for Europe and the world. “The CFR,” wrote du Berrier in January 1973, “saw the Common Market from the first as a regional government to which more and more nations would be added until the world government which the UN had failed to bring about would be realized. At a favorable point in the Common Market’s development, America would be brought in. But the American public had to be softened first and leaders groomed for the change-over.”

Mr. du Berrier chronicled in his reports the “secret history” of the Common Market, utilizing published statements from the European and American press, official documents of European governments, the diaries and memoirs of European Insiders, and his own unparalleled intelligence sources developed over a lifetime of direct participation in some of the most momentous events of the 20th century. Step by step, he detailed the Insider-

orchestrated program, from the pre-World War II era, through the war years, and then the post-WWII era. As du Berrier notes, the first concrete step toward the abolition of the European nation-states was taken in 1951 with the signing of the seemingly innocuous treaty creating the European Coal and Steel Community (ECSC). The ostensible purpose of this move was to so integrate the basic industries of coal and steel that a future war between France and Germany would be “physically impossible.”

The next nail in the coffin of European national sovereignty came on March 25, 1957 with the signing by the six ECSC nations (France, West Germany, Italy, Belgium, Netherlands, and Luxembourg) of the two Treaties of Rome. These created the European Economic Community (EEC or Common Market) and the European Atomic Energy Community (Euratom), which greatly furthered the process of merging the economic and energy sectors of the member states.

The next stage involved bringing the rest of Western Europe into the fold. In 1973 the United Kingdom, after more than two decades of resisting, came in, as did Ireland and Denmark-Greece joined in 1981, bringing the number of member states to ten. Spain and Portugal became the 11th and 12th members in 1986. The year 1986 also marked passage of the Single European Act, which mandated the establishment of “an area without internal frontiers, in which the free movement of goods, persons, services, and capital is ensured.” The 1991 Treaty of Maastricht committed the EU signatories to a single currency and a European central bank. The European Monetary Institute (EMI), the embryonic European central bank created by the treaty, was officially launched on January 1, 1994. Frankfurt was chosen as the site for the new entity and Alexander Lamfalussy, former head of the Bank for International Settlements (BIS) in Basel, Switzerland, was tapped to be president. (Significantly, the establishment of the EMI in Frankfurt coincided with that city’s March celebration of the founding of the Rothschild banking dynasty. About 80 members of the famous first family of international banking Insiders gathered in Frankfurt during the first week of March to commemorate the birth of dynasty founder Meyer Amschel Rothschild, who was born there 250 years ago. The Lamfalussy-BIS connection is also significant, inasmuch as the BIS has long been recognized by all observers of banking as the central bank of international banking.)

Work in the Shadows

Now let’s drop back for a moment and briefly examine the nutsand- bolts process and the main actors involved in putting this amazing scheme together, beginning with the European Coal and Steel Commission, or ECSC. “This was a truly revolutionary organization,” wrote Georgetown University Professor Carroll Quigley, the Insiders’ own inside historian, “since it had sovereign powers, including the authority to raise funds outside any existing state’s power.” The ECSC merged the coal and steel industries of six countries under a single High Authority. It was, Quigley pointed out, “a rudimentary government.” In his 1966 history of the world, *Tragedy and Hope*, Quigley wrote:

“This “supranational“ body had the right to control prices, channel investment, raise

funds, allocate coal and steel.... Its powers to raise funds for its own use by taxing each ton produced made it independent of governments. Moreover, its decisions were binding, and could be reached by majority vote without the unanimity required in most international organizations of sovereign states."

The proposal for the ECSC was introduced, amidst great fanfare, in May 1950 as the "Schuman Plan." (Although Jean Monnet, a consummate Insider and at that time head of France's General Planning Commission, was the real author of the plan) The American Insiders leapt to praise the Schuman Plan. John Foster Dulles, a CFR founder, called it "brilliantly creative." Dulles had become close pals with Monnet decades earlier, when both labored at Versailles following World War I to establish the League of Nations. Later, as Secretary of State, he would use U.S. power to help Monnet quash European opposition to a United Europe. Secretary of State Dean Acheson (CFR) termed it a "major contribution toward the resolution of the pressing political and economic problems of Europe."

Insider Jean Monnet, a life-long, self-avowed, multi-millionaire socialist, whom columnist Joseph Alsop (CFR) admiringly dubbed the "good, gray wizard of Western European union,"²⁰ was appointed the first president of the powerful new ECSC. Monnet knew full well just how subversive and revolutionary his new creation was. Merry and Serge Bromberger record in their biography *Jean Monnet and the United States of Europe* that when Monnet and his "brain trust" had outlined the basics of the ECSC proposal, they called in legal expert Maurice Lagrange to take care of the detail work. Monnet recognized that his scheme was so audaciously subversive it was doubtful that the governments of sovereign nations would ever agree to such a radical proposal. Unless, of course, the proponents just as audaciously employed deception, duplicity, bribery, extortion, and coercion. Which is precisely what they did. The Brombergers, who are ardent admirers of Monnet, admit the conspiratorial and totalitarian mind-set of their hero:

"Gradually, it was thought, the supranational authorities, supervised by the European Council of Ministers at Brussels and the Assembly in Strasbourg, would administer all the activities of the Continent. A day would come when governments would be forced to admit that an integrated Europe was an accomplished fact, without their having had a say in the establishment of its underlying principles. All they would have to do was to merge all these autonomous institutions into a single federal administration and then proclaim a United States of Europe.... Actually, the founders of the Coal and Steel Community would have to obtain from the various national governments —justifiably reputed to be incapable of making sacrifices for the sake of a federation — a whole series of concessions in regard to their sovereign rights until, having been finally stripped, they committed hara-kiri by accepting the merger."

Again, a bald admission that the Insider founders of the ECSC/EU knew from the start that they were slipping a noose around the neck of an unsuspecting Europe and that they Planned to gradually tighten it until it strangled their hapless victim — to death. Another very important source on this "hara-kiri" phenomenon is Insider Ernst H. van

der Beugel, honorary secretary-general of the Bilderberger Group, vice-chairman of the Netherlands Institute for Foreign Affairs (a CFR affiliate), member of the Trilateral Commission, Harvard lecturer, etc. In his book *From Marshall Aid to Atlantic Partnership* — which contains a foreword by “my friend Henry Kissinger” — van der Beugel explained the workings of the Monnet-CFR symbiosis and cited examples of the diplomatic bludgeoning of those officials who balked at administering national “hara-kiri.” For instance, he reported how Monnet’s Action Committee, which was “supported by funds from United States foundations,” ramrodded the negotiations for the Rome Treaties:

“Monnet and his Action Committee were unofficially supervising the negotiations and as soon as obstacles appeared, the United States diplomatic machinery was alerted, mostly through Ambassador Bruce ... who had immediate access to the top echelon of the State Department.... At that time, it was usual that if Monnet thought that a particular country made difficulties in the negotiations, the American diplomatic representative in that country approached the Foreign Ministry in order to communicate the opinion of the American Government which, in practically all cases, coincided with Monnet’s point of view.”

Monnet’s high-level friends, who assisted him in these strongarm tactics, included President Eisenhower, John Foster Dulles, John J. McCloy, David Bruce, Averell Harriman, George Ball, and C. Douglas Dillon — all CFR one-worlders. All of this was occurring, remember, in the immediate post-WWII years, when war-ravaged Europe had become very dependent on U.S. aid and looked to the U.S. for protection from the growing (Insider backed) Soviet threat.

Western Hemisphere EU

With this knowledge in mind, the first thing an observant onlooker should have noticed when proposals for NAFTA and WHFTA began floating about was the Pratt House imprint. It wasn’t difficult to spot; the CFR logo was all over these schemes, as we have already seen in the case of NAFTA.

The Insiders have stepped up their political, economic and propaganda efforts for the next step, an EU for the Western Hemisphere. Following the pattern of the ECSC-EU, most of the important early activity for the WHFTA was taking place “below the surface of public attention.” In 1999, after years of preparation, the business pages of newspapers began buzzing over the startling proposal by Argentine President Carlos Menem to abandon his country’s peso for the dollar. Similar proposals soon started flowing in from the leaders of Canada, Brazil, Mexico, and Venezuela. All of a sudden, “dollarization” became the sexy economic issue of the day, with Republicans and Democrats alike lining up with euphoric praise for the ultra-radical scheme. What we were witnessing, in reality, was another CFR ventriloquism show; like the European leaders a generation earlier, the Western hemispheric choir hymning the dollarization theme were merely mouthpieces for the CFR puppet masters. In April 1974, the CFR telegraphed much of what was to come when Foreign Affairs published a remarkably frank attack on U.S. sovereignty.

Authored by Columbia University law professor and veteran State Department official Richard N. Gardner (Clinton's Ambassador to Spain), the article was entitled "The Hard Road to World Order." It began with CFR member Gardner's lamentation that like-minded internationalists had failed to achieve what he termed "instant world government." He proposed a new and more effective route to the creation of an all-powerful, global superstate, asserting:

"In short, the "house of world order" will have to be built from the bottom up rather than from the top down. It will look like a great "booming, buzzing confusion," to use William James' famous description of reality, but an end run around national sovereignty, eroding it piece by piece, will accomplish much more than the old-fashioned frontal assault."

Gardner's piecemeal scheme for world government proposed, among other things, luring all nations into a variety of economic and political entanglements, including trade traps like NAFTA and WHFTA.

The Dollarization Bandwagon

In 1984, 10 years after Gardner's "Hard Road" manifesto, Foreign Affairs brought forth another audacious piece entitled "A Monetary System for the Future," by Richard N. Cooper (CFR, TC). Cooper, a professor of international economics at Harvard, boldly stated: "I suggest a radical alternative scheme for the next century: the creation of a common currency for all of the industrial democracies, with a common monetary policy and a joint Bank of Issue to determine that monetary policy."

The main problem with this scheme, Cooper realized, is that "a single currency is possible only if there is in effect a single monetary policy, and a single authority issuing the currency and directing the monetary policy." "How can independent states accomplish that?" he asked rhetorically. Naturally, he had the answer: "They need to turn over the determination of monetary policy to a supranational body"

More recently, in its July/August 1999 issue, Foreign Affairs explicitly took up the campaign for such a supranational power and dollarization, with an essay by Zanny Minton Beddoes of *The Economist*, one of Britain's leading Fabian Socialist periodicals. In the opening paragraph of his globalist propaganda tract, "From EMU to AMU?: The Case for Regional Currencies," Beddoes declared with oracular certainty: "By 2030 the world will have two major currency zones — one European, the other American. The euro will be used from Brest to Bucharest, and the dollar from Alaska to Argentina — perhaps even Asia."

Mr. Beddoes paid specific tribute to Richard Cooper's 1984 Foreign Affairs article, and threw bouquets to other "farsighted academics" who share his one-world view and chided skeptics who "argue that a national currency is a basic symbol of sovereignty that countries choose to forfeit only under extraordinary circumstances." Mr. Beddoes and his devious allies would surely like all of us to believe that a national currency is only

a “symbol of sovereignty,” but it is much more than that, of course. It is an essential ingredient of sovereignty, and a nation is at the fearful mercy of any entity to whom it may be foolish enough to forfeit so important a power. The Federal Reserve System and the International Monetary Fund have already vindicated that claim a thousand times over, and yet here we are about to be enticed into an even deeper abyss.

An even more extraordinary propaganda and disinformation salvo, this one aimed at a broader audience, was provided by the Time magazine cover story for February 15, 1999. Along with the headline, “The Committee to Save the World,” the cover featured the beaming visages of Federal Reserve Chairman Alan Greenspan (CFR), then-Treasury Secretary Robert Rubin (CFR), and Deputy Treasury Secretary Lawrence Summers (CFR), who followed Rubin in the top Treasury post. The article bore this riveting subtitle: “The inside story of how the Three Marketeers have prevented a global economic meltdown — so far.” The adulatory piece, written by Time’s Joshua Cooper Ramo (CFR), reverently refers to the CFR triumvirate as “the Trinity” and suggests that they are uniquely possessed of near-divine virtues and insights, and, thus, deserve our trust in establishing new monetary authority over the hemisphere. The “conservative,” CFR-run Wall Street Journal assured its readers that “Dollarization has arisen as a spontaneous movement within our hemisphere,” and urged U.S. political leaders to embrace this opportunity to “score a powerful victory for free trade and free markets.” But the dollarization bandwagon is about as spontaneous as the Normandy invasion, and it has nothing to do with free markets.

The current dollarization-NAFTA/WHFTA drive we are now witnessing is the culmination of a massive, long-range effort that began many years ago as an intermediate stepping stone to world government. Myriad documents, publications, statements, speeches, conferences, meetings, and events from the past several decades copiously document that effort. One such document is Western Hemisphere Economic Integration, a study by Gary Clyde Hufbauer (CFR and former CFR vice president) and Jeffrey J. Schott, published in 1994 by the Institute for International Economics (IE). While hardly a household name in America, the IE, according to Martin Walker of the London Observer, “may be the most influential think-tank on the planet,” with “an extraordinary record in turning ideas into effective policy.”

The dedication at the beginning of this IE book reads: “TO DAVID ROCKEFELLER, For his lifelong devotion to promoting economic development in Latin America and to improving relations among the countries of the Western Hemisphere. His wisdom has been an enormous source of encouragement to the work of the Institute and inspired us to explore the important ties that unite the Americas.” Mr. Rockefeller, of course, was chairman of the CFR from 1970-85 and, as we will see, has played an especially key role in the dollarization and Western hemispheric economic convergence scheme. Likewise the IE, which is virtually joined at the hip to the CFR.

So what did the Hufbauer-Schott study published by the IE advocate? Very simply, “a Western Hemisphere Free Trade Area (WHFTA)” following the sovereignty-destroying,

mega-state pattern of the European Union (EU). "After four decades of dedicated effort," said the report, "Western Europe has just arrived at the threshold of ... monetary union, and fiscal coordination. It seems likely that trade and investment integration will proceed at a faster pace within the Western Hemisphere...." "Finally," the study stated, "the more countries that participate in integration and the wider its scope, the greater the need for some institutional mechanism to administer the arrangements and to resolve the inevitable disputes, and the stronger the case for a common legal framework." (Which means supranational legislative, executive, and judicial institutions, naturally.) "The European Commission, Council, Parliament, and Court of Justice have many of the powers of comparable institutions in federal states," the report noted approvingly before commenting, "On this subject, we score Europe with a 5 [on a scale of 0 to 5]." Not satisfied with the EU model, the authors proposed going far beyond it. They asserted that "integration between NAFTA and Latin America should be legally open-ended; potentially the WHFTA should include countries outside the hemisphere." Indeed, presaging Beddoes, they asserted: "Economic logic suggests that the expansion of NAFTA in an Asian direction is just as desirable as its expansion in a Latin American direction."

In countless similar studies, speeches, lectures, and programs over the years, the CFR elitists have prepped the upper echelon of the U.S. and Western intelligentsia and business communities so that they would enthusiastically embrace this deadly nostrum - long before it appeared "spontaneously" for general public consumption.

The UN World Money System

In a globalized economy, everyone needs the IMF [International Monetary Fund]. Without the IMF, the world economy would not become an idealized fantasy.... [T]he IMF is the sovereign nations' credit union... — David Rockefeller, Trilateral Commission Founder, longtime former chairman of both the TC and CFR

[A] single currency is possible only if there is in effect a single monetary policy.... How can independent states accomplish that? They need to turn over the determination of monetary policy to a supranational body.... The key point is that monetary control ... would be in the hands of a new Bank of Issue, not in the hands of any national government.... — Professor Richard N. Cooper (CFR, TC), Harvard University, former U.S. Under Secretary of State

The fifth plank of the Communist Manifesto calls for "Centralization of credit in the hands of the State, by means of a national bank with State capital and an exclusive monopoly." 8 It stands to reason: You can't establish the total state, the "dictatorship of the proletariat," if people are allowed the freedom to produce their own goods and services, buy and sell what they need and desire, and travel where they please when and how they please. Communism is about rationed scarcity and total regimentation. Under Communism, "the State" (i.e., the ruling oligarchy that rules in the name of "the people") controls and rations food, clothing, housing, transportation, fuel, health care, education,

communications, publishing, entertainment — everything.

Monopoly control by “the State“ of all money, savings, and credit is as essential to the totalitarian Communist system as its secret police, torture chambers, firing squads, and gulags. We have seen throughout the 20th century that everywhere the Communists have taken over they have religiously followed Marx’s dictate in this matter. The reason is simple: power, control. Power to exercise total control over all human activity. Any private, independent initiative is seen as a threat to this monopoly control and, therefore, cannot be allowed. Most people find it amazing, then, to learn that the world’s premier “capitalist“ bankers and financiers subscribe to the game Marxist program. For decades, led by the Rhodes-Milner-Morgan- Rockefeller-RIIA-CFR-TC cabal, in one country after another, the Insider bankers have successfully pushed for the establishment of central banks. These central banks are patterned after our own Federal Reserve System, a completely Marxist operation that was foisted upon the American people by the banking trust in 1913, in one of the most gigantic deceptions in world history.* While having all the appearances of being run by national governments, these central banks are, in reality, run by the private RIIA-CFR-TC banking fraternity.

Why do these “capitalists“ support Marx’s program? Again, the reason is simple: power, control. Recall that arch-conspirator Cecil Rhodes’ “simple desire“ was nothing less than “the government of the world.“ The one-world banksters, like their Bolshevik brethren, want to control the world. And these sup. posed “mortal enemies“ have worked hand in hand throughout much of the past century to bring about this totalitarian, global control. As Ford Foundation President H. Rowan Gaither (CFR) put it, he and his one-world associates were making “every effort to so alter life in the United States as to make possible a comfortable merger with the Soviet Union.“ Spearheading this capitalist-Communist “merger“ scheme for much of the past century has been one of America’s wealthiest and most famous dynasties: the Rockefeller family. Microsoft mogul Bill Gates, investment wizard Warren Buffet, and dot.com upstarts have grabbed headlines in recent years as the “world’s richest“ tycoons, but their economic and political influence doesn’t begin to compare with the global reach and power of the Rockefellers.

David Rockefeller, the current pater familias of the super-rich clan, was for many years chairman of the CFR (1970-85), chairman of the Trilateral Commission, and chairman of Chase Manhattan Bank (formerly the Chase National Bank). Although now officially retired, he has remained actively engaged as chairman emeritus of all three institutions. During the entire “Cold War“ (and for decades before), the Rockefellers served as the primary banker for the Reds (Communists). As Congressman Louis McFadden, chairman of the House Banking Committee, noted in 1933:

“Open up the books of Amtorg, the trading organization of the Soviet Government in New York, and of Gostorg, the general office of the Soviet trade organization, and of the State Bank of the Union of Soviet Socialist Republics, and you will be staggered to see how much American money has been taken from the United States Treasury for the benefit of Russia. Find out what business has been transacted for the State bank of

Soviet Russia by its correspondent, the Chase Bank of New York....“

“Arch-capitalist“ David Rockefeller has always enjoyed immediate, privileged access to Communist countries and received the royal “red carpet“ welcome from them. His Chase Manhattan Bank’s Moscow branch enjoys the distinctive cache of being located at “1 Karl Marx Square.“ In 1974, the bank even saw fit to boast of this supposed trophy address in full-page newspaper advertisements that read, in part: “From 1 Chase Manhattan plaza to 1 Karl Marx Square, we’re international money experts with a knack for making good sense out of confusing East-West trade talk.“ David Rockefeller also expressed pride in the fact that Chase Manhattan was the first Western bank to open for business in Communist China.

A world central bank controlling all national monetary policies and currencies — until such time as a single global currency may be established — is essential to the one-worlders’ East-West merger scheme. Much of their scheming, naturally, goes on secretly, behind closed doors, at the continuous and mysterious meetings of such Insider circles of high-level finance as the G-7, G-22, IMF, World Bank, Bank for International Settlements, the Paris Club, the Bilderberg Group, and the World Economic Forum, as well as many smaller, informal conclaves. However, in order to advance their conspiratorial agenda, they must telegraph many of their plans to their lower-level operatives — in sanitized language, of course. By studying the documents, reports, speeches, and published utterances of these Insiders over the past several decades it is possible to determine their game plan and their ultimate goal. As we have seen in the preceding chapter, the Insiders’ penultimate goal is to create regional blocs in which the nation-states will become so economically and politically interdependent and integrated that the nations are subsumed into regional supergovernments (the EU, WHFTA, APEC, etc.) with regional central banks and regional currencies. Once this is done, it is small work to merge the regional entities into a single global government.

Origins of Global Aid

The institutions of the current “international economic system“ grew out of the 1944 Bretton Woods Conference. In addition to the original World Bank (WB) and International Monetary Fund (IMF), we now have an assortment of subsidiary institutions: International Development Association, International Finance Corporation, Asian Development Bank, Asian Development Fund, Inter-American Development Bank, African Development Bank, Multilateral Investment Guarantee Agency, and the Witeveen Facility. Over the past half century, this group of institutions has devastated our planet by stealing hundreds of billions of dollars from taxpayers in the West to fund socialism worldwide. No Communist butcher, socialist potentate, or Third World kleptocrat has escaped the largesse of these compassionate UN bankers. The cumulative effect of their efforts has been to subsidize bankrupt Communist regimes while saddling the poor of the developing countries with an impossible debt load. Periodically, this has meant hitting up the taxpayers of Japan and the Western countries for additional tens of billions of dollars for the IMF and WB institutions so that they can issue new “loans“ to the Communist

and socialist kleptocracies to make payments on their loans from the global banksters.

Although we have mentioned U.S. Assistant Secretary of the Treasury Harry Dexter White (CFR) previously, it is important to reemphasize his importance in the context of the Insiders' plan for a global monetary system. It was Soviet agent White who led the U.S. delegation and presided as the overall leader of the 45-nation Bretton Woods Conference. It was White — together with his inseparable “dear friend” John Maynard Keynes, the homosexual, Fabian Socialist, one-worlder — who designed the IMF. On November 6, 1953, Attorney General Herbert Brownell announced: “Harry Dexter White was a Russian spy. He smuggled secret documents to Russian agents for transmission to Moscow.” Brownell also reported that “Harry Dexter White was known to be a spy by the very people who appointed him to the most sensitive and important position he ever held in Government service. The FBI became aware of White's espionage activities at an early point in his government career and from the beginning made reports on these activities to the appropriate officials in authority. But these reports did not impede White's advancement in the Administration....”

Attorney General Brownell made it clear that, in spite of his Red record, White had received Insider clearance from the very top: “White's spying activities for the Soviet Government were reported in detail by the FBI to the White House by means of a report delivered to President Truman through his military aide, Brig. Gen. Harry H. Vaughn.” Comrade White was no ordinary “espionage” agent. As former Communist Whittaker Chambers observed, “Harry Dexter White's role as a Soviet agent was second in importance only to that of Alger Hiss — if, indeed, it was second.” It was Chambers who recruited White and introduced him to Col. Boris Bykov, of Soviet military intelligence, in 1937. In his capacity as U.S. Assistant Secretary of the Treasury Harry Dexter White deliberately held up congressionally approved gold shipments to bolster China's currency during World War II. His purpose in doing so was either to bring down the anti-Communist Chiang Kai-shek or to force a coalition government between Chiang's Nationalists and the Communists. As Assistant Secretary of State for Far Eastern Affairs, Walter S. Robertson candidly explained at the time: “In China, we withheld our funds at the only time, in my opinion, we had a chance to save the situation. To do what? To force the Communists in.”

Serving as technical secretary at Bretton Woods and White's right-hand man was fellow Treasury official Virginius Frank Coe, also a Soviet agent. With White's help, Coe became the first secretary of the newly created IMF, a powerful post he immediately put in the service of the world revolution.²⁵ What is most extraordinary in all of this is not that a few clever Communists managed to penetrate the top levels of the U.S. government by “outsmarting” the “wise men” of the American Establishment. That was not how it happened. Instead, it was top U.S. Insiders in our government — Dean Acheson, Robert Lovett, Averell Harriman, Nelson Rockefeller, Edward Stettinius, et al. — who repeatedly interceded to prevent exposure of the records of these Soviet agents, and to promote these traitors to even higher offices where they could increase their damage to

our nation!

Fruits of Global Aid

Under the leadership of White's and Coe's successors, the IMF has been subsidizing the global socialist revolution for decades. Cato Institute researcher Doug Bandow pointed out in 1994:

"[S]ix nations, Chile, Egypt, India, Sudan, Turkey, and Yugoslavia, had been relying on IMF aid for more than 30 years; 24 countries had been borrowers for between 20 and 29 years. And 47, almost one-third of all the states in the world, had been using IMF credit for between 10 and 19 years.... Since 1947, Egypt has never left the IMF dole. Yugoslavia took its first loan in 1949 and was a borrower in all but three of the succeeding 41 years.... Bangladesh, Barbados, Gambia, Guinea-Bissau, Pakistan, Uganda, Zaire, and Zambia all started borrowing in the early 1970s and have yet to stop two decades later."

Like domestic welfare drones, once these parasites attach themselves to the taxpayers, they never let loose. With the admission in 1992 of virtually all of the "ex-Communist" countries into both the IMF and World Bank, UN officials and their international welfare lobbyists launched a sustained campaign for massive new infusions of capital, which have thus far siphoned billions into Russia and its "former" Warsaw Pact allies, all of which boast socialist regimes run by lifelong Communists, who are now called "reformers." None of the above should surprise us, since the IMF was designed, as we've shown, by Communists, socialists and oneworlders. The Socialist International has acknowledged that the IMF is "in essence a Socialist conception." Free market economist Henry Hazlitt, who stood virtually alone in exposing and opposing the IMF at its inception in 1944, clearly recognized its socialist essence. Forty years later, in his book *From Bretton Woods to World Inflation*, he warned: "The world cannot get back to economic sanctity until the IMF is abolished.... We will not stop the growth of world inflation and world socialism until the institutions and policies adopted to promote them have been abolished." The warnings of this wise economist were absolutely correct in 1944. They were just as correct in 1984. And they are still correct today.

The World Bank, of course, has also played a central role in the global socialist revolution. India, one of the most pathetic socialist examples, has been the WB's biggest recipient. From the bank's creation in 1946 until the late 1960s, the WB funneled billions of dollars into socialist regimes, but by today's standards, the amounts divvied out were relatively small. "Then, in 1968, Robert McNamara became bank president and dedicated himself to continually raising loan levels," writes James Bovard in *The World Bank and the Impoverishment of Nations*. "By 1981, when McNamara resigned, lending had increased more than 13-fold from 883million to 12 billion. Loan levels have continued soaring: now the bank exists largely to maximize the transfer of resources to Third World governments."

Unfortunately, Bovard points out, "the bank has greatly promoted the nationalization of Third World economies and increased political and bureaucratic control over the lives of the poorest of the poor." Whenever the public, the press, or members of Congress

raise a hue and cry over the bank's deplorable activities, he notes, WB officials go on a "rhetorical crusade in favor of the private sector." But their bankrolling of revolution continues unabated. "The bank, more than any other international institution," says Bovard, "is responsible for the Third World's rush to socialism and economic collapse."

The IMF and WB have worked in close tandem with the top CFR-TC braintrusters and bankers from the beginning. An example of this can be seen in the 1996 Annual Report of the CFR by Council Chairman Peter G. Peterson, who writes that "one of our most important initiatives in the recent past has been to expand our outreach to international institutions and to individuals supportive of the Council's work around the world. I am quite literally writing this letter on an airplane en route to Asia, where I will meet with leaders of the Hong Kong forum and then continue on to Beijing, where our unique and quite unprecedented 'home and home' dialogue with the Chinese People's Institute of Foreign Affairs moves into its next phase at a critical time in the U.S.-China relationship. This trip was immediately preceded by an all-day discussion with our distinguished International Advisory Board, chaired by David Rockefeller, and capped off with an intensive dinner discussion with James D. Wolfensohn, president of the World Bank."

This account suggests a fascinating decision-making hierarchy in international affairs. The CFR's International Advisory Board, under the direction of David Rockefeller, set the policy guidelines for U.S.-Chinese affairs; CFR Chairman Peterson was dispatched to Beijing to confer with his counterparts in the Chinese equivalent of the CFR; a few months later, Secretary of State Warren Christopher (CFR) was sent to lay the groundwork for an eventual summit between heads of state Bill Clinton (CFR) and Jiang Zemin. And James Wolfensohn (CFR) gets new WB funds rolling for the joint Beijing-Insider projects.

Revolution Over Profits

In his 1979 book *With No Apologies*, Senator Barry Goldwater opined that "the Council on Foreign Relations and its ancillary elitist groups are indifferent to Communism. They have no ideological anchors. In their pursuit of a new world order they are prepared to deal without prejudice with a communist state, a socialist state, a democratic state, monarchy, oligarchy — it's all the same to them."

Although this cynical observation may seem, to the casual observer, an adequate explanation for the Insider-Communist symbiosis of the past few decades, it is sorely misleading. The Insiders are not "indifferent to Communism." It is not "all the same to them." Yes, they have done business with and arranged loans for democratic states, monarchies, and "right-wing" dictatorships and oligarchies, as well as socialist and Communist dictatorships. But the pattern that emerges is striking: Virtually always, they have used the leverage they have gotten through loans to undermine the non-socialist, non-Communist governments and push them into the Communist-socialist camp. David Rockefeller returned from a visit to Communist China in 1973 (in his capacity as chairman of the Chase Manhattan Bank) declaring that "the social experiment in China under Chairman Mao's

leadership is one of the most important and successful in human history." According to the most reliable estimates, Mao Tse-tung's "social experiment" had by that time involved the murder of as many as 64 million Chinese by the Communists.

In April 1974, David Rockefeller's Chase Manhattan Bank loaned the USSR \$150 million to build the world's largest truck factory near the Kama River. The first trucks out of that plant carried Soviet soldiers into Afghanistan in 1979.³⁷ In 1982 the chairman of the CFR, TC, and Chase Manhattan expanded on his business "philosophy" during a 10-nation swing through Africa, saying that "we have found we can deal with just about any kind of government, provided they are orderly and responsible." ³⁸ By that standard, Rockefeller would have had no trouble dealing with the "orderly and responsible" Nazi regime of Adolf Hitler. He found the Communist dictator of Zimbabwe, Robert Mugabe, to be a "very reasonable and charming person" and said that the presence of 20,000 Cuban soldiers had no "direct bearing on American business operations in Angola. Clearly it has not interfered with our own banking relations."

Rockefeller has welcomed Fidel Castro, Nelson Mandela, Thabo Mbeki, and other assorted terrorists and tyrants to the CFR's prestigious headquarters. This is not just about "business" and "profit," as Senator Goldwater suggested, and as David Rockefeller's remarks above were intended to infer. This is about power.

Masterminding Economic Collapse

An interesting window into the mindset of these Insiders was provided in 1990 by Canadian journalist Daniel Wood, who journeyed to the sprawling southern Colorado estate of one of Canada's most renowned citizens, Maurice Strong. Mr. Strong is an engaging and controversial fellow: mega-millionaire industrialist, radical environmentalist, New Age spiritualist, United Nations plutocrat, fervent one-world socialist, economic savant, global gadfly, and close pal of David Rockefeller and Mikhail Gorbachev. Mr. Wood spent a week at Strong's Baca Grande ranch interviewing this illustrious "world citizen."

During the course of Wood's visit, Strong told him of a novel he had been planning to write. It was about a group of world leaders who decided the only way to save the world was to cause the economies of the industrialized countries to collapse. Strong explained how his fictional leaders had formed a secret society and engineered a worldwide financial panic and, ultimately, the economic crash they sought. Mr. Wood's account of that conversation appeared in the May 1990 issue of *West* magazine:

"Each year, he [Strong] explains as background to the telling of the novel's plot, the World Economic Forum convenes in Davos, Switzerland. Over a thousand CEO's, prime ministers, finance ministers, and leading academics gather in February to attend meetings and set economic agendas for the year ahead. With this as a setting, he then says: "What if a small group of these world leaders were to conclude that the principal risk to the earth comes from the actions of the rich countries? And if the world is to survive, those rich countries would have to sign an agreement reducing their impact on the environment. Will they do it?... The group's conclusion is 'no.' The rich countries won't do it. They

won't change. So, in order to save the planet, the group decides: Isn't the only hope for the planet that the industrialized civilizations collapse? Isn't it our responsibility to bring that about? ... It's February. They're all at Davos. These aren't terrorists. They're world leaders. They have positioned themselves in the world's commodity and stock markets. They've engineered, using their access to stock exchanges and computers and gold supplies, a panic. Then, they prevent the world's stock markets from closing. They jam the gears. They hire mercenaries who hold the rest of the world leaders at Davos as hostages. The markets can't close. The rich countries...."

Wood wrote that at that point the tycoon cum novelist "makes a slight motion with his fingers as if he were flicking a cigarette butt out the window." Pffffft! The fates of hundreds of millions, even billions, of people callously sealed with the flick of a finger—their livelihoods, life savings, jobs, businesses, homes, dreams—tossed out like a cigarette butt. All for a good cause ("to save the planet"), of course. Wood wrote: "I sit there spellbound. This is not any storyteller talking. This is Maurice Strong. He knows these world leaders. He is, in fact, co-chairman of the Council of the World Economic Forum. He sits at the fulcrum of power. He is in a position to do it."

Perhaps more important — and what makes this amateur, would-be novelist's tale so alarming — is that, from everything we know about the eminent Mr. Strong, he is very likely inclined to do it! Maurice Strong is the archetypal global elitist — a super-wealthy collectivist of unbridled arrogance, who believes that he, and a select few others, have been chosen to run the world and refashion it according to their Utopian designs. As Secretary-General of UNCED, the UN Earth Summit in Rio, Strong ranted against the lifestyles of "the rich countries" much like the "hero" of his novel. He declared that "the United States is clearly the greatest risk" to the world's ecological health. "In effect," Strong charged, "the United States is committing environmental aggression against the rest of the world."

In a 1991 UNCED report, Strong wrote: "It is clear that current lifestyles and consumption patterns of the affluent middle-class ... involving high meat intake, consumption of large amounts of frozen and 'convenience' foods, ownership of motor-vehicles, numerous electric household appliances, home and workplace air conditioning ... suburban housing ... are not sustainable." Moreover, he insisted, a shift is necessary "towards lifestyles ... less geared to ... environmentally damaging consumption patterns." Those are just a small sampling of Strong's eco-Stalinist tirades. And remember, as Daniel Wood said, this man is in a position to carry out the "fictitious" plan he outlined. Wood was not exaggerating. Maurice Strong is an Insider's Insider. The oil and energy magnate is the former head of Dome Petroleum of Canada, Power Corporation of Canada, Ontario Hydro, and Petro Canada. In 1972, he made his debut on the world stage as Secretary-General of the first UN environmental conference, held in Stockholm, Sweden. He was at the time also a trustee of the Rockefeller Foundation, one of the premier, longtime promoters of world government. Following the Stockholm confab, he was named to head the newly created United Nations Environment Program (UNEP). (Strong is also a mover

and shaker in such Insider circles of power as the Club of Rome, the Aspen Institute for Humanistic Studies, the World Federation of United Nations Associations, the World Economic Forum, the World Future Society, the Lindisfarne Association, Planetary Citizens, the World Wilderness Congress, the Business Council for Sustainable Development, the Trilateral Commission, the World Resources Institute, the Gorbachev Foundation, the World Bank, and the Commission on Global Governance.)

In 1991, Strong teamed up with David Rockefeller, founder of the Trilateral Commission, to write the promotional introductions to the Trilateral Commission plan for radical global “reform” entitled *Beyond Interdependence: The Meshing of the World’s Economy and the Earth’s Ecology*. This eco-socialist paean to world government, Strong claimed, “provides the most compelling economic as well as environmental case for such reform that I have read.” One of the Trilateral “reforms” that Strong, no doubt, fancied was the proposal for “a new global partnership expressed in a revitalized international system in which an Earth Council, perhaps the Security Council with a broader mandate, maintains the interlocked environmental and economic security of the planet.”

As “luck” would have it, one of the new global entities that came into being as a result of the Earth Summit was an Earth Council. One guess as to who was appointed to head it. Yes, Maurice Strong is the chairman. Together with Mikhail Gorbachev and other one-world luminaries, Maurice Strong has been promoting the environmental manifesto known as the “Earth Charter.” This charter envisions a planetary socialist welfare state, which would, among other things, “promote the equitable distribution of wealth within nations and among nations.” And Messrs. Strong, Gorbachev, Rockefeller, et al., will be in charge of the distribution, of course. But before they can “distribute” the world’s wealth, they must first take full control of it. Which means it’s really about power. That’s what all wealth redistribution schemes are always really about.

The creation of a global central bank, a global currency, a global tax system, and a global trading authority have been key objectives of world government advocates for decades. Centralized monetary and economic institutions of this kind would make the orchestrated world financial collapse scenario Maurice Strong envisions mere child’s play. They would also facilitate the grand redistribute-the-wealth schemes of the UN’s bureaucrats. As was evident in the previous chapter with regard to the EU and WHFTA, the oneworld Insiders recognize that economic control is their sure path to political control.

Pooling Monetary Sovereignty

One of the Insiders’ leading technicians helping to design their envisioned “new world order” is Harvard University Professor Richard N. Cooper (CFR, TC). Writing in the Fall 1984 edition of the CFR journal *Foreign Affairs*, Cooper proposed “a radical alternative scheme” (his words) that would mean the end of America as we know it. In his article entitled “A Monetary System for the Future,” the Harvard don wrote:

“A new Bretton Woods conference is wholly premature. But it is not premature to begin thinking about how we would like international monetary arrangements to evolve in

the remainder of this century. With this in mind, I suggest a radical alternative scheme for the next century: the creation of a common currency for all of the industrial democracies, with a common monetary policy and a joint Bank of Issue to determine that monetary policy.”

“The currency of the Bank of Issue could be practically anything,” the CFR economist continued. “The key point is that monetary control — the issuance of currency and of reserve credit — would be in the hands of the new Bank of Issue, not in the hands of any national government....” (Emphasis added.) The problem, he noted, is that “a single currency is possible only if there is in effect a single monetary policy, and a single authority issuing the currency and directing the monetary policy. How can independent states accomplish that? They need to turn over the determination of monetary policy to a supranational body....” (Emphasis added.) As the *Washington Post* put it: “The real point is that a common currency means one common country, and all else is details to be filled in later.” (Emphasis in original.) Precisely! And the CFRTC ueberlords are more than willing to provide those details. Mr. Cooper realized that selling this flagrantly totalitarian idea to the public would not be an easy, overnight job. “This one-currency regime is much too radical to envisage in the near future,” he admitted. “But it is not too radical to envisage 25 years from now.... [I]t will require many years of consideration before people become accustomed to the idea.”

Overcoming objections to “a pooling of monetary sovereignty” - even with friendly nations — would be difficult under any circumstances. But how could Americans ever be expected to go along with a “radical scheme” to merge economically with Communist countries? It would be difficult, Cooper conceded, but doable, nonetheless. He wrote: “First, it is highly doubtful whether the American public, to take just one example, could ever accept that countries with oppressive autocratic regimes should vote on the monetary policy that would affect monetary conditions in the United States.... For such a bold step to work at all, it presupposes a certain convergence of political values....”

Creating Convergence

Cooper and his confreres in the CFR-dominated media, think tanks, and academia went to work to create that “convergence of political values” in the public mind. A flood of articles and op-eds in the *New York Times*, *Los Angeles Times*, *Washington Post*, *Wall Street Journal*, *Foreign Affairs*, *Foreign Policy*, *Christian Science Monitor*, *The Economist*, etc. soon began hammering home the theme that the United States and Western Europe must help Gorbachev’s “perestroika” transform the Soviet Union in the direction of “democracy” and a market economy. After the purported “collapse of Communism” in 1989, they stepped up the convergence drum beat, asserting that the taxpayers of the West must provide Russia and all the nations of her “former” satellite empire more billions of dollars in credits and aid to help them make the transition to freedom and stability.

The essential point here should not be missed: The advocates of world government intend that their planned global superstate, although “initially limited,” will, ultimately, exercise

unlimited planetary power, a power far beyond that realized by Hitler, Stalin, or Mao. Surely, if we do not stop their megalomaniacal plans, we will see them use this power in much the same way as outlined by Maurice Strong — and in ways even more brutal and horrific.

15.4 Bringing it Home

One-World Religion

“The histories and symbols that served our fathers encumber and divide us. Sacraments and rituals harbor disputes and waste our scanty emotions.... The modernization of the religious impulse leads us straight to the effort for the establishment of the world state as a duty...” — H.G. Wells, author, historian, and one-world Fabian Socialist, *The Open Conspiracy*, 1928

“We must now forge a new “Earth Ethic“ which will inspire all peoples and nations to join in a new global partnership of North, South, East and West.” — UN publication *In Our Hands: Earth Summit '92*

A majority of Americans still consider themselves Christian, but find they are increasingly in retreat before a steady onslaught of anti-Christian media assaults, court rulings, attacks from academia, and pop culture offerings. Meanwhile, hedonism, Satanism, witchcraft, astrology, vampirism, homosexuality, Eastern mystic cults, and “Indigenous Peoples“ religions are exalted by the same media mandarins and Hollywood elites who control our “news“ and “entertainment.“ What very few of these Americans realize is that this hideous “spiritual transformation“ is tied directly to the United Nations, where the oneworld architects intend to enthrone their planned New World Religion. And as this Satanic enthronement progresses (yes, we mean, literally, Satanic), Christians — and Orthodox Jews and Muslims as well — will find themselves increasingly in the crosshairs of the new world order, singled out as “bigoted,“ “dogmatic,“ and “intolerant“ for insisting on clinging to their “archaic“ and “divisive“ religious beliefs.

Religious leaders and adherents of all sects are being aggressively evangelized to adopt the UN’s new “global ethic,“ a gooey melange of religious syncretism, environmentalism, socialism, and militant secular humanism. People of all religious backgrounds are being enlisted to embrace this “global ethic“ as a “core belief“ of their religious faith. As more and more people adopt this new “planetary consciousness,“ the one-world Insiders know that support will grow for:

- global disarmament, for both individuals and nations
- world government
- paganism
- environmental extremism
- socialism and Communism

- religious persecution, in the name of “tolerance” and combating “hate”

If the above statements are shocking and incredible to you, then you are unaware of easily verifiable facts concerning events and developments that are dramatically impacting our society. Many of the steps in this diabolic scheme are taking place before our very eyes, in the open, as British novelist and Fabian Socialist historian H.G. Wells proposed in 1928 in his *The Open Conspiracy: Blue Prints For a World Revolution*. Wells, an ardent one-worlder and one of the most widely read authors and intellectuals of his day, conceded that human history has proven that religious ideals are essential to the sustaining of any society. However, having rejected Christianity and all other religions, he determined that only a new “modern” religion could sustain the socialist world government he was advocating. “The conspiracy of modern religion against the established institutions of the world must be an open conspiracy,” he averred, and must reject “secret methods or tactical insincerities.” This statement was itself a “tactical insincerity,” of course, since Wells and his one-world, socialist comrades never planned to be completely open about their schemes.

Indoctrination: Subordination to the State

Wells himself is very much alive in “world order” circles. Quotations from his works are scattered throughout New Age and new world order books and publications. The World Federalist Association (WFA), for instance, continues to publish some of his essays, including “How a Federal World Government May Come About,” taken from his book *The Outline of History* (1920). According to Wells, in that one-world polemic:

“The essential task of men of goodwill in all states and countries remains the same, it is an educational task, and its very essence is to bring to the minds of all men everywhere, as a necessary basis for world co-operation, a new telling and interpretation, a common interpretation, of history.... The world perishes unless sovereignty is merged and nationality subordinated.”

Wells sets down what he sees as “the broad fundamentals of the coming world state.” “It will be based,” he says, “upon a common world religion, very much simplified and universalized.... This will not be Christianity nor Islam nor Buddhism nor any such specialized form of religion, but religion itself pure and undefiled; the Eightfold Way, the Kingdom of Heaven, brotherhood, creative service, and self-forgetfulness. Throughout the world men’s thoughts and motives will be turned by education.... And education, as the new age will conceive it, will go on throughout life.” Sound familiar? This is precisely what we have been experiencing in our schools and colleges, as well as the government-directed “lifelong learning” programs that gradually have become an integral part of so many corporate and governmental jobs. Which is not to imply that we are, or ought to be, opposed to “lifelong learning,” as the term is commonly understood, in its most innocent and benign meaning. To the contrary, we accept it as a fact of life. Ours is not the first generation to realize that learning does not (or should not) end with

the completion of formal schooling; wise people (of all socio-economic and educational backgrounds) throughout the ages have recognized the need for (as well as the pleasure to be derived from) continuous lifelong education. In today's fast-changing, technology-driven world, it is more important than ever to be constantly updating skills and learning new ones.

However, in using the same terms, we do not all mean the same thing. We should be very familiar with this phenomenon by now. "Tolerance" no longer means "live and let live" civility; it means using the power of government to force majority acceptance of the perverse practices of a militant minority. "Peacekeeping" means carpet-bombing and/or invading and militarily subjugating whomever the UN has designated as villain du jour. "Multiculturalism" means demonizing Christian and European civilization for genocide, exploitation, and raping Mother Earth. "Investing" doesn't mean private individuals freely deciding what to do with their own capital assets; it means politicians and bureaucrats plundering your savings through taxation, and then spending it on socialist boondoggles. So we should not be surprised that the same coercive Utopians have also co-opted "lifelong learning." In their lexicon it no longer is an elective; the individual cannot be allowed to determine if and when he will take any continued formal schooling. Such important decisions must be made by superior "experts." Or as Wells put it, "we should have the collective affairs of the world managed by suitably equipped groups of the most interested, intelligent and devoted people" — such as himself and his fellow Fabians.

Subversive World Council of Churches

One of the early major attempts to co-opt religion in the service of world government came in 1942. Time magazine devoted considerable space in its March 16, 1942 issue to a report on a gathering at Ohio Wesleyan University of hundreds of delegates representing the more than 30 denominations called together by the notoriously pro-Communist Federal Council of Churches (FCC). The FCC (which later changed its name to the National Council of Churches, NCC) was the American branch of the Communist-controlled World Council of Churches, which still exists and has never ceased its subversive activities. Chairing the 1942 FCC Wesleyan confab was Insider John Foster Dulles, a founder of the CFR and, together with his brother Allen Dulles (CFR), a member of the Woodrow Wilson-Colonel House team that tried to foist the League of Nations on the United States. John Dulles would later go on to promote the new world order as Secretary of State under President Eisenhower. However, at the 1942 FCC conference he was lining up church support for the United Nations that would be coming three years later.

As Time reported, the Dulles-led conference produced a political program of "extreme internationalism." Some of the "high spots" of that program were, said Time:

- Ultimately, "a world government of delegated powers."
- Strong immediate limitations on national sovereignty.
- International control of all armies and navies.
- "A universal system of money...."

- Progressive elimination of all tariff and quota restrictions on world trade.

According to Time, the conference “held that ‘a new order of economic life is both imminent and imperative’ — a new order that is sure to come either ‘through voluntary cooperation ... or through explosive political revolution.’” “ ‘Collectivism is coming whether we like it or not,’ the delegates were told by no less a churchman than England’s Dr. William Paton, co-secretary of the World Council of Churches.” The problem is that Dr. Paton and his comrades did want collectivism, and they were doing everything in their power to fasten it upon the peoples of the world, through both patient gradualism and “explosive political revolution.” The Time story finished on this note:

“The ultimate goal: “a duly constituted world government ... an international court ... international administrative bodies with necessary powers, and adequate international police forces and provision for enforcing its worldwide economic authority.”

The Dulles-FCC propaganda parley no doubt greatly assisted the Insiders’ globalist plans, both in building religious support for U.S. entry into the forthcoming United Nations, and in neutralizing opposition to the same organization. In the decades since that confab at Ohio Wesleyan University, UN religious summitry has played an increasingly important part in the one-world transformation scheme.

The granddaddy of these convocations, the United Nations Millennium World Peace Summit of Religious and Spiritual Leaders, was held in New York City in late August 2000 (not to be confused with the gathering of Heads of State at the UN’s Millennium Summit, which followed in September). The Peace Summit offered terrifying glimpses of the outrageous and demonic “global spirituality” the Insiders have planned for us. The outrages began even before the Peace Summit began, when the UN organizers announced that the Dalai Lama would not be invited because his attendance would offend Communist China! So, while more than a thousand religious leaders and gurus representing every conceivable “faith tradition” gathered in New York under banners of “tolerance,” “peace,” and “brotherhood,” one of the world’s best-known religious figures, the revered leader of millions of Buddhists, and a man who exemplifies those virtues the UN summit extolled, was barred from attendance — because the totalitarian, genocidal butchers who have been brutally occupying his tiny kingdom of Tibet for half a century would get upset!

In his address to the UN’s “spiritual” Peace Summit, Bishop Fu Tieshan, the puppet-stooge of these Red Chinese persecutors, said:

“Let us pray for the wisdom of the Holy Spirit, respect the purposes and principles of the U.N. Charter, and from now on, guard against and put an end to anything that taint and desecrate religious purity... Today in China, facts and other practice genuinely reflect the harmony between different religions. And under the protection of the Constitution and other laws, we enjoy comprehensive and full religious freedom.”

In an obvious attack on the Dalai Lama and the many brave religious believers suffering

under the Communist regime, “Bishop“ Fu said: “At present, there are still many violent and evil activities going on ‘in the name of religion.’ Some people have made use of religious differences to fuel ethnic feuds and provoke so-called conflicts of civilizations; some want to trample upon the sovereignty of other countries under the pretext of ‘protecting religious human rights.’” Did any of the esteemed spiritual leaders attending the Peace Summit walk out in protest over this brazen display of hypocrisy? Did they announce their “solidarity“ with their brothers who are suffering for their religious convictions? Did they demand that Red China stop its vicious persecution of all religions? Did they even timidly ask our Beijing “partners“ to light en up with the truncheons and thumbscrews? Hah! Not even close! Instead, they politely applauded (some enthusiastically cheered) this puppet of the Communist persecutors. Most Americans, if they saw or heard any coverage of the Summit in the major CFR-dominated media, were not apprised of the cruel charade that was played out there. Few are aware that Bishop Fu Tieshan is a fraud or that religionists of all types are routinely persecuted in Red China.

CNN (Note: usually known as “Clinton News Network“ in 2016) certainly wasn’t going to expose this sham; CNN founder and current vice-chairman of CNN parent company Time Warner, Ted Turner, not only was a major financial sponsor of the Summit, but also honorary chairman of the event. Turner, who is infamous for his profanity, womanizing, and scathing verbal attacks on Christianity, Christian leaders, the Ten Commandments, and Biblical morality, couldn’t resist using the Summit podium to criticize the “very intolerant“ Christianity of his boyhood and to propose a more global, all-embracing spirituality for the “one human race.“

The “spirituality“ that One-World Ted and his fellow Insiders have in mind is to be found in the UN’s “Declaration of a Global Ethic,“ which UNESCO commissioned renegade “theologian“ Hans Kung to draft.³⁸ Yes, while real Christian heroes like Cardinal Kung, who suffer torture for their faith, are completely ignored by the CFR “news“ cartel, left-wing ideologues like Hans Kung are celebrated. For those who like their theology dished up from the likes of Ted Turner and Bishop Fu Tieshan — which appears to be most of the globalist folk who populate the UN diplomatic corps and delegations to UN conferences — Hans Kung was a perfect choice. In his 1991 book *Global Responsibility: In Search of a New World Ethic*, Kung declared:

“Any form of... church conservatism is to be rejected.... To put it bluntly: No regressive or repressive religion — whether Christian, Islamic, Jewish or of whatever provenance — has a long-term future.“

Moreover, he said: “If ethics is to function for the well-being of all, it must be indivisible. The undivided world increasingly needs an undivided ethic. Postmodern men and women need common values, goals, ideals, visions.“ That’s right, UN “diversity“ is broad enough to embrace every imaginable navel-gazing mystic, diapered swami, saffron-robed guru, befeathered sachem, spellchanting shaman, New Age psycho-babbler, tree-worshipping pantheist, witch, warlock, druid, animist, or Marxian spiritualist — but not those terrible, monotheistic creeds. Mustn’t tolerate any of those “dogmatic,“ “absolutist“ faiths; of that

the “tolerant” globalists are dogmatically, absolutely certain.

Sri Chinmoy is the one-world, New Age guru who runs the UN’s Meditation Room and regularly leads the meditations. Chinmoy has offered his prophecy regarding the UN’s divine mission:

“The United Nations is the chosen instrument of God; to be a chosen instrument means to be a divine messenger carrying the banner of God’s inner vision and outer manifestation. One day, the world will ... treasure and cherish the soul of the United Nations as its very own with pride, for this soul is all-loving, all-nourishing, and all-fulfilling.”

“Spiritual Leaders” for the New Millennium

It was Master Chinmoy, appropriately, who presented the UN’s U. Thant Peace Award to Maurice Strong, the globe-trotting billionaire best known for his role as Secretary-General of the 1992 UN Earth Summit in Brazil. Strong was receiving the honor, said Chinmoy, for “his lifelong commitment to the soaring ideals of the United Nations.” The award was named for U Thant, the Burmese Marxist who served as the UN’s third Secretary-General and who, in 1970, brazenly declared: “Lenin was a man with a mind of great clarity and incisiveness.” Maurice Strong, who apparently shares Lenin’s “great clarity and incisiveness,” has been a driving force in bringing the most extreme enviro-Leninism and far-out religio-Leninism into the social, political, economic, religious mainstream.

- Mohammed Ramadan, president of the UN’s Society for Enlightenment and Transformation, which has offices in the basement of the UN building where every conceivable variety of “spiritual sage” — witch doctors, mystics, “channelers” UFO enthusiasts, reincarnated Masters — contribute their cosmic energies to the sacred mission of the UN.
- Apostate theologian Matthew Fox, whose radical New Age spirituality embraces Wicca, homosexuality, abortion, and oneworld socialism. An apostle of the Gaia (Earth Goddess) Gospel, Fox says, “I believe the appropriate symbol of the Cosmic Christ... is that of Jesus as Mother Earth crucified yet rising daily... [T]he symbol of which I speak holds the capacity to launch a global spirituality of untold dimensions appropriate for the third millennium.”
- Gerald Barney, founder and executive director of the Millennium Institute and a co-chair of the 1993 Parliament of World Religions. In his keynote address at that summit, he said that “an internationally famous, highly influential author on sustainable development told me bluntly, ‘Religion must die. It is the fundamental cause of virtually all social, economic, and ecological problems and much of the violence in the world.’”⁴⁷ The only alternative to the destruction of religion, Barney asserted, is the “reinterpretation and even rejection of ancient traditions and assumptions” and the creation of a “‘sustainable’ faith tradition on earth....”
- William Irwin Thompson, founder of the (Luciferian) Lindisfarne Association. “We have now a new spirituality, what has been called the New Age movement,” Thompson says.

“This is now beginning to influence concepts of politics and community in ecology... This is the Gaia [Mother Earth] politique ... planetary culture.”

- Mikhail Gorbachev, former Soviet dictator, butcher of Afghanistan, and chairman of the Gorbachev Foundation and Green Cross International. In a Los Angeles Times interview of May 8, 1997, Gorbachev insisted humanity must embrace “a new environmental legal code rooted in an Earth Charter ... a kind of Ten Commandments, a ‘Sermon on the Mount,’ that provides a guide for human behavior toward the environment in the next century and beyond.” “The most important thing,” he said, “is the shaping of a new value system” from a “new synthesis” of “democratic, Christian, and Buddhist values ... which affirm such moral principles as social responsibility and the sense of oneness with nature and with each other.”

Christian-Marxist “Unity”

Following the conclusion of the State of the World Forum 2000 (September 4th-10th) in New York, Mr. Gorbachev was off on a multi-week evangelistic crusade that took him to some surprising venues. He was received with apparent enthusiasm at churches in Florida and Tennessee. Then it was off to Salt Lake City, where Gorby addressed Franklin Covey’s International Symposium at the Salt Palace.* At a Salt Lake City press conference, the Nobel Prize winner lamented to the assembled media corps that “we do not have a new world order, the kind of new world order that we need.”

Later, in California, he shared a stage with William “Star Trek” Shatner, before beaming his “global ethic” sermonette to a global television audience from the Reverend Robert Schuller’s famous Crystal Cathedral. “I know that he calls himself an atheist,” Rev. Schuller said, but Schuller believed, nonetheless, that God had used Gorbachev “in a mighty way.” And he hoped that one day the former Communist dictator would become “a man of faith.”

Comrade Gorbachev, after all, is a “man of faith”: He believes in the gospels of Marx and Lenin. As we have already noted, Gorbachev declared in 1989: “I am a Communist, a convinced Communist. For some that may be a fantasy. But for me it is the main goal.” By both word and act, Gorbachev has confirmed many times since then his continued adherence to his revolutionary faith. To anyone familiar with Communist dialectical materialism as it concerns religion, Gorbachev’s fixation with religion over the past decade makes perfect sense. He is one of the leading global activists working to transform Christianity, to unite it with Marxism! As a master dialectician, he is expert in the use of words as weapons, particularly in using words that will appeal to and disarm Christians. According to one of Gorbachev’s old friends, Natasha Rimashevskaya, he had one phrase he loved to say: “‘As to this question, one must approach it dialectically.’ That meant he wanted to entertain a thesis and its contradiction at the same time.”

Gorbachev’s admiring biographer, Gail Sheehy, tells us: “Lenin is in his blood, say Gorbachev’s friends. And Lenin’s doctrine of ‘two steps forward, one step back’ — or complete tactical flexibility — appealed particularly strongly to him.” Gorbachev is fol-

lowing precisely the Leninist dialectical line that was spelled out by Li Wei Han of the Central Committee of the Chinese Communist Party in 1959, in instructions sent to Fidel Castro's new Communist regime. According to Comrade Li:

“The line of action to follow against the Church is to instruct, to educate, to persuade, to convince, and, gradually, to awaken and fully develop the political conscience of Catholics by getting them to take part in study circles and political activities. By means of these activities, we must undertake the dialectical struggle within religion. Gradually, we will replace the religious element with the Marxist element.” Have the Communists forgotten or abandoned this lesson? They have never been more active or aggressive in promoting it! In fact, Comrade Li's 1959 instructions have been reprinted in books currently available in Communist bookstores. While Christian leaders naively praise the new “openness” to religion in Communist countries, Leninists like Gorbachev know this is only a temporary, tactical “one step back.” There is no question that the Leninists — with the aid of foolish Christians, as well as agents posing as Christians — are “[replacing] the religious element with the Marxist element.” Thus we have seen a host of books and articles promoting the diabolic dialectic theme of “Christian-Marxist Unity.” One example of this, *Christian-Marxist Unity: A Miraculous, Explosive Prescription*, the influential text by Raimundo Garcia Franco, tells us: “Yes, Christian faith and Marxism-Leninism do share almost complete overlapping of common objectives in the building of socialism. We cannot look backward, since the path ahead is that of creative transformation to communism and to the Kingdom of God on this earth.”

This is the same subversive dialectic that permeates Gorbachev's annual State of the World Forums as well as all of the UN's “spiritual” confabulations. When the leaders of these events aren't directly “replacing the religious element with the Marxist element,” they are fast at work replacing the Christian element with various pagan and New Age elements, which they recognize as far more flexible and conducive to their Marxist one-world schemes than what they scornfully denounce as “dogmatic,” “rigid,” and “sectarian.”

Total War on the Family

Abolition of the family!.... Do you charge us with wanting to stop the exploitation of children by their parents? To this crime we plead guilty. — Karl Marx, *The Communist Manifesto*, 1848

The kindergarten or infant school has a significant part to play in a child's education. Not only can it correct many of the errors of home training, but it can prepare the child for membership ... in the world society.... As long as the child breathes the poisoned air of nationalism, education in world-mindedness can produce only rather precarious results. As we have pointed out, it is frequently the family that infects the child with extreme nationalism. The school should therefore use the means described earlier to combat family attitudes that favor jingoism. — United Nations Educational, Social, and Cultural Organization (UNESCO), 1949

If we want to talk about equality of opportunity for children, then the fact that children are raised in families means there's no equality.... In order to raise children with equality, we must take them away from families and communally raise them. — Dr. Mary Jo Bane, U.S. Department of Health and Human Services, Clinton administration

Every child is our child. — motto of the United Nations Children's Fund (UNICEF)

One of the most terrifying features of totalitarian society is the control and brainwashing of children and youth by the Omnipotent State. The 20th century's experiments with such "education" must never be forgotten. Children were "transformed" through a "reshaping of consciousness." They were taught to publicly denounce (and even execute) their parents, to reject all tradition, to renounce their religion and embrace atheism, and to betray their countries. Matt Cvetic, who for nine years was an undercover agent in the Communist Party USA for the FBI, attended a secret meeting of top-level Communists in 1948, at which a Soviet agent relayed a speech that Stalin had given directing the American Communists to put new emphasis on the recruitment of youth. Here is part of Stalin's speech:

"Comrades, Hitler gained control of the Youth in Germany before he was able to wage a successful Nazi Revolution in Germany. We Communists gained control of the Youth in Russia before we were able to wage a successful Communist Revolution in Russia, and Comrades, we must gain control of the Youth in the United States if we are to wage a successful Communist Revolution in that nation. For this purpose, we are ordering our Comrades to set up a new Communist Youth group in the United States."

(One might hint at the words of Yuri Bezmenov from a previous chapter where he states that Ideological Subversion needs 15-20 years, i.e. one generation of children). As Cvetic pointed out, "Within a few short months after this meeting, more than 6,000 American students were recruited into this new Communist Youth movement known as the Labor Youth League."⁷ This youth apparatus has gone through various structural and name changes over the years, but its purpose has remained unchanged. In 1983, it was reorganized and renamed the Young Communist League (YCL), the name under which it still operates. However, the primary danger to American children and youth at that time emanated not from the YCL or other groups overtly associated with the Communist Party. Those efforts that were openly Communist only reached tens of thousands of young people. Far more dangerous were the pro-Communist, pro-UN, internationalist programs in our schools that were reaching tens of millions of students. Thanks to generous funding from the Carnegie Endowment, the Rockefeller and Ford Foundations, and the other Insider foundations, subversive textbooks and curriculum materials were flooding our schools. Thousands of teachers were being programmed at college to serve as "change agents." Change agents like Lydia Shchevchenko. In his memoirs, former Soviet dictator Nikita Khrushchev told of the lasting influence of this childhood teacher on his life:

"I suppose you could say my political education began during my boyhood in the little

village of Kalinovka where I was born. My schoolteacher there was a woman named Lydia Shchevchenko. She was a revolutionary. She was also an atheist. She instilled in me my first political consciousness and began to counteract the effects of my strict religious upbringing. My mother was very religious, likewise her father — my grandfather.... When I think back to my childhood, I can remember vividly the saints on the icons against the wall of our wooden hut, their faces darkened by fumes from the oil lamps. I remember being taught to kneel and pray in front of the icons with the grown-ups in church. When we were taught to read, we read the scriptures. But Lydia Shchevchenko set me on a path which took me away from all that."

Where did that path lead? Nikita Khrushchev's subsequent career was detailed in a seven-part study, *The Crimes of Khrushchev*, published by a congressional committee in 1959.⁹ During Stalin's bloody purges, the report notes, Khrushchev, "as the Number 1 Communist official in the Moscow area ... sent thousands to their death, scores of thousands to hideous slave-labor camps." When Stalin was ready to launch his planned genocide of the people of the Ukraine, Khrushchev "was sent in 1937 as Stalin's trusted killer.... When his two-year Ukrainian purge was over, an estimated 400,000 had been killed and terror gripped the whole population." Later, he added to his infamy, gaining the title of "the Butcher of Budapest" for his ruthless subjugation of Hungary.

State-of-Mind Marxists

How many would-be and wanna-be Khrushchevs have been created by Lydia Shchevchenko's myriad counterparts in America? The thought is frightening; the number is certainly far greater than most Americans would ever imagine. Khrushchev was born in 1894 and the time period of his revolutionary formation referred to above was probably around 1900-1910, before the Czar was overthrown and Lenin came to power. Khrushchev did not say whether Lydia was actually a member of one of the Communist organizations in Czarist Russia. The important point is that it is not necessary for someone like Lydia to be an actual disciplined Party member in order to be an effective "change agent" in carrying forward the Communist revolution. As Lenin said, "We must build Communism with non-Communist hands." Lydia Shchevchenko was, at the very least, a "state-of-mind Marxist." She had consciously rejected God and country, embraced the "revolutionary faith," and dedicated herself to its propagation. Like Lydia, there are many thousands of American educators who have imbibed of the "revolutionary faith," and, to varying degrees, have adopted and propagated its tenets. Many are "state-of-mind Marxists" without even knowing it. Some of these consider themselves Democrats, Republicans, liberals, or even conservatives and libertarians, but they are transmitting the Marxist contagion nonetheless. They are greatly assisted in this subversion, as we shall see, by the major teachers unions, the CFR-dominated tax exempt foundations, and the various agencies of the United Nations.

Equally important to this subversion process is the massive disinformation and moral corrosion provided by the Insider-run mass media and pop culture, most especially the so-called "entertainment" aimed at youth. Over the past two generations, we have seen

these educational and cultural elements carrying forward a massive, coordinated program of conquest through “a slow reshaping of consciousness,” as prescribed by Italian Communist theorist Antonio Gramsci. “In a developed society, ‘the passage to socialism’ occurs neither by putsch nor by direct confrontation,” Gramsci maintained, “but by the transformation of ideas, which is to say — a slow reshaping of consciousness.” “And the stake of this war of positions is the culture, that is — the source of values and ideas,” said Gramsci. “The seizure of political power is not possible until after the seizure of cultural power.”

Dumb Down, Bum Down, Numb Down, Scum Down

The Pratt House thought cartel has been doing all within its power to speed this “seizure of cultural power.” Like their Fascist and Communist brethren, the CFR one-worlders realize full well that for their global totalitarian vision to succeed, they must take control of the children and youth. For their New World Order to triumph they must have obedient, subservient masses — an unthinking, goose-stepping lumpen proletariat. In order to achieve this goal they know they must destroy, or “Reconstruct,” what they refer to as “mass thought patterns” and “consciousness” — most especially in children and youth — so they can “reconstruct” and “reshape” the thought patterns and consciousness according to their own designs.

Through their dominant influence in education, the mass media, and the centers and instruments that produce our popular culture, the Insiders’ change agents are aggressively pursuing this destruction-deconstruction/reshaping-reconstruction process. This process contains several components, which we refer to as the dumbing down, bumming down, numbing down, and scumming down of American society and culture. The dumbing down of America has been the subject of intense concern and great debate for several decades. The alarming 1983 report *A Nation At Risk*, by the National Commission on Excellence in Education, warned that “the educational foundations of our society are presently being eroded by a rising tide of mediocrity that threatens our very future as a nation and a people.”¹⁶ That report and dozens of others before and since have cataloged the grim results of this dumbing-down process: widespread illiteracy, high student dropout rates, continuous decline in scores in all areas of academic achievement, the plummeting of the U.S. to last or near-last place on test scores, etc.

These results should not surprise: Traditional academic core subjects have been replaced with “politically correct,” multi-cultural programming; phonics instruction has been supplanted by various look-say, whole-word “reading” programs; and evolutionary dogma, sex education, and enviro-Leninist propaganda have replaced real science. The bumming down of America is proceeding on many fronts, but the attack through the schools is especially pernicious. The public (i.e., government) schools have trained several generations of children to look to Big Brother in Washington for the “solution” to every problem, whether real or contrived. Responsibility, initiative, pride of workmanship, self-sufficiency, and independence are being replaced by the irresponsibility, sloth, slovenliness, and dependence of the welfare state. The government schools are being transformed into

socialist cradle-to-grave, womb-to-tomb “community centers” that also serve as daycare centers, medical clinics, senior citizen centers, and providers of “lifelong learning” for adult education.

The numbing down and scumming down of America, likewise, are proceeding on many fronts, the educational system working in tandem with the CFR-controlled mass media and the “entertainment” industry to destroy every vestige of decency, honor, and virtue. Since fomenting the social upheavals of the 1960s, these same forces have been accelerating their attack, promoting alienation, rebellion, cynicism, hedonism, promiscuity, paganism, and false idealism. They are pressing on to destroy the residual Christian culture of America and the values system it upholds in order to clear the way for their planned “reshaping” process. (*For one of the most informative exposes of this scheme to intellectually cripple and subvert American children and youth, see: *The Deliberate Dumbing Down of America* by Charlotte Iserbyt (Ravenna, Ohio: Conscience Press, 1999). This 750-page, telephone book-size opus is a masterpiece of research and educational detective work by one of America’s top education experts.)

Attack From Within

The aforementioned study *A Nation At Risk* ominously noted: “If an unfriendly foreign power had attempted to impose on America the mediocre educational performance that exists today, we might well have viewed it as an act of war. As it stands we have allowed this to happen to ourselves.... We have, in effect, been committing an act of unthinking, unilateral, educational disarmament.”

The statement is both true and false at the same time. While it is true that no foreign nation has “imposed” (in the military sense, that is) our educational disaster upon us, it is not alto-gether true that we have “done this to ourselves.” A close examination of the subversive educational “reforms” of decades past that produced our present catastrophe shows that the individuals and organizations most responsible do indeed constitute a power “foreign” to — and militantly hostile to — our constitutional and spiritual heritage. And they have indeed been carrying out unrelenting, total warfare against American society.

Integral to this total war is the rooting out of individualism and all loyalties that compete with supreme loyalty to the omniscient, omnipotent, omni-beneficent state — in this case, the world state. Thus the traditional family is viewed by these aspiring global overlords not just as a competitor, but as a mortal enemy. Philosophers as varied as Aristotle, Cicero, John Locke, and G.K. Chesterton have noted that the family is ordained by God and Nature to raise and educate children. That truth is plainly obvious. But the one-worlders will have none of that. The parents and the family must be supplanted by agents of the global state: the school and other social agencies.

This is basic Tyranny 101; it follows the statist, textbook dogmas of Rousseau, Marx, Lenin, Hitler, Stalin, Mao, and others of their totalitarian ilk throughout history. The Hitlerian UNESCO screed quoted at the head of this chapter, charging the family with

“infecting” the child with bad attitudes, is taken from a UNESCO program for teachers, published in 1949 under the heading *Towards World Understanding*. In this 10-part series, UNESCO (United Nations Educational, Scientific and Cultural Organization) complained that “before the child enters school his mind has already been profoundly marked, and often injuriously, by early influences” — most particularly by parents, of course, who are deemed hopelessly ignorant and insufficiently “world-minded.”

Parents are seen by UNESCO as retrograde influences who tend to teach their children love for God and country, which UNESCO condemned as “infecting” the minds of children with “nationalism,” “chauvinism,” and “sclerosis of the mind.”

This pernicious one-world, anti-parent, anti-family, anti-patriotism sentiment was already being spread through the schools many years earlier by the radical National Education Association (NEA), the nation’s largest teachers union. When the United Nations was created, the NEA became (and remains) one of its biggest promoters. For the NEA, the United Nations became the hope of the world. In January 1946, Joy Elmer Morgan wrote in the *NEA Journal*:

“In the struggle to establish an adequate world government, the teacher has many parts to play. He must begin with his own attitude and knowledge and purpose. He can do much to prepare the hearts and minds of children for global understanding and cooperation.... At the very top of all the agencies which will assure the coming of world government must stand the school, the teacher, and the organized profession.”

The NEA’s ardor for the UN and a global school board has intensified over the years. In 1993, the militant teachers union took a major step in its push for one-worldism by launching Education International (EI), a worldwide federation of teachers unions. Mary Hatwood Futrell, the NEA’s radical-left former president, moved to Brussels, Belgium (headquarters for the European Union) to head EI’s new global union operation. Futrell, ever the darling of the CFR coterie, had proven her one-world bona fides by serving on many Carnegie panels and commissions and reliably promoting the big government, globalist line. The Insiders knew she could be entrusted with the task of spearheading this new global initiative. Education International, which now claims 24 million members through its 304 affiliate organizations, serves as an important teachers auxiliary to the Socialist International, dependably supporting just about every socialist scheme imaginable. EI boasts of its “privileged” status with UNESCO: “At UNESCO, EI is one of 16 organisations worldwide holding the coveted status of NGO in formal associate relations.” With Futrell holding the reins at EI, it is not surprising that the union behemoth follows the NEA lead, supporting every move to empower the UN, particularly in the area of education. The NEA’s 2000-2001 Resolutions include this paean to the UN:

“The National Education Association recognizes the interdependence of all people.... The Association urges all nations to develop treaties and disarmament agreements.... The Association further believes that the United Nations (UN) furthers world peace and promotes the rights of all people by preventing war, racism, and genocide.”

The NEA and EI support increased funding for the UN, increased authority for the World Court, creation of the International Criminal Court, ratification of most UN treaties, and expansion of UN power in virtually all areas. The NEA-EI education mafia is tailor-made for the Insiders' one-world purposes. With tens of millions of dollars in dues forcibly taken from members' paychecks, the union is a cash cow for revolution. With tens of millions of teachers worldwide as members, it can exert enormous influence in classrooms, as well as local, state and national elections.

The NEA one-world subversives also affect the classrooms and national and state education policy through think tanks like the National Training Laboratory (NTL) in Bethel, Maine. The NTL was set up by the NEA in the 1940s to reeducate teachers along politically correct lines. NTL says it works "to change teachers' inflexible patterns of thinking." An NTL teachers manual says of children: "Although they appear to behave appropriately and seem normal by most cultural standards, they may actually be in need of mental health care in order to help them change, adapt, and conform to the planned society in which there will be no conflict of attitudes or beliefs."

Another NEA-created and -supported think tank is the Association for Supervision and Curriculum Development (ASCD), one of the leading educational purveyors of "global think." At a 1985 international-curriculum symposium in Enschede, Netherlands, ASCD officials told participants of the need for a "world core curriculum" to meet the needs of our "increasingly global interdependency."³⁰ ASCD executive director Gordon Cawelti told symposium participants that the proposed world core curriculum would be based on UN guru Robert Muller's book *New Genesis: Shaping a Global Spirituality*.

At the beginning of his *World Core Curriculum Manual* Muller states that "the underlying philosophy upon which [his] School is based will be found in the teaching set forth in the books of Alice A. Bailey by the Tibetan teacher Djwhal Khul..." and M. Morya.³² This is quite an admission considering that Mrs. Bailey's exalted position in the occult theosophical firmament is second only to that of Theosophy founder and high priestess Madame Blavatsky. Bailey, who alleged that Khul and Morya communicated with her telepathically, was a rabid Luciferian and founded the Lucifer Publishing Company and the theosophical journal *Lucifer*.

So we are not engaging in hyperbole at all when we refer to the Insiders' attack on families and children as devilish, demonic, diabolic, or satanic. The totalitarian threat to the family posed by UNESCO, NEA, EI, NTL, ASCD, Carnegie, et al., is real and is thoroughly evil. The threat presents itself in three significant ways:

- **The Rule of Law.** The militant shock troops first lobby for ratification of UN treaties, such as the Convention on the Rights of the Child. Once ratified (or even before ratification), they fraudulently assign these treaties the exalted status of "international law," which, they assert, overrides all federal, state, and local authority. In order to show our respect for the "rule of law," they and their prostitute "legal scholars" say, we must "harmonize" our laws and policies with those of the "international community." They know

that most local officials, school board members, state legislators, and congressmen are unfamiliar with, and unable to muster an effective defense against, the supposed authority of “international law.” Thus the UN treaties provide the homegrown revolutionaries with the weapons to undermine our laws and transform our government and institutions into subservient instruments of the UN to enforce global political correctness.

- The Global School Board. Through UNESCO, NEA, EI, and hundreds of other organizations and think tanks, the global structure bureaucracy is already being established for a worldwide socialist system that is intended to provide school teachers with indoctrination and certification, schools with accreditation, and students with the subversive materials and programs they “need” for graduation.
- The New Faith. In our “interdependent” world, the UN provides the new focal point to teach children about our global “oneness.” Loyalty will be transferred from the family to the state and from the nation to the UN. Children will be (or are already being) taught to be “citizens of the world.” They are being programmed to reject “narrow,” “divisive,” “bigoted,” “dogmatic” Christianity and to adopt pagan and occult beliefs.

UNESCO Subversion

In the early 1950s, as the UNESCO programs began working their way into school textbooks and curricula, and as the truly subversive nature of the programs became known, a significant number of parents and educators became alarmed. They prevailed upon elected officials, who began to challenge and condemn the UN’s perfidious insinuation of collectivist propaganda into the schools. In 1953, Senator William Jenner (R-Ind.), the courageous chairman of the Senate Internal Security Subcommittee, attacked the UNESCO subversion head-on, challenging his Senate colleagues in these words:

“How many of you Senators know what the UN is doing to change the teaching of the children in your own home town? The UN is at work there, every day and night, changing the teachers, changing the teaching materials, changing the very words and tones — changing all the essential ideas which we imagine our schools are teaching to our young folks. How in the name of Heaven are we to sit here, approve these programs, appropriate our own people’s money — for such outrageous “orientation” of our own children, and of the men and women who teach our children, in this nation’s schools?”

Some of the one-worlders were audacious and zealous enough candidly to admit the subversive agenda of UNESCO, though they praised it as a necessary and righteous subversion. Such, for instance, was the case at the Saturday Review, which, in 1952, published a wildly pro-UNESCO editorial which declared:

“If UNESCO is attacked on the grounds that it is helping to prepare the world’s peoples for world government, then it is an error to burst forth with apologetic statements and denials. Let us face it: the job of UNESCO is to help create and promote the elements of world citizenship. When faced with such a “charge,” let us by all means affirm it from the housetops.”

More astute Insiders realized, however, that the time was not yet ripe for open confrontation on such fundamental and emotionally charged issues. The wiser course was to ease up and drop back for awhile, and cloak their true aims in more noble-sounding and less threatening verbiage about “world peace,” “collective security,” “ending world hunger,” etc. Which is what they did. Now, however, after decades of softening up the American public with one-world propaganda, calculatedly undermining our morality and religious fervor with carnal and irreligious “entertainment,” and destroying patriarchal authority and responsibility and family ties through welfare statism, the totalitarian internationalists are pressing forward with fresh audacity.

They are rapturously pushing on toward the dystopic vision of the developing cradle-to-grave socialist world state outlined years ago by UNESCO director-general Julian Huxley. In 1947, Huxley announced that UNESCO would be exploring “the application of psychoanalysis and other schools of ‘deep’ psychology to education.” The use of such techniques to cultivate a sense of world citizenship, said Huxley, “would mean an extension of education backwards from the nursery school to the nursery itself.” This Huxleyite conception of lifelong, womb-to-tomb, UN-driven indoctrination (and re-indoctrination, repeated as often as the UN mandarins deem necessary) has been integral to the UNESCO drive over the decades. It has come frighteningly close to fruition in many current UN programs, declarations and proposals, such as the UN’s Millennium Forum Declaration of May 2000, which states that “education will be universal and lifelong, and will nurture a sense of world citizenship.”

The Rights of the Child

In 1989, the UN General Assembly adopted the United Nations Convention on the Rights of the Child (CROC), which, shorn of its pretended concerns for the welfare of children, is a blatant statist attack on the family and parental authority and responsibility. It proposes a massive intrusion of government into family matters. Implementation of the CROC would radically alter the parentchild relationship, interjecting government-appointed “child advocates” between parents and children. Ultimately, it aims at stripping parents of their traditionally recognized rights to control the upbringing and education of their children and to pass on to their children their religious values and beliefs. If the people of the United States allow the conspirators in our government to subject us to the supposed authority of the CROC, we will soon see UN-approved government child “experts” assuming complete control over our children and parental rights completely destroyed.

In March 1990, representatives from more than 150 countries met in Jomtien, Thailand, for a five-day World Conference on Education for All (WCEFA). Official sponsors of this Insider-run event included UNESCO, UNICEF, UNDP (United Nations Development Program), the World Bank, other UN agencies, and one-world NGOs. Out of this major agenda-setting palaver came two documents: The World Declaration on Education for All, and The Framework for Action to Meet Basic Learning Needs. The Framework set forth six education goals, which just happened to be virtually identical to the controversial

Outcome-Based Education (OBE) program set out by then-President George Bush (CFR) in his “America 2000” education plan.

In order to facilitate coordination of U.S. OBE policies with those of the UN globocrats, a U.S. Coalition for Education for All (USCEFA) was launched at a meeting held on October 30-November 1, 1991 in Alexandria, Virginia. Gathering under the banner of “Learning for All: Bridging Domestic and International Education” were movers and shakers from the government and private sector. Conference cosponsors included Apple Computer, IBM, the National School Board Association the American Federation of Teachers, the National Education Association, the U.S. Department of Education, the College Board, USAID — and the usual tax-exempt foundations. Heading up the USCEFA as president was Janet Whitla, director of the Education Development Center, Inc., infamous for its pro-homosexual, pornographic, promiscuity-promoting sex education programs and globalist curricula. The Coalition is pushing to make UNESCO the global school board which will dictate educational policy for the world.

For the past decade, unbeknownst to American parents, the Convention on the Rights of the Child has been in the process of implementation through the USCEFA programs. One indication of the frightening progress of this subversion is the increasing acceptance, especially in political and academic circles, of totalitarian sentiments. Among those promoting dangerous new state authority, we point to Professor Jack C. Westman of the University of Wisconsin-Madison, Professor David Lykken of the University of Minnesota, and Connecticut Superior Court Judge Charles D. Gill, a co-founder of the National Task Force for Children’s Constitutional Rights (NTFCCR). Dr. Westman, Dr. Lykken, and Judge Gill are leaders in the despotic drive to mandate government licensing of all parents. “The United Nations Convention [on the Rights of the Child] clearly declares that the state has a role in child-rearing,” says Dr. Westman, approvingly. “Because the consent of children is not required for the exercise of parental power, it is in the privacy of their homes that their civil rights are least assured.”

In a 1991 law journal article, Judge Gill wrote: “The [UN] Convention makes a total break from previous approaches to children’s rights. Previous ‘rights’ were paternalistic, whereas the Convention makes the state directly responsible to the child.”⁴⁶ Westman, Lykken, Gill, et al., view the family and parents with outright hostility, while idolizing the state and its supposed capacity to raise better children. These extreme, totalitarian sentiments have been made “respectable” in influential circles thanks to help from the Pratt House one-world elites. These statist nostrums have moved from the stage of advocacy by socialist fringe groups to acceptance by “mainstream” Democrat and Republican politicians. The forces pushing this agenda have enormous financial resources at their disposal, and they are geared up for major, continuous, offensive action. If they are not aggressively exposed and opposed by a significant, growing, and increasingly determined constituency of parents, grandparents, and concerned citizens, an American version of the Hitler Youth or Red Guard — under the rubric of national service, of course — will not be long in coming. That is a terrifying prospect, but even that does not begin to

depict the full extent of the anti-family agenda the Insiders and their UN lackeys envision for their global police state. Space permitting, we would detail the UN programs for global:

- Forced abortion;
- Proliferation of chemical abortions (RU486);
- Coercive population control and eugenics programs;
- Forced mass population relocation;
- Mandatory school “sexual orientation” programs promoting homosexuality;
- Outlawing of independent home schooling and independent private and religious schools;
- Euthanasia and assisted suicide.

The piecemeal Marxist abolition of the family is a fact, and the UN is the instrument through which the one-world Insiders intend to carry out their abolition program world-wide.

15.5 What Must Be Done

[I]t does not require a majority to prevail, but rather an irate, tireless minority keen to set brush fires in people’s minds. — Samuel Adams

If we wish to be free ...we must fight! I repeat it, sir, we must fight!! — Patrick Henry (March 23, 1775)

In the preceding chapters, we have painted, we admit, a very alarming picture of reality. It was entirely our intent to do so. We believe, like Founding Father James Madison, that it is proper and prudent to sound the alarm, wake the town, and tell the people when danger is threatening. In fact, it would be immoral not to warn others about an imminent peril. Madison wisely advised, as we have noted previously:

“[I]t is proper to take alarm at the first experiment on our liberties. We hold this prudent jealousy to be the first duty of citizens and one of [the] noblest characteristics of the late Revolution. The freemen of America did not wait till usurped power had strengthened itself by exercise and entangled the question in precedents. They saw all the consequences in the principle, and they avoided the consequences by denying the principle. We revere this lesson too much, soon to forget it.”

Tragically, most Americans have forgotten this important lesson. We are long past “the first experiment on our liberties.” We are rushing headlong to destruction, tyranny, and slavery. Some will say that our concerns are wildly exaggerated, that the UN, while often obnoxious and corrupt, is toothless and can present no real danger to the mighty United States. And besides, they will aver, it still represents mankind’s noblest aspirations for peace. We can reform it and use it to good purpose. We can trust our president and Congress to watch out for our interests. Others will react in the opposite direction,

asserting that the Insiders' new world order and their plans to empower the UN have proceeded too far to be stopped now. The enemy is too rich and powerful, too well organized and deeply entrenched. Resistance is futile; we have already lost.

Both of these attitudes — blind, senseless optimism and hopeless defeatism — should be equally repugnant to free peoples. We assure you there is nothing exaggerated about the dire threat posed by the UN in anything we have written. But it is not necessary for anyone to rely on our word. We have quoted extensively from UN and U.S. documents and copiously cited the statements of many of the key players in this drama. Any person of ordinary intelligence, with an open, honest mind, can read the literature and compare it with readily verifiable facts concerning the rapidly growing “empowerment“ of the UN in all of the areas we have discussed. Let us take a lesson from the patriots who founded our nation. In the summer of 1775, these courageous souls faced a situation not dissimilar from our own. Some argued that, in spite of the Crown's tyrannical acts, things were not all that bad and that the prudent course was to continue entreating England for fairness and justice. Others warned that it would be futile and foolhardy to dare to challenge the British military might.

In his famous oration at St. John's Church, Patrick Henry addressed the faulty arguments of both the Panglossian optimists and the defeatists. He eloquently and forcefully expressed the position that full and complete information, even though unpleasant, was the necessary basis for a proper decision:

“[I]t is natural for a man to indulge in the illusions of hope. We are apt to shut our eyes against a painful truth — and listen to the song of that siren till she transforms us into beasts. Is this the part of wise men, engaged in a great and arduous struggle for liberty? Are we disposed to be of the number of those who, having eyes, see not, and having ears, hear not, the things which so nearly concern their temporal salvation? For my part, whatever anguish of spirit it might cost, I am willing to know the whole truth; to know the worst and to provide for it.”

Mr. Henry then spoke words that are as relevant today (if not more so) as they were in that desperate time:

“They tell us, sir, that we are weak — unable to cope with so formidable an adversary. But when shall we be stronger? Will it be the next week, or the next year? Will it be when we are totally disarmed, and when a British [or a UN] guard shall be stationed in every house? Shall we gather strength by irresolution and inaction? Shall we acquire the means of effectual resistance by lying supinely on our backs, and hugging the delusive phantom of hope, until our enemies shall have bound us hand and foot? Sir, we are not weak, if we make a proper use of those means which the God of nature hath placed in our power. Three millions of people, armed in the holy cause of liberty, and in such a country as that which we possess, are invincible by any force which our enemy can send against us. Besides, sir, we shall not fight our battles alone. There is a just God who presides over the destinies of nations, and who will raise up friends to fight our battles

for us. The battle, sir, is not to the strong alone; it is to the vigilant, the active, the brave. Besides, sir, we have no election. If we were base enough to desire it, it is now too late to retire from the contest. There is no retreat, but in submission and slavery! Our chains are forged, their clanking may be heard on the plains of Boston!... Is life so dear, or peace so sweet, as to be purchased at the price of chains and slavery? Forbid it, Almighty God! I know not what course others may take; but as for me, give me liberty or give me death!'

The submission and slavery the American colonists faced was a very real and dire prospect, but was nothing compared to that which we will face under a fully empowered UN. The British government was autocratic, abusive, even tyrannical at times but not outright totalitarian. The organized one-worlders, however, intend to transform the UN into the global governing instrument of their ruthless, totalitarian "New World Order."

Projecting the Lines

Let us summarize the case we have made and, from what is already known, project the lines concerning what we can expect in the future — if, that is, by "irresolution and inaction" we allow the Insiders' plans for the UN to come to fruition. Those plans include:

- Creating a United Nations Military, with army, navy, air force, and nuclear weapons.
- Dispatching U.S. military personnel on ever-increasing UN missions throughout the world.
- Gradually disarming all nation states, including the U.S., so that the UN military forces will be unchallengeable.
- Establishing the International Criminal Court and rapidly expanding its jurisdiction.
- Establishing a global UN police force and bringing all local police under its control.
- Outlawing private ownership of firearms and disarming citizens.
- Imposing global draconian regulations on all human activity under the pretext of protecting the environment.
- Drastically restricting and, ultimately, destroying property rights.
- Forcing vast relocations of human populations in order to create "Wildlands" for UN-designated animal species.
- Imposing global "carbon taxes" on all fuels, a "Tobin tax" on financial transactions, and myriad other tax proposals.
- Placing a vast regulatory regime on all labor, business, and employment policies.
- Imposing population controls, including mandatory abortion a la Red China's UN-approved-and-funded "one child policy."
- Accelerating UN subversion in our schools and bringing all education under the jurisdiction of UNESCO.
- Subjecting all parents to licensing and claiming UN "protective" authority over all children.
- Striking down all laws against homosexuality and pedophilia/ pederasty.

- Greatly expanding the practice of euthanasia and assisted suicide.
- Promoting paganism, “New Age” spirituality, the occult, and Satanism under the guise of promoting peace, brotherhood, and a “Global Ethic.”

The list above is far from exhaustive. Anyone willing to study the facts will be able to readily verify that the Pratt House mafia promoting the UN is pushing for all of these insidious programs and more. All of these incredible grabs for power are, in fact, already in various stages of implementation. So what will be the consequences of inaction? What will an allpowerful UN government mean to life as Americans know it? Isn't it possible that our would-be slavemasters will be more benevolent than old-style Communist dictators? Surely American leaders would not want to preside over bloodletting, torture, and genocide. That is a dangerous assumption. First of all, while many of the Insiders of this one-world cabal are American citizens, they are not Americans; they are internationalists, with loyalties to no country. Many of them hold, or have held, public office and have sworn to uphold and defend the Constitution — while doing everything in their power to subvert and destroy it. Secondly, while no one can predict with absolute certainty what others would do given the power and opportunity, nonetheless there are compelling principles we dare not ignore. Let's look first at the lessons of history regarding the consequences of power.

We have previously invoked Lord Acton's famous maxim “Power tends to corrupt and absolute power corrupts absolutely.” This principle was accepted as an undisputed truism by the American Founding Fathers. They were so firmly convinced that the best of men, regardless of character and intentions, could not be trusted with unrestrained power that they designed our government to thwart the ambitions of men. Thomas Jefferson expressed it this way: “In questions of power, then, let no more be heard of confidence in man, but bind him down from mischief by the chains of the Constitution.”

The situation is even worse when the system encourages the worst of men to gravitate to the top as happened so often in so many nations in the last century. Then we are no longer talking about “mischief with our liberties. Our lives, the lives of our families and neighbors, and the lives of billions of others are at stake. John Locke warned centuries ago that “he that thinks absolute power purifies men's blood, and corrects the baseness of human nature, need read but the history of this, or any other age, to be convinced of the contrary.” The history of the spectacularly bloody 20th century offers a definitive rebuke to those who believe that a world government would be a blessing. In his important book *Death by Government*, Professor R.J. Rummel documents that the case for global government rests entirely upon an essentially superstitious belief in the benevolence of government as an institution.

Rummel, a professor of political science at the University of Hawaii, is perhaps the world's foremost authority on the phenomenon of “democide” — the systematic murder of human beings by governments. “Democide is committed by absolute Power; its agency is government,” Rummel declares, and the death toll of democide is nearly incomprehensible:

“In total, during the first eighty-eight years of this [20th] century, almost 170 million men, women, and children have been shot, beaten, tortured, knifed, burned, starved, frozen, crushed, or worked to death; buried alive, drowned, hung, bombed, or killed in any other of the myriad ways governments have inflicted death on unarmed, helpless citizens and foreigners. The dead could conceivably be nearly 360 million people.”

The “respectable” CFR elites have always been comfortable with mass-murdering thugs like Stalin, Mao, Tito, Castro, Sukarno, Nkrumah, Kenyatta, Lumumba, Ben Bella, Ceausescu, Aristide, Mandela, Arafat, et al... As we have noted, David Rockefeller, one of the most powerful drivers of the Establishment agenda during the 20th century has praised “the social experiment in China under Chairman Mao’s leadership” as “one of the most important and successful in human history.” He made this incredible statement in spite of the wellknown fact that Mao Tse-tung’s “social experiment” had by that time (1973) cost the lives of as many as 64 million Chinese at the hands of their Communist masters! Rockefeller and his fellow one-worlders share with “Mao the Master Butcher” the addictive lust for absolute power. Again, Patrick Henry has provided us the proper attitude toward a record of tyranny. He said, “I have but one lamp by which my feet are guided; and that is the lamp of experience. I know of no way of judging the future but by the past.” “And judging by the past,” he declared, “I wish to know what there has been in the conduct of the British ministry for the last ten years to justify those hopes with which gentlemen have been pleased to solace themselves...?”

What has there been in the conduct of the CFR-UN cabal in the last fifty years to justify any hopes of benign intent on their part? What could we expect from men with proven amoral character who would gain unrestrained power and the opportunity to do evil? Some may seek comfort in the illusion that tyranny is strictly a foreign phenomenon — that domination and exploitation of one’s fellow man are not in the heart of American leaders. After all, these men are cultured, genteel, and highly educated. They are some of the most famous political, business, and academic leaders. Some of them kiss babies, smile convincingly, and talk of God, patriotism, and family values. Some of them give millions of dollars to hospitals, schools, and charitable causes. They are courted and praised by the media and responsible, respectable members of society. Surely these eminent men are not capable of the criminal activities we suggest.

With more space, we could credibly demonstrate that U.S. Insiders (direct forebears to the current new world order cabal) orchestrated the rise of Communism to a world power in the USSR and in China (Well, this book has done this actually) and supplied these criminal regimes with Western technology and the means for nuclear weapons. It is also true that they willingly sent U.S. sons to die in no-win wars to build their new world order. They betrayed friendly, anti-Communist allies into Communist tyranny. They used U.S. foreign aid to further communize and socialize nations under petty despots. They supported brutal terrorist groups and Communist-directed wars of “national liberation.” They have facilitated the Communist drug offensive against the United States and frustrated all genuine efforts to expose and oppose it. They have then turned around and offered

dangerous, totalitarian proposals disguised as a “War on Drugs,” but which, in reality, are aimed at making war on our freedoms. They have promoted the destruction of morality and the family. They have sought the destruction of private property and the middle class. They have worked to subvert the influence of monotheistic religions. They have encouraged teaching methods that promote illiteracy, conformity known as political correctness, and worship of the Almighty State as God.

These and a host of other crimes too numerous to mention should leave no doubt that top leaders of the Pratt House presidium are out to create the kind of absolutist, all-pervasive, mind- and souldestroying, Big Brother dictatorship depicted with such horrifying force in George Orwell’s 1984. In case your memory of that nightmarish world has dimmed since you read Orwell’s classic in high school, it may help to recall commissar O’Brien’s hideous colloquy with the tortured protagonist, Winston Smith. After delivering an excruciatingly painful electric shock to Smith, who is strapped to a bed, O’Brien casually explains:

“Obedience is not enough. Unless he is suffering, how can you be sure that he is obeying your will and not his own? Power is in inflicting pain and humiliation. Power is in tearing human minds to pieces and putting them together again in new shapes of your own choosing. Do you begin to see, then, what kind of world we are creating? It is the exact opposite of the stupid hedonistic Utopias that the old reformers imagined. A world of fear and treachery and torment, a world of trampling and being trampled upon, a world which will grow not less but more merciless as it refines itself. [Emphasis in original.] Progress in our world will be progress toward more pain. The old civilizations claimed that they were founded on love and justice. Ours is founded upon hatred. In our world there will be no emotions except fear, rage, triumph, and self-abasement. Everything else we shall destroy — everything. Already we are breaking down the habits of thought which have survived from before the Revolution. We have cut the links between child and parent, and between man and man, and between man and woman. No one dares trust a wife or a child or a friend any longer. But in the future there will be no wives and no friends. Children will be taken from their mothers at birth, as one takes eggs from a hen.... There will be no loyalty, except loyalty toward the Party. There will be no love, except the love of Big Brother. There will be no laughter, except the laugh of triumph over a defeated enemy.”

The brutish O’Brien then matter-of-factly continued his explanation to the helpless and supine Winston Smith. “But always — do not forget this, Winston — always there will be the intoxication of power, constantly increasing and constantly growing subtler. Always, at every moment, there will be the thrill of victory, the sensation of trampling on an enemy who is helpless. If you want a picture of the future, imagine a boot stamping on a human face — forever.”

A Call to Action

A ruthless, tyrannical, Orwellian world state is precisely what the top Insiders plan to have. Like Orwell's O'Brien, they are intoxicated with power. They crave absolute power. And if they should ever attain it, we will experience a murderous "plague of power" such as this planet has not seen before. We will know democide on a scale not previously imagined. The moral man who fully realizes the terrible consequences of allowing such a future to come to pass by default will be highly motivated to join the battle against the forces of evil and oppression. The moral person who understands what is at stake — for himself, his loved ones, and the incredible heritage of freedom with which we have been blessed — will be imbued with a high level of commitment to stopping these would-be tyrants. But how does one go about such a daunting task?

Those committed to this UN world-government goal enjoy, as we have shown, enormous influence and prominent positions throughout our institutions, especially in the media. They are able to create the appearance of universal support for their agenda. As the late Admiral Chester Ward, a former longtime member of the Council on Foreign Relations, observed: "Once the ruling members of CFR have decided that the U.S. Government should adopt a particular policy, the very substantial research facilities of CFR are put to work to develop arguments, intellectual and emotional, to support the new policy, and to confound and discredit, intellectually and politically, any opposition."

Clearly, anyone who dares to sound the alarm or question the globalist agenda invites well-orchestrated attacks and ridicule. In short, Americans face a very perilous situation: the major power centers and safeguards on which they depend to protect their interests have either been compromised or are secretly working to enslave us. With the major channels of communication in internationalist hands, alerting other Americans to this situation is a formidable challenge. Yet, as we shall see, the situation is not hopeless if a core of responsible Americans will organize and act in pursuit of a sound plan.

A Commensurate Response

What needs to be done commensurate with the seriousness of the danger? Our answer: Enlist many more citizens to follow a sound program to get the United States out of the United Nations completely. With the UN as a foundation, the globalists are waging assaults on our sovereignty on an incredible number of fronts. And they have equally incredible resources at their disposal for doing so, including the support of now more than 1,000 NGOs lobbying for the UN agenda. We cannot expect to obtain the resources to defend against all of those attacks. Moreover, such a purely defensive strategy is always doomed to defeat. The only sensible strategy is to put the globalists' gains up for grabs by going after the foundation for their assaults — the United Nations itself.

"There are a thousand hacking at the branches of evil," said Henry David Thoreau, "to one who is striking at the root." Rather than hacking at the ever-proliferating branches

of the UN program, we must concentrate our forces where it counts. We must wield a sharp axe to the root and trunk of the UN tree — by forcing the U.S. to withdraw from the UN. U.S. withdrawal before the UN acquires real, independent power would condemn the UN to the ash heap of history. Without U.S. support, the United Nations would share the same fate as its predecessor League of Nations. When the U.S. Senate wisely refused to have the U.S. join the League following World War I, the League soon faded into oblivion.

The UN is not the only program or assault on the U.S. system that has been mounted by the Establishment one-worlders. But it is a cornerstone of their plans — an investment of over five decades. As a mechanism to destroy our sovereignty, it threatens to take many other battles in resisting the collectivist assault out of the hands of Congress and the American people. Depriving the Conspiracy of its creation, the UN, is essential to the preservation of liberty and accomplishing this would be an incredible setback to the Insiders' plans. One very significant advantage we have on our side in this monumental effort is truth and the natural, God-given, human desire to be free. Another is the considerable freedoms and protections that still exist under what remains of our badly tattered constitutional system. There are many layers of strength not yet rotted and corrupted. One very important indication of that reality is the fact that the Insiders still must resort constantly to massive lies and deception to sell their fraudulent, totalitarian programs. If the fight were already over, as the defeatists claim, our enemies would not be going to such lengths to deceive; they would be flying their colors openly.

But they cannot promote their agenda openly. As dumbed-down, numbed-down, bummed-down, and scummed-down as a growing segment of the American public is, there is still sufficient residual morality and intelligence to force the conspirators for world tyranny to cloak their schemes in noble-sounding rhetoric and extravagant charades. This means they must invest hundreds of times (even thousands of times) more in labor and resources to sell their lies than what it takes to offset their lies by promoting the truth. The architects of the new world order have not yet been able to entirely erode the republican form of government that our Founding Fathers established and that has been passed on to us through the sacrifices of so many dedicated Americans who have gone before us. Concerned Americans (or rather every citizen within the UN) just need to inform themselves and use the rights, freedoms, and blessings we enjoy in order to reverse our course.

Sound Organization Required

Building sufficient understanding in time will require organization under extremely tough, responsible, and knowledgeable leadership. Taking on the UN means taking on the power and influence of the Establishment, and in particular the Council on Foreign Relations (the UN's creator and sponsor) as well as all of the politicians and media moguls the CFR has in its pocket. This battle can't be carried through to success without leadership that

understands the wiles of politicians and the pressures that the CFR can bring to bear. For example, as public understanding grows that the UN is not our friend, inevitably new proposals to “reform” the UN will be offered — which politicians will be tempted to support. This is not only a bad idea, but also a dangerous trap. No reforms will change the nature of the beast. The UN was designed from the beginning to promote global tyranny. But politicians love to champion “compromise” because they see a chance to pacify uninformed constituents while not risking the wrath of the globalists. Which also means that freedom loses. These politicians love to posture with calls for “reform” in order to deflect mounting pressure that would force them to take real action with real political consequences. Unfortunately, many conservative groups that oppose most of the UN’s agenda have already been co-opted to adopt the “reform the UN” agenda. That is a prescription for defeat.

To force serious political action (and keep politicians from wiggling, stalling, and doing nothing in the face of enormous pressure and deception from the Establishment) requires a well-informed, well-organized action group under sound leadership.

Our enemy’s success all stems from the ignorance, delusion, and lack of understanding of the American people. If good Americans gain a proper understanding of what is happening, our problems can be resolved within the institutions that George Washington and others fought to give us. If the people don’t gain the understanding to choose better leaders and hold their politicians accountable to the Constitution, they cannot expect to improve their government through revolution. In fact, just the opposite would happen. What is needed instead is to use the resources and the freedoms we have to inform our fellow citizens and put the government our Founding Fathers gave us back on track. But for success in the educational battle ahead, we do need to find the same spirit of patriotism and determination that Patrick Henry captured so well in his previously mentioned “Give Me Liberty or Give Me Death” oration:

“If we wish to be free — if we mean to preserve inviolate those inestimable privileges for which we have been so long contending — if we mean not basely to abandon the noble struggle in which we have been so long engaged, and which we have pledged ourselves never to abandon until the glorious object of our contest shall be obtained — we must fight! I repeat it, sir, we must fight!! An appeal to arms and to the God of Hosts is all that is left us! ...Is life so dear, or peace so sweet, as to be purchased at the price of chains and slavery? Forbid it, Almighty God! I know not what course others may take; but as for me, give me liberty or give me death!”

16. The Fate of Empire

By Sir John Glubb

John Bagot Glubb was born in 1897, his father being a regular officer in the Royal Engineers. At the age of four he left England for Mauritius, where his father was posted for a three-year tour of duty. At the age of ten he was sent to school for a year in Switzerland. These youthful travels may have opened his mind to the outside world at an early age. He entered the Royal Military Academy at Woolwich in September 1914, and was commissioned in the Royal Engineers in April 1915. He served throughout the first World War in France and Belgium, being wounded three times and awarded the Military Cross. In 1920 he volunteered for service in Iraq, as a regular officer, but in 1926 resigned his commission and accepted an administrative post under the Iraq Government. In 1930, however, he signed a contract to serve the Transjordan Government (now Jordan). From 1939 to 1956 he commanded the famous Jordan Arab Legion, which was in reality the Jordan Army. Since his retirement he has published seventeen books, chiefly on the Middle East, and has lectured widely in Britain, the United States and Europe.

Introduction

As we pass through life, we learn by experience. We look back on our behaviour when we were young and think how foolish we were. In the same way our family, our community and our town endeavour to avoid the mistakes made by our predecessors. The experiences of the human race have been recorded, in more or less detail, for some four thousand years. If we attempt to study such a period of time in as many countries as possible, we seem to discover the same patterns constantly repeated under widely differing conditions of climate, culture and religion. Surely, we ask ourselves, if we studied calmly and impartially the history of human institutions and development over these four thousand years, should we not reach conclusions which would assist to solve our problems today? For everything that is occurring around us has happened again and again before. No such conception ever appears to have entered into the minds of our historians. In general, historical teaching in schools is limited to this small island. We endlessly mull over the Tudors and the Stewarts, the Battle of Crecy, and Guy Fawkes. Perhaps this narrowness is due to our examination system, which necessitates the careful definition of a syllabus which all children must observe. I remember once visiting a school for mentally handicapped children. "Our children do not have to take examinations," the headmaster told me, "and so we are able to teach them things which will be really useful to them in life."

However this may be, the thesis which I wish to propound is that priceless lessons could be learned if the history of the past four thousand years could be thoroughly and impartially

studied. In these two articles, which first appeared in *Blackwood's Magazine*, I have attempted briefly to sketch some of the kinds of lessons which I believe we could learn. My plea is that history should be the history of the human race, not of one small country or period.

Learning from History

'The only thing we learn from history,' it has been said, 'is that men never learn from history', a sweeping generalisation perhaps, but one which the chaos in the world today goes far to confirm. What then can be the reason why, in a society which claims to probe every problem, the bases of history are still so completely unknown? Several reasons for the futility of our historical studies may be suggested. First, our historical work is limited to short periods—the history of our own country, or that of some past age which, for some reason, we hold in respect. Second, even within these short periods, the slant we give to our narrative is governed by our own vanity rather than by objectivity. If we are considering the history of our own country, we write at length of the periods when our ancestors were prosperous and victorious, but we pass quickly over their shortcomings or their defeats. Our people are represented as patriotic heroes, their enemies as grasping imperialists, or subversive rebels. In other words, our national histories are propaganda, not wellbalanced investigations. Third, in the sphere of world history, we study certain short, usually unconnected, periods, which fashion at certain epochs has made popular. Greece 500 years before Christ, and the Roman Republic and early Roman Empire are cases in point. The intervals between the 'great periods' are neglected. Recently Greece and Rome have become largely discredited, and history tends to become increasingly the parochial history of our own countries.

To derive any useful instruction from history, it seems to me essential first of all to grasp the principle that history, to be meaningful, must be the history of the human race. For history is a continuous process, gradually developing, changing and turning back, but in general moving forward in a single mighty stream. Any useful lessons to be derived must be learned by the study of the whole flow of human development, not by the selection of short periods here and there in one country or another. Every age and culture is derived from its predecessors, adds some contribution of its own, and passes it on to its successors. If we boycott various periods of history, the origins of the new cultures which succeeded them cannot be explained. Physical science has expanded its knowledge by building on the work of its predecessors, and by making millions of careful experiments, the results of which are meticulously recorded. Such methods have not yet been employed in the study of world history. Our piecemeal historical work is still mainly dominated by emotion and prejudice.

The Lives of Empires

If we desire to ascertain the laws which govern the rise and fall of empires, the obvious course is to investigate the imperial experiments recorded in history, and to endeavour to deduce from them any lessons which seem to be applicable to them all. The word 'empire', by association with the British Empire, is visualised by some people as an organisation consisting of a homecountry in Europe and 'colonies' in other continents. In this essay, the term 'empire' is used to signify a great power, often called today a superpower. Most of the empires in history have been large landblocks, almost without overseas possessions. We possess a considerable amount of information on many empires recorded in history, and of their vicissitudes and the lengths of their lives, for example:

The Nation	Dates of rise and fall	Duration in years
Assyria	859-612 B.C.	247
Persia	538-330 B.C.	208
Greece	331-100 B.C.	231
Roman Republic	260-27 B.C.	233
Roman Empire	27 B.C. - A.D. 180	207
Arab Empire	A.D. 634-880	246
Mameluke Empire	1250-1517	267
Ottoman Empire	1250-1570	250
Spain	1500-1750	250
Romanov Russia	1682-1916	234
Britain	1700-1950	250

This list calls for certain comments.

(1) The present writer is exploring the facts, not trying to prove anything. The dates given are largely arbitrary. Empires do not usually begin or end on a certain date. There is normally a gradual period of expansion and then a period of decline. The resemblance in the duration of these great powers may be queried. Human affairs are subject to many chances, and it is not to be expected that they could be calculated with mathematical accuracy.

(2) Nevertheless, it is suggested that there is sufficient resemblance between the life periods of these different empires to justify further study.

(3) The division of Rome into two periods may be thought unwarranted. The first, or republican, period dates from the time when Rome became the mistress of Italy, and ends with the accession of Augustus. The imperial period extends from the accession of Augustus to the death of Marcus Aurelius. It is true that the empire survived nominally for more than a century after this date, but it did so in constant confusion, rebellions, civil wars and barbarian invasions.

(4) Not all empires endured for their full lifespan. The Babylonian Empire of Nebuchadnezzar, for example, was overthrown by Cyrus, after a life duration of only some

seventy-four years.

(5) An interesting deduction from the figures seems to be that the duration of empires does not depend on the speed of travel or the nature of weapons. The Assyrians marched on foot and fought with spears and bow and arrows. The British used artillery, railways and ocean-going ships. Yet the two empires lasted for approximately the same periods. There is a tendency nowadays to say that this is the jet-age, and consequently there is nothing for us to learn from past empires. Such an attitude seems to be erroneous.

(6) It is tempting to compare the lives of empires with those of human beings. We may choose a figure and say that the average life of a human being is seventy years. Not all human beings live exactly seventy years. Some die in infancy, others are killed in accidents in middle life, some survive to the age of eighty or ninety. Nevertheless, in spite of such exceptions, we are justified in saying that seventy years is a fair estimate of the average person's expectation of life.

(7) We may perhaps at this stage be allowed to draw certain conclusions: (a) In spite of the accidents of fortune, and the apparent circumstances of the human race at different epochs, the periods of duration of different empires at varied epochs show a remarkable similarity. (b) Immense changes in the technology of transport or in methods of warfare do not seem to affect the life-expectation of an empire. (c) The changes in the technology of transport and of war have, however, affected the shape of empires. The Assyrians, marching on foot, could only conquer their neighbours, who were accessible by land—the Medes, the Babylonians, the Persians and the Egyptians. The British, making use of ocean-going ships, conquered many countries and subcontinents, which were accessible to them by water—North America, India, South Africa, Australia and New Zealand—but they never succeeded in conquering their neighbours, France, Germany and Spain. But, although the shapes of the Assyrian and the British Empires were entirely different, both lasted about the same length of time.

The Human Yardstick

What then, we may ask, can have been the factor which caused such an extraordinary similarity in the duration of empires, under such diverse conditions, and such utterly different technological achievements? One of the very few units of measurement which have not seriously changed since the Assyrians is the human 'generation', a period of about twenty-five years. Thus a period of 250 years would represent about ten generations of people. A closer examination of the characteristics of the rise and fall of great nations may emphasise the possible significance of the sequence of generations. Let us then attempt to examine the stages in the lives of such powerful nations.

Stage One. The Outburst

Again and again in history we find a small nation, treated as insignificant by its contemporaries, suddenly emerging from its homeland and overrunning large areas of the world. Prior to Philip (359-336 B.C.), Macedon had been an insignificant state to the north of Greece. Persia was the great power of the time, completely dominating the area from Eastern Europe to India. Yet by 323 B.C., thirty-six years after the accession of Philip, the Persian Empire had ceased to exist, and the Macedonian Empire extended from the Danube to India, including Egypt. This amazing expansion may perhaps he attributed to the genius of Alexander the Great, but this cannot have been the sole reason; for although after his death everything went wrong—the Macedonian generals fought one another and established rival empires—Macedonian pre-eminence survived for 231 years. In the year A.D. 600, the world was divided between two superpower groups as it has been for the past fifty years between Soviet Russia and the West. The two powers were the eastern Roman Empire and the Persian Empire. The Arabs were then the despised and backward inhabitants of the Arabian Peninsula. They consisted chiefly of wandering tribes, and had no government, no constitution and no army. Syria, Palestine, Egypt and North Africa were Roman provinces, Iraq was part of Persia.

The Prophet Mohammed preached in Arabia from A.D. 613 to 632, when he died. In 633, the Arabs burst out of their desert peninsula, and simultaneously attacked the two super-powers. Within twenty years, the Persian Empire had ceased to exist. Seventy years after the death of the Prophet, the Arabs had established an empire extending from the Atlantic to the plains of Northern India and the frontiers of China. At the beginning of the thirteenth century, the Mongols were a group of savage tribes in the steppes of Mongolia. In 1211, Genghis Khan invaded China. By 1253, the Mongols had established an empire extending from Asia Minor to the China Sea, one of the largest empires the world has ever known. The Arabs ruled the greater part of Spain for 780 years, from 712 A.D. to 1492. (780 years back in British history would take us to 1196 and King Richard Coeur de Lion.) During these eight centuries, there had been no Spanish nation, the petty kings of Aragon and Castile alone holding on in the mountains. The agreement between Ferdinand and Isabella and Christopher Columbus was signed immediately after the fall of Granada, the last Arab kingdom in Spain, in 1492. Within fifty years, Cortez had conquered Mexico, and Spain was the world's greatest empire. Examples of the sudden outbursts by which empires are born could be multiplied indefinitely. These random illustrations must suffice.

Characteristics of the Outburst

These sudden outbursts are usually characterised by an extraordinary display of energy and courage. The new conquerors are normally poor, hardy and enterprising and above all aggressive. The decaying empires which they overthrow are wealthy but defensive-

minded. In the time of Roman greatness, the legions used to dig a ditch round their camps at night to avoid surprise. But the ditches were mere earthworks, and between them wide spaces were left through which the Romans could counter-attack. But as Rome grew older, the earthworks became high walls, through which access was given only by narrow gates. Counterattacks were no longer possible. The legions were now passive defenders. But the new nation is not only distinguished by victory in battle, but by unrelenting enterprise in every field. Men hack their way through jungles, climb mountains, or brave the Atlantic and the Pacific oceans in tiny cockle-shells. The Arabs crossed the Straits of Gibraltar in A.D. 711 with 12,000 men, defeated a Gothic army of more than twice their strength, marched straight over 250 miles of unknown enemy territory and seized the Gothic capital of Toledo. At the same stage in British history, Captain Cook discovered Australia. Fearless initiative characterises such periods.

Other peculiarities of the period of the conquering pioneers are their readiness to improvise and experiment. Untrammelled by traditions, they will turn anything available to their purpose. If one method fails, they try something else. Uninhibited by textbooks or book learning, action is their solution to every problem. Poor, hardy, often half-starved and ill-clad, they abound in courage, energy and initiative, overcome every obstacle and always seem to be in control of the situation. VI The causes of race outbursts The modern instinct is to seek a reason for everything, and to doubt the veracity of a statement for which a reason cannot be found. So many examples can be given of the sudden eruption of an obscure race into a nation of conquerors that the truth of the phenomenon cannot be held to be doubtful. To assign a cause is more difficult. Perhaps the easiest explanation is to assume that the poor and obscure race is tempted by the wealth of the ancient civilisation, and there would undoubtedly appear to be an element of greed for loot in barbarian invasions. Such a motivation may be divided into two classes. The first is mere loot, plunder and rape, as, for example, in the case of Attila and the Huns, who ravaged a great part of Europe from A.D. 450 to 453. However, when Attila died in the latter year, his empire fell apart and his tribes returned to Eastern Europe. Many of the barbarians who founded dynasties in Western Europe on the ruins of the Roman Empire, however, did so out of admiration for Roman civilisation, and themselves aspired to become Romans.

A providential Turnover?

Whatever causes may be given for the overthrow of great civilisations by barbarians, we can sense certain resulting benefits. Every race on earth has distinctive characteristics. Some have been distinguished in philosophy, some in administration, some in romance, poetry or religion, some in their legal system. During the pre-eminence of each culture, its distinctive characteristics are carried by it far and wide across the world. If the same nation were to retain its domination indefinitely, its peculiar qualities would permanently characterise the whole human race. Under the system of empires each lasting for 250

years, the sovereign race has time to spread its particular virtues far and wide. Then, however, another people, with entirely different peculiarities, takes its place, and its virtues and accomplishments are likewise disseminated. By this system, each of the innumerable races of the world enjoys a period of greatness, during which its peculiar qualities are placed at the service of mankind.

To those who believe in the existence of God, as the Ruler and Director of human affairs, such a system may appear as a manifestation of divine wisdom, tending towards the slow and ultimate perfection of humanity.

The Course of Empire

The first stage of the life of a great nation, therefore, after its outburst, is a period of amazing initiative, and almost incredible enterprise, courage and hardihood. These qualities, often in a very short time, produce a new and formidable nation. These early victories, however, are won chiefly by reckless bravery and daring initiative. The ancient civilisation thus attacked will have defended itself by its sophisticated weapons, and by its military organisation and discipline. The barbarians quickly appreciate the advantages of these military methods and adopt them. As a result, the second stage of expansion of the new empire consists of more organised, disciplined and professional campaigns. In other fields, the daring initiative of the original conquerors is maintained—in geographical exploration, for example: pioneering new countries, penetrating new forests, climbing unexplored mountains, and sailing uncharted seas. The new nation is confident, optimistic and perhaps contemptuous of the 'decadent' races which it has subjugated. The methods employed tend to be practical and experimental, both in government and in warfare, for they are not tied by centuries of tradition, as happens in ancient empires. Moreover, the leaders are free to use their own improvisations, not having studied politics or tactics in schools or in textbooks.

USA in the Stage of Pioneers

In the case of the United States of America, the pioneering period did not consist of a barbarian conquest of an effete civilisation, but of the conquest of barbarian peoples. Thus, viewed from the outside, every example seems to be different. But viewed from the standpoint of the great nation, every example seems to be similar. The United States arose suddenly as a new nation, and its period of pioneering was spent in the conquest of a vast continent, not an ancient empire. Yet the subsequent life history of the United States has followed the standard pattern which we shall attempt to trace—the periods of the pioneers, of commerce, of affluence, of intellectualism and of decadence.

Commercial Expansion

The conquest of vast areas of land and their subjection to one government automatically acts as a stimulant to commerce. Both merchants and goods can be exchanged over considerable distances. Moreover, if the empire be an extensive one, it will include a great variety of climates, producing extremely varied products, which the different areas will wish to exchange with one another. The speed of modern methods of transportation tends to create in us the impression that far-flung commerce is a modern development, but this is not the case. Objects made in Ireland, Scandinavia and China have been found in the graves or the ruins of the Middle East, dating from 1,000 years before Christ. The means of transport were slower, but, when a great empire was in control, commerce was freed from the innumerable shackles imposed upon it today by passports, import permits, customs, boycotts and political interference.

The Roman Empire extended from Britain to Syria and Egypt, a distance, in a direct line, of perhaps 2,700 miles. A Roman official, transferred from Britain to Syria, might spend six months on the journey. Yet, throughout the whole distance, he would be travelling in the same country, with the same official language, the same laws, the same currency and the same administrative system. Today, some twenty independent countries separate Britain from Syria, each with its own government, its own laws, politics, customs fees, passports and currencies, making commercial co-operation almost impossible. And this process of disintegration is still continuing. Even within the small areas of the modern European nations, provincial movements demanding secession or devolution tend further to splinter the continent. The present fashion for 'independence' has produced great numbers of tiny states in the world, some of them consisting of only one city or of a small island. This system is an insuperable obstacle to trade and cooperation. The present European Economic Community is an attempt to secure commercial cooperation among small independent states over a large area, but the plan meets with many difficulties, due to the mutual jealousies of so many nations.

Even savage and militaristic empires promoted commerce, whether or not they intended to do so. The Mongols were some of the most brutal military conquerors in history, massacring the entire populations of cities. Yet, in the thirteenth century, when their empire extended from Peking to Hungary, the caravan trade between China and Europe achieved a remarkable degree of prosperity—the whole journey was in the territory of one government. In the eighth and ninth centuries, the caliphs of Baghdad achieved fabulous wealth owing to the immense extent of their territories, which constituted a single trade bloc. The empire of the caliphs is now divided into some twenty-five separate 'nations'.

The Pros and Cons of Empires

In discussing the life-story of the typical empire, we have digressed into a discussion of whether empires are useful or injurious to mankind. We seem to have discovered

that empires have certain advantages, particularly in the field of commerce, and in the establishment of peace and security in vast areas of the globe. Perhaps we should also include the spread of varied cultures to many races. The present infatuation for independence for ever smaller and smaller units will eventually doubtless be succeeded by new international empires.

The present attempts to create a European community may be regarded as a practical endeavour to constitute a new super-power, in spite of the fragmentation resulting from the craze for independence. If it succeeds, some of the local independencies will have to be sacrificed. If it fails, the same result may be attained by military conquest, or by the partition of Europe between rival superpowers. The inescapable conclusion seems, however, to be that larger territorial units are a benefit to commerce and to public stability, whether the broader territory be achieved by voluntary association or by military action.

Sea Power

One of the more benevolent ways in which a super-power can promote both peace and commerce is by its command of the sea. From Waterloo to 1914, the British Navy commanded the seas of the world. Britain grew rich, but she also made the Seas safe for the commerce of all nations, and prevented major wars for 100 years. Curiously enough, the question of sea power was never clearly distinguished, in British politics during the last fifty years, from the question of imperial rule over other countries. In fact, the two subjects are entirely distinct. Sea power does not offend small countries, as does military occupation. If Britain had maintained her navy, with a few naval bases overseas in isolated islands, and had given independence to colonies which asked for it, the world might well be a more stable place today. In fact, however, the navy was swept away in the popular outcry against imperialism.

The Age of Commerce

Let us now, however, return to the lifestory of our typical empire. We have already considered the age of outburst, when a littleregarded people suddenly bursts on to the world stage with a wild courage and energy. Let us call it the Age of the Pioneers. Then we saw that these new conquerors acquired the sophisticated weapons of the old empires, and adopted their regular systems of military organisation and training. A great period of military expansion ensued, which we may call the Age of Conquests. The conquests resulted in the acquisition of vast territories under one government, thereby automatically giving rise to commercial prosperity. We may call this the Age of Commerce. The Age of Conquests, of course, overlaps the Age of Commerce. The proud military traditions still hold sway and the great armies guard the frontiers, but gradually the desire to make money seems to gain hold of the public. During the military period, glory and honour

were the principal objects of ambition. To the merchant, such ideas are but empty words, which add nothing to the bank balance.

Art and Luxury

The wealth which seems, almost without effort, to pour into the country enables the commercial classes to grow immensely rich. How to spend all this money becomes a problem to the wealthy business community. Art, architecture and luxury find rich patrons. Splendid municipal buildings and wide streets lend dignity and beauty to the wealthy areas of great cities. The rich merchants build themselves palaces, and money is invested in communications, highways, bridges, railways or hotels, according to the varied patterns of the ages. The first half of the Age of Commerce appears to be peculiarly splendid. The ancient virtues of courage, patriotism and devotion to duty are still in evidence. The nation is proud, united and full of selfconfidence. Boys are still required, first of all, to be manly—to ride, to shoot straight and to tell the truth. (It is remarkable what emphasis is placed, at this stage, on the manly virtue of truthfulness, for lying is cowardice—the fear of facing up to the situation.)

Boys' schools are intentionally rough. Frugal eating, hard living, breaking the ice to have a bath and similar customs are aimed at producing a strong, hardy and fearless breed of men. Duty is the word constantly drummed into the heads of young people. The Age of Commerce is also marked by great enterprise in the exploration for new forms of wealth. Daring initiative is shown in the search for profitable enterprises in far corners of the earth, perpetuating to some degree the adventurous courage of the Age of Conquests.

The Age of Affluence

There does not appear to be any doubt that money is the agent which causes the decline of this strong, brave and self-confident people. The decline in courage, enterprise and a sense of duty is, however, gradual. The first direction in which wealth injures the nation is a moral one. Money replaces honour and adventure as the objective of the best young men. Moreover, men do not normally seek to make money for their country or their community, but for themselves. Gradually, and almost imperceptibly, the Age of Affluence silences the voice of duty. The object of the young and the ambitious is no longer fame, honour or service, but cash.

Education undergoes the same gradual transformation. No longer do schools aim at producing brave patriots ready to serve their country. Parents and students alike seek the educational qualifications which will command the highest salaries. The Arab moralist, Ghazali (1058-1111), complains in these very same words of the lowering of objectives in the declining Arab world of his time. Students, he says, no longer attend college to acquire learning and virtue, but to obtain those qualifications which will enable them to grow rich. The same situation is everywhere evident among us in the West today.

High Noon

That which we may call the High Noon of the nation covers the period of transition from the Age of Conquests to the Age of Affluence: the age of Augustus in Rome, that of Harun al-Rashid in Baghdad, of Sulaiman the Magnificent in the Ottoman Empire, or of Queen Victoria in Britain. Perhaps we might add the age of Woodrow Wilson in the United States. All these periods reveal the same characteristics. The immense wealth accumulated in the nation dazzles the onlookers. Enough of the ancient virtues of courage, energy and patriotism survive to enable the state successfully to defend its frontiers. But, beneath the surface, greed for money is gradually replacing duty and public service. Indeed the change might be summarised as being from service to selfishness.

Defensiveness

Another outward change which invariably marks the transition from the Age of Conquests to the Age of Affluence is the spread of defensiveness. The nation, immensely rich, is no longer interested in glory or duty, but is only anxious to retain its wealth and its luxury. It is a period of defensiveness, from the Great Wall of China, to Hadrian's Wall on the Scottish Border, to the Maginot Line in France in 1939. Money being in better supply than courage, subsidies instead of weapons are employed to buy off enemies. To justify this departure from ancient tradition, the human mind easily devises its own justification. Military readiness, or aggressiveness, is denounced as primitive and immoral. Civilised peoples are too proud to fight. The conquest of one nation by another is declared to be immoral. Empires are wicked. This intellectual device enables us to suppress our feeling of inferiority, when we read of the heroism of our ancestors, and then ruefully contemplate our position today.

'It is not that we are afraid to fight,' we say, 'but we should consider it immoral.' This even enables us to assume an attitude of moral superiority. The weakness of pacifism is that there are still many peoples in the world who are aggressive. Nations who proclaim themselves unwilling to fight are liable to be conquered by peoples in the stage of militarism— perhaps even to see themselves incorporated into some new empire, with the status of mere provinces or colonies. When to be prepared to use force and when to give way is a perpetual human problem, which can only be solved, as best we can, in each successive situation as it arises. In fact, however, history seems to indicate that great nations do not normally disarm from motives of conscience, but owing to the weakening of a sense of duty in the citizens, and the increase in selfishness and the desire for wealth and ease.

The Age of Intellect

We have now, perhaps arbitrarily, divided the life-story of our great nation into four ages. The Age of the Pioneers (or the Outburst), the Age of Conquests, the Age of Commerce, and the Age of Affluence. The great wealth of the nation is no longer needed to supply the mere necessities, or even the luxuries of life. Ample funds are available also for the pursuit of knowledge. The merchant princes of the Age of Commerce seek fame and praise, not only by endowing works of art or patronising music and literature. They also found and endow colleges and universities. It is remarkable with what regularity this phase follows on that of wealth, in empire after empire, divided by many centuries. In the eleventh century, the former Arab Empire, then in complete political decline, was ruled by the Seljuk sultan, Malik Shah. The Arabs, no longer soldiers, were still the intellectual leaders of the world. During the reign of Malik Shah, the building of universities and colleges became a passion. Whereas a small number of universities in the great cities had sufficed the years of Arab glory, now a university sprang up in every town.

In our own lifetime, we have witnessed the same phenomenon in the U.S.A. and Britain. When these nations were at the height of their glory, Harvard, Yale, Oxford and Cambridge seemed to meet their needs. Now almost every city has its university. The ambition of the young, once engaged in the pursuit of adventure and military glory, and then in the desire for the accumulation of wealth, now turns to the acquisition of academic honours. It is useful here to take note that almost all the pursuits followed with such passion throughout the ages were in themselves good. The manly cult of hardihood, frankness and truthfulness, which characterised the Age of Conquests, produced many really splendid heroes. The opening up of natural resources, and the peaceful accumulation of wealth, which marked the age of commercialism, appeared to introduce new triumphs in civilisation, in culture and in the arts. In the same way, the vast expansion of the field of knowledge achieved by the Age of Intellect seemed to mark a new high-water mark of human progress. We cannot say that any of these changes were 'good' or 'bad'. The striking features in the pageant of empire are:

- (a) the extraordinary exactitude with which these stages have followed one another, in empire after empire, over centuries or even millennia; and
- b) the fact that the successive changes seem to represent mere changes in popular fashion—new fads and fancies which sweep away public opinion without logical reason. At first, popular enthusiasm is devoted to military glory, then to the accumulation of wealth and later to the acquisition of academic fame.

Why could not all these legitimate, and indeed beneficent, activities be carried on simultaneously, each of them in due moderation? Yet this never seemed to happen.

The Effects of Intellectualism

There are so many things in human life which are not dreamt of in our popular philosophy. The spread of knowledge seems to be the most beneficial of human activities, and yet every period of decline is characterised by this expansion of intellectual activity. 'All the Athenians and strangers which were there spent their time in nothing else, but either to tell or to hear some new thing' is the description given in the Acts of the Apostles of the decline of Greek intellectualism. The Age of Intellect is accompanied by surprising advances in natural science. In the ninth century, for example, in the age of Mamun, the Arabs measured the circumference of the earth with remarkable accuracy. Seven centuries were to pass before Western Europe discovered that the world was not flat. Less than fifty years after the amazing scientific discoveries under Mamun, the Arab Empire collapsed. Wonderful and beneficent as was the progress of science, it did not save the empire from chaos.

The full flowering of Arab and Persian intellectualism did not occur until after their imperial and political collapse. Thereafter the intellectuals attained fresh triumphs in the academic field, but politically they became the abject servants of the often illiterate rulers. When the Mongols conquered Persia in the thirteenth century, they were themselves entirely uneducated and were obliged to depend wholly on native Persian officials to administer the country and to collect the revenue. They retained as wazeer, or Prime Minister, one Rashid al- Din, a historian of international repute. Yet the Prime Minister, when speaking to the Mongol Khan, was obliged to remain throughout the interview on his knees. At state banquets, the Prime Minister stood behind the Khan's seat to wait upon him. If the Khan were in a good mood, he occasionally passed his wazeer a piece of food over his shoulder.

As in the case of the Athenians, intellectualism leads to discussion, debate and argument, such as is typical of the Western nations today. Debates in elected assemblies or local committees, in articles in the Press or in interviews on television—endless and incessant talking. Men are interminably different, and intellectual arguments rarely lead to agreement. Thus public affairs drift from bad to worse, amid an unceasing cacophony of argument. But this constant dedication to discussion seems to destroy the power of action. Amid a Babel of talk, the ship drifts on to the rocks.

The Inadequacy of Intellect

Perhaps the most dangerous by-product of the Age of Intellect is the unconscious growth of the idea that the human brain can solve the problems of the world. Even on the low level of practical affairs this is patently untrue. Any small human activity, the local bowls club or the ladies' luncheon club, requires for its survival a measure of self-sacrifice and service on the part of the members. In a wider national sphere, the survival of the nation depends basically on the loyalty and self-sacrifice of the citizens. The impression

that the situation can be saved by mental cleverness, without unselfishness or human self-dedication, can only lead to collapse. Thus we see that the cultivation of the human intellect seems to be a magnificent ideal, but only on condition that it does not weaken unselfishness and human dedication to service. Yet this, judging by historical precedent, seems to be exactly what it does do. Perhaps it is not the intellectualism which destroys the spirit of self-sacrifice—the least we can say is that the two, intellectualism and the loss of a sense of duty, appear simultaneously in the life-story of the nation. Indeed it often appears in individuals, that the head and the heart are natural rivals. The brilliant but cynical intellectual appears at the opposite end of the spectrum from the emotional self-sacrifice of the hero or the martyr. Yet there are times when the perhaps unsophisticated self-dedication of the hero is more essential than the sarcasms of the clever.

Civil Dissensions

Another remarkable and unexpected symptom of national decline is the intensification of internal political hatreds. One would have expected that, when the survival of the nation became precarious, political factions would drop their rivalry and stand shoulder-to-shoulder to save their country. In the fourteenth century, the weakening empire of Byzantium was threatened, and indeed dominated, by the Ottoman Turks. The situation was so serious that one would have expected every subject of Byzantium to abandon his personal interests and to stand with his compatriots in a last desperate attempt to save the country. The reverse occurred. The Byzantines spent the last fifty years of their history in fighting one another in repeated civil wars, until the Ottomans moved in and administered the coup de grâce.

Britain has been governed by an elected parliament for many centuries. In former years, however, the rival parties observed many unwritten laws. Neither party wished to eliminate the other. All the members referred to one another as honourable gentlemen. But such courtesies have now lapsed. Booming, shouting and loud noises have undermined the dignity of the House, and angry exchanges are more frequent. We are fortunate if these rivalries are fought out in Parliament, but sometimes such hatreds are carried into the streets, or into industry in the form of strikes, demonstrations, boycotts and similar activities. True to the normal course followed by nations in decline, internal differences are not reconciled in an attempt to save the nation. On the contrary, internal rivalries become more acute, as the nation becomes weaker.

The influx of Foreigners

One of the oft-repeated phenomena of great empires is the influx of foreigners to the capital city. Roman historians often complain of the number of Asians and Africans in Rome. Baghdad, in its prime in the ninth century, was international in its population—Persians, Turks, Arabs, Armenians, Egyptians, Africans and Greeks mingled in its streets. In Lon-

don today, Cypriots, Greeks, Italians, Russians, Africans, Germans and Indians jostle one another on the buses and in the underground, so that it sometimes seems difficult to find any British. The same applies to New York, perhaps even more so. This problem does not consist in any inferiority of one race as compared with another, but simply in the differences between them. In the age of the first outburst and the subsequent Age of Conquests, the race is normally ethnically more or less homogeneous. This state of affairs facilitates a feeling of solidarity and comradeship. But in the Ages of Commerce and Affluence, every type of foreigner floods into the great city, the streets of which are reputed to be paved with gold. As, in most cases, this great city is also the capital of the empire, the cosmopolitan crowd at the seat of empire exercises a political influence greatly in excess of its relative numbers.

Second- or third-generation foreign immigrants may appear outwardly to be entirely assimilated, but they often constitute a weakness in two directions. First, their basic human nature often differs from that of the original imperial stock. If the earlier imperial race was stubborn and slowmoving, the immigrants might come from more emotional races, thereby introducing cracks and schisms into the national policies, even if all were equally loyal. Second, while the nation is still affluent, all the diverse races may appear equally loyal. But in an acute emergency, the immigrants will often be less willing to sacrifice their lives and their property than will be the original descendants of the founder race. Third, the immigrants are liable to form communities of their own, protecting primarily their own interests, and only in the second degree that of the nation as a whole. Fourth, many of the foreign immigrants will probably belong to races originally conquered by and absorbed into the empire. While the empire is enjoying its High Noon of prosperity, all these people are proud and glad to be imperial citizens. But when decline sets in, it is extraordinary how the memory of ancient wars, perhaps centuries before, is suddenly revived, and local or provincial movements appear demanding secession or independence. Some day this phenomenon will doubtless appear in the now apparently monolithic and authoritarian Soviet empire. It is amazing for how long such provincial sentiments can survive. Historical examples of this phenomenon are scarcely needed. The idle and capacious Roman mob, with its endless appetite for free distributions of food—bread and games—is notorious, and utterly different from that stern Roman spirit which we associate with the wars of the early republic. In Baghdad, in the golden days of Harun al-Rashid, Arabs were a minority in the imperial capital. Istanbul, in the great days of Ottoman rule, was peopled by inhabitants remarkably few of whom were descendants of Turkish conquerors. In New York, descendants of the Pilgrim Fathers are few and far between.

This interesting phenomenon is largely limited to great cities. The original conquering race is often to be found in relative purity in rural districts and on far frontiers. It is the wealth of the great cities which draws the immigrants. As, with the growth of industry, cities nowadays achieve an ever greater preponderance over the countryside, so will the influence of foreigners increasingly dominate old empires. Once more it may

be emphasised that I do not wish to convey the impression that immigrants are inferior to older stocks. They are just different, and they thus tend to introduce cracks and divisions.

Frivolity

As the nation declines in power and wealth, a universal pessimism gradually pervades the people, and itself hastens the decline. There is nothing succeeds like success, and, in the Ages of Conquest and Commerce, the nation was carried triumphantly onwards on the wave of its own self-confidence. Republican Rome was repeatedly on the verge of extinction—in 390 B.C. when the Gauls sacked the city and in 216 B.C. after the Battle of Cannae. But no disasters could shake the resolution of the early Romans. Yet, in the later stages of Roman decline, the whole empire was deeply pessimistic, thereby sapping its own resolution. Frivolity is the frequent companion of pessimism. Let us eat, drink and be merry, for tomorrow we die. The resemblance between various declining nations in this respect is truly surprising. The Roman mob, we have seen, demanded free meals and public games. Gladiatorial shows, chariot races and athletic events were their passion. In the Byzantine Empire the rivalries of the Greens and the Blues in the hippodrome attained the importance of a major crisis. Judging by the time and space allotted to them in the Press and television, football and baseball are the activities which today chiefly interest the public in Britain and the United States respectively.

The heroes of declining nations are always the same—the athlete, the singer or the actor. The word ‘celebrity’ today is used to designate a comedian or a football player, not a statesman, a general, or a literary genius.

The Arab Decline

In the first half of the ninth century, Baghdad enjoyed its High Noon as the greatest and the richest city in the world. In 861, however, the reigning Khalif (caliph), Mutawakkil, was murdered by his Turkish mercenaries, who set up a military dictatorship, which lasted for some thirty years. During this period the empire fell apart, the various dominions and provinces each assuming virtual independence and seeking its own interests. Baghdad, lately the capital of a vast empire, found its authority limited to Iraq alone. The works of the contemporary historians of Baghdad in the early tenth century are still available. They deeply deplored the degeneracy of the times in which they lived, emphasising particularly the indifference to religion, the increasing materialism and the laxity of sexual morals. They lamented also the corruption of the officials of the government and the fact that politicians always seemed to amass large fortunes while they were in office. The historians commented bitterly on the extraordinary influence acquired by popular singers over young people, resulting in a decline in sexual morality. The ‘pop’ singers of Baghdad accompanied their erotic songs on the lute, an instrument resembling the modern guitar.

In the second half of the tenth century, as a result, much obscene sexual language came increasingly into use, such as would not have been tolerated in an earlier age. Several khalifs issued orders banning 'pop' singers from the capital, but within a few years they always returned. An increase in the influence of women in public life has often been associated with national decline. The later Romans complained that, although Rome ruled the world, women ruled Rome. In the tenth century, a similar tendency was observable in the Arab Empire, the women demanding admission to the professions hitherto monopolised by men. 'What,' wrote the contemporary historian, Ibn Bessam, 'have the professions of clerk, tax-collector or preacher to do with women? These occupations have always been limited to men alone.' Many women practised law, while others obtained posts as university professors. There was an agitation for the appointment of female judges, which, however, does not appear to have succeeded. Soon after this period, government and public order collapsed, and foreign invaders overran the country. The resulting increase in confusion and violence made it unsafe for women to move unescorted in the streets, with the result that this feminist movement collapsed.

The disorders following the military takeover in 861, and the loss of the empire, had played havoc with the economy. At such a moment, it might have been expected that everyone would redouble their efforts to save the country from bankruptcy, but nothing of the kind occurred. Instead, at this moment of declining trade and financial stringency, the people of Baghdad introduced a five-day week. When I first read these contemporary descriptions of tenth-century Baghdad, I could scarcely believe my eyes. I told myself that this must be a joke! The descriptions might have been taken out of *The Times* today. The resemblance of all the details was especially breathtaking—the break-up of the empire, the abandonment of sexual morality, the 'pop' singers with their guitars, the entry of women into the professions, the five-day week. I would not venture to attempt an explanation! There are so many mysteries about human life which are far beyond our comprehension.

Political Ideology

Today we attach immense importance to the ideology of our internal politics. The Press and public media in the U.S.A. and Britain pour incessant scorn on any country the political institutions of which differ in any manner from our own idea of democracy. It is, therefore, interesting to note that the life-expectation of a great nation does not appear to be in any way affected by the nature of its institutions. Past empires show almost every possible variation of political system, but all go through the same procedure from the Age of Pioneers through Conquest, Commerce, Affluence to decline and collapse.

The Mameluke Empire

The empire of the Mamelukes of Egypt provides a case in point, for it was one of the most exotic ever to be recorded in history. It is also exceptional in that it began on one fixed day and ended on another, leaving no doubt of its precise duration, which was 267 years. In the first part of the thirteenth century, Egypt and Syria were ruled by the Ayoubid sultans, the descendants of the family of Saladin. Their army consisted of Mamelukes, slaves imported as boys from the Steppes and trained as professional soldiers. On 1st May 1250, the Mamelukes mutinied, murdered Turan Shah, the Ayoubid sultan, and became the rulers of his empire. The first fifty years of the Mameluke Empire were marked by desperate fighting with the hitherto invincible Mongols, the descendants of Genghis Khan, who invaded Syria. By defeating the Mongols and driving them out of Syria, the Mamelukes saved the Mediterranean from the terrible fate which had overtaken Persia. In 1291, the Mamelukes captured Acre, and put an end to the Crusades.

From 1309 to 1341, the Mameluke Empire was everywhere victorious and possessed the finest army in the world. For the ensuing hundred years the wealth of the Mameluke Empire was fabulous, slowly leading to luxury, the relaxation of discipline and to decline, with ever more bitter internal political rivalries. Finally the empire collapsed in 1517, as the result of military defeat by the Ottomans. The Mameluke government appears to us utterly illogical and fantastic. The ruling class was entirely recruited from young boys, born in what is now Southern Russia. Every one of them was enlisted as a private soldier. Even the sultans had begun life as private soldiers and had risen from the ranks. Yet this extraordinary political system resulted in an empire which passed through all the normal stages of conquest, commercialism, affluence and decline and which lasted approximately the usual period of time.

The master Race

The people of the great nations of the past seem normally to have imagined that their pre-eminence would last for ever. Rome appeared to its citizens to be destined to be for all time the mistress of the world. The Abbasid Khalifs of Baghdad declared that God had appointed them to rule mankind until the day of judgement. Seventy years ago, many people in Britain believed that the empire would endure for ever. Although Hitler failed to achieve his objective, he declared that Germany would rule the world for a thousand years. That sentiments like these could be publicly expressed without evoking derision shows that, in all ages, the regular rise and fall of great nations has passed unperceived. The simplest statistics prove the steady rotation of one nation after another at regular intervals. The belief that their nation would rule the world forever, naturally encouraged the citizens of the leading nation of any period to attribute their pre-eminence to hereditary virtues. They carried in their blood, they believed, qualities which constituted them a race of supermen, an illusion which inclined them

to the employment of cheap foreign labour (or slaves) to perform menial tasks and to engage foreign mercenaries to fight their battles or to sail their ships.

These poorer peoples were only too happy to migrate to the wealthy cities of the empire, and thereby, as we have seen, to adulterate the close-knit, homogeneous character of the conquering race. The latter unconsciously assumed that they would always be the leaders of mankind, relaxed their energies, and spent an increasing part of their time in leisure, amusement or sport. In recent years, the idea has spread widely in the West that 'progress' will be automatic without effort, that everyone will continue to grow richer and richer and that every year will show a 'rise in the standard of living'. We have not drawn from history the obvious conclusion that material success is the result of courage, endurance and hard work—a conclusion nevertheless obvious from the history of the meteoric rise of our own ancestors. This self-assurance of its own superiority seems to go hand-in-hand with the luxury resulting from wealth, in undermining the character of the dominant race.

The Welfare State

When the welfare state was first introduced in Britain, it was hailed as a new high-water mark in the history of human development. History, however, seems to suggest that the age of decline of a great nation is often a period which shows a tendency to philanthropy and to sympathy for other races. This phase may not be contradictory to the feeling described in the previous paragraph, that the dominant race has the right to rule the world. For the citizens of the great nation enjoy the role of Lady Bountiful. As long as it retains its status of leadership, the imperial people are glad to be generous, even if slightly condescending. The rights of citizenship are generously bestowed on every race, even those formerly subject, and the equality of mankind is proclaimed. The Roman Empire passed through this phase, when equal citizenship was thrown open to all peoples, such provincials even becoming senators and emperors. The Arab Empire of Baghdad was equally, perhaps even more, generous. During the Age of Conquests, pure-bred Arabs had constituted a ruling class, but in the ninth century the empire was completely cosmopolitan.

State assistance to the young and the poor was equally generous. University students received government grants to cover their expenses while they were receiving higher education. The State likewise offered free medical treatment to the poor. The first free public hospital was opened in Baghdad in the reign of Harun al-Rashid (786-809), and under his son, Mamun, free public hospitals sprang up all over the Arab world from Spain to what is now Pakistan. The impression that it will always be automatically rich causes the declining empire to spend lavishly on its own benevolence, until such time as the economy collapses, the universities are closed and the hospitals fall into ruin. It may perhaps be incorrect to picture the welfare state as the high-water mark of human attainment. It may merely prove to be one more regular milestone in the lifestory of an

ageing and decrepit empire.

Religion

Historians of periods of decadence often refer to a decline in religion, but, if we extend our investigation over a period covering the Assyrians (859-612 B.C.) to our own times, we have to interpret religion in a very broad sense. Some such definition as 'the human feeling that there is something, some invisible Power, apart from material objects, which controls human life and the natural world'. We are probably too narrow and contemptuous in our interpretation of idol worship. The people of ancient civilisations were as sensible as we are, and would scarcely have been so foolish as to worship sticks and stones fashioned by their own hands. The idol was for them merely a symbol, and represented an unknown, spiritual reality, which controlled the lives of men and demanded human obedience to its moral precepts. We all know only too well that minor differences in the human visualisation of this Spirit frequently became the ostensible reason for human wars, in which both sides claimed to be fighting for the true God, but the absurd narrowness of human conceptions should not blind us to the fact that, very often, both sides believed their campaigns to have a moral background. Genghis Khan, one of the most brutal of all conquerors, claimed that God had delegated him the duty to exterminate the decadent races of the civilised world. Thus the Age of Conquests often had some kind of religious atmosphere, which implied heroic self-sacrifice for the cause.

But this spirit of dedication was slowly eroded in the Age of Commerce by the action of money. People make money for themselves, not for their country. Thus periods of affluence gradually dissolved the spirit of service, which had caused the rise of the imperial races. In due course, selfishness permeated the community, the coherence of which was weakened until disintegration was threatened. Then, as we have seen, came the period of pessimism with the accompanying spirit of frivolity and sensual indulgence, byproducts of despair. It was inevitable at such times that men should look back yearningly to the days of 'religion', when the spirit of self-sacrifice was still strong enough to make men ready to give and to serve, rather than to snatch. But while despair might permeate the greater part of the nation, others achieved a new realisation of the fact that only readiness for self-sacrifice could enable a community to survive. Some of the greatest saints in history lived in times of national decadence, raising the banner of duty and service against the flood of depravity and despair.

In this manner, at the height of vice and frivolity the seeds of religious revival are quietly sown. After, perhaps, several generations (or even centuries) of suffering, the impoverished nation has been purged of its selfishness and its love of money, religion regains its sway and a new era sets in. 'It is good for me that I have been afflicted,' said the psalmist, 'that I might learn Thy Statutes.'

New Combinations

We have traced the rise of an obscure race to fame, through the stages of conquest, commercialism, affluence, and intellectualism, to disintegration, decadence and despair. We suggested that the dominant race at any given time imparts its leading characteristics to the world around, being in due course succeeded by another empire. By this means, we speculated, many successive races succeeded one another as superpowers, and in turn bequeathed their peculiar qualities to mankind at large. But the objection may here be raised that some day the time will come when all the races of the world will in turn have enjoyed their period of domination and have collapsed again in decadence. When the whole human race has reached the stage of decadence, where will new energetic conquering races be found? The answer is at first partially obscured by our modern habit of dividing the human race into nations, which we seem to regard as water-tight compartments, an error responsible for innumerable misunderstandings. In earlier times, warlike nomadic nations invaded the territories of decadent peoples and settled there. In due course, they intermarried with the local population and a new race resulted, though it sometimes retained an old name. The barbarian invasions of the Roman Empire probably provide the example best known today in the West. Others were the Arab conquests of Spain, North Africa and Persia, the Turkish conquests of the Ottoman Empire, or even the Norman Conquest of England.

In all such cases, the conquered countries were originally fully inhabited and the invaders were armies, which ultimately settled down and married, and produced new races. In our times, there are few nomadic conquerors left in the world, who could invade more settled countries bringing their tents and flocks with them. But ease of travel has resulted in an equal, or probably an even greater, intermixture of populations. The extreme bitterness of modern internal political struggles produces a constant flow of migrants from their native countries to others, where the social institutions suit them better. The vicissitudes of trade and business similarly result in many persons moving to other countries, at first intending to return, but ultimately settling down in their new countries. The population of Britain has been constantly changing, particularly in the last sixty years, owing to the influx of immigrants from Europe, Asia and Africa, and the exit of British citizens to the Dominions and the United States. The latter is, of course, the most obvious example of the constant rise of new nations, and of the transformation of the ethnic content of old nations through this modern nomadism.

Decadence of a System

It is of interest to note that decadence is the disintegration of a system, not of its individual members. The habits of the members of the community have been corrupted by the enjoyment of too much money and too much power for too long a period. The result has been, in the framework of their national life, to make them selfish and idle. A

community of selfish and idle people declines, internal quarrels develop in the division of its dwindling wealth, and pessimism follows, which some of them endeavour to drown in sensuality or frivolity. In their own surroundings, they are unable to redirect their thoughts and their energies into new channels. But when individual members of such a society emigrate into entirely new surroundings, they do not remain conspicuously decadent, pessimistic or immoral among the inhabitants of their new homeland. Once enabled to break away from their old channels of thought, and after a short period of readjustment, they become normal citizens of their adopted countries. Some of them, in the second and third generations, may attain pre-eminence and leadership in their new communities.

This seems to prove that the decline of any nation does not undermine the energies or the basic character of its members. Nor does the decadence of a number of such nations permanently impoverish the human race. Decadence is both mental and moral deterioration, produced by the slow decline of the community from which its members cannot escape, as long as they remain in their old surroundings. But, transported elsewhere, they soon discard their decadent ways of thought, and prove themselves equal to the other citizens of their adopted country.

Decadence is not Physical

Neither is decadence physical. The citizens of nations in decline are sometimes described as too physically emasculated to be able to bear hardship or make great efforts. This does not seem to be a true picture. Citizens of great nations in decadence are normally physically larger and stronger than those of their barbarian invaders. Moreover, as was proved in Britain in the first World War, young men brought up in luxury and wealth found little difficulty in accustoming themselves to life in the frontline trenches. The history of exploration proves the same point. Men accustomed to comfortable living in homes in Europe or America were able to show as much endurance as the natives in riding camels across the desert or in hacking their way through tropical forests. Decadence is a moral and spiritual disease, resulting from too long a period of wealth and power, producing cynicism, decline of religion, pessimism and frivolity. The citizens of such a nation will no longer make an effort to save themselves, because they are not convinced that anything in life is worth saving.

Human Diversity

Generalisations are always dangerous. Human beings are all different. The variety in human life is endless. If this be the case with individuals, it is much more so with nations and cultures. No two societies, no two peoples, no two cultures are exactly the same. In these circumstances, it will be easy for critics to find many objections to what has been said, and to point out exceptions to the generalisations. There is some value in comparing the lives of nations to those of individuals. No two persons in the world are

identical. Moreover their lives are often affected by accidents or by illness, making the divergences even more obvious. Yet, in fact, we can generalise about human life from many different aspects. The characteristics of childhood, adolescence, youth, middle and old age are well known. Some adolescents, it is true, are prematurely wise and serious. Some persons in middle age still seem to be young. But such exceptions do not invalidate the general character of human life from the cradle to the grave.

I venture to submit that the lives of nations follow a similar pattern. Superficially, all seem to be completely different. Some years ago, a suggestion was submitted to a certain television corporation that a series of talks on Arab history would form an interesting sequence. The proposal was immediately vetoed by the director of programmes with the remark, "What earthly interest could the history of medieval Arabs have for the general public today?" Yet, in fact, the history of the Arab imperial age—from conquest through commercialism, to affluence, intellectualism, science and decadence—is an exact precursor of British imperial history and lasted almost exactly the same time. If British historians, a century ago, had devoted serious study to the Arab Empire, they could have foreseen almost everything that has happened in Britain down to 1976.

A Variety of Falls

It has been shown that, normally, the rise and fall of great nations are due to internal reasons alone. Ten generations of human beings suffice to transform the hardy and enterprising pioneer into the captious citizen of the welfare state. But whereas the life histories of great nations show an unexpected uniformity, the nature of their falls depends largely on outside circumstances and thus shows a high degree of diversity. The Roman Republic, as we have seen, was followed by the empire, which became a super-state, in which all the natives of the Mediterranean basin, regardless of race, possessed equal rights. The name of Rome, originally a city-state, passed from it to an equalitarian international empire. This empire broke in half, the western half being overrun by northern barbarians, the eastern half forming the East Roman or Byzantine Empire. The vast Arab Empire broke up in the ninth century into many fragments, of which one former colony, Moslem Spain, ran its own 250-year course as an independent empire. The homelands of Syria and Iraq, however, were conquered by successive waves of Turks to whom they remained subject for 1,000 years.

The Mameluke Empire of Egypt and Syria, on the other hand, was conquered in one campaign by the Ottomans, the native population merely suffering a change of masters. The Spanish Empire (1500-1750) endured for the conventional 250 years, terminated only by the loss of its colonies. The homeland of Spain fell, indeed, from its high estate of a super-power, but remained as an independent nation until today. Romanov Russia (1682-1916) ran the normal course, but was succeeded by the Soviet Union. It is unnecessary to labour the point, which we may attempt to summarise briefly. Any regime which attains great wealth and power seems with remarkable regularity to decay and fall apart

in some ten generations. The ultimate fate of its component parts, however, does not depend on its internal nature, but on the other organisations which appear at the time of its collapse and succeed in devouring its heritage. Thus the lives of great powers are surprisingly uniform, but the results of their falls are completely diverse.

Inadequacy of our Historical studies

In fact, the modern nations of the West have derived only limited value from their historical studies, because they have never made them big enough. For history to have meaning, as we have already stated, it must be the history of the human race. Far from achieving such an ideal, our historical studies are largely limited to the history of our own country during the lifetime of the present nation. Thus the timefactor is too short to allow the longer rhythms of the rise and fall of nations even to be noticed. As the television director indicated, it never even crosses our minds that longer periods could be of any interest. When we read the history of our own nation, we find the actions of our ancestors described as glorious, while those of other peoples are depicted as mean, tyrannical or cowardly. Thus our history is (intentionally) not based on facts. We are emotionally unwilling to accept that our forbears might have been mean or cowardly. Alternatively, there are 'political' schools of history, slanted to discredit the actions of our past leaders, in order to support modern political movements. In all these cases, history is not an attempt to ascertain the truth, but a system of propaganda, devoted to the furtherance of modern projects, or the gratification of national vanity. Men can scarcely be blamed for not learning from the history they are taught. There is nothing to learn from it, because it is not true.

Small Nations

The word 'empires' has been used in this essay to signify nations which achieve the status of great powers, or super-powers, in the jargon of today—nations which have dominated the international scene for two or three centuries. At any given time, however, there are also smaller states which are more or less self-contained. Do these live the same 'lives' as the great nations, and pass through the same phases? It seems impossible to generalise on this issue. In general, decadence is the outcome of too long a period of wealth and power. If the small country has not shared in the wealth and power, it will not share in the decadence.

The Emerging Pattern

In spite of the endless variety and the infinite complications of human life, a general pattern does seem to emerge from these considerations. It reveals many successive empires covering some 3,000 years, as having followed similar stages of development and

decline, and as having, to a surprising degree, 'lived' lives of very similar length. The life-expectation of a great nation, it appears, commences with a violent, and usually unforeseen, outburst of energy, and ends in a lowering of moral standards, cynicism, pessimism and frivolity. If the present writer were a millionaire, he would try to establish in some university or other a department dedicated solely to the study of the rhythm of the rise and fall of powerful nations throughout the world. History goes back only some 3,000 years, because before that period writing was not sufficiently widespread to allow of the survival of detailed records. But within that period, the number of empires available for study is very great.

At the commencement of this essay, the names of eleven such empires were listed, but these included only the Middle East and the modern nations of the West. India, China and Southern America were not included, because the writer knows nothing about them. A school founded to study the rise and fall of empires would probably find at least twenty-four great powers available for dissection and analysis. The task would not be an easy one, if indeed the net were cast so wide as to cover virtually all the world's great nations in 3,000 years. The knowledge of language alone, to enable detailed investigations to be pursued, would present a formidable obstacle.

Would it help?

is pleasing to imagine that, from such studies, a regular life-pattern of nations would emerge, including an analysis of the various changes which ultimately lead to decline, decadence and collapse. It is tempting to assume that measures could be adopted to forestall the disastrous effects of excessive wealth and power, and thence of subsequent decadence. Perhaps some means could be devised to prevent the activist Age of Conquests and Commerce deteriorating into the Age of Intellect, producing endless talking but no action. It is tempting to think so. Perhaps if the pattern of the rise and fall of nations were regularly taught in schools, the general public would come to realise the truth, and would support policies to maintain the spirit of duty and self-sacrifice, and to forestall the accumulation of excessive wealth by one nation, leading to the demoralisation of that nation.

Could not the sense of duty and the initiative needed to give rise to action be retained parallel with intellectual development and the discoveries of natural science? The answer is doubtful, though we could but try. The weaknesses of human nature, however, are so obvious, that we cannot be too confident of success. Men bursting with courage, energy and self-confidence cannot easily be restrained from subduing their neighbours, and men who see the prospect of wealth open to them will not readily be prevented from pursuing it. Perhaps it is not in the real interest of humanity that they should be so prevented, for it is in periods of wealth that art, architecture, music, science and literature make the greatest progress.

Moreover, as we have seen where great empires are concerned, their establishment may

give rise to wars and tragedies, but their periods of power often bring peace, security and prosperity to vast areas of territory. Our knowledge and our experience (perhaps our basic human intellects) are inadequate to pronounce whether or not the rise and fall of great nations is the best system for the best of all possible worlds. These doubts, however, need not prevent us from attempting to acquire more knowledge on the rise and fall of great powers, or from endeavouring, in the light of such knowledge, to improve the moral quality of human life.

Perhaps, in fact, we may reach the conclusion that the successive rise and fall of great nations is inevitable and, indeed, a system divinely ordained. But even this would be an immense gain. For we should know where we stand in relation to our human brothers and sisters. In our present state of mental chaos on the subject, we divide ourselves into nations, parties or communities and fight, hate and vilify one another over developments which may perhaps be divinely ordained and which seem to us, if we take a broader view, completely uncontrollable and inevitable. If we could accept these great movements as beyond our control, there would be no excuse for our hating one another because of them. However varied, confusing and contradictory the religious history of the world may appear, the noblest and most spiritual of the devotees of all religions seem to reach the conclusion that love is the key to human life. Any expansion of our knowledge which may lead to a reduction in our unjustified hates is therefore surely well worth while.

Summary

As numerous points of interest have arisen in the course of this essay, I close with a brief summary, to refresh the reader's mind.

- (a) We do not learn from history because our studies are brief and prejudiced.
- (b) In a surprising manner, 250 years emerges as the average length of national greatness.
- (c) This average has not varied for 3,000 years. Does it represent ten generations?
- (d) The stages of the rise and fall of great nations seem to be:
 - The Age of Pioneers (outburst)
 - The Age of Conquests
 - The Age of Commerce
 - The Age of Affluence
 - The Age of Intellect
 - The Age of Decadence.
- (e) Decadence is marked by:
 - Defensiveness
 - Pessimism
 - Materialism

Frivolity

An influx of foreigners

The Welfare State

A weakening of religion.

(f) Decadence is due to:

Too long a period of wealth and power

Selfishness

Love of money

The loss of a sense of duty.

(g) The life histories of great states are amazingly similar, and are due to internal factors.

(h) Their falls are diverse, because they are largely the result of external causes.

(i) History should be taught as the history of the human race, though of course with emphasis on the history of the student's own country.

17. Further Reading

Next to the books given in the introduction (of which I'd like to recommend "Tragedy and Hope" especially) used as sources for this book, here are some additional ones:

- **The Sleepwalkers** by Christopher Clark.
- **A History of the First World War** by Lidell Hart.
- **The Anglo-American-Establishment** by Carroll Quigley.
- **The First World War** by John Keegan.
- **Storm of Steel** by Ernst Jünger.
- **Icebreaker** by Victor Suvorov.
- **The War that had many Fathers** by Gerd Schultze-Rhonhof.
- **Conjuring Hitler, how Britain and America made the Third Reich** by Guido Giacomo Preparata.
- **America, Roosevelt And The Causes Of The Present War** by Ezra Pound.
- **The Origins Of The Second World War** by A.J.P. Taylor.
- **Atlas Of The World War II** by Richard Natkiel.
- **The Second World War** by Antony Beevor.
- **The Myth of German Villainy** by Benton L. Bradberry.
- **Wall Street and the Bolshevik Revolution** by Antony Sutton.
- **Inside the Third Reich** by Albert Speer.
- **Hellstorm: The Death of Nazi Germany** by Thomas Goodrich.
- **The Gulag Archipelago** by Aleksandr I. Solzhenitsyn.
- **The International Jew** by Henry Ford.
- **Propaganda** by Edward L. Bernays.
- **Hitler's Second Book** by Adolf Hitler.
- **Breaking the Interest Slavery** by Gottfried Feder.
- **Hitler's Table Talk.**
- **The Banking Swindle** by Kerry Bolton.
- **Nations: The Long History and Deep Roots of Political Ethnicity and Nationalism** by Azar Gat.

- **The Psychotic Left** by Kerry Bolton.
- **Men Among the Ruins** by Julius Evola.
- **The Grand Chessboard** by Zbigniew Brzezinski.
- **The Decline of the West** by Oswald Spengler.
- **The Wealth of Nations** by Adam Smith.
- **Manufacturing Consent** by Noam Chomsky.
- **The War Against Boys** by Christina Hoff Sommers.
- **World Order** by Henry Kissinger.
- **Death of the West** by Patrick Buchanan.
- **Dissecting the Holocaust** by Germar Rudolf.
- **Debating the Holocaust** by Thomas Dalton.
